SUBJECT: Kimberly-Clark Upland Area, Data Validation

Dear Ms. Brock,

Enclosed are the final validation reports for the fractions listed below. These SDGs were received on October 30, 2020. Attachment 1 is a summary of the samples that were reviewed for each analysis.

LDC Project #49554:

SDG #	Fraction
009289, 009316, 009348, 009369 009431, 009494, 009564, 010033 010063, 010302, 010084, 010110 010130, 010155, 010179, 010208 010237, 010269	Polynuclear Aromatic Hydrocarbons, Metals, Total Petroleum Hydrocarbons as Extractables

The data validation was performed under Stage 2A guidelines. The analyses were validated using the following documents, as applicable to each method:

- USEPA National Functional Guidelines for Organic Superfund Methods Data Review, January 2017
- USEPA National Functional Guidelines for Inorganic Superfund Methods Data Review; January 2017
- EPA SW 846, Third Edition, Test Methods for Evaluating Solid Waste, update 1, July 1992; update IIA, August 1993; update II, September 1994; update IIB, January 1995; update III, December 1996; update IIIA, April 1998; IIIB, November 2004; update IV, February 2007; update V, July 2014

Please feel free to contact us if you have any questions.

Sincerely,

Christina Rink

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with a modified outline of the USEPA National Functional Guidelines (NFG) for Inorganic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following methods:

Copper and Zinc by Environmental Protection Agency (EPA) SW 846 Method 6020B
Mercury by EPA Method 1631E

All sample results were subjected to Stage 2A data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition.

All technical holding time requirements were met.

II. ICPMS Tune

ICP-MS tune data were not reviewed for Stage 2A validation.

III. Instrument Calibration

Instrument calibration data were not reviewed for Stage 2A validation.

IV. ICP Interference Check Sample Analysis

ICP Interference check sample (ICS) analysis data were not reviewed for Stage 2A validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the methods. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

VIII. Duplicate Sample Analysis

The laboratory has indicated that there were no duplicate (DUP) analyses specified for the samples in this SDG, and therefore duplicate analyses were not performed for this SDG.

IX. Serial Dilution

Serial dilution was not performed for this SDG.

X. Laboratory Control Samples

Laboratory control samples (LCS) were analyzed as required by the methods. Percent recoveries (%R) were within QC limits.

XI. Field Duplicates

No field duplicates were identified in this SDG.

XII. Internal Standards (ICP-MS)

Internal standards data were not reviewed for Stage 2A validation.

XIII. Sample Result Verification

Raw data were not reviewed for Stage 2A validation.

XIV. Overall Assessment of Data

The analysis was conducted within all specifications of the methods. No results were rejected in this SDG.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with a modified outline of the USEPA National Functional Guidelines (NFG) for Inorganic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following methods:

Copper and Zinc by Environmental Protection Agency (EPA) SW 846 Method 6020B
Mercury by EPA Method 1631E

All sample results were subjected to Stage 2A data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition.

All technical holding time requirements were met.

II. ICPMS Tune

ICP-MS tune data were not reviewed for Stage 2A validation.

III. Instrument Calibration

Instrument calibration data were not reviewed for Stage 2A validation.

IV. ICP Interference Check Sample Analysis

ICP Interference check sample (ICS) analysis data were not reviewed for Stage 2A validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the methods. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Analyte	MS (%R) (Limits)	MSD (%R) (Limits)	Flag	A or P
BBH-B-23-10MS/MSD (BBH-B-23-10)	Mercury	157 (71-125)	-	J (all detects)	A
BBH-B-23-10MS/MSD (BBH-S-18-8 BBH-S-17-8 BBH-B-22-10 BBH-S-14-8 BBH-S-13-8 BBH-518 BBH-S-15-8 BBH-S-19-8 BBH-S-20-8 BBH-B-25-10 BBH-S-22-8 BBH-S-21-8)	Mercury	157 (71-125)	-	NA	-

Relative percent differences (RPD) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Analyte	RPD (Limits)	Flag	A or P
BBH-B-23-10MS/MSD (All samples in SDG 009316)	Mercury	23 (≤20)	J (all detects) UJ (all non-detects)	A

VIII. Duplicate Sample Analysis

The laboratory has indicated that there were no duplicate (DUP) analyses specified for the samples in this SDG, and therefore duplicate analyses were not performed for this SDG.

IX. Serial Dilution

Serial dilution was not performed for this SDG.

X. Laboratory Control Samples

Laboratory control samples (LCS) were analyzed as required by the methods. Percent recoveries (%R) were within QC limits.

XI. Field Duplicates

Samples BBH-B-23-10 and BBH-518 were identified as field duplicates. No results were detected in any of the samples with the following exceptions:

Analyte	Concentration (mg/Kg)		RPD
	BBH-B-23-10	BBH-518	
Copper	49.2	32.5	41
Zinc	86.3	60.2	36
Mercury	0.13	0.1U	Not calculable

XII. Internal Standards (ICP-MS)

Internal standards data were not reviewed for Stage 2A validation.

XIII. Sample Result Verification

Raw data were not reviewed for Stage 2A validation.

XIV. Overall Assessment of Data

The analysis was conducted within all specifications of the methods.

Due to MS/MSD %R and RPD, data were qualified as estimated in thirteen samples.

No results were rejected in this SDG.

METHOD: Trace metals (EPA SW 846 Method 6020/6010/7470)

Please see qualifications below for all questions answered "N". Not applicable questions are identified as "N/A".

Y N N/A Was a matrix spike analyzed for each matrix in this SDG?

Y N N/A Were matrix spike percent recoveries (%R) within the control limits of 75-125? If the sample concentration exceeded the spike concentration by a factor of 4 or more, no action was taken.

Y N N/A Were all duplicate sample relative percent differences (RPD) ≤ 20% for samples?

LEVEL IV ONLY:

Y N N/A Were recalculated results acceptable? See Level IV Recalculation Worksheet for recalculations.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with a modified outline of the USEPA National Functional Guidelines (NFG) for Inorganic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following methods:

Copper and Zinc by Environmental Protection Agency (EPA) SW 846 Method 6020B
Mercury by EPA Method 1631E

All sample results were subjected to Stage 2A data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition.

All technical holding time requirements were met.

II. ICPMS Tune

ICP-MS tune data were not reviewed for Stage 2A validation.

III. Instrument Calibration

Instrument calibration data were not reviewed for Stage 2A validation.

IV. ICP Interference Check Sample Analysis

ICP Interference check sample (ICS) analysis data were not reviewed for Stage 2A validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the methods. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

VIII. Duplicate Sample Analysis

The laboratory has indicated that there were no duplicate (DUP) analyses specified for the samples in this SDG, and therefore duplicate analyses were not performed for this SDG.

IX. Serial Dilution

Serial dilution was not performed for this SDG.

X. Laboratory Control Samples

Laboratory control samples (LCS) were analyzed as required by the methods. Percent recoveries (%R) were within QC limits.

XI. Field Duplicates

No field duplicates were identified in this SDG.

XII. Internal Standards (ICP-MS)

Internal standards data were not reviewed for Stage 2A validation.

XIII. Sample Result Verification

Raw data were not reviewed for Stage 2A validation.

XIV. Overall Assessment of Data

The analysis was conducted within all specifications of the methods. No results were rejected in this SDG.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with a modified outline of the USEPA National Functional Guidelines (NFG) for Inorganic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following methods:

Copper and Zinc by Environmental Protection Agency (EPA) SW 846 Method 6020B
Mercury by EPA Method 1631E

All sample results were subjected to Stage 2A data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition.

All technical holding time requirements were met.

II. ICPMS Tune

ICP-MS tune data were not reviewed for Stage 2A validation.

III. Instrument Calibration

Instrument calibration data were not reviewed for Stage 2A validation.

IV. ICP Interference Check Sample Analysis

ICP Interference check sample (ICS) analysis data were not reviewed for Stage 2A validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the methods. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

VIII. Duplicate Sample Analysis

The laboratory has indicated that there were no duplicate (DUP) analyses specified for the samples in this SDG, and therefore duplicate analyses were not performed for this SDG.

IX. Serial Dilution

Serial dilution was not performed for this SDG.

X. Laboratory Control Samples

Laboratory control samples (LCS) were analyzed as required by the methods. Percent recoveries (%R) were within QC limits.

XI. Field Duplicates

Samples BBH-S-49-8 and BBH-519 were identified as field duplicates. No results were detected in any of the samples with the following exceptions:

Analyte	Concentration (mg/Kg)		RPD
	BBH-S-49-8	BBH-519	
Copper	20.5	18.7	9
Zinc	43.0	42.4	1

XII. Internal Standards (ICP-MS)

Internal standards data were not reviewed for Stage 2A validation.

XIII. Sample Result Verification

Raw data were not reviewed for Stage 2A validation.

XIV. Overall Assessment of Data

The analysis was conducted within all specifications of the methods. No results were rejected in this SDG.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with a modified outline of the USEPA National Functional Guidelines (NFG) for Inorganic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following methods:

Copper and Zinc by Environmental Protection Agency (EPA) SW 846 Method 6020B
Mercury by EPA Method 1631E

All sample results were subjected to Stage 2A data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition.

All technical holding time requirements were met.

II. ICPMS Tune

ICP-MS tune data were not reviewed for Stage 2A validation.

III. Instrument Calibration

Instrument calibration data were not reviewed for Stage 2A validation.

IV. ICP Interference Check Sample Analysis

ICP Interference check sample (ICS) analysis data were not reviewed for Stage 2A validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the methods. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Analyte	MS (%R) (Limits)	MSD (%R) (Limits)	Flag	A or P
BBH-S-57-4MS/MSD (BBH-S-57-4 BBH-S-57-8 BBH-S-58-4 BBH-S-59-4 BBH-S-10-8 BBH-B-15-10 BBH-S-09-8)	Mercury	-	137 (71-125)	J (all detects)	A
BBH-S-57-4MS/MSD (BBH-B-24-10)	Mercury	-	137 (71-125)	NA	-

Relative percent differences (RPD) were within QC limits.

VIII. Duplicate Sample Analysis

The laboratory has indicated that there were no duplicate (DUP) analyses specified for the samples in this SDG, and therefore duplicate analyses were not performed for this SDG.

IX. Serial Dilution

Serial dilution was not performed for this SDG.

X. Laboratory Control Samples

Laboratory control samples (LCS) were analyzed as required by the methods. Percent recoveries (%R) were within QC limits.

XI. Field Duplicates

No field duplicates were identified in this SDG.

XII. Internal Standards (ICP-MS)

Internal standards data were not reviewed for Stage 2A validation.

XIII. Sample Result Verification

Raw data were not reviewed for Stage 2A validation.

XIV. Overall Assessment of Data

The analysis was conducted within all specifications of the methods.

Due to MS/MSD %R, data were qualified as estimated in seven samples.

No results were rejected in this SDG.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with a modified outline of the USEPA National Functional Guidelines (NFG) for Inorganic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following methods:

Copper, Lead, and Zinc by Environmental Protection Agency (EPA) SW 846 Method 6020B
Mercury by EPA Method 1631E

All sample results were subjected to Stage 2A data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition.

All technical holding time requirements were met.

II. ICPMS Tune

ICP-MS tune data were not reviewed for Stage 2A validation.

III. Instrument Calibration

Instrument calibration data were not reviewed for Stage 2A validation.

IV. ICP Interference Check Sample Analysis

ICP Interference check sample (ICS) analysis data were not reviewed for Stage 2A validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the methods. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

VIII. Duplicate Sample Analysis

The laboratory has indicated that there were no duplicate (DUP) analyses specified for the samples in this SDG, and therefore duplicate analyses were not performed for this SDG.

IX. Serial Dilution

Serial dilution was not performed for this SDG.

X. Laboratory Control Samples

Laboratory control samples (LCS) were analyzed as required by the methods. Percent recoveries (%R) were within QC limits.

XI. Field Duplicates

No field duplicates were identified in this SDG.

XII. Internal Standards (ICP-MS)

Internal standards data were not reviewed for Stage 2A validation.

XIII. Sample Result Verification

Raw data were not reviewed for Stage 2A validation.

XIV. Overall Assessment of Data

The analysis was conducted within all specifications of the methods. No results were rejected in this SDG.

Laboratory Data Consultants, Inc.
Data Validation Report

Project/Site Name: Kimberly-Clark Upland Area

LDC Report Date: November 16, 2020

Parameters: Total Petroleum Hydrocarbons as Extractables

Validation Level: Stage 2A

Laboratory: Friedman & Bruya, Inc.

Sample Delivery Group (SDG): 009494

Sample Identification	Laboratory Sample Identification	Matrix	Collection Date
B2-Trench-01-8	009494-01	Soil	09/25/20

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with a modified outline of the USEPA National Functional Guidelines (NFG) for Organic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Total Petroleum Hydrocarbons (TPH) as Extractables by NWTPH-Dx

All sample results were subjected to Stage 2A data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered not detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. Initial Calibration and Initial Calibration Verification

Initial calibration data were not reviewed for Stage 2A validation.

III. Continuing Calibration

Continuing calibration data were not reviewed for Stage 2A validation.

IV. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

V. Field Blanks

No field blanks were identified in this SDG.

VI. Surrogates

Surrogates were added to all samples as required by the method. All surrogate recoveries (%R) were within QC limits.

VII. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

VIII. Laboratory Control Samples

Laboratory control samples (LCS) were analyzed as required by the method. Percent recoveries (%R) were within QC limits.

IX. Field Duplicates

No field duplicates were identified in this SDG.

X. Compound Quantitation

Raw data were not reviewed for Stage 2A validation.

XI. Target Compound Identifications

Raw data were not reviewed for Stage 2A validation.

XII. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with a modified outline of the USEPA National Functional Guidelines (NFG) for Inorganic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following methods:

Copper and Zinc by Environmental Protection Agency (EPA) SW 846 Method 6020B
Mercury by EPA Method 1631E

All sample results were subjected to Stage 2A data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition.

All technical holding time requirements were met.

II. ICPMS Tune

ICP-MS tune data were not reviewed for Stage 2A validation.

III. Instrument Calibration

Instrument calibration data were not reviewed for Stage 2A validation.

IV. ICP Interference Check Sample Analysis

ICP Interference check sample (ICS) analysis data were not reviewed for Stage 2A validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the methods. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Analyte	MS (%R) (Limits)	MSD (%R) (Limits)	Flag	A or P
BBH-S-61-4MS/MSD (BBH-S-61-4 BBH-S-63-4 BBH-S-64-4 BBH-S-12-8 BBH-B-13-10)	Copper	-	153 (75-125)	J (all detects)	A
BBH-S-61-4MS/MSD (BBH-S-61-4 BBH-S-63-4 BBH-S-12-8 BBH-B-13-10)	Zinc	162 (75-125)	215 (75-125)	J (all detects)	A

Relative percent differences (RPD) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Analyte	RPD (Limits)	Flag	A or P
BBH-S-61-4MS/MSD (BBH-S-61-4 BBH-S-63-4 BBH-S-64-4 BBH-S-12-8 BBH-B-13-10)	Copper	25 (≤20)	J (all detects)	A
BBH-S-61-4MS/MSD (BBH-S-61-4 BBH-S-63-4 BBH-S-12-8 BBH-B-13-10)	Zinc	28 (≤20)	J (all detects)	A

VIII. Duplicate Sample Analysis

The laboratory has indicated that there were no duplicate (DUP) analyses specified for the samples in this SDG, and therefore duplicate analyses were not performed for this SDG.

IX. Serial Dilution

Serial dilution was not performed for this SDG.

X. Laboratory Control Samples

Laboratory control samples (LCS) were analyzed as required by the methods. Percent recoveries (%R) were within QC limits.

XI. Field Duplicates

Samples BBH-S-60-4 and BBH-520 were identified as field duplicates. No results were detected in any of the samples with the following exceptions:

Analyte	Concentration (mg/Kg)		RPD
	BBH-S-60-4	BBH-520	
Mercury	1.9	1.5	24

XII. Internal Standards (ICP-MS)

Internal standards data were not reviewed for Stage 2A validation.

XIII. Sample Result Verification

Raw data were not reviewed for Stage 2A validation.

XIV. Overall Assessment of Data

The analysis was conducted within all specifications of the methods.

Due to MS/MSD %R and RPD, data were qualified as estimated in five samples.

No results were rejected in this SDG.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with a modified outline of the USEPA National Functional Guidelines (NFG) for Inorganic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following methods:

Copper and Zinc by Environmental Protection Agency (EPA) SW 846 Method 6020B
Mercury by EPA Method 1631E

All sample results were subjected to Stage 2A data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition.

All technical holding time requirements were met.

II. ICPMS Tune

ICP-MS tune data were not reviewed for Stage 2A validation.

III. Instrument Calibration

Instrument calibration data were not reviewed for Stage 2A validation.

IV. ICP Interference Check Sample Analysis

ICP Interference check sample (ICS) analysis data were not reviewed for Stage 2A validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the methods. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

VIII. Duplicate Sample Analysis

The laboratory has indicated that there were no duplicate (DUP) analyses specified for the samples in this SDG, and therefore duplicate analyses were not performed for this SDG.

IX. Serial Dilution

Serial dilution was not performed for this SDG.

X. Laboratory Control Samples

Laboratory control samples (LCS) were analyzed as required by the methods. Percent recoveries (%R) were within QC limits.

XI. Field Duplicates

No field duplicates were identified in this SDG.

XII. Internal Standards (ICP-MS)

Internal standards data were not reviewed for Stage 2A validation.

XIII. Sample Result Verification

Raw data were not reviewed for Stage 2A validation.

XIV. Overall Assessment of Data

The analysis was conducted within all specifications of the methods. No results were rejected in this SDG.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with a modified outline of the USEPA National Functional Guidelines (NFG) for Inorganic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following methods:

Copper, Lead, and Zinc by Environmental Protection Agency (EPA) SW 846 Method 6020B
Mercury by EPA Method 1631E

All sample results were subjected to Stage 2A data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition.

All technical holding time requirements were met.

II. ICPMS Tune

ICP-MS tune data were not reviewed for Stage 2A validation.

III. Instrument Calibration

Instrument calibration data were not reviewed for Stage 2A validation.

IV. ICP Interference Check Sample Analysis

ICP Interference check sample (ICS) analysis data were not reviewed for Stage 2A validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the methods. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

VIII. Duplicate Sample Analysis

The laboratory has indicated that there were no duplicate (DUP) analyses specified for the samples in this SDG, and therefore duplicate analyses were not performed for this SDG.

IX. Serial Dilution

Serial dilution was not performed for this SDG.

X. Laboratory Control Samples

Laboratory control samples (LCS) were analyzed as required by the methods. Percent recoveries (%R) were within QC limits.

XI. Field Duplicates

Samples DT-B-05-8 and DT-521 were identified as field duplicates. No results were detected in any of the samples with the following exceptions:

Analyte	Concentration (mg/Kg)		RPD
	DT-B-05-8	DT-521	
Copper	45.2	51.0	12
Lead	12.7	13.7	8
Zinc	55.4	65.5	17
Mercury	0.14	0.20	35

XII. Internal Standards (ICP-MS)

Internal standards data were not reviewed for Stage 2A validation.

XIII. Sample Result Verification

Raw data were not reviewed for Stage 2A validation.

XIV. Overall Assessment of Data

The analysis was conducted within all specifications of the methods. No results were rejected in this SDG.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with a modified outline of the USEPA National Functional Guidelines (NFG) for Organic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Total Petroleum Hydrocarbons (TPH) as Extractables by NWTPH-Dx

All sample results were subjected to Stage 2A data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered not detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. Initial Calibration and Initial Calibration Verification

Initial calibration data were not reviewed for Stage 2A validation.

III. Continuing Calibration

Continuing calibration data were not reviewed for Stage 2A validation.

IV. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

V. Field Blanks

No field blanks were identified in this SDG.

VI. Surrogates

Surrogates were added to all samples as required by the method. All surrogate recoveries (%R) were within QC limits.

VII. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

VIII. Laboratory Control Samples

Laboratory control samples (LCS) were analyzed as required by the method. Percent recoveries (%R) were within QC limits.

IX. Field Duplicates

Samples DT-B-05-8 and DT-521 were identified as field duplicates. No results were detected in any of the samples.

X. Compound Quantitation

Raw data were not reviewed for Stage 2A validation.

XI. Target Compound Identifications

Raw data were not reviewed for Stage 2A validation.

XII. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with a modified outline of the USEPA National Functional Guidelines (NFG) for Inorganic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following methods:

Copper and Zinc by Environmental Protection Agency (EPA) SW 846 Method 6020B
Mercury by EPA Method 1631E

All sample results were subjected to Stage 2A data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

DNR Do not report from this analysis; the result for this analyte is to be reported from an alternative analysis.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition.

All technical holding time requirements were met.

II. ICPMS Tune

ICP-MS tune data were not reviewed for Stage 2A validation.

III. Instrument Calibration

Instrument calibration data were not reviewed for Stage 2A validation.

IV. ICP Interference Check Sample Analysis

ICP Interference check sample (ICS) analysis data were not reviewed for Stage 2A validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the methods. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Analyte	MS (%R) (Limits)	MSD (%R) (Limits)	Flag	A or P
BBH-S-97-8MS/MSD (BBH-S-91-4 BBH-S-97-8 BBH-525 BBH-525DL BBH-S-94-8 BBH-S-94-8DL)	Copper	30 (75-125)	136 (75-125)	J (all detects) UJ (all non-detects)	A

Relative percent differences (RPD) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Analyte	RPD (Limits)	Flag	A or P
BBH-S-97-8MS/MSD (BBH-S-91-4 BBH-S-97-8 BBH-525 BBH-525DL BBH-S-94-8 BBH-S-94-8DL)	Copper	128 (≤20)	J (all detects) UJ (all non-detects)	A

VIII. Duplicate Sample Analysis

The laboratory has indicated that there were no duplicate (DUP) analyses specified for the samples in this SDG, and therefore duplicate analyses were not performed for this SDG.

IX. Serial Dilution

Serial dilution was not performed for this SDG.

X. Laboratory Control Samples

Laboratory control samples (LCS) were analyzed as required by the methods. Percent recoveries (%R) were within QC limits.

XI. Field Duplicates

Samples BBH-525 and BBH-S-94-8 were identified as field duplicates. No results were detected in any of the samples with the following exceptions:

Analyte	Concentration (mg/Kg)		RPD
	BBH-525	BBH-S-94-8	
Copper	19.8	18.4	7
Mercury	0.83	0.78	6

XII. Internal Standards (ICP-MS)

Internal standards data were not reviewed for Stage 2A validation.

XIII. Sample Result Verification

Raw data were not reviewed for Stage 2A validation.

XIV. Overall Assessment of Data

The analysis was conducted within all specifications of the methods.

In the case where more than one result was reported for an individual sample, the least technically acceptable results were deemed not reportable as follows:

Sample	Analyte	Reason	Flag	A or P
BBH-525DL BBH-S-94-8DL	Copper	Sample with lower dilution is more acceptable due to having a detected result.	DNR	-

Due to MS/MSD %R and RPD, data were qualified as estimated in four samples.

No results were rejected in this SDG.

Sample Identification	Laboratory Sample Identification	Matrix	Collection Date
BA7-S-01-3	010084-01	Soil	10/05/20
BA7-S-02-3	010084-02	Soil	10/05/20
BA7-S-01-6	010084-03	Soil	10/05/20
BA7-S-02-6	010084-04	Soil	10/05/20

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with a modified outline of the USEPA National Functional Guidelines (NFG) for Organic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Polynuclear Aromatic Hydrocarbons (PAHs) by Environmental Protection Agency (EPA) SW 846 Method 8270E in Selected Ion Monitoring (SIM) mode

All sample results were subjected to Stage 2A data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. GC/MS Instrument Performance Check

Instrument performance check data were not reviewed for Stage 2A validation.

III. Initial Calibration and Initial Calibration Verification

Initial calibration data were not reviewed for Stage 2A validation.

IV. Continuing Calibration

Continuing calibration data were not reviewed for Stage 2A validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Surrogates

Surrogates were added to all samples as required by the method. Surrogate recoveries (%R) were not within QC limits for sample BA7-S-02-3. Using professional judgment, no data were qualified when one surrogate %R was outside the QC limits and the %R was greater than or equal to 10%.

VIII. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

IX. Laboratory Control Samples

Laboratory control samples (LCS) were analyzed as required by the method. Percent recoveries (%R) were within QC limits.

X. Field Duplicates

No field duplicates were identified in this SDG.

XI. Internal Standards

Internal standards data were not reviewed for Stage 2A validation.

XII. Compound Quantitation

Raw data were not reviewed for Stage 2A validation.

XIII. Target Compound Identifications

Raw data were not reviewed for Stage 2A validation.

XIV. System Performance

Raw data were not reviewed for Stage 2A validation.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with a modified outline of the USEPA National Functional Guidelines (NFG) for Inorganic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following methods:

Copper and Zinc by Environmental Protection Agency (EPA) SW 846 Method 6020B
Mercury by EPA Method 1631E

All sample results were subjected to Stage 2A data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition.

All technical holding time requirements were met.

II. ICPMS Tune

ICP-MS tune data were not reviewed for Stage 2A validation.

III. Instrument Calibration

Instrument calibration data were not reviewed for Stage 2A validation.

IV. ICP Interference Check Sample Analysis

ICP Interference check sample (ICS) analysis data were not reviewed for Stage 2A validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the methods. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

VIII. Duplicate Sample Analysis

The laboratory has indicated that there were no duplicate (DUP) analyses specified for the samples in this SDG, and therefore duplicate analyses were not performed for this SDG.

IX. Serial Dilution

Serial dilution was not performed for this SDG.

X. Laboratory Control Samples

Laboratory control samples (LCS) were analyzed as required by the methods. Percent recoveries (%R) were within QC limits.

XI. Field Duplicates

No field duplicates were identified in this SDG.

XII. Internal Standards (ICP-MS)

Internal standards data were not reviewed for Stage 2A validation.

XIII. Sample Result Verification

Raw data were not reviewed for Stage 2A validation.

XIV. Overall Assessment of Data

The analysis was conducted within all specifications of the methods. No results were rejected in this SDG.

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with a modified outline of the USEPA National Functional Guidelines (NFG) for Inorganic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following methods:

Copper and Zinc by Environmental Protection Agency (EPA) SW 846 Method 6020B
Mercury by EPA Method 1631E

All sample results were subjected to Stage 2A data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition.

All technical holding time requirements were met.

II. ICPMS Tune

ICP-MS tune data were not reviewed for Stage 2A validation.

III. Instrument Calibration

Instrument calibration data were not reviewed for Stage 2A validation.

IV. ICP Interference Check Sample Analysis

ICP Interference check sample (ICS) analysis data were not reviewed for Stage 2A validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the methods. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Analyte	MS (%R) (Limits)	MSD (%R) (Limits)	Flag	A or P
BBH-B-15-11MS/MSD (All samples in SDG 010110)	Copper	198 (75-125)	130 (75-125)	J (all detects)	A

Relative percent differences (RPD) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Analyte	RPD (Limits)	Flag	A or P
BBH-B-15-11MS/MSD (All samples in SDG 010110)	Copper	41 (≤20)	J (all detects)	A

VIII. Duplicate Sample Analysis

The laboratory has indicated that there were no duplicate (DUP) analyses specified for the samples in this SDG, and therefore duplicate analyses were not performed for this SDG.

IX. Serial Dilution

Serial dilution was not performed for this SDG.

X. Laboratory Control Samples

Laboratory control samples (LCS) were analyzed as required by the methods. Percent recoveries (%R) were within QC limits.

XI. Field Duplicates

No field duplicates were identified in this SDG.

XII. Internal Standards (ICP-MS)

Internal standards data were not reviewed for Stage 2A validation.

XIII. Sample Result Verification

Raw data were not reviewed for Stage 2A validation.

XIV. Overall Assessment of Data

The analysis was conducted within all specifications of the methods.

Due to MS/MSD %R and RPD, data were qualified as estimated in six samples.

No results were rejected in this SDG.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with a modified outline of the USEPA National Functional Guidelines (NFG) for Inorganic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following methods:

Copper and Zinc by Environmental Protection Agency (EPA) SW 846 Method 6020B
Mercury by EPA Method 1631E

All sample results were subjected to Stage 2A data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition.

All technical holding time requirements were met.

II. ICPMS Tune

ICP-MS tune data were not reviewed for Stage 2A validation.

III. Instrument Calibration

Instrument calibration data were not reviewed for Stage 2A validation.

IV. ICP Interference Check Sample Analysis

ICP Interference check sample (ICS) analysis data were not reviewed for Stage 2A validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the methods. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

VIII. Duplicate Sample Analysis

The laboratory has indicated that there were no duplicate (DUP) analyses specified for the samples in this SDG, and therefore duplicate analyses were not performed for this SDG.

IX. Serial Dilution

Serial dilution was not performed for this SDG.

X. Laboratory Control Samples

Laboratory control samples (LCS) were analyzed as required by the methods. Percent recoveries (%R) were within QC limits.

XI. Field Duplicates

Samples BBH-B-33-10 and BBH-522 were identified as field duplicates. No results were detected in any of the samples with the following exceptions:

Analyte	Concentration (mg/Kg)		RPD
	BBH-B-33-10	BBH-522	
Copper	9.09	11.7	25
Zinc	22.7	28.5	23

XII. Internal Standards (ICP-MS)

Internal standards data were not reviewed for Stage 2A validation.

XIII. Sample Result Verification

Raw data were not reviewed for Stage 2A validation.

XIV. Overall Assessment of Data

The analysis was conducted within all specifications of the methods. No results were rejected in this SDG.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with a modified outline of the USEPA National Functional Guidelines (NFG) for Inorganic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following methods:

Copper and Zinc by Environmental Protection Agency (EPA) SW 846 Method 6020B
Mercury by EPA Method 1631E

All sample results were subjected to Stage 2A data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition.

All technical holding time requirements were met.

II. ICPMS Tune

ICP-MS tune data were not reviewed for Stage 2A validation.

III. Instrument Calibration

Instrument calibration data were not reviewed for Stage 2A validation.

IV. ICP Interference Check Sample Analysis

ICP Interference check sample (ICS) analysis data were not reviewed for Stage 2A validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the methods. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

VIII. Duplicate Sample Analysis

The laboratory has indicated that there were no duplicate (DUP) analyses specified for the samples in this SDG, and therefore duplicate analyses were not performed for this SDG.

IX. Serial Dilution

Serial dilution was not performed for this SDG.

X. Laboratory Control Samples

Laboratory control samples (LCS) were analyzed as required by the methods. Percent recoveries (%R) were within QC limits.

XI. Field Duplicates

No field duplicates were identified in this SDG.

XII. Internal Standards (ICP-MS)

Internal standards data were not reviewed for Stage 2A validation.

XIII. Sample Result Verification

Raw data were not reviewed for Stage 2A validation.

XIV. Overall Assessment of Data

The analysis was conducted within all specifications of the methods. No results were rejected in this SDG.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with a modified outline of the USEPA National Functional Guidelines (NFG) for Inorganic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following methods:

Copper and Zinc by Environmental Protection Agency (EPA) SW 846 Method 6020B
Mercury by EPA Method 1631E

All sample results were subjected to Stage 2A data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

DNR Do not report from this analysis; the result for this analyte is to be reported from an alternative analysis.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition.

All technical holding time requirements were met.

II. ICPMS Tune

ICP-MS tune data were not reviewed for Stage 2A validation.

III. Instrument Calibration

Instrument calibration data were not reviewed for Stage 2A validation.

IV. ICP Interference Check Sample Analysis

ICP Interference check sample (ICS) analysis data were not reviewed for Stage 2A validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the methods. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Analyte	MS (%R) (Limits)	MSD (%R) (Limits)	Flag	A or P
BBH-S-76-4MS/MSD (BBH-S-76-4 BBH-S-76-8 BBH-B-03-10 BBH-B-06-10 BBH-S-78-4 BBH-S-78-8 BBH-S-79-4 BBH-S-79-8 BBH-S-79-8DL BBH-B-18-10 BBH-S-80-4 BBH-S-80-8 BBH-S-75-8)	Zinc	68 (75-125)	-	J (all detects) UJ (all non-detects)	A

Spike ID (Associated Samples)	Analyte	MS (%R) (Limits)	MSD (%R) (Limits)	Flag	A or P
BBH-S-76-4MS/MSD (BBH-S-76-4 BBH-S-76-8 BBH-S-78-4 BBH-S-79-4 BBH-S-75-8)	Mercury	-	144 (71-125)	J (all detects)	A
BBH-S-76-4MS/MSD (BBH-S-77-8 BBH-B-03-10 BBH-B-06-10 BBH-S-78-8 BBH-S-79-8 BBH-B-18-10 BBH-S-80-4 BBH-S-80-8)	Mercury	-	144 (71-125)	NA	-

Relative percent differences (RPD) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Analyte	RPD (Limits)	Flag	A or P
BBH-S-76-4MS/MSD (BBH-S-76-4 BBH-S-76-8 BBH-B-03-10 BBH-B-06-10 BBH-S-78-4 BBH-S-78-8 BBH-S-79-4 BBH-S-79-8 BBH-S-79-8DL BBH-B-18-10 BBH-S-80-4 BBH-S-80-8 BBH-S-75-8)	Copper Zinc	21 (≤20) 32 (≤20)	J (all detects) UJ (all non-detects) J (all detects) UJ (all non-detects)	A
BBH-S-76-4MS/MSD (BBH-S-76-4 BBH-S-76-8 BBH-S-77-8 BBH-B-03-10 BBH-B-06-10 BBH-S-78-4 BBH-S-78-8 BBH-S-79-4 BBH-S-79-8 BBH-B-18-10 BBH-S-80-4 BBH-S-80-8 BBH-S-75-8)	Mercury	26 (≤20)	J (all detects) UJ (all non-detects)	A

VIII. Duplicate Sample Analysis

The laboratory has indicated that there were no duplicate (DUP) analyses specified for the samples in this SDG, and therefore duplicate analyses were not performed for this SDG.

IX. Serial Dilution

Serial dilution was not performed for this SDG.

X. Laboratory Control Samples

Laboratory control samples (LCS) were analyzed as required by the methods. Percent recoveries (%R) were within QC limits.

XI. Field Duplicates

No field duplicates were identified in this SDG.

XII. Internal Standards (ICP-MS)

Internal standards data were not reviewed for Stage 2A validation.

XIII. Sample Result Verification

Raw data were not reviewed for Stage 2A validation.

XIV. Overall Assessment of Data

The analysis was conducted within all specifications of the methods.

In the case where more than one result was reported for an individual sample, the least technically acceptable results were deemed not reportable as follows:

Sample	Analyte	Reason	Flag	A or P
BBH-S-79-8DL	Copper Zinc	Sample with lower dilution is more acceptable due to having a detected result.	DNR	-

Due to MS/MSD %R and RPD, data were qualified as estimated in thirteen samples.

No results were rejected in this SDG.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with a modified outline of the USEPA National Functional Guidelines (NFG) for Inorganic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following methods:

Copper and Zinc by Environmental Protection Agency (EPA) SW 846 Method 6020B
Mercury by EPA Method 1631E

All sample results were subjected to Stage 2A data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition.

All technical holding time requirements were met.

II. ICPMS Tune

ICP-MS tune data were not reviewed for Stage 2A validation.

III. Instrument Calibration

Instrument calibration data were not reviewed for Stage 2A validation.

IV. ICP Interference Check Sample Analysis

ICP Interference check sample (ICS) analysis data were not reviewed for Stage 2A validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the methods. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Analyte	MS (%R) (Limits)	MSD (%R) (Limits)	Flag	A or P
BBH-523MS/MSD (BBH-S-81-4 BBH-S-82-4 BBH-S-83-4 BBH-S-85-4 BBH-S-65-8)	Copper	63 (75-125)	-	J (all detects) UJ (all non-detects)	A

For BBH-523MS/MSD, no data were qualified for mercury percent recoveries (%R) outside the QC limits since the parent sample results were greater than 4X the spike concentration.

Relative percent differences (RPD) were within QC limits.

VIII. Duplicate Sample Analysis

The laboratory has indicated that there were no duplicate (DUP) analyses specified for the samples in this SDG, and therefore duplicate analyses were not performed for this SDG.

IX. Serial Dilution

Serial dilution was not performed for this SDG.

X. Laboratory Control Samples

Laboratory control samples (LCS) were analyzed as required by the methods. Percent recoveries (%R) were within QC limits.

XI. Field Duplicates

Samples BBH-523 and BBH-S-39-8 were identified as field duplicates. No results were detected in any of the samples with the following exceptions:

Analyte	Concentration (mg/Kg)		RPD
	BBH-523	BBH-S-39-8	
Mercury	1.1	0.94	16

XII. Internal Standards (ICP-MS)

Internal standards data were not reviewed for Stage 2A validation.

XIII. Sample Result Verification

Raw data were not reviewed for Stage 2A validation.

XIV. Overall Assessment of Data

The analysis was conducted within all specifications of the methods.

Due to MS/MSD %R, data were qualified as estimated in five samples.

No results were rejected in this SDG.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with a modified outline of the USEPA National Functional Guidelines (NFG) for Inorganic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following methods:

Copper by Environmental Protection Agency (EPA) SW 846 Method 6020B
Mercury by EPA Method 1631E

All sample results were subjected to Stage 2A data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

DNR Do not report from this analysis; the result for this analyte is to be reported from an alternative analysis.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition.

All technical holding time requirements were met.

II. ICPMS Tune

ICP-MS tune data were not reviewed for Stage 2A validation.

III. Instrument Calibration

Instrument calibration data were not reviewed for Stage 2A validation.

IV. ICP Interference Check Sample Analysis

ICP Interference check sample (ICS) analysis data were not reviewed for Stage 2A validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the methods. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

VIII. Duplicate Sample Analysis

The laboratory has indicated that there were no duplicate (DUP) analyses specified for the samples in this SDG, and therefore duplicate analyses were not performed for this SDG.

IX. Serial Dilution

Serial dilution was not performed for this SDG.

X. Laboratory Control Samples

Laboratory control samples (LCS) were analyzed as required by the methods. Percent recoveries (%R) were within QC limits.

XI. Field Duplicates

No field duplicates were identified in this SDG.

XII. Internal Standards (ICP-MS)

Internal standards data were not reviewed for Stage 2A validation.

XIII. Sample Result Verification

Raw data were not reviewed for Stage 2A validation.

XIV. Overall Assessment of Data

The analysis was conducted within all specifications of the methods.

In the case where more than one result was reported for an individual sample, the least technically acceptable results were deemed not reportable as follows:

Sample	Analyte	Reason	Flag	A or P
BBH-B-23-11DL	Copper	Sample with lower dilution is more acceptable due to having a detected result.	DNR	-

No results were rejected in this SDG.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with a modified outline of the USEPA National Functional Guidelines (NFG) for Inorganic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following methods:

Copper by Environmental Protection Agency (EPA) SW 846 Method 6020B
Mercury by EPA Method 1631E

All sample results were subjected to Stage 2A data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

DNR Do not report from this analysis; the result for this analyte is to be reported from an alternative analysis.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition.

All technical holding time requirements were met.

II. ICPMS Tune

ICP-MS tune data were not reviewed for Stage 2A validation.

III. Instrument Calibration

Instrument calibration data were not reviewed for Stage 2A validation.

IV. ICP Interference Check Sample Analysis

ICP Interference check sample (ICS) analysis data were not reviewed for Stage 2A validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the methods. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

VIII. Duplicate Sample Analysis

The laboratory has indicated that there were no duplicate (DUP) analyses specified for the samples in this SDG, and therefore duplicate analyses were not performed for this SDG.

IX. Serial Dilution

Serial dilution was not performed for this SDG.

X. Laboratory Control Samples

Laboratory control samples (LCS) were analyzed as required by the methods. Percent recoveries (%R) were within QC limits.

XI. Field Duplicates

Samples GFB12-S-06-4 and GFB12-524 were identified as field duplicates. No results were detected in any of the samples with the following exceptions:

Analyte	Concentration (mg/Kg)		RPD
	GFB12-S-06-4	GFB12-524	
Mercury	1.2	1.3	8

XII. Internal Standards (ICP-MS)

Internal standards data were not reviewed for Stage 2A validation.

XIII. Sample Result Verification

Raw data were not reviewed for Stage 2A validation.

XIV. Overall Assessment of Data

The analysis was conducted within all specifications of the methods.

In the case where more than one result was reported for an individual sample, the least technically acceptable results were deemed not reportable as follows:

Sample	Analyte	Reason	Flag	A or P
BBH-B-08-11DL	Copper	Sample with lower dilution is more acceptable due to having a detected result.	DNR	-

No results were rejected in this SDG.

SUBJECT: Kimberly-Clark Upland Area, Data Validation

Dear Ms. Brock,

Enclosed are the final validation reports for the fractions listed below. These SDGs were received on November 12, 2020. Attachment 1 is a summary of the samples that were reviewed for each analysis.

LDC Project #49664:

SDG #	Fraction
010352, 010369, 010391 010462, 010506, 010541 011027, 011068	Metals, Total Petroleum Hydrocarbons as Extractables

The data validation was performed under Stage 2A guidelines. The analyses were validated using the following documents, as applicable to each method:

- USEPA National Functional Guidelines for Organic Superfund Methods Data Review, January 2017
- USEPA National Functional Guidelines for Inorganic Superfund Methods Data Review; January 2017
- EPA SW 846, Third Edition, Test Methods for Evaluating Solid Waste, update 1, July 1992; update IIA, August 1993; update II, September 1994; update IIB, January 1995; update III, December 1996; update IIIA, April 1998; IIIB, November 2004; update IV, February 2007; update V, July 2014

Please feel free to contact us if you have any questions.

Sincerely,

Christina Rink

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with a modified outline of the USEPA National Functional Guidelines (NFG) for Inorganic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following methods:

Copper by Environmental Protection Agency (EPA) SW 846 Method 6020B
Mercury by EPA Method 1631E

All sample results were subjected to Stage 2A data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition.

All technical holding time requirements were met.

II. ICPMS Tune

ICP-MS tune data were not reviewed for Stage 2A validation.

III. Instrument Calibration

Instrument calibration data were not reviewed for Stage 2A validation.

IV. ICP Interference Check Sample Analysis

ICP Interference check sample (ICS) analysis data were not reviewed for Stage 2A validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the methods. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Analyte	MS (%R) (Limits)	MSD (%R) (Limits)	Flag	A or P
BBH-S-98-4MS/MSD (BBH-S-98-4 BBH-S-99-8 GFB12-S-09-4 GFB12-S-12-4)	Mercury	-	130 (71-125)	J (all detects)	A
BBH-S-98-4MS/MSD (BBH-S-100-4 GFB12-S-10-4 GFB12-S-11-4 GFB12-B-01-8)	Mercury	-	130 (71-125)	NA	-

Relative percent differences (RPD) were within QC limits.

VIII. Duplicate Sample Analysis

The laboratory has indicated that there were no duplicate (DUP) analyses specified for the samples in this SDG, and therefore duplicate analyses were not performed for this SDG.

IX. Serial Dilution

Serial dilution was not performed for this SDG.

X. Laboratory Control Samples

Laboratory control samples (LCS) were analyzed as required by the methods. Percent recoveries (%R) were within QC limits.

XI. Field Duplicates

No field duplicates were identified in this SDG.

XII. Internal Standards (ICP-MS)

Internal standards data were not reviewed for Stage 2A validation.

XIII. Sample Result Verification

Raw data were not reviewed for Stage 2A validation.

XIV. Overall Assessment of Data

The analysis was conducted within all specifications of the methods.

Due to MS/MSD %R, data were qualified as estimated in four samples.

No results were rejected in this SDG.

VALIDATION FINDINGS WORKSHEET
Matrix Spike/Matrix Spike Duplicates

Reviewer: DTM

METHOD: Trace metals (EPA SW 846 Method 6020/6010/7470)

Please see qualifications below for all questions answered "N". Not applicable questions are identified as "N/A".

Y N N/A Was a matrix spike analyzed for each matrix in this SDG?

Y N N/A Were matrix spike percent recoveries (%R) within the control limits of 75-125? If the sample concentration exceeded the spike concentration by a factor of 4 or more, no action was taken.

Y N N/A Were all duplicate sample relative percent differences (RPD) ≤ 20% for samples?

LEVEL IV ONLY:

Y N N/A Were recalculated results acceptable? See Level IV Recalculation Worksheet for recalculations.

#	MS/MSD ID	Matrix	Analyte	MS %Recovery	MSD %Recovery	RPD (Limits)	Associated Samples	Qual	DET	ND	PS Recovery%
	9-10	S	Hg		130 (71-125)		ALL	J/A		3,5-6,8

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with a modified outline of the USEPA National Functional Guidelines (NFG) for Inorganic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Mercury by Environmental Protection Agency (EPA) Method 1631E

All sample results were subjected to Stage 2A data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition.

All technical holding time requirements were met.

II. Instrument Calibration

Instrument calibration data were not reviewed for Stage 2A validation.

III. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

IV. Field Blanks

No field blanks were identified in this SDG.

V. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

VI. Duplicate Sample Analysis

The laboratory has indicated that there were no duplicate (DUP) analyses specified for the samples in this SDG, and therefore duplicate analyses were not performed for this SDG.

VII. Laboratory Control Samples

Laboratory control samples (LCS) were analyzed as required by the method. Percent recoveries (%R) were within QC limits.

VIII. Field Duplicates

No field duplicates were identified in this SDG.

IX. Sample Result Verification

Raw data were not reviewed for Stage 2A validation.

X. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with a modified outline of the USEPA National Functional Guidelines (NFG) for Inorganic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Mercury by Environmental Protection Agency (EPA) Method 1631E

All sample results were subjected to Stage 2A data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition.

All technical holding time requirements were met.

II. Instrument Calibration

Instrument calibration data were not reviewed for Stage 2A validation.

III. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

IV. Field Blanks

No field blanks were identified in this SDG.

V. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Analyte	MS (%R) (Limits)	MSD (%R) (Limits)	Flag	A or P
BBH-S-106-4MS/MSD (All samples in SDG 010462)	Mercury	145 (71-125)	148 (71-125)	J (all detects)	A

Relative percent differences (RPD) were within QC limits.

VI. Duplicate Sample Analysis

The laboratory has indicated that there were no duplicate (DUP) analyses specified for the samples in this SDG, and therefore duplicate analyses were not performed for this SDG.

VII. Laboratory Control Samples

Laboratory control samples (LCS) were analyzed as required by the method. Percent recoveries (%R) were within QC limits.

VIII. Field Duplicates

No field duplicates were identified in this SDG.

IX. Sample Result Verification

Raw data were not reviewed for Stage 2A validation.

X. Overall Assessment of Data

The analysis was conducted within all specifications of the method.

Due to MS/MSD %R, data were qualified as estimated in three samples.

No results were rejected in this SDG.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with a modified outline of the USEPA National Functional Guidelines (NFG) for Inorganic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following methods:

Copper, Lead, and Zinc by Environmental Protection Agency (EPA) SW 846 Method 6020B
Mercury by EPA Method 1631E

All sample results were subjected to Stage 2A data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition.

All technical holding time requirements were met.

II. ICPMS Tune

ICP-MS tune data were not reviewed for Stage 2A validation.

III. Instrument Calibration

Instrument calibration data were not reviewed for Stage 2A validation.

IV. ICP Interference Check Sample Analysis

ICP Interference check sample (ICS) analysis data were not reviewed for Stage 2A validation.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the methods. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

VIII. Duplicate Sample Analysis

The laboratory has indicated that there were no duplicate (DUP) analyses specified for the samples in this SDG, and therefore duplicate analyses were not performed for this SDG.

IX. Serial Dilution

Serial dilution was not performed for this SDG.

X. Laboratory Control Samples

Laboratory control samples (LCS) were analyzed as required by the methods. Percent recoveries (%R) were within QC limits.

XI. Field Duplicates

No field duplicates were identified in this SDG.

XII. Internal Standards (ICP-MS)

Internal standards data were not reviewed for Stage 2A validation.

XIII. Sample Result Verification

Raw data were not reviewed for Stage 2A validation.

XIV. Overall Assessment of Data

The analysis was conducted within all specifications of the methods. No results were rejected in this SDG.

Laboratory Data Consultants, Inc.
Data Validation Report

Project/Site Name: Kimberly-Clark Upland Area

LDC Report Date: November 20, 2020

Parameters: Total Petroleum Hydrocarbons as Extractables

Validation Level: Stage 2A

Laboratory: Friedman & Bruya, Inc.

Sample Delivery Group (SDG): 010506

Sample Identification	Laboratory Sample Identification	Matrix	Collection Date
DT-B-06-8	010506-02	Soil	10/28/20
DT-S-01-4	010506-03	Soil	10/28/20

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with a modified outline of the USEPA National Functional Guidelines (NFG) for Organic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Total Petroleum Hydrocarbons (TPH) as Extractables by NWTPH-Dx

All sample results were subjected to Stage 2A data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered not detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. Initial Calibration and Initial Calibration Verification

Initial calibration data were not reviewed for Stage 2A validation.

III. Continuing Calibration

Continuing calibration data were not reviewed for Stage 2A validation.

IV. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

V. Field Blanks

No field blanks were identified in this SDG.

VI. Surrogates

Surrogates were added to all samples as required by the method. All surrogate recoveries (%R) were within QC limits.

VII. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

VIII. Laboratory Control Samples

Laboratory control samples (LCS) were analyzed as required by the method. Percent recoveries (%R) were within QC limits.

IX. Field Duplicates

No field duplicates were identified in this SDG.

X. Compound Quantitation

Raw data were not reviewed for Stage 2A validation.

XI. Target Compound Identifications

Raw data were not reviewed for Stage 2A validation.

XII. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with a modified outline of the USEPA National Functional Guidelines (NFG) for Inorganic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Mercury by Environmental Protection Agency (EPA) Method 1631E

All sample results were subjected to Stage 2A data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition.

All technical holding time requirements were met.

II. Instrument Calibration

Instrument calibration data were not reviewed for Stage 2A validation.

III. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

IV. Field Blanks

No field blanks were identified in this SDG.

V. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. For GFB12-S-16-4MS/MSD, no data were qualified for mercury percent recoveries outside the QC limits since the parent sample results were greater than 4X the spike concentration. Relative percent differences (RPD) were within QC limits.

VI. Duplicate Sample Analysis

The laboratory has indicated that there were no duplicate (DUP) analyses specified for the samples in this SDG, and therefore duplicate analyses were not performed for this SDG.

VII. Laboratory Control Samples

Laboratory control samples (LCS) were analyzed as required by the method. Percent recoveries (%R) were within QC limits.

VIII. Field Duplicates

No field duplicates were identified in this SDG.

IX. Sample Result Verification

Raw data were not reviewed for Stage 2A validation.

X. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with a modified outline of the USEPA National Functional Guidelines (NFG) for Inorganic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Mercury by Environmental Protection Agency (EPA) Method 1631E

All sample results were subjected to Stage 2A data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition.

All technical holding time requirements were met.

II. Instrument Calibration

Instrument calibration data were not reviewed for Stage 2A validation.

III. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

IV. Field Blanks

No field blanks were identified in this SDG.

V. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample.

For GFB12-S-17-4MS/MSD, no data were qualified for mercury percent recoveries outside the QC limits since the parent sample results were greater than 4X the spike concentration.

Relative percent differences (RPD) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Analyte	RPD (Limits)	Flag	A or P
GFB12-S-17-4MS/MSD (All samples in SDG 011027)	Mercury	50 (≤20)	J (all detects)	A

VI. Duplicate Sample Analysis

The laboratory has indicated that there were no duplicate (DUP) analyses specified for the samples in this SDG, and therefore duplicate analyses were not performed for this SDG.

VII. Laboratory Control Samples

Laboratory control samples (LCS) were analyzed as required by the method. Percent recoveries (%R) were within QC limits.

VIII. Field Duplicates

No field duplicates were identified in this SDG.

IX. Sample Result Verification

Raw data were not reviewed for Stage 2A validation.

X. Overall Assessment of Data

The analysis was conducted within all specifications of the method.

Due to MS/MSD RPD, data were qualified as estimated in one sample.

No results were rejected in this SDG.

APPENDIX D

Report of Archaeological Monitoring (Perteet Inc.)

Allyson Brooks Ph.D., Director
State Historic Preservation Officer

December 28, 2020

Mr. Steve Germiat
Principal Hydrogeologist
Aspect Consulting

In future correspondence please refer to:
Project Tracking Code: 050912-24-SN
Property: Kimberly Clark Pulp and Paper Mill Demolition World Wide
Re: Archaeology - Concur with Monitoring Report

Dear Mr. Germiat:

The State Historic Preservation Officer (SHPO) and the Department of Archaeology and Historic Preservation (DAHP) has been provided with documentation regarding the above referenced project. In response, we concur with the results and recommendations made in the monitoring report entitled "Results of Archaeological Monitoring for the Kimberly-Clark Everett Interim Action." Specifically, we agree that although the building remnants and infrastructure found during monitoring likely date to the historical period, not enough was found during this project to require any further archaeological work at this time. No further archaeological work is recommended for this project.

These comments are based on the information available at the time of this review and on behalf of the SHPO pursuant to Washington State law. Please note that should the project scope of work and/or location change significantly, please contact DAHP for further review.

Thank you for the opportunity to review and comment. Please ensure that the DAHP Project Number (a.k.a. Project Tracking Code) is attached to any further communications with the DAHP about this project. Should you have any questions, please feel free to contact me.

Sincerely,

Stephanie Jolivette
Local Governments Archaeologist

Re: Results of Archaeological Monitoring for the Kimberly-Clark Everett Interim Action

Dear Mr. Germiat,

This letter provides the results of cultural resources monitoring conducted by Perteet for the Kimberly-Clark Interim Action Project at the Kimberly-Clark Worldwide Site Upland Area (Site) in Everett, Washington (Figure 1). The project location, regulatory context, monitoring methods, and results are described in detail below. Detailed background information on the natural and cultural environments of the project area are provided by Rinck and colleagues (2013) and will not be repeated in this report.

Archaeological monitoring of excavations for the current phase of the Interim Action Project is now complete. Sediments removed during excavation were limited to historical fill; no native sediments or soils were encountered during monitoring. No pre-contact archaeological materials were observed during monitoring. Subsurface remnants of historical mill structures were encountered and documented during monitoring of excavation in two project areas. Structural elements documented in the Hydraulic Barker (HB) area probably represent remnants of the hydraulic debarking facility erected by the Soundview Pulp Company in 1945 (Everett Daily Herald, Feb. 8, 1954:20). Structural elements documented in the Central Maintenance Shop (CMS) area represent remnants of various infrastructure and facilities installed from the 1930s onward. Subsurface structural remains observed during monitoring were not removed and remain in situ.

No observed structural elements incorporated distinctive features that could yield historical insight through additional research, and no historical artifacts were encountered in association with structural remains. Standing historical mill structures throughout the site were demolished in 2013 after a Final Mitigated Determination of Non-Significance issued by the City of Everett (Attachment A) required an evaluation of the historical significance of only the Puget Sound Pulp and Timber Main Office Building, which is outside the current project area. No additional work is therefore recommended within the current project area.

PROJECT LOCATION AND DESCRIPTION

Kimberly-Clark (K-C) has undertaken removal of contaminated soil in nine areas within the Site (Figure 2). The Site lies within Section 19 of Township 29 North, Range 5 East, Willamette Meridian. It is south of US Naval Station Everett, adjacent to the East Waterway in Port Gardner Bay, and bordered to the west by the BNSF railroad. Data from geotechnical boreholes and geoarchaeological analysis indicate that seven of the nine

planned cleanup areas were entirely within historical dredge fill associated with development of the mill site (Rinck et al. 2013). However, the CMS and HB areas lie within an area previously identified as having a high potential for encountering native sediment during excavations (Figure 3). These two areas therefore required archaeological monitoring during removal of contaminated sediments.

Removal of contaminated materials involved excavation of uncontaminated backfill overburden and underlying contaminated deposits, followed by disposal of contaminated materials at an off-site facility. Cleanup work was conducted by Aspect Consulting, LLC (Aspect) on behalf of K-C under the guidance of an Interim Action Work Plan (IAWP) prepared by Aspect as an exhibit to an Amendment to Agreed Order No. DE 9476 (Order) between K-C and the Washington State Department of Ecology (Ecology) (Aspect 2019). A prior phase of interim cleanup was undertaken in 2013-2014 under this Order. All documents pertaining to the current IAWP and Order are available on the Ecology website (WSDE 2020).

REGULATORY SETTING

The project is subject to the Washington State Environmental Policy Act (SEPA) that requires the project proponent to identify any places or objects listed on or eligible for national, state, or local preservation registers in the vicinity of the project. The regulation also requires proponents to describe evidence for sites of historic, archaeological, scientific, or cultural importance in the vicinity of a project, and describe proposed measures to reduce or control impacts to those sites. Agencies are encouraged by SEPA to consult with others to find acceptable ways to avoid or mitigate any adverse impacts that may be caused by the project.

The project is also subject to several Washington state laws pertaining to archaeological cultural resources. For example, the Archaeological Sites and Resources Act [RCW 27.53] prohibits knowingly excavating or disturbing prehistoric and historic archaeological sites on public or private land. The Indian Graves and Records Act [RCW 27.44] prohibits knowingly destroying American Indian graves and provides that inadvertent disturbance through construction or other activities requires re-interment under supervision of the appropriate Indian tribe. In order to prevent the looting or depredation of sites, any maps, records, or other information identifying the location of archaeological sites, historic sites, artifacts, or the site of traditional ceremonial, or social uses and activities of Indian Tribes are also exempt from disclosure [RCW 42.56.300].

The Tulalip Tribes have previously communicated to Ecology that the Everett waterfront is a very culturally sensitive area. Previous cultural resources assessment (Rinck et al. 2013) and was completed due to the Tribe's and other interested parties' concern for cultural resources in the project vicinity.

PROJECT BACKGROUND

A cultural resources assessment was conducted in 2013 prior to demolition of historical mill structures and initial cleanup efforts at the Site (Rinck et al. 2013). This work reviewed extensive historical and geotechnical data to detail the long history of use of the project vicinity by Native Americans and subsequent Euroamerican settlers, including extensive modification of the Site in conjunction with development of the historical mill. This land modification emplaced large amounts of dredge and mill fill across the Site, and extended the former shoreline westward by over 500 feet (152 meters) in some areas, covering native foreshore, marshland, and sub-tidal depositional environments. Variable depths of fill across the Site were documented, and areas of high archaeological sensitivity within the Site were identified (Figure 3). An archaeological monitoring and discovery plan (MDP) was formulated to guide subsequent demolition and cleanup efforts (Rinck 2013). This plan calls for monitoring of fill excavations by a geologist, and archaeological monitoring of excavation below fill in moderate and high sensitivity areas or when intact cultural materials are observed by the geologist.

Archaeological monitoring following this MDP was performed during prior cleanup efforts at the site in 2013 to the south of current project areas (Undem et al. 2014). Monitoring efforts documented a small amount of historical and pre-contact cultural material within historical fill. In all cases where cultural materials were encountered, poor integrity and a lack of data potential precluded the need for additional targeted recovery or mitigation measures. Historical features observed were associated with mill construction and operation. Pre-contact materials encountered include one pre-contact edge-altered cobble (stone chopping/digging tool) and several fragments of fire-modified rock (FMR). All pre-contact materials were encountered in displaced contexts within lower fill at about 6.5 feet (2 meters) below the surface. The stone tool was recorded as an isolate (Smithsonian trinomial 45SN629) (Undem 2014) and donated to Hibulb Cultural Center; no other cultural remains encountered during this phase of work were formally recorded as archaeological sites.

In the current project area, fill deposits were expected to be roughly 6 feet (1.8 meters) thick in the HB area and between 6 and 12 feet (1.8 to 3.7 meters) thick in the CMS area based on available geotechnical data (Rinck et al. 2013) and observations from previous cleanup efforts in the vicinity (Aspect 2015). Natural deposits below the fill include sediments deposited in backshore, beach, foreshore, marsh, and sub-tidal deltaic environments. Thus current project excavations had potential to encounter pre-contact and early historical cultural materials along the historical shoreline but buried below the fill. The fill could also harbor stable former surfaces with potential for historical cultural materials.

CULTURAL RESOURCES MONITORING METHODS

Prior to the start of excavation, Perteet archaeologist Emily Peterson coordinated with Aspect project leads to review the site MDP established prior to earlier cleanup efforts. As per this plan, site excavation in historical fill containing no cultural remains was monitored by a geologist. Aspect notified Perteet when excavation was anticipated to extend below fill, and a Perteet archaeologist was then deployed to perform excavation monitoring. On the first day of archaeological monitoring, Perteet archaeologist Jack Johnson met with Aspect and other project personnel on-site to review monitoring and site safety protocols.

Archaeological monitoring was performed in two distinct areas within the Site: the Hydraulic Barker (HB) area and the Central Maintenance Shop (CMS) area. Archaeological monitoring of the HB area was performed on May 29, 2020 by Jack Johnson. In this location, removal of a roughly 50 foot by 20 foot (15.2 by 9.1 meter) area of overburden to a depth of roughly 6 feet (1.8 meters) below surface was completed prior to archaeological monitoring to allow equipment access for dewatering. At the eastern edge of this area, a roughly 20 foot by 20 foot (6 by 6 meter) area of historical fill had also been excavated to a depth of roughly 10 feet (3 meters) below surface prior to the arrival of the archaeological monitor. The archaeological monitor observed subsequent excavation of this smaller area to a depth of roughly 13 feet (4 meters) below the surface, where excavation ended. Archaeological monitoring of the CMS area was performed on July 10, 13, and 14 by Perteet archaeologist Patrick Garrison. A small amount of overburden fill had been removed prior to archaeological monitoring in this area; archaeological monitoring observed subsequent excavation of this area to a depth of about 6 feet (1.8 meters) below the surface, where excavation ended.

Throughout archaeological monitoring, Perteet archaeologists described excavation methods, sediments, and cultural materials encountered using standardized forms and terminology. Photographs were taken using digital cameras and a log of all photographs taken was kept. Location data were recorded on hand-drawn maps. Excavation spoils were examined for cultural materials.

Due to the contaminated nature of the site, archaeological monitoring in both areas was performed at a safe distance from potentially-contaminated deposits. This inhibited the archaeologists' ability to closely examine cultural materials or subsurface stratigraphy encountered during excavation, especially in the small HB area

where a combination of contaminated materials, space constraints, and excavation depth prevented safe entry into the fully-excavated pit. However, historical structural remains and debris encountered during excavation were identifiable from the surface grade in this area. Further, because project objectives focused on the removal of loose contaminated sediment, site excavation was able to work around extant structural remains without displacing these remains, facilitating exposure and documentation from a safe working distance.

RESULTS OF CULTURAL RESOURCES MONITORING

In both excavation areas, archaeological monitors observed and documented structural remains and building debris associated with historical mill operations. Identified structural remains were within historical fill, and no evidence of intact cultural remains within native sediment was observed. No pre-contact cultural materials were observed.

Within the HB area, structural remains included concrete foundations, wood pilings, and brick and metal debris. Debris was encountered between roughly 6 and 10 feet (1.8 to 3 meters) below the surface within mottled brown fill (Figure 4). Concrete features and wood piling were encountered at roughly 10 feet (3 meters) to 11 feet (3.35 meters) below the surface. They include a 10-inch (25 centimeter) thick, 5-foot (1.5 meter) wide concrete foundation in the south wall of the excavation pit, a small concrete footing at the east edge of the pit, and an elbow-shaped concrete feature protruding from the north wall of the pit and trending westward (Figures 5 and 6). One displaced timber piling protruded from the south wall of the pit adjacent to the concrete foundation, and another remained *in situ* at the elbow of the concrete feature protruding from the north wall. These materials are remnants of the former hydraulic bark removal facility erected in 1945 at this location (Figure 7), and the elbow-shaped concrete feature probably represents the remnant of the southernmost of the former log ways used to collect floated logs from the shoreline waterway, which was adjacent to this structure at the time.

Within the CMS area, structural remains included a concrete vault, concrete pipe, foundations, and walkways, one segment of wood stave pipe, steel pipes, and brick debris (Figure 8). Cultural materials in this location were shallowly-buried, and all lie within historical fill in the upper 6 feet (1.8 meters) of subsurface deposits. The wood stave pipe (Figure 9) represents remnant mill process sewer pipes indicated in historic maps from 1957 (Figure 10), and were probably installed during the early period of mill operation in the 1930s given the construction methods and materials used. Other extant structural remains probably date to the 1950s or later; historic maps and aerial imagery indicate this portion of the site was relatively undeveloped until sometime between 1941 and 1952 (Figures 11 and 12) with most of the previous structures in this area dating to the 1960s or later.

The types of historic features and debris encountered during monitoring are ubiquitous and lack the potential to yield historical insights in the absence of diagnostic features or associated intact deposits of contemporary artifacts. For example, similar structural remnants of dozens of buildings can be expected at this Site alone. Perteet therefore did not record these features as one or more archaeological sites, but instead documented them with detailed notes and photographs. Observed structural features described above also remain *in situ*, and were not removed or otherwise adversely affected by cleanup excavations.

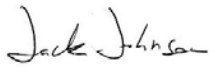
DISCUSSION

Structural remains associated with the historical mill were encountered during archaeological monitoring of excavations in both the HB and the CMS areas. Observed structural remains date primarily to the mid-1940s or later, although a segment of wood stave pipe in the CMS area may date to initial mill operation in the 1930s. Remains were not associated with deposits of other cultural materials that could provide additional information related to the history of mill operations at the Site, and therefore do not hold any potential for yielding additional historical insights.

No precontact artifacts or buried surfaces were observed during monitoring. Ground disturbance in the HB and CMS areas is now complete, and no further monitoring or cultural resources investigations are recommended.

Thank you for the opportunity to work with you on this project. Please do not hesitate to contact me with any questions regarding this report.

Sincerely,



Jack Johnson, Ph.D., RPA
Project Archaeologist, Perteet Inc.

ATTACHMENT A
Determination of Non-Significance

FINAL MITIGATED
DETERMINATION OF NON-SIGNIFICANCE
SEPA12-010
May 25, 2012

Description of Proposal: Demolition of Kimberly Clark Pulp and Paper Mill facilities upland from the shoreline, not including any structures or utilities located more than 2 feet below existing grade.

Applicant: Kimberly Clark Worldwide
Rick Tucker, Mill Manager
2600 Federal Avenue
Everett, WA 98201

Location: 2600 Federal Ave

Zoning: M-2 -- Heavy Industry

Lead Agency: City of Everett Planning Department

Contact Person: John Jimerson Phone: (425) 257-8731

AGENCIES WITH JURISDICTION

The following agencies have been identified as possibly having jurisdiction over the proposal. It is the responsibility of the applicant to identify and obtain all necessary permits and approvals.

1. Department of Ecology (Construction Stormwater General Permit, NPDES Water Discharge Permit Modification/ Demolition Notification).

2. Department of Labor and Industries (Asbestos Abatement/Demolition Notification).

THRESHOLD DETERMINATION

The lead agency for this proposal has determined that it does not have a probable significant adverse impact on the environment. An Environmental Impact Statement is not required under RCW 43.21C.030(2)(c). This determination assumes compliance with State law and City ordinances related to general environmental protection including but not limited to right-of-way improvement requirements, drainage, etc. This decision was made after review of a completed environmental checklist and other information on file with the lead agency. This information is available to the public on request. This Mitigated Determination of Non-Significance is specifically conditioned on compliance with the conditions attached hereto which are incorporated by reference as if fully set forth herein.

This Final DNS is issued under WAC 197-11-355. A 14-day public comment period for this proposal has been completed.

MITIGATION MEASURES

1. No demolition in the immediate vicinity of the Puget Sound Pulp and Timber Main Office Building, or of the building itself, may be commenced before: 1) Kimberly Clark has submitted an evaluation of the historical significance of that building, prepared by a qualified historian or other professional qualified to

perform such evaluation; 2) the City, in consultation with the Washington State Department of Archeology and Historic Preservation, has deemed the evaluation complete and adequate; and 3) Kimberly Clark has made a binding commitment approved by the City in consultation with the Washington State Department of Archeology and Historic Preservation to document and record historically significant aspects or features of the building and contribute same to an agency or entity as directed by the City.

This Final DNS is issued under WAC 197-11-355. A 14-day public comment period for this proposal has been completed.

Responsible Official: Allan Giffen, Director Phone: (425) 257-8731

Address: 2930 Wetmore Avenue, Suite 8-A, Everett, WA 98201

Date: May 25, 2012

Signature: _____

You may appeal this determination by filing an appeal on forms provided by the Planning Department and a *fee to the* Planning/Community Development Permit Services Counter at 3200 Cedar Street, 2nd Floor, no later than June 8, 2012.

Contact John Jimerson to read or ask about the procedures for SEPA appeals.

NOTE: A DNS may be withdrawn in the event of significant changes in the proposal, disclosure of new significant information, misrepresentation by the applicant, or failure to comply with the conditions upon which this Determination of Non-Significance is predicated.

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.

Recommendations are based upon data size, data distribution, and skewness.

These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).

However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

APPENDIX F

Groundwater pH Monitoring Data Collected during CM Removal

F. Groundwater pH Monitoring Conducted during CM Removal

This appendix presents groundwater pH monitoring data collected throughout the crushed material (CM) removal project, conducted in general accordance with the pH Monitoring Plan included as Appendix E to the Interim Action Work Plan (Work Plan; Aspect, 2019).

F.1.1. pH Monitoring Methods

As required by the CM Removal Plan of Operations (K-C, 2018), the CM was removed from 17 CM Excavation Sequencing Areas (Areas), arranged in three "rows" denoted Eastern Areas, Central Areas, and Western Areas based on their position on the Site, as follows:

- The Eastern Areas were, from south to north, A1, B1, F, G, L, and M (Figure F1)
- The Central Areas were, from south to north, A2, B2, E, H, K, and N (Figure F2)
- The Western Areas were, from south to north, C, D, I, J, and O (Figure F3)

CM removal was conducted in the Eastern Areas, followed by the Central Areas, followed by the Western Areas, except for minor areas of CM serving as haul roads and remaining beneath part of the eastern fence line until the last phases of the project.

Groundwater across the Site flows generally from east to west with discharge to the East Waterway. Monitoring was conducted in existing monitoring wells located downgradient (west) of an Area undergoing CM removal to assess whether that action created a pH increase in groundwater that posed a risk of migration to the East Waterway.

For each Area, two sets of wells were established in the pH Monitoring Plan: "proximal wells" positioned as close as possible downgradient (west) of the Area, and "downgradient wells" located downgradient of the proximal wells. Due to decommissioning of monitoring wells as the interim action or CM removal projects progressed, the following changes to wells monitored were implemented during the monitoring program, following discussion with and approval by Washington State Department of Ecology (Ecology):

- For monitoring of Eastern Area G, downgradient well GF9-MW-1 was not found in the field. Adjacent well GF9-MW-2, located approximately 25 feet south of it, was monitored to achieve coverage (Figure F1).
- For monitoring of Western Area C, well MW-1 replaced proximal wells PM-MW-7, REC7-MW-3, and UST68-MW-5 (Figure F3).
- For monitoring of Western Area D, wells UST71-MW-102 and BA6-MW-101 replaced proximal wells UST71-MW-101, UST71-MW-104, and BA-MW-5 (Figure F3).

As required by the pH Monitoring Plan, Ecology evaluated the pH data being collected during CM removal and agreed that no change to the proposed Area K proximal wells TM-MW-5 and LP-MW-1 was warranted based on the lack of other suitably located wells and lack of pH impact observed in monitoring through the first 3 months of CM removal, including all of the Eastern Areas.

Figures F1, F2, and F3 depict the proximal wells (blue-highlighted) and downgradient wells (orange-highlighted) monitored for the Eastern, Central, and Western Areas, respectively. The wells monitored for each Area are also included with their data in Tables F-1 through F-17.

Prior to the start of CM removal in each Area, monitoring was conducted in designated proximal and downgradient wells three times within a 1-week or longer period to document the baseline pH condition, defined as the average of the three pH measurements. Throughout the subsequent CM removal in an Area, and for a period of 3 weeks following its completion, pH monitoring was conducted at least weekly in the proximal wells. When CM excavation was occurring in the first Areas (A1 and B1), pH monitoring was conducted daily as required by the pH Monitoring Plan. Based on that initial dataset, Ecology agreed to maintain the weekly monitoring frequency unless CM was observed beneath the water table during its removal in a specific Area. Ultimately, CM was not observed beneath the water table[1] during the removal project, except in localized subsurface structures (e.g., vaults) that were generally isolated from the surrounding subsurface, and around the LP-MW-1 well location as described in Section F.1.2.1 below.

A "trigger pH" value was defined for each well as the baseline pH value plus 0.5 pH unit. If, during or following CM removal in an Area, groundwater pH in a proximal monitoring well was observed to increase and exceed the trigger pH for a period of 3 weeks, it would have triggered daily monitoring of the proximal wells and the start of monitoring in the downgradient wells for that Area. If groundwater pH was observed to increase and exceed the trigger pH for 1 week at the downgradient wells, K-C would have notified Ecology to discuss the situation and decide whether to implement a contingency remediation action to achieve protection of the East Waterway. The pH Monitoring Plan provides additional details regarding the pH monitoring program and the contingency action decision process.

F.1.2. pH Monitoring Results

Monitoring of 35 proximal wells over more than 4 months of CM removal covering approximately 32 acres documented no exceedances of a trigger pH value attributable to the CM removal action (Tables F-1 through F-17). Well LP-MW-1 did record a substantial pH increase, but it was not related to the CM removal action as discussed in the following section.

[1] Largely because CM removal was conducted during dry-season conditions when the water table was low.

The collective pH monitoring data demonstrate that removing the more than 200,000 tons of CM from the Site did not create migration of high-pH groundwater toward the East Waterway.

F.1.2.1. Well LP-MW-1

Between September 22 and 28, 2020, a dramatic groundwater pH increase, from pH 7.20 to pH 9.72, was measured in well LP-MW-1, which is located on the boundary between Western Areas I and J and within the footprint of the former log pond (Figure F2). As per the pH Monitoring Plan, LP-MW-1 was a proximal well to be monitored during CM removal in Areas H and K east of it. The pH spike was confirmed with a second measurement on September 29—a reading of pH 10.52, which was nearly 3 pH units greater than the pH 7.62 trigger value based on the well's baseline readings (Table F-10). However, collective information indicates that the pH spike was a result of a rapidly rising groundwater level submerging the base of the CM in that area, in response to a large-scale rain event; it was not due to CM removal activities.

As discussed in Aspect (2017) and again in the pH Monitoring Plan, well LP-MW-1 has historically had the highest pH readings measured on the Site, which is due to the facts that (1) its well screen is shallow enough that it intercepts the thick layer of CM in that area and (2) the log pond fill has low enough permeability that precipitation does not infiltrate there nearly as readily as the dredge fill outside of the log pond. Consequently, when the seasonal rains begin, the groundwater level within the log pond footprint "mounds up" because infiltration is so slow. The mounded groundwater submerges CM within the well's screened interval, which creates very high pH groundwater in the shallow depth interval screened by LP-MW-1.

Between August 31 and September 22, 2020, the pH readings in LP-MW-1, collected prior to and then during CM removal in Areas H and K, ranged from 7.0 to 7.5—near-neutral values typical of the water table being below the base of the CM in that area. For example, on September 3, the water level was 7.0 feet below the well's top of casing, confirming it was below the base of the CM. Between September 24 and 26, the Site received approximately 1.6 inches of rain. On September 28, the pH in LP-MW-1 had risen to 9.7; the water level was not measured that day. On September 29, when a pH of 10.5 was measured, the water level had risen to 3.3 feet below top of casing. Comparing the September 3 and September 29 readings, the water level rose about 3.7 feet, submerging the base of the CM, and the pH increased about 3.3 units in response. Figure F4 illustrates the relationship of water level (relative to the base of the CM) and pH at well LP-MW-1, with data going back to 2013.

The water level-pH effect was clearly observed at well LP-MW-1 both in 2016 and 2017, and the September 2020 data are a continuation of that seasonal effect—a result of the large precipitation event that preceded it and not the CM removal activities occurring east of it. That conclusion is further supported by the fact that pH changed by 0.3 pH units or less in each of the other six wells monitored on September 28 that are located outside of the log pond footprint: wells BA-MW-2, BA-MW-3, and CN-MW-101 increased slightly, while wells SHB-MW-102, PM-MW-4, and TM-MW-5 decreased slightly, relative to their prior measurement (Tables F-8, F-9, F-10, and F-12).

TABLES

Table F-1. Groundwater pH Data for Excavation Sequencing Area A1

Project No. 110207, Everett, Washington

	pH Reading in Standard Units				
	Proximal Wells		Downgradient Wells to Monitor if pH Increase >0.5 unit is Observed in Proximal Well(s)		
Date	BCT-MW-104	BCT-MW-106	REC7-MW-3	UST68-MW-5	REC7-MW-4
Baseline Readings for this Sequencing Area (3x in 1 week)					
6/3/2020	7.25	7.08		7.88	7.81
6/4/2020	7.34	7.18		7.93	7.95
6/5/2020	7.33	7.18		7.96	7.94

8/3/2020	6.84		
8/10/2020	6.88		
8/17/2020	6.88		
Weekly (at least) Compliance Readings for 3 Weeks After CM Removal is Done in this Sequencing Area			
8/24/2020	6.92		
8/31/2020	6.88		
9/3/2020	6.92		
9/8/2020	6.92		

Notes

"Trigger pH" for proximal wells is the pH that, if exceeded for 3 weeks, triggers daily monitoring of proximal well and start monitoring of downgradient wells.

"Trigger pH" for downgradient wells is the pH that, if exceeded for 1 week, triggers consultation with Ecology regarding response action.

Table F-5. Groundwater pH Data for Excavation Sequencing Area L

Project No. 110207, Everett, Washington

	pH Reading in Standard Units			
	Proximal Wells		Downgradient Wells to Monitor if pH Increase >0.5 unit is Observed in Proximal Well(s)	
Date	UST29-MW-103	LP-MW-4	UST29-MW101	UST29-MW102
Baseline Readings for this Sequencing Area (3x in 1 week)				
7/13/2020	9.21	6.92		
7/14/2020	9.22	6.92		
7/16/2020	9.19	6.91	9.97	7.91
7/17/2020	9.21	6.90	10.01	7.91
7/20/2020	8.82	6.89	10.07	8.68
Average Baseline	*9.13*	*6.91*	*10.02*	*8.17*
"Trigger pH"	***9.63***	***7.41***	***10.52***	***8.67***
Weekly (at least) Compliance Readings During CM Removal in this Sequencing Area *(Daily if CM is observed below water table)*				
8/3/2020	8.68	6.89		
8/10/2020	8.66	6.91		
8/17/2020	8.29	6.98		
Weekly (at least) Compliance Readings for 3 Weeks After CM Removal is Done in this Sequencing Area				
8/24/2020	8.33	6.95		
8/31/2020	8.43	6.90		
9/3/2020	8.68	6.90		
9/8/2020	8.06	6.99		

Notes

No CM was observed below water table during removal.

"Trigger pH" for proximal wells is the pH that, if exceeded for 3 weeks, triggers daily monitoring of proximal well and start monitoring of downgradient wells.

"Trigger pH" for downgradient wells is the pH that, if exceeded for 1 week, triggers consultation with Ecology regarding response action.

Table F-6. Groundwater pH Data for Excavation Sequencing Area M

Project No. 110207, Everett, Washington

	pH Reading in Standard Units			
	Proximal Wells	Downgradient Wells to Monitor if pH Increase >0.5 unit is Observed in Proximal Well(s)		
Date	TM-MW-2	TM-MW-1	CN-MW-103	TM-MW-5
Baseline Readings for this Sequencing Area (3x in 1 week)				
7/14/2020	8.61			
7/16/2020	8.64	6.57	6.51	7.78
7/17/2020	8.66	6.58	6.48	7.79
7/20/2020	7.37	6.56	6.50	7.83

10/1/2020	10.84		6.85	6.71	6.60
10/2/2020	10.85				
10/5/2020	11.34		6.87	6.95	7.13
10/7/2020	11.30		6.98	6.97	7.06
10/9/2020	11.38		6.99	7.02	7.13
10/12/2020	11.60		7.07	6.57	6.66

Notes

Red highlighted values exceed Trigger pH value.

*: The driller decommissioning wells in an adjacent area inadvertently decommissioned this well on 9/29. Well SHB-MW-101, located 25 feet from this well, is substituted as a proximal well for the rest of the monitoring.

"Trigger pH" for proximal wells is the pH that, if exceeded for 3 weeks, triggers daily monitoring of proximal well and start monitoring of downgradient wells.

"Trigger pH" for downgradient wells is the pH that, if exceeded for 1 week, triggers consultation with Ecology regarding response action.

Table F-11. Groundwater pH Data for Excavation Sequencing Area K

Project No. 110207, Everett, Washington

10/5/2020				6.88
Weekly (at least) Compliance Readings for 3 Weeks After CM Removal is Done in this Sequencing Area				
10/12/2020	inaccessible*	inaccessible*	inaccessible*	7.50
10/19/2020				6.79
10/28/2020				7.26

Notes

*: The driller decommissioning wells in an adjacent area inadvertently decommissioned these wells on 9/29. Therefore, well MW-1 has been substituted as a proximal well for the rest of the monitoring. Other adjacent wells were decommissioned for the OMS excavation.

"Trigger pH" for proximal wells is the pH that, if exceeded for 3 weeks, triggers daily monitoring of proximal well and start monitoring of downgradient wells.

"Trigger pH" for downgradient wells is the pH that, if exceeded for 1 week, triggers consultation with Ecology regarding response action.

Table F-14. Groundwater pH Data for Excavation Sequencing Area D

Project No. 110207, Everett, Washington

	pH Reading in Standard Units								
	Proximal Wells					Downgradient Wells to Monitor if pH Increase >0.5 unit is Observed in Proximal Well(s)			
Date	BA-MW-5*	UST71-MW-101*	UST71-MW-103*	UST71-MW-102	BA6-MW101	RCD-MW-101	UST70-MW-2	REC3-MW-1R	PM-MW-8
Baseline Readings for this Sequencing Area (3x in 1 week)									
9/21/2020	6.62	7.12	6.21			6.66	7.08	7.26	7.05
9/22/2020	6.62	7.14	6.24			6.68	7.12	7.24	7.07
9/23/2020	6.64	7.17	6.26			6.64	7.11	7.30	7.10
10/2/2020	inaccessible*	inaccessible*	inaccessible*	6.30	7.20				
10/5/2020				6.33	7.22				
10/6/2020				6.35	7.19				
Avg Baseline	*6.63*	*7.14*	*6.24*	*6.33*	*7.20*	*6.66*	*7.10*	*7.27*	*7.07*

Weekly (at least) Compliance Readings During CM Removal in this Sequencing Area									
10/9/2020	inaccessible*	inaccessible*	inaccessible*	6.36	7.26				
Weekly (at least) Compliance Readings for 3 Weeks After CM Removal is Done in this Sequencing Area									
10/12/2020				Dry	7.07				
10/19/2020	inaccessible*	inaccessible*	inaccessible*	6.33	7.05				
10/28/2020				6.26	6.61				

Notes

*: Well UST71-MW-103 was located just within the CM footprint and required decommissioning to allow complete CM removal. However, the driller inadvertently also decommissioned nearby wells UST71-MW-101 and BA-MW-5 on 9/29. Consequently, adjacent non-shoreline wells UST71-MW-102 and BA6-MW-101 have been replaced as proximal wells.

"Trigger pH" for proximal wells is the pH that, if exceeded for 3 weeks, triggers daily monitoring of proximal well and start monitoring of downgradient wells.

"Trigger pH" for downgradient wells is the pH that, if exceeded for 1 week, triggers consultation with Ecology regarding response action.

Table F-15. Groundwater pH Data for Excavation Sequencing Area I

Project No. 110207, Everett, Washington

	pH Reading in Standard Units	
	Proximal Wells	
Date	LP-MW-2	SHB-MW-2
Baseline Readings for this Sequencing Area (3x in 1 week)		
10/5/2020	6.95	7.13
10/6/2020	6.92	7.14
10/7/2020	7.17	7.16
Average Baseline	*7.01*	*7.14*
"Trigger pH"	***7.51***	***7.64***
Weekly (at least) Compliance Readings During CM Removal in this Sequencing Area		
10/9/2020	7.02	7.13
10/12/2020	6.57	6.66
Weekly (at least) Compliance Readings for 3 Weeks After CM Removal is Done in this Sequencing Area		
10/19/2020	6.55	6.87
10/28/2020	6.65	6.89
11/2/2020	6.60	6.87

No Downgradient Wells

Notes

"Trigger pH" for proximal wells is the pH that, if exceeded for 3 weeks, triggers daily monitoring of proximal well and start monitoring of downgradient wells.

"Trigger pH" for downgradient wells is the pH that, if exceeded for 1 week, triggers consultation with Ecology regarding response action.

Table F-16. Groundwater pH Data for Excavation Sequencing Area J

Project No. 110207, Everett, Washington

	pH Reading in Standard Units			
	Proximal Wells			No Downgradient Wells
Date	TM-MW-6	REC6-MW-2	MW-6	
Baseline Readings for this Sequencing Area (3x in 1 week)				
10/1/2020	7.35	6.96	7.20	
10/5/2020	7.52	7.22	7.29	
10/7/2020	7.57	7.20	7.34	
10/9/2020	7.55	7.18	7.32	
Average Baseline	*7.50*	*7.14*	*7.29*	
"Trigger pH"	***8.00***	***7.64***	***7.79***	
Weekly (at least) Compliance Readings During CM Removal in this Sequencing Area				
10/12/2020	7.21	6.99	7.17	
10/19/2020	7.22	6.67	7.20	
Weekly (at least) Compliance Readings for 3 Weeks After CM Removal is Done in this Sequencing Area				
10/28/2020	7.18	6.66	7.22	
11/2/2020	7.15	6.67	7.10	
11/12/2020	7.18	6.75	7.06	

Notes

"Trigger pH" for proximal wells is the pH that, if exceeded for 3 weeks, triggers daily monitoring of proximal well and start monitoring of downgradient wells.

"Trigger pH" for downgradient wells is the pH that, if exceeded for 1 week, triggers consultation with Ecology regarding response action.

Tabulation of Dust Monitoring Data/Observations and Controls Implemented

TABLE

Table G-1. Daily Average Dust (PM_{10}) Concentrations, Visual Observations, and Dust Control Measures Employed

Project No. 110207, Everett, Washington

		Quantitative Measurements			
Date	General Site Earthwork Activities	Monitoring Duration (Hour:Min)	Daily Average PM_{10} Conc. (mg/m^3)	Qualitative Observations regarding Visible Dust	Contractor Dust Control Measures Employed
	Maximum Daily Average PM_{10} Concentration during Work Hours (mg/m^3), excluding smoke and fog days =		**0.029**	***Air quality standard for PM10 is 0.15 mg/m^3 as 24-hr average.***	
	Average PM_{10} Concentration during Work Hours for Project Duration (mg/m^3), excluding smoke and fog days =		**0.008**		
05/20/20	Breach Pipe C; constructed settling basin on pavement for vactor materials	6:20	0.005		
05/21/20	Video/vactor pipes C and M. Remove unusable wood chips	6:50	0.004		
05/22/20	Remove unusable wood chips	2:40	0.005		
05/26/20	Pipe K excavation; Remove unusable wood chips	7:40	0.001		
05/27/20	Pipe K excavation; Pipe C plug w/ CDF	7:05	0.002		
05/28/20	Hydraulic Barker area scrape/stockpile CM, start soil excavation. Wood chip removal.	7:35	0.010		
05/29/20	Hydraulic Barker area soil excavation	8:00	0.010		
06/01/20	Removal of Pipe M inland of plugged vault.	7:40	0.003		
06/02/20	Expose, breach, plug Pipe K at shoreline	6:00	0.008		
06/03/20	Removed inland portion of Pipe M. Potholed to find inland portion of Pipe K.	7:45	0.005		
06/04/20	Pipe K plugging. Backfill Pipe M vault. Hydraulic Barker overexcavation.	7:10	0.002		
06/05/20	Cut concrete to expose wooden Pipe F @ shoreline. Pipe M pipe removal, backfill.	7:10	0.007		
06/08/20	Breached Pipe F @ 15' and 75', video pipe. Hydraulic Barker overexcavation.	Rain - no monitoring			
06/09/20	Begin filling Pipe F with CDF.	Rain - no monitoring			
06/10/20	Complete CDF placement inside and around Pipe F @15' and 75' breaches.	8:00	0.003		
06/11/20	CM potholing.	6:00	0.008		
06/12/20	(half-day rain) CM removal from PM-B-6 area. CM potholing.	4:20	0.008		
06/15/20	PM-B-6 CM scraping/stockpiling and soil excavation.	Rain - no monitoring			
06/16/20	PM-B-6 soil excavation.	6:45	0.001		
06/17/20	Log Pond chip conveyor area CM stripping, then soil excavation.	6:50	0.002		
06/18/20	Log Pond chip conveyor area soil excav. Clark Nickerson CM & overburden stripping,	8:00	0.002		
06/19/20	Brush clearing but no earthwork.	No earthwork - no monitoring			
06/22/20	Soil over-excavation in PMB6 and Log Pond conveyor areas.	7:15	0.002		
06/23/20	Soil excavation in Log Pond conveyor and Clark-Nickerson west areas.	7:25	0.002		
06/24/20	Soil excavation in Clark Nickerson east and soil over-excavation in PMB6 areas.	8:00	0.005		
06/25/20	Soil excavation in OMS area.	8:00	0.005		
06/26/20	Soil excavation in OMS area.	7:20	0.004		
06/29/20	Soil excavation in OMS area, soil over-excavation in LP Conveyor and CN-west areas.	8:00	0.014		
06/30/20	CM excavation/stockpiling onsite from areas A1 and B1.	3:05 before rain	0.004		
07/01/20	CM removal from A1 and B1.	Rain - no monitoring			
07/02/20	CM removal from A1 and B1.	Rain - no monitoring			
07/06/20	Over-excavation in PMB6 and OMS areas.	7:30	0.009		
07/07/20	Soil excavation in OMS area. Backfilling Log Pond & CN excavations. CM removal A1 & B1.	Rain - no monitoring			
07/08/20	CMS soil excavation. CM removal A1 & B1.	7:40	0.006		
07/09/20	CMS soil excavation. CM removal B1 & F.	7:30	0.008		
07/10/20	CMS soil excavation. CM removal B1 & F.	7:20	0.005		
07/13/20	Soil excavation in CMS area. CM removal B1 & F.	7:50	0.008		
07/14/20	Soil excavation in CMS area. CM removal F.	7:55	-0.001*		
07/15/20	Soil over-excavation in OMS and PMB6 areas. CM removal F.	7:50	0.010		
07/16/20	Soil excavation in CMS area. CM removal F.	7:35	0.014		
07/17/20	Soil excavation in CMS area. CM removal F.	7:10	0.013		
07/20/20	Soil excavation in CMS area. CM removal F.	8:00	0.009

Project No. 110207, Everett, Washington

		Quantitative Measurements			
Date	General Site Earthwork Activities	Monitoring Duration (Hour:Min)	Daily Average PM_{10} Conc. (mg/m^3)	Qualitative Observations regarding Visible Dust	Contractor Dust Control Measures Employed
07/21/20	CM removal in F and G areas.	8:00	0.013		
07/22/20	Soil over-excavation in PMB6 area. CM removal in Areas F and G.	8:00	0.008	Minimal dust generated from CM excavation, moderate dust beneath trucks on site. No visible dust observed at fenceline.	Water truck operated continuously to control dust on travelways.
07/23/20	CM removal in Areas F and G.	8:00	0.010	Same as above.	Same as above
07/24/20	CM removal in Area G.	Meter malfunction		Same as above.	Same as above.
07/27/20	Soil excavation in CMS area. CM removal in Area G.	7:55	0.029	Same as above. Observed BNSF locomotive idling near dust monitor all day, and large dust cloud originating well south of site.	Same as above.
07/28/20	Soil excavation in CMS area. CM removal in Area G.	7:30	0.004	Minimal dust generated from CM excavation, minimal to moderate dust when loading CM, and beneath trucks, on site. No visible dust observed at fenceline.	Same as above.
07/29/20	Soil excavation in CMS area. CM removal in Area G.	7:20	0.009	Same as above.	Same as above.
07/30/20	Soil excavation in CMS area. CM removal in Areas G and L.	6:40	0.004	Same as above.	Same as above.
07/31/20	CM removal in Area L.	7:40	0.013	Same as above.	Same as above.
08/03/20	Soil excavation in CMS area. CM removal in Areas G and L.	7:40	0.010	Same as above.	Same as above.
08/04/20	Soil excavation in CMS area. CM removal in Areas G and L.	8:00	0.010	Same as above.	Same as above.
08/05/20	Soil excavation in CMS area. CM removal in Areas L and M.	8:00	0.008	Same as above.	Same as above.
08/06/20	CM removal in Areas L and M.	Rain - no monitoring		No dust observed at fenceline.	None.
08/07/20	CM removal in Area M.	Mist - no monitoring			Periodic use of water truck for selected parts of haul route.
08/10/20	CM removal in Area M. Backfilling PMB6 excavation and CM Area F.	5:15	0.004	No dust observed at fenceline.	Water truck operated continuously to control dust on travelways.
08/11/20	Soil excavation in CMS area. Test pitting GFB12 location. CM removal in Area M.	7:25	0.003	No dust observed at fenceline.	Same as above.
08/12/20	Soil excavation in CMS area. CM removal in Area M.	7:20	0.015	No dust observed at fenceline.	Same as above.
08/13/20	Soil excavation in CMS area. CM removal in Area M.	8:00	0.013	No dust observed at fenceline. City conducted construction work near the site--on 25th St. west of 529.	Same as above.
08/14/20	Soil excavation in CMS area. CM removal in Area M.	6:50	0.018	Same as above.	Same as above.
08/17/20	Soil excavation in CMS area incl. bunker pipe area. CM removal in Area M. Backfilling Areas B1 & F.	8:00	0.017	Same as above.	Same as above.
08/18/20	Soil excavation in CMS area. CM removal in Area M. Backfilling Areas B1 & F.	7:35	0.010	Same as above.	Same as above.
08/19/20	Soil excavation in CMS area. CM removal in Area M. Backfilling Areas B1 & F.	7:35	0.010	Same as above.	Same as above.
08/20/20	Soil excavation in CMS area. CM removal in Area M. Backfilling Areas B1 & F.	Rain - no monitoring		Same as above.	Periodic use of water truck for selected parts of haul route.
08/21/20	Soil excavation in CMS area. CM removal in Area M. Moved water conveyance line and water storage tank. Backfilling Areas F & L.	8:00	0.007	Same as above.	Water truck operated continuously to control dust on travelways.
08/24/20	CM removal in Areas M, A2, and B2. Backfilling Areas F & G.	6:20	0.014	No dust observed at fenceline.	Same as above.
08/25/20	Soil excavation in CMS area. CM removal in Areas M, A2, and B2. Backfilling Areas F & G.	7:35	0.008	No dust observed at fenceline.	Same as above.
08/26/20	Soil excavation in CMS area. CM removal in Areas M, A2, and B2. Backfilling Areas F & G.	7:00	0.013	City conducted construction work near the site--on 25th St. west of 529. No dust observed at fenceline.	Same as above.
08/27/20	Soil excavation in CMS area (bunker pipe trench) and SE corner of OMS area. CM removal in Areas A2 and B2. Backfilling Areas F & G.	6:55	0.006	No dust observed at fenceline.	Same as above.
08/28/20	Soil excavation in REC5-MW-1 area. CM removal in Areas A2 and B2. Backfilling Areas F & G.	7:30	0.007	Same as above.	Same as above.
08/31/20	Soil excavation in CMS area. CM removal in Areas A2, and B2. Backfilling Areas F & G.	7:15	0.012	Same as above.	Same as above.
09/01/20	Soil excavation in BBH area. CM removal in Areas A2, B2, and E. Backfilling Areas F, G, & L.	5:55	0.001	Same as above.	Same as above.
09/02/20	Soil excavation in BBH area. CM removal in Areas B2 and E. Backfilling Areas F & L.	7:35	0.004	Same as above.	Same as above.
09/03/20	CM removal in Areas B2 and E. Backfilling Areas F & L.	7:55	0.002	Same as above.	Same as above.
09/04/20	CM removal in Areas B2 and E. Backfilling Areas F & L.	7:05	0.012	Same as above.	Same as above.

Notes:

*: Meter malfunctioned, generating negative readings.

^: High humidity and esp. fog can cause high bias in the dust monitor's readings. This is due to water-uptake and resulting hygroscopic growth of the aerosol particles, causing them to scatter more light and generate higher apparent mass concentration readings by the photometric instrument (TSI Application Note EXPMN-008 [2014]).

City of Everett Documentation for

PS04 Outfall Decommissioning

CITY OF EVERETT
Public Works

MEMORANDUM

Abandonment Close Out Report for Puget Sound Outfall No. 4, Work Order 2018 1433

FROM: Brian Doolan, P.E. Sewer/Drainage Maintenance Supervisor

DATE: February 24, 2021

PSO 4 Abandonment Work Plan (submitted February 19, 2020)

The City of Everett's plans to abandon Puget Sound Outfall No. 4 (PSO 4) were submitted to the Department of Ecology on February 19, 2020. PSO 4 runs through the former Kimberly Clark (KC) upland property.

The PSO4 pipeline previously carried stormwater from the local collection basin and infrequently the combined sewer overflow from the City's Lift Station No. 5. Approximately seven acres of storm water from two private parking lots and a small area of West Marine View Drive flowed through the line and out PS0 4 whenever it rained. When PSO 4 was functional, stormwater (that bypassed LS No. 5) or combined sewer overflows (from LS No. 5) entered a manhole east of the railroad tracks and were carried through a 10-inch pipe under the tracks. The PSO 4 pipeline also carried the historical discharges originating from the KC site.

The abandonment of PSO 4 has resulted in no further stormwater or combined sewer overflow discharges from the outfall. With Ecology Water Quality approval, city forces have temporarily re-routed PSO 4 stormwater and combined sewer flows to combine with the city's PSO No. 5 located at Lift Station No. 3.PSO 4 is permitted by Ecology to discharge combined sewer overflows and stormwater. The City of Everett's NPDES wastewater collection and treatment permit, Permit No. WA0024490 (expired October 30, 2020 and now administratively extended), lists PSO 4 as a permitted point of discharge for combined sewer (Section S.8); stormwater discharges from PSO 4 and the city's stormwater collection are covered under the Western Washington Phase II Stormwater General Permit (effective date August 1, 2019).

The PSO 4 pipeline started at Lift Station No. 5 as a 10-inch diameter pipe, where it crossed under the railroad tracks to enter the former KC site. As the pipeline traveled west across the KC site, multiple revisions, pipe types, and pipe upsizing occurred over the years to accommodate the site's historical industrial use, with multiple connections added from the KC facilities. By the time effluent reached the point of discharge, the pipe was 30 inches in diameter, an increase of nine times the flow capacity. Pipe types used included clay tiles, ductile, and concrete. Nine manhole structures were abandoned across the site, varying between brick and concrete.

The methods used to abandon the pipeline and manholes were from documents provided to the Ecology Toxics Cleanup Program for this site (Aspect Consulting memorandum to Andy Kallus, *Approach for Plugging Open Pipes at Shoreline,* June 27, 2018) and were referenced in the February 2020 work plan.

Each manhole and pipe access location along the pipeline alignment was filled with a control density fill mix (CDF) as specified in the submitted work plan. The CDF mix was applied for a length of at least five times the pipe diameter at each manhole and all connections. The CDF mix is lean cement, which upon setting has only a few hundred psi compressive strength. The work plan presented the metal analyses of the CDF aggregate materials from the gravel pit indicating the aggregate metal levels are well below MTCA Method A for soils.

Figure 1 shows PSO 4 across the former KC site, the manhole locations, and the lay lengths that were fully filled with CDF.

Concrete trucks were brought on site and delivered the CDF at a consistency and viscosity that allowed the CDF to be pumped to at least the five times the pipe diameter length for each manhole connection stated in the Aspect Consulting memo. The CDF supplier provided a mix that was able to fill the pipes (adjustments had to be made as viscosity specifications are not normal for concrete mixes). The pump hose was measured and marked with the required length to be used at each manhole location to ensure the volume requirement of five times the diameter length was met. At the end of the entire pour the volume required at all nine manhole locations was exceeded by one yard of CDF, surpassing the established quantity for the length requirement.

The CDF was delivered in two pours due to the CDF viscosity and to ensure the head pressure of CDF in a manhole did not push the CDF beyond the length needed to keep the pipe's full circumference filled. The first pour filled the pipes to the required length and then was allowed to set, preventing the CDF from being pushed further down the pipe due to the manhole head pressure. A visual inspection was completed after each pour to ensure the pipe's circumference was filled after the pump hose was removed. Once the pipe connections were filled and

allowed to initially set, the entire manhole structure was filled but for the last foot. The remaining roughly one-foot depth from the top of the CDF fill to the surface of the manholes was left unfilled to allow for final grading of the site by KC's contractor and to avoid impacting and damaging the structure and CDF.

Specific Details

On Thursday February 27, 2020, all connections including inlet and outlet pipes from each of the nine manholes across the site were filled with the specified CDF mix. At each location, the manhole was prepared by city crews prior to being abandoned. Manholes and their connecting pipes were previously cleaned by city crews and were void of debris. At each location, a crew member made entry to and inspected the manhole and connecting lines to verify the lines were still clean.

Once a manhole was ready, a cement mixer with a pumper delivered the CDF directly to each manhole and their connecting pipes. The pumper hose was inserted by the crew member into each pipe for the CDF volume needed to meet the five times the diameter length requirement. For example, the first upstream manhole had a 10-inch pipe for its inlet and outlet and therefore required a length of 50 inches of each pipe to be filled. The hose was inserted 50 inches resulting in the CDF being pumped into and filling the pipe beyond the required 50 inches. This allowed the full lay length of CDF required to fully fill the circumference. This was repeated at each of the manhole and connecting pipe locations for all inlets and the outlet segments of pipe. Once the pumping was completed at each manhole the pipe was visually checked to ensure that it was filled.

On Friday February 28th, 2020, after the previous day's applied CDF could initially cure, each of the nine manholes had additional CDF added to within one foot of the surface. This eliminated air gaps and prevented ground water inflow.

Some of the manholes were smaller due to their last section being a cone rather than a cylinder shape. Manhole No. 9, the last structure discharge was smaller than was estimated.

See photos below for typical installation examples. Photo 1 shows how a pump line was typically processed with the entrant entering the manhole to push the line up the pipe. Photo 2 shows a manhole after both upstream and downstream pipes had been filled.

Below is a summary of the abandonment information for each location, listed by manhole number (per Figure 1).

Manhole No. 1

Manhole No. 1 has a 10-inch pipe entering and exiting the structure. The structure is 5-feet deep and 4-feet in dimeter. The pipe distance filled with CDF was 50 inches in both directions. The estimated total CDF volume that filled the pipes and the manhole was three cubic yards.

Manhole No. 2

This manhole has a 10-inch pipe entering and a 16-inch pipe exiting the structure. The structure is 6-feet deep and 4-feet in diameter. The pipe length filled was 50 inches on the inlet pipe and 80 inches on the outlet pipe. Approximately five cubic yards of CDF filled the pipes and manhole.

Manhole No. 3

This manhole has a 16-inch pipe entering and a 16-inch pipe exiting the structure. The structure is 6-feet deep and 4-feet in diameter. The pipe length filled was 80 inches on both the inlet and outlet pipes. About six cubic yards of CDF filled the pipes and manhole.

Manhole No. 4

This manhole has a 16-inch pipe entering and a 16-inch pipe exiting the structure. The structure is 6-feet deep and 4-feet in diameter. The pipe length filled was 80 inches on both the inlet and outlet pipes. An estimated six cubic yards of CDF filled the pipes and manhole.

Manhole No. 5

This manhole has a 16-inch pipe entering and an 18-inch pipe exiting the structure. The structure is 8.5 feet deep and 4.5 feet in diameter. The pipe length filled was 80 inches on the inlet pipe and 90 inches on the outlet pipe. An estimated nine cubic yards of CDF filled the pipes and manhole.

Manhole No. 6

This manhole has an 18-inch pipe entering and an 18-inch pipe exiting the structure. The structure is 9-feet deep and 4.5 feet in diameter. The pipe length filled was 90 inches on the inlet pipe and 90 inches on the outlet pipe. Just over nine cubic yards of CDF filled the pipes and manhole.

Manhole No. 7

This manhole has an 18-inch pipe entering and an 18-inch pipe exiting the structure. The structure is 13.5 feet deep and 4.5 feet in diameter. The pipe length filled was 90 inches on the inlet pipe and 90 inches on the outlet pipe. An estimated 12 cubic yards of CDF filled the pipes and manhole.

Manhole No. 8

This manhole has an 18-inch pipe entering and a 30-inch pipe exiting the structure. The structure is 14-feet deep and 6-feet in diameter. The pipe length filled was 90 inches on the inlet pipe and 150 inches on the outlet pipe. An estimated 20 cubic yards of CDF filled the pipes and manhole.

Manhole No. 9 – (or Vault)

This structure is a vault rather than a manhole. The structure has a 30-inch pipe entering and a 30-inch pipe exiting the structure. The vault was smaller than expected. The pipe length filled was 90 inches on the inlet pipe and the outlet pipe. Both the inlet and outlet pipe were capped at the structure to allow complete filling and blocked to prevent water from entering or exiting. The total volume of CDF to abandon this vault and piping was approximately 20 cubic yards.

End of Pipe for PS 04

The pipe west of Manhole No. 9 is attached underneath the wharf and is a 30-inch diameter clay-tile pipe. City crews planned to plug the accessible end of pipe with a mechanical plug during low tides in July 2020. Due to the cleanup effort going on during the summer of 2020, city forces could not access the wharf area to install the plug. This work is now being coordinated with the Port of Everett and installation of the mechanical plug is now scheduled during a low tide cycle the last week of March 2021.

Once the mechanical plug is installed photos will be emailed to Ecology.

Work Plan..... Interim Action Work Plan and Addendum

1.0 INTRODUCTION

On behalf of the Port of Everett (Port), this Interim Action Construction Report (Report) presents implementation of the 3rd Interim Cleanup Action (Interim Action) at the Upland Area of the former Kimberly-Clark Worldwide, Inc. (K-C) Model Toxics Control Act (MTCA) site (Site). The Site is located adjacent to and just north of the Port's main Marine Terminal facilities in Everett, Washington. The Interim Action was conducted in coordination with the Port's Maritime Industrial Expansion (MIE) at Norton Terminal project (collectively referred to in this document as the Project), as illustrated on Figures 1 and 2.

The Interim Action was conducted in accordance with the Agreed Order (AO) between the Port, K-C, and the Washington State Department of Ecology (Ecology; AO No. DE 9476). The second amendment to the AO addresses a 3rd Interim Action completed at the Site by the Port (Ecology 2021). Work to satisfy the requirements of this 3rd Interim Action was guided by the Interim Action Work Plan (Landau Associates, Inc. [Landau] 2021), and the Interim Action Work Plan Addendum No. 1 (Landau 2022), collectively referenced in this document as the Work Plan.

2.0 IMPLEMENTATION OF THE INTERIM ACTION

The Project, which included implementation of the Interim Action, commenced in October 2021 and concluded in May of 2023. Interim Action portions of the Project generally included site grading, cap construction, utility installation, outfall reconstruction, soil and groundwater management, and security fencing installation. Preload ground improvement activities to support cap construction were conducted in portions of the Site prior to approval of the Work Plan; this work was proposed in the Preload Ground Improvement technical memorandum (Preload Memo) that was approved by Ecology, which was included as an attachment to the Work Plan. Preloading activities are discussed in this report as a part of the Interim Action.

2.1 Ecology Coordination and Permitting

The Interim Action was implemented in accordance with the second amendment to the AO. In addition to Ecology approval of the Work Plan, the Port maintained consistent communication with Ecology's Site manager, Andy Kallus, during the Project, which included weekly coordination meetings, requests for reviews of contractor submittals, and general updates of observations at the Site.

The Port also obtained the following permits and approvals for the Project:

- NOAA Fisheries Section 7 Endangered Species Act (ESA) Letter of Concurrence (February 10, 2021)
- US Fish & Wildlife Section 7 ESA Letter of Concurrence (March 11, 2021)
- US Army Corps of Engineers Nationwide Permit 7 Authorization (June 14, 2021)
- City of Everett Shoreline Substantial Development Permit, Height Modification, and Landscaping Modification Approval (September 23, 2021)
- Washington State Department of Archaeology and Historic Preservation No Historic Properties Affected Concurrence Letter (March 17, 2021)
- Port State Environmental Policy Act mitigated determination of non-significance (March 8, 2021)
- Ecology Administrative Order for compliance with Water Pollution Control Act, Water Quality Standards, and National Pollutant Discharge Elimination System Construction Stormwater General Permit (CSGP; August 3, 2021)
- Washington State coverage under the CSGP (August 6, 2021)
- City of Everett Public Works Permit (October 26, 2021)
- Maritime Administration National Environmental Policy Act Record of Categorical Exclusion (April 15, 2021)
- City of Everett Letter of Substantive Requirements (August 10, 2021)
- Washington Department of Fish & Wildlife Letter of Substantive Requirements of the Hydraulic Code (July 8, 2021).

Copies of permits and approvals are held by the Port and can be provided upon request.

2.2 Site Grading

Site grading conducted during implementation of the Interim Action included importing, grading, and compacting clean fill to meet the following goals: 1) increase elevation of the Site to be protective of anticipated sea level rise associated with expected climate change impacts, 2) direct stormwater drainage to the site-wide stormwater conveyance and treatment system, and 3) support construction of the low-permeability cap described in Section 2.3 to reduce surface water infiltration. Final site grades are presented on as-built sheets C3.3 through C3.14 (Appendix A).

Clean fill was compacted to meet subgrade design requirements for the low-permeability cap. A preload was also used at the Site to further limit long-term settlement in areas with significant wood debris deposits and protect the long-term functionality of the low-permeability cap.

2.2.1 Preload and Grading

Preload activities were conducted in accordance with the Preload Early Action Letter, which was included as an attachment to the Work Plan. Preload material was imported to the Site, placed in preload within the area illustrated on as-built sheet C1.1 (Appendix A). Following completion of preloading, the material was used as fill during Site grading activities. Preload material was evaluated against import fill criteria presented in the Work Plan prior to being transported on Site, as is detailed in Section 2.2.2 below. Results of preloading activities are presented in the Preload Ground Improvement Summary Memorandum (Appendix B).

Performance of the preload was monitored from August 2021 through the completion of settlement associated with the preload in January 2022. Following completion of preloading activities, preload soil was used to provide the base course for the pavement cap and raise the elevation of the Upland Area. This material was graded and compacted to meet geotechnical requirements, reduce stormwater infiltration, and convey stormwater to stormwater treatment infrastructure installed as a part of the Project.

2.2.2 Import Fill Evaluations

In accordance with the Work Plan, import fill evaluations were conducted by the contractor and submitted to the Port and Ecology for review and approval prior to delivering the material to the Site. Fill materials imported to the Site were sampled at a rate of five samples for the first 1,000 cubic yards (CY) and one sample per each additional 1,000 CY of each specific material. Characterization samples were analyzed for the following:

- Gasoline-range total petroleum hydrocarbons (TPH-G) by Northwest total petroleum hydrocarbon gasoline-range extended (NWTPH-Gx) and Northwest total petroleum hydrocarbon diesel-range extended (NWPTH-Dx)
- Polycyclic aromatic hydrocarbons (PAHs) by US Environmental Protection Agency (EPA) Method 8270 selected ion monitoring (SIM)
- Metals (arsenic, copper, lead, mercury, nickel, zinc) by EPA Method 6000/7000

- Polychlorinated biphenyls (PCBs) by EPA Method 8082.

Analytical results were evaluated against import fill criteria as presented in the Work Plan either by a direct comparison to that criteria or using a statistical evaluation in coordination with Ecology. Import fill evaluation data and initial evaluations are presented in contractor-provided memoranda in Appendix C; this appendix also includes statistical evaluation worksheets, if used.

2.2.2.1 South Terminal Stockpile

Material from a soil stockpile located within the Port's South Terminal was utilized for haul road construction during placement of preload material. In accordance with import fill criteria presented in the Preload Memo (dated April 6, 2021), which was included as an attachment to the Work Plan, import fill characterization sampling was conducted to characterize the approximately 1,650-CY stockpile of ballast rock, which had been stored at the Port's South Terminal wharf area. Six representative samples of the material were collected. Laboratory analytical results were screened against the import fill criteria presented in the Preload Memo.

As presented in the Preload Memo, all analytical results met the screening levels, which indicates that this imported material meets the criteria and is suitable for use at the Site. As is presented in the Preload Memo, no surface grading or excavation was conducted during import or placement of this material, and this material was only placed at elevations above the current and future expected groundwater table (i.e., in unsaturated conditions).

2.2.2.2 Getchell Pit #15415

As presented in the July 26, 2021 letter prepared by Krazan & Associates, Inc. (Krazan), 15 characterization samples (representative of 11,000 CY of material) were collected from crushed surfacing base course (CSBC) sourced from the Miles Sand and Gravel—Getchell Pit #15415. Results for all analytes met the criteria by a direct comparison to the Work Plan criteria and provided satisfactory import fill data for material represented by these samples.

2.2.2.3 Cadman Pit D345 (a)

As presented in the August 18, 2021 letter prepared by Krazan, 22 characterization samples (representative of 18,000 CY of material) were collected from CSBC sourced from the Cadman Sand and Gravel pit #D345. Results for copper and nickel did not meet import fill criteria by a direct comparison to the Work Plan criteria; results for other analytes provided satisfactory import fill data. As suggested by Ecology, a 95 percent Upper Confidence Limit (95UCL) was calculated for both the copper and nickel data sets using EPA ProUCL 5.1 software; the 95UCL for nickel was 36.69 milligrams per kilogram (mg/kg) and the 95UCL for copper was 29.74 mg/kg. These calculated values are less than the applicable import fill criteria and indicate that these results provide satisfactory import fill data for material represented by these samples.

2.2.2.4 Cadman Pit D345 (b)

As presented in the September 13, 2021 letter prepared by Krazan, 25 additional characterization samples (representative of an additional 25,000 CY of material) were collected from CSBC sourced from

the Cadman Sand and Gravel pit #D345. Results for nickel did not meet import fill criteria by a direct comparison to the Work Plan criteria; results for other analytes provide satisfactory import fill data. As suggested by Ecology, a 95UCL was calculated for the nickel data sets using EPA ProUCL 5.1 software; the 95UCL for nickel was 28.45 mg/kg. This calculated value is less than the applicable import fill criteria and indicates that these results provide satisfactory import fill data for material represented by these samples.

2.2.2.5 Mandan Pit (a)

As presented in the December 7, 2021 letter prepared by Aspect Consulting (Aspect), 14 CSBC characterization samples (representative of 10,000 CY) and 14 structural fill samples (representative of 10,000 CY) were collected from the Granite Construction Mandan Pit. Results for copper and nickel did not meet import fill criteria by a direct comparison to the Work Plan criteria; results for other analytes provide satisfactory import fill data. As presented in the letter, the nickel and copper data were statistically evaluated by calculating a 95UCL for the nickel data sets using EPA ProUCL 5.1 software; the 95UCL for nickel was 28.45 mg/kg. This calculated value is less than the applicable import fill criteria and indicates that these results provide satisfactory import fill data for material represented by these samples.

2.2.2.6 Mandan Pit (b)

As presented in the March 29, 2022 letter prepared by Aspect, an additional four CSBC characterization samples (representative of an additional 4,000 CY) and 10 additional structural fill samples (representative of an additional 10,000 CY) were collected from the Granite Construction Mandan Pit. Of the four additional CSBC samples and 10 additional structural fill samples collected for this submittal, one analytical result for mercury did not meet import fill criteria by a direct comparison to the Work Plan criteria; results for other analytes provide satisfactory import fill data. As presented in the summary letter, this mercury result was less than two times the criteria and is suspected to be within the range of natural background concentrations; these results were determined to provide satisfactory import fill data for material represented by these samples.

2.2.2.7 Other Materials

Additional materials imported to the Site during the Project included quarry spalls, pea gravel, and rip rap. Consistent with Ecology's guidance, because these materials were washed and did not include any fraction smaller than ¼-inch, laboratory analysis for comparison to import fill criteria was not necessary. Use of these materials was consistent with project plans, except for placement of quarry spalls in areas where concrete structures were left in place and/or void spaces beneath existing structures were filled.

2.2.3 Abandoned Pipe Decommissioning

Abandoned pipes were decommissioned during Site grading activities to support the long-term effectiveness of the grading activities and to reduce the risk of contamination being spread via preferential pathways to surface water. Existing abandoned underground pipes previously identified on historical plans within 75 feet (ft) inland of the shoreline were demolished by filling completely with

controlled density fill (CDF) or by removal. Any additional abandoned underground pipes (within 75 ft inland of the shoreline) encountered during subsurface activities within the work zone were decommissioned consistent with requirements of the Work Plan by being filled with a CDF or grout plug equal to five times the diameter of the pipe. Additionally, abandoned underground pipes 15 inches in diameter or greater encountered during subsurface activities throughout the Site will be filled with CDF or removed and replaced with quarry spall backfill.

Sheet D2.1 of the as-built plans (Appendix A) illustrates abandoned pipes that were decommissioned. As noted on this sheet, the contractor potholed to locate pipes identified on the plans prior to decommissioning; some pipes were not located and may have been previously decommissioned by removal and/or were not accurately depicted on historical plans. Select photographs of pipe decommissioning are included in Appendix D, and include the following:

- A 36-inch wood stave pipe at the eastern edge of the Site was decommissioned after being exposed and prior to being filled with quarry spalls.
- A 48-inch steel pipe along the eastern Site boundary was capped at its northern end and elevated concentrations of methane were detected when the pipe was cut. The pipe was decommissioned by being filled with grout under the supervision of an industrial hygienist.
- A 36-inch wood stave pipe running east/west, just northwest of the existing warehouse was full of water when exposed. A hydrogen sulfide odor was observed. The pipe was decommissioned by being filled with quarry spalls and CDF under the supervision of an industrial hygienist.

2.3 Cap Construction

Following intrusive activities and general site grading, a low-permeability cap consisting of low-permeability pavement materials was constructed to further reduce surface water infiltration and to prevent exposure of terrestrial ecological receptors. The pavement was graded so that all rainfall is routed to stormwater conveyance system inlet structures. A total of approximately 33.2 acres were capped. The total pavement area includes the originally planned 29.5 acres of pavement, plus an additional acreage at the northern portion of the Site to result in a total pavement area of 33.2 acres. The extent of the capped area and pavement section details are illustrated on Sheets C3.1 and C3.2 of the as-built plans (Appendix A). Photographs of the completed cap are also included in Appendix D.

Based on an approximate maximum capping area of 40.84 acres presented in the Work Plan, approximately 81 percent of the maximum capping area of the Site described in the AO has been capped, which far exceeds the 30 percent infiltration reduction performance goal of the Interim Action.

2.4 Utility Installation

During earthwork activities and prior to cap construction, the project included installation of subgrade utilities to minimize future disturbance of the cap. Utilities installed included a storm drainage system, potable water, sanitary sewer, electrical and communications, and electrical for light poles; additional subsurface foundation installations were required for light pole installation and other aboveground utility infrastructure.

Subgrade utilities were installed in trenches ranging from 1 to 2 ft below the former grade shallow enough to be within clean fill material placed at the Site during implementation of the 2nd Interim Action completed by K-C in 2020, up to approximately 8 ft below ground surface (bgs). Select structures required excavation of up to 18 ft bgs (i.e., the stormwater lift station upstream of the stormwater treatment system and Outfall M). Excavated material generated during trenching was managed in accordance with the Work Plan and is described in further detail in Section 2.6.

Utility trench cutoff walls were also installed to reduce the risk of contaminating adjacent properties, or contamination from nearby properties impacting the Site at the Site boundary on Federal Avenue and at the two reconstructed outfalls—Outfall A and Outfall M. Cutoff wall details are provided in as-built sheets C5.2 (Federal Avenue utilities) and C4.10 and C4.14 (outfalls).

2.5 Outfall Reconstruction

Consistent with project plans, existing Outfalls A and M were reconstructed for discharge from the new stormwater system. Outfall reconstruction activities were conducted in the dry during low tide windows in the mornings of July 25 through July 27. Soil excavated from around the former outfall pipes consisted of brown to black, silty sand with some cobbles and debris (bricks); clean imported quarry spalls and rip rap was used as fill during reconstruction.

As the former Outfall A outlet daylighted north of the new Outfall A, abandonment of the former outfall pipe was completed after reconstruction of the new outfall. The former Outfall A pipe was shown on historical plans, but initially could not be located along the shoreline and had to be located in the upland portion of the Site. A pipe, suspected to be the former Outfall A pipe, was located upstream near an existing storm drain structure near the existing warehouse in a pothole excavation approximately 8 ft bgs. On August 2, 2022, a camera was placed in the pipe. The camera initially followed the pipe approximately 69 ft to the west before encountering water. The camera was in the pipe at the time of a falling tide and proceeded down the pipe as the tide decreased up to a total of 128 ft west of the point of entry. Based on a tide elevation at the time of the camera's furthest travel distance, the elevation of the pipe at the furthest point the camera progressed was -0.8 ft, or approximately 16 ft bgs. Based on the fact that the water in the pipe was fluctuating with the tide, and the location of the pipe generally matched historical plans, this pipe was determined to be the former Outfall A pipe and was abandoned by filling with CDF from the access point in the pothole excavation. The outfall was later identified along the shoreline on August 11, 2022, and the pipe was also plugged at this point with grout placed behind sandbags.

As-built sheets C4.9 and C4.10 present details for the reconstructed outfalls. Select photographs of the outfall reconstruction are included in Appendix D.

2.6 Soil and Groundwater Management

Management of contaminated soil and groundwater during construction of subgrade utilities was conducted in accordance with the soil and groundwater management plan (SGMP), which was an attachment to the Work Plan. The project also included excavation outside the Site boundary to the

south, which was within the ExxonMobil/ADC MTCA cleanup site. Soil excavated from the ExxonMobil/ADC site was managed separately in coordination with Ecology and was guided by the ExxonMobil/ADC SGMP.

Excavated soil generally included 2–5 ft of clean sand fill placed during the 2nd Interim Action and was underlain by hydraulic fill. Field screening was conducted to determine when soil was suitable for on-site backfill; generally, all of the recent sand fill and some of the underlying hydraulic fill was reused onsite. Soil reused onsite was placed only in areas ultimately covered by the low-permeability cap and was placed in approximately the same vertical horizon it originated. However, field screening also indicated significant quantities of potentially contaminated soil, geotechnically unsuitable soil, and in-place concrete structures and rubble. Potentially contaminated soil was consistent with contaminated soils previously observed at the Site; no "new conditions" were observed. Additionally, no crushed demolition debris (crushed material or "CM") as identified and removed during the 2nd Interim Action was observed.

Potentially contaminated and geotechnically unsuitable soil was managed as one material during construction activities; in total, 17,850 tons of soil was excavated and removed from the Site for offsite disposal as non-hazardous waste. In addition, 7.1 million gallons of groundwater was removed from excavations was disposed of in the City of Everett sanitary sewer system.

2.6.1 Management of Unsuitable Excavated Soils

Excavated materials not reused onsite were managed in accordance with the SGMP. These materials included potentially contaminated soil, geotechnically unsuitable soil, concrete, and wood debris.

Following excavation and field screening, potentially contaminated soil and geotechnically unsuitable soil was transported to an onsite temporary stockpile cell. Temporary soil stockpile cells were constructed to contain the soil and prevent rain and stormwater from being in contact with the contaminated soil; details for the temporary soil stockpile construction details are provided in as-built sheets C1.4. Soil for disposal was loaded from the temporary stockpile into containers or trucks for transport to the disposal facility.

Soil representative of potentially contaminated and geotechnically unsuitable soil observed throughout the project was sampled for waste characterization purposes. Waste characterization samples were analyzed for diesel- and oil-range total petroleum hydrocarbons (TPH-D/O); benzene, toluene, ethylbenzene, and xylenes (BTEX); PCBs; semivolatile organic compounds (SVOCs); Resource Conservation and Recovery Act (RCRA) 8 metals; and sulfate. The analytical results were provided to Republic Services, Waste Management, and Cadman for development of waste profiles. Depending on container and truck availability, soil was exported to all three of these facilities as non-hazardous waste. Waste characterization laboratory analytical reports are included with the waste profiles presented in Appendix E, and field-screening indicated that these samples were representative of potentially contaminated soil that was removed from the Site during the duration of the project.

2.6.1.1 Potentially Contaminated Soil

Potentially contaminated soil observed during intrusive activities generally consisted of gray to black sands and silts with petroleum odor and sheen and varying amounts of gravel and cobbles, bricks, and dimensional lumber. Free-phase petroleum (light non-aqueous phase liquids or "LNAPL") was not observed. Given the defined vertical and horizontal limits of excavation necessary for utility installation, the areal extent of any observed contaminated soil was not clear; nor did field observations indicate a new source of contamination. In general, soils with petroleum odor and sheen were observed as shallow as approximately 3 ft bgs and as deep as 10 ft bgs in excavations throughout the Site. In addition to specific locations discussed below, photographs of potentially contaminated soil are included in Appendix D.

Some areas with more significant contamination included the following:

- During excavation at the light pole LP06 location, heavy sheen was observed in soil and groundwater encountered beneath the recent sand fill. In-place vertical and horizontal concrete structures were encountered at this location. A photograph of the material encountered is included in Appendix D, and the location of LP06 is clearly illustrated on sheet G1.4 (labeled as NT-HML-06; Appendix A).
- Gray silt and sand with creosote odor and several creosote-treated piles were observed at and below approximately 6 ft bgs in the excavation for the stormwater lift station vault located just east of reconstructed Outfall M. A photograph of this material and the creosote-treated timbers is included in Appendix D.

2.6.1.2 Geotechnically Unsuitable Soil

Geotechnically unsuitable soils consisted of sands and silts with above-optimum moisture contents and varying amounts of rock and other debris. General photographs showing geotechnically unsuitable soil are included in Appendix D; additional notable materials observed are described below.

- Significant concrete debris and rock was observed on March 3, 2022 between approximately 1 ft bgs to 7 ft bgs in a light pole foundation excavation located just inside the south gate to the Site. Brick and some dimensional wood debris was also observed in this material. The Port discussed observations with Ecology and concluded this material was general debris and not CM. A photograph of the excavated debris is included in Appendix D.

2.6.1.3 Concrete and Historical Foundations

Significant volumes of in-place concrete structures were observed at the Site. Observed concrete structures included vertical walls, horizontal floors, and vertical metal and concrete pilings. In-place concrete structures were removed using a hydraulic breaker to facilitate excavation necessary for utility installation. Areas where concrete structures were left in place are illustrated on as-built sheet 3.21 (Appendix A), and in these areas, single- or double-layer geogrid was installed for geotechnical stability and long-term integrity of the low-permeability cap. Photographs of example concrete structures encountered during intrusive activities are included in Appendix D. Clean concrete, broken into pieces and free of any soil and rebar, was trucked to offsite recycling facilities.

2.6.1.4 Wood Chips

Wood chips, some with a petroleum odor, were observed in discontinuous areas from an approximately 20-ft by 20-ft by 3-ft-deep area to the south and southwest of the existing public utility district (PUD) substation, generally within the historical "log pond fill area," as shown on as-built figure G2.1 (Appendix A). Photographs of this material are included in Appendix D. Wood chips were excavated where proof rolling of existing soils indicated a soft subgrade; thin lenses of wood chips were observed in the sidewalls outside of excavated areas and at depths beyond the maximum excavation depth of 3 ft bgs. Additional wood chips may be present in the area southwest of the existing PUD substation, but observations indicated that the most concentrated volumes of wood chips were within 3 ft of the ground surface, which was removed.

After excavation, the wood chips were managed as potentially contaminated soil stockpile for offsite disposal as described above in 2.6.1.1.

2.6.2 Management of Groundwater

To facilitate construction, groundwater encountered during excavation was dewatered using sumps or well points, as needed, and was managed in accordance with the SGMP. Collected groundwater was conveyed to settling tanks operated by the Port's contractor, who tested the water to verify compliance with the discharge authorization prior to discharge to the City of Everett's sanitary sewer collection system in accordance with a City of Everett Discharge Authorization No. MD-41-2021 (Appendix F). Approximately 7.1 million gallons of groundwater were treated and discharged to the City's sanitary sewer.

No groundwater was managed by infiltration at the Site.

2.6.2.1 Monitoring Well Decommissioning

Existing monitoring wells within the extent of the Project were decommissioned in accordance with the Work Plan and resource protection well decommissioning requirements presented in Washington Administrative Code (WAC) 173-160-460.

A total of 10 monitoring wells were decommissioned. Decommissioned monitoring wells include the eight monitoring wells decommissioned on October 14, 2021; the locations of these wells are shown on as-built sheets D1.1 through D1.8 (Appendix A). Two additional wells were decommissioned in the northeast corner of the Site on November 23, 2022 to accommodate additional paving. The location of decommissioned monitoring well UG-MW-1 is shown on sheet G3.1 (Appendix A); the second of the two additional wells was located approximately 95 ft directly north of UG-MW-1. This well did not have an Ecology well identification (ID) tag, and no records of this well were located; the well was approximately 57 ft deep and was constructed with a 1-inch polyvinyl chloride (PVC) well casing. The unknown well was removed by overdrilling and was filled with grout and bentonite chips.

Well Name	Ecology Tag ID	Well Diameter	Decommission Date
REC1-MW-5	BHS 334	2-inch	October 14, 2021
REC1-MW-8	BHS 325	¾-inch	October 14, 2021
REC1-MW-9	BHS 326	2-inch	October 14, 2021
REC7-MW-4	BHE 801	2-inch	October 14, 2021
MW-1	BHM 187	1-inch	October 14, 2021

2.7 Security Fencing

Demolition of the existing Site fence and installation of new security fencing was completed to maintain vector control and to prevent human contact with residual Site contamination. Security fencing details are shown on Sheets C 6.1 through C6.6 of the as-builts (Appendix A).

3.0 CULTURAL RESOURCES

The Interim Action included implementation of a Cultural Resources Monitoring and Discovery Plan (M&D Plan), which was included as an attachment to the Work Plan. Implementation of the M&D Plan generally included the archeological monitoring of excavations at depths where there was a moderate potential for encountering buried cultural resources. Potential buried cultural resources were not observed during the Interim Action; a summary report documenting the results of cultural monitoring conducted during the Project is included in Appendix G.

4.0 COMPLIANCE MONITORING

MTCA requires compliance monitoring for all cleanup actions, as described in WAC 173-340-410. Compliance monitoring is conducted for the following three purposes:

- Protection monitoring to confirm that human health and the environment are adequately protected during construction and operation and maintenance of the cleanup action.
- Performance monitoring to confirm that the cleanup action has attained cleanup standards and any other performance standards.
- Confirmational monitoring to confirm the long-term effectiveness of the cleanup action once the cleanup standards and other performance standards have been attained.

Compliance monitoring for the Interim Action was limited to protection monitoring and performance monitoring for verification that the Project scope is completed as planned. Subsequent remedial investigation work at the Upland Area will evaluate the effectiveness of the Interim Action relative to final cleanup standards for the Upland Area, which will inform development of the final cleanup action.

4.1 Protection Monitoring

Protection monitoring implemented during the Interim Action included measures for the protection of human health and protection of the environment.

4.1.1 Protection of Human Health

Monitoring for protection of human health addresses worker safety for activities related to construction, operation, and maintenance of the cleanup action and was addressed in a Site-specific health and safety plan (HASP) developed by the contractor, which was also adopted by additional personnel onsite. Additionally, a Landau-specific project HASP was developed during preparation of the Work Plan. The HASPs were implemented to monitor and mitigate physical and chemical hazards associated with Site activities, consistent with the requirements of WAC 173-340-810.

4.1.2 Protection of the Environment

Environmental protection monitoring was conducted during the construction activities. This included monitoring for dust, preparation and implementation of a stormwater pollution prevention plan (SWPPP), and implementation and monitoring of best management practices (BMPs) to minimize dust generation and/or control stormwater runoff from contaminated soil cleanup actions during construction. During construction, a certified construction erosion and sediment control lead (CESCL) monitored performance of the BMPs and recommended changes in approach or application, if necessary. The CESCL also visually monitored the Site to verify that stormwater runoff was not being impacted by Site activities.

The Port also conducted quantitative dust monitoring throughout the duration of the Project. Dust monitoring was conducted on days when intrusive or site grading activities were conducted and when there was no recorded precipitation. Daily dust readings were collected upwind, adjacent to, and

downwind of areas of intrusive activity using a dust meter rated to detect particulate matter equal to or less than 10 micrometers in diameter. An action level (consistent with Washington State Ambient Air Quality 24-Hour Average Standard) of 0.150 milligrams per cubic meter was established; measurements only exceeded this action level on October 20, 2022, when regional wildfire smoke impacted measurements at all three Site air monitoring locations.

4.2 Performance Monitoring

Performance monitoring consisted of verification that the Interim Action was completed consistent with the scope of work as described in the Work Plan, and that final conditions meet the Project's 30 percent reduction in stormwater infiltration performance goal, as presented in the AO. The Port confirmed completion of the Interim Action through consistent coordination with both the construction contractor and Ecology, significant construction observation directly by the Port and by Port representatives, and preparation of as-built project plans to document final conditions. Meeting the 30 percent reduction in stormwater infiltration goal is demonstrated by the final limits of the low-permeability cap, which covers approximately 81 percent of the maximum capping area of the Site as defined in the AO.

4.3 Confirmation Monitoring

Confirmation monitoring will be conducted following finalization of the remedial investigation/feasibility study and cleanup action plan during implementation of the final cleanup action for the Upland Area.

5.0 SUMMARY

The Port, Ecology, and federal funding partners successfully completed the 3rd Interim Action at the K-C Site, satisfying the requirements of the second amendment to the AO. This project provides substantial benefits to human health and the environment, all while integrating the cleanup with a long-term Site use that restores the job numbers lost when the mill closed in 2012.

Completion of the Interim Action expedites cleanup of the K-C Upland Area, reduces surface water infiltration through residual soil contamination that could be mobilized into groundwater by surface water infiltration, and thus improves groundwater quality and prevents wildlife exposure to residual soil contamination. Completion of the Interim Action also integrates Site infrastructure improvements and cleanup elements to ensure consistency with future Site use and long-term protection of human health and the environment. Additional accomplishments of the Interim Action include the removal and disposal of 17, 850 tons of soil, removal and disposal of 7.1 million gallons of groundwater, and exceeding the AO's goal of a 30 percent reduction in surface water infiltration by placement of a low-permeability cap across 81 percent of the Site's maximum capping area.

While additional capping may occur as part of this interim action at a later date, the Port requests written confirmation that the requirements of the second amendment to the AO have been fulfilled with respect to the areas completed.

6.0 USE OF THIS REPORT

This report has been prepared for the exclusive use of the Port of Everett. Reliance on this report by third parties is at their sole risk. Further, the reuse of information, conclusions, and recommendations provided herein for extensions of the project or for any other project, without review and authorization by Landau, shall be at the user's sole risk. Landau warrants that within the limitations of scope, schedule, and budget, our services have been provided in a manner consistent with that level of care and skill ordinarily exercised by members of the profession currently practicing in the same locality under similar conditions as this project. We make no other warranty, either express or implied.

GENERAL NOTES:

1. ALL CONSTRUCTION SHALL CONFORM TO THESE PLANS AND SPECIFICATIONS AND THE CURRENT VERSION OF THE CITY OF EVERETT STANDARDS.
2. CONTRACTOR SHALL VERIFY ALL LEVELS, DIMENSIONS, AND EXISTING CONDITIONS IN THE FIELD BEFORE PROCEEDING. CONTRACTOR SHALL NOTIFY THE ENGINEER OF ANY DISCREPANCIES OR FIELD CHANGES PRIOR TO INSTALLATION OR FABRICATION. IN CASE OF DISCREPANCIES BETWEEN THE EXISTING CONDITIONS AND THE PLANS, THE CONTRACTOR SHALL OBTAIN DIRECTION FROM THE ENGINEER BEFORE PROCEEDING. DIMENSIONS AND CALLOUTS NOTED AS PLUS OR MINUS (±) OR (REF) INDICATE UNVERIFIED DIMENSIONS AND ARE APPROXIMATE. NOTIFY THE ENGINEER IMMEDIATELY OF CONFLICTS OR EXCESSIVE VARIATIONS FROM AS INDICATED. NOTED DIMENSIONS TAKE PRECEDENCE OVER SCALED DIMENSIONS – DO NOT SCALE THE PLANS.
3. ALL LOCATIONS OF EXISTING STRUCTURES AND UTILITIES SHOWN HEREIN HAVE BEEN OBTAINED FROM AVAILABLE RECORDS AND SHOULD, THEREFORE, BE CONSIDERED APPROXIMATE ONLY AND NOT NECESSARILY COMPLETE. IT IS THE RESPONSIBILITY OF THE CONTRACTOR TO INDEPENDENTLY VERIFY THE ACCURACY OF ALL UTILITY LOCATIONS SHOWN AND TO FURTHER DISCOVER AND AVOID OTHER UTILITIES NOT SHOWN HEREIN WHICH MAY BE AFFECTED BY THE IMPLEMENTATION OF THIS PLAN. THE CONTRACTOR SHALL POTHOLE OR OTHERWISE CONFIRM EXISTING CONDITIONS, SPECIFICALLY PIPE SIZES PRIOR TO CONSTRUCTION, AND BRING ANY CONFLICTS BETWEEN EXISTING CONDITIONS AND NEW WORK TO THE ENGINEER'S ATTENTION.
4. THE EXISTING NORTON TERMINAL SITE UTILITIES HAVE UNDERGONE NUMEROUS REPAIR AND UPGRADE PROJECTS SINCE THE TIME OF THE ORIGINAL CONSTRUCTION. THESE REPAIRS MAY NOT ALL BE REFLECTED IN THESE CONTRACT DOCUMENTS. REFERENCE DRAWINGS FOR THESE CONTRACTS ARE AVAILABLE FROM THE PORT OF EVERETT. IT IS ANTICIPATED THAT MOST SITE UTILITIES WERE DEMOLISHED OR ABANDONED DURING DEMOLITION OF FORMER KIMBERLY-CLARK SITE.
5. A COPY OF THE PLANS SHALL BE ON-SITE WHENEVER CONSTRUCTION IS IN PROGRESS. THROUGHOUT THE PROGRESS OF THE WORK OF THIS CONTRACT, THE CONTRACTOR SHALL MAINTAIN AN ACCURATE RECORD OF ALL CHANGES IN THE CONTRACT DOCUMENTS. UPON THE COMPLETION OF THIS CONTRACT, THE CONTRACTOR SHALL PROVIDE ONE COMPLETE SET OF CONTRACTOR REDLINE AS-BUILT TO THE PORT OF EVERETT.
6. THE CONTRACTOR SHALL LOCATE ALL UTILITIES WITHIN THE PROJECT SITE PRIOR TO WORK. CONTRACTOR SHALL CONTACT 811 "CALL BEFORE YOU DIG" AND AN INDEPENDENT LOCATING SERVICE TO LOCATE ALL UTILITIES AT LEAST 48 HOURS PRIOR TO WORK.
7. THE CONTRACTOR SHALL FIELD VERIFY ALL DIMENSIONS OF EXISTING STRUCTURES AND OTHER FEATURES THAT MAY IMPACT THE WORK. CONTRACTOR SHALL BRING ANY CONFLICTS TO THE ENGINEER'S ATTENTION PRIOR TO BEGINNING AFFECTED WORK.
8. ANY DAMAGE TO EXISTING UTILITIES, OTHER FACILITIES OR EQUIPMENT DUE TO THE CONTRACTOR'S NEGLIGENCE, EXCEPT FOR ITEMS DESIGNATED FOR DEMOLITION, SHALL BE PROMPTLY REPAIRED BY THE CONTRACTOR AT HIS EXPENSE. THIS INCLUDES ITEMS OUTSIDE THE WORK AREA AND WITHIN THE PORT OF EVERETT PROPERTY THAT ARE DAMAGED BY CONSTRUCTION ACTIVITIES DURING EXECUTION OF THIS CONTRACT.
9. PRIOR TO LAYING PIPE, THE CONTRACTOR SHALL EXPOSE EXISTING WATER, STORM WATER AND SEWER PIPING AT CONNECTION POINTS TO VERIFY THAT FIELD CONDITIONS MATCH INFORMATION SHOWN ON THE PLANS, SPECIFICALLY THE LOCATION, ELEVATION, DIAMETER, AND MATERIAL OF EXISTING PIPE. CONTRACTOR SHALL CONTACT THE ENGINEER IF DISCREPANCIES ARE DISCOVERED.
10. ALL ACTIVATION AND DEACTIVATION OF UTILITIES SHALL BE COORDINATED WITH THE UTILITY AND THE ENGINEER IN ADVANCE. PROVIDE A MINIMUM OF 3 DAYS ADVANCE WRITTEN NOTICE TO THE UTILITY AND ENGINEER.
11. SHORING AND EXCAVATION SHALL BE IN ACCORDANCE WITH STATE AND FEDERAL REQUIREMENTS. SEE SPECIFICATIONS FOR ADDITIONAL REQUIREMENTS.
12. THE CONTRACTOR SHALL KEEP ALL STREETS AND VEHICULAR TRAFFIC AREAS USED FOR THIS WORK CLEAN AT ALL TIMES, SEE SPECIFICATIONS FOR ADDITIONAL REQUIREMENTS.
13. CONTRACTOR IS RESPONSIBLE FOR ANY TRAFFIC CONTROLS REQUIRED DURING THE DURATION OF THIS PROJECT, PER CONTRACTOR'S OPERATION. ALL TRAFFIC CONTROL SHALL BE IN ACCORDANCE WITH THE MANUAL OF UNIFORM TRAFFIC CONTROL DEVICES.
14. CONTRACTOR SHALL BE AWARE OF FACILITY OPERATION REQUIREMENTS AND SHALL COORDINATE ACCESS TO THE SITE WITH THE ENGINEER. CONTRACTOR SHALL MAINTAIN ADJACENT TENANT ACCESS AT ALL TIMES AND SHALL NOT RESTRICT TENANT OPERATIONS WITHOUT APPROVAL OF THE ENGINEER.
15. THE CONTRACTOR SHALL PLACE CONSTRUCTION DEBRIS CONTROL DEVICES, BOOMS, TARPAULINS AND OTHER DEVICES AS NECESSARY TO PREVENT DEBRIS FROM ENTERING THE WATER, AND AIR BORNE MATERIALS FROM LEAVING THE IMMEDIATE VICINITY OF THE SITE. THE CONTRACTOR SHALL BE RESPONSIBLE FOR CLEANUP OF ANY MATERIALS DEPOSITED OUTSIDE THE WORK AREA.
16. MAINTAIN UTILITY SERVICE TO EXISTING BUILDINGS, UTILITIES AND FIRE HYDRANTS DURING CONSTRUCTION UNLESS NOTED OTHERWISE OR APPROVED BY THE ENGINEER. INSTALL NEW UTILITY LINES TO POINTS OF CONNECTION TO EXISTING UTILITY LINE PRIOR TO DEMOLITION OF THE EXISTING LINES, UNLESS NOTED OTHERWISE. WATER SERVICE SHUTDOWNS WILL BE LIMITED TO 2 HOURS FOR EACH UTILITY CROSSOVER AND SHALL BE COORDINATED WITH THE ENGINEER. POWER AND COMMUNICATION SHUTDOWNS SHALL BE LIMITED AND SHALL BE COORDINATED WITH THE ENGINEER. SEE SPECIFICATIONS FOR FURTHER SHUTDOWN REQUIREMENTS.
17. CONTRACTOR-INITIATED CHANGES SHALL BE SUBMITTED IN WRITING TO THE PORT FOR APPROVAL PRIOR TO FABRICATION OR CONSTRUCTION. CHANGES SHOWN ON SHOP DRAWINGS ONLY WILL NOT SATISFY THIS REQUIREMENT.
18. THE CONTRACTOR SHALL TAKE NECESSARY MEASURES TO PREVENT INTERRUPTION OF OPERATIONS AND PROTECT ALL EXISTING SURFACES/STRUCTURES TO REMAIN AT THE FACILITY DURING CONSTRUCTION. DETAILS SHALL BE PRESENTED IN THE CONTRACTOR'S WORK PLAN.
19. PROJECT NORTH AS INDICATED ON THESE DRAWINGS IS FOR CONVERSATIONAL GENERAL DIRECTIONAL REFERENCE. BEARINGS NOTES ON DRAWINGS ARE RELATIVE TO TRUE NORTH.
20. CONTRACTOR SHALL BE RESPONSIBLE FOR ERECTION STABILITY AND TEMPORARY SUPPORT AS NECESSARY. DETAILED CONSTRUCTION PLANS SHALL BE PREPARED BY THE CONTRACTOR AND APPROVED BY THE PORT PRIOR TO MOBILIZATION.
21. SEE ALSO STRUCTURAL GENERAL NOTES ON SHEETS S1.1–S1.3.
22. NORTON TERMINAL IS ON THE WASHINGTON STATE DEPARTMENT OF ECOLOGY LIST OF CONTAMINATED SITES AND IS CURRENTLY IN THE MTCA CLEANUP PROCESS. REFER TO THE SOIL AND GROUNDWATER MANAGEMENT PLAN IN APPENDIX B OF THE SPECIFICATIONS FOR ADDITIONAL INFORMATION.
23. SEE SHEET G1.3 FOR UNDERGROUND STRUCTURE LOADING CRITERIA REQUIREMENTS.

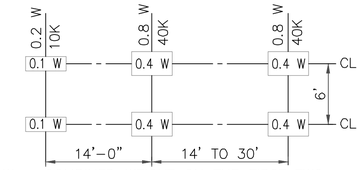
TAYLOR "BIG RED" THDC-976 CONTAINER HANDLER

NOTE:
CONTAINER HANDLING REACH STACKERS CURRENTLY USED ON SITE ARE HYSTER RS46-36CH AND LINDE C4535TLS. THE TAYLOR THPC-976 LOADING WILL GOVERN OVER THE HYSTER AND LINDE LOADING.



W = COMBINED WEIGHT ON THE FIRST TWO AXLES WHICH IS THE SAME AS FOR THE CORRESPONDING H TRUCK.

NOTE: ADD 10% IMPACT TO ABOVE LOADS

HS 25 TRUCK = (1.25 x HS20)

UNDERGROUND UTILITY STRUCTURES DESIGN LOADING CRITERIA

1. ALL UNDERGROUND AND AT GRADE STRUCTURES INCLUDING MANHOLES, CATCH BASINS, HAND HOLES, VAULTS, CLEANOUTS AND OTHER STRUCTURES, INCLUDING ALL RINGS, COVERS, HATCHES, GRATES AND OTHER FEATURES WHICH MAY APPLY, SHALL BE CONTRACTOR DESIGNED. ALL VAULTS SHALL BE CONTRACTOR DESIGNED TO WITHSTAND LOADING CRITERIA FOR THE TAYLOR "BIG RED" THDC-976 CONTAINER HANDLER SHOWN ON THIS SHEET UNLESS NOTED OTHERWISE. VAULTS LOCATED WITHIN THE PROTECTIVE BOLLARDS SHALL BE CONTRACTOR DESIGNED TO WITHSTAND LOADING CRITERIA FOR THE AASHTO HS 25 TRUCK.
2. LID CASTING AND FRAME SHALL BE 200 KIP PROOF TEST LOAD RATED PER AASHTO M306.
3. CONTRACTOR SHALL SUBMIT STAMPED AND SIGNED SHOP DRAWINGS AND CALCULATIONS COMPLETED BY A WASHINGTON STATE REGISTERED STRUCTURAL ENGINEER FOR APPROVAL BY THE ENGINEER PRIOR TO FABRICATION OF ALL UNDERGROUND UTILITY STRUCTURES. SHOP DRAWINGS AND CALCULATIONS PROVIDED BY THE CONTRACTOR SHALL ADDRESS BUOYANCY AND SOIL BEARING PRESSURE.
4. STANDARD PLAN REFERENCES AND MANUFACTURER MODEL NUMBERS FOR UNDERGROUND UTILITY STRUCTURES ARE INTENDED TO PROVIDE INTERIOR GEOMETRY AND INTENT ONLY. THE CONTRACTOR SHALL INCREASE REQUIRED REINFORCING AND WALL THICKNESS, AND CHANGE ACCESS GRATE AND COVER AS REQUIRED TO ACCOMMODATE LOADING CRITERIA REQUIREMENTS.
5. REFER TO THE GEOTECHNICAL ENGINEERING DESIGN REPORT DATED MAY, 2021 PREPARED BY LANDAU ASSOCIATES FOR SOIL DESIGN CRITERIA TO BE APPLIED TO VAULT DESIGN.
6. DEAD LOAD SHALL BE APPLIED TO ALL STRUCTURES, WHICH INCLUDES THE WEIGHT OF THE CONSTRUCTION MATERIALS AND THE SOIL.
7. LIVE LOADS SHALL BE APPLIED TO ALL STRUCTURES TO ACT SIMULTANEOUSLY AND IN COMBINATION WITH DEAD LOADS, SOIL LOADS AND HYDROSTATIC PRESSURE.
8. MEASURED DEPTH TO GROUNDWATER IN THE UPLAND AREAS OF THE NORTON TERMINAL GENERALLY RANGES 6 TO 12 FEET BELOW GROUND SURFACE, BUT IS SHALLOWER ALONG THE EAST EDGE OF THE SITE AS DESCRIBED IN THE GEOTECHNICAL REPORT. DEWATERING MAY BE REQUIRED FOR INSTALLATION OF UTILITY LINES AND STRUCTURES DEPENDING UPON LOCATION, TIME OF YEAR AND TIDE ELEVATION. SEE SPECIFICATIONS AND SOIL AND GROUNDWATER MANAGEMENT PLAN FOR ADDITIONAL GROUNDWATER INFORMATION.

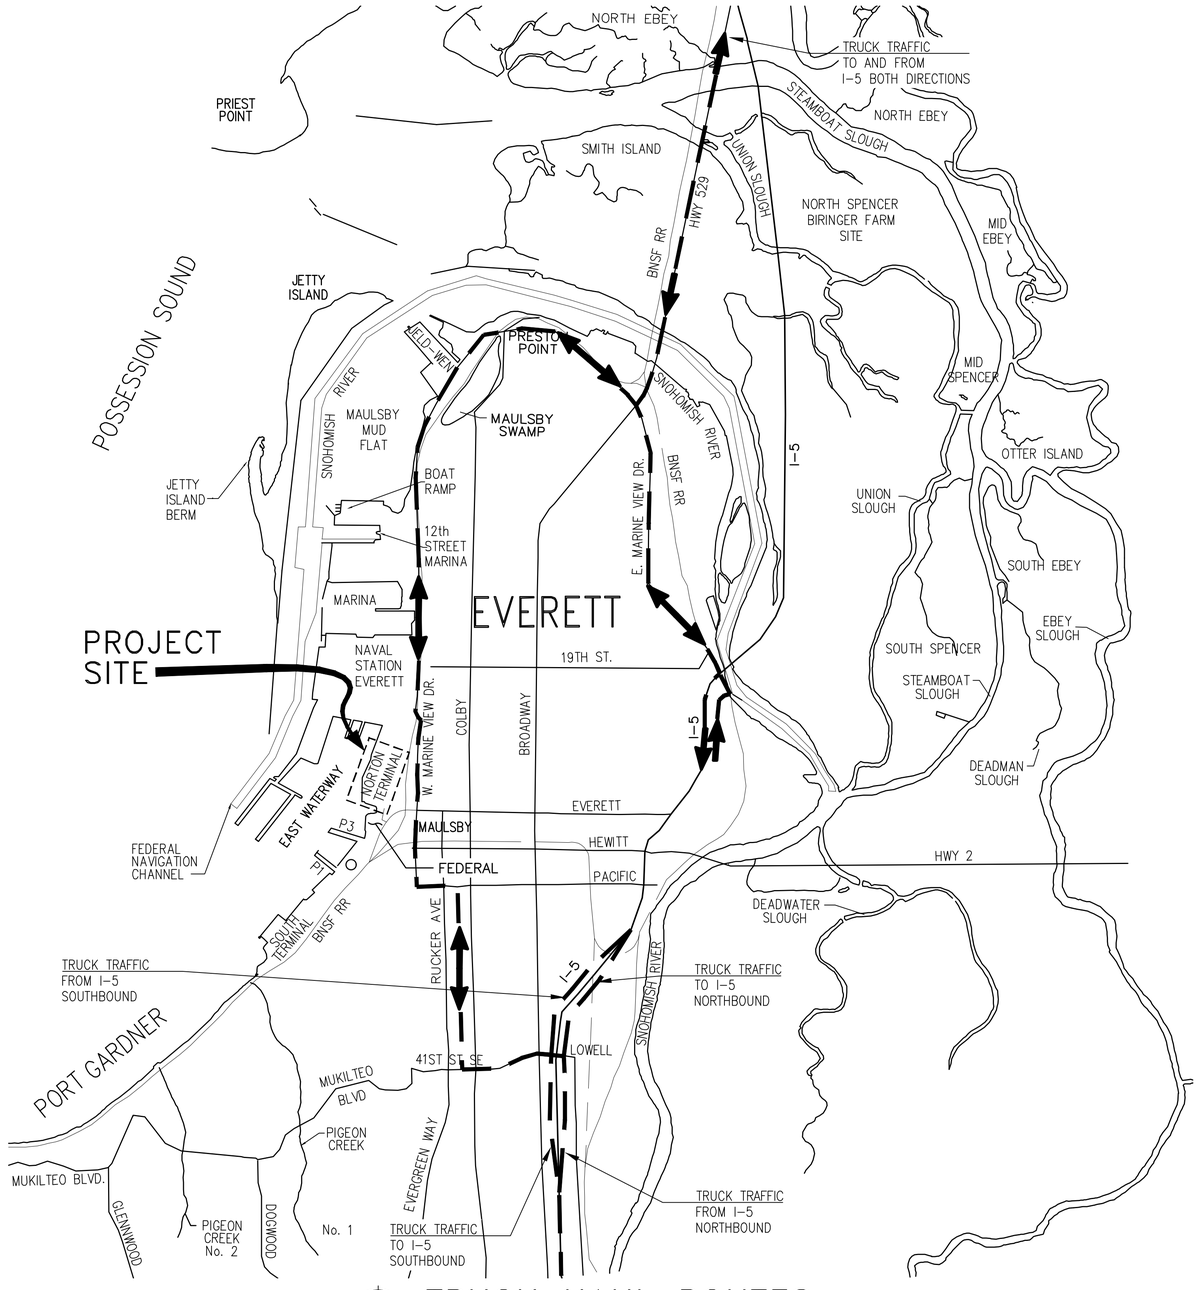
SITE ACCESS PLAN

SCALE: 1" = 200'



TRUCK HAUL ROUTES

SCALE: 1" = 2000'

KEY NOTES

1. THE MAJORITY OF THE SITE WAS BACKFILLED WITH APPROXIMATELY 1 TO 5 FEET OF SAND BACKFILL IN FALL 2020 DURING THE 2ND INTERIM ACTION CLEANUP. THE CONTRACTOR SHALL BE AWARE THAT THERE IS THE POTENTIAL THAT SOME CONSTRUCTION EQUIPMENT OR TRUCKS MAY EXPERIENCE POOR TRACTION OR GET STUCK DRIVING OVER THE EXISTING SAND IN PORTIONS OF THE SITE. SEE SPECIFICATIONS FOR ADDITIONAL INFORMATION.
2. SEPARATE PRELOAD CONTRACT WILL LEAVE A GRAVEL HAUL ROAD FROM FEDERAL AVENUE TO THE PRELOAD THAT WILL BE AVAILABLE FOR USE BY THE CONTRACTOR. AN EXISTING GRAVEL ROAD IS ALSO AVAILABLE AT THE NORTH END.
3. UNLESS OTHERWISE SHOWN OR APPROVED BY THE ENGINEER, THE CONTRACTOR SHALL LOCATE ALL STOCKPILES AND THEIR CONSTRUCTION TRAILER WITHIN THE WORK AREA LIMITS SHOWN. SEE SHEET C1.1 FOR FURTHER REQUIREMENTS.
4. CONTRACTOR MAY SHARE CONSTRUCTION ACCESS POINTS WITH OTHER CONTRACTORS. SEE SHEET C5.1 AND SPECIFICATIONS FOR FURTHER DETAILS.
5. CONTRACTOR SHALL PROVIDE TRAFFIC CONTROL AND MAINTAIN ONE LANE OF TRAFFIC DURING ALL WORK WITHIN THE FEDERAL AVENUE ROW. THIS WILL BE REQUIRED TO MAINTAIN ACCESS TO EXISTING TENANTS ALONG FEDERAL AVENUE (EVERETT SHIP REPAIR, DUNLAP AND MAIN TERMINAL TRAFFIC) AND OTHER CONSTRUCTION PROJECTS AS SHOWN.
6. CONTRACTOR SHALL PROVIDE ACCESS TO PORT SURVEYORS TO THE SETTLEMENT MONITORING POINTS ON THE PRELOAD FOOTPRINT BETWEEN SEPTEMBER 2021 AND MARCH 2022.
7. CONTRACTOR CAN UTILIZE EXISTING NORTH CONSTRUCTION ACCESS SHOWN ON SHEET C1.1 FOR THE MAJORITY OF THE PROJECT UNTIL DIRECTED BY ENGINEER TO UTILIZE THE NEW NORTH GATE ALIGNMENT.
8. NO CONTRACTOR TRAFFIC QUEUING IS ALLOWED ON EITHER TERMINAL AVENUE OR FEDERAL AVENUE.

AS-BUILTS

OTHER CONSTRUCTION PROJECTS

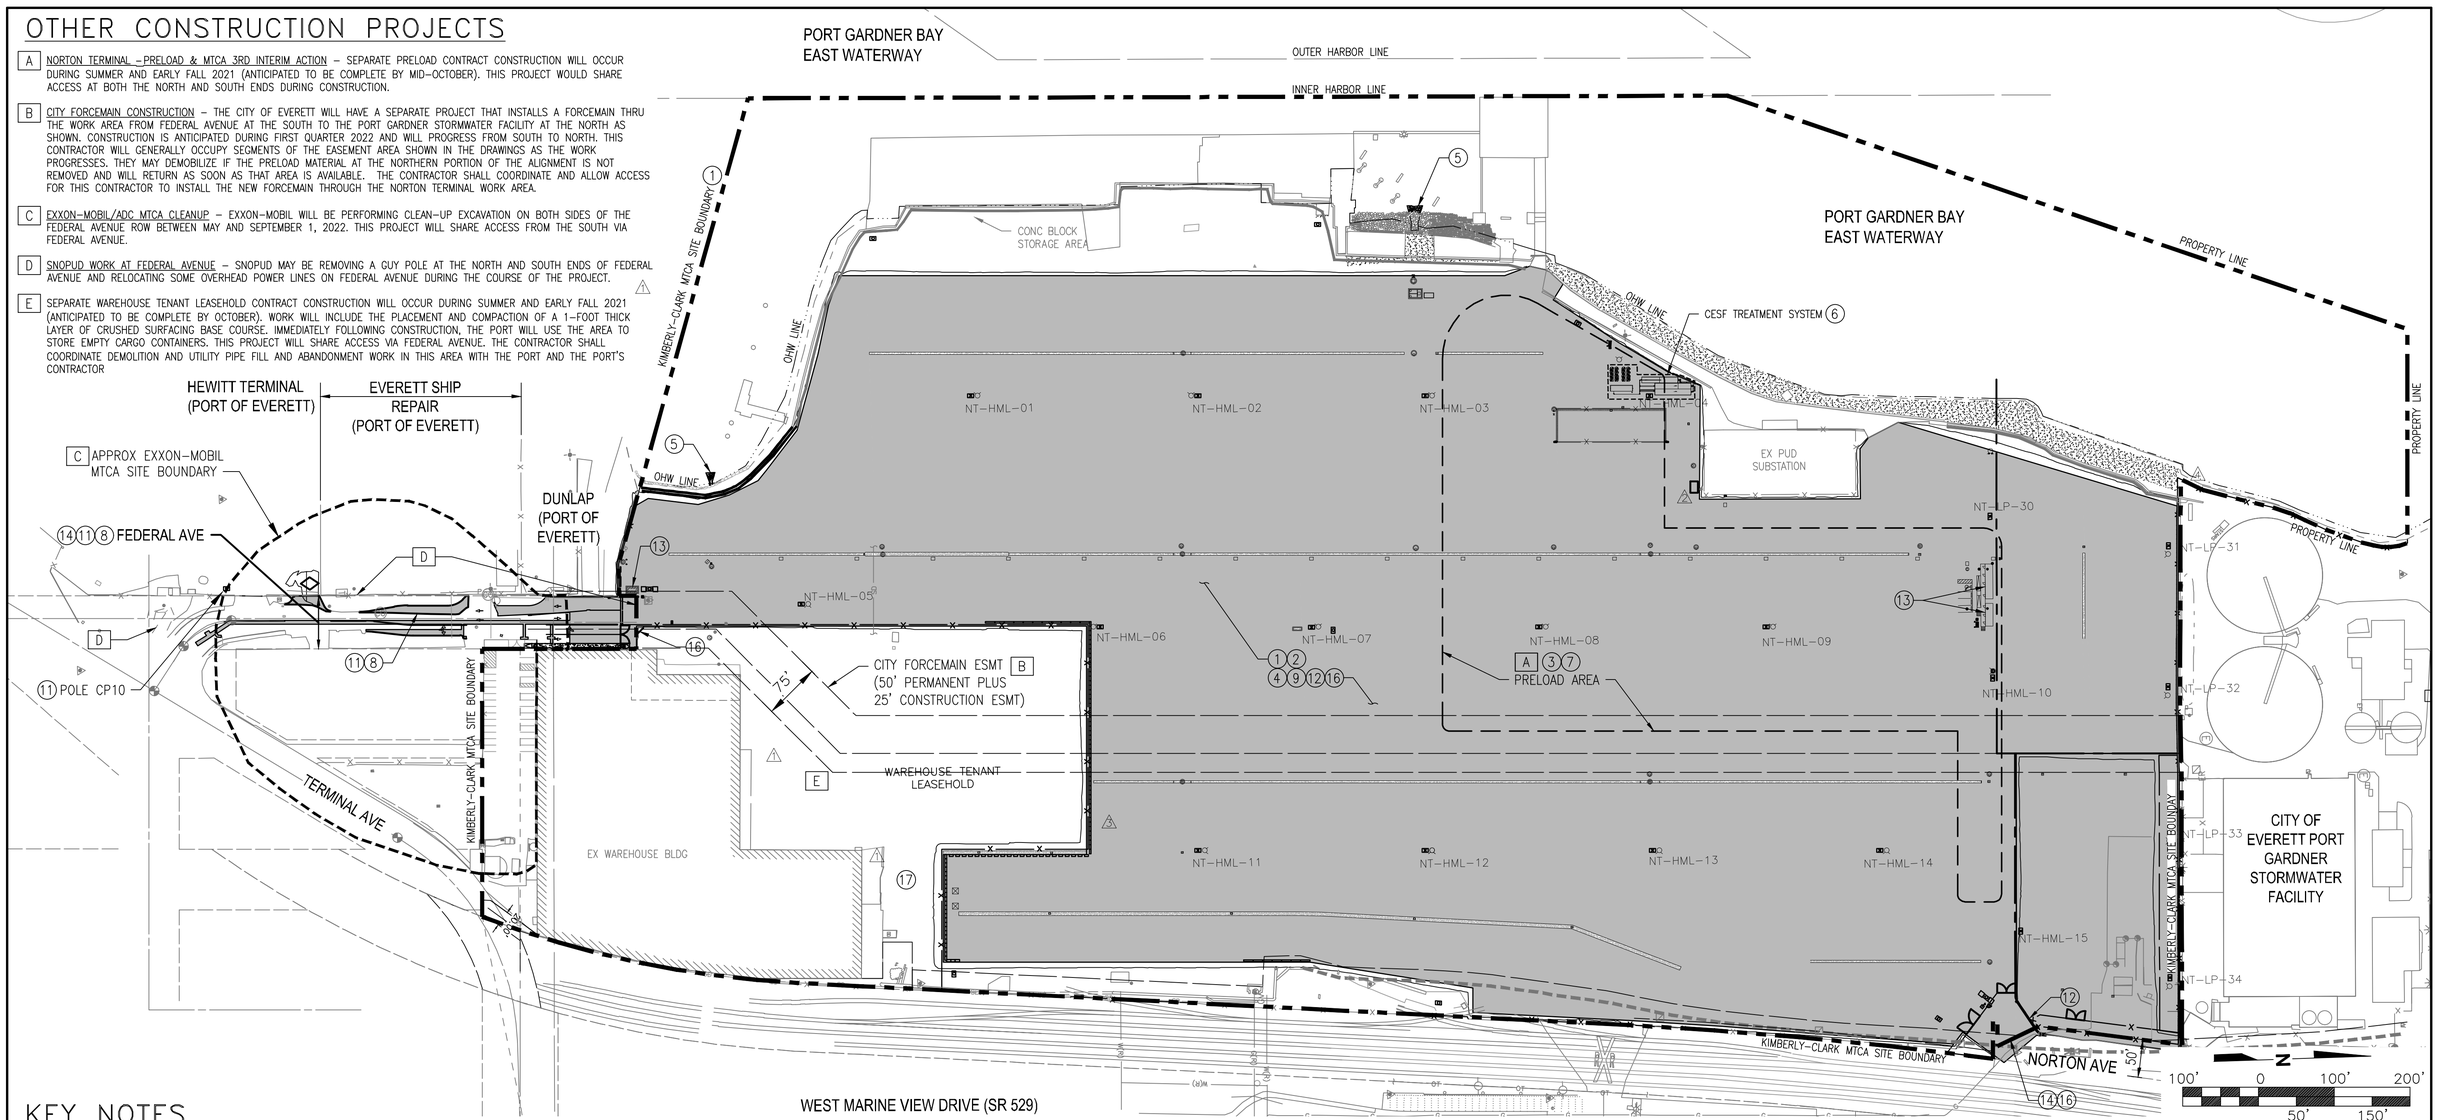
A NORTON TERMINAL – PRELOAD & MTCA 3RD INTERIM ACTION – SEPARATE PRELOAD CONTRACT CONSTRUCTION WILL OCCUR DURING SUMMER AND EARLY FALL 2021 (ANTICIPATED TO BE COMPLETE BY MID-OCTOBER). THIS PROJECT WOULD SHARE ACCESS AT BOTH THE NORTH AND SOUTH ENDS DURING CONSTRUCTION.

B CITY FORCEMAIN CONSTRUCTION – THE CITY OF EVERETT WILL HAVE A SEPARATE PROJECT THAT INSTALLS A FORCEMAIN THRU THE WORK AREA FROM FEDERAL AVENUE AT THE SOUTH TO THE PORT GARDNER STORMWATER FACILITY AT THE NORTH AS SHOWN. CONSTRUCTION IS ANTICIPATED DURING FIRST QUARTER 2022 AND WILL PROGRESS FROM SOUTH TO NORTH. THIS CONTRACTOR WILL GENERALLY OCCUPY SEGMENTS OF THE EASEMENT AREA SHOWN IN THE DRAWINGS AS THE WORK PROGRESSES. THEY MAY DEMOBILIZE IF THE PRELOAD MATERIAL AT THE NORTHERN PORTION OF THE ALIGNMENT IS NOT REMOVED AND WILL RETURN AS SOON AS THAT AREA IS AVAILABLE. THE CONTRACTOR SHALL COORDINATE AND ALLOW ACCESS FOR THIS CONTRACTOR TO INSTALL THE NEW FORCEMAIN THROUGH THE NORTON TERMINAL WORK AREA.

C EXXON-MOBIL/ADC MTCA CLEANUP – EXXON-MOBIL WILL BE PERFORMING CLEAN-UP EXCAVATION ON BOTH SIDES OF THE FEDERAL AVENUE ROW BETWEEN MAY AND SEPTEMBER 1, 2022. THIS PROJECT WILL SHARE ACCESS FROM THE SOUTH VIA FEDERAL AVENUE.

D SNOPUD WORK AT FEDERAL AVENUE – SNOPUD MAY BE REMOVING A GUY POLE AT THE NORTH AND SOUTH ENDS OF FEDERAL AVENUE AND RELOCATING SOME OVERHEAD POWER LINES ON FEDERAL AVENUE DURING THE COURSE OF THE PROJECT. △1

E SEPARATE WAREHOUSE TENANT LEASEHOLD CONTRACT CONSTRUCTION WILL OCCUR DURING SUMMER AND EARLY FALL 2021 (ANTICIPATED TO BE COMPLETE BY OCTOBER). WORK WILL INCLUDE THE PLACEMENT AND COMPACTION OF A 1-FOOT THICK LAYER OF CRUSHED SURFACING BASE COURSE. IMMEDIATELY FOLLOWING CONSTRUCTION, THE PORT WILL USE THE AREA TO STORE EMPTY CARGO CONTAINERS. THIS PROJECT WILL SHARE ACCESS VIA FEDERAL AVENUE. THE CONTRACTOR SHALL COORDINATE DEMOLITION AND UTILITY PIPE FILL AND ABANDONMENT WORK IN THIS AREA WITH THE PORT AND THE PORT'S CONTRACTOR



SCALE: 1"=100'

KEY NOTES

1. THE PROJECT HAS A DUAL PURPOSE AS A COMBINED DEVELOPMENT OF NORTON TERMINAL AND A 3RD INTERIM ACTION CLEANUP FROM THE FORMER KIMBERLY-CLARK OPERATIONS. THE NORTON TERMINAL IS WITHIN THE KIMBERLY-CLARK MTCA SITE. SEE SPECIFICATIONS FOR FURTHER ENVIRONMENTAL REQUIREMENTS.
2. SEE SHEET G2.1 AND THE SPECIFICATIONS FOR FURTHER INFORMATION ON REMAINING KNOWN BELOW GRADE FOUNDATIONS FROM THE FORMER KIMBERLY-CLARK FACILITY.
3. THE CONTRACTOR SHALL BE AWARE THAT THE NORTHERN PORTION OF THE SITE HAS KNOWN WOOD WASTE DEPOSITS THAT IMPACT VARIOUS SITE DESIGN ELEMENTS. SEE SPECIFICATIONS FOR FURTHER REQUIREMENTS.
4. SEE SPECIFICATIONS FOR TERMINAL OPENING AND SUBSTANTIAL COMPLETION MILESTONE REQUIREMENTS.
5. OUTFALL REPLACEMENT (SEE STORMWATER DRAWINGS) IS SUBJECT TO IN-WATER CONSTRUCTION WINDOWS AND SHALL BE COMPLETED BETWEEN JULY 16 AND FEBRUARY 15. WORK SHALL ALSO BE PERFORMED IN THE "DRY" AT LOW TIDES. SEE SPECIFICATIONS FOR FURTHER ENVIRONMENTAL REQUIREMENTS AND BMPS.
6. CESF TREATMENT SYSTEM SHALL BE COMPLETE AND OPERATIONAL PRIOR TO OFF-SITE DISCHARGE OF STORM WATER RUNOFF. CONTRACTOR SHALL INFILTRATE ALL STORMWATER ON-SITE UNTIL NEW PAVEMENT IS PLACED. ANY NEW PAVED AREAS SHALL TEMPORARILY CONVEY RUNOFF TO AN INFILTRATION AREA OR TO THE CESF SYSTEM FOR TREATMENT PRIOR TO OFF-SITE DISCHARGE. SEE SPECIFICATIONS AND TESC DRAWINGS FOR FURTHER REQUIREMENTS.
7. PRELOAD IS ANTICIPATED TO BE COMPLETE IN FIRST QUARTER 2022. CONTRACTOR SHALL ASSUME THAT SOME PORTIONS OF PRELOAD MAY NEED TO STAY IN PLACE UNTIL MID-MARCH 2022. IT IS ANTICIPATED THAT PORTIONS OF THE PRELOAD MAY BE AVAILABLE FOR RELOCATION SOONER BASED ON RESULTS OF SETTLEMENT MONITORING.
8. CONTRACTOR SHALL COMPLETE INSTALLATION OF THE NEW WATERLINE, ELECTRICAL AND COMMUNICATIONS DUCTBANKS (INCLUDING ASSOCIATED TRENCHING, BACKFILL & REPAVING) LOCATED WITHIN THE FEDERAL AVENUE ROW PRIOR TO THE MAY 1, 2022 START OF EXXON-MOBIL CLEANUP. CONTRACTOR SHALL NOTE THAT WORK WITHIN FEDERAL AVENUE IS WITHIN THE EXXON-MOBIL/ADC MTCA SITE AS SHOWN ON G1.4. SEE SPECIFICATIONS FOR FURTHER ENVIRONMENTAL REQUIREMENTS.
9. THE CONTRACTOR SHALL COMPLETE THE PROJECT ON-SITE COMMUNICATIONS DUCTBANKS, VAULTS AND POLES PRIOR TO AUGUST 1, 2022 AND ALLOW THE PORT ACCESS TO THIS INFRASTRUCTURE TO PULL COMMUNICATIONS CABLES AND INSTALL EQUIPMENT ONTO POLES PRIOR TO TERMINAL OPENING. SEE ELECTRICAL DRAWINGS FOR FURTHER DETAILS.
10. DUE TO EXXON-MOBIL CONSTRUCTION, THE CONTRACTOR SHALL WAIT TO INSTALL NEW FEDERAL AVENUE SLIDE GATE FROM HEWITT TERMINAL (AND ASSOCIATED ELECTRICAL POWER) UNTIL SEPTEMBER 1, 2022.
11. CONTRACTOR SHALL COORDINATE WITH PORT (AND SEPARATE COMMUNICATIONS CONTRACTOR) TO MINIMIZE CHANGE-OVER DURATION BETWEEN EXISTING COMMUNICATIONS POLE AND NEW COMMUNICATIONS POLE (AND INTERCEPTION OF CONDUITS IN HEWITT TERMINAL). NEW COMMUNICATIONS POLE CP10 AND ADJACENT CONDUITS SHALL BE INSTALLED AND READY FOR WORK BY OTHERS ON MARCH 1, 2022. SEE ELECTRICAL DRAWINGS FOR FURTHER DETAILS.
12. THE CONTRACTOR WILL INSTALL THE BELOW GRADE INFRASTRUCTURE FOR THE SNOPUD EQUIPMENT WITHIN NORTON TERMINAL AND SHALL COORDINATE WITH SNOPUD TO ALLOW INSTALLATION OF THEIR EQUIPMENT AND CABLING. SEE ELECTRICAL DRAWINGS FOR DETAILS.
13. CONTRACTOR SHALL NOTE THAT THE MODULAR LONGSHORE BUILDINGS AND GUARD SHACK WILL BE DEFERRED SUBMITTALS FROM THE CITY BASED ON CONTRACTOR DESIGN. CONSTRUCTION CAN NOT BEGIN UNTIL THE CONTRACTOR OBTAINS REQUIRED PERMITS FROM THE CITY. SEE ARCHITECTURAL SPECIFICATIONS.
14. SEE SHEET G4.1 FOR SITE ACCESS REQUIREMENTS.
15. NOT USED
16. SEE SPECIFICATIONS FOR DEWATERING REQUIREMENTS AND POTENTIAL CITY SANITARY SEWER DISCHARGE LOCATIONS NEAR NORTH AND SOUTH GATES AS SHOWN ON SHEET C1.1. △1
17. REFER TO SHEET C1.1 FOR AREA AVAILABLE TO CONTRACTOR FOR LAYDOWN/STOCKPILE AREA ON NORTH SIDE OF WAREHOUSE.

DEMOLITION NOTES

1. THE EXISTING UTILITY LOCATIONS AND DEPTHS SHOWN ON THESE PLANS ARE APPROXIMATE. NO REPRESENTATION IS MADE AS TO THE ACCURACY OR COMPLETENESS OF THE INFORMATION. THE CONTRACTOR SHALL POTHOLE OR OTHERWISE CONFIRM EXISTING CONDITIONS PRIOR TO START OF WORK. IF CONDITIONS DIFFER FROM THOSE SHOWN ON THE PLANS, THE CONTRACTOR SHALL NOTIFY THE ENGINEER AND SHALL NOT BEGIN CONSTRUCTION UNTIL THE CHANGED CONDITIONS HAVE BEEN EVALUATED. THE CONTRACTOR SHALL TAKE PRECAUTIONARY MEASURES TO PROTECT FROM DAMAGE OR DESTRUCTION ALL UTILITIES AS SHOWN AND ALL UTILITIES NOT SHOWN THAT MAY BE ENCOUNTERED DURING CONSTRUCTION DUE TO NO RECORD OF THEIR EXISTENCE.
2. UTILITIES, STRUCTURES AND SITE FEATURES NOT INDICATED FOR DEMOLITION SHALL BE PROTECTED-IN-PLACE.
3. ALL ITEMS MARKED FOR DEMOLITION (DEMO) SHALL BE DEMOLISHED AND REMOVED FROM THE SITE AND DISPOSED OF AT AN APPROVED UPLAND DISPOSAL SITE IN ACCORDANCE WITH THE SPECIFICATIONS. ANY FEES REQUIRED FOR DISPOSAL ARE THE RESPONSIBILITY OF THE CONTRACTOR.
4. CONTRACTOR SHALL COORDINATE WITH CITY TO SHUT-OFF WATER SERVICE AS NEEDED TO CONSTRUCT WATERMAIN EXTENSION AND TO DECOMMISSION AND ABANDON EXISTING WATER SERVICES AS NOTED ON THE DRAWINGS.
5. CONTRACTOR SHALL USE CARE TO REMOVE AND NOT DAMAGE ITEMS MARKED FOR SALVAGE. CONTRACTOR SHALL RETURN SALVAGED ITEMS TO THE PORT AT COVERED LOADING DOCKS 1 AND 2 ALONG WEST SIDE OF EXISTING WAREHOUSE.
6. EXISTING ACP IN NORTON AVE IS APPROXIMATELY 6" THICK. CONTRACTOR SHALL FIELD VERIFY THICKNESS AND REMOVE THE FULL THICKNESS OF ACP MARKED FOR DEMO.
7. DEMOLITION OF EXISTING CHAINLINK FENCE SHALL INCLUDE DEMOLITION OF EXISTING POSTS, CONCRETE FOUNDATIONS, BARBED WIRE, AND FASTENERS.

NOTES

1. SEE SHEETS D1.1 AND D1.2 FOR OTHER SITE DEMOLITION REQUIREMENTS.
2. SEE SHEET G3.2 FOR UNDERGROUND UTILITY PLAN FROM FORMERLY KIMBERLY-CLARK SITE PROVIDED AS REFERENCE.
3. THE EXISTING UTILITY LOCATIONS AND DEPTHS SHOWN ON THESE PLANS ARE APPROXIMATE. NO REPRESENTATION IS MADE AS TO THE ACCURACY OR COMPLETENESS OF THE INFORMATION. THE CONTRACTOR SHALL POTHOLE OR OTHERWISE CONFIRM EXISTING CONDITIONS PRIOR TO START OF WORK. IF CONDITIONS DIFFER FROM THOSE SHOWN ON THE PLANS, THE CONTRACTOR SHALL NOTIFY THE ENGINEER AND SHALL NOT BEGIN CONSTRUCTION UNTIL THE CHANGED CONDITIONS HAVE BEEN EVALUATED. THE CONTRACTOR SHALL TAKE PRECAUTIONARY MEASURES TO PROTECT FROM DAMAGE OR DESTRUCTION ALL UTILITIES AS SHOWN AND ALL UTILITIES NOT SHOWN THAT MAY BE ENCOUNTERED DURING CONSTRUCTION DUE TO NO RECORD OF THEIR EXISTENCE.
4. ALL EXISTING PIPES SMALLER THAN 15" DIAMETER THAT ARE ENCOUNTERED DURING THE WORK SHALL BE FULLY REMOVED OR SHALL BE CUT AND EACH END PLUGGED WITH GROUT FOR A MINIMUM LENGTH OF 5 TIMES THE PIPE DIAMETER.

KEY NOTES

(1) ALL EXISTING PIPES THAT ARE 15" DIAMETER AND LARGER AS SHOWN ON THESE DRAWINGS OR THAT ARE ENCOUNTERED DURING THE WORK SHALL BE FULLY REMOVED OR ABANDONED IN PLACE BY FILLING THE ENTIRE PIPE LENGTH AND CROSS SECTIONAL AREA WITH CDF. PRIOR TO FILLING WITH CDF, CONTRACTOR SHALL VIDEO SURVEY THE ENTIRE LENGTH OF PIPE TO EVALUATE ITS CONDITION. IF PIPE IS FOUND TO HAVE HOLES OR DISLOCATED JOINTS, THESE AREAS OF THE PIPE SHALL BE EXCAVATED TO EXPOSE PIPE AND THEN REPAIR/SEAL DAMAGED AREA PRIOR TO FILLING THE ENTIRE PIPE WITH CDF. CDF SHALL BE CONTAINED WITHIN PIPES AND SHALL NOT BE ALLOWED TO DISCHARGE INTO THE SURROUNDING SOIL TO THE GREATEST EXTENT POSSIBLE.

(2) UTILITY NOT LOCATED DURING CONSTRUCTION.

TESC NOTES

1. CONTRACTOR SHALL MANAGE AND MAINTAIN EXISTING ON-SITE INFILTRATION OF ALL ON-SITE STORMWATER DURING CONSTRUCTION AND SHALL NOT ALLOW SURFACE WATERS TO DISCHARGE FROM THE SITE.
2. OUTFALL REPLACEMENT WORK – ALL EXCAVATION AND PLACEMENT OF ROCK BELOW OHW WILL OCCUR IN THE 'DRY' DURING LOW TIDE WITHIN A SINGLE TIDE CYCLE. WORK THAT CANNOT BE COMPLETED IN A SINGLE TIDE CYCLE SHALL BE TEMPORARILY COVERED AND STABILIZED WITH GRAVEL, GEOTEXTILE OR OTHER APPROVED METHODS PRIOR TO TIDAL SUBMERSION.
3. THROUGHOUT THE PROJECT DURATION AND AT END OF PROJECT, CONTRACTOR SHALL REVIEW PERIMETER BERM FOR SIGNS OF MATERIAL LOSS AND EROSION. MATERIAL LOSS AND EROSION SHALL BE REPAIRED WITH ON-SITE STOCKPILED BALLAST MATERIAL PROVIDED BY THE PORT OR STRUCTURAL BACKFILL IMPORTED BY CONTRACTOR.
4. CONTRACTOR SHALL FOLLOW ALL TESC MEASURES DESCRIBED IN THE SWPPP AND UPDATE THE SWPPP AS REQUIRED THROUGHOUT THE DURATION OF THE CONTRACT. SEE SPECIFICATIONS FOR FURTHER REQUIREMENTS.
5. CONTRACTOR CAN UTILIZE EXISTING NORTH GATE FOR CONSTRUCTION ACCESS AS SHOWN UNTIL DIRECTED BY ENGINEER TO UTILIZE THE NEW NORTH GATE ALIGNMENT. △2
6. SEE SHEET C1.4 FOR CITY OF EVERETT STANDARD TESC NOTES.

1 STOCKPILE COVER
C1.1|C1.4 SCALE: NTS

NOTES

1. STOCKPILED MATERIALS SHALL BE COVERED AND SECURED FROM WIND, RAIN, AND OTHER DISTURBANCES AT ALL TIMES EXCEPT DURING ACTIVE LOADING AND UNLOADING.
2. CONTRACTOR SHALL REMOVE WATER WITHIN THE STOCKPILE AREAS BY PUMPING TO A CONTAINMENT VESSEL FOR ANALYSIS TO DETERMINE ITS PROPER DISPOSAL. CONTRACTOR SHALL BE RESPONSIBLE FOR DISPOSAL OF COLLECTED WATER IN THE STOCKPILE AREA.
3. CONTRACTOR IS RESPONSIBLE FOR SOIL AND STOCKPILE MANAGEMENT, INCLUDING SIZE, LOCATION AND NUMBER OF STOCKPILES. SEE SPECIFICATIONS FOR FURTHER REQUIREMENTS.
4. IF MULTIPLE SHEETS OF PLASTIC SHEETING ARE USED ABOVE OR BELOW THE STOCKPILES, THEY MUST OVERLAP BY 3' MINIMUM.
5. BARRIER REQUIRED AT TOE OF STOCKPILES.
6. SECURE COVERING TIGHTLY IN PLACE BY USING SANDBAGS OR TIRES ON ROPES WITH MAXIMUM 10' GRID SPACING IN ALL DIRECTIONS.
7. STOCKPILES MUST BE LOCATED MORE THAN 75' FROM SHORELINE AND AWAY FROM STORM DRAIN CATCH BASINS.
8. GROUND SURFACES UNDER CONTAMINATED MATERIAL STOCKPILES SHALL BE FREE OF OBJECTS THAT WILL DAMAGE SHEETING, OR A LAYER OF GEOTEXTILE OR PLYWOOD SHALL BE PLACED BELOW.

CITY OF EVERETT STANDARD TESC NOTES (VOL. 1, 2-5)

1. APPROVAL OF THIS EROSION/SEDIMENTATION CONTROL (ESC) PLAN DOES NOT CONSTITUTE AN APPROVAL OF PERMANENT ROAD OR DRAINAGE DESIGN (E.G. SIZE AND LOCATION OF ROADS, PIPES, RESTRICTORS, CHANNELS, RETENTION FACILITIES, UTILITIES).
2. THE IMPLEMENTATION OF THESE ESC PLANS AND THE CONSTRUCTION, MAINTENANCE, REPLACEMENT, AND UPGRADING OF THESE ESC FACILITIES IS THE RESPONSIBILITY OF THE APPLICANT/CONTRACTOR UNTIL ALL CONSTRUCTION IS COMPLETED AND APPROVED AND PERMANENT STABILIZATION MEASURES ARE ESTABLISHED.
3. THE BOUNDARIES OF THE CLEARING LIMITS SHOWN ON THIS PLAN SHALL BE CLEARLY FLAGGED IN THE FIELD PRIOR TO CONSTRUCTION. DURING THE CONSTRUCTION PERIOD, NO DISTURBANCE BEYOND THE FLAGGED CLEARING LIMITS SHALL BE PERMITTED. THE FLAGGING SHALL BE MAINTAINED BY THE APPLICANT/CONTRACTOR FOR THE DURATION OF CONSTRUCTION.
4. THE ESC FACILITIES SHOWN ON THIS PLAN MUST BE CONSTRUCTED IN CONJUNCTION WITH ALL CLEARING AND GRADING ACTIVITIES, AND IN SUCH A MANNER AS TO ENSURE THAT SEDIMENT AND SEDIMENT LADEN WATER DO NOT ENTER THE DRAINAGE SYSTEM, ROADWAYS, OR VIOLATE APPLICABLE WATER QUALITY STANDARDS.
5. THE ESC FACILITIES SHOWN ON THIS PLAN ARE THE MINIMUM REQUIREMENTS FOR ANTICIPATED SITE CONDITIONS. DURING THE CONSTRUCTION PERIOD, THESE ESC FACILITIES SHALL BE UPGRADED AS NEEDED FOR UNEXPECTED STORM EVENTS AND TO ENSURE THAT SEDIMENT AND SEDIMENT-LADEN WATER DO NO LEAVE THE SITE.
6. THE ESC FACILITIES SHALL BE INSPECTED ROUTINELY AND MAINTAINED BY THE APPLICANT/CONTRACTOR TO ENSURE THEIR CONTINUED FUNCTIONING, ESPECIALLY AFTER STORM EVENTS.
7. THE ESC FACILITIES ON INACTIVE SITES SHALL BE INSPECTED AND MAINTAINED A MINIMUM OF ONCE A MONTH OR WITHIN THE 48 HOURS FOLLOWING A MAJOR STORM EVENT.
8. AT NO TIME SHALL MORE THAN ONE FOOT OF SEDIMENT BE ALLOWED TO ACCUMULATE WITHIN A TRAPPED CATCH BASIN. ALL CATCH BASINS AND CONVEYANCE LINES SHALL BE CLEANED PRIOR TO PAVING. THE CLEANING OPERATION SHALL NOT FLUSH SEDIMENT LADEN WATER INTO THE DOWNSTREAM SYSTEM.
9. STABILIZED CONSTRUCTION ENTRANCES SHALL BE INSTALLED AT THE BEGINNING OF CONSTRUCTION AND MAINTAINED FOR THE DURATION OF THE PROJECT. ADDITIONAL MEASURES MAY BE REQUIRED TO ENSURE THAT ALL PAVED AREAS ARE KEPT CLEAN FOR THE DURATION OF THE PROJECT.
10. THE CONTRACTOR SHALL PROVIDE PERIODIC STREET CLEANING TO REMOVE DEBRIS AND SEDIMENT TRACKED OFF THE SITE.
11. APPROPRIATE MEASURES SHALL BE TAKEN TO STOP SEDIMENT FROM ENTERING SURFACE WATER BODIES IF PROPOSED BMPs FAIL.
12. BARE AND/OR DISTURBED SOILS SHALL REMAIN UNCOVERED AND/OR UNSTABILIZED FOR NO MORE THAN 2 DAYS FROM OCTOBER 1 THROUGH APRIL 30, AND FOR NO MORE THAN 7 DAYS FROM MAY 1 THROUGH SEPTEMBER 30.

NOTES

1. REFER TO SPECIFICATIONS FOR PIPE MATERIAL.
2. REFER TO SHEET C4.17 FOR STORM AND TRENCH DRAIN STRUCTURE SCHEDULE.

CITY OF EVERETT STANDARD STORM DRAIN NOTES (VOL.1, 4-2.7)

1. NO PART OF THE DRAINAGE SYSTEM SHALL BE COVERED, CONCEALED, OR PUT INTO USE UNTIL IT HAS BEEN INSPECTED, TESTED, AND ACCEPTED BY THE CITY OF EVERETT.
2. ALL WORK AND MATERIAL SHALL CONFORM TO THE CITY OF EVERETT DESIGN AND CONSTRUCTION STANDARDS AND SPECIFICATIONS AND THE WSDOT/APWA STANDARD SPECIFICATIONS FOR ROAD, BRIDGE, AND MUNICIPAL CONSTRUCTION (CURRENT EDITION).
3. APPROXIMATE LOCATIONS OF EXISTING UTILITIES HAVE BEEN OBTAINED FROM AVAILABLE RECORDS AND ARE SHOWN FOR CONVENIENCE. THE CONTRACTOR SHALL BE RESPONSIBLE FOR VERIFICATION OF LOCATIONS AND TO AVOID DAMAGE TO ANY ADDITIONAL UTILITIES SHOWN. IF CONFLICTS WITH EXISTING UTILITIES ARISE DURING CONSTRUCTION, THE CONTRACTOR SHALL NOTIFY THE PUBLIC WORKS INSPECTOR AND ANY CHANGES REQUIRED SHALL BE APPROVED BY THE CITY ENGINEER PRIOR TO COMMENCEMENT OF RELATED CONSTRUCTION ON THE PROJECT.
4. ALL STORM SYSTEMS WITHIN THE PUBLIC RIGHT-OF-WAY OR IN EASEMENTS MUST BE STAKED BY SURVEY FOR LINE AND GRADE PRIOR TO STARTING CONSTRUCTION.
5. ALL CATCH BASIN GRATES MUST BE STENCILED OR STAMPED "DUMP NO WASTE, DRAINS TO STREAM, LAKE, RIVER, PUGET SOUND, OR WETLAND." CHOOSE APPROPRIATE FEATURE FOR THE PROJECT.

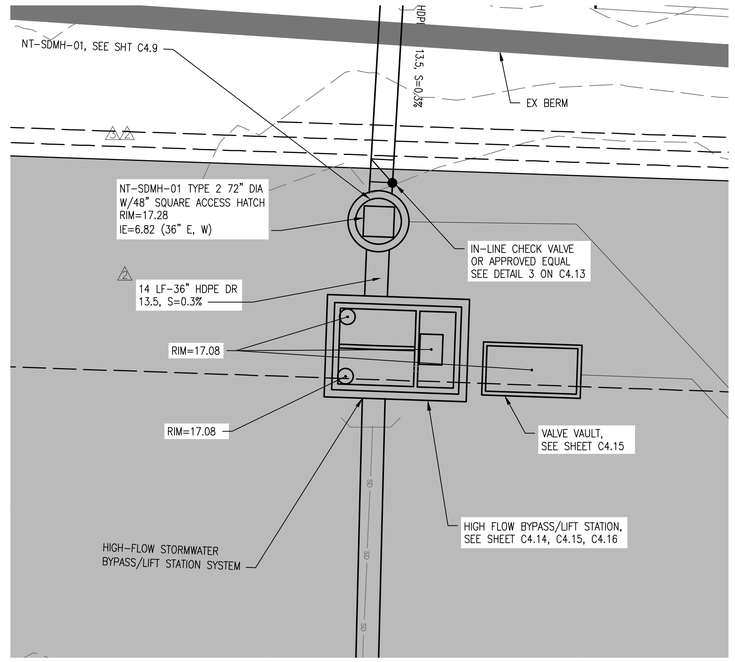
10' 0 10' 20'
5' 15'
SCALE: 1"=10'



2 HIGH-FLOW BYPASS & LIFT STATION DETAIL PLAN
C4.1 C4.9

GENERAL NOTES

1. ALL WORK BELOW ORDINARY HIGH WATER (OHW) LINE SHALL OCCUR IN THE 'DRY'.
2. EXCAVATION AND PLACEMENT OF ROCK BELOW HTL SHALL OCCUR WITHIN A SINGLE TIDE CYCLE. IF WORK IS NOT COMPLETED WITHIN A SINGLE TIDE CYCLE, TEMPORARILY COVER AND STABILIZE EXPOSED SOILS WITH GRAVEL, GEOTEXTILE OR OTHER APPROVED METHODS PRIOR TO TIDAL SUBMERSION.

CONSTRUCTION KEY NOTES

1. RESTORE RIPRAP TO ITS ORIGINAL ELEVATION, DEPTH, AND LIMITS FOLLOWING OUTFALL REPLACEMENT.
2. KEY RESTORED RIPRAP INTO EXISTING RIPRAP FOLLOWING OUTFALL REPLACEMENT WORK.
3. EXISTING RIRRAP AND CONCRETE RUBBLE THAT IS REMOVED FOR OUTFALL M CONSTRUCTION SHALL BE STOCKPILED IN A CONTAINED AREA AT THE UPLANDS FOR CHARACTERIZATION BY THE PORT IN CONFORMANCE WITH THE SOIL AND GROUNDWATER MANAGEMENT PLAN.
4. RIPRAP SHALL BE REPLACED WITH NEW MATERIALS THAT THE REQUIRED IMPORT CRITERIA AS DESCRIBED IN THE SPECIFICATIONS.

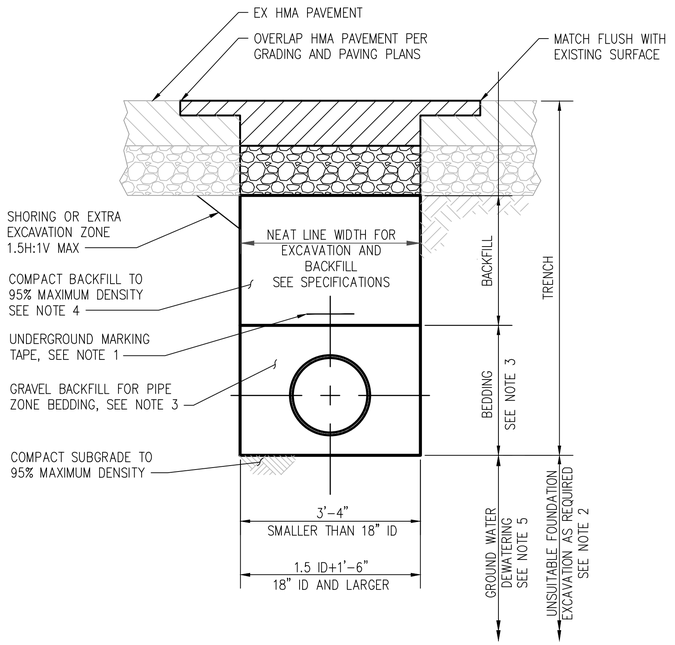
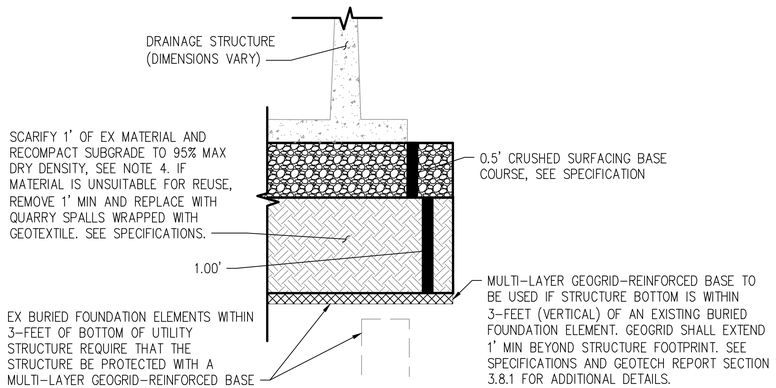
NT-TD-03 NORTH END	1301532.48	363109.83 (6)
NT-TD-04 SOUTH END	1301475.61	361475.99
NT-TD-04 NORTH END (4)	1301484.51	361731.84
NT-TD-05 SOUTH END	1301794.91	362025.28
NT-TD-05 NORTH END	1301835.64	363195.33
NT-TD-06 SOUTH END (6)	1302064.69	362962.86
NT-TD-06 NORTH END	1302072.48	363186.72

STORM DRAIN STRUCTURE SCHEDULE NOTES:

1. SDMH8 SHALL BE A STORMFILTER BY CONTECH OR APPROVED EQUAL MANHOLE STRUCTURE THAT COLLECTS SURFACE WATER RUNOFF AND IS CAPABLE OF TREATING IT TO MEET DEPARTMENT OF ECOLOGY 'BASIC' TREATMENT CRITERIA.
2. SOLID COVER.
3. GRATE COVER.
4. SDMH23 REPLACES DELETED CB3
5. SDMH24 REPLACES DELETED CB2
6. CB2 IS DELETED & REPLACED BY SDMH24
7. CB3 IS DELETED & REPLACED BY SDMH23
8. CB12, CB13, CB16, CB20, CB21, SDMH20 ARE DELETED



1 TYPICAL TRENCH DETAIL FOR STORM DRAIN
X|C4.17 SCALE: NTS



2 PRECAST STRUCTURES SUBGRADE PREPARATION
–|C4.17 SCALE: NTS

PIPE TRENCH NOTES

1. PLACE THE APPROPRIATE UTILITY MARKING TAPE, WITH METAL FIBERS, 1' ABOVE THE PIPE CONTINUOUSLY ALONG THE PIPE LENGTH.
2. UNSUITABLE FOUNDATION EXCAVATION NOT SHOWN. SEE SPECIFICATIONS.
3. TRENCH BEDDING SECTION PER COE STANDARD PLAN 614-TYPICAL TRENCH SECTION.
4. DEWATER TO AT LEAST 2 FEET BELOW SUBGRADE. SEE SPECIFICATIONS.

NOTE:

NORTHINGS AND EASTINGS OF STRUCTURES ARE BASED OFF OF CONSTRUCTION SURVEY AS-BUILTS PROVIDED BY THE CONTRACTOR.

NOTES

1. THE EXISTING UTILITY LOCATIONS AND DEPTHS SHOWN ON THE PLANS ARE APPROXIMATE. NO REPRESENTATION IS MADE AS TO THE ACCURACY OR COMPLETENESS OF THE INFORMATION. THE CONTRACTOR SHALL POTHOLE OR OTHERWISE CONFIRM EXISTING CONDITIONS PRIOR TO START OF WORK. IF CONDITIONS DIFFER FROM THOSE SHOWN ON THE PLANS, THE CONTRACTOR SHALL NOTIFY THE ENGINEER AND SHALL NOT BEGIN CONSTRUCTION UNTIL THE CHANGED CONDITIONS HAVE BEEN EVALUATED. THE CONTRACTOR SHALL TAKE PRECAUTIONARY MEASURES TO PROTECT FROM DAMAGE OR DESTRUCTION ALL UTILITIES AS SHOWN AND ALL UTILITIES NOT SHOWN THAT MAY BE ENCOUNTERED DURING CONSTRUCTION DUE TO NO RECORD OF THEIR EXISTENCE.

2. SEE SHEETS C5.30–C5.32 FOR WATER PROFILE W1.
SEE SHEET C5.32 FOR WATER PROFILE W2.
SEE SHEETS C5.33–C5.34 FOR WATER PROFILE W3.
SEE SHEET C5.35 FOR WATER PROFILE W4.
SEE SHEET C5.35 FOR WATER PROFILE W5.
SEE SHEET C5.36 FOR WATER PROFILE W6.
SEE SHEETS C5.37 FOR WATER PROFILES W7 & W8.
SEE SHEET C5.38 FOR WATER PROFILE W9.

CITY OF EVERETT STANDARD WATER NOTES (VOL.1, 5–2–1)

A. NO CONNECTION TO THE EXISTING MAINS WILL BE ALLOWED EXCEPT BY MEANS OF AN APPROVED BACKFLOW PREVENTION DEVICE PRIOR TO SATISFACTORY FLUSHING, TESTING, DISINFECTION, AND RECEIPT OF SATISFACTORY BACTERIOLOGICAL TEST RESULTS.

B. CONNECTIONS TO AND TAPS ON EXISTING MAINS WILL BE MADE BY THE PUBLIC WORKS DEPARTMENT AT THE DEVELOPER'S EXPENSE. THE PUBLIC WORKS DEPARTMENT SHALL BE GIVEN AT LEAST 5 BUSINESS DAYS NOTICE FOR EACH CONNECTION. THE PUBLIC WORKS DEPARTMENT SHALL THEREAFTER DETERMINE THE DATE AND TIME AT WHICH THE CONNECTION SHALL BE MADE.

C. ALL WORK AND MATERIALS MUST CONFORM TO CITY OF EVERETT STANDARDS.

D. A PRE–CONSTRUCTION MEETING SHALL BE HELD WITH THE CITY PRIOR TO THE START OF CONSTRUCTION. THE CITY OF EVERETT PUBLIC WORKS CONSTRUCTION DIVISION MUST BE NOTIFIED AT LEAST 24 HOURS PRIOR TO COMMENCEMENT OF CONSTRUCTION.

E. THE DEVELOPER OR THE DEVELOPER'S AUTHORIZED AGENT SHALL NOTIFY THE PUBLIC WORKS DEPARTMENT OF A PERSON WHO CAN BE CONTACTED REGARDING PROBLEMS DURING CONSTRUCTION ON A 24–HOUR BASIS.

F. MAINTAIN A MINIMUM OF 10 FEET HORIZONTAL AND 18 INCHES VERTICAL SEPARATION BETWEEN POTABLE AND NON–POTABLE CONVEYANCE SYSTEMS.

G. ALL CITY OF EVERETT VALVES SHALL BE OPERATED BY PUBLIC WORKS DEPARTMENT PERSONNEL ONLY. ALL VALVES, NEW AND EXISTING, SHALL BE ACCESSIBLE AT ALL TIMES.

CITY OF EVERETT STANDARD SEWER NOTES (VOL.1, 6–3–1)

A. ALL WORK AND MATERIALS SHALL CONFORM TO THE CITY OF EVERETT STANDARDS AND WSDOT/APWA STANDARD SPECIFICATIONS.

B. NO PART OF THE SANITARY SEWER SYSTEM SHALL BE COVERED, CONCEALED, OR PUT INTO USE UNTIL IT HAS BEEN TESTED, INSPECTED, AND APPROVED BY THE CITY INSPECTOR.

C. APPROXIMATE LOCATIONS OF EXISTING UTILITIES HAVE BEEN OBTAINED FROM AVAILABLE RECORDS AND ARE SHOWN FOR CONVENIENCE. THE CONTRACTOR SHALL BE RESPONSIBLE FOR VERIFICATION OF LOCATIONS AND TO AVOID DAMAGE TO ANY ADDITIONAL UTILITIES NOT SHOWN. IF CONFLICTS WITH EXISTING UTILITIES ARISE DURING CONSTRUCTION, THE CONTRACTOR SHALL NOTIFY THE PUBLIC WORKS INSPECTOR AND ANY CHANGES REQUIRED SHALL BE APPROVED BY THE CITY ENGINEER PRIOR TO COMMENCEMENT OF RELATED CONSTRUCTION ON THE PROJECT.

D. ALL SEWER MAIN EXTENSIONS WITHIN THE PUBLIC RIGHT–OF–WAY OR IN EASEMENTS MUST BE STAKED BY SURVEY FOR LINE AND GRADE PRIOR TO START CONSTRUCTION.

CONSTRUCTION NOTES

(1) FH ASSEMBLY PER COE STD DWG 507.

AS-BUILTS

STRUCTURAL NOTES:

1. CODES AND STANDARDS:
   ALL MATERIALS, WORKMANSHIP, DESIGN AND CONSTRUCTION SHALL CONFORM TO THE DRAWINGS AND THE INTERNATIONAL BUILDING CODE (IBC), 2018 EDITION, WITH CITY OF EVERETT AMENDMENTS, AND THE PROJECT SPECIFICATIONS.

2. DESIGN LOADS
   A. DESIGN LOAD CRITERIA FOR LOW-MAST AND HIGH-MAST POLES:
      EARTHQUAKE LOADS: PER IBC 2018
      WIND LOADS: 98 MPH; EXPOSURE D; IMPORTANCE FACTOR OF 1.0
      ULTIMATE BASE REACTIONS FOR POLES SHALL BE CALCULATED PER AASHTO LRFD LOAD COMBINATIONS.

   B. ULTIMATE POLE BASE REACTION FOR THE HIGH-MAST POLE FOUNDATION:

OVERTURNING MOMENT	M = 50 KIP*FT
DOWNLOAD	N = 2.5 KIPS
SHEAR	V = 1.1 KIPS

   C. ULTIMATE POLE BASE REACTION FOR THE LOW-MAST POLE FOUNDATION:

OVERTURNING MOMENT	M = 23 KIP*FT
DOWNLOAD	N = 1.0 KIP
SHEAR	V = 0.4 KIPS

3. GEOTECHNICAL DESIGN CRITERIA:
   FOUNDATIONS AND RETAINING WALL DESIGN IS IN ACCORDANCE WITH LANDAU ASSOCIATES REPORT DATED JUNE 2021.

4. GENERAL:
   A. THIS DRAWING SHALL BE USED IN CONJUNCTION WITH ELECTRICAL AND CIVIL DRAWINGS FOR BIDDING AND CONSTRUCTION. CONTRACTOR SHALL VERIFY ALL DIMENSIONS AND CONDITIONS FOR COMPATIBILITY PRIOR TO COMMENCING WORK. ANY DISCREPANCIES SHALL BE BROUGHT TO THE ATTENTION OF THE ENGINEER BEFORE PROCEEDING.

   B. LIGHT POLES, ANCHOR BOLTS, NUTS AND BASE PLATES AT EACH LOCATION SHALL BE DESIGNED AND SUPPLIED BY THE POLE MANUFACTURER. CONTRACTOR SHALL COORDINATE SHOP DRAWINGS TO VERIFY COMPATIBILITY AND BRING ANY DISCREPANCIES TO THE ATTENTION OF THE ENGINEER

   C. CONTRACTOR SHALL REFER TO ELECTRICAL DRAWINGS FOR SIZE AND LOCATION OF OPENINGS AND DETAILS NOT SHOWN ON DRAWINGS.

   D. CONTRACTOR SHALL COORDINATE WITH POLE MANUFACTURER FOR ALL REQUIREMENTS OF BASE PLATE AND ANCHOR BOLTS FOR EACH POLE AND VERIFY THAT THE ULTIMATE POLE REACTIONS ARE LESS THEN OR EQUAL TO THOSE SHOWN IN NOTE 2.

   E. CONTRACTOR SHALL BE RESPONSIBLE FOR SAFETY PRECAUTION, ERECTION STABILITY AND TEMPORARY SHORING AS NECESSARY UNTIL PERMANENT SUPPORT AND STIFFENING ARE INSTALLED. CONTRACTOR SHALL PROTECT SURROUNDING BUILDINGS AND EQUIPMENT FROM AUGER DEBRIS DURING SHAFT DRILLING.

   F. ALL EXPOSED CONCRETE SURFACES SHALL BE PAINTED SAFETY YELLOW.

5. DRILLED SHAFT, BASE, AND SPREAD FOOTING MATERIAL:
   CONCRETE STRENGTH AT 28 DAYS (f'c) SHALL BE 5000 PSI. THE REINFORCING STEEL SHALL BE GRADE 60 (fy=60,000 PSI) CONFORMING TO ASTM A-615. THE MINIMUM CONCRETE COVER IS 3 INCHES UNLESS OTHERWISE INDICATED. REFER TO PROJECT SPECIFICATIONS.

6. NON-SHRINK GROUT:
   GROUT SHALL BE NON-SHRINK NON-METALLIC CEMENTITIOUS GROUT CONTAINING NATURAL AGGREGATES DELIVERED TO JOB SITE IN FACTORY PREPACKAGED CONTAINERS REQUIRING ONLY THE ADDITION OF WATER. MINIMUM 28 DAY COMPRESSIVE STRENGTH SHALL BE 10,000 PSI OR PER THE LIGHT POLE MANUFACTURER'S REQUIREMENTS, WHICHEVER IS GREATER. GROUT SHALL BE MIXED, APPLIED AND CURED STRICTLY IN ACCORDANCE WITH THE MANUFACTURER'S PRINTED INSTRUCTIONS.

7. EXCAVATION, SHORING AND BACKFILL:
   A. INSTALL AND SHORE EXCAVATION AS NECESSARY TO PROTECT WORKERS, UTILITIES, PAVEMENT AND OTHER IMPROVEMENTS AGAINST LOSS OF GROUND, ROCKS, GRAVELS OR CAVING EMBANKMENTS. BACKFILL AND COMPACT WITH NATIVE SOIL TO SUBGRADE ELEVATION NO SOONER THAN 3 DAYS AFTER COMPLETION OF FOUNDATION. LOOSE MATERIAL SHALL BE REMOVED FROM THE BOTTOM OF THE SHAFT PRIOR TO CONCRETE PLACEMENT.

   B. MATERIAL REMOVED DURING EXCAVATIONS AND DRILLING MAY BE CONTAMINATED SOIL. SEE SPECIFICATIONS FOR SOIL HANDLING AND DISPOSAL REQUIREMENTS.

   C. SHAFT INSTALLATION SHALL BE PERFORMED UTILIZING TEMPORARY CASING. PERMANENT CASING MAY ALSO BE USED IF APPROVED BY THE ENGINEER PRIOR TO BID. THE HOLE SHALL BE KEPT DRY AND FREE OF MUD PRIOR TO REINFORCING CAGE INSTALLATION AND DURING CONCRETE PLACEMENT. SEE SPECIFICATIONS FOR SOIL DISPOSAL AND DEWATERING REQUIREMENTS.

8. SPECIAL INSPECTIONS:
   A. A QUALIFIED INSPECTOR SHALL PERFORM CONTINUOUS INSPECTION ON THE FOLLOWING SHAFT AND MISCELLANEOUS FOUNDATION ITEMS:
      a. ANCHOR BOLTS AND INSERTS
      b. PREPARATION OF TEST SPECIMENS
      c. CONCRETE PLACEMENT
      d. DRILLED SHAFTS (BY PROJECT GEOTECHNICAL ENGINEER)

   B. A QUALIFIED INSPECTOR SHALL PERFORM PERIODIC INSPECTION ON THE FOLLOWING ITEMS:
      a. CONCRETE REINFORCING PLACEMENT
      b. REINFORCING COUPLING

   C. ALL SOIL GRADING, EXCAVATION, FILL, DRILLED SHAFTS AND FINAL FOUNDATION PREPARATION SHALL BE INSPECTED BY THE PROJECT GEOTECHNICAL ENGINEER.

   D. ALL INSPECTION SHALL CONFORM TO THE REQUIREMENTS OF THE IBC.

9. DRILLED SHAFT FOUNDATION:
   A. CAGE RING TEMPLATE SHALL BE DESIGNED AND SUPPLIED BY THE POLE MANUFACTURER.

   B. ADJUSTMENTS MAY BE MADE IN SPACING OF SHEAR REINFORCEMENT WHERE THERE IS CONFLICT WITH MIDDLE CAGE RING SPACING AS APPROVED BY THE ENGINEER.

   C. THE ENDS OF SHEAR REINFORCEMENT SHALL BE ANCHORED ACCORDING TO ACI 318.

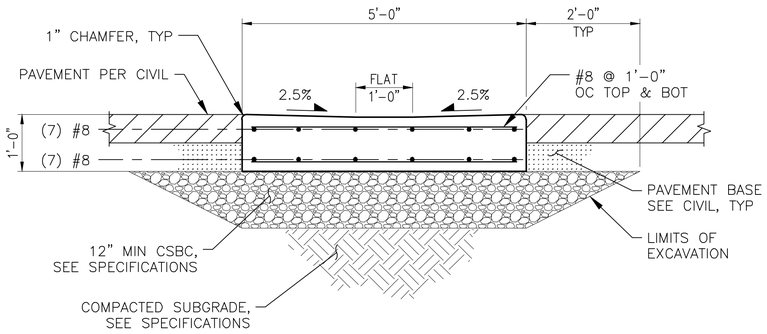
B CONCRETE TRENCH DRAIN SECTION

C4.1 S1.3 SCALE: 3/4" = 1'-0"



C CONCRETE GUTTER SECTION

C4.1 S1.3 SCALE: 3/4" = 1'-0"

SCHEDULE OF MINIMUM LAP SPLICE LENGTHS		
BAR SIZE	fc = 5000 PSI	
	OTHER STRAIGHT BARS	TOP BARS
#4	1'-10"	2'-5"
#6	2'-9"	3'-7"
#8	4'-7"	6'-0"

NOTES

1. LENGTHS ARE BASED ON CLASS "B" CASE 1 SPLICES (MAX OF 50% OF BARS SPLICED AT ONE LOCATION.)
2. TOP BARS ARE DEFINED AS ANY HORIZONTAL BAR PLACED SUCH THAT MORE THAN 12" OF FRESH CONCRETE IS CAST IN THE MEMBER BELOW THE BAR IN ANY SINGLE POUR.
3. STAGGER ALL LAP SPLICES IN ADJACENT BARS BY ONE LAP LENGTH + 1'-0" MINIMUM.
4. NO MORE THAN 50% OF THE REINFORCING BARS IN ANY LAYER SHALL BE SPLICED AT ONE LOCATION.
5. DEVELOPMENT & SPLICE LENGTHS ARE APPLICABLE FOR TENSION OR COMPRESSION.
6. FOR NON-CONTACT LAP SPLICES THE TRANSVERSE CENTER-TO-CENTER SPACING OF SPLICED BARS SHALL NOT EXCEED THE LESSER OF ONE-FIFTH THE REQUIRED LAP SPLICE LENGTH AND 6IN.

NOTES

1. CONCRETE COMPRESSIVE STRENGTH AT 28 DAYS (f'c) SHALL BE 5000 PSI FOR THE CONCRETE TRENCH DRAIN, CONCRETE GUTTER AND GUARD SHACK FOUNDATION

FOR RECEPTACLES IN THIS SECTION, WP DENOTES WEATHERPROOF WHILE-IN-USE BOX AND GFI RECEPTACLE. FOR ALL OTHER DEVICES, WP DENOTES NEMA 3R ENCLOSURE UNO.

- CONVENIENCE RECEPTACLE – DUPLEX UNO, MOUNTING HEIGHT TO BE 18" AFF UNO (3 = CIRCUIT NUMBER)
- CONVENIENCE RECEPTACLE – FOURPLEX
- SIMPLEX RECEPTACLE WITH BRASS FLOORPLATE AND SCREW CAP
- DUPLEX RECEPTACLE – FLUSH MOUNTED IN FLOOR
- FOURPLEX RECEPTACLE – FLUSH MOUNTED IN FLOOR
- JUNCTION BOX
- SPECIAL PURPOSE RECEPTACLE, DESIGNATION AND AMPERAGE AS INDICATED, OR SHOWN IN SCHEDULE, SEE SPECIFICATIONS
- CONNECTION POINT TO EQUIPMENT SPECIFIED FURNISHED AND INSTALLED BY OTHER TRADES. RACEWAY, CONDUCTOR AND CONNECTION BY ELECTRICAL CONTRACTOR.
- NONFUSED DISCONNECT SWITCH. SIZE 30A UNLESS INDICATED OTHERWISE, 3 POLE UNO
- FUSED DISCONNECT SWITCH. SIZE INDICATED, (60 = SWITCH RATING, 40 = FUSE RATING) 3 POLE UNO
- COMBINATION MOTOR STARTER AND DISCONNECT, SIZE PER MANUFACTURER REQUIREMENTS, NUMBER OF POLES AS REQUIRED
- PANEL
- TRANSFORMER
- HANDHOLE, SIZE AS NOTED
- THERMOSTAT
- GROUND ROD
- GENERATOR
- GROUND TEST WELL

LIGHTING

SEE LUMINAIRE SCHEDULE FOR FURTHER INFORMATION.

- POLE MOUNTED LUMINAIRE
- WALL SWITCH, SYMBOL INDICATED WALL SWITCH LOCATION. SEE LIGHTING CONTROL SCHEDULE FOR WALL SWITCH TYPE AND FEATURES.
- REMOTE LED DRIVER
- REMOTE 0–10V LIGHTING CONTROLLER
- PHOTOCELL CONTACTOR RELAY

ONE-LINE DIAGRAM

ALL DEVICES THIS SECTION TO BE 3 POLE UNO, RATINGS AS INDICATED.

- TRANSFORMER, SECONDARY VOLTAGE. PHASE AND RATING INDICATED AS APPLICABLE.
- GROUND
- FUSE (400)
- CIRCUIT BREAKER (400)
- SWITCH (400)
- REVENUE GRADE METER AND ENCLOSURE
- CURRENT TRANSFORMER
- TRANSFER SWITCH
- MOTOR CONNECTION
- FEEDER TAG – SEE FEEDER SCHEDULE FOR FURTHER INFORMATION

CONDUIT AND RACEWAY

ALL CONDUCTORS INCLUDING NEUTRAL AND GROUND SHALL BE SIZED TO MATCH OR EXCEED OVERCURRENT PROTECTION DEVICE PER NEC, 2#12, 1#12G MINIMUM UNO. ALL CONDUITS SHALL BE SIZED TO MATCH OR EXCEED QUANTITIES AND SIZES OF CONDUCTORS PER NEC, 3/4" MINIMUM UNO.

- HOME RUN, DESTINATION SHOWN, CIRCUIT NUMBERS PRECEDED BY PANEL NAME, SEE PANEL SCHEDULE, ARROW DOES NOT ALWAYS POINT TO PANEL. (P1–1,3)
- CONDUIT WITH MEDIUM VOLTAGE CONDUCTORS (U)
- CONDUIT WITH LINE VOLTAGE CONDUCTORS (P)
- CONDUIT WITH LOW VOLTAGE CONDUCTORS (T)
- CONDUIT DOWN
- CONDUIT UP
- CONDUIT STUBBED AND CAPPED AS SHOWN
- CONDUIT CONTINUED
- EXPOSED FLEX CONDUIT

DRAWING CONVENTIONS

- A / TITLE / E1 / SCALE: 1/4"=1'–0" — DETAIL/SECTION TITLE UNDERLINE, E1 = SHEET WHERE REFERENCED
- A / E2 — A = DETAIL/SECTION NUMBER, E2 = SHEET WHERE SHOWN
- N — NORTH ARROW
- 3 — NOTE
- 1 — REVISION REFERENCE
- XXX / FTP–1 = FTP 1 — EQUIPMENT ID TAG – SEE EQUIPMENT SCHEDULE FOR FURTHER INFORMATION, COORDINATE EQUIPMENT LOCATION WITH ASSOCIATED MECHANICAL, CIVIL, ETC. PLANS

GENERAL NOTES

1. MEET ALL REQUIREMENTS OF THE NEC AND AHJ FOR INSTALLATION AND CONSTRUCTION.
2. VERIFY LOCATION OF ALL LIFT STATION AND TREATMENT EQUIPMENT WITH CIVIL CONTRACTOR PRIOR TO ROUGH–IN. COORDINATE EXACT CIRCUIT BREAKER, FUSE AND WIRE SIZE WITH CIVIL PRIOR TO ROUGH–IN.
3. ALL EXTERIOR DEVICES TO BE CIRCUITED WITH #10 WIRE MINIMUM UNLESS NOTED OTHERWISE.
4. ALL WIRING SHALL BE COPPER UNLESS NOTED OTHERWISE.
5. VERIFY LOCATIONS OF OTHER UTILITIES PRIOR TO COMMENCING WORK, PROVIDE REQUIRED CLEARANCES FROM OTHER UTILITIES, BUILDINGS, AND FREESTANDING STRUCTURES, DURING INSTALLATION OF CONDUITS, CABLES, ETC.
6. USE ELECTRICAL PLANS FOR DETERMINING LUMINAIRE AND DEVICE COUNTS. QUANTITIES SHOWN WITHIN CALCULATION AND CONTROL SCHEDULES SHALL NOT BE USED FOR BID COUNTS.
7. NOT ALL COMPONENTS OF THE ELECTRICAL SYSTEMS ARE SHOWN (FOR CLARITY). PROVIDE MATERIALS AND LABOR NECESSARY FOR A COMPLETE AND OPERATIONAL SYSTEM.
8. THE AIC OF THE PANELS SHOWN ARE TENTATIVE AND GIVEN FOR BIDDING PURPOSES ONLY. CONTRACTOR SHALL CALCULATE THE PANEL AIC BASED UPON FINAL CONDUIT ROUTING AND TRANSFORMERS AND FUSES SUBMITTED.
9. PROVIDE ALL SNOHOMISH COUNTY PUD (SNOPUD) VAULTS PER SNOPUD STANDARDS, SEE SHEET E6.7 FOR FURTHER INFORMATION.
10. SEE SHEET C4.17 FOR PRECAST VAULT BEDDING DETAILS AND SUBGRADE PREPARATION. ALL PRECAST VAULTS SUBJECTED TO TERMINAL LOADS SHALL BE CONTRACTOR DESIGNED TO MEET THE UNDERGROUND UTILITY STRUCTURE LOADING CRITERIA SHOWN ON SHEET G1.3. SEE SPECIFICATIONS FOR FURTHER DETAILS.
11. PROVIDE INTEGRAL LOCKS OR PADLOCK EYES FOR ALL ENCLOSURE DOORS. PROVIDE LOCKABLE HANDLES FOR ALL DISCONNECTS.
12. PROVIDE NEMA 4X STAINLESS STEEL HOUSINGS FOR ALL SWITCHBOARDS, PANELBOARDS, TRANSFORMERS, DISCONNECTS, COMMUNICATIONS CABINETS AND COMBINATION TRANSFORMER–PANELBOARDS UNLESS NOTED OTHERWISE.

PROJECT NO. MT–NT–2021–02.2

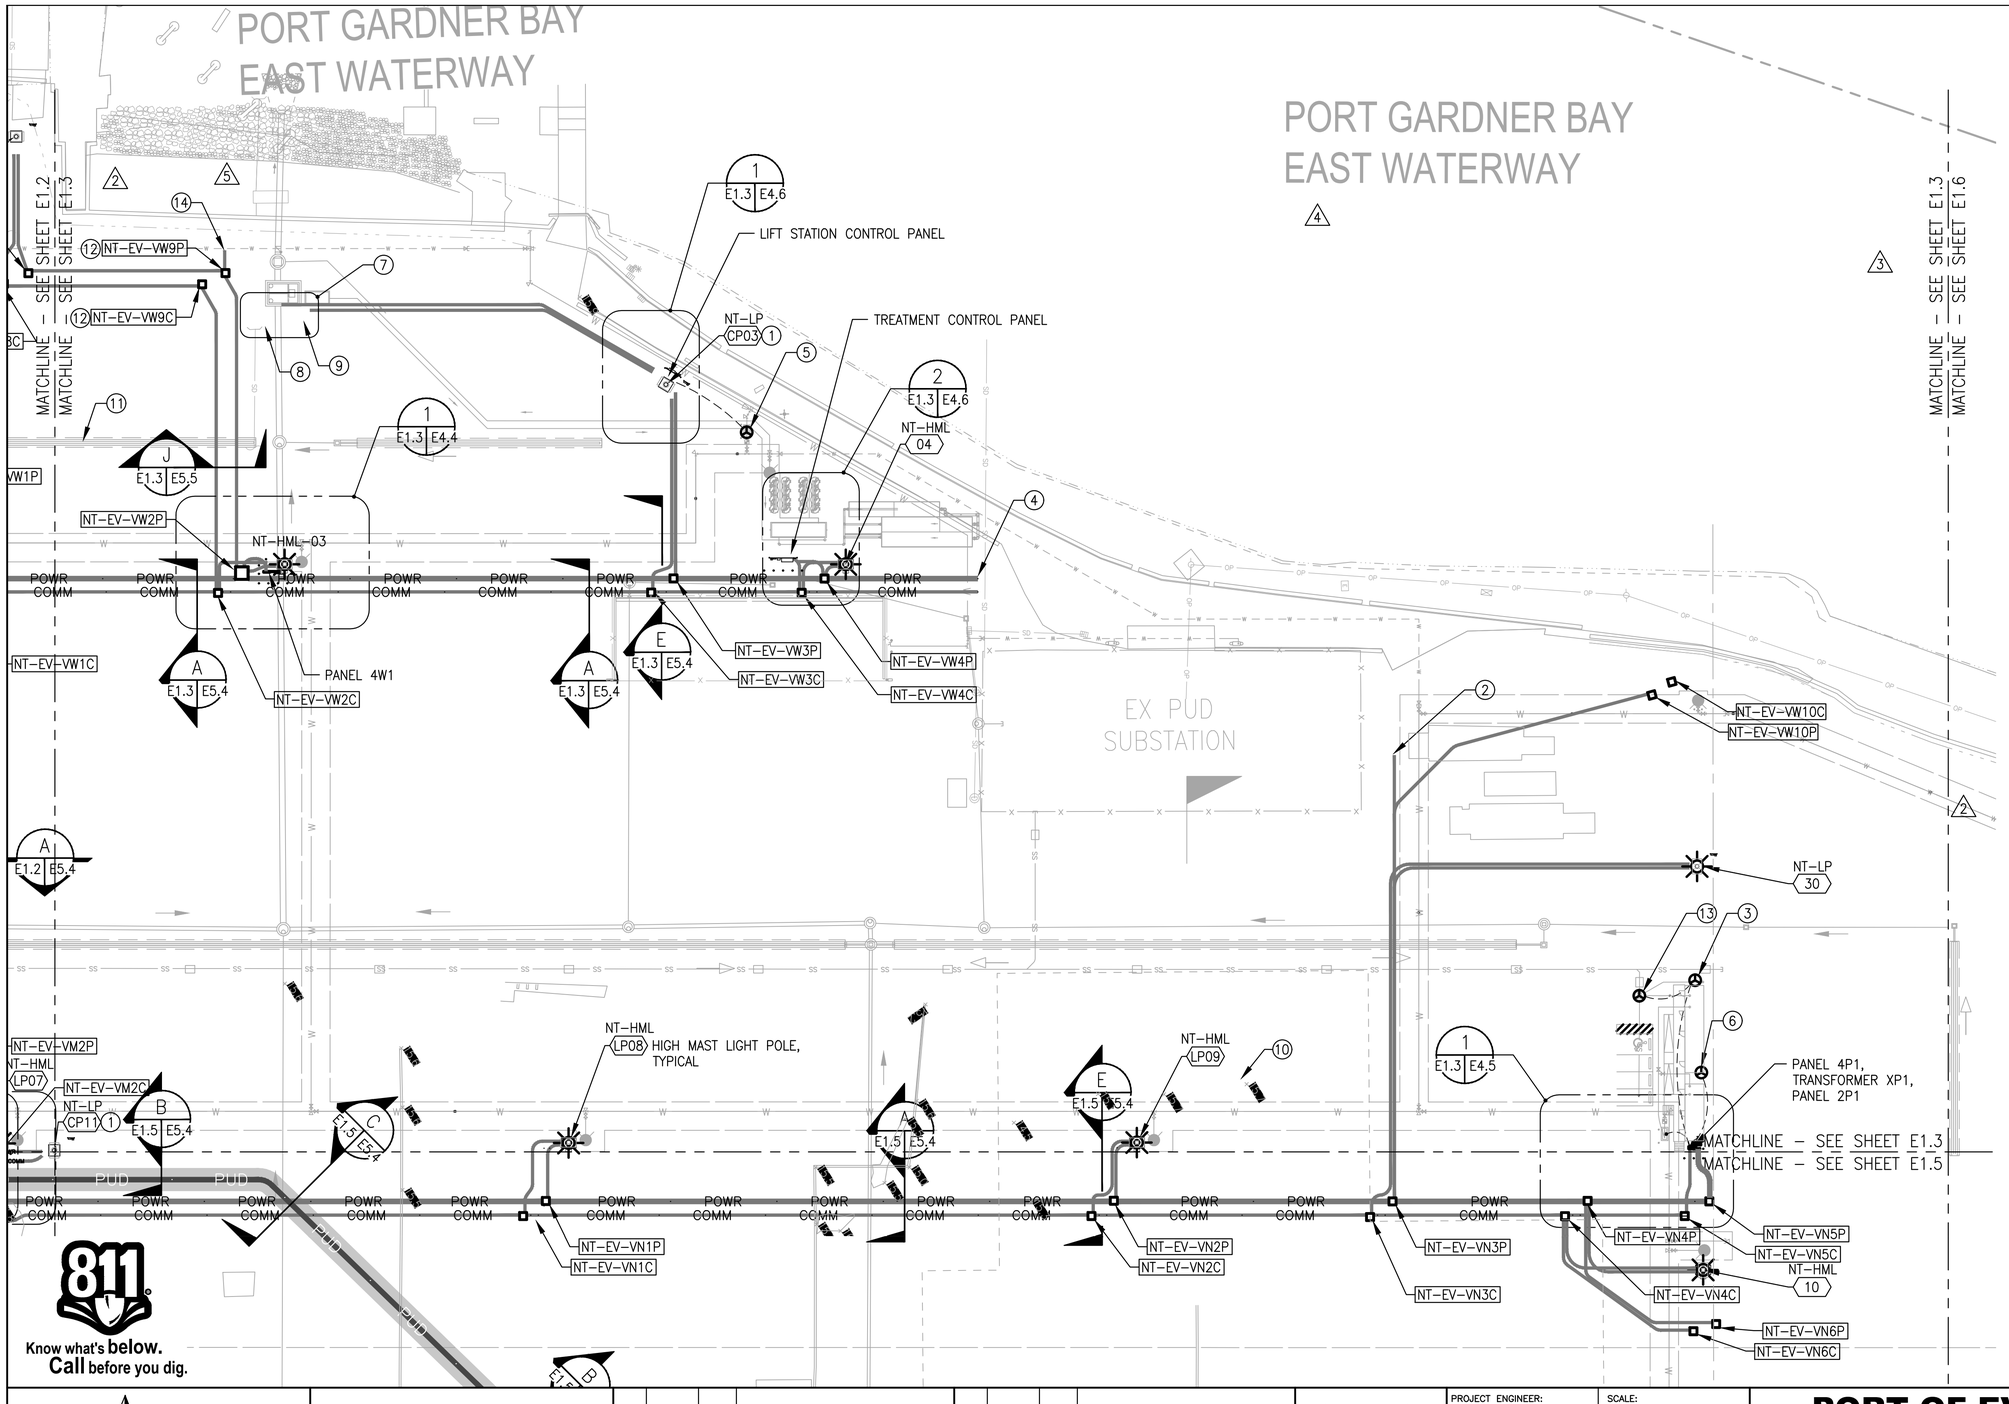
SHEET NO. 105 OF 150

AS-BUILTS

M: \2019\1900238 POE Maritime Industrial Expansion Engineering Services\2.18 Drawings\AS BUILTS\Incoming\2023-05-31\mie_elec\m8e12 7-07-23 10:31am jhollenbach



GENERAL NOTES

1. PROVIDE (2) 6" CONDUITS AND (2) 4" CONDUITS WITHIN EACH SNOHOMISH COUNTY PUD TRENCH UNLESS NOTED OTHERWISE.
2. PROVIDE (8) 4" CONDUITS WITHIN EACH PORT OF EVERETT POWER DUCT BANK UNLESS NOTED OTHERWISE.
3. PROVIDE (4) 4" CONDUITS WITHIN EACH PORT OF EVERETT TELECOM DUCT BANK UNLESS NOTED OTHERWISE.
4. FOR DUCT BANK CROSSINGS WITH OTHER CONDUITS, PIPING OR STRUCTURES REFER TO SECTIONS C, E AND F ON SHEET E5.4 UNLESS NOTED OTHERWISE.
5. FOR STORMWATER OR SEWER VAULT PENETRATIONS, PROVIDE CORE DRILL FOR EACH CONDUIT PENETRATION. CONDUITS TO ENTER VAULT BETWEEN 6"–18" BELOW THE BOTTOM OF THE VAULT LID (NOT THE ACCESS LID). PROVIDE APPROVED MECHANICAL SEAL OR PACK TIGHT WITH NON–SHRINK GROUT TO SEAL CONDUIT PENETRATIONS THROUGH VAULT WALL. SEAL FITTINGS MAY BE INSTALLED IN THE VAULT OR BELOW THE CONTROL PANEL AS SHOWN ON E5.2.

KEYED NOTES

1. LOW MAST COMMUNICATIONS POLE.
2. STUB CONDUITS FOR FUTURE HIGH MAST LIGHT POLE.
3. PROVIDE LIFT STATION CONTROL PANEL ELECTRICAL CONNECTION, SEE SHEET C5.9 FOR FURTHER LIFT STATION INFORMATION. COORDINATE WITH LIFT STATION SUPPLIER FOR CONNECTION REQUIREMENTS. CIRCUIT TO PANEL 2P1 CIRCUITS 7,9.
4. STUB CONDUITS 5'–0" BEYOND EDGE OF PAVEMENT, AS SHOWN ON SHEET C3.1.
5. PROVIDE HOT BOX ELECTRICAL CONNECTION, SEE SHEET C5.9 FOR FURTHER HOT BOX INFORMATION.
6. PROVIDE LONGSHOREMAN RESTROOM TRAILER ELECTRICAL CONNECTION. COORDINATE WITH TRAILER PROVIDER FOR EXACT CONNECTION LOCATION.
7. THE LIFT STATION AND VALVE VAULT ARE CLASSIFIED SPACES, CLASS I, DIVISION 2 PER NEC AND NFPA 820.
8. STORMWATER LIFT STATION PER SHEET C4.9.
9. VALVE VAULT PER SHEET C4.9.
10. REMNANT BELOW GRADE FOUNDATIONS, SEE CIVIL DRAWINGS FOR FURTHER INFORMATION.
11. TRENCH DRAIN, SEE SHEET S1.3 FOR FURTHER INFORMATION.
12. PROVIDE 24" EXTENSION RING FOR VAULT TO ALLOW FOR FUTURE CONDUITS EXITING VAULT TO THE WEST TO HAVE SUFFICIENT COVER, AS GRADE SLOPES DOWN WEST OF THIS POINT, SEE SHEETS C3.5 & C3.6 FOR FURTHER INFORMATION.
13. PROVIDE (3) 1–1/2" CONDUITS BETWEEN LIFT STATION AND LIFT STATION CONTROL PANEL FOR POWER CABLING, CONTROL CABLING AND SPARE. THE LIFT STATION IS A CLASSIFIED SPACE, CLASS I, DIVISION 2 PER NEC AND NFPA 820.
14. STUB CONDUITS 5'–0" BEYOND EDGE OF PAVEMENT, AS SHOWN ON SHEET C3.1. MARK LOCATION OF THE CONDUIT ENDS WITH A 4"X4" STAKE PAINTED WHITE.

1 E1.2 E4.1

811 Know what's below. Call before you dig.

GENERAL NOTES

1. PROVIDE ALL SERVICE ENTRANCE EQUIPMENT PER SNOHOMISH COUNTY PUD (SNOPUD) ELECTRICAL SERVICE REQUIREMENTS UNLESS NOTED OTHERWISE.

KEYED NOTES

1. PROVIDE CONCRETE VAULT WITH OPENING FOR PAD-MOUNTED SWITCH PER SNOPUD STANDARD "T&D COMPATIBLE UNIT V0501".
2. PAD-MOUNTED SWITCH BY SNOPUD.
3. PROVIDE CONDUITS BETWEEN VAULTS PER SHEET E6.1. 15kV CABLES TO BE PROVIDED BY SNOPUD.
4. PROVIDE CONCRETE PULL VAULT PER SNOPUD STANDARD "T&D COMPATIBLE UNIT V0203".
5. PROVIDE PAD-MOUNTED TRANSFORMER VAULT PER SNOPUD DISTRICT CAT. ID 1001689, 1001690, 1001691.
6. PAD-MOUNTED UTILITY TRANSFORMER BY SNOPUD.
7. PROVIDE SWITCHBOARD 4M1, SEE SHEET E6.1 FOR ADDITIONAL SIZING INFORMATION.
8. INSTALL OWNER-PROVIDED COMM ENCLOSURE, HOFFMAN CAT. NO. WS72X60X30SS/SPL.
9. PROVIDE STRUCTURAL BOLLARD PER SHEET C2.3. BOLLARDS SHALL BE SPACED A MAXIMUM OF 5'-0" FROM EACH OTHER. SHOULD BELOW GRADE OBSTRUCTIONS INTERFERE WITH PLACEMENT, INCREASE QUANTITY OF BOLLARDS TO MAINTAIN SPACING REQUIREMENTS.
10. PROVIDE REMOVABLE BOLLARD PER SHEET C2.2 DETAIL 3. SEE KEYED NOTE 9 FOR FURTHER SPACING REQUIREMENTS.
11. SNOPUD EASEMENT, SEE CIVIL PLANS FOR FURTHER INFORMATION.
12. PROVIDE FEEDER PER SHEET E6.1.
13. PROVIDE (2) 4" CONDUITS.
14. PROVIDE DOUBLE DUPLEX RECEPTACLE, CIRCUITED TO MPZ AT LP07, CIRCUIT 3.
15. PROVIDE 200W HEATER WITH THERMOSTAT AND CIRCUIT TO MPZ AT LP07, CIRCUIT 5.

AS-BUILTS

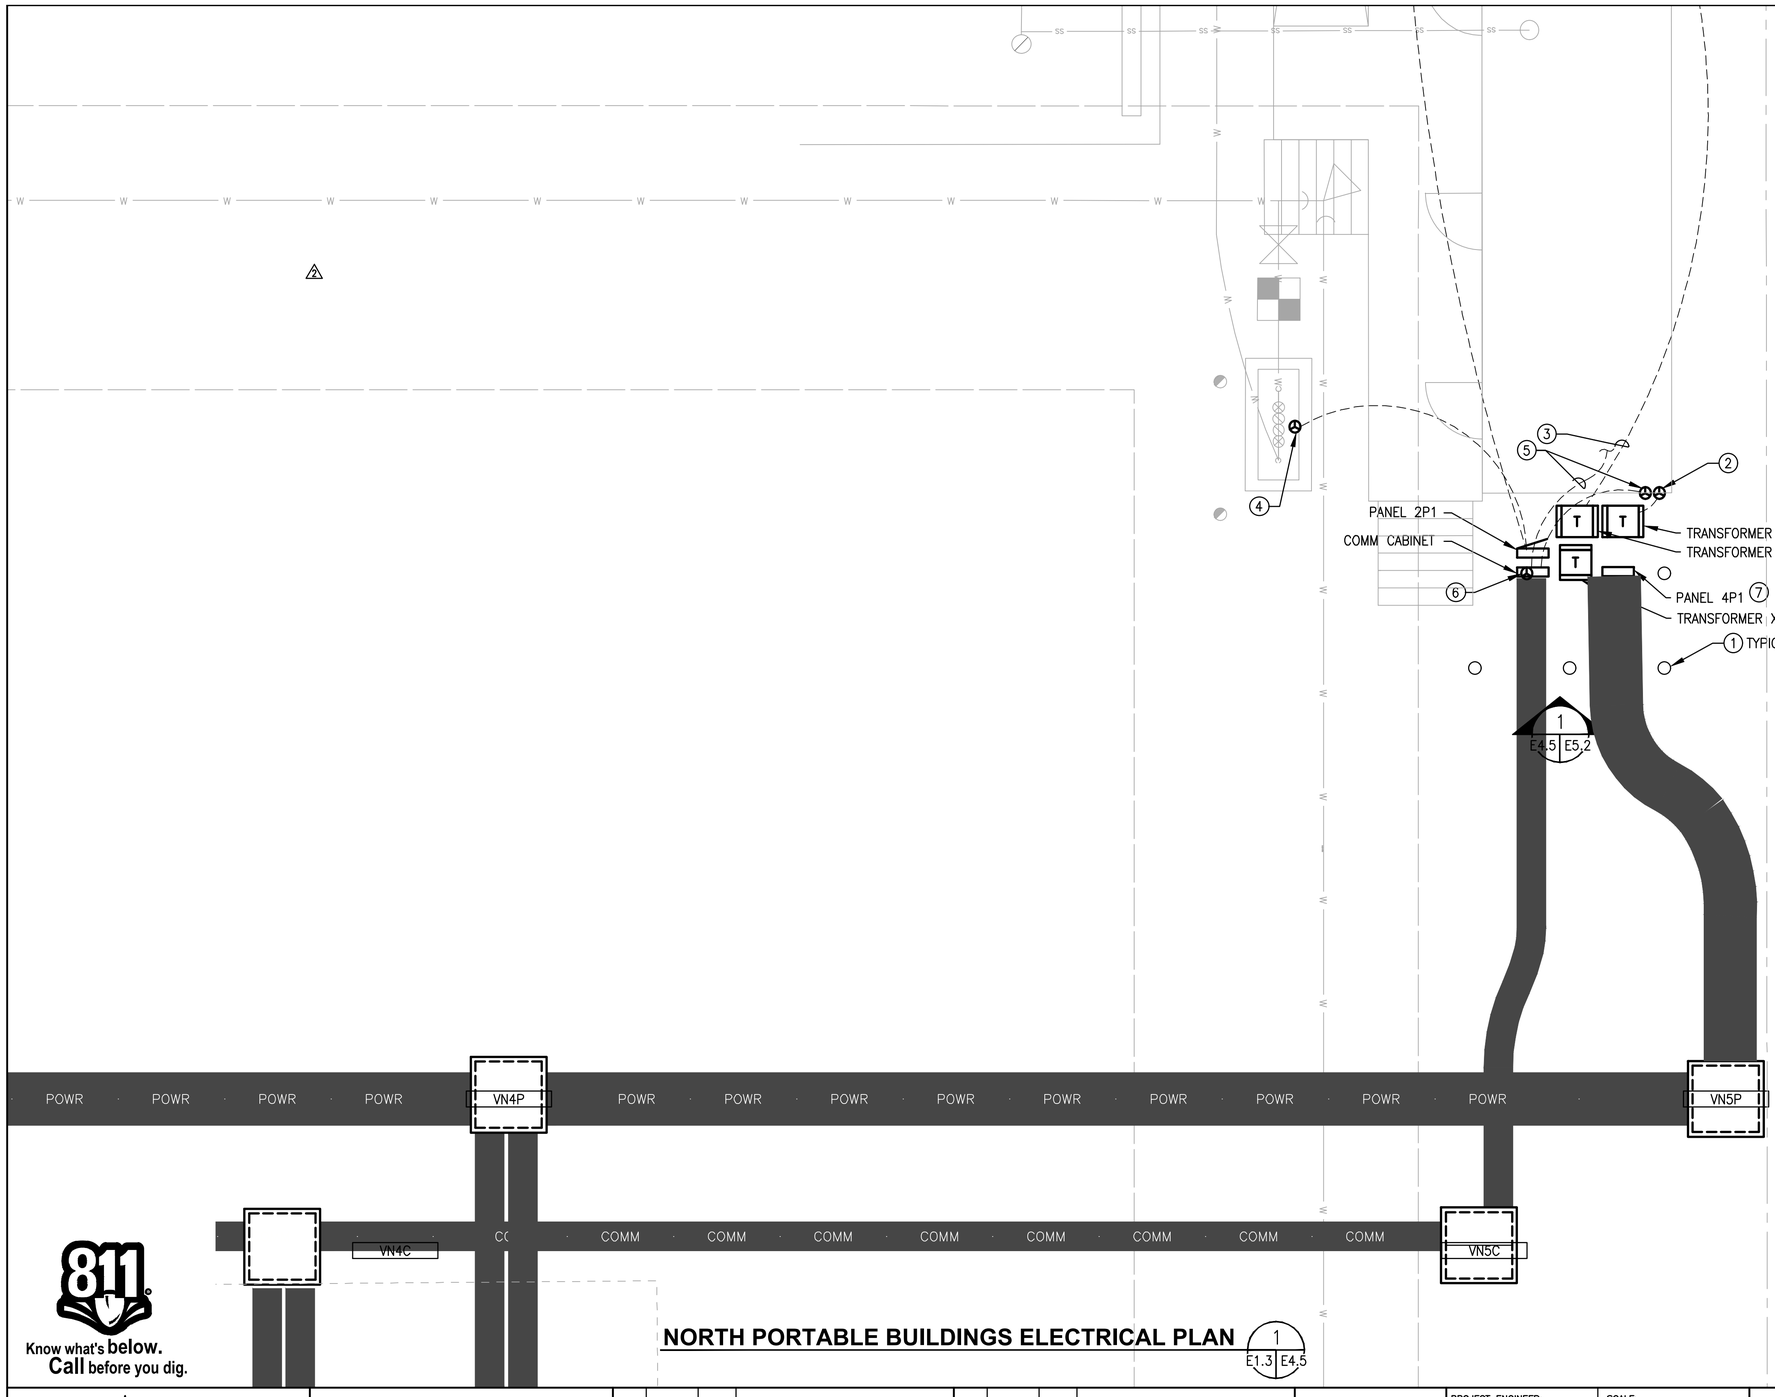
M:\2019\1900238 POE Maritime Industrial Expansion Engineering Services\2.18 Drawings\AS BUILTS\Incoming\2023-05-31\mle_elec\m8e44 7-06-23 11:15am dyu



GENERAL NOTES

1. SEE SHEET E6.1 FOR CONDUIT AND WIRING BETWEEN EQUIPMENT.

KEYED NOTES

(1) PROVIDE STRUCTURAL BOLLARD PER SHEET C2.3. BOLLARDS SHALL BE SPACED A MAXIMUM OF 5'–0" FROM EACH OTHER. SHOULD BELOW GRADE OBSTRUCTIONS INTERFERE WITH PLACEMENT, INCREASE QUANTITY OF BOLLARDS TO MAINTAIN SPACING REQUIREMENTS.

(2) PROVIDE LONGSHOREMAN BREAK ROOM TRAILER ELECTRICAL CONNECTION AS SHOWN ON SHEET E6.1. COORDINATE WITH TRAILER PROVIDER FOR EXACT CONNECTION LOCATION.

(3) PROVIDE LONGSHOREMAN RESTROOM TRAILER ELECTRICAL CONNECTION AS SHOWN ON SHEET E6.1. COORDINATE WITH TRAILER PROVIDER FOR EXACT CONNECTION LOCATION.

(4) PROVIDE HOT BOX HEATER ELECTRICAL CONNECTION, SEE SHEET C5.9 FOR FURTHER HOT BOX INFORMATION. CIRCUIT 3#10 IN 1"C TO 2P1–1.

(5) PROVIDE (1) 2" CONDUIT TO EACH LONGSHOREMAN TRAILER FOR COMMUNICATIONS. COORDINATE WITH TRAILER PROVIDER FOR EXACT CONNECTION LOCATIONS.

(6) PROVIDE 200W HEATER WITH THERMOSTAT WITHIN COMM CABINET AND CIRCUIT TO PANEL 2P1–5.

(7) PROVIDE (2) 100A 480V 4P 4W RECEPTACLES ADJACENT TO PANEL FOR POWERING PORTABLE TRANSFORMER SKID SHOWN ON E5.3.

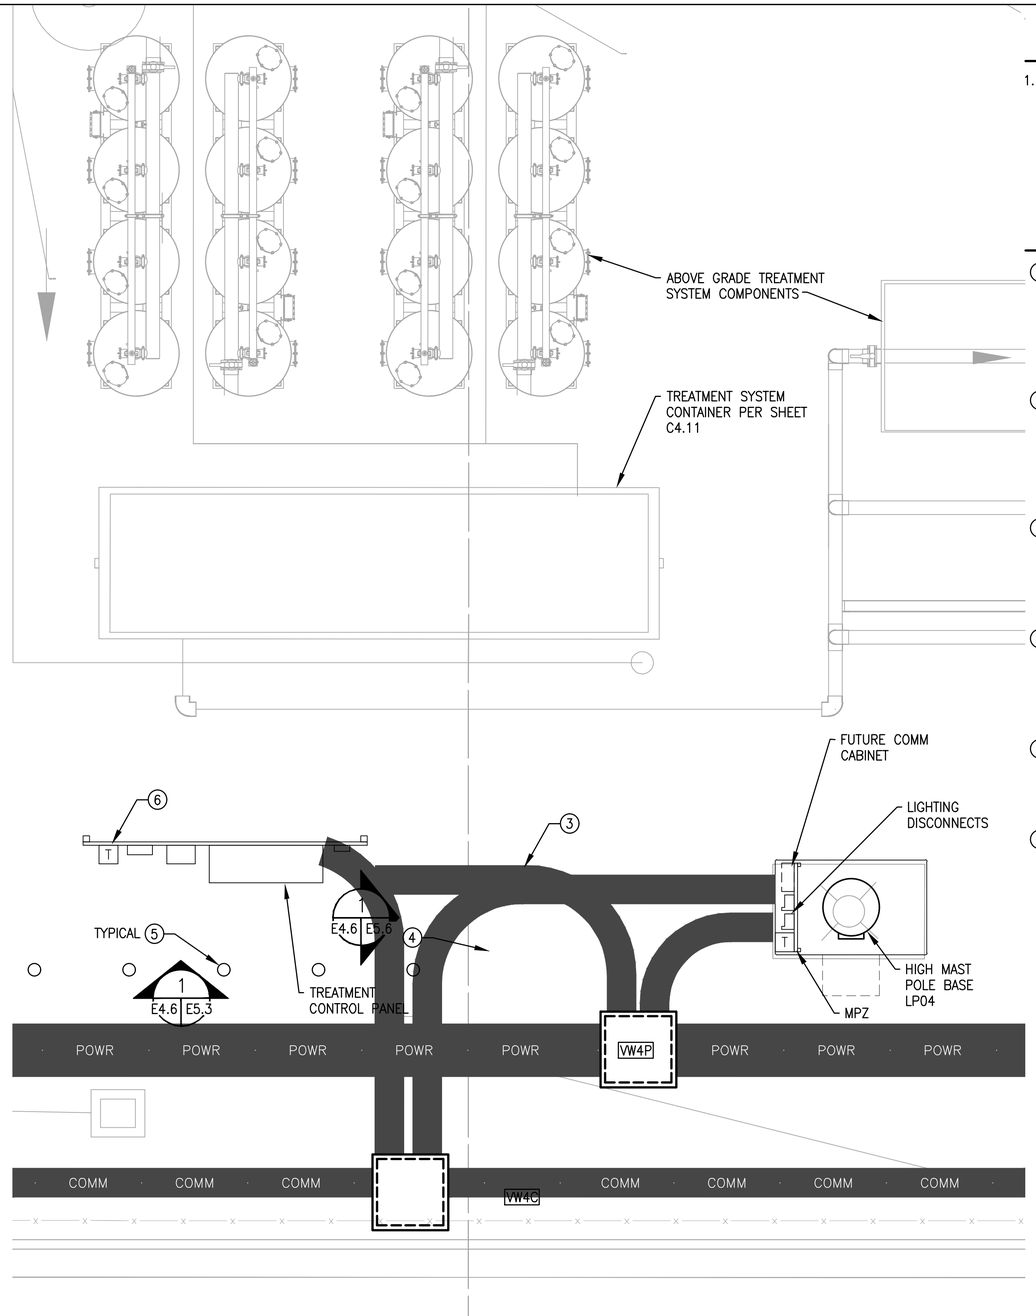
LIFT STATION CONTROL PANEL ELECTRICAL PLAN

1 | E1.3 | E4.6



TREATMENT CONTROL PANEL ELECTRICAL PLAN

2 | E1.3 | E4.6

GENERAL NOTES

1. SEE SHEET E6.1 FOR CONDUIT AND WIRING BETWEEN EQUIPMENT.

KEYED NOTES

(1) COORDINATE WITH LIFT STATION SUPPLIER FOR CONNECTION REQUIREMENTS. FOR BIDDING PURPOSES PROVIDE DUCTBANK WITH THE FOLLOWING CONDUITS TO SERVE LIFT STATION:
(2) 2"C – POWER
(3) 2"C – CONTROL
(1) 2"C – SPARE

(2) COORDINATE WITH LIFT STATION SUPPLIER FOR CONNECTION REQUIREMENTS. FOR BIDDING PURPOSES PROVIDE DUCTBANK WITH THE FOLLOWING CONDUITS TO SERVE VALVE VAULT:
(1) 2"C – POWER
(1) 2"C – CONTROL
(1) 2"C – SPARE

(3) COORDINATE WITH LIFT STATION SUPPLIER FOR CONNECTION REQUIREMENTS. FOR BIDDING PURPOSES PROVIDE DUCTBANK WITH THE FOLLOWING CONDUITS TO SERVE TREATMENT CONTROL PANEL:
(1) 4"C – POWER
(1) 4"C – SPARE

(4) COORDINATE WITH LIFT STATION SUPPLIER FOR CONNECTION REQUIREMENTS. FOR BIDDING PURPOSES PROVIDE DUCTBANK WITH THE FOLLOWING CONDUITS TO SERVE TREATMENT CONTROL PANEL:
(1) 2"C – COMM
(1) 2"C – SPARE

(5) PROVIDE STRUCTURAL BOLLARD PER SHEET C2.3. BOLLARDS SHALL BE SPACED A MAXIMUM OF 5'–0" FROM EACH OTHER. SHOULD BELOW GRADE OBSTRUCTIONS INTERFERE WITH PLACEMENT, INCREASE QUANTITY OF BOLLARDS TO MAINTAIN SPACING REQUIREMENTS.

(6) PROVIDE COMBINATION TRANSFORMER AND PANELBOARD (MPZ). CIRCUIT 2#8, #8G IN 2"C TO 4W1–14,16.

FEDERAL AVENUE ELECTRICAL PLAN 1 (E1.1 | E4.8)

EXISTING HANDHOLE PHOTO 1

GENERAL NOTES

1. THIS PORTION OF SITE IS ACTIVE, THE OPERATION OF THE FACILITY WILL TAKE PRECEDENCE OVER THE WORK OF THE CONTRACTOR. IT IS THE RESPONSIBILITY OF THE CONTRACTOR TO COORDINATE CONSTRUCTION WITH OWNER'S PERSONNEL TO MINIMIZE DISRUPTION TO THE FACILITY.
2. OUTAGES ARE TO BE MINIMIZED. PROVIDE NOTIFICATION TO OWNER'S PERSONNEL OF ANY IMMINENT POWER OR COMMUNICATIONS OUTAGES A MINIMUM OF 48 HOURS PRIOR TO OUTAGE. PROCEED WITH EACH OUTAGE ONLY AFTER APPROVAL FROM OWNER'S PERSONNEL IS GIVEN.
3. DEMOLITION OF COMMUNICATIONS CABLING TO EXISTING COMMUNICATIONS POLE BY OTHERS.
4. CLEAN AND MANDREL ANY EXISTING CONDUIT PRIOR TO RE-USE.

KEYED NOTES

1. DEMOLISH EXISTING HANDHOLES AFTER NEW COMMUNICATIONS POLE IS IN SERVICE.
2. SALVAGE EXISTING PORT COMMUNICATIONS POLE AND RETURN TO OWNER AFTER NEW COMMUNICATIONS POLE IS IN SERVICE, ABANDON POLE FOUNDATION IN PLACE.
3. DEMOLISH THIS PORTION OF EXISTING CONCRETE ENCASED DUCT BANK WITH (1) 2"C POWER AND (1) 2" COMMUNICATIONS. DEMOLISH PORTION OF CIRCUIT (2#8, 1#10G) FROM EXISTING COMMUNICATIONS POLE (KEYED NOTE 2) TO NEAREST HANDHOLE AS SHOWN ON E1.1 COORDINATE WITH OWNER FOR DE-ENERGIZING EXISTING CIRCUIT GS-N1-11 PRIOR TO DEMOLITION.
4. DEMOLISH THIS PORTION OF EXISTING DUCTBANK IF IT INTERFERES WITH NEW GATE INSTALLATION, OTHERWISE ABANDON IN PLACE.
5. PROVIDE STRUCTURAL BOLLARD PER SHEET C2.3. BOLLARDS SHALL BE SPACED A MAXIMUM OF 5'-0" FROM EACH OTHER. SHOULD BELOW GRADE OBSTRUCTIONS INTERFERE WITH PLACEMENT, INCREASE QUANTITY OF BOLLARDS TO MAINTAIN SPACING REQUIREMENTS.
6. LOW-MAST COMMUNICATIONS POLE.
7. PROVIDE COMBINATION TRANSFORMER AND PANELBOARD (MPZ). CIRCUIT 2#8, #8G IN 2"C TO 4S1-2,4.
8. PROVIDE ELECTRICAL CONNECTION TO GATE CONTROLLER. SEE SHEET C6.2 FOR FURTHER INFORMATION. COORDINATE WITH GATE SUPPLIER FOR CONNECTION REQUIREMENTS. FOR BIDDING PURPOSES PROVIDE 4#10 IN 1"C TO PANEL 4S1.
9. PROVIDE (1) 2"C POWER AND (1) 2"C COMMUNICATIONS WITHIN DUCT BANK. PORTION OF EXISTING DUCT BANK MAY BE REUSED IN LIEU OF NEW DUCT BANK IF EXISTING IS IN SATISFACTORY CONDITION.

GENERAL NOTES

1. FOR ALL CONDUITS PROVIDE 2'-0" STAGGER BETWEEN ROW CONNECTION JOINTS UNLESS NOTED OTHERWISE.
2. REFER TO SNOHOMISH COUNTY PUD ELECTRICAL SERVICE REQUIREMENTS FOR MINIMUM CLEARANCES FROM DISTRICT UNDERGROUND LINES IN COUNDUIT TO OTHER CONDUITS, PIPES AND STRUCTURES.

KEYED NOTES

(1) PROVIDE LOW-STRENGTH FLUIDIZED THERMAL BACKFILL (FTB) MINIMUM 3" BEYOND CONDUIT IN ALL DIRECTIONS PER SNOPUD T&D GUIDELINE 4-24-6.0.

(2) HOT MIX ASPHALT PER SHEET C3.2.

(3) CRUSHED ROCK BASE COURSE PER SHEET C3.2.

(4) PROVIDE BACKFILL WITH 5/8" MINUS CRUSHED ROCK AND COMPACTED TO 95% OF MAXIMUM DRY DENSITY OR LOW STRENGTH FTB OR CONTROLLED DENSITY FILL (CDF) PER SNOPUD T&D GUIDELINE 4-24-6.0.

(5) COMPACTED SUBGRADE.

(6) PER STRUCTURAL ENGINEER PROVIDE 3000 PSI CONCRETE WITH #3 REBAR SPACE HOOPS AND LONGITUDINAL REINFORCEMENT AT 12" ON CENTER ALONG THE ENTIRE LENGTH OF THE DUCTBANK. CONCRETE SHALL EXTEND AT LEAST 4" PAST THE OUTER EDGE OF EACH CONDUIT.

(7) PROVIDE BACKFILL AND COMPACT TO 95% MAXIMUM DENSITY. BACKFILL SHALL BE IMPORTED STRUCTURAL FILL OR EQUIVALENT SUITABLE NATIVE MATERIAL AS APPROVED BY THE ENGINEER.

(8) PROVIDE #4/0 BARE CU GROUND.

(9) NOT ALL CONDUITS, ENCASEMENT AND BACKFILL FEATURES HAVE BEEN FULLY SHOWN IN THIS SECTION. THIS SECTION IS FOR DEMONSTRATING CLEARANCES FROM OTHER CONDUITS/STRUCTURES. REFER TO OTHER SECTION CUTS FOR ADDITIONAL CONDUIT, ENCASEMENT AND BACKFILL REQUIREMENTS.

(10) PROVIDE 24" EXTENSION RING FOR VAULT TO ALLOW FOR CONDUITS TO PASS UNDER NEIGHBORING DUCT BANK.

(11) SEE SHEET E6.6 AND SPECIFICATIONS FOR VAULT BEDDING AND SUBGRADE PREPARATIONS.

GENERAL NOTES

1. FOR ALL CONDUITS PROVIDE 2'-0" STAGGER BETWEEN ROW CONNECTION JOINTS UNLESS NOTED OTHERWISE.
2. REFER TO SNOHOMISH COUNTY PUD ELECTRICAL SERVICE REQUIREMENTS FOR MINIMUM CLEARANCES FROM DISTRICT UNDERGROUND LINES IN COUNDUIT TO OTHER CONDUITS, PIPES AND STRUCTURES.

KEYED NOTES

(1) PROVIDE LOW-STRENGTH FLUIDIZED THERMAL BACKFILL (FTB) MINIMUM 3" BEYOND CONDUIT IN ALL DIRECTIONS PER SNOPUD T&D GUIDELINE 4-24-6.0.

(2) HOT MIX ASPHALT PER SHEET C3.2.

(3) CRUSHED ROCK BASE COURSE PER SHEET C3.2.

(4) PROVIDE BACKFILL WITH 5/8" MINUS CRUSHED ROCK AND COMPACTED TO 95% OF MAXIMUM DRY DENSITY OR LOW STRENGTH FTB OR CONTROLLED DENSITY FILL (CDF) PER SNOPUD T&D GUIDELINE 4-24-6.0.

(5) COMPACTED SUBGRADE.

(6) PER STRUCTURAL ENGINEER PROVIDE 3000 PSI CONCRETE WITH #3 REBAR SPACE HOOPS AND LONGITUDINAL REINFORCEMENT AT 12" ON CENTER ALONG THE ENTIRE LENGTH OF THE DUCTBANK. CONCRETE SHALL EXTEND AT LEAST 4" PAST THE OUTER EDGE OF EACH CONDUIT.

(7) PROVIDE BACKFILL AND COMPACT TO 95% MAXIMUM DENSITY. BACKFILL SHALL BE IMPORTED STRUCTURAL FILL OR EQUIVALENT SUITABLE NATIVE MATERIAL AS APPROVED BY THE ENGINEER.

(8) PROVIDE #4/0 BARE CU GROUND.

(9) NOT ALL CONDUITS, ENCASEMENT AND BACKFILL FEATURES HAVE BEEN FULLY SHOWN IN THIS SECTION. THIS SECTION IS FOR DEMONSTRATING CLEARANCES FROM OTHER CONDUITS/STRUCTURES. REFER TO OTHER SECTION CUTS FOR ADDITIONAL CONDUIT, ENCASEMENT AND BACKFILL REQUIREMENTS.

(10) PROVIDE 24" EXTENSION RING FOR VAULT TO ALLOW FOR CONDUITS TO PASS UNDER NEIGHBORING DUCT BANK.

NOTE:

NORTHINGS AND EASTINGS OF STRUCTURES ARE BASED OFF OF CONSTRUCTION SURVEY AS-BUILTS PROVIDED BY THE CONTRACTOR.

GENERAL NOTES

1. PROVIDE VAULT RISER/EXTENSION RINGS FOR ALL VAULTS WHERE NEIGHBORING DUCT BANKS ARE WITHIN 4'-0" OF VAULT, SEE SECTION 'F' ON SHEET E5.4 FOR FURTHER INFORMATION.
2. SEE SHEET C4.17 FOR PRECAST VAULT BEDDING DETAILS AND SUBGRADE PREPARATION. ALL PRECAST VAULTS SUBJECTED TO TERMINAL LOADS SHALL BE CONTRACTOR DESIGNED TO MEET THE UNDERGROUND UTILITY STRUCTURE LOADING CRITERIA SHOWN ON SHEET G1.3. SEE SPECIFICATIONS FOR FURTHER DETAILS.
3. LID CASTING AND FRAME SHALL MATCH KIP RATING OF VAULT. COVER SHALL READ "ELECTRIC" OR "COMMUNICATIONS" AS APPROPRIATE. PROVIDE FIELD STAMPED LABEL ON EXPOSED METAL FRAME AND LID, LABEL SHALL MATCH VAULT ID ON ELECTRICAL PLANS. LIDS WEIGHING MORE THAN 50 POUNDS SHALL BE EQUIPPED WITH EITHER STAINLESS STEEL MECHANICAL SPRING LIFT ASSIST STRUTS OR LIFTING RINGS TO ALLOW LIFTING BY A FORKLIFT, WHEN NOT IN USE THE RINGS SHALL RECESS. PROVIDE SECURITY BOLT ON ALL LIDS. LID OPENING SHALL HAVE A OPENING OF 30" DIAMETER MINIMUM.

KEYED NOTES

(1) PROVIDE VAULT RISER/EXTENSION RING FOR EITHER POWER OR COMM VAULT, PER GENERAL NOTE 1.

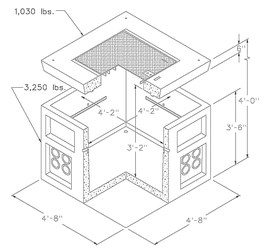
T&D Compatible Unit V0203 - V0204

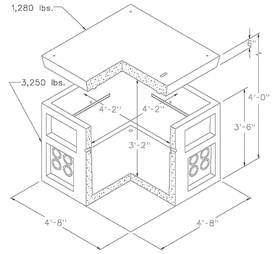
Vaults, 4'8"W x 4'8"L x 3'6"H with 6"H Cover

PAGE 1 OF 1
REV. 5
DEC. 28, 2016



Note:
For applications requiring a vault cover with a slip-resistant steel hatch, specify SlipNOT cover MID 1002120.

C.U.	DESCRIPTION	QTY	MID
V0203	Vault, Conc 4'8"W x 4'8"L x 3'6"H & Cover, Vault 4'8"W x 4'8"L x 6"H w/ 3'W x 3'L Diamond Plate *(Cover only MID 765646)*	1	766397



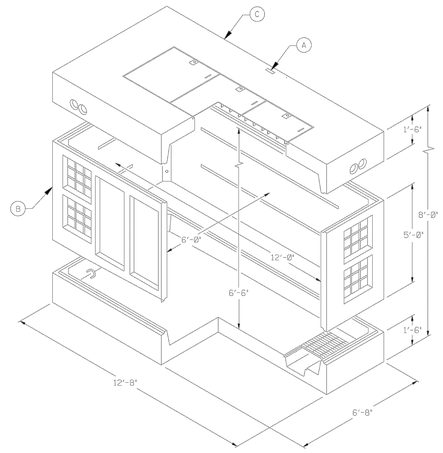
C.U.	DESCRIPTION	QTY	MID
V0204	Vault, Conc 4'8"W x 4'8"L x 3'6"H & Cover, Vault 4'8"W x 4'8"L x 6"H Solid Concrete *(Cover only MID 765547)*	1	766420

Notes:
1. The above vaults are rated for H20 loading, but are not recommended for high traffic areas.
2. For high traffic applications, i.e., full H20 loading, where vault lid will be subject to heavy impact vehicular traffic, e.g., in streets, specify a vault cover with a heavy duty ductile iron lid, MID 1003599.

T&D Compatible Unit V0210

Concrete Pulling/Splicing Vault
6'8"W x 12'8"L x 6'6"H w/ 18"H Cover

PAGE 1 OF 1
REV. 7
AUG. 5, 2014



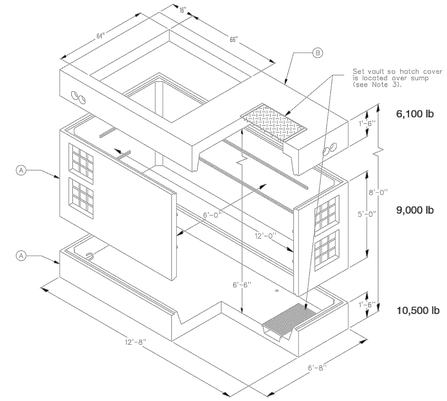
ITEM	DESCRIPTION	QTY	MID
A	Tag, Vault, Cu 1"W x 3.5"L	1	385303
B	Vault, 2-Piece Concrete Bottom: 6'8"W x 12'8"L x 1'6"H Middle: 6'8"W x 12'8"L x 5'H	1	1003601
C	Vault, Cover 6'8"W x 12'8"L x 18"H w/ (3) 3'W x 3'L Diamond Plates	1	1002247

Notes:
1. The vault dimensions shown are for Utility Vault (a division of Oldcastle Precast), historically the District's primary supplier for this vault. Equivalent vaults supplied by other manufacturers typically have slightly different dimensions. Determine which manufacturer a vault was purchased from, and check its dimensions for situations where dimensions are critical, such as in paved areas where the vault cover must be flush with the grade.
2. For Utility Vault replacement cover w/ 3-Diamond Plate doors, see MID 1002247.
3. For Utility Vault replacement cover w/ 3-SlipNOT® doors, see MID 1003024.

T&D Compatible Unit V0501

6'8"W x 12'8"L x 6'6"H Vault w/ 1'6"H Cover w/ 3'W x 3'L Diamond Plate &
64"W x 66"L Opening for PME Type Dead-Front Pad-Mounted Switchgear

PAGE 1 OF 1
REV. 5
JAN. 3, 2016



ITEM	SECTION	DESCRIPTION	QTY	MID
A		Vault, 2-Piece Concrete	1	1003601
	Bottom	6'8"W x 12'8"L x 1'6"H		
	Middle	6'8"W x 12'8"L x 5'0"H		
B	Cover	6'8"W x 12'8"L x 1'6"H w/ 3'W x 3'L Diamond Plate & 64"W x 66"L Opening	1	1002508

Notes:
1. When there is a delay between setting the vault and installing the pad-mounted switchgear, use solid cover slab MID 5000051 (6'W x 6'L x 6"H) to cover the cable blockout in the vault cover. The cover slab weighs approximately 3618 lb.
2. For the vault cover only, see MID 1002508.
3. Orient the vault base section so the pump sump is located below the hatch cover.
4. Section weights are approximate.

Preload Ground Improvement Summary Memorandum

Technical Memorandum

TO: Nathan Watson, PE, KPFF Consulting Engineers

FROM: Sean M. Gertz, PE and Steven R. Wright, PE

DATE: February 3, 2023

RE: **Preload Ground Improvement Summary**
Marine Industrial Expansion
Everett, Washington
Project No. 0121049.070.071

Introduction

This memorandum summarizes the results of a preload ground improvement program completed at the Port of Everett's (Port, project owner) Marine Industrial Expansion project, located at 2600 Federal Avenue in Everett, Washington (site; Figure 1).

The purpose of this memorandum is to document the intent of preload activities performed at the site, to summarize preload monitoring data, and to present information to be used in evaluating load restrictions within the preload area. This memorandum has been prepared with information provided by KPFF Consulting Engineers (KPFF, project civil engineer) and the Port and is based on work completed by Landau Associates, Inc. (Landau) in support of previous phases of the project.

Project Background

The site consists of the former Kimberly-Clark (K-C) mill property, situated on the Everett waterfront. The Port purchased the majority of the property in 2019 and has redeveloped approximately 34 acres into a marine cargo terminal. Existing docks and waterfront features were preserved for future maritime expansion. The upland portion of the site can be accessed via Federal Avenue from the south and Norton Avenue from the north.

No marine component was included in the initial redevelopment phase; however, the Port wishes to develop a flexible design plan that can accommodate future construction of marine infrastructure or reuse of the existing barge dock. Improvements associated with the initial redevelopment phase included the addition of flexible pavements, light poles, and utility corridors.

The site was the subject of a 2012 Agreed Order between the Washington State Department of Ecology and K-C. In 2013, K-C completed the first interim action cleanup at the site, during which approximately 38,000 tons of contaminated soil was removed. In 2020, K-C performed a second interim action cleanup and Crushed Material Removal project. Interim action cleanup activities included removal or capping of pipes protruding from the shoreline; removal of 250,000 tons of crushed material from the mill demolition; removal of approximately 18,000 tons of contaminated soil; and import of clean sand backfill material, which was graded and used to cover the site (Ecology; accessed March 25, 2021).

Landau previously provided geotechnical recommendations for the proposed development in geotechnical engineering reports dated December 4, 2020 and May 7, 2021; and in memoranda dated July 22, 2020 and April 15, 2021. During Landau's support of the project, significant areas of buried wood waste were identified, primarily in the northern half of the site. These areas of wood waste were anticipated to contribute to potentially large settlements under new loads. To mitigate post-construction settlement of the wood waste deposits, Landau recommended a preload ground improvement program be implemented in areas with the highest risk of settlement due to the woody material.

It is understood that the preload area may be used to store shipping containers or heavy military and agricultural equipment. For the sake of its analyses, Landau assumed that the preload area would be used to store fully-loaded shipping containers. Based on discussions with KPFF, Landau understands that an 8 ft wide by 20 ft long shipping container has a gross weight of 52,800 lbs and that an 8 ft wide by 40 ft long shipping container has a gross weight of 67,000 lbs. These gross weights correspond to a uniform ground pressure of 330 pounds per square foot (psf) and 209 psf, respectively.

From August 2021 through November 2021, crushed surfacing base course was imported to the Norton Terminal site and placed to create a preload with a height of approximately 6 feet (ft) above the existing ground surface. Landau understands the first 12 inches of preload material was placed in lifts and compacted. The remainder of the preload fill was end dumped and graded to create a relatively uniform load across the preload area. Following placement of the preload material, Landau visited the site and used a Troxler nuclear density gauge to estimate the average unit weight of the preload fill material. Landau tested the top surface of the preload at several locations and concluded that the average unit weight of the preload fill was about 115 pounds per cubic foot (pcf). The total ground pressure exerted by the preload fill is anticipated to be approximately 690 psf. Following completion of the project, the final ground surface within the preload area was brought up by about 2 ft.

Within the preload fill, a total of 25 settlement monitoring points were constructed to measure settlement of the underlying ground surface over time. Elevations of the tops of the settlement monitoring points were routinely recorded by David Evans and Associates, Inc. (DEA), and Landau plotted the elevations versus time to evaluate the settlement of the ground surface beneath the preload fill. Monitoring of the preload-induced settlement was concluded on January 28, 2022. Some existing site features and the preload ground improvement configuration are shown on Figure 2.

Wood Waste Settlement

While providing geotechnical support to the project, Landau evaluated subsurface conditions initially by reviewing previously conducted geotechnical explorations (Chase T. Main, Inc. 1952; Dames and Moore 1990, 1993, 1995; Aspect Consulting 2013; Shannon & Wilson 2014). Upon learning of the

presence of extensive buried wood waste deposits at the site, Landau's scope was expanded to include ten additional exploratory borings and a series of electrical resistivity tomography (ERT) surveys. The purpose of the additional exploration efforts was to attempt to better define the extent and characteristics of the buried wood waste deposits and evaluate the potential impacts on the proposed improvements.

Based on a review of the available subsurface information, Landau attempted to quantify the magnitude of settlement that may occur as a result of the proposed fills and new loads at the site. Landau predicted up to 14 inches of settlement may occur under the proposed loading. Several uncertainties were noted that have the potential to influence the magnitude of possible settlement. The accumulation of these uncertainties has the potential to result in an overestimation of settlement magnitude.

- **Lack of published compressibility data for soil-wood mixtures** – While buried organic soils are known to contribute to large amounts of short- and long-term settlements, little scientific data was available quantifying the magnitude of settlement to be anticipated due to consolidation of mineral soil mixed with woody material.

- **Concentration of wood waste within deposit** – Higher concentrations of woody material within the soil matrix is generally considered to contribute to larger anticipated settlements. Due to the method of deposition, the concentration of wood within the soil matrix was anticipated to be highly variable. The percentage of woody material encountered was not well documented in the exploratory borings that were reviewed during design of the proposed improvements. Some borings simply identified the material as "wood" or "wood chips," whereas other borings identified materials as "fine silty sand, shells, wood, etc." Classification of mineral soil is generally completed by comparison of the weight of the constituents that make up the soil matrix. This methodology is not easily applied to soil-wood mixtures because the weight by volume of organic particles is significantly lower than that of mineral soil particles. For example, a soil sample may visually appear to be made up of equal parts organics and mineral soil; however, when compared by weight, the actual organic concentration of the soil matrix could range from about 10 to 40 percent. The lower end of this range would generally be associated with sawdust-soil mixtures, whereas the higher end of this range would be associated with hog fuel-soil mixtures. To adequately determine the organic composition of mixed deposits, it would have been necessary to perform "loss by ignition" organic matter tests on samples obtained throughout the site.

- **Composition of wood waste within deposit** – The physical structure of the organic material is likely to significantly affect the engineering properties of the soil matrix. Fine wood particles such as sawdust are likely to behave similar to peat soils, exhibiting high rates of initial compression and secondary consolidation. Coarser wood particles such as hog fuel are likely

to experience moderately high rates of initial compression and lower levels of secondary consolidation.

- **Age of deposit** – Much of the historic fill at the site was placed in the 1800's, and therefore it has been experiencing organic decomposition and consolidation for over 100 years. It is uncertain whether a greater level of decomposition would contribute to higher or lower amounts of settlement. As the woody material becomes more decomposed, it begins to resemble peat soils more closely, and may experience higher rates of settlement associated with those soils. However, during this time, significant settlements have likely occurred, and how much settlement potential remains is uncertain.

- **Stress history of deposit** – As noted previously, much of the historic fill was placed over 100 years ago. During the time since fill placement, the soil has likely experienced many different loading scenarios as a result of the development history of the site. Because of this, it is uncertain what portion of the proposed loading is within the virgin compression curve (i.e., the portion of the loading curve that the soil had previously not experienced).

- **Poor sample recovery** – Many of the exploratory borings reviewed by Landau noted that it was not possible to recover soil samples from the borings, particularly in and around deposits of woody material. This introduced uncertainty regarding the actual extent and composition of the woody deposits.

- **Reliability of historic boring information** – Landau reviewed environmental and geotechnical explorations previously completed at the site, dating back to 1952. Over time, exploration methods and sampling procedures have evolved and oftentimes, the drilling or sampling methods were not noted on the boring logs. Geotechnical analysis relies heavily upon the penetration resistance of the sampler used during explorations, referred to as "blow counts." Modern geotechnical explorations typically use a standardized sampler that is driven using a consistent amount of energy with each blow. The number of blows required to drive the sampler a distance of 12 inches provides an indication of soil relative density or consistency. When other sampling procedures are used, it becomes difficult to correlate the blow counts with the standardized methods. This is nearly impossible to do if the sampling method was not noted on the boring logs. Additionally, several borings that were reviewed were terminated within woody debris or in material that resulted in poor sample recovery, and as a result, the full extent of the woody debris could not be determined with certainty.

  Furthermore, methods for classification of soil deposits have changed over the time period during which the previous borings were completed. Even with standardized soil classification systems that are in use today, the ability to accurately categorize soil types without

geotechnical laboratory testing is a skill that requires practice. An inexperienced field engineer or scientist could easily classify a soil deposit incorrectly.

Due to the uncertainty regarding engineering properties of the highly variable site fill, Landau recommended that areas of the site with the most significant presence of woody debris be preloaded to mitigate the potential post-construction settlement.

Preload Performance

Between commencement of preload placement in August 2021 and January 10, 2022, up to 1.6 inches of settlement had been recorded at the locations of the 25 preload monitoring points. Following review of this data, Landau concluded that at a majority of the monitoring point locations, the time rates of settlement due to the preload appeared to have stabilized and settlement induced by the preload was essentially complete. Because settlement appeared to be continuing at the locations of monitoring points 1 and 4, Landau recommended measurements continued to be collected at the locations of monitoring points 1 through 5. Following review of data collected through January 28, 2022, Landau concluded that settlement due to the preload was essentially complete at all monitoring point locations.

Plots of recorded settlement versus time for each settlement monitoring point are presented in Figures 3 through 27. It should be noted that significant variability was observed in the data over time. The source of this variability is unclear; however, the presence of the variability does not prevent Landau from concluding that the preload has performed its intended function.

Forecasting for Additional Loading

A load restriction zone was included in the original project plans for the portion of the site subjected to preloading. This restriction would only allow storage of shipping containers stored on trailer chassis or a single row of containers placed on the ground. Based on the limited preload settlement observed, Landau understands the Port is considering removal of the load restriction from this area. Upon review of the measured preload settlement, Landau estimates future settlements up to the magnitudes detailed in Table 1 for the additional loading conditions noted. It should be noted that these forecasted settlements are primary settlements and do not account for the effects of wood waste decomposition that could occur over many years.

Table 1. Anticipated Future Primary Settlement

Loading Condition	Anticipated Future Primary Settlement (inches)*
Loaded Shipping Containers, Stacked 2 High (660 psf)	<1
Loaded Shipping Containers, Stacked 4 High (1,320 psf)	<3

* Settlements do not include the up to 1.6 inches of settlement that was already observed beneath the preload.
ft = feet
psf = pounds per square foot

The nature of settlement described above may result in an uneven pavement surface, differential settlement between the pavement and adjacent structures, and premature pavement distress. Given the relatively low magnitude of settlement observed as a result of the preload, these signs of distress are likely to be fairly minimal over the short term. If the terminal loading condition exceeds fully-loaded shipping container stacked two high, settlement may exceed the observed settlement during the preload process. Because of these relatively low anticipated settlement magnitudes shown in Table 1, Landau recommends that the Port proceed with loading the preload area as desired and establish a pavement performance monitoring plan for this area. The pavement performance monitoring plan should occur on a yearly or twice-yearly basis and should document evidence of pavement distress through photographs, diagrams, and measurements as necessary to track worsening conditions. If evidence of settlement is observed, the concept of a load restriction zone should be re-evaluated.

Use of This Technical Memorandum

Landau Associates prepared this technical memorandum for the exclusive use of KPFF Consulting Engineers, the Port of Everett, and their designated representatives for specific application to the Port of Everett Marine Industrial Expansion project in Everett, Washington. No other party is entitled to rely on the information, conclusions, and recommendations included in this document without the express written consent of Landau Associates. Reuse of the information, conclusions, and recommendations provided herein for extensions of the project or for any other project, without review and authorization by Landau Associates, shall be at the user's sole risk. Landau Associates warrants that, within the limitations of scope, schedule, and budget, its services have been provided in a manner consistent with that level of skill and care ordinarily exercised by members of the profession currently practicing in the same locality, under similar conditions as this project. Landau Associates makes no other warranty, either express or implied.

RE: SOIL ANALYTICAL ANALYSIS AND REPORTING
Cadman Sand & Gravel – Pit # D345
22022 Mountain Loop Hwy
Granite Falls, Washington

Dear Mr. Snyder

In accordance with your request and authorization, our firm performed soil sampling and analysis for the above-referenced project on August 13, 2021. The sampling was performed by Krazan and Associates, Inc. representative on August 9, 2021.

If you have any questions, or if we can be of further assistance, please do not hesitate to contact our office.

Respectfully submitted,
KRAZAN & ASSOCIATES, INC.

RE: Letter Report for Soil Analytical Reporting
Cadman Sand & Gravel
22022 Mountain Loop Highway
Granite Falls, WA 98252

Dear Mr. Snyder:

Krazan and Associates is providing this Letter Report in reference to limited sampling of soil at the above referenced address located in Granite Falls, Washington. Sample collection was conducted by Krazan & Associates representative Mr. Jordan Kain on August 9, 2021. This sampling was performed in accordance with federal, state and local regulatory requirements, and was limited to the 1-¼" CSBC stock pile located at Cadman Sand & Gravel pit # D345. Contaminants of concern (C.O.C) analysis were based on Port of Everett – Norton Terminal – Preload and MTCA 3rd Interim Action specification 1.04 E Section 31 00 00.

1.0 ANALYTICAL RESULTS

1.1 Soil Sampling Locations

Twenty-two (22) discrete soil samples were collected at evenly distributed locations throughout the on-site 1-¼" CSBC stockpile. See attached figure for soil sample locations. Collected samples were delivered to a Washington State certified laboratory. The laboratory analytical report is provided in Appendix A.

1.2 Sampling Methodology

The samples were collected by carefully collecting discreet samples with a clean stainless-steel sampler. The samples were placed in laboratory supplied clean glass sample containers. Sample containers were then placed in an iced cooler for transportation to the laboratory. The sampling instrument was wiped between samples with a clean moist cloth to decontaminate the tool and minimize the potential cross contamination of subsequent samples. Data pertinent to each sample (e.g., date, sample number, material description, and material category) was recorded on a chain of custody.

1.3 Laboratory Analysis

A total of twenty-two (22) discrete soil samples were collected from the site and delivered OnSite Environmental Inc in Redmond, Washington, under chain-of-custody protocol for analysis. OnSite Environmental is a Washington State accredited laboratory. Samples were run for Total Petroleum Hydrocarbons Gasoline (TPH-Gx), Total Petroleum Hydrocarbons Diesel & Motor Oil (TPH-Dx), PAHs, PCBs, Arsenic, Nickel, Copper Mercury, Lead, Zinc and percent moisture. Samples labeled S-1 through S-10 were placed on a rushed 4-day turnaround time and samples labeled S-11 through S-22 were placed on a standard turnaround time. Laboratory analytical data reports and chain-of-custody forms are provided in Appendix A.

1.4 Laboratory Sample Results

Table 1 & 2 includes the sample number, sample location, sample description, and analyte contamination.

1.5 Conclusion

The soil collected from Cadman Sand and Gravel - Pit #D345 located at 22022 Mountain Loop Highway, Granite Falls, WA did not exceed the Department of Ecology and the Port of Everett concentration upper limits for TPH-Gx, TPH-Dx, PAHs, Total cPAHs TEQ, PCBs, Arsenic, Lead, Mercury and Zinc as stated in Port of Everett – Norton Terminal – Preload and MTCA 3rd Interim Action specification 1.04 E Section 31 00 00. However, samples labeled S-3, S-5, S-6, and S-11 were slightly above the 48-ppm upper limit threshold for Nickel at 54-ppm, 62-ppm, 49-ppm & 49-ppm respectively. Samples labeled S-16 and S-22 were slightly above the 36-ppm upper limit threshold for Copper at 45-ppm and 38-ppm respectively. Based on laboratory control limits and data qualifiers, all samples have been validated.

LIMITATIONS

This survey and review of the subject property has been limited in scope to those areas defined by the client. This investigation is undertaken with the risk that visual observations and random sampling alone would not reveal the presence, full nature, and extent of Contaminants of Concern (COC). Krazan makes no representation as to the COC content of materials not sampled or that were inaccessible to our inspector. The sample locations are approximate, and are based on field notes and diagrams of sample locations. The opinions presented herein apply to the site condition existing at the time of the investigation. Opinions and recommendations provided herein may not apply to future conditions that may exist at the site.

The findings presented in this report were based on field observations and sampling as defined by the client. Therefore, the data obtained are clear and accurate only to the degree implied by the sources and

methods used. The information presented herein is based on professional interpretation using presently accepted methods with a degree of conservatism deemed proper as of the report date. We do not warrant that future technical developments cannot supersede such data.

This report is provided for the exclusive use of the client noted on the cover page and is subject to the terms and conditions in the applicable contract between the client and Krazan. The client is the only party to whom Krazan has explained the risks involved and has been involved in the shaping of the scope of services needed to satisfactorily manage those risks, if any, from the client's point of view. Any third party use of this report, including use by the Client's lender, prospective purchaser, or lessee will be subject to the terms and conditions governing the contractual work between the Client and Krazan. The unauthorized use of, reliance on, or release of the information contained in this report is strictly prohibited and will be without risk or liability to Krazan.

Laboratory analysis was conducted by a laboratory accredited under the guidance of the EPA. The results of the analyses are accurate only to the degree of care exercised by the independent laboratories and the representative nature of the samples obtained.

Krazan appreciates the opportunity to provide you with this information and trusts that you will find it useful. If you have any questions or if we may be of further assistance, please do not hesitate to contact our office at (425) 485-5519.

Respectfully submitted,
KRAZAN & ASSOCIATES, INC.

Jordan Kain, P.E

Re: Analytical Data for Project 094-21021
Laboratory Reference No. 2108-092

Dear Jordan:

Enclosed are the analytical results and associated quality control data for samples submitted on August 9, 2021.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

David Baumeister
Project Manager

Enclosures

This report pertains to the samples analyzed in accordance with the chain of custody,
and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: August 17, 2021
Samples Submitted: August 9, 2021
Laboratory Reference: 2108-092
Project: 094-21021

Case Narrative

Samples were collected on August 9, 2021 and received by the laboratory on August 9, 2021. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

This report pertains to the samples analyzed in accordance with the chain of custody,
and is intended only for the use of the individual or company to whom it is addressed.

and is intended only for the use of the individual or company to whom it is addressed.

OnSite Environmental Inc.

Data Qualifiers and Abbreviations

A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.

B - The analyte indicated was also found in the blank sample.

C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.

E - The value reported exceeds the quantitation range and is an estimate.

F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.

H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.

I - Compound recovery is outside of the control limits.

J - The value reported was below the practical quantitation limit. The value is an estimate.

K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.

L - The RPD is outside of the control limits.

M - Hydrocarbons in the gasoline range are impacting the diesel range result.

M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.

N - Hydrocarbons in the lube oil range are impacting the diesel range result.

N1 - Hydrocarbons in diesel range are impacting lube oil range results.

O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.

P - The RPD of the detected concentrations between the two columns is greater than 40.

Q - Surrogate recovery is outside of the control limits.

S - Surrogate recovery data is not available due to the necessary dilution of the sample.

T - The sample chromatogram is not similar to a typical _____.

U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

U1 - The practical quantitation limit is elevated due to interferences present in the sample.

V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.

W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.

X - Sample extract treated with a mercury cleanup procedure.

X1- Sample extract treated with a sulfuric acid/silica gel cleanup procedure.

Y - The calibration verification for this analyte exceeded the 20% drift specified in methods 8260 & 8270, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.

Y1 - Negative effects of the matrix from this sample on the instrument caused values for this analyte in the bracketing continuing calibration verification standard (CCVs) to be outside of 20% acceptance criteria. Because of this, quantitation limits and sample concentrations should be considered estimates.

Z -

ND - Not Detected at PQL
PQL - Practical Quantitation Limit
RPD - Relative Percent Difference

RE: SOIL ANALYTICAL ANALYSIS AND REPORTING
Cadman Sand & Gravel – Pit # D345
22022 Mountain Loop Hwy
Granite Falls, Washington

Dear Mr. Snyder

In accordance with your request and authorization, our firm performed soil sampling analysis for the above-referenced project on September 13, 2021. The sampling was performed by Krazan and Associates, Inc. representative on August 31, 2021.

If you have any questions, or if we can be of further assistance, please do not hesitate to contact our office.

Respectfully submitted,
KRAZAN & ASSOCIATES, INC.

RE: Letter Report for Soil Analytical Reporting
Cadman Sand & Gravel
22022 Mountain Loop Highway
Granite Falls, WA 98252

Dear Mr. Snyder:

Krazan and Associates is providing this Letter Report in reference to limited sampling of soil at the above referenced address located in Granite Falls, Washington. Sample collection was conducted by Krazan & Associates representative Mr. Jordan Kain on August 31, 2021. This sampling was performed in accordance with federal, state and local regulatory requirements, and was limited to the 1-¼" CSBC stock pile located at Cadman Sand & Gravel pit # D345. Contaminants of concern (C.O.C) analysis were based on Port of Everett – Norton Terminal – Preload and MTCA 3rd Interim Action specification 1.04 E Section 31 00 00.

1.0 ANALYTICAL RESULTS

1.1 Soil Sampling Locations

Twenty-five (25) discrete soil samples were collected at evenly distributed locations throughout the on-site 1-¼" CSBC stockpile. See attached figure for soil sample locations. Collected samples were delivered to a Washington State certified laboratory. The laboratory analytical report is provided in Appendix A.

1.2 Sampling Methodology

The samples were collected by carefully collecting discreet samples with a clean stainless-steel sampler. The samples were placed in laboratory supplied clean glass sample containers. Sample containers were then placed in an iced cooler for transportation to the laboratory. The sampling instrument was wiped between samples with a clean moist cloth to decontaminate the tool and minimize the potential cross contamination of subsequent samples. Data pertinent to each sample (e.g., date, sample number, material description, and material category) was recorded on a chain of custody.

1.3 Laboratory Analysis

A total of twenty-five (25) discrete soil samples were collected from the site and delivered OnSite Environmental Inc in Redmond, Washington, under chain-of-custody protocol for analysis. OnSite Environmental is a Washington State accredited laboratory. Samples were run for Total Petroleum Hydrocarbons Gasoline (TPH-Gx), Total Petroleum Hydrocarbons Diesel & Motor Oil (TPH-Dx), PAHs, PCBs, Arsenic, Nickel, Copper Mercury, Lead, Zinc and percent moisture. Laboratory analytical data reports and chain-of-custody forms are provided in Appendix A.

1.4 Laboratory Sample Results

Table 1 & 2 includes the sample number, sample location, sample description, and analyte contamination.

1.5 Conclusion

The soil collected from Cadman Sand and Gravel - Pit #D345 located at 22022 Mountain Loop Highway, Granite Falls, WA did not exceed the Department of Ecology and the Port of Everett concentration upper limits for TPH-Gx, TPH-Dx, PAHs, Total cPAHs TEQ, PCBs, Arsenic, Lead, Mercury and Zinc as stated in Port of Everett – Norton Terminal – Preload and MTCA 3rd Interim Action specification 1.04 E Section 31 00 00. Based on laboratory control limits and data qualifiers, all samples have been validated.

LIMITATIONS

This survey and review of the subject property has been limited in scope to those areas defined by the client. This investigation is undertaken with the risk that visual observations and random sampling alone would not reveal the presence, full nature, and extent of Contaminants of Concern (COC). Krazan makes no representation as to the COC content of materials not sampled or that were inaccessible to our inspector. The sample locations are approximate, and are based on field notes and diagrams of sample locations. The opinions presented herein apply to the site condition existing at the time of the investigation. Opinions and recommendations provided herein may not apply to future conditions that may exist at the site.

The findings presented in this report were based on field observations and sampling as defined by the client. Therefore, the data obtained are clear and accurate only to the degree implied by the sources and methods used. The information presented herein is based on professional interpretation using presently accepted methods with a degree of conservatism deemed proper as of the report date. We do not warrant that future technical developments cannot supersede such data.

This report is provided for the exclusive use of the client noted on the cover page and is subject to the terms and conditions in the applicable contract between the client and Krazan. The client is the only party to whom Krazan has explained the risks involved and has been involved in the shaping of the scope of services needed to satisfactorily manage those risks, if any, from the client's point of view. Any third party use of this report, including use by the Client's lender, prospective purchaser, or lessee will be subject to the terms and conditions governing the contractual work between the Client and Krazan. The unauthorized use of, reliance on, or release of the information contained in this report is strictly prohibited and will be without risk or liability to Krazan.

Laboratory analysis was conducted by a laboratory accredited under the guidance of the EPA. The results of the analyses are accurate only to the degree of care exercised by the independent laboratories and the representative nature of the samples obtained.

Krazan appreciates the opportunity to provide you with this information and trusts that you will find it useful. If you have any questions or if we may be of further assistance, please do not hesitate to contact our office at (425) 485-5519.

Respectfully submitted,
KRAZAN & ASSOCIATES, INC.

Re: Analytical Data for Project 094-21021
Laboratory Reference No. 2108-312

Dear Jordan:

Enclosed are the analytical results and associated quality control data for samples submitted on August 31, 2021.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

David Baumeister
Project Manager

Enclosures

Case Narrative

Samples were collected on August 31, 2021 and received by the laboratory on August 31, 2021. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

This report pertains to the samples analyzed in accordance with the chain of custody,
and is intended only for the use of the individual or company to whom it is addressed.

OnSite Environmental Inc.

Data Qualifiers and Abbreviations

A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.

B - The analyte indicated was also found in the blank sample.

C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.

E - The value reported exceeds the quantitation range and is an estimate.

F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.

H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.

I - Compound recovery is outside of the control limits.

J - The value reported was below the practical quantitation limit. The value is an estimate.

K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.

L - The RPD is outside of the control limits.

M - Hydrocarbons in the gasoline range are impacting the diesel range result.

M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.

N - Hydrocarbons in the lube oil range are impacting the diesel range result.

N1 - Hydrocarbons in diesel range are impacting lube oil range results.

O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.

P - The RPD of the detected concentrations between the two columns is greater than 40.

Q - Surrogate recovery is outside of the control limits.

S - Surrogate recovery data is not available due to the necessary dilution of the sample.

T - The sample chromatogram is not similar to a typical _____.

U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

U1 - The practical quantitation limit is elevated due to interferences present in the sample.

V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.

W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.

X - Sample extract treated with a mercury cleanup procedure.

X1- Sample extract treated with a sulfuric acid/silica gel cleanup procedure.

Y - The calibration verification for this analyte exceeded the 20% drift specified in methods 8260 & 8270, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.

Y1 - Negative effects of the matrix from this sample on the instrument caused values for this analyte in the bracketing continuing calibration verification standard (CCVs) to be outside of 20% acceptance criteria. Because of this, quantitation limits and sample concentrations should be considered estimates.

Z -

ND - Not Detected at PQL
PQL - Practical Quantitation Limit
RPD - Relative Percent Difference

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

RE: SOIL ANALYTICAL ANALYSIS AND REPORTING
Miles Sand and Gravel – Getchell Pit #15415
15415 84th St NE
Lake Stevens, Washington

Dear Mr. Snyder

In accordance with your request and authorization, our firm performed analytical analysis and reporting for the above-referenced project on July 22, 2021. The sampling was performed by SRV Construction representative and analysis and reporting was performed by Krazan & Associates.

If you have any questions, or if we can be of further assistance, please do not hesitate to contact our office.

Respectfully submitted,
KRAZAN & ASSOCIATES, INC.

Jordan Kain, P.E.
Environmental Department Manager

RE: Letter Report for Soil Analytical Reporting
Miles Sand and Gravel – Getchell Pit #15415
15415 84th St NE
Lake Stevens, Washington 98258

Dear Mr. Snyder:

Krazan and Associates is providing this Letter Report in reference to limited sampling of soil at the above referenced address located in Lake Stevens, Washington. Sample collection was conducted by SRV Construction Inc. (SRV) representative Mr. Steve Verbarendse on July 12, 2021. This sampling was performed in accordance with federal, state and local regulatory requirements, and was limited to the 1-¼" CSBC stock pile located at Getchell Pit #15415. Contaminants of concern (C.O.C) analysis were based on Port of Everett – Norton Terminal – Preload and MTCA 3rd Interim Action specification 1.04 E Section 31 00 00.

1.0 ANALYTICAL RESULTS

1.1 Soil Sampling Locations

Fifteen (15) discrete soil samples were collected at evenly distributed locations throughout the on-site 1-¼" CSBC stockpile totaling approximately 150'x150'x25' in size. See attached figure for soil sample locations. Collected samples were delivered to a Washington State certified laboratory. The laboratory analytical report is provided in Appendix A.

1.2 Sampling Methodology

The samples were collected by carefully collecting discreet samples with a clean stainless-steel sampler. The samples were placed in clean glass sample containers. Sample containers were then placed in an iced cooler for transportation to the laboratory. The sampling instrument was wiped between samples with a clean moist cloth to decontaminate the tool and minimize the potential cross contamination of subsequent samples. Data pertinent to each sample (e.g., date, sample number, material description, and material category) was recorded on a chain of custody.

1.3 Laboratory Analysis

A total of fifteen (15) discrete soil samples were collected from the site and delivered OnSite Environmental Inc. in Redmond, Washington, under chain-of-custody protocol for analysis. OnSite Environmental Inc. is a Washington State accredited laboratory. Samples were run for Total Petroleum Hydrocarbons Gasoline (TPH-Gx), Total Petroleum Hydrocarbons Diesel & Motor Oil (TPH-Dx), PAHs, PCBs, Arsenic, Nickel, Copper Mercury, Lead, Zinc and percent moisture. Laboratory analytical data reports and chain-of-custody forms are provided in Appendix A.

1.4 Laboratory Sample Results

Table 1 & 2 include the sample number, sample location, sample description, and analyte contamination.

Table 1 – Summary of Analytical Data

1.5 Conclusion

The soil collected from Miles Sand and Gravel - Getchell Pit #15415 located at 15415 84th Street NE, Lake Stevens, WA **did not** exceed the Department of Ecology and the Port of Everett concentration upper limits for TPH-Gx, TPH-Dx, PAHs, Total cPAHs TEQ, PCBs, and Metals as stated in Port of Everett – Norton Terminal – Preload and MTCA 3rd Interim Action specification 1.04 E Section 31 00 00. Based on laboratory control limits and data qualifiers, all samples have been validated.

LIMITATIONS

This survey and review of the subject property has been limited in scope to those areas defined by the client. This investigation is undertaken with the risk that visual observations and random sampling alone would not reveal the presence, full nature, and extent of Contaminants of Concern (COC). Krazan makes no representation as to the COC content of materials not sampled or that were inaccessible to our inspector. The sample locations are approximate, and are based on field notes and diagrams of sample locations. The opinions presented herein apply to the site condition existing at the time of the investigation. Opinions and recommendations provided herein may not apply to future conditions that may exist at the site.

The findings presented in this report were based on field observations and sampling as defined by the client. Therefore, the data obtained are clear and accurate only to the degree implied by the sources and methods used. The information presented herein is based on professional interpretation using presently

accepted methods with a degree of conservatism deemed proper as of the report date. We do not warrant that future technical developments cannot supersede such data.

This report is provided for the exclusive use of the client noted on the cover page and is subject to the terms and conditions in the applicable contract between the client and Krazan. The client is the only party to whom Krazan has explained the risks involved and has been involved in the shaping of the scope of services needed to satisfactorily manage those risks, if any, from the client's point of view. Any third party use of this report, including use by the Client's lender, prospective purchaser, or lessee will be subject to the terms and conditions governing the contractual work between the Client and Krazan. The unauthorized use of, reliance on, or release of the information contained in this report is strictly prohibited and will be without risk or liability to Krazan.

Laboratory analysis was conducted by a laboratory accredited under the guidance of the EPA. The results of the analyses are accurate only to the degree of care exercised by the independent laboratories and the representative nature of the samples obtained.

Krazan appreciates the opportunity to provide you with this information and trusts that you will find it useful. If you have any questions or if we may be of further assistance, please do not hesitate to contact our office at (425) 485-5519.

Respectfully submitted,
KRAZAN & ASSOCIATES, INC.

Re: Analytical Data for Project CIP No. 1-8-900-OS
Laboratory Reference No. 2107-102

Dear John:

Enclosed are the analytical results and associated quality control data for samples submitted on July 13, 2021.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

David Baumeister
Project Manager

Enclosures

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: July 21, 2021
Samples Submitted: July 13, 2021
Laboratory Reference: 2107-102
Project: CIP No. 1-8-900-OS

Case Narrative

Samples were collected on July 12, 2021 and received by the laboratory on July 13, 2021. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

This report pertains to the samples analyzed in accordance with the chain of custody,
and is intended only for the use of the individual or company to whom it is addressed.

This report pertains to the samples analyzed in accordance with the chain of custody,
and is intended only for the use of the individual or company to whom it is addressed.

OnSite Environmental Inc.

Data Qualifiers and Abbreviations

A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.

B - The analyte indicated was also found in the blank sample.

C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.

E - The value reported exceeds the quantitation range and is an estimate.

F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.

H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.

I - Compound recovery is outside of the control limits.

J - The value reported was below the practical quantitation limit. The value is an estimate.

K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.

L - The RPD is outside of the control limits.

M - Hydrocarbons in the gasoline range are impacting the diesel range result.

M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.

N - Hydrocarbons in the lube oil range are impacting the diesel range result.

N1 - Hydrocarbons in diesel range are impacting lube oil range results.

O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.

P - The RPD of the detected concentrations between the two columns is greater than 40.

Q - Surrogate recovery is outside of the control limits.

S - Surrogate recovery data is not available due to the necessary dilution of the sample.

T - The sample chromatogram is not similar to a typical _____.

U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

U1 - The practical quantitation limit is elevated due to interferences present in the sample.

V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.

W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.

X - Sample extract treated with a mercury cleanup procedure.

X1- Sample extract treated with a sulfuric acid/silica gel cleanup procedure.

Y - The calibration verification for this analyte exceeded the 20% drift specified in methods 8260 & 8270, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.

Y1 - Negative effects of the matrix from this sample on the instrument caused values for this analyte in the bracketing continuing calibration verification standard (CCVs) to be outside of 20% acceptance criteria. Because of this, quantitation limits and sample concentrations should be considered estimates.

Z -

ND - Not Detected at PQL
PQL - Practical Quantitation Limit
RPD - Relative Percent Difference

Subject: RE: Norton Terminal: Import Chemical Testing Results

Hi – I agree with Aspect's conclusions and the nickel appears to be naturally occurring. The 95 UCL of 48.6 mg/kg compared to 48 mg/kg is not that different. Since both populations are normally distributed, I ran a couple of t-tests showing that the population mean of the structural fill is not statistically different than the background level of 48 mg/kg, and both population means are not statistically different.

Let me know when you have time to discuss.

Andy

One sample t-test – Concludes that the structural fill population mean is less than or equal to 48 mg/kg

Hi Andy,

Please see the attached memo by Aspect Consulting that presents the import testing results for structural fill and the CSBC material for the MIE K-C 3rd Interim Action site. They had some screening level exceedances of a few metals, and as a result provided some statistical analysis. We would like to discuss the results and how we move forward once you have had a chance to review. The memo and analysis of the produced by Aspect (Steve G and Carla) under contract with Strider. Their proposal is to allow the material.

Can you let me know your availability to discuss the results? Thanks!

Re: **Import Chemical Testing Results – Mandan Pit**
Norton Terminal Development at the K-C Worldwide Site
2600 Federal Avenue, Everett, WA

Aspect Consulting, LLC (Aspect) has conducted chemical testing of potential import materials in support of the 3rd Interim Action (IA) at the KC Upland Area, to be conducted concurrently with the Port of Everett Norton Terminal Development. Aspect was retained by Strider Construction (Strider) to meet requirements for testing and evaluation of imported fill material that was provided in the Earthwork specification, Section 31. Strider selected the Mandan Pit, located at 11423 Jordan Road in Arlington, Snohomish County, Washington, as a potential source for import materials. The Mandan Pit is a 185-acre sand and gravel quarry operated by Granite Construction with mining of Quaternary (Pleistocene) glacial drift (Qgd) that includes glacial till and outwash (DNR, 2021).

On November 4, 2021, Aspect collected samples from two stockpiles at the Mandan Pit; one of which contains material that meets the specifications for use as crushed surfacing base course (CSBC) and another that contains material that meets the specifications for use as structural fill (SF). The sample collection and analysis were conducted to meet the specified requirement for frequency of five samples for the first 1,000 cubic yards of imported material, and one sample for each additional 1,000 cubic yards. Strider estimates the total volume of import material to be approximately 10,000 cubic yards each of CSBC and SF.

This memo describes the sample collection procedures, analytical testing methods and result, a comparison of data to the site preliminary soil cleanup levels (PCLs), results of a statistical

evaluation of sample data for metals, and conclusions regarding the suitability of the proposed import material to meet the chemical criteria.

Sample Collection

In November 2021, Aspect collected 14 samples representing approximately 10,000 cubic yards of CSBC and 14 samples representing approximately 10,000 cubic yards of SF, from stockpiles of each material at the Mandan Pit. The samples that represent soils to be used as backfill were collected with approximate 10-foot lateral spacing between samples in a radial pattern around each stockpile. The locations of the stockpiles at the time of sampling, and the approximate locations from where samples were collected from each stockpile, is shown in Figure 1. At each sample location, the top 6 inches of soil was removed, and a sample of freshly exposed soil was collected.

The CSBC consisted primarily of brown gravel with well-graded sand. The SF consisted primarily of brown well-graded sand with gravel. Each soil sample was field sieved to remove gravel in order to provide the fine constituents to the laboratory for analysis. The sieved fines were placed into laboratory-prepared and -supplied sample jars, placed in a cooler with ice, and transported to the laboratory under proper chain of custody protocols.

Analytical Testing

The aggregate samples were submitted to ALS Environmental in Everett, Washington for laboratory analysis of the following:

- Gasoline-range petroleum hydrocarbons by Northwest Method NWTPH-Gx
- Diesel-/oil-range petroleum hydrocarbons by Northwest Method NWTPH-Dx
- Arsenic, copper, lead, nickel, and zinc by EPA Method 6020
- Mercury by EPA Method 7471
- Polycyclic aromatic hydrocarbons (PAHs) by EPA Method 8270 SIM
- Polychlorinated biphenyls (PCBs) by EPA Method 8082

The laboratory analytical reports are provided as Appendix A. Aspect completed a Level 2a data quality validation of the analytical data and concluded that all data are of known quality and are acceptable for use in this evaluation. The Data Validation Report is provided in Appendix B.

Results

Laboratory Analytical Data

The sample results were compared to the PCLs for the 3rd IA. The PCLs and soil sampling results are included in Tables 1 and 2 for CSBC and SF, respectively. The results are summarized by material in the following subsections.

Results for Crushed Surfacing Base Course

The laboratory analytical results for the CSBC stockpile samples indicate that concentrations of petroleum hydrocarbons, PAHs, and PCBs are below the laboratory reporting limits, all of which are below the PCLs (Table 1). All the analyzed metals were detected in each of the CSBC samples at concentrations above the laboratory reporting limits. The following metals were detected in one

or more CSBC samples at concentrations above the PCLs, which are based on natural background levels:

- Copper – three samples, with concentrations reported at 38 milligrams per kilogram (mg/kg) to 58 mg/kg, as compared to the copper PCL of 36 mg/kg.
- Mercury – one sample at 0.11 mg/kg, which only slightly exceeds the PCL of 0.1 mg/kg.
- Nickel – two samples, at concentrations of 49 mg/kg and 68 mg/kg, relative to the nickel PCL of 48 mg/kg.

Results for Structural Fill

The laboratory analytical results for the SF stockpile samples indicate that concentrations of petroleum hydrocarbons, PAHs, and PCBs are below the laboratory reporting limits, all of which are below the PCLs (Table 1). All the analyzed metals were detected in each of the CSBC samples at concentrations above the laboratory reporting limits. The following metals were detected in one or more SF samples at concentrations above the PCLs, which are based on natural background levels:

- Copper – three samples, with concentrations exceeding the 36 mg/kg PCL ranging from 37 mg/kg to 67 mg/kg.
- Nickel – five samples with concentrations ranging from 50 mg/kg to 57 mg/kg, relative to the nickel PCL of 48 mg/kg.

Statistical Data Evaluation

Because of the exceedance of the PCLs for naturally-occurring metals in the CSBC and SF, a statistical analysis was performed to evaluate whether the material, as a whole, would meet the chemical criteria specifications for the import material following the three-fold compliance criteria in the Washington State Model Toxics Control Act cleanup regulation (MTCA), which consist of the following:

- The 95 percent upper confidence limit (UCL) is below the PCL.
- No single sample concentration is greater than two times the PCL.
- No more than 21.4 percent of the sample concentrations are above the PCL, which is revised from the default of 10 percent to account for background following statistical procedures outlined in Ecology's Statistical Guidance for Ecology Site Managers (Ecology, 1992).

The soil metals data was statistically analyzed using EPA's ProUCL 5.1 to identify outliers, evaluate distribution, and calculate a 95 percent UCL. The results of the three-fold evaluation are as follows:

- For copper in the CSBC, Dixon's Outlier Test identified a single outlier at the 1 percent, 5 percent, and 10 percent significance level. The outlier, with a concentration of 58 mg/kg, was removed from the dataset and the 95 percent UCL of the remaining data is below the PCL of 36 mg/kg. ProUCL suggests using the 95 percent UCL of 34.5 mg/kg based on a normal distribution but the 95 percent UCL based on a lognormal distribution is almost the same at 34.6 mg/kg. Copper was not detected at more than two times the PCL in the CSBC

and 21.4 percent of the samples (3 of 14) have copper above the PCL, which meets the revised compliance statistic requirement that no more than 21.4 percent of samples have copper above the PCL.

- For mercury in the CSBC, the single exceedance of the PCL at 0.11 mg/kg was identified by Dixon's Outlier Test as an outlier. With the outlier removed, none of the reported concentrations of mercury exceed the PCL. The 95 percent UCL of the remaining dataset is 0.0551 mg/kg (which is below the PCL of 0.1 mg/kg), less than 10 percent of the samples exceed the criteria, and there are no detections that are more than two times the criteria.
- For nickel in the CSBC, one outlier (68 mg/kg) was identified by the Dixon's Outlier Test and removed from the dataset. The 95 percent UCL for the remaining data is 40.5 mg/kg or 40.8 mg/kg, assuming a normal or lognormal distribution, respectively. None of the nickel concentrations exceed two times the cleanup level and 14 percent of the samples (2 of 14) exceed the PCL, which is below the revised compliance statistical requirement of 21.4 percent.
- For copper in the SF, Dixon's Outlier Test identified a single outlier at the 1 percent, 5 percent, and 10 percent significance level. The outlier, with a concentration of 67 mg/kg, was removed from the dataset and the 95 percent UCL of the remaining data is below the PCL of 36 mg/kg. ProUCL suggests using the 95 percent UCL of 34.7 mg/kg based on a normal distribution but the 95 percent UCL based on a lognormal distribution is almost the same at 34.9 mg/kg. Copper was not detected at more than two times the PCL in the CSBC and 21.4 percent of the samples (3 of 14) have copper above the PCL, which meets the revised compliance statistic requirement that no more than 21.4 percent of samples have copper above the PCL.
- For nickel in the SF, no outliers were identified at any significance level. The 95 percent UCL is 48.6 mg/kg, which only slightly exceeds the PCL of 48 mg/kg. There are no samples with nickel at greater than two times the PCL; however, 35.7 percent of samples exceed the PCL, which is above the revised compliance statistic requirements that take into account natural background and allow for a frequency of exceedance of 21.4 percent.

The backup for these statistics is provided in Appendix C. The results of the evaluation indicate that all metals in the CSBC and SF meet the statistical requirements for compliance with the PCL except for nickel in the SF material. However, the reported concentrations of nickel in the SF range from 31 mg/kg to 57 mg/kg (Table 2), relative to the Puget Sound natural background concentration of 48 mg/kg and are likely representative of naturally occurring nickel concentrations in the source geologic unit at the Mandan Pit.

Conclusions

The proposed aggregate import sources at the Mandan Pit were sampled in accordance with the specification for earthwork and compared to the project chemical criteria. The results indicate that both the CSBC and SF materials meet the PCLs, either through direct comparison of sample data to the PCLs or through statistical analysis of the data representing the material, with one exception:

- Nickel in the structural fill does not meet compliance requirements for soil; however, the reported concentrations of nickel are suspected to be naturally occurring at only slightly higher statistical concentrations than the PCL.

APPENDIX A

Laboratory Report

November 16, 2021

Ms. Amy Tice
Aspect Consulting, LLC
710 - 2nd Ave, Suite 550
Seattle, WA 98104

Dear Ms. Tice,

On November 4th, 28 samples were received by our laboratory and assigned our laboratory project number EV21110033. The project was identified as your KC Stockpile. The sample identification and requested analyses are outlined on the attached chain of custody record.

No abnormalities or nonconformances were observed during the analyses of the project samples.

Please do not hesitate to call me if you have any questions or if I can be of further assistance.

Sincerely,

ALS Laboratory Group

Glen Perry
Laboratory Director

APPENDIX B

Data Validation Report

DATA VALIDATION REPORT

Norton Terminal Development at the K-C Worldwide Site

Import Material Soil Sampling

November 2021

Sample Delivery Group EV21110033

Prepared by:
Aspect Consulting, LLC
710 2nd Ave, Suite 550
Seattle, WA 98104

Project No. 210550-A-01 • December 7, 2021

1 Introduction

This report summarizes the findings of the U.S. Environmental Protection Agency (USEPA) Level 2A data validation performed on analytical data for the potential import material soil samples collected in November 2021 from the Mandan Pit in support of the 3rd Interim Action (IA) and the KC Upland Area.

Samples were analyzed for gasoline-, diesel-, and oil-range Total petroleum hydrocarbons (TPH), select metals, Polycyclic aromatic hydrocarbons (PAHs), and Polychlorinated biphenyls (PCBs) by ALS Environmental (ALS). The analytical methods are summarized below:

Table 1. Analytical Methods

Analysis	Method	Laboratory
Gasoline-range TPH	NWTPH-Gx	ALS
Diesel- and oil-range TPH	NWTPH-Dx	ALS
Metals (arsenic, copper, lead, nickel, zinc)	EPA 6020	ALS
Metals (mercury)	EPA 7471	ALS
PAHs	EPA 8270-SIM	ALS
PCBs	EPA 8082	ALS

The validation followed the procedures documented in the analytical methods, and the *National Functional Guidelines for Organic Data Review* (USEPA, 2017), and *Contract Laboratory Program SOW* (USEPA, 2016).

Data assigned a J qualifier (estimated) may be used for site evaluation purposes but the reasons for qualification should be considered when interpreting sample concentrations. Data marked as rejected (R) should not be used under any circumstances. Values without qualification meet all data measurement quality objectives and are suitable for use.

Data qualifier definitions and a summary table of the qualified data are included in the Qualified Data Summary at the end of this report. Data qualifiers have been incorporated into the project chemistry database to reflect the validation in this report.

2 Data Validation Findings for Sample Delivery Group EV21110033

Soil samples in this sample delivery group (SDG), and the chemical analyses performed on them, are tabulated below. The sections below describe the results of the data quality review by analyte group (analysis).

Table 2. Sample Index

Sample Name	Sample Date	Sample Matrix	Analysis					
			Gasoline-Range TPH	Diesel- and oil-range TPH	Metals (As, Cu, Pb, Ni, Zn)	Metals (Mercury)	PAHs	PCBs

2.1 Gasoline-range TPH (NWTPH-Gx)

2.1.1 Sample Receipt, Preservation, and Holding Times

Sample receipt and preservation (2-6 degrees C) were acceptable. Samples were analyzed within the requisite holding time limit.

2.1.2 Method Blanks/Detection Levels

Target analytes were not detected at or above the reporting levels in the method blank. No qualification or action was needed.

2.1.3 Laboratory Control Samples/Laboratory Control Sample Duplicates (LCS/LCSD)

All laboratory control samples (LCS) and laboratory control sample duplicates (LCSD), percent recovery (%R) and relative percent difference (RPD) were within the laboratory specified control limits for requested analytes. No qualification or action was needed.

2.1.4 Surrogates

All surrogate %R values were within laboratory specified control limit. No qualification or action was needed.

2.1.5 Overall Assessment

Accuracy was acceptable based on the LCS/LCSD, and precision was acceptable based on the LCS/LCSD RPD values. The data are of known quality and are acceptable for use.

2.2 Diesel-range TPH (NWTPH-Dx)

2.2.1 Sample Receipt, Preservation, and Holding Times

Sample receipt and preservation (2-6 degrees C) were acceptable. Samples were analyzed within the requisite holding time limit.

2.2.2 Method Blanks/Detection Levels

Target analytes were not detected at or above the reporting levels in the method blank. No qualification or action was needed.

2.2.3 Laboratory Control Samples/Laboratory Control Sample Duplicates (LCS/LCSD)

All laboratory control samples (LCS) and laboratory control sample duplicates (LCSD), percent recovery (%R) and relative percent difference (RPD) were within the laboratory specified control limits for requested analytes. No qualification or action was needed.

2.2.4 Surrogates

All surrogate %R values were within laboratory specified control limit. No qualification or action was needed.

2.2.5 Overall Assessment

Accuracy was acceptable based on the LCS/LCSD and precision was acceptable based on the LCS/LCSD RPD values. The data are of known quality and are acceptable for use.

2.3 Metals (EPA 6020)

2.3.1 Sample Receipt, Preservation, and Holding Times

Sample receipt and preservation (2-6 degrees C) were acceptable. Samples were analyzed within the requisite holding time limit.

2.3.2 Method Blanks/Detection Levels

Target analytes were not detected at or above the reporting levels in the method blank. No qualification or action was needed.

2.3.3 Laboratory Control Samples/Laboratory Control Sample Duplicates (LCS/LCSD)

All laboratory control samples (LCS) and laboratory control sample duplicates (LCSD), percent recovery (%R) and relative percent difference (RPD) were within the laboratory specified control limits for requested analytes. No qualification or action was needed.

2.3.4 Overall Assessment

Accuracy was acceptable based on the LCS/LCSD and precision was acceptable based on the LCS/LCSD RPD values. The data are of known quality and are acceptable for use.

2.4 Mercury (EPA 7471)

2.4.1 Sample Receipt, Preservation, and Holding Times

Sample receipt and preservation (2-6 degrees C) were acceptable. Samples were analyzed within the requisite holding time limit.

2.4.2 Method Blanks/Detection Levels

Target analytes were not detected at or above the reporting levels in the method blank. No qualification or action was needed.

2.4.3 Laboratory Control Samples/Laboratory Control Sample Duplicates (LCS/LCSD)

All laboratory control samples (LCS) and laboratory control sample duplicates (LCSD), percent recovery (%R) and relative percent difference (RPD) were within the laboratory specified control limits for requested analytes. No qualification or action was needed.

2.4.4 Overall Assessment

Accuracy was acceptable based on the LCS/LCSD and precision was acceptable based on the LCS/LCSD RPD values. The data are of known quality and are acceptable for use.

2.5 PAHs (EPA 8270 SIM)

2.5.1 Sample Receipt, Preservation, and Holding Times

Sample receipt and preservation (2-6 degrees C) were acceptable. Samples were analyzed within the requisite holding time limit.

2.5.2 Method Blanks/Detection Levels

Target analytes were not detected at or above the reporting levels in the method blank. The surrogate %R value in the method blank was above the specified control limit, but because the target analytes were non-detect, no qualification or action was needed.

2.5.3 Laboratory Control Samples/Laboratory Control Sample Duplicates (LCS/LCSD)

All laboratory control samples (LCS) and laboratory control sample duplicates (LCSD), percent recovery (%R) were within the laboratory specified control limits for requested analytes. Relative percent difference (RPD) were within the laboratory specified control limits for requested analytes, with the following exceptions:

- Acenapthene
- Pyrene
- Benzo(b)fluoranthene
- Benzo(k)fluoranthene

All associated sample results were non-detect, therefore no qualification or action was needed.

2.5.4 Surrogates

All surrogate %R values were within laboratory specified control limit. No qualification or action was needed.

2.5.5 Overall Assessment

Accuracy was acceptable based on the LCS/LCSD and precision was acceptable based on the LCS/LCSD RPD values except as noted above. The data are of known quality and are acceptable for use.

2.6 PCBs (EPA 8082)

2.6.1 Sample Receipt, Preservation, and Holding Times

Sample receipt and preservation (2-6 degrees C) were acceptable. Samples were analyzed within the requisite holding time limit.

2.6.2 Method Blanks/Detection Levels

Target analytes were not detected at or above the reporting levels in the method blank. No qualification or action was needed.

2.6.3 Laboratory Control Samples/Laboratory Control Sample Duplicates (LCS/LCSD)

All laboratory control samples (LCS) and laboratory control sample duplicates (LCSD), percent recovery (%R) and relative percent difference (RPD) were within the laboratory specified control limits for requested analytes. No qualification or action was needed.

2.6.4 Surrogates

All surrogate %R values were within laboratory specified control limit. No qualification or action was needed.

2.6.5 Overall Assessment

Accuracy was acceptable based on the LCS/LCSD, and precision was acceptable based on the LCS/LCSD RPD values. The data are of known quality and are acceptable for use.

3 Qualified Data Summary

No sample results were qualified as part of this validation report. This list does not include non-detected values simply qualified U.

4 Data Qualifier Definitions

Data Qualifier	Definition
J	The analyte was detected above the reported quantitation limit, and the reported concentration was an estimated value.
R	The sample results are unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.
U	The analyte was analyzed for but was considered not detected at the reporting limit or reported value.
UJ	The analyte was analyzed for, and the associated quantitation limit was an estimated value.

APPENDIX D

Report Limitations and Guidelines for Use

REPORT LIMITATIONS AND USE GUIDELINES

Reliance Conditions for Third Parties

This report was prepared for the exclusive use of the Client. No other party may rely on this report or the product of our services without the express written consent of Aspect Consulting, LLC (Aspect). This limitation is to provide our firm with reasonable protection against liability claims by third parties with whom there would otherwise be no contractual conditions or limitations and guidelines governing their use of the report. Within the limitations of scope, schedule and budget, our services have been executed in accordance with our Agreement with the Client and recognized standards of professionals in the same locality and involving similar conditions.

Services for Specific Purposes, Persons and Projects

Aspect has performed the services in general accordance with the scope and limitations of our Agreement. This report has been prepared for the exclusive use of the Client and their authorized third parties, approved in writing by Aspect. This report is not intended for use by others, and the information contained herein is not applicable to other properties.

This report is not, and should not, be construed as a warranty or guarantee regarding the presence or absence of hazardous substances or petroleum products that may affect the subject property. The report is not intended to make any representation concerning title or ownership to the subject property. If real property records were reviewed, they were reviewed for the sole purpose of determining the subject property's historical uses. All findings, conclusions, and recommendations stated in this report are based on the data and information provided to Aspect, current use of the subject property, and observations and conditions that existed on the date and time of the report.

Aspect structures its services to meet the specific needs of our clients. Because each environmental study is unique, each environmental report is unique, prepared solely for the specific client and subject property. This report should not be applied for any purpose or project except the purpose described in the Agreement.

This Report Is Project-Specific

Aspect considered a number of unique, project-specific factors when establishing the Scope of Work for this project and report. You should not rely on this report if it was:

- Not prepared for you
- Not prepared for the specific purpose identified in the Agreement
- Not prepared for the specific real property assessed
- Completed before important changes occurred concerning the subject property, project or governmental regulatory actions

If changes are made to the project or subject property after the date of this report, Aspect should be retained to assess the impact of the changes with respect to the conclusions contained in the report.

Geoscience Interpretations

The geoscience practices (geotechnical engineering, geology, and environmental science) require interpretation of spatial information that can make them less exact than other engineering and natural science disciplines. It is important to recognize this limitation in evaluating the content of the report. If you are unclear how these "Report Limitations and Use Guidelines" apply to your project or site, you should contact Aspect.

Discipline-Specific Reports Are Not Interchangeable

The equipment, techniques and personnel used to perform an environmental study differ significantly from those used to perform a geotechnical or geologic study and vice versa. For that reason, a geotechnical engineering or geologic report does not usually address any environmental findings, conclusions or recommendations; e.g., about the likelihood of encountering underground storage tanks or regulated contaminants. Similarly, environmental reports are not used to address geotechnical or geologic concerns regarding the subject property.

Environmental Regulations Are Not Static

Some hazardous substances or petroleum products may be present near the subject property in quantities or under conditions that may have led, or may lead, to contamination of the subject property, but are not included in current local, state or federal regulatory definitions of hazardous substances or petroleum products or do not otherwise present potential liability. Changes may occur in the standards for appropriate inquiry or regulatory definitions of hazardous substance and petroleum products; therefore, this report has a limited useful life.

Property Conditions Change Over Time

This report is based on conditions that existed at the time the study was performed. The findings and conclusions of this report may be affected by the passage of time (for example, Phase I ESA reports are applicable for 180 days), by events such as a change in property use or occupancy, or by natural events, such as floods, earthquakes, slope failure or groundwater fluctuations. If more than six months have passed since issuance of our report, or if any of the described events may have occurred following the issuance of the report, you should contact Aspect so that we may evaluate whether changed conditions affect the continued reliability or applicability of our conclusions and recommendations.

Phase I ESAs – Uncertainty Remains After Completion

Aspect has performed the services in general accordance with the scope and limitations of our Agreement and the current version of the "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process", ASTM E1527, and U.S. Environmental Protection Agency (EPA)'s Federal Standard 40 CFR Part 312 "Innocent Landowners, Standards for Conducting All Appropriate Inquiries".

No ESA can wholly eliminate uncertainty regarding the potential for recognized environmental conditions in connection with subject property. Performance of an ESA study is intended to reduce, but not eliminate, uncertainty regarding the potential for environmental conditions affecting the subject property. There is always a potential that areas with contamination that were not identified during this ESA exist at the subject property or in the study area. Further evaluation of such potential would require additional research, subsurface exploration, sampling and/or testing.

Historical Information Provided by Others

Aspect has relied upon information provided by others in our description of historical conditions and in our review of regulatory databases and files. The available data does not provide definitive information with regard to all past uses, operations or incidents affecting the subject property or adjacent properties. Aspect makes no warranties or guarantees regarding the accuracy or completeness of information provided or compiled by others.

Exclusion of Mold, Fungus, Radon, Lead, and HBM

Aspect's services do not include the investigation, detection, prevention or assessment of the presence of molds, fungi, spores, bacteria, and viruses, and/or any of their byproducts. Accordingly, this report does not include any interpretations, recommendations, findings, or conclusions regarding the detection, assessment, prevention or abatement of molds, fungi, spores, bacteria, and viruses, and/or any of their byproducts. Aspect's services also do not include the investigation or assessment of hazardous building materials (HBM) such as asbestos, polychlorinated biphenyls (PCBs) in light ballasts, lead based paint, asbestos-containing building materials, urea-formaldehyde insulation in on-site structures or debris or any other HBMs. Aspect's services do not include an evaluation of radon or lead in drinking water, unless specifically requested.

Re: **March 2022 Import Chemical Testing Results – Mandan Pit**
Norton Terminal Development at the K-C Worldwide Site
2600 Federal Avenue, Everett, WA

Aspect Consulting, LLC (Aspect) has conducted chemical testing of potential import materials in support of the 3rd Interim Action (IA) at the KC Upland Area, to be conducted concurrently with the Port of Everett Norton Terminal Development. Aspect was retained by Strider Construction (Strider) to meet requirements for testing and evaluation of imported fill material that was provided in the Earthwork specification, Section 31. The work was conducted to supplement previous import material sampling and analysis because of an increase in the volume of subgrade to be placed on the site.

Strider requested that Aspect collect samples from two stockpiles at the Mandan Pit, located at 11423 Jordan Road in Arlington, Snohomish County, Washington. The Mandan Pit is a 185-acre gravel quarry operated by Granite Construction with mining of Quaternary (Pleistocene) glacial drift (Qgd) that includes glacial till and outwash (DNR, 2021). The requested stockpiles include one that contains material that meets the specifications for use as crushed surfacing base course (CSBC) and another that contains material that meets the specifications for use as structural fill (SF). Strider requested that Aspect collect 4 samples of CSBC and 10 samples of SF. Sampling activities were conducted on March 11, 2022.

This memo describes the sample collection procedures, analytical testing methods and results, a comparison of data to the site preliminary soil cleanup levels (PCLs), and conclusions regarding the suitability of the proposed import material to meet the chemical criteria.

Sample Collection

On March 11, 2022, Aspect collected 4 samples of CSBC and 10 samples of SF. Samples were collected in a radial pattern around each stockpile, with approximate even spacing around the respective stockpile circumferences. The locations of the stockpiles and associated sample locations (CSBC-15 through CSBC-18, and SF-15 through SF-24) are shown in Figure 1. At each location, a sample of freshly exposed soil was collected by removing a few inches of soil from the surface.

Samples of CSBC were field sieved to remove gravel prior to sample collection. Samples of SF and CSBC were placed into laboratory-prepared and -supplied sample jars, placed in a cooler with ice, and transported to Friedman & Bruya, Inc. (F&B) under proper chain of custody (COC) protocols. F&B is a National Environmental Laboratory Accreditation Program (NELAP)- accredited lab located in Seattle, Washington.

Analytical Testing

The aggregate samples were submitted to F&B for laboratory analysis of the following:

- Gasoline-range petroleum hydrocarbons by Northwest Method NWTPH-Gx
- Diesel-/oil-range petroleum hydrocarbons by Northwest Method NWTPH-Dx
- Arsenic, copper, lead, nickel, and zinc by EPA Method 6020B
- Mercury by EPA Method 1631E
- Polycyclic aromatic hydrocarbons (PAHs) by EPA Method 8270E
- Polychlorinated biphenyls (PCBs) by EPA Method 8082A

The laboratory analytical report is provided as Appendix A. Aspect completed a Level 2a data quality validation of the analytical data and concluded that all data are of known quality and are acceptable for use in this evaluation. The Data Validation Report is provided in Appendix B.

Results

Laboratory Analytical Data

The sample results were compared to the PCLs for the 3rd IA. The PCLs and soil sampling results are included in Tables 1 and 2 for CSBC and SF, respectively. The results are summarized by material in the following subsections.

Results for Crushed Surfacing Base Course – Table 1

The laboratory analytical results for the CSBC stockpile samples indicate that concentrations of petroleum hydrocarbons, PAHs, and PCBs are below the laboratory reporting limits, all of which are below the PCLs.

Concentrations of arsenic, copper, lead, nickel, and zinc were detected in each of the CSBC samples at concentrations above respective laboratory reporting limits, but below respective PCLs.

The laboratory reporting limit for mercury was equivalent to the PCL of 0.1 mg/kg; three of the CSBC samples did not contain mercury at concentrations above the reporting limit and PCL. Mercury was detected at a concentration of 0.15 mg/kg in sample CSBC-17, which slightly exceeds the PCL but is less than two times the PCL.

Results for Structural Fill – Table 2

The laboratory analytical results for the SF stockpile samples indicate that concentrations of petroleum hydrocarbons, PAHs, and PCBs are below the laboratory reporting limits, all of which are below the PCLs.

Concentrations of arsenic, copper, lead, nickel, and zinc were detected in each of the SF samples at concentrations above respective laboratory reporting limits, but below respective PCLs. Mercury was not detected in SF samples above the laboratory reporting limit (and PCL) of 0.1 mg/kg.

Conclusions

The proposed aggregate import sources at the Mandan Pit were sampled in accordance with the specification for earthwork and compared to the project chemical criteria. The results indicate that both the CSBC and SF materials meet the respective PCLs, with one exception:

- Mercury was detected at a concentration of 0.15 mg/kg in sample CSBC-17. The reported mercury concentration is less than two times the PCL and is within the range of natural background concentrations noted in the Washington State Department of Ecology (Ecology) Natural Background Soil Metals Concentrations in Washington State for western Washington of 0.01 to 0.19 mg/kg (Ecology, 1994). The single detection of mercury above the PCL in sample CSBC-17 is suspected to be naturally occurring.

Limitations

Work for this project was performed for Strider Construction Co, Inc. (Client), and this memorandum was prepared in accordance with generally accepted professional practices for the nature and conditions of work completed in the same or similar localities, at the time the work was performed. This memorandum does not represent a legal opinion. No other warranty, expressed or implied, is made.

All reports prepared by Aspect Consulting for the Client apply only to the services described in the Agreement(s) with the Client. Any use or reuse by any party other than the Client is at the sole risk of that party, and without liability to Aspect Consulting. Aspect Consulting's original files/reports shall govern in the event of any dispute regarding the content of electronic documents furnished to others.

Please refer to Appendix C titled "Report Limitations and Guidelines for Use" for additional information governing the use of this report.

Matthew Eddy, Project Manager
Aspect Consulting, LLC
350 Madison Ave. N.
Bainbridge Island, WA 98110-1810

Dear Mr Eddy:

Included are the results from the testing of material submitted on March 11, 2022 from the Port of Everett Soils 210550-A-01, F&BI 203243 project. There are 59 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days, or as directed by the Chain of Custody document. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

CASE NARRATIVE

This case narrative encompasses samples received on March 11, 2022 by Friedman & Bruya, Inc. from the Aspect Consulting, LLC Port of Everett Soils 210550-A-01, F&BI 203243 project. Samples were logged in under the laboratory ID's listed below.

Laboratory ID	Aspect Consulting, LLC
203243 -01	CSBC-15
203243 -02	CSBC-16
203243 -03	CSBC-17
203243 -04	CSBC-18
203243 -05	SF-15
203243 -06	SF-16
203243 -07	SF-17
203243 -08	SF-18
203243 -09	SF-19
203243 -10	SF-20
203243 -11	SF-21
203243 -12	SF-22
203243 -13	SF-23
203243 -14	SF-24

All quality control requirements were acceptable.

Aroclor 1260	mg/kg (ppm)	0.25	94	51-150

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht – The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

APPENDIX B

Data Validation Report

DATA VALIDATION REPORT

Port of Everett
Soil Sampling
March 2022
Sample Delivery Group 203243

Prepared by:
Aspect Consulting, LLC
710 2nd Ave, Suite 550
Seattle, WA 98104

Project No. 210550-A-01 • March 29, 2022

1 Introduction

This report summarizes the findings of the U.S. Environmental Protection Agency (USEPA) Level 2A data validation performed on analytical data for the soil samples collected in March 2022 from the Mandan Pit.

Samples were analyzed for gasoline-, diesel-, and oil-range Total petroleum hydrocarbons (TPH), select metals, Polycyclic aromatic hydrocarbons (PAHs), and Polychlorinated biphenyls (PCBs) by Friedman and Bruya (F&B). The analytical methods are summarized below:

Table 1. Analytical Methods

Analysis	Method	Laboratory
Gasoline-range TPH	NWTPH-Gx	F&B
Diesel- and oil-range TPH	NWTPH-Dx	F&B
Metals (arsenic, copper, lead, nickel, zinc)	EPA 6020B	F&B
Metals (mercury)	EPA 1631E	F&B
PAHs	EPA 8270E	F&B
PCBs	EPA 8082	F&B

The validation followed the procedures documented in the analytical methods, and the *National Functional Guidelines for Organic Data Review* (USEPA, 2017), and *Contract Laboratory Program SOW* (USEPA, 2016).

Data assigned a J qualifier (estimated) may be used for site evaluation purposes but the reasons for qualification should be considered when interpreting sample concentrations. Data marked as rejected (R) should not be used under any circumstances. Values without qualification meet all data measurement quality objectives and are suitable for use.

Data qualifier definitions and a summary table of the qualified data are included in the Qualified Data Summary at the end of this report. Data qualifiers have been incorporated into the project chemistry database to reflect the validation in this report.

2 Data Validation Findings for Sample Delivery Group 203243

Soil samples in this sample delivery group (SDG), and the chemical analyses performed on them, are tabulated below. The sections below describe the results of the data quality review by analyte group (analysis).

Table 2. Sample Index

2.1 Gasoline-range TPH (NWTPH-Gx)

2.1.1 Sample Receipt, Preservation, and Holding Times

Sample receipt and preservation (2-6 degrees C) were acceptable. Samples were analyzed within the requisite holding time limit.

2.1.2 Method Blanks/Detection Levels

Target analytes were not detected at or above the reporting levels in the method blank. No qualification or action was needed.

2.1.3 Laboratory Control Samples (LCS)

All laboratory control samples (LCS) percent recovery (%R) were within the laboratory specified control limits for requested analytes. No qualification or action was needed.

2.1.4 Surrogates

All surrogate %R values were within laboratory specified control limit. No qualification or action was needed.

2.1.5 Laboratory Duplicates (LD)

All LD RPD were within the laboratory specified control limits. No qualification or action was needed.

2.1.6 Overall Assessment

Accuracy was acceptable based on the LCS, and precision was acceptable based on the LD RPD values. The data are of known quality and are acceptable for use.

2.2 Diesel-range TPH (NWTPH-Dx)

2.2.1 Sample Receipt, Preservation, and Holding Times

Sample receipt and preservation (2-6 degrees C) were acceptable. Samples were analyzed within the requisite holding time limit.

2.2.2 Method Blanks/Detection Levels

Target analytes were not detected at or above the reporting levels in the method blank. No qualification or action was needed.

2.2.3 Laboratory Control Samples (LCS)

All laboratory control samples (LCS) percent recovery (%R) were within the laboratory specified control limits for requested analytes. No qualification or action was needed.

2.2.4 Matrix Spikes/Matrix Spike Duplicates (MS/MSD)

All MS and MSD %R and RPD were within the laboratory specified control limits. No qualification or action was needed.

2.2.5 Surrogates

All surrogate %R values were within laboratory specified control limit. No qualification or action was needed.

2.2.6 Overall Assessment

Accuracy was acceptable based on the LCS an MS/MSD %R and precision was acceptable based on the MS/MSD RPD values. The data are of known quality and are acceptable for use.

2.3 Metals (EPA 6020)

2.3.1 Sample Receipt, Preservation, and Holding Times

Sample receipt and preservation (2-6 degrees C) were acceptable. Samples were analyzed within the requisite holding time limit.

2.3.2 Method Blanks/Detection Levels

Target analytes were not detected at or above the reporting levels in the method blank. No qualification or action was needed.

2.3.3 Laboratory Control Samples (LCS)

All laboratory control samples (LCS) percent recovery (%R) were within the laboratory specified control limits for requested analytes. No qualification or action was needed.

2.3.4 Matrix Spikes/Matrix Spike Duplicates (MS/MSD)

All MS and MSD %R and RPD were within the laboratory specified control limits. No qualification or action was needed.

2.3.5 Overall Assessment

Accuracy was acceptable based on the LCS an MS/MSD %R and precision was acceptable based on the MS/MSD RPD values. The data are of known quality and are acceptable for use.

2.4 Mercury (EPA 1631E)

2.4.1 Sample Receipt, Preservation, and Holding Times

Sample receipt and preservation (2-6 degrees C) were acceptable. Samples were analyzed within the requisite holding time limit.

2.4.2 Method Blanks/Detection Levels

Target analytes were not detected at or above the reporting levels in the method blank. No qualification or action was needed.

2.4.3 Laboratory Control Samples (LCS)

All laboratory control samples (LCS) percent recovery (%R) were within the laboratory specified control limits for requested analytes. No qualification or action was needed.

2.4.4 Matrix Spikes/Matrix Spike Duplicates (MS/MSD)

All MS and MSD %R and RPD were within the laboratory specified control limits. No qualification or action was needed.

2.4.5 Overall Assessment

Accuracy was acceptable based on the LCS an MS/MSD %R and precision was acceptable based on the MS/MSD RPD values. The data are of known quality and are acceptable for use.

2.5 PAHs (EPA 8270 E)

2.5.1 \Sample Receipt, Preservation, and Holding Times

Sample receipt and preservation (2-6 degrees C) were acceptable. Samples were analyzed within the requisite holding time limit.

2.5.2 Method Blanks/Detection Levels

Target analytes were not detected at or above the reporting levels in the method blank. No qualification or action was needed.

2.5.3 Laboratory Control Samples (LCS)

All laboratory control samples (LCS) percent recovery (%R) were within the laboratory specified control limits for requested analytes. No qualification or action was needed.

2.5.4 Matrix Spikes/Matrix Spike Duplicates (MS/MSD)

All MS and MSD %R and RPD were within the laboratory specified control limits. No qualification or action was needed.

2.5.5 Surrogates

All surrogate %R values were within laboratory specified control limit. No qualification or action was needed.

2.5.6 Overall Assessment

Accuracy was acceptable based on the LCS an MS/MSD %R and precision was acceptable based on the MS/MSD RPD values. The data are of known quality and are acceptable for use.

2.6 PCBs (EPA 8082)

2.6.1 Sample Receipt, Preservation, and Holding Times

Sample receipt and preservation (2-6 degrees C) were acceptable. Samples were analyzed within the requisite holding time limit.

2.6.2 Method Blanks/Detection Levels

Target analytes were not detected at or above the reporting levels in the method blank. No qualification or action was needed.

2.6.3 Laboratory Control Samples (LCS)

All laboratory control samples (LCS) percent recovery (%R) and relative percent difference (RPD) were within the laboratory specified control limits for requested analytes. No qualification or action was needed.

2.6.4 Matrix Spikes/Matrix Spike Duplicates (MS/MSD)

All MS and MSD %R and RPD were within the laboratory specified control limits. No qualification or action was needed.

2.6.5 Surrogates

All surrogate %R values were within laboratory specified control limit. No qualification or action was needed. Lab report noted that some surrogates were out in some calibration checks. This would not have impacted out analytical results, and no action was needed.

2.6.6 Overall Assessment

Accuracy was acceptable based on the LCS and MS/MSD percent recoveries, and precision was acceptable based on the MS/MSD RPD values. The data are of known quality and are acceptable for use.

3 Qualified Data Summary

No sample results were qualified as part of this validation report. This list does not include non-detected values simply qualified U.

4 Data Qualifier Definitions

Data Qualifier	Definition
U	The analyte was analyzed for but was considered not detected at the reporting limit or reported value.

APPENDIX C

Report Limitations and Guidelines for Use

REPORT LIMITATIONS AND USE GUIDELINES

Reliance Conditions for Third Parties

This report was prepared for the exclusive use of the Client. No other party may rely on this report or the product of our services without the express written consent of Aspect Consulting, LLC (Aspect). This limitation is to provide our firm with reasonable protection against liability claims by third parties with whom there would otherwise be no contractual conditions or limitations and guidelines governing their use of the report. Within the limitations of scope, schedule and budget, our services have been executed in accordance with our Agreement with the Client and recognized standards of professionals in the same locality and involving similar conditions.

Services for Specific Purposes, Persons and Projects

Aspect has performed the services in general accordance with the scope and limitations of our Agreement. This report has been prepared for the exclusive use of the Client and their authorized third parties, approved in writing by Aspect. This report is not intended for use by others, and the information contained herein is not applicable to other properties.

This report is not, and should not, be construed as a warranty or guarantee regarding the presence or absence of hazardous substances or petroleum products that may affect the subject property. The report is not intended to make any representation concerning title or ownership to the subject property. If real property records were reviewed, they were reviewed for the sole purpose of determining the subject property's historical uses. All findings, conclusions, and recommendations stated in this report are based on the data and information provided to Aspect, current use of the subject property, and observations and conditions that existed on the date and time of the report.

Aspect structures its services to meet the specific needs of our clients. Because each environmental study is unique, each environmental report is unique, prepared solely for the specific client and subject property. This report should not be applied for any purpose or project except the purpose described in the Agreement.

This Report Is Project-Specific

Aspect considered a number of unique, project-specific factors when establishing the Scope of Work for this project and report. You should not rely on this report if it was:

- Not prepared for you
- Not prepared for the specific purpose identified in the Agreement
- Not prepared for the specific real property assessed
- Completed before important changes occurred concerning the subject property, project or governmental regulatory actions

If changes are made to the project or subject property after the date of this report, Aspect should be retained to assess the impact of the changes with respect to the conclusions contained in the report.

Geoscience Interpretations

The geoscience practices (geotechnical engineering, geology, and environmental science) require interpretation of spatial information that can make them less exact than other engineering and natural science disciplines. It is important to recognize this limitation in evaluating the content of the report. If you are unclear how these "Report Limitations and Use Guidelines" apply to your project or site, you should contact Aspect.

Discipline-Specific Reports Are Not Interchangeable

The equipment, techniques and personnel used to perform an environmental study differ significantly from those used to perform a geotechnical or geologic study and vice versa. For that reason, a geotechnical engineering or geologic report does not usually address any environmental findings, conclusions or recommendations; e.g., about the likelihood of encountering underground storage tanks or regulated contaminants. Similarly, environmental reports are not used to address geotechnical or geologic concerns regarding the subject property.

Environmental Regulations Are Not Static

Some hazardous substances or petroleum products may be present near the subject property in quantities or under conditions that may have led, or may lead, to contamination of the subject property, but are not included in current local, state or federal regulatory definitions of hazardous substances or petroleum products or do not otherwise present potential liability. Changes may occur in the standards for appropriate inquiry or regulatory definitions of hazardous substance and petroleum products; therefore, this report has a limited useful life.

Property Conditions Change Over Time

This report is based on conditions that existed at the time the study was performed. The findings and conclusions of this report may be affected by the passage of time (for example, Phase I ESA reports are applicable for 180 days), by events such as a change in property use or occupancy, or by natural events, such as floods, earthquakes, slope failure or groundwater fluctuations. If more than six months have passed since issuance of our report, or if any of the described events may have occurred following the issuance of the report, you should contact Aspect so that we may evaluate whether changed conditions affect the continued reliability or applicability of our conclusions and recommendations.

Phase I ESAs – Uncertainty Remains After Completion

Aspect has performed the services in general accordance with the scope and limitations of our Agreement and the current version of the "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process", ASTM E1527, and U.S. Environmental Protection Agency (EPA)'s Federal Standard 40 CFR Part 312 "Innocent Landowners, Standards for Conducting All Appropriate Inquiries".

No ESA can wholly eliminate uncertainty regarding the potential for recognized environmental conditions in connection with subject property. Performance of an ESA study is intended to reduce, but not eliminate, uncertainty regarding the potential for environmental conditions affecting the subject property. There is always a potential that areas with contamination that were not identified during this ESA exist at the subject property or in the study area. Further evaluation of such potential would require additional research, subsurface exploration, sampling and/or testing.

Historical Information Provided by Others

Aspect has relied upon information provided by others in our description of historical conditions and in our review of regulatory databases and files. The available data does not provide definitive information with regard to all past uses, operations or incidents affecting the subject property or adjacent properties. Aspect makes no warranties or guarantees regarding the accuracy or completeness of information provided or compiled by others.

Exclusion of Mold, Fungus, Radon, Lead, and HBM

Aspect's services do not include the investigation, detection, prevention or assessment of the presence of molds, fungi, spores, bacteria, and viruses, and/or any of their byproducts. Accordingly, this report does not include any interpretations, recommendations, findings, or conclusions regarding the detection, assessment, prevention or abatement of molds, fungi, spores, bacteria, and viruses, and/or any of their byproducts. Aspect's services also do not include the investigation or assessment of hazardous building materials (HBM) such as asbestos, polychlorinated biphenyls (PCBs) in light ballasts, lead based paint, asbestos-containing building materials, urea-formaldehyde insulation in on-site structures or debris or any other HBMs. Aspect's services do not include an evaluation of radon or lead in drinking water, unless specifically requested.

APPENDIX E

Waste Disposal Documentation

Waste Profiling Analytical Data

December 30, 2021

Mr. Dylan Frazer
Landau Associates, Inc.
155 NE 100th St, Ste 302
Seattle, WA 98125

Dear Mr. Frazer,

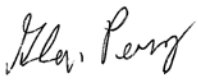
On December 21st, 3 samples were received by our laboratory and assigned our laboratory project number EV21120140. The project was identified as your POE - MIE / 121049.080.081. The sample identification and requested analyses are outlined on the attached chain of custody record.

No abnormalities or nonconformances were observed during the analyses of the project samples.

Please do not hesitate to call me if you have any questions or if I can be of further assistance.

Sincerely,

ALS Laboratory Group



Glen Perry
Laboratory Director

LABORATORY CONTROL SAMPLE RESULTS

DUP05 - LCS/LCSD RPD exceeded the laboratory acceptance limit. Recovery met acceptance criteria.
SQ1 - Spike outside of control limits with a high bias. Associated compounds non-detect. No corrective action taken.
SR1 - RPD outside of control limits.

Mr. Dylan Frazer
Landau Associates, Inc.
155 NE 100th St, Ste 302
Seattle, WA 98125

Dear Mr. Frazer,

On January 3rd, 3 samples were received by our laboratory and assigned our laboratory project number EV22010002. The project was identified as your POE - MIE / 121049.080.081. The sample identification and requested analyses are outlined on the attached chain of custody record.

No abnormalities or nonconformances were observed during the analyses of the project samples.

Please do not hesitate to call me if you have any questions or if I can be of further assistance.

Sincerely,

ALS Laboratory Group

Glen Perry
Laboratory Director

U - Analyte analyzed for but not detected at level above reporting limit.
Chromatogram indicates that it is likely that sample contains an unidentified diesel range product and lube oil.
Diesel range product results biased high due to oil range product overlap.

Seattle, WA 98125

Dear Mr. Frazer,

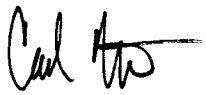
On January 20th, 3 samples were received by our laboratory and assigned our laboratory project number EV22010079. The project was identified as your POE - MIE / 121049.080.083. The sample identification and requested analyses are outlined on the attached chain of custody record.

No abnormalities or nonconformances were observed during the analyses of the project samples.

Please do not hesitate to call me if you have any questions or if I can be of further assistance.

Sincerely,

ALS Laboratory Group



Carl Nott
Professional Scientist

U - Analyte analyzed for but not detected at level above reporting limit.
Chromatogram indicates that it is likely that sample contains an unidentified diesel range product and lube oil.
Diesel range product results biased high due to oil range product overlap.

Project: POE-MIE 121049.080.083

Received Date: 1/20/2022 Received Time: 1505 By: SMH

Type of shipping container: Cooler X Box ___ Other ___

Shipped via: FedEx Ground ___ UPS ___ Mail ___ Courier ___ Hand Delivered X
FedEx Express ___

	Yes	No	N/A
Were custody seals on outside of shipping container?	___	X	___
If yes, how many? ___ Where? ___			
Custody seal date: ___ Seal name: ___			
Was Chain of Custody properly filled out (ink, signed, dated, etc.)?	X	___	___
Did all bottles have labels?	X	___	___
Did all bottle labels and tags agree with Chain of Custody?	X	___	___
Were samples received within hold time?	X	___	___
Did all bottles arrive in good condition (unbroken, etc.)?	X	___	___
Was sufficient amount of sample sent for the tests indicated?	X	___	___
Was correct preservation added to samples?	X	___	___

If no, Sample Control added preservative to the following:

Sample Number	Reagent	Analyte

3 low kits.

Were VOA vials checked for absence of air bubbles?	___	___	X
Bubbles present in sample #: ___			

Temperature of cooler upon receipt: 2.0°C on ice (Cold) Cool Ambient N/A

Explain any discrepancies: ___

Was client contacted? ___ Who was called? ___ By whom? ___ Date: ___

Outcome of call: ___

Waste Disposal Tickets

Total Haul off for month of March = 45

Billed to date = 6 EA
Total Tonnage = 190.71 TN

Use 28 Ton estimate for other loads
39 * 28 TN = 1092 TN

Bid Item 13

Republic Services

Tickets to date = 31 EA
Total Tonnage = 936.29 TN

Total Containers Hauled to Date = 101 EA
Total Haul Month of May = 37 EA

Use 28 Ton estimate for other loads
(101 EA - 31 EA) * 28 TN = 1960 TN

980 TNs in PA 8:
1960-980 = 980 tons estimated for PA 9

Total thru month of May = 1960 + 936.29 = 2896.29 TN

Waste Management

Total Haul = 994.15 TN

Total Billed to Date = 2896.29 + 994.15 = 3890.44 TN

Previously Billed = 2860.80
Total to Date incl. estimated = 3890.44
