APPENDIX I

DATA VALIDATION REVIEWS

PART 2

2020

MEMORANDUM

TO: Project File **DATE:** February 5, 2020

FROM: Jessie Compeau

SUBJECT: Laboratory Data Validation Review

PROJECT: American Linen Data Validation

PROJECT #: 1413.001.02.501E

TASK: EIM Data Validation Level EPA2A for 1st Quarter 2020 – Groundwater Samples

LAB: Pace Sample Delivery Groups (SDGs): L1179348, L1179855, L1180338, L1181247, and L1181269

Forty-one (41) groundwater samples (including two field duplicate samples), one equipment blank, and four trip blanks were collected on January 14-16, and 20, 2020 as part of the Remedial Investigation (RI) first quarter of 2020 groundwater sampling event at the Former American Linen Supply Site, in Seattle, Washington. The samples were shipped and delivered to Pace Lab Sciences (Pace) of Mount Juliet, TN for laboratory analysis. Selected samples were analyzed for the following:

- Volatile organic compounds (VOCs) by United States Environmental Protection Agency (USEPA) Method 8260D;
- Total petroleum hydrocarbons as gasoline (TPH-Gx) by NWTPH-Gx per analytical method stipulated by Washington State Department of Ecology;
- VOCs (dissolved gases – methane, ethane, and ethene) by EPA SOP RSK 175;
- Alkalinity by Method 2320 B-2011;
- Anions (chloride, nitrate, and sulfate) by USEPA Method 9056A;
- Total Organic Carbon (TOC) by USEPA Method 9060A; and
- Metals (iron and manganese) by USEPA Method 6020B.

The first quarter of RI sampling was conducted January of 2020. Results are reported in multiple SDGs from Pace. Pace SDGs are reviewed in groups (less than 10 SDGs) for each data validation report. Group 1 analytical results are reported in SDGs L1179348, L1179855, L1180338, L1181247, and L1181269. The quality assurance review of the laboratory data associated with Group 1 is summarized below.

DATA QUALIFICATIONS

Guidelines established by USEPA for a limited data validation review of analytical data along with Pace control limit criteria were used to validate the data. The comments presented in this memorandum refer to the laboratory's performance in meeting the quality control criteria

outlined in the USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review (USEPA, 2017) and USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017). Following Guidelines, non-project-specific laboratory duplicates and matrix spike results were not evaluated as part of this data validation.

DATA VALIDATION

Completeness

All samples were collected and analyzed as requested with the following exception:

- SDG L1181247: A trip blank (TB-012020) is included on the COC but was not submitted. On January 21, 2020 PES confirmed that Pace should proceed without analyzing the trip blank.

- SDG L1181269: Pace was contacted on February 4, 2020 to review gasoline results for samples MW-156-012020 and MW-157-012020. On February 5, 2020 Pace reissued and revised report for SDG L1181269. The revised report includes sample narratives indicating “no discernible petroleum pattern” for two samples (MW-156-012020 and MW-157-012020). Refer to Compound Identification and Quantitation Limits for additional information.

Sample Collection and Preservation

Samples were collected in laboratory-supplied sample containers preserved as appropriate for the individual analyses conducted. The samples were packed on ice in coolers and delivered by courier to the analytical laboratory. The laboratory reported that the coolers were received at a cooler temperature less than the recommended temperature preservation of 6°C. Samples were received in good condition with the following discussion:

- SDG L1179348: Samples MW126-11420, MW-310-11420, MW108-11420, and MW-311-11420 were corrected per PES’s January 15, 2020 request to read MW126-**0**11420, MW-310-**0**11420, MW108-**0**11420, and MW-311-**0**11420. Request for NWTPHGx analysis on the trip blank (Trip-011420) was revised per PES’s January 15, 2020 request.

No data were qualified based upon the sample collection and preservation information.

Holding Times

USEPA Method 8260D:
All samples were analyzed for VOCs within the EPA recommended holding time of fourteen days for preserved waters from the date of collection. All holding time criteria are met.

NWTPH-Gx Method:
All samples were analyzed within the WA State recommended holding time of fourteen days for preserved waters from the date of sample collection. All holding time criteria are met.

Dissolved Gases (Methane, Ethane, and Ethene) by RSK 175:
All samples were analyzed within the WA State recommended holding time of fourteen days for preserved waters from the date of sample collection. All holding time criteria are met.

USEPA Method 6020B:
All samples were analyzed within the USEPA recommended holding time for iron and manganese of 180 days for preserved waters from the date of sample collection. All holding time criteria are met.

General Chemistry (Alkalinity, Chloride, Sulfate, Nitrate, and TOC):
All samples were analyzed within the USEPA recommended holding time for alkalinity (14 days), chloride (28 days), sulfate (28 days), and nitrate (48 hours), and TOC (28 days) for preserved waters from the date of sample collection. All holding time criteria are met.

Initial and Continuing Calibration

Calibration data for this project are not required for this deliverable however Pace's notes indicate the following:

- Multiple SDGs - *USEPA Method 8260D:* Continuing calibration verification (CCV) issues were noted by Pace for multiple compounds associated with analytical batches in each SDG. These compounds are qualified by the laboratory "J0" to indicate that percent difference CCV is outside of laboratory acceptance criteria. **Associated sample results with laboratory qualified (J0) results are estimated and qualified (J/UJ) unless qualified as not detected (U) due to blank contamination.** Refer to method, equipment, and trip blank sections for additional information.

Method Blank Results

USEPA Method 8260D:
Laboratory method blanks were included with the analytical batches per method requirement. The target analytes were not detected in the method blanks at or above the reporting detection limits (RDLs) with the following exceptions:

- SDG L1179348 – Analytical batch WG1411916: Low levels of hexachloro-1,3-butadiene, naphthalene, and 1,2,3-trichlorobenzene are detected in the method blank. No action is taken for hexachloro-1,3-butadiene and 1,2,3-trichlorobenzene as these are not detected in the associated samples. **Associated naphthalene detection in sample MW126-011420 is below the RDL and qualified as not detected (U).**

- SDG L1179348 – Analytical batch WG1412367: Low levels of hexachloro-1,3-butadiene, naphthalene, 1,2,3-trichlorobenzene, and 1,2,4-trimethylbenzene are detected in the method blank. No action is taken for hexachloro-1,3-butadiene and 1,2,4-trimethylbenzene as these are not detected in the associated samples. **The associated naphthalene detection in sample FMW-141-011420 is below the RDL and qualified as not detected (U).**

- SDG L1180338 – Analytical batch WG1413456: Low levels of hexachloro-1,3-butadiene, naphthalene, and 1,2,3-trichlorobenzene are detected in the method blank. No action is taken for hexachloro-1,3-butadiene, naphthalene, and 1,2,3-trichlorobenzene as these are either not detected in the associated samples or detections are far greater than the RDL.

- SDG L1181247 – Analytical batch WG1414927: Low levels of naphthalene, and 1,2,3-trichlorobenzene are detected in the method blank. No action is taken for 1,2,3-trichlorobenzene as this compound is not detected in the associated samples. **The associated naphthalene detection in sample MW-214-012020 is below the RDL and qualified as not detected (U).**

- SDG L1181269 – Analytical batch WG1414927: Low levels of naphthalene and 1,2,3-trichlorobenzene are detected in the method blank. No action is taken for naphthalene and 1,2,3-trichlorobenzene as these are not detected in the associated samples.

NWTPH-Gx Method:
Laboratory method blanks were included with the analytical batches per method requirement. The target analyte (gasoline) was not detected in the method blanks at or above the RDLs with one exception:

- SDG L1179348 – Analytical batch WG1412244: A low level gasoline concentration is detected in the method blank. **The associated gasoline range organic (GRO) detection in sample MW106-011420 is below the RDL and qualified as not detected (U).**

- SDGs L1179348 – Analytical batch WG1413155: Low levels of gasoline are detected in the method and associated trip blank. No action is taken on this basis.

- SDG L1179855 – Analytical batch WG1413155: A low level gasoline concentration is detected in the method blank. No action is taken since gasoline is not detected in the associated samples.

- SDG L1179855 – Analytical batch WG1414185: A low level gasoline (C6-C12) concentration is detected in the method blank and associated trip blank. Quality control gasoline descriptor is C6-C12 whereas the associated result is reported as gasoline range organics-NWTPH. No action was taken other than to notify Pace on the minor discrepancy. No action was taken due to blank contamination.

- SDG L1180338 – Analytical batch WG1413246: A low level gasoline concentration is detected in the method blank and associated trip blank. **The associated gasoline range organic (GRO) detection in the associated sample MW-306-011620 is below the RDL and qualified as not detected (U) due to blank contamination.** No action was taken on the associated trip blank due to method blank contamination.

- SDG L1180338 – Analytical batch WG1414185: A low level gasoline (C6-C12) concentration is detected in the method blank and associated equipment blank. Quality control gasoline descriptor is C6-C12 whereas the associated result is reported as gasoline range organics-NWTPH. No action is taken other than to notify Pace on the minor discrepancy. No action was taken on the associated equipment blank due to method blank contamination.

Dissolved Gases (Methane, Ethane, and Ethene) by RSK 175:
Laboratory method blanks were included with the analytical batches per method requirement. The target analytes (dissolved gases) are not detected in the method blanks at or above the RDLs.

USEPA Method 6020B and General Chemistry (Alkalinity, Chloride, Sulfate, Nitrate, and TOC):
Laboratory method blanks were included with the analytical batches per method requirement. The target analytes were detected in the method blanks below the RDLs. Per Guidance, no action is taken for blank detections less than the RDL when associated sample detections are greater than the RDL. General chemistry and metal blank detections are shown below:

SDG	Batch	Method	Analyte	Method Blank Result	Qualifier	RDL	Units	Associated Result(s) Qualified
L1179348	WG1411429	SM2320B	Alkalinity as CaCO3, Total	3220	J	20000	µg/L	NO
L1179348	WG1411668	9060A	TOC	267	J	1000	µg/L	NO
L1179348	WG1411560	6020B	Manganese	0.406	J	5.00	µg/L	NO
L1179855	WG1412383	SM2320B	Alkalinity as CaCO3, Total	4000	J	20000	µg/L	NO
L1179855	WG1412539	9060A	TOC	219	J	1000	µg/L	NO
L1180338	WG1413034	SM2320B	Alkalinity as CaCO3, Total	4040	J	20000	µg/L	NO
L1180338	WG1413982	9060A	TOC	471	J	1000	µg/L	NO
L1181247	WG1414762	SM2320B	Alkalinity as CaCO3, Total	4420	J	20000	µg/L	NO
L1181247	WG1414453	9056A	Chloride	284	J	1000	µg/L	NO
L1181247	WG1414453	9056A	Sulfate	530	J	5000	µg/L	**YES**
L1181247	WG1415857	9060A	TOC	429	J	1000	µg/L	NO
L1181247	WG1416628	9060A	TOC	420	J	1000	µg/L	NO
L1181269	WG1414762	SM2320B	Alkalinity as CaCO3, Total	4420	J	20000	µg/L	NO
L1181269	WG1414453	9056A	Chloride	284	J	1000	µg/L	NO
L1181269	WG1414453	9056A	Sulfate	530	J	5000	µg/L	NO
L1181269	WG1416628	9060A	TOC	420	J	1000	µg/L	NO

Target analytes were detected in method blanks at low levels with no impact to the associated samples with the following exception:

- SDG L1181247 – Analytical batch WG1414453: A low level of sulfate is detected in the method blank. **Sample MW128-012020 sulfate detection is below the RDL and qualified as not detected (U).**

Trip Blank Results

USEPA Method 8260D and NWTPH-Gx:
Four trip blanks were collected and analyzed. The target analytes (gasoline and VOCs) were not detected in the trip blanks at or above the RDLs with the following exceptions:

- SDG L1179348: Low levels of gasoline and acetone are detected in the trip blank (Trip-011420). **A low level of gasoline is detected in the associated sample MW106-011420 and is qualified as not detected (U) due to method or trip blank contamination. Associated acetone detections in two samples (MW126-011420 and MW-311-011420) and acetone detections are qualified as not detected (U) due to blank contamination.**

- SDG L1179855: A low level of gasoline is detected in the trip blank (TB-011520). No action is taken since gasoline is not detected in the associated samples.

- SDG L1180338: A low level of gasoline is detected in the trip blank (TB-011620). **A low level of gasoline is detected in the associated sample MW-306-011620 and is qualified as not detected (U) due to blank contamination.**

- SDG L1181269: A low level of acetone is detected in the trip blank (TB-012020). The a**ssociated acetone detection in sample MW-156-012020 is qualified as not detected (U) due to blank contamination.**

Field, Rinsate, or Equipment Blank Results

All Analytical Methods:
Equipment blank (EQ-011620 with SDG L1180338) is associated with six samples (MW-306-011620, MW110-011620, MW-316-011620, MW111-011620, MW103-011620, and MW-319-011620). Low levels of gasoline, acetone and chloroform were detected in the equipment blank as well as low levels of TOC, metals (iron and manganese), and alkalinity. No action is taken for low levels of TOC, metals, and alkalinity detections since amounts in the associated samples are far greater than the detections in the equipment blank. No action was taken for chloroform or acetone as these compounds are not detected in the associated samples. Gasoline was not detected in the associated samples with one exception:

- A l**ow-level gasoline detection in the associated sample MW-306-011620 is qualified as not detected (U) due to trip, method, or equipment blank contamination.**

Field Duplicate Analyses

Field duplicate pairs were submitted and analyzed. Field duplicate sample pairs are as follows:

- SDG L1179855: Samples MW-314-011520 and MW-922-011520
- SDG L1181269: Samples BB-8-022020 and MW-923-012020

Target analyte results are comparable and within a relative percent difference (RPD) of 30% (± 1x RDL for groundwater results <5X the RDL) for the field duplicate pair with the following exceptions:

- **SDG L1179855: Samples MW-314-011520 and MW-922-011520 RPD result for ethane is greater than 30% and qualified as estimated (J/UJ).**

Laboratory Duplicate Analyses

USEPA Method 8260D:
Laboratory duplicate samples were not analyzed. Refer to laboratory control sample/sample duplicate (LCS/LCSD) or matrix spike/matrix spike duplicate (MS/MSD) results for precision data.

NWTPH-Gx Method:
Laboratory duplicate samples were not analyzed. Refer to laboratory control sample/sample duplicate (LCS/LCSD) or matrix spike/matrix spike duplicate (MS/MSD) results for precision data. In some cases, only LCS data are available (SDGs L1179348, L1179855, and L1181269). No action is taken other than note that precision data are not available for several analytical batches.

Dissolved Gases (Methane, Ethane, and Ethene) by RSK 175:
Laboratory duplicate sample analyses were performed on client and non-client samples within the analytical batches. The primary/duplicate RPDs for dissolved gas analyses are within the laboratory control limit of 20%.

USEPA Method 6020B:
Laboratory duplicate samples were not analyzed. Refer to LCS/LCSD or MS/MSD results for precision data.

General Chemistry (Alkalinity, Chloride, Sulfate, Nitrate, and TOC):
Laboratory duplicate sample analyses were performed on client samples and/or on non-client samples. The primary/duplicate RPDs for general chemistry parameters are within the laboratory control RPD limits or ± 1x RDL for groundwater results <5X the RDL.

Surrogate Recoveries

USEPA Method 8260D:
The surrogate recovery results for the samples, laboratory control samples, matrix spike samples, and the blanks are within the laboratory surrogate control limits for all the analyses.

NWTPH-Gx Method:
The surrogate recovery results for the samples, laboratory control samples, matrix spike samples, and the blanks are within the laboratory surrogate control limits for all analyses.

Laboratory Control Samples

USEPA Method 8260D:
Laboratory control sample/laboratory control sample duplicate (LCS/LCSD) or laboratory control sample (LCS) were analyzed by USEPA Method 8260D method. The LCS % Rs or LCS/LCSD % Rs and RPDs for the all target compounds are within the laboratory control criteria for waters with the following discussion:

- SDG L1179855 - Analytical batch WG1412735: LCS % recoveries for naphthalene and 1,2,3-trichlorobenzene are above laboratory acceptance criteria and laboratory qualified

(J4). No action is needed because these compounds are not detected in the associated samples.

- SDG L1180338 - Analytical batch WG1413456: LCS % recovery for n-hexane is above laboratory acceptance criteria and laboratory qualified (J4). No action is needed for n-hexane as it is not detected in the associated samples.

NWTPH-Gx Method:
The LCS % Rs or LCS/LCSD % Rs and RPDs for the target compound (gasoline) are within the laboratory control criteria for waters.

Dissolved Gases (Methane, Ethane, and Ethene) by RSK 175:
The LCS/LCSD % Rs and RPDs for the target compound (dissolved gases) are within the laboratory control criteria for waters.

USEPA Method 6020B:
The LCS/LCSD % Rs and RPDs for the target compound (iron and manganese) are within the laboratory control criteria for waters.

General Chemistry (Alkalinity, Chloride, Sulfate, Nitrate, and TOC):
The LCS % Rs for general chemistry parameters are within the laboratory control criteria for waters.

Matrix Spike/Matrix Spike Duplicates

USEPA Method 8260D:
Matrix spike/matrix spike duplicate (MS/MSD) analyses were performed on non-client samples associated with SDG L1179855. Matrix spike analysis was performed on a non-client sample and matrix spike duplicate results are laboratory qualified (J5) to indicate that the recovery is high due to interference. No action is taken in this case since the spike was performed on a non-client sample. Refer to LCS/LCSD results for accuracy and precision data.

NWTPH-Gx Method:
MS/MSD analyses were performed on a non-client sample within one of the analytical batches. The MS/MSD % Rs and RPD were acceptable and within laboratory control limit criteria for water samples. Refer to LCS/LCSD results for accuracy and precision data.

Dissolved Gases (Methane, Ethane, and Ethene) by RSK 175:
MS/MSD analyses were not performed. Refer to LCS results and field duplicate sample for accuracy and precision data.

USEPA Method 6020B:
MS/MSD analyses were performed on client and/or non-client samples within the analytical batches. The MS/MSD % Rs and RPD were acceptable and within laboratory control limit criteria for water samples with the following discussion:

- SDG L1180338: Matrix spike analysis was performed on client sample MW110-011620 and manganese MS/MSD recoveries are laboratory qualified (V) to indicate that the sample amount is greater than four times the spike amount. Per Guidance, no action is necessary. Refer to LCS/LCSD results for accuracy and precision data.

General Chemistry (Alkalinity, Chloride, Sulfate, Nitrate, and TOC):
MS or MS/MSD analyses were performed on client and/or non-client samples within the analytical batches. In cases where MS/MSD spike analyses are not performed refer to LCS/LCSD or laboratory duplicate data for accuracy and precision data. The MS/MSD % Rs and RPDs are acceptable and within laboratory control limit criteria for water samples with the following discussions:

- SDG L1179348: Sulfate spike analysis was performed on sample FMW-129-011420. MS/MSD recoveries for sulfate are laboratory qualified (E) because the spiked amount exceeded the upper limit of the calibration limit. No action is taken other than to note this.

- SDG L1179348: Chloride and sulfate spike analysis was performed on sample MW126-011420. MS recovery for chloride is laboratory qualified (E) because the spiked amount exceeded the upper limit calibration limit. MS recovery for sulfate is laboratory qualified (E, V) because the amount exceeded the upper calibration limit and sample concentration is greater than four times the spike amount. No action is taken other than to note this.

- SDG L1179855: Chloride spike analysis was performed on sample associated with another client SDG (SDG L1179880). MS recovery for chloride is laboratory qualified (E) because the spiked amount exceeded the upper calibration limit. No action is taken other than to note this.

- SDG L1179855: Sulfate spike analysis was performed on sample MW-307-011520. MS recovery for sulfate is laboratory qualified (E) because the spiked amount exceeded the upper calibration limit. No action is taken other than to note this.

- SDG L1181247: Sulfate spike analysis was performed on a non-client sample within the analytical batch. MS recovery for sulfate is laboratory qualified (E) because the spiked amount exceeded the upper calibration limit. No action is taken other than to note this.

Other Quality Control Issues

No laboratory quality control issues were identified in the laboratory report with the following discussions:

- Multiple SDGs: Selected sample narratives for alkalinity results indicate that several sample containers had some headspace and exposure to air may have impacted the reported results. No action was taken other than to note this.

- Electronic data deliverables (EDDs) for these SDGs were provided by the laboratory and data validator qualifiers were entered. In some cases, different chemical synonyms are used between the EDD and the hardcopy however associated Chemical Abstracts Service (CAS) numbers are provided in the EDD to confirm chemical identifications.

Compound Identification and Quantitation Limits

Results of the analyses were reported based on laboratory RDLs for all compounds. RDLs for selected compounds are elevated due to method-required dilutions. No action is taken other than to note this.

Gasoline and gasoline range organics are analyzed for via Volatile Organic Compounds (GC) by Washington State Method NWTPHGx (using a gas chromatograph/flame ionization detector (GC/FID)) and Pace reported gasoline range organic-NWTPH results. Several chlorinated VOC compounds (including cis-1,2-dichloroethene, trans-1,2-dichloroethene, trichloroethene, tetrachloroethene, and vinyl chloride) elute within the gasoline range organics (GRO) retention time range as specified by Washington State (detections falling between the toluene and dodecane range).

Non-petroleum organics (e.g. chlorinated VOC compounds) eluting within the gasoline range contribute to the GRO result and GRO results are likely biased high (J+). PES requested that Pace evaluate chromatograms associated with positive sample detections to confirm the potential presence of gasoline. Per PES's request Pace reviewed selected sample chromatograms against the gasoline standard chromatograms and assigned "no discernible petroleum pattern to GRO results associated with this Task. PES assigned an additional project level qualifier (Z) to GRO results when the chromatogram for the sample does not match a discernible petroleum pattern. Associated chromatograms and qualified samples for this Task are as follows:

Sample ID	Laboratory Identification	Gasoline Range Organic Result (µg/L)	DV Qualifier	Data Validation Comments	Pace Chromatogram Review Notes
MW-156-012020	L1181269-02	2160	Z, J+	Elevated chlorinated VOCs detected within the GRO elution range	No discernible petroleum pattern
MW-157-012020	L1181269-03	1650	Z, J+	Elevated chlorinated VOCs detected within the GRO elution range	No discernible petroleum pattern

Project level qualifiers have been included to the PES's project database (Epiphany) as (ZJ+). Washington State EIM valid values were reviewed. In this case no Washington State EIM valid value descriptor is ideal and the default estimated value (J) has been selected as the best match to qualify GRO (ZJ+) data.

Data Assessment

The laboratory data reported for this project were reviewed based on the criteria outlined in:

- USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review (USEPA, 2017); and
- USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017).

Data qualifiers are assigned and laboratory report pages with qualifiers are attached. All data, including qualified data, are judged to be acceptable for their intended use.

Wet Chemistry by Method 2320 B-2011

MEMORANDUM

TO: Project File **DATE:** February 13, 2020

FROM: Jessie Compeau

SUBJECT: Laboratory Data Validation Review

PROJECT: American Linen Data Validation

PROJECT #: 1413.001.02.501E

TASK: EIM Data Validation Level EPA2A for 1st Quarter 2020 – Groundwater Samples

LAB: Pace Sample Delivery Groups (SDGs): L1180825, L1181649, L1182058, L1182069, L1182482, and L1182486

Thirty-three (33) groundwater samples (including one field duplicate sample), and three trip blanks were collected as part of the Remedial Investigation (RI) first quarter of 2020 groundwater sampling event at the Former American Linen Supply Site, in Seattle, Washington, January 17, and 21-23, 2020. The samples were shipped and delivered to Pace Lab Sciences (Pace) of Mount Juliet, TN for laboratory analysis. Selected samples were analyzed for the following:

- Volatile organic compounds (VOCs) by United States Environmental Protection Agency (USEPA) Method 8260D;
- Total petroleum hydrocarbons as gasoline (TPH-Gx) by NWTPH-Gx per analytical method stipulated by Washington State Department of Ecology;
- VOCs (dissolved gases – methane, ethane, and ethene) by EPA SOP RSK 175;
- Alkalinity by Method 2320 B-2011;
- Anions (chloride, nitrate, and sulfate) by USEPA Method 9056A;
- Total Organic Carbon (TOC) by USEPA Method 9060A; and
- Metals (iron and manganese) by USEPA Method 6020B.

The first quarter of RI sampling was conducted January of 2020. Results are reported in multiple SDGs from Pace. Pace SDGs are reviewed in groups (less than 10 SDGs) for each data validation report. Group 2 analytical results are reported in SDGs L1180825, L1181649, L1182058, L1182069, L1182482, and L1182486. The quality assurance review of the laboratory data associated with Group 2 is summarized below.

DATA QUALIFICATIONS

Guidelines established by USEPA for a limited data validation review of analytical data along with Pace control limit criteria were used to validate the data. The comments presented in this memorandum refer to the laboratory's performance in meeting the quality control criteria

outlined in the USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review (USEPA, 2017) and USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017). Following Guidelines, non-project-specific laboratory duplicates and matrix spike results were not evaluated as part of this data validation.

DATA VALIDATION

Completeness

All samples were collected and analyzed as requested with the following exception:

- SDG L1180825: On January 19, 2020 PES forwarded a revised chain of custody (COC) to Pace. Revised COC includes dates of sample collection, depth of sample collection, and type of sample (grab or composite). No action is taken other than to note this.
- SDG L1180825: Pace was contacted on February 11, 2020 to review the gasoline range organic result for sample MW120-011720. On February 12, 2020 Pace reissued and revised report for SDG L1180825. The revised report includes a sample narrative indicating "no discernible petroleum pattern" for sample MW120-011720. Refer to Compound Identification and Quantitation Limits for additional information.
- SDG L1182482: Pace was contacted on February 11, 2020 to review gasoline range organic results for samples MW-170-012320 and MW-172-012320. On February 12, 2020 Pace reissued and revised report for SDG L1182482. The revised report includes sample narratives indicating "no discernible petroleum pattern" for two samples (MW-170-012320 and MW-172-012320). Refer to Compound Identification and Quantitation Limits for additional information.

Sample Collection and Preservation

Samples were collected in laboratory-supplied sample containers preserved as appropriate for the individual analyses conducted. The samples were packed on ice in coolers and delivered by courier to the analytical laboratory. The laboratory reported that the coolers were received at a cooler temperature less than the recommended temperature preservation of 6°C. Samples were received in good condition. No data were qualified based upon the sample collection and preservation information.

Holding Times

USEPA Method 8260D:
All samples were analyzed for VOCs within the EPA recommended holding time of fourteen days for preserved waters from the date of collection. All holding time criteria are met.

NWTPH-Gx Method:
All samples were analyzed within the WA State recommended holding time of fourteen days for preserved waters from the date of sample collection. All holding time criteria are met.

Dissolved Gases (Methane, Ethane, and Ethene) by RSK 175:
All samples were analyzed within the WA State recommended holding time of fourteen days for preserved waters from the date of sample collection. All holding time criteria are met.

USEPA Method 6020B:
All samples were analyzed within the USEPA recommended holding time for iron and manganese of 180 days for preserved waters from the date of sample collection. All holding time criteria are met.

General Chemistry (Alkalinity, Chloride, Sulfate, Nitrate, and TOC):
All samples were analyzed within the USEPA recommended holding time for alkalinity (14 days), chloride (28 days), sulfate (28 days), and nitrate (48 hours), and TOC (28 days) for preserved waters from the date of sample collection. All holding time criteria are met.

Initial and Continuing Calibration

Calibration data for this project are not required for this deliverable however Pace's notes indicate the following:

- Multiple SDGs - *USEPA Method 8260D:* Continuing calibration verification (CCV) issues were noted by Pace for multiple compounds associated with analytical batches in each SDG. These compounds are qualified by the laboratory "J0" to indicate that percent difference CCV is outside of laboratory acceptance criteria. **Associated sample results with laboratory qualified (J0) results are estimated and qualified (J/UJ).**

Method Blank Results

USEPA Method 8260D:
Laboratory method blanks were included with the analytical batches per method requirement. The target analytes were not detected in the method blanks at or above the reporting detection limits (RDLs) with the following exceptions:

- SDG L1180825 – Analytical batch WG1413866: Low levels of n-butylbenzene, sec-butylbenzene, tert-butylbenzene, hexachloro-1,3-butadiene, p-isopropyltoluene, n-propylbenzene, 1,2,3-trichlorobenzene, 1,2,4-trichlorobenzene, 1,2,4-trimethylbenzene, 1,2,3-trimethylbenzene, and 1,3,5-trimethylbenzene are detected in the method blank. No action is taken for most compounds as these are not detected in the associated samples with the following exceptions:
    - A**ssociated 1,2,4-trimethylbenzene detection in sample SCL-MW105-011720 is below the RDL and qualified as not detected (U).**
    - **Associated 1,3,5-trimethylbenzene detection in sample SCL-MW101-011720 is below the RDL and qualified as not detected (U).**
    - **Associated 1,2,4-trimethylbenzene and 1,2,3-trichlorobenzene detections in sample SMW-3-011720 are below the RDL and qualified as not detected (U).**

- SDG L1181649 – Analytical batch WG1415610: Low levels of 2-butanone (MEK) and naphthalene are detected in the method blank. No action is taken for these compounds as these are not detected in the associated samples.

- SDGs L1182058 and L1182069 – Analytical batch WG1417070: A low level of 1,2,3-trichlorobenzene is detected in the method blank. No action is taken for 1,2,3-trichlorobenzene as it is not detected in the associated samples.

- SDG L1182486 – Analytical batch WG1418320: Low levels of naphthalene and 1,2,4-trimethylbenzene are detected in the method blank. No action is taken for either compound as these are not detected in the associated samples.

- SDG L1181247 – Analytical batch WG1414927: Low levels of naphthalene, and 1,2,3-trichlorobenzene are detected in the method blank. No action is taken for 1,2,3-trichlorobenzene as this compound is not detected in the associated samples. **The associated naphthalene detection in sample MW-214-012020 is below the RDL and qualified as not detected (U).**

NWTPH-Gx Method:
Laboratory method blanks were included with the analytical batches per method requirement. The target analyte (gasoline) was not detected in the method blanks at or above the RDLs with one exception:

- SDG L1180825 – Analytical batch WG1414185: A low level gasoline concentration is detected in the method blank. **The associated gasoline range organic (GRO) detection in sample MW-127-011720 is below the RDL and qualified as not detected (U) due to method or trip blank contamination.**

Dissolved Gases (Methane, Ethane, and Ethene) by RSK 175:
Laboratory method blanks were included with the analytical batches per method requirement. The target analytes (dissolved gases) are not detected in the method blanks at or above the RDLs.

USEPA Method 6020B and General Chemistry (Alkalinity, Chloride, Sulfate, Nitrate, and TOC):
Laboratory method blanks were included with the analytical batches per method requirement. The target analytes were detected in the method blanks below the RDLs. Per Guidance, no action is taken for blank detections less than the RDL when associated sample detections are greater than the RDL. General chemistry and metal blank detections are shown below:

SDG	Batch	Method	Analyte	Method Blank Result	Qualifier	RDL	Units	Associated Result(s) Qualified

L1182486	WG1416647	6020B	Manganese	0.281	J	5.00	µg/L	NO

Target analytes were detected in method blanks at low levels with no impact to the associated samples with the following exception:

- SDG L1181649 – Analytical batch WG1415232: A low level of sulfate is detected in the method blank. **Sample MW109-012120 sulfate result is below the RDL and qualified as not detected (U).**

- SDG L1182058 – Analytical batch WG1415788: A low level of nitrate is detected in the method blank. **Samples MW-142-012220, MW-143-012220, GEI-1-012220, and MW123-012220 nitrate results are below the RDL and are qualified as not detected (U).**

- SDG L1182069 – Analytical batch WG1415788: A low level of nitrate is detected in the method blank. **Samples FMW-142-012220, FMW-140-012220, and GEI-2-012220 nitrate results are below the RDL and are qualified as not detected (U).**

Trip Blank Results

USEPA Method 8260D and NWTPH-Gx:
Four trip blanks were collected and analyzed. The target analytes (gasoline and VOCs) were not detected in the trip blanks at or above the RDLs with the following exceptions:

- SDG L1180825: Low levels of gasoline and hexachloro-1,3-butadiene are detected in the trip blank (TB-011720). **A low level of gasoline is detected in the associated sample MW-127-011720 and is qualified as not detected (U) due to method or trip blank contamination.** No action is taken for the gasoline detection in sample MW120-011720 because the detection is greater than the RDL. No action is taken for hexachloro-1,3-butadiene since it was not detected in the associated samples.

- SDG L1182482: A low level of acetone is detected in the trip blank (TB-012320). No action is necessary since acetone is not detected in the associated samples.

Field, Rinsate, or Equipment Blank Results

All Analytical Methods:
A field, rinsate, or equipment blank was not collected.

Field Duplicate Analyses

Field duplicate pairs were submitted and analyzed. Field duplicate sample pair is as follows:

- SDG L1182482: Samples MW-102-012320 and MW-924-012320

Target analyte results are comparable and within a relative percent difference (RPD) of 30% (± 1x RDL for groundwater results <5X the RDL) for the field duplicate pair.

Laboratory Duplicate Analyses

USEPA Method 8260D:
Laboratory duplicate samples were not analyzed. Refer to laboratory control sample/sample duplicate (LCS/LCSD) or matrix spike/matrix spike duplicate (MS/MSD) results for precision data.

NWTPH-Gx Method:
Laboratory duplicate samples were not analyzed. Refer to laboratory control sample/sample duplicate (LCS/LCSD) or matrix spike/matrix spike duplicate (MS/MSD) results for precision data. In some cases, only LCS data are available (SDGs L1179348, L1179855, and L1181269). No action is taken other than note that precision data are not available for several analytical batches.

Dissolved Gases (Methane, Ethane, and Ethene) by RSK 175:
Laboratory duplicate sample analyses were performed on client and non-client samples within the analytical batches. The primary/duplicate RPDs for dissolved gas analyses are within the laboratory control limit of 20%.

USEPA Method 6020B:
Laboratory duplicate samples were not analyzed. Refer to LCS/LCSD or MS/MSD results for precision data.

General Chemistry (Alkalinity, Chloride, Sulfate, Nitrate, and TOC):
Laboratory duplicate sample analyses were performed on client samples and/or on non-client samples. The primary/duplicate RPDs for general chemistry parameters are within the laboratory control RPD limits or ± 1x RDL for groundwater results <5X the RDL.

Surrogate Recoveries

USEPA Method 8260D:
The surrogate recovery results for the samples, laboratory control samples, matrix spike samples, and the blanks are within the laboratory surrogate control limits for all the analyses.

NWTPH-Gx Method:
The surrogate recovery results for the samples, laboratory control samples, matrix spike samples, and the blanks are within the laboratory surrogate control limits for all analyses.

Laboratory Control Samples

USEPA Method 8260D:
Laboratory control sample/laboratory control sample duplicate (LCS/LCSD) or laboratory control sample (LCS) were analyzed by USEPA Method 8260D method. The LCS % Rs or LCS/LCSD % Rs and RPDs for the all target compounds are within the laboratory control criteria for waters with the following discussion:

- SDG L1181649 - Analytical batch WG1415610: LCS % recoveries for chloromethane and 2,2-dichloropropane are above laboratory acceptance criteria and laboratory qualified (J4). No action is needed because these compounds are not detected in the associated samples.

- SDG L1182486 - Analytical batch WG1418320: LCS % recoveries for 2,2-dichloropropane and naphthalene are above laboratory acceptance criteria and laboratory qualified (J4). No action is needed because these compounds are not detected in the associated samples.

NWTPH-Gx Method:
The LCS % Rs or LCS/LCSD % Rs and RPDs for the target compound (gasoline) are within the laboratory control criteria for waters.

Dissolved Gases (Methane, Ethane, and Ethene) by RSK 175:
The LCS/LCSD % Rs and RPDs for the target compound (dissolved gases) are within the laboratory control criteria for waters.

USEPA Method 6020B:
The LCS/LCSD % Rs and RPDs for the target compound (iron and manganese) are within the laboratory control criteria for waters.

General Chemistry (Alkalinity, Chloride, Sulfate, Nitrate, and TOC):
The LCS % Rs for general chemistry parameters are within the laboratory control criteria for waters.

Matrix Spike/Matrix Spike Duplicates

USEPA Method 8260D:

Matrix spike/matrix spike duplicate (MS/MSD) analyses were not performed. Refer to LCS/LCSD results for accuracy and precision data.

NWTPH-Gx Method:
MS/MSD analyses were performed on non-client samples within several analytical batches. The MS/MSD % Rs and RPD were acceptable and within laboratory control limit criteria for water samples. Refer to LCS/LCSD results for accuracy and precision data.

Dissolved Gases (Methane, Ethane, and Ethene) by RSK 175:
MS/MSD analyses were not performed. Refer to LCS results and field duplicate sample for accuracy and precision data.

USEPA Method 6020B:
MS/MSD analyses were performed on client and/or non-client samples within the analytical batches. The MS/MSD % Rs and RPD were acceptable and within laboratory control limit criteria for water samples with the following discussion:

- SDGs L1181649 and L1182058: Matrix spike analysis was performed on client sample MW109-012120 (SDG L1181649) and manganese MS/MSD recoveries are laboratory qualified (V) to indicate that the sample amount is greater than four times the spike amount. Per Guidance, no action is necessary. Refer to LCS/LCSD results for accuracy and precision data.

General Chemistry (Alkalinity, Chloride, Sulfate, Nitrate, and TOC):
MS or MS/MSD analyses were performed on client and/or non-client samples within the analytical batches. In cases where MS/MSD spike analyses are not performed refer to LCS/LCSD or laboratory duplicate data for accuracy and precision data. The MS/MSD % Rs and RPDs are acceptable and within laboratory control limit criteria for water samples with the following discussions:

- SDG L1180825: Nitrate spike analysis was performed on a non-client sample within the analytical batch. MS/MSD recoveries for nitrate are laboratory qualified (E and J5) because the spiked amount exceeded the upper limit of the calibration limit and sample matrix interference. No action is taken other than to note this. Refer to laboratory duplicate and laboratory control sample results for precision and accuracy data.

- SDG L1181649: Chloride spike analysis was performed on a non-client sample within the analytical batch. MS/MSD recoveries for chloride are laboratory qualified (E) because the spiked amount exceeded the upper limit calibration limit. No action is taken other than to note this.

- SDGs L1182058 and L1182069: Sulfate spike analysis was performed on a non-client sample within the analytical batch. MS/MSD recoveries for sulfate are laboratory qualified (E) because the spiked amount exceeded the upper limit calibration limit. No action is taken other than to note this.

Other Quality Control Issues

No laboratory quality control issues were identified in the laboratory report with the following discussions:

- Multiple SDGs: Selected sample narratives for alkalinity results indicate that several sample containers had some headspace and exposure to air may have impacted the reported results. No action was taken other than to note this.

- Electronic data deliverables (EDDs) for these SDGs were provided by the laboratory and data validator qualifiers were entered. In some cases, different chemical synonyms are used between the EDD and the hardcopy however associated Chemical Abstracts Service (CAS) numbers are provided in the EDD to confirm chemical identifications.

Compound Identification and Quantitation Limits

Results of the analyses were reported based on laboratory RDLs for all compounds. RDLs for selected compounds are elevated due to method-required dilutions. No action is taken other than to note this.

Gasoline and gasoline range organics are analyzed for via Volatile Organic Compounds (GC) by Washington State Method NWTPHGx (using a gas chromatograph/flame ionization detector (GC/FID)) and Pace reported gasoline range organic-NWTPH results. Several chlorinated VOC compounds (including cis-1,2-dichloroethene, trans-1,2-dichloroethene, trichloroethene, tetrachloroethene, and vinyl chloride) elute within the gasoline range organics (GRO) retention time range as specified by Washington State (detections falling between the toluene and dodecane range).

Non-petroleum organics (e.g. chlorinated VOC compounds) eluting within the gasoline range contribute to the GRO result and GRO results are likely biased high (J+). PES requested that Pace evaluate chromatograms associated with positive sample detections to confirm the potential presence of gasoline. Per PES's request Pace reviewed selected sample chromatograms against the gasoline standard chromatograms and assigned "no discernible petroleum pattern to GRO results associated with this Task. PES assigned an additional project level qualifier (Z) to GRO results when the chromatogram for the sample does not match a discernible petroleum pattern. Associated chromatograms and qualified samples for this Task are as follows:

Sample ID	Laboratory Identification	Gasoline Range Organic Result (μg/L)	DV Qualifier	Data Validation Comments	Pace Chromatogram Review Notes
MW120-011720	L1180825-05	124	Z, J+	Elevated chlorinated VOCs detected within the GRO elution range. Blank contamination below the RDL.	No discernible petroleum pattern.
MW-170-012320	L1182482-04	20,000	Z, J+	Elevated chlorinated VOCs detected within the GRO elution range	No discernible petroleum pattern
MW-172-012320	L1182482-06	10,700	Z, J+	Elevated chlorinated VOCs detected within the GRO elution range	No discernible petroleum pattern

Project level qualifiers have been included to the PES's project database (Epiphany) as (ZJ+). Washington State EIM valid values were reviewed. In this case no Washington State EIM valid value descriptor is ideal and the default estimated value (J) has been selected as the best match to qualify GRO (ZJ+) data.

Data Assessment

The laboratory data reported for this project were reviewed based on the criteria outlined in:

- USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review (USEPA, 2017); and
- USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017).

Data qualifiers are assigned and laboratory report pages with qualifiers are attached. All data, including qualified data, are judged to be acceptable for their intended use.

MEMORANDUM

TO:	Project File	**DATE:**	February 17, 2020
FROM:	Jessie Compeau		
SUBJECT:	Laboratory Data Validation Review		
PROJECT:	American Linen Data Validation		
PROJECT #:	1413.001.02.501E		
TASK:	EIM Data Validation Level EPA2A for 1st Quarter 2020 – Groundwater Samples		
LAB:	Pace Sample Delivery Groups (SDGs): L1181608, L1182886, L1182898, and L1183293		

Nineteen (19) groundwater samples (including one field duplicate sample), two equipment blanks, and three trip blanks were collected as part of the Remedial Investigation (RI) first quarter of 2020 groundwater sampling event at the Former American Linen Supply Site, in Seattle, Washington on January 21, 24, and 27, 2020. The samples were shipped and delivered to Pace Lab Sciences (Pace) of Mount Juliet, TN for laboratory analysis. Selected samples were analyzed for the following:

- Volatile organic compounds (VOCs) by United States Environmental Protection Agency (USEPA) Method 8260D;
- Total petroleum hydrocarbons as gasoline (TPH-Gx) by NWTPH-Gx per analytical method stipulated by Washington State Department of Ecology;
- VOCs (dissolved gases – methane, ethane, and ethene) by EPA SOP RSK 175;
- Alkalinity by Method 2320 B-2011;
- Anions (chloride, nitrate, and sulfate) by USEPA Method 9056A;
- Total Organic Carbon (TOC) by USEPA Method 9060A; and
- Metals (iron and manganese) by USEPA Method 6020B.

The first quarter of RI sampling was conducted January of 2020. Results are reported in multiple SDGs from Pace. Pace SDGs are reviewed in groups (less than 10 SDGs) for each data validation report. Group 3 analytical results are reported in SDGs L1181608, L1182886, L1182898, and L1183293. The quality assurance review of the laboratory data associated with Group 3 is summarized below.

DATA QUALIFICATIONS

Guidelines established by USEPA for a limited data validation review of analytical data along with Pace control limit criteria were used to validate the data. The comments presented in this memorandum refer to the laboratory's performance in meeting the quality control criteria

outlined in the USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review (USEPA, 2017) and USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017). Following Guidelines, non-project-specific laboratory duplicates and matrix spike results were not evaluated as part of this data validation.

DATA VALIDATION

Completeness

All samples were collected and analyzed as requested with the following exception:

- SDG L1183293: On January 28, 2020 Pace contacted PES regarding a conflict on the chain of custody (COC). Sample MW-18**2**-012720 with a collection time of 0951 was not received however a sample MW-18**7**-012720 with a collection time of 0951was received. PES instructed Pace to log the sample as MW-18**2**-012720. No action is taken other than to note this.

Sample Collection and Preservation

Samples were collected in laboratory-supplied sample containers preserved as appropriate for the individual analyses conducted. The samples were packed on ice in coolers and delivered by courier to the analytical laboratory. The laboratory reported that the coolers were received at a cooler temperature less than the recommended temperature preservation of 6°C. Samples were received in good condition. No data were qualified based upon the sample collection and preservation information.

Holding Times

USEPA Method 8260D:
All samples were analyzed for VOCs within the EPA recommended holding time of fourteen days for preserved waters from the date of collection. All holding time criteria are met.

NWTPH-Gx Method:
All samples were analyzed within the WA State recommended holding time of fourteen days for preserved waters from the date of sample collection. All holding time criteria are met.

Dissolved Gases (Methane, Ethane, and Ethene) by RSK 175:
All samples were analyzed within the WA State recommended holding time of fourteen days for preserved waters from the date of sample collection. All holding time criteria are met.

USEPA Method 6020B:
All samples were analyzed within the USEPA recommended holding time for iron and manganese of 180 days for preserved waters from the date of sample collection. All holding time criteria are met.

General Chemistry (Alkalinity, Chloride, Sulfate, Nitrate, and TOC):

All samples were analyzed within the USEPA recommended holding time for alkalinity (14 days), chloride (28 days), sulfate (28 days), and nitrate (48 hours), and TOC (28 days) for preserved waters from the date of sample collection. All holding time criteria are met.

Initial and Continuing Calibration

Calibration data for this project are not required for this deliverable however Pace's notes indicate the following:

- Multiple SDGs - *USEPA Method 8260D:* Continuing calibration verification (CCV) issues were noted by Pace for multiple compounds associated with analytical batches in each SDG. These compounds are qualified by the laboratory "J0" to indicate that percent difference CCV is outside of laboratory acceptance criteria. **Associated sample results with laboratory qualified (J0) results are estimated and qualified (J/UJ) unless qualified as not detected (U) due to blank contamination.**

Method Blank Results

USEPA Method 8260D:
Laboratory method blanks were included with the analytical batches per method requirement. The target analytes were not detected in the method blanks at or above the reporting detection limits (RDLs) with the following exceptions:

- SDG L1181608 – Analytical batch WG1415610: Low levels of 2-butanone (MEK) and naphthalene are detected in the method blank. No action is taken for these compounds as these are not detected in the associated samples.

NWTPH-Gx Method:
Laboratory method blanks were included with the analytical batches per method requirement. The target analyte (gasoline) was not detected in the method blanks at or above the RDLs with one exception:

- SDG L1183293 – Analytical batch WG1418226: A low level gasoline concentration is detected in the method blank. **The associated gasoline range organic (GRO) detection in sample MW-304-012720 is below the RDL and qualified as not detected (U) due to method or trip blank contamination.**

Dissolved Gases (Methane, Ethane, and Ethene) by RSK 175:
Laboratory method blanks were included with the analytical batches per method requirement. The target analytes (dissolved gases) are not detected in the method blanks at or above the RDLs.

USEPA Method 6020B and General Chemistry (Alkalinity, Chloride, Sulfate, Nitrate, and TOC):
Laboratory method blanks were included with the analytical batches per method requirement. The target analytes were detected in the method blanks below the RDLs. Per Guidance, no action is taken for blank detections less than the RDL when associated sample detections are greater than the RDL. General chemistry and metal blank detections are shown below:

SDG	Batch	Method	Analyte	Method Blank Result	Qualifier	RDL	Units	Associated Result(s) Qualified
L1181608	WG1415297	SM2320B	Alkalinity as CaCO3, Total	4440	J	20000	µg/L	NO
L1181608	WG1415072	9056A	Chloride	61.3	J	1000	µg/L	NO
L1181608	WG1415072	9056A	Nitrate	23.0	J	100	µg/L	**YES**
L1181608	WG1416628	9060A	TOC	420	J	1000	µg/L	NO
L1181608	WG1415176	6020B	Manganese	0.339	J	5.00	µg/L	NO
L1181649	WG1417179	9060A	TOC	381	J	1000	µg/L	NO
L1182886	WG1417009	SM2320B	Alkalinity as CaCO3, Total	4410	J	20000	µg/L	NO
L1182886	WG1418866	9060A	TOC	301	J	1000	µg/L	NO
L1182886	WG1416986	6020B	Iron	37.7	J	100	µg/L	NO
L1182886	WG1416986	6020B	Manganese	1.18	J	5.00	µg/L	NO
L1182898	WG1417009	SM2320B	Alkalinity as CaCO3, Total	4410	J	20000	µg/L	NO
L1182898	WG1419599	9060A	TOC	486	J	1000	µg/L	NO
L1183293	WG1418552	SM2320B	Alkalinity as CaCO3, Total	6840	J	20000	µg/L	NO
L1183293	WG1418181	9056A	Chloride	417	J	1000	µg/L	NO
L1183293	WG1418181	9056A	Sulfate	569	J	5000	µg/L	**YES**
L1183293	WG1419929	9060A	TOC	356	J	1000	µg/L	NO

Target analytes were detected in method blanks at low levels with no impact to the associated samples with the following exceptions:

- SDG L1181608 – Analytical batch WG1415072: A low level of nitrate is detected in the method blank. **Samples MW-158A-012120, MW-153-012120, MW-144R-012120, and MW-145R-012120 nitrate detections are below the RDL and are qualified as not detected (U).**

- SDG L1183293 – Analytical batch WG1418181: A low level of sulfate is detected in the method blank. **Sample MW-181-012720 sulfate detection is below the RDL and qualified as not detected (U).**

Trip Blank Results

USEPA Method 8260D and NWTPH-Gx:
Four trip blanks were collected and analyzed. The target analytes (gasoline and VOCs) were not detected in the trip blanks at or above the RDLs with the following exceptions:

- SDG L1182886: A low level of acetone is detected in the trip blank (TB-012420). **Low levels of acetone are detected in the associated samples MW-303-012420, MW-302-012420, and MW112-012420 and are qualified as not detected (U) due to method or trip blank contamination.**

- SDG L1183293: A low level of iodomethane is detected in the trip blank (TB-012720). No action is necessary since iodomethane is not detected in the associated samples.

Field, Rinsate, or Equipment Blank Results

All Analytical Methods:

Two equipment blanks were collected as follows:

- SDG L1181608: Equipment blank (EQ-012120) is associated with all samples in the SDG.
- SDG L1183293: Equipment blank (EQ-012720) is associated with samples MW-304-012720 and MW-138-012720.

Equipment blanks were analyzed for all analytical parameters and positive detections are shown in the table below:

SDG	Equipment Blank Identification	Method	Analyte	Equipment Blank Result	Qualifier	RDL	Units	Associated Result(s) Qualified
L1181608	EQ-012120	SM2320B	Alkalinity as CaCO3, Total	8520	J	20000	µg/L	NO
L1181608	EQ-012120	9056A	Chloride	68.9	J	1000	µg/L	NO
L1181608	EQ-012120	9056A	Nitrate	23.1	J	100	µg/L	**YES**
L1181608	EQ-012120	9056A	Sulfate	176	J	5000	µg/L	NO
L1181608	EQ-012120	9060A	TOC	525	J	1000	µg/L	NO
L1181608	EQ-012120	6020B	Iron	19.7	J	100	µg/L	**YES**
L1181608	EQ-012120	6020B	Manganese	2.15	J	5.00	µg/L	NO
L1181608	EQ-012120	8260D	Acetone	1.59	J	25.0	µg/L	**YES**
L1181608	EQ-012120	8260D	Chloroform	0.300	J	0.500	µg/L	NO
L1183293	EQ-012720	SM2320B	Alkalinity as CaCO3, Total	4520	J	20000	µg/L	NO
L1183293	EQ-012720	9056A	Chloride	418	J	1000	µg/L	NO
L1183293	EQ-012720	9056A	Nitrate	64.2	J	100	µg/L	NO
L1183293	EQ-012720	9056A	Sulfate	518	J	5000	µg/L	NO
L1183293	EQ-012720	9060A	TOC	343	J	1000	µg/L	NO
L1183293	EQ-012720	RSK 175	Methane	25.0	J	0.678	µg/L	**YES**
L1183293	EQ-012720	8260D	Acetone	1.59	J	25.0	µg/L	NO
L1183293	EQ-012720	8260D	Chloroform	0.300	J	0.500	µg/L	NO

Target analytes were detected in equipment blanks at low levels with no impact to the associated samples with the following exceptions:

- SDG L1181608 – Analytical batch WG1415072: A low level of nitrate is detected in the method and equipment blanks. **Samples MW-158A-012120, MW-153-012120, MW-144R-012120, and MW-145R-012120 nitrate detections are below the RDL and are qualified as not detected (U) due to blank contamination.**

- SDG L1181608 – Analytical batch WG1415072: A low level of sulfate (176 µg/L) is detected in the equipment blank. Sample MW-145R-012120 sulfate detection is at 3170 µg/L and is also below the RDL. *In this case, using professional judgement, no action is taken other than to note this.*

- SDG L1181608 – Analytical batch WG1415072: A low level of iron is detected in the equipment blank. **Sample MW-154-012120 iron detection is at 62.4 µg/L is below the RDL and is qualified as not detected (U) due to blank contamination.**

- SDG L1181608 – Analytical batch WG1415072: A low level of acetone is detected in the equipment blank. **Sample MW-145R-012120 acetone detection is below the RDL and is qualified as not detected (U) due to blank contamination.**

- SDG L1183293 – Analytical batch WG1418181: A low level of sulfate is detected in the method blank. **Sample MW-181-012720 sulfate detection is below the RDL and qualified as not detected (U).**

- SDG L1183293 – Analytical batch WG1418181: A low level of methane is detected in the method blank. **Sample MW-304-012720 methane detection is below the RDL and qualified as estimated (J+).**

Field Duplicate Analyses

Field duplicate pairs were submitted and analyzed. Field duplicate sample pair is as follows:

- SDG L1182886: Samples MW-146-012420 and MW-925-012420

Target analyte results are comparable and within a relative percent difference (RPD) of 30% (± 1x RDL for groundwater results <5X the RDL) for the field duplicate pair with the following exceptions:

- Samples MW-146-012420 and MW-925-012420: Gasoline range organics (GRO) and methane field duplicate results are not comparable with RPDs greater than 30%. **Methane sample MW-146-012420 and MW-925-012420 results are estimated and qualified (J).** GRO results are already estimated and qualified. Refer to Compound Identification and Quantitation Limits

- Samples MW-146-012420 and MW-925-012420: Sample MW-146-012420 was diluted 100X and sample MW-925-012420 was analyzed undiluted except for a 200X dilution factor for two compounds (cis-1,2-dichloroethene and vinyl chloride). Certain VOC compounds (1,1-dichloroethene, trans-1,2-dichloroethene, and trichloroethene) are not detected in MW-146-012420 because they were diluted out. No action is taken in these cases. **Tetrachloroethene and vinyl chloride sample MW-146-012420 and MW-925-012420 results are estimated (J).**
- Sample MW-146-012420 was diluted 100X and sample MW-925-012420 was undiluted with the two exceptions compounds (cis-1,2-dichloroethene and vinyl chloride) were diluted 200X. Certain VOC compounds (1,1-dichloroethene, trans-1,2-dichloroethene, and trichloroethene) are not detected in MW-146-012420 because they were diluted out. No action is taken in these cases. **Tetrachloroethene and vinyl chloride sample MW-146-012420 and MW-925-012420 results are estimated (J).**

Laboratory Duplicate Analyses

USEPA Method 8260D:

Laboratory duplicate samples were not analyzed. Refer to laboratory control sample/sample duplicate (LCS/LCSD) or matrix spike/matrix spike duplicate (MS/MSD) results for precision data.

NWTPH-Gx Method:
Laboratory duplicate samples were not analyzed. Refer to laboratory control sample/sample duplicate (LCS/LCSD) or matrix spike/matrix spike duplicate (MS/MSD) results for precision data. In some cases, only LCS data are available (SDGs L1179348, L1179855, and L1181269). No action is taken other than note that precision data are not available for several analytical batches.

Dissolved Gases (Methane, Ethane, and Ethene) by RSK 175:
Laboratory duplicate sample analyses were performed on client and non-client samples within the analytical batches. The primary/duplicate RPDs for dissolved gas analyses are within the laboratory control limit of 20%.

USEPA Method 6020B:
Laboratory duplicate samples were not analyzed. Refer to LCS/LCSD or MS/MSD results for precision data.

General Chemistry (Alkalinity, Chloride, Sulfate, Nitrate, and TOC):
Laboratory duplicate sample analyses were performed on client samples and/or on non-client samples. The primary/duplicate RPDs for general chemistry parameters are within the laboratory control RPD limits or ± 1x RDL for groundwater results <5X the RDL.

Surrogate Recoveries

USEPA Method 8260D:
The surrogate recovery results for the samples, laboratory control samples, matrix spike samples, and the blanks are within the laboratory surrogate control limits for all the analyses.

NWTPH-Gx Method:
The surrogate recovery results for the samples, laboratory control samples, matrix spike samples, and the blanks are within the laboratory surrogate control limits for all analyses.

Laboratory Control Samples

USEPA Method 8260D:
Laboratory control sample/laboratory control sample duplicate (LCS/LCSD) or laboratory control sample (LCS) were analyzed by USEPA Method 8260D method. The LCS % Rs or LCS/LCSD % Rs and RPDs for the all target compounds are within the laboratory control criteria for waters with the following discussion:

- SDG L1181608 - Analytical batch WG1415610: LCS % recoveries for chloromethane and 2,2-dichloropropane are above laboratory acceptance criteria and laboratory qualified (J4). No action is needed because these compounds are not detected in the associated samples.

- SDG L1183293 - Analytical batch WG1418645: LCS % recovery for bromomethane are above laboratory acceptance criteria and laboratory qualified (J4). No action is needed because this compound is not detected in the associated samples.

NWTPH-Gx Method:
The LCS % Rs or LCS/LCSD % Rs and RPDs for the target compound (gasoline) are within the laboratory control criteria for waters.

Dissolved Gases (Methane, Ethane, and Ethene) by RSK 175:
The LCS/LCSD % Rs and RPDs for the target compound (dissolved gases) are within the laboratory control criteria for waters.

USEPA Method 6020B:
The LCS/LCSD % Rs and RPDs for the target compound (iron and manganese) are within the laboratory control criteria for waters.

General Chemistry (Alkalinity, Chloride, Sulfate, Nitrate, and TOC):
The LCS % Rs for general chemistry parameters are within the laboratory control criteria for waters.

Matrix Spike/Matrix Spike Duplicates

USEPA Method 8260D:
Matrix spike/matrix spike duplicate (MS/MSD) analyses were not performed. Refer to LCS/LCSD results for accuracy and precision data.

NWTPH-Gx Method:
MS/MSD analyses were performed on non-client samples within several analytical batches. The MS/MSD % Rs and RPD were acceptable and within laboratory control limit criteria for water samples. Refer to LCS/LCSD results for accuracy and precision data.

Dissolved Gases (Methane, Ethane, and Ethene) by RSK 175:
MS/MSD analyses were not performed. Refer to LCS results and field duplicate sample for accuracy and precision data.

USEPA Method 6020B:
MS/MSD analyses were performed on client and/or non-client samples within the analytical batches. The MS/MSD % Rs and RPD were acceptable and within laboratory control limit criteria for water samples with the following discussion:

- SDGs L1182886 and L1182898: Matrix spike analysis was performed on client sample MW-146-012420 (SDG L1182886) and manganese MS/MSD recoveries are laboratory qualified (V) to indicate that the sample amount is greater than four times the spike amount. Per Guidance, no action is necessary. Refer to LCS/LCSD results for accuracy and precision data.

General Chemistry (Alkalinity, Chloride, Sulfate, Nitrate, and TOC):

MS or MS/MSD analyses were performed on client and/or non-client samples within the analytical batches. In cases where MS/MSD spike analyses are not performed refer to LCS/LCSD or laboratory duplicate data for accuracy and precision data. The MS/MSD % Rs and RPDs are acceptable and within laboratory control limit criteria for water samples with the following discussions:

- SDG L1181608: Chloride, nitrate, and sulfate spike analysis were performed on non-client samples within the analytical batch. MS/MSD recoveries are laboratory qualified (E) because the spiked amount exceeded the upper limit of the calibration limit and sample matrix interference. No action is taken other than to note this. Refer to laboratory duplicate and laboratory control sample results for precision and accuracy data.

- SDG L1183293: Sulfate spike analysis was performed on a non-client sample within the analytical batch. MS/MSD recoveries for sulfate are laboratory qualified (E) because the spiked amount exceeded the upper limit calibration limit. No action is taken other than to note this.

Other Quality Control Issues

No laboratory quality control issues were identified in the laboratory report with the following discussions:

- Multiple SDGs: Selected sample narratives for alkalinity results indicate that several sample containers had some headspace and exposure to air may have impacted the reported results. No action was taken other than to note this.

- Electronic data deliverables (EDDs) for these SDGs were provided by the laboratory and data validator qualifiers were entered. In some cases, different chemical synonyms are used between the EDD and the hardcopy however associated Chemical Abstracts Service (CAS) numbers are provided in the EDD to confirm chemical identifications.

Compound Identification and Quantitation Limits

Results of the analyses were reported based on laboratory RDLs for all compounds. RDLs for selected compounds are elevated due to method-required dilutions. No action is taken other than to note this.

Gasoline and gasoline range organics are analyzed for via Volatile Organic Compounds (GC) by Washington State Method NWTPHGx (using a gas chromatograph/flame ionization detector (GC/FID)) and Pace reported gasoline range organic-NWTPH results. Several chlorinated VOC compounds (including cis-1,2-dichloroethene, trans-1,2-dichloroethene, trichloroethene, tetrachloroethene, and vinyl chloride) elute within the gasoline range organics (GRO) retention time range as specified by Washington State (detections falling between the toluene and dodecane range).

Non-petroleum organics (e.g. chlorinated VOC compounds) eluting within the gasoline range contribute to the GRO result and GRO results are likely biased high (J+). PES requested that Pace evaluate chromatograms associated with positive sample detections to confirm the potential presence of gasoline. Per PES's request Pace reviewed selected sample chromatograms against the gasoline standard chromatograms and assigned "no discernible petroleum pattern to GRO results associated with this Task. PES assigned an additional project level qualifier (Z) to GRO results when the chromatogram for the sample does not match a discernible petroleum pattern. Associated chromatograms and qualified samples for this Task are as follows:

Sample ID	Laboratory Identification	Gasoline Range Organic Result (µg/L)	DV Qualifier	Data Validation Comments	Pace Chromatogram Review Notes
MW-925-012420	L1182886-04	423	Z, J+	Elevated chlorinated VOCs detected within the GRO elution range.	No discernible petroleum pattern
MW-146-012420	L1182886-06	1,140	Z, J+	Elevated chlorinated VOCs detected within the GRO elution range	No discernible petroleum pattern
MW-147-012420	L1182886-07	1,200	Z, J+	Elevated chlorinated VOCs detected within the GRO elution range	No discernible petroleum pattern
MW-177-012420	L1182898-02	89,400	Z, J+	Elevated chlorinated VOCs detected within the GRO elution range	No discernible petroleum pattern
MW-180-012420	L1182898-03	186	Z, J+	Elevated chlorinated VOCs detected within the GRO elution range	No discernible petroleum pattern
MW-182-012720	L1183293-01	2,420	Z, J+	Elevated chlorinated VOCs detected within the GRO elution range	No discernible petroleum pattern
MW-181-012720	L1183293-05	9,090	Z, J+	Elevated chlorinated VOCs detected within the GRO elution range	No discernible petroleum pattern

Project level qualifiers have been included to the PES's project database (Epiphany) as (ZJ+). Washington State EIM valid values were reviewed. In this case no Washington State EIM valid value descriptor is ideal and the default estimated value (J) has been selected as the best match to qualify GRO (ZJ+) data.

Data Assessment

The laboratory data reported for this project were reviewed based on the criteria outlined in:

- USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review (USEPA, 2017); and
- USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017).

Data qualifiers are assigned and laboratory report pages with qualifiers are attached. All data, including qualified data, are judged to be acceptable for their intended use.

MEMORANDUM

TO: Project File **DATE:** February 19, 2020

FROM: Jessie Compeau

SUBJECT: Laboratory Data Validation Review

PROJECT: American Linen Data Validation

PROJECT #: 1413.001.02.501E

TASK: EIM Data Validation Level EPA2A for 1st Quarter 2020 – Groundwater Samples

LAB: Pace Sample Delivery Groups (SDGs): L1183332, L1183659, L1183749, and L1184164

Eighteen (18) groundwater samples (including one field duplicate sample) and two trip blanks were collected as part of the Remedial Investigation (RI) first quarter of 2020 groundwater sampling event at the Former American Linen Supply Site, in Seattle, Washington on January 27-29, 2020. The samples were shipped and delivered to Pace Lab Sciences (Pace) of Mount Juliet, TN for laboratory analysis. Selected samples were analyzed for the following:

- Volatile organic compounds (VOCs) by United States Environmental Protection Agency (USEPA) Method 8260D;
- Total petroleum hydrocarbons as gasoline (TPH-Gx) by NWTPH-Gx per analytical method stipulated by Washington State Department of Ecology;
- VOCs (dissolved gases – methane, ethane, and ethene) by EPA SOP RSK 175;
- Alkalinity by Method 2320 B-2011;
- Anions (chloride, nitrate, and sulfate) by USEPA Method 9056A;
- Total Organic Carbon (TOC) by USEPA Method 9060A; and
- Metals (iron and manganese) by USEPA Method 6020B.

Results are reported in multiple SDGs from Pace. Pace SDGs are reviewed in groups (less than 10 SDGs) for each data validation report. Group 4 analytical results are reported in SDGs L1183332, L1183659, L1183749, and L1184164. The quality assurance review of the laboratory data associated with Group 4 is summarized below.

DATA QUALIFICATIONS

Guidelines established by USEPA for a limited data validation review of analytical data along with Pace control limit criteria were used to validate the data. The comments presented in this memorandum refer to the laboratory's performance in meeting the quality control criteria outlined in the USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review (USEPA, 2017) and USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review

(USEPA, 2017). Following Guidelines, non-project-specific laboratory duplicates and matrix spike results were not evaluated as part of this data validation.

DATA VALIDATION

Completeness

All samples were collected and analyzed as requested with the following discussion:

- SDG L1184164: Dates of sample collection are not listed on the chain of custody for three samples and the trip blank (drop down arrow was not included). No action is taken other than to note that the dates of collection are included within the sample identification.

Sample Collection and Preservation

Samples were collected in laboratory-supplied sample containers preserved as appropriate for the individual analyses conducted. The samples were packed on ice in coolers and delivered by courier to the analytical laboratory. The laboratory reported that the coolers were received at a cooler temperature less than the recommended temperature preservation of 6°C. Samples were received in good condition. No data were qualified based upon the sample collection and preservation information.

Holding Times

USEPA Method 8260D:
All samples were analyzed for VOCs within the EPA recommended holding time of fourteen days for preserved waters from the date of collection. All holding time criteria are met.

NWTPH-Gx Method:
All samples were analyzed within the WA State recommended holding time of fourteen days for preserved waters from the date of sample collection. All holding time criteria are met.

Dissolved Gases (Methane, Ethane, and Ethene) by RSK 175:
All samples were analyzed within the WA State recommended holding time of fourteen days for preserved waters from the date of sample collection. All holding time criteria are met.

USEPA Method 6020B:
All samples were analyzed within the USEPA recommended holding time for iron and manganese of 180 days for preserved waters from the date of sample collection. All holding time criteria are met.

General Chemistry (Alkalinity, Chloride, Sulfate, Nitrate, and TOC):
All samples were analyzed within the USEPA recommended holding time for alkalinity (14 days), chloride (28 days), sulfate (28 days), and nitrate (48 hours), and TOC (28 days) for preserved waters from the date of sample collection. All holding time criteria are met.

Initial and Continuing Calibration

Calibration data for this project are not required for this deliverable however Pace's notes indicate the following:

- Multiple SDGs - *USEPA Method 8260D:* Continuing calibration verification (CCV) issues were noted by Pace for multiple compounds associated with analytical batches in each SDG. These compounds are qualified by the laboratory "J0" to indicate that percent difference CCV is outside of laboratory acceptance criteria. **Associated sample results with laboratory qualified (J0) results are estimated and qualified (J/UJ).**

Method Blank Results

USEPA Method 8260D:
Laboratory method blanks were included with the analytical batches per method requirement. The target analytes were not detected in the method blanks at or above the reporting detection limits (RDLs) with the following exceptions:

- SDGs L1183749 and L1184164 – Analytical batch WG1420688: A low level of 1,2,4-trimethylbenzene is detected in the method blank. No action is taken for this compound as it is not detected in the associated samples.

NWTPH-Gx Method:
Laboratory method blanks were included with the analytical batches per method requirement. The target analyte (gasoline) was not detected in the method blanks at or above the RDLs with the following exceptions:

- SDG L1183332 – Analytical batch WG1418226: A low level gasoline concentration is detected in the method blank. **The associated gasoline range organic (GRO) detection in sample MW-183-012720 is below the RDL and qualified as not detected (U) due to method contamination.**

- SDG L1183659 – Analytical batch WG1419920: A low level gasoline concentration is detected in the method blank. **The associated GRO detection in sample MW-176-012820 is below the RDL and qualified as not detected (U) due to method or trip blank contamination.**

- SDG L1183749 – Analytical batch WG1419920: A low level gasoline concentration is detected in the method blank. **The associated GRO detections in samples MW-926-012820, MW-175-012820, MW-161-012820, and MW-167-012820 are below the RDL and qualified as not detected (U) due to method blank contamination.**

- SDG L1184164 – Analytical batch WG1419920: A low level gasoline concentration is detected in the method blank. **The associated GRO detections in samples MW-187-012920, MW-160-012920, and MW-188-012920 are below the RDL and qualified as not detected (U) due to method or trip blank contamination.**

Dissolved Gases (Methane, Ethane, and Ethene) by RSK 175:
Laboratory method blanks were included with the analytical batches per method requirement. The target analytes (dissolved gases) are not detected in the method blanks at or above the RDLs.

USEPA Method 6020B and General Chemistry (Alkalinity, Chloride, Sulfate, Nitrate, and TOC):
Laboratory method blanks were included with the analytical batches per method requirement. The target analytes were detected in the method blanks below the RDLs. Per Guidance, no action is taken for blank detections less than the RDL when associated sample detections are greater than the RDL. General chemistry and metal blank detections are shown below:

SDG	Batch	Method	Analyte	Method Blank Result	Qualifier	RDL	Units	Associated Result(s) Qualified
L1183332	WG1418552	SM2320B	Alkalinity as CaCO3, Total	6840	J	20000	µg/L	NO
L1183332	WG1418181	9056A	Chloride	417	J	1000	µg/L	NO
L1183332	WG1418181	9056A	Sulfate	569	J	5000	µg/L	**YES**
L1183332	WG1419929	9060A	TOC	356	J	1000	µg/L	NO
L1183659	WG1419044	SM2320B	Alkalinity as CaCO3, Total	3870	J	20000	µg/L	NO
L1183659	WG1420575	9060A	TOC	488	J	1000	µg/L	NO
L1183749	WG1419044	SM2320B	Alkalinity as CaCO3, Total	3870	J	20000	µg/L	NO
L1183749	WG1420575	9060A	TOC	488	J	1000	µg/L	NO
L1184164	WG1419673	SM2320B	Alkalinity as CaCO3, Total	4030	J	20000	µg/L	NO
L1184164	WG1421496	9060A	TOC	361	J	1000	µg/L	NO
L1184164	WG1419838	6020B	Manganese	0.279	J	5.00	µg/L	NO

Target analytes were detected in method blanks at low levels with no impact to the associated samples with the following exception:

- SDG L1183332 – Analytical batch WG1418181: A low level of sulfate is detected in the method blank. **Sample MW-183-012720 sulfate detection is below the RDL and is qualified as not detected (U).**

Trip Blank Results

USEPA Method 8260D and NWTPH-Gx:
Two trip blanks were collected and analyzed. The target analytes (gasoline and VOCs) were not detected in the trip blanks at or above the RDLs with the following exceptions:

- SDG L1183659: Low levels of gasoline and acetone are detected in the trip blank (TB-012820). **A low level of acetone is detected in the associated sample MW-173-012820 and is qualified as not detected (U) due to trip blank contamination. The associated GRO detection in sample MW-176-012820 is below the RDL and qualified as not detected (U) due to method or trip blank contamination.**

- SDG L1184164 – Analytical batch WG1419920: A low level gasoline concentration is detected in the trip and associated method blank. **The associated GRO detections in**

samples MW-187-012920, MW-160-012920, and MW-188-012920 are below the RDL and qualified as not detected (U) due to method or trip blank contamination.

Field, Rinsate, or Equipment Blank Results

All Analytical Methods:
A field, rinsate, or equipment blank was not collected.

Field Duplicate Analyses

Field duplicate sample pair is identified as follows:

- Samples MW-176-012820 (SDG L1183659) and MW-926-012820 (SDG L1183749)

Target analyte results are comparable and within a relative percent difference (RPD) of 30% (± 1x RDL for groundwater results <5X the RDL) for the field duplicate pair.

Laboratory Duplicate Analyses

USEPA Method 8260D:
Laboratory duplicate samples were not analyzed. Refer to laboratory control sample/sample duplicate (LCS/LCSD) results for precision data.

NWTPH-Gx Method:
Laboratory duplicate samples were not analyzed. Refer to field duplicate results for precision data.

Dissolved Gases (Methane, Ethane, and Ethene) by RSK 175:
Laboratory duplicate sample analyses were performed on client and non-client samples within the analytical batches. The primary/duplicate RPDs for dissolved gas analyses are within the laboratory control limit of 20%.

USEPA Method 6020B:
Laboratory duplicate samples were not analyzed. Refer to LCS/LCSD or MS/MSD results for precision data.

General Chemistry (Alkalinity, Chloride, Sulfate, Nitrate, and TOC):
Laboratory duplicate sample analyses were performed on client samples and/or on non-client samples. The primary/duplicate RPDs for general chemistry parameters are within the laboratory control RPD limits or ± 1x RDL for groundwater results <5X the RDL.

Surrogate Recoveries

USEPA Method 8260D:
The surrogate recovery results for the samples, laboratory control samples, and the blanks are within the laboratory surrogate control limits for all the analyses.

NWTPH-Gx Method:

The surrogate recovery results for the samples, laboratory control samples, and the blanks are within the laboratory surrogate control limits for all analyses.

Laboratory Control Samples

USEPA Method 8260D:
Laboratory control sample/laboratory control sample duplicate (LCS/LCSD) or laboratory control sample (LCS) were analyzed by USEPA Method 8260D method. The LCS % Rs or LCS/LCSD % Rs and RPDs for the all target compounds are within the laboratory control criteria for waters with the following discussion:

- SDG L1183332 - Analytical batch WG1418843: LCS/LCSD % recoveries for iodomethane are within laboratory acceptance criteria but were recovered wide with an elevated RPD and laboratory qualified (J3). No action is taken other than to note that the recoveries are within criteria.

- SDGs L1183749 and L1184164 - Analytical batch WG1420688: LCS % recovery for carbon tetrachloride, 1,2-dibromo-3-chloropropane, hexachloro-1,3-butadiene, naphthalene, and 1,1,1-trichloroethane are above laboratory acceptance criteria and laboratory qualified (J4). No action is needed because these compounds are not detected in the associated samples.

NWTPH-Gx Method:
The LCS % Rs for the target compound (gasoline) are within the laboratory control criteria for waters. Precision data are not provided for SDGs L1183332, L1183659, L1183749, and L1184164. Refer to field duplicate results for precision data.

Dissolved Gases (Methane, Ethane, and Ethene) by RSK 175:
The LCS/LCSD % Rs and RPDs for the target compound (dissolved gases) are within the laboratory control criteria for waters.

USEPA Method 6020B:
The LCS/LCSD % Rs and RPDs for the target compound (iron and manganese) are within the laboratory control criteria for waters.

General Chemistry (Alkalinity, Chloride, Sulfate, Nitrate, and TOC):
The LCS % Rs for general chemistry parameters are within the laboratory control criteria for waters.

Matrix Spike/Matrix Spike Duplicates

USEPA Method 8260D:
Matrix spike/matrix spike duplicate (MS/MSD) analyses were not performed. Refer to LCS/LCSD results for accuracy and precision data.

NWTPH-Gx Method:
MS/MSD analyses were not performed. Refer to LCS and field duplicate results for accuracy and precision data.

Dissolved Gases (Methane, Ethane, and Ethene) by RSK 175:
MS/MSD analyses were not performed. Refer to LCS/LCSD results and field duplicate sample for accuracy and precision data.

USEPA Method 6020B:
MS/MSD analyses were performed on client and/or non-client samples within the analytical batches. The MS/MSD % Rs and RPD were acceptable and within laboratory control limit criteria for water samples with the following discussion:

- SDG L1184164: Manganese spike analysis was performed on a non-client sample within the analytical batch. MS/MSD recoveries are laboratory qualified (V) because the sample amount is greater than four times the spiked amount. Per Guidance, no action is needed. Refer to laboratory duplicate and laboratory control sample results for precision and accuracy data.

General Chemistry (Alkalinity, Chloride, Sulfate, Nitrate, and TOC):
MS or MS/MSD analyses were performed on client and/or non-client samples within the analytical batches. In cases where MS/MSD spike analyses are not performed refer to LCS/LCSD or laboratory duplicate data for accuracy and precision data. The MS/MSD % Rs and RPDs are acceptable and within laboratory control limit criteria for water samples with the following discussions:

- SDG L1183332: Sulfate spike analysis was performed on client sample W-MW-01-012720. MS/MSD recoveries are laboratory qualified (E) because the spiked amount exceeded the upper limit of the calibration limit. No action is taken other than to note this. Refer to laboratory duplicate and laboratory control sample results for precision and accuracy data.

- SDG L1184164: Sulfate spike analysis was performed on a non-client sample within the analytical batch. MS/MSD recoveries are laboratory qualified (E, J6) because the spiked amount exceeded the upper limit of the calibration limit and sample matrix interference. No action is taken other than to note that this is a non-client sample. Refer to laboratory duplicate and laboratory control sample results for precision and accuracy data.

Other Quality Control Issues

No laboratory quality control issues were identified in the laboratory report with the following discussions:

- Multiple SDGs: Selected sample narratives for alkalinity results indicate that several sample containers had some headspace and exposure to air may have impacted the reported results. No action was taken other than to note this.

- Electronic data deliverables (EDDs) for these SDGs were provided by the laboratory and data validator qualifiers were entered. In some cases, different chemical synonyms are used between the EDD and the hardcopy however associated Chemical Abstracts Service (CAS) numbers are provided in the EDD to confirm chemical identifications.

Compound Identification and Quantitation Limits

Results of the analyses were reported based on laboratory RDLs for all compounds. RDLs for selected compounds are elevated due to method-required dilutions. No action is taken other than to note this.

Gasoline and gasoline range organics are analyzed for via Volatile Organic Compounds (GC) by Washington State Method NWTPHGx (using a gas chromatograph/flame ionization detector (GC/FID)) and Pace reported gasoline range organic-NWTPH results. Several chlorinated VOC compounds (including cis-1,2-dichloroethene, trans-1,2-dichloroethene, trichloroethene, tetrachloroethene, and vinyl chloride) elute within the gasoline range organics (GRO) retention time range as specified by Washington State (detections falling between the toluene and dodecane range).

Non-petroleum organics (e.g. chlorinated VOC compounds) eluting within the gasoline range contribute to the GRO result and GRO results are likely biased high (J+). PES requested that Pace evaluate chromatograms associated with positive sample detections to confirm the potential presence of gasoline. Per PES's request Pace reviewed selected sample chromatograms against the gasoline standard chromatograms and assigned "no discernible petroleum pattern" to GRO results associated with this Task. PES assigned an additional project level qualifier (Z) to GRO results when the chromatogram for the sample does not match a discernible petroleum pattern. Associated chromatograms and qualified samples for this Task are as follows:

Sample ID	Laboratory Identification	Gasoline Range Organic Result (µg/L)	DV Qualifier	Data Validation Comments	Pace Chromatogram Review Notes
MW-179-012720	L1183332-01	501	Z, J+	Elevated chlorinated VOCs detected within the GRO elution range.	No discernible petroleum pattern
MW-184-012720	L1183332-04	462	Z, J+	Elevated chlorinated VOCs detected within the GRO elution range	No discernible petroleum pattern
MW107-012820	L1183749-03	1,890	Z, J+	Elevated chlorinated VOCs detected within the GRO elution range	No discernible petroleum pattern
MW-174-012820	L1183749-04	531	Z, J+	Chlorinated VOCs detected within the GRO elution range	No discernible petroleum pattern

Project level qualifiers have been included to the PES's project database (Epiphany) as (ZJ+). Washington State EIM valid values were reviewed. In this case no Washington State EIM valid value descriptor is ideal and the default estimated value (J) has been selected as the best match to qualify GRO (ZJ+) data.

Data Assessment

The laboratory data reported for this project were reviewed based on the criteria outlined in:

- USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review (USEPA, 2017); and
- USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017).

Data qualifiers are assigned and laboratory report pages with qualifiers are attached. All data, including qualified data, are judged to be acceptable for their intended use.

MEMORANDUM

TO: Project File **DATE:** February 19, 2020

FROM: Jessie Compeau

SUBJECT: Laboratory Data Validation Review

PROJECT: American Linen Data Validation

PROJECT #: 1413.001.02.501E

TASK: EIM Data Validation Level EPA2A for 1st Quarter 2020 – Groundwater Samples

LAB: Pace Sample Delivery Groups (SDGs): L1184195, L1184637, and L1184934

Eight (8) groundwater samples and two trip blanks were collected as part of the Remedial Investigation (RI) first quarter of 2020 groundwater sampling event at the Former American Linen Supply Site, in Seattle, Washington on January 29-31, 2020. The samples were shipped and delivered to Pace Lab Sciences (Pace) of Mount Juliet, TN for laboratory analysis. Selected samples were analyzed for the following:

- Volatile organic compounds (VOCs) by United States Environmental Protection Agency (USEPA) Method 8260D;
- Total petroleum hydrocarbons as gasoline (TPH-Gx) by NWTPH-Gx per analytical method stipulated by Washington State Department of Ecology;
- VOCs (dissolved gases – methane, ethane, and ethene) by EPA SOP RSK 175;
- Alkalinity by Method 2320 B-2011;
- Anions (chloride, nitrate, and sulfate) by USEPA Method 9056A;
- Total Organic Carbon (TOC) by USEPA Method 9060A; and
- Metals (iron and manganese) by USEPA Method 6020B.

Results are reported in multiple SDGs from Pace. Pace SDGs are reviewed in groups (less than 10 SDGs) for each data validation report. Group 5 analytical results are reported in SDGs L1184195, L1184637, and L1184934. The quality assurance review of the laboratory data associated with Group 5 is summarized below.

DATA QUALIFICATIONS

Guidelines established by USEPA for a limited data validation review of analytical data along with Pace control limit criteria were used to validate the data. The comments presented in this memorandum refer to the laboratory's performance in meeting the quality control criteria outlined in the USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review (USEPA, 2017) and USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017). Following Guidelines, non-project-specific laboratory duplicates and matrix spike results were not evaluated as part of this data validation.

DATA VALIDATION

Completeness

All samples were collected and analyzed as requested with the following discussion:

- SDG L1184195: Pace's non-conformance form indicates that the one of eight VOA vials for sample MW104-012920 was received broken. PES indicated that Pace should continue to analyze the remaining vials as requested.

- SDG L1184637: Sample MW-166-013020 results for manganese and iron are not reported in the report hardcopy. Per PES's request the report was revised on February 19, 2020 to include these results.

Sample Collection and Preservation

Samples were collected in laboratory-supplied sample containers preserved as appropriate for the individual analyses conducted. The samples were packed on ice in coolers and delivered by courier to the analytical laboratory. The laboratory reported that the coolers were received at a cooler temperature less than the recommended temperature preservation of 6°C. Samples were received in good condition. No data were qualified based upon the sample collection and preservation information.

Holding Times

USEPA Method 8260D:
All samples were analyzed for VOCs within the EPA recommended holding time of fourteen days for preserved waters from the date of collection. All holding time criteria are met.

NWTPH-Gx Method:
All samples were analyzed within the WA State recommended holding time of fourteen days for preserved waters from the date of sample collection. All holding time criteria are met.

Dissolved Gases (Methane, Ethane, and Ethene) by RSK 175:
All samples were analyzed within the WA State recommended holding time of fourteen days for preserved waters from the date of sample collection. All holding time criteria are met.

USEPA Method 6020B:
All samples were analyzed within the USEPA recommended holding time for iron and manganese of 180 days for preserved waters from the date of sample collection. All holding time criteria are met.

General Chemistry (Alkalinity, Chloride, Sulfate, Nitrate, and TOC):
All samples were analyzed within the USEPA recommended holding time for alkalinity (14 days), chloride (28 days), sulfate (28 days), and nitrate (48 hours), and TOC (28 days) for preserved waters from the date of sample collection. All holding time criteria are met.

Initial and Continuing Calibration

Calibration data for this project are not required for this deliverable however Pace's notes indicate the following:

- Multiple SDGs - *USEPA Method 8260D:* Continuing calibration verification (CCV) issues were noted by Pace for multiple compounds associated with analytical batches in each SDG. These compounds are qualified by the laboratory "J0" to indicate that percent difference CCV is outside of laboratory acceptance criteria. **Associated sample results with laboratory qualified (J0) results are estimated and qualified (J/UJ).**

Method Blank Results

USEPA Method 8260D:
Laboratory method blanks were included with the analytical batches per method requirement. The target analytes were not detected in the method blanks at or above the reporting detection limits (RDLs) with the following exceptions:

- SDG L1184195 – Analytical batch WG1420688: A low level of 1,2,4-trimethylbenzene is detected in the method blank. No action is taken for this compound as it is not detected in the associated samples.

- SDGs L1184195 and L1184637 – Analytical batch WG1420746: A low level of naphthalene is detected in the method blank. No action is taken for this compound as it is not detected in the associated samples.

- SDGs L1184934 – Analytical batch WG1421589: A low level of naphthalene is detected in the method blank. **Naphthalene was detected in sample MW-168-013120 below the RDL and qualified as not detected (U) due to method contamination.**

NWTPH-Gx Method:
Laboratory method blanks were included with the analytical batches per method requirement. The target analyte (gasoline) was not detected in the method blanks at or above the RDLs with the following exceptions:

- SDG L1184195 – Analytical batch WG1420077: A low level gasoline concentration is detected in the method blank. **The associated gasoline range organic (GRO) detection in sample MW125-012920, MW-159-012920, and MW-186-012920 is below the RDL and qualified as not detected (U) due to method contamination.**

Dissolved Gases (Methane, Ethane, and Ethene) by RSK 175:
Laboratory method blanks were included with the analytical batches per method requirement. The target analytes (dissolved gases) are not detected in the method blanks at or above the RDLs.

USEPA Method 6020B and General Chemistry (Alkalinity, Chloride, Sulfate, Nitrate, and TOC):
Laboratory method blanks were included with the analytical batches per method requirement. The target analytes were detected in the method blanks below the RDLs. Per Guidance, no

action is taken for blank detections less than the RDL when associated sample detections are greater than the RDL. General chemistry and metal blank detections are shown below:

SDG	Batch	Method	Analyte	Method Blank Result	Qualifier	RDL	Units	Associated Result(s) Qualified
L1184195	WG1419673	SM2320B	Alkalinity as CaCO3, Total	4030	J	20000	µg/L	NO
L1184195	WG1421496	9060A	TOC	361	J	1000	µg/L	NO
L1184195	WG1419838	6020B	Manganese	0.279	J	5.00	µg/L	NO
L1184637	WG1420302	SM2320B	Alkalinity as CaCO3, Total	4530	J	20000	µg/L	NO
L1184637	WG1420280	9056A	Chloride	354	J	1000	µg/L	NO
L1184637	WG1420280	9056A	Sulfate	486	J	5000	µg/L	NO
L1184637	WG1421501	9060A	TOC	281	J	1000	µg/L	NO
L1184637	WG1420188	6020B	Manganese	0.433	J	5.00	µg/L	NO
L1184934	WG1421599	SM2320B	Alkalinity as CaCO3, Total	3130	J	20000	µg/L	NO
L1184934	WG1422742	9060A	TOC	320	J	1000	µg/L	NO
L1184934	WG1420932	6020B	Manganese	0.486	J	5.00	µg/L	NO

Target analytes were detected in method blanks at low levels with no impact to the associated samples with the following exception:

- SDG L1184637 – Analytical batch WG1420280: A low level of sulfate (486 µg/L) is detected in the method blank. Sample MW124-013020 sulfate detection is 2,120 µg/L and is also below the RDL (5,000 µg/L). *In this case, using professional judgement, no action is taken other than to note this.*

Trip Blank Results

USEPA Method 8260D and NWTPH-Gx:
Two trip blanks were collected and analyzed. The target analytes (gasoline and VOCs) were not detected in the trip blanks at or above the RDLs with the following exceptions:

- SDG L1184637: A low level of acetone is detected in the trip blank (TB-013020). **A low level of acetone is detected in the associated samples MW124-013020, MW-166-013020, and MW-165-013020 are qualified as not detected (U) due to trip blank contamination.**

- SDG L1183659: A low level of acetone is detected in the trip blank (TB-013120). **A low level of acetone is detected in the associated sample MW-168-013120 and is qualified as not detected (U) due to trip blank contamination.**

Field, Rinsate, or Equipment Blank Results

All Analytical Methods:
A field, rinsate, or equipment blank was not collected.

Field Duplicate Analyses

Field duplicates were not collected.

Laboratory Duplicate Analyses

USEPA Method 8260D:
Laboratory duplicate samples were not analyzed. Refer to laboratory control sample/sample duplicate (LCS/LCSD) results for precision data.

NWTPH-Gx Method:
Laboratory duplicate samples were not analyzed. Refer to field duplicate results for precision data.

Dissolved Gases (Methane, Ethane, and Ethene) by RSK 175:
Laboratory duplicate sample analyses were performed on client and non-client samples within the analytical batches. The primary/duplicate RPDs for dissolved gas analyses are within the laboratory control limit of 20%.

USEPA Method 6020B:
Laboratory duplicate samples were not analyzed. Refer to LCS/LCSD or MS/MSD results for precision data.

General Chemistry (Alkalinity, Chloride, Sulfate, Nitrate, and TOC):
Laboratory duplicate sample analyses were performed on client samples and/or on non-client samples. The primary/duplicate RPDs for general chemistry parameters are within the laboratory control RPD limits or ± 1x RDL for groundwater results <5X the RDL with the following discussion:

- SDG L1184637: Sulfate laboratory duplicate analysis was performed on a non-client sample within the analytical batch. Duplicate results are laboratory qualified (J, P1) because the results are below the RDL. No action is taken other than to note that this is a non-client sample. Refer to laboratory duplicate sample results for precision data.

- SDG L1184934: Nitrate laboratory duplicate analysis was performed on a non-client sample within the analytical batch. Duplicate results are laboratory qualified (J3) because the RPD is greater than laboratory acceptance criteria. No action is taken other than to note that this is a non-client sample. Refer to laboratory duplicate sample results for precision data.

Surrogate Recoveries

USEPA Method 8260D:
The surrogate recovery results for the samples, laboratory control samples, and the blanks are within the laboratory surrogate control limits for all the analyses.

NWTPH-Gx Method:

The surrogate recovery results for the samples, laboratory control samples, and the blanks are within the laboratory surrogate control limits for all analyses.

Laboratory Control Samples

USEPA Method 8260D:
Laboratory control sample/laboratory control sample duplicate (LCS/LCSD) or laboratory control sample (LCS) were analyzed by USEPA Method 8260D method. The LCS % Rs or LCS/LCSD % Rs and RPDs for the all target compounds are within the laboratory control criteria for waters with the following discussions:

- SDG L1184195 - Analytical batch WG1420688: LCS % recovery for carbon tetrachloride, 1,2-dibromo-3-chloropropane, hexachloro-1,3-butadiene, naphthalene, and 1,1,1-trichloroethane are above laboratory acceptance criteria and laboratory qualified (J4). No action is needed because these compounds are not detected in the associated samples.

- SDG L1184934 - Analytical batch WG1421075: LCS % recovery for bromochloromethane and cis-1,2-dichloroethene are above laboratory acceptance criteria and laboratory qualified (J4). No action is needed because these compounds are not detected in the associated samples. LCS/LCSD % recoveries for bromomethane are within laboratory acceptance criteria but were recovered wide with an elevated RPD and laboratory qualified (J3). No action is taken other than to note that the recoveries are within criteria.

- SDG L1184934 - Analytical batch WG1421589: LCS/LCSD % recoveries for 1,2-Dibromo-3-Chloropropane are within laboratory acceptance criteria but were recovered wide with an elevated RPD and laboratory qualified (J3). No action is taken other than to note that the recoveries are within criteria.

NWTPH-Gx Method:
The LCS/LCSD % Rs and RPDs for the target compound (gasoline) are within the laboratory control criteria for waters. Precision data are not provided for SDGs L1184637. No action was taken other than to note that precision data are provide for the remaining SDGs.

Dissolved Gases (Methane, Ethane, and Ethene) by RSK 175:
The LCS/LCSD % Rs and RPDs for the target compound (dissolved gases) are within the laboratory control criteria for waters.

USEPA Method 6020B:
The LCS/LCSD % Rs and RPDs for the target compound (iron and manganese) are within the laboratory control criteria for waters.

General Chemistry (Alkalinity, Chloride, Sulfate, Nitrate, and TOC):
The LCS % Rs for general chemistry parameters are within the laboratory control criteria for waters.

Matrix Spike/Matrix Spike Duplicates

USEPA Method 8260D:
Matrix spike/matrix spike duplicate (MS/MSD) analyses were not performed. Refer to LCS/LCSD results for accuracy and precision data.

NWTPH-Gx Method:
MS/MSD analyses was performed on a non-client sample within one of the analytical batches. The MS/MSD % Rs and RPD were acceptable and within laboratory control limit criteria for water samples.

Dissolved Gases (Methane, Ethane, and Ethene) by RSK 175:
MS/MSD analyses were not performed. Refer to LCS/LCSD results and field duplicate sample for accuracy and precision data.

USEPA Method 6020B:
MS/MSD analyses were performed on client and/or non-client samples within the analytical batches. The MS/MSD % Rs and RPD were acceptable and within laboratory control limit criteria for water samples with the following discussion:

- SDG L1184195: Manganese spike analysis was performed on a non-client sample within the analytical batch. MS/MSD recoveries are laboratory qualified (V) because the sample amount is greater than four times the spiked amount. Per Guidance, no action is needed. Refer to laboratory duplicate and laboratory control sample results for precision and accuracy data.

- SDG L1184637: Manganese and iron spike analysis were performed on sample MW-166-013020. MS/MSD recoveries are laboratory qualified (V) because the sample amount is greater than four times the spiked amount. Per Guidance, no action is needed. Refer to laboratory duplicate and laboratory control sample results for precision and accuracy data.

General Chemistry (Alkalinity, Chloride, Sulfate, Nitrate, and TOC):
MS or MS/MSD analyses were performed on client and/or non-client samples within the analytical batches. In cases where MS/MSD spike analyses are not performed refer to LCS/LCSD or laboratory duplicate data for accuracy and precision data. The MS/MSD % Rs and RPDs are acceptable and within laboratory control limit criteria for water samples with the following discussion:

- SDG L1184195: Sulfate spike analysis was performed on a non-client sample within the analytical batch. MS/MSD recoveries are laboratory qualified (E, J6) because the spiked amount exceeded the upper limit of the calibration limit and sample matrix interference. No action is taken other than to note that this is a non-client sample. Refer to laboratory duplicate and laboratory control sample results for precision and accuracy data.

Other Quality Control Issues

No laboratory quality control issues were identified in the laboratory report with the following discussions:

- Multiple SDGs: Selected sample narratives for alkalinity results indicate that several sample containers had some headspace and exposure to air may have impacted the reported results. No action was taken other than to note this.

- Electronic data deliverables (EDDs) for these SDGs were provided by the laboratory and data validator qualifiers were entered. In some cases, different chemical synonyms are used between the EDD and the hardcopy however associated Chemical Abstracts Service (CAS) numbers are provided in the EDD to confirm chemical identifications.

Compound Identification and Quantitation Limits

Results of the analyses were reported based on laboratory RDLs for all compounds. RDLs for selected compounds are elevated due to method-required dilutions. No action is taken other than to note this.

Gasoline and gasoline range organics are analyzed for via Volatile Organic Compounds (GC) by Washington State Method NWTPHGx (using a gas chromatograph/flame ionization detector (GC/FID)) and Pace reported gasoline range organic-NWTPH results. Several chlorinated VOC compounds (including cis-1,2-dichloroethene, trans-1,2-dichloroethene, trichloroethene, tetrachloroethene, and vinyl chloride) elute within the gasoline range organics (GRO) retention time range as specified by Washington State (detections falling between the toluene and dodecane range).

Non-petroleum organics (e.g. chlorinated VOC compounds) eluting within the gasoline range contribute to the GRO result and GRO results are likely biased high (J+). PES requested that Pace evaluate chromatograms associated with positive sample detections to confirm the potential presence of gasoline. Per PES's request Pace reviewed selected sample chromatograms against the gasoline standard chromatograms and assigned "no discernible petroleum pattern" to GRO results associated with this Task. PES assigned an additional project level qualifier (Z) to GRO results when the chromatogram for the sample does not match a discernible petroleum pattern. Associated chromatograms and qualified samples for this Task are as follows:

Sample ID	Laboratory Identification	Gasoline Range Organic Result (µg/L)	DV Qualifier	Data Validation Comments	Pace Chromatogram Review Notes
MW104-012920	L1184195-04	447	Z, J+	Elevated chlorinated VOCs detected within the GRO elution range.	No discernible petroleum pattern

Project level qualifiers have been included to the PES's project database (Epiphany) as (ZJ+). Washington State EIM valid values were reviewed. In this case no Washington State EIM valid value descriptor is ideal and the default estimated value (J) has been selected as the best match to qualify GRO (ZJ+) data.

Data Assessment

The laboratory data reported for this project were reviewed based on the criteria outlined in:

- USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review (USEPA, 2017); and
- USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017).

Data qualifiers are assigned and laboratory report pages with qualifiers are attached. All data, including qualified data, are judged to be acceptable for their intended use.

MEMORANDUM

TO: Project File **DATE:** February 19, 2019

FROM: Jessie Compeau

SUBJECT: Laboratory Data Validation Review

PROJECT: American Linen Data Validation

PROJECT #: 1413.001.02.501F

TASK: EIM Data Validation Level EPA2A for January 2020 – Soil Vapor Samples

LAB: Pace Sample Delivery Groups (SDG): L1183594

Two (2) soil vapor samples (including one field duplicate) were collected as part of the ongoing sampling event at the Former American Linen Supply Site, in Seattle, Washington on January 27, 2020. The samples were shipped and delivered to Pace Lab Sciences (Pace) of Mount Juliet, TN for laboratory analysis. Samples were analyzed for the following:

- Volatile organic compounds (VOCs) by United States Environmental Protection Agency (USEPA) Method TO-15

The quality assurance review of the sample data is summarized below.

DATA QUALIFICATIONS

Guidelines established by USEPA for a limited data validation review of analytical data along with PACE control limit criteria were used to validate the data. The comments presented in this memorandum refer to the laboratory's performance in meeting the quality control criteria outlined in the USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review (USEPA, 2017). Following Guidelines, non-project-specific laboratory duplicates and matrix spike results were not evaluated as part of this data validation.

DATA VALIDATION

Completeness

All samples were collected and analyzed as requested.

Sample Collection and Preservation

The laboratory supplied a Summa Canister ^{TM} canister (1Liter) for the air sample. The samples were shipped, delivered by FedEx, and received in good condition by the laboratory. The sample was collected, handled, and delivered in an appropriate manner. No data qualifications were warranted based upon sampling techniques.

Holding Times

The analyses for VOCs by Method TO-15 were performed within the 30-day recommended holding time limit for the air samples collected in Summa canisters. All holding time criteria are met.

Initial and Continuing Calibration

Initial and continuing calibration data for this project are retained by the laboratory and available for review if necessary. Case narrative and laboratory notes do not indicate that there are any issues with calibration.

Method Blank Results

A laboratory method blank is included with the analytical batch per method requirement. The target analytes were not detected in the method blank at or above the RDLs with one exception:

- A low level of propene was detected in the method blank. No action is necessary is this was not detected in the associated samples.

Trip Blank Results

A trip blank was not required for the VOCs by TO-15 analyses. No action is taken other than to note this.

Field Duplicate Analyses

Field duplicate sample pair is as follows:

- Samples SV01-012720 and SV01-012720-D

Target analyte results are comparable and within a relative percent difference (RPD) of 30% for the field duplicate pair with the following exceptions:

- Samples SV01-012720 and SV01-012720-D – Multiple VOC results are not comparable with RPDs greater than 30% (or for results < 5X RDL the absolute difference < 1X RDL). **Field duplicate results for acetone, chloromethane, cyclohexane, 1,1-dichloroethane, ethanol, hexane, toluene, and 1,1,1-trichloroethane are estimated and qualified (UJ/J).**

Laboratory Duplicate/Replicate Analyses

A laboratory replicate was not performed. Refer to the Laboratory Control Sample section for additional information.

Surrogate Recoveries

The surrogate percent recovery (% R) results for the VOCs by TO-15 air samples, method blank, and laboratory control samples are within the laboratory surrogate control limits of 60 -140% R. No data qualifications were warranted.

Laboratory Control Samples

A laboratory control sample/laboratory control sample duplicate (LCS/LCSD) were analyzed for the VOCs by TO-15 along with each analytical batch. The LCS/LCSD recovery and relative percent differences (RPDs) for all control compounds met laboratory control limit criteria.

Matrix Spike/Matrix Spike Duplicates

A matrix spike/matrix spike duplicate (MS/MSD) is not required for the VOCs by TO-15 method.

Other Quality Control Issues

No laboratory quality control issues were identified in the laboratory report with the following discussion:

- Electronic data deliverables (EDDs) for these SDGs were provided by the laboratory and data validator qualifiers were entered. In some cases, different chemical synonyms are used between the EDD and the hardcopy however associated Chemical Abstracts Service (CAS) numbers are provided in the EDD to confirm chemical identifications.

Quantitation Limits

Results of the VOCs by TO-15 analysis are reported based on laboratory MRLs (assuming standard temperature and pressure is equal to 24.45) and reported in units of ppbv and $\mu g/m^3$.

The RDLs indicate the minimum quantity of a target analyte that can be confidently determined by the reference method. The RDLs were acceptable for the project; therefore, no data qualifications were warranted.

Data Assessment

The laboratory data reported for this project were reviewed based on the criteria outlined in:

- USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review (USEPA, 2017).

Data qualifiers are assigned and laboratory report pages with qualifiers are attached. All data, including qualified data, are judged to be acceptable for their intended use.

MEMORANDUM

TO: Project File **DATE:** April 20, 2020

FROM: Jessie Compeau

SUBJECT: Laboratory Data Validation Review

PROJECT: American Linen Data Validation

PROJECT #: 1413.001.05.202

TASK: EIM Data Validation Level EPA2A for March 2020 Soil Boring Samples/Interim Action 2020

LAB: Pace Analytical (Pace) Sample Delivery Groups: L1200814 and L1200909

Thirty-seven (37) soil samples including two field duplicates, and two trip blank samples were collected as an individual event within the Interim Action effort at the Former American Linen Supply Site, in Seattle, Washington on March 17 and 18, 2020. The samples were delivered to Pace Analytical (Pace) of Mount Juliet, Tennessee for laboratory analysis. Selected samples were analyzed for the following parameters:

- Volatile organic compounds (VOCs) by United States Environmental Protection Agency (USEPA) Method 8260D;
- Total petroleum hydrocarbons as gasoline (TPH-Gx) by NWTPH-Gx and TPH as diesel and heavy oil (TPH-Dx) by NWTPH-Dx per analytical methods stipulated by Washington State Department of Ecology; and
- Total Solids by USEPA Method 2540 G-2011.

The quality assurance review of the laboratory data associated with SDGs L1200814 and L1200909 are summarized below.

DATA QUALIFICATIONS

Guidelines established by USEPA for review of analytical data were used to validate the data. The comments presented in this memorandum refer to the laboratory's performance in meeting the quality control criteria outlined in the USEPA Contract Laboratory Program National Functional Guidelines for Organic Superfund Methods Data Review (USEPA, 2017). Following Guidelines, non-project-specific laboratory duplicates and matrix spike results were not evaluated as part of this data validation.

DATA VALIDATION

Sample Receipt, Preservation and Handling

The samples were delivered to the project laboratory in coolers under standard chain-of-custody protocols. Review of Pace's notes on the chain of custody form indicates that all samples were received in good condition below the recommended preservation temperature 6.0°C. No data qualifications were assigned due to sample receipt or temperature preservation issues.

Holding Times

USEPA Method 8260D:
All samples were analyzed for VOCs within the USEPA recommended holding time of fourteen days for soils (preserved waters) from the date of sample collection. All holding time criteria were met.

NWTPH-Gx Method:
All samples were analyzed for gasoline within the WA State recommended holding time of fourteen days for soils (preserved waters) from the date of sample collection.

NWTPH-Dx Method:
All samples were extracted within the WA State recommended holding time of fourteen days for soils from the date of sample collection to extraction. All samples were analyzed within forty days from the date of extraction. All holding time criteria were met.

Total Solids by USEPA Method 2540 G-2011:
Samples were analyzed within the USEPA recommended holding time of seven days for total solids.

Initial and Continuing Calibration

USEPA Method 8260D (VOCs):
Initial and continuing calibration data for this project are retained by the laboratory and available for review if necessary. Pace indicated within the laboratory report that continuing calibration verification (CCV) criteria for were not met for the following:

- SDGs L1200814 and L1200909: CCV compounds outside of criteria are qualified by the laboratory (J0). **The associated sample results with laboratory qualifiers (J0) are estimated (UJ/J) as the associated CCV recoveries are outside of laboratory control limits.**

Method Blank Results

USEPA Method 8260D:
Laboratory method blanks are included with the analytical batches per method requirement. The target analytes are not detected in the method blanks at or above the method reporting limits (RDLs) with the following exceptions:

- SDG L1200814 - Analytical batch WG1447912: Low levels of chloroform, 2-butanone (MEK), and naphthalene are detected in the method blank. **Chloroform, 2-butanone (MEK), and/or naphthalene detections in samples below the RDL and are qualified as not detected (U) as follows:**
    - **Chloroform results for samples B-277-1, B-277-3, B-277-5, B-277-11, B-278-3, B-278-6, B-279-3, B-279-5, and B-281-2 are below the RDL and qualified as not detected (U).** No action is required for sample B-277-9.5 since the detection is slightly above the RDL**.**
    - **2-Butanone (MEK) results for samples B-277-1, B-277-5, B-277-11, B-278-6, B-279-3, B-279-5, B-279-10, B-280-6, B-281-2, B-281-5, and B-282-2 are below the RDL and qualified as not detected (U).** No action is required for samples B-277-3, B-277-9.5, and B-280-4.5 since the detections are slightly above the RDL**.**
    - **Naphthalene results for samples B-277-1, B-277-3, B-277-9.5, B-278-3, B-279-3, B-281-2, B-281-5, and B-282-2 are below the RDL and qualified as not detected (U).**
- SDG L1200814 - Analytical batch WG1447922: A low level of 2-butanone (MEK) is detected in the method blank. **2-Butanone (MEK) detection in sample B-282-4 is below the RDL and qualified as not detected (U).**
- SDG L1200909 - Analytical batch WG1447922: A low level of 2-butanone (MEK) is detected in the method blank. **2-Butanone (MEK) detections in sample B-272-6, B-273-3, and B-274-3 are below the RDL and qualified as not detected (U).** 2-Butanone (MEK) detection in samples B-271-1, B-275-6, and B-275-9 are slightly greater than the RDL and no action is taken on this basis.
- SDG L1200909 - Analytical batch WG1448125: A low level of 2-butanone (MEK) is detected in the method blank. 2-Butanone (MEK) detection in sample B-276-11 is slightly greater than the RDL and no action is taken on this basis.

NWTPH-Gx Method:
Laboratory method blank was included with the analytical batch per method requirement. The target analyte (gasoline) is not detected in the method blank at or above the RDL with the following exception:

- SDG L1200814: Gasoline was detected at a low level in the method blank and in the associated trip blank. **A low level of gasoline is detected in the associated samples B-277-9.5 and B-277-11 and are qualified as not detected (U) due to method or trip blank contamination.**

NWTPH-Dx Method:
Laboratory method blank was included with the analytical batch per method requirement. The

target analytes (diesel and heavy oil) were not detected in the method blank at or above the RDLs.

Total Solids by SM 2540 G 2011:
Laboratory method blanks were included with the analytical batches per method requirement. The target analytes (% solids) were not detected at a significant level in the method blanks and sample results are not impacted.

Trip Blank Results

USEPA Method 8260D and NWTPH-Gx
Two trip blanks (TB-031720 and TB-031820) were collected and submitted for analysis. The target analytes were not detected in the trip blanks at or above the RDLs with the following exceptions:

- SDG L1200814: Low levels of gasoline and acetone are detected in the trip blank (TB-031820). **A low level of gasoline is detected in the associated samples (B-277-9.5 and B-277-11) and are qualified as not detected (U) due to method or trip blank contamination.** Acetone was not detected in the associated samples. No further action is required.

- SDG L1200909: A low level of acetone was detected in the trip blank (TB-031720). No action is required since associated sample acetone results were either non-detects or, in one case, is detected slightly above the RDL.

Field, Rinsate, or Equipment Blank Results

Field, rinsate or equipment blanks were not collected.

Field Duplicate Analyses

Field duplicate pairs were submitted and analyzed. Field duplicate sample pairs are as follows:

- SDG L1200814: Samples B-282-4 and B-971-5
- SDG L1200909: Samples B-276-7 and B-970-6

Target analyte results are comparable and within a relative percent difference (RPD) of 30% (or ± <2X RDL) for the field duplicate pairs.

Laboratory Duplicate Analyses

USEPA Method 8260D:
Laboratory duplicate samples were not analyzed. Refer to laboratory control sample/sample duplicate (LCS/LCSD) or matrix spike/matrix spike duplicate (MS/MSD) results for precision data.

NWTPH-Gx Method:

Laboratory duplicate samples were not analyzed. Refer to LCS/LCSD or MS/MSD results for precision data. In one case, only LCS data are available (SDGs L1200814). Refer to field duplicate data for precision data.

NWTPH-Dx Method:
Laboratory duplicate samples were not analyzed. Refer to MS/MSD results for precision data. The RPDs for diesel and heavy oil are within the laboratory control limits of 30% RPD.

Moisture by Method 2540 G-2011:
Laboratory duplicate samples were performed on client and non-client samples associated with the analytical batches. The RPDs for percent moisture are within the laboratory control limit of 20% RPD.

Surrogate Recoveries

USEPA Method 8260D:
The surrogate recovery results for the samples, laboratory control samples, matrix spike samples, and the method blanks are within the laboratory surrogate control limits for all the analyses.

NWTPH-Gx Method:
The surrogate recovery results for the samples, laboratory control samples, matrix spike samples, and the blanks are within the laboratory surrogate control limits.

NWTPH-Dx Method:
The surrogate recovery results for the samples, laboratory control samples, matrix spike samples, and method blanks are within the laboratory surrogate control limits.

Matrix Spike/ Matrix Spike Duplicates

USEPA Method 8260D:
Matrix spike/matrix spike duplicate (MS/MSD) analyses were performed on non-client samples. The MS/MSD percent recoveries (%R’s) and RPDs for the all target compounds are within the laboratory control criteria for soil with the following exceptions:

- SDG L1200814: MS/MSD (analytical batch WG1447912) was performed on a non-client sample within the analytical batch. Recovery for two targets are laboratory qualified (J5) to indicate matrix interference. No action is taken since the spike was performed on a non-client sample. Refer to LCS/LCSD results for accuracy and precision data.

- SDG L1200909: MS/MSD (analytical batch WG1448125) was performed on a non-client sample within the analytical batch. Two target analyte RPDs were recovered above lab criteria and laboratory qualified (J3). Review indicates that MS/MSD recoveries are within but are recovered wide. No action is taken in this case. Refer to LCS/LCSD results for precision data.

NWTPH-Gx Method:

MS/MSD analyses were performed on two client samples within the analytical batches. MS/MSD % Rs and RPDs are acceptable and within laboratory control limit criteria.

NWTPH-Dx Method:
MS/MSD analyses were performed on a non-client sample within the analytical batch. MS/MSD % Rs and RPD are acceptable and within laboratory control limit criteria

Laboratory Control Samples

USEPA Method 8260D:
Laboratory control sample/laboratory control sample duplicates (LCS/LCSD) were analyzed by USEPA Method 8260D. In some cases, only an LCS was analyzed. Refer to matrix spike duplicate or field duplicate results in these cases. The LCS or LCS/LCSD %R's and RPDs for the target compounds are within the laboratory control criteria for soils with the following exceptions:

- SDG L1200814: LCSD (analytical batch WG1447922) recovery for acetone is laboratory qualified (J3) to indicate an elevated RPD exceeding laboratory criteria. No action is taken since the spike recoveries are within acceptance criteria but are recovered wide. LCSD recovery for bromochloromethane is 76.5% and laboratory qualified (J4) because the recovery is slightly below acceptance criteria of 77.0-128%. No action is taken since the LCS is within criteria and LCSD recovery is marginally outside of criteria.

NWTPH-Gx Method:
LCS or LCS/LCSDs were analyzed by the NWTPH-Gx method along with the analytical batch. The LCS or LCS/LCSD %Rs and RPDs for the all target compounds are within the laboratory control criteria.

NWTPH-Dx Method:
LCS or LCS/LCSD were analyzed by the NWTPH-Dx method along with the analytical batch. The LCS or LCS/LCSD %Rs and RPD for the target compound is within the laboratory control criteria

Other Quality Control Issues

No laboratory quality control issues were identified in the laboratory reports with the following discussion:

- Electronic data deliverables (EDDs) for these SDGs were provided by the laboratory and data validator qualifiers were entered, as appropriate, into the EDDs.

Quantitation Limits

Results of all analyses were reported based on standard laboratory RDLs. The reported RDLs are considered appropriate for this project. RDLs in some all cases are raised for method-required dilutions. No data qualifiers were warranted based upon standard detection limits.

Compound Identification

Gasoline and gasoline range organics are analyzed for via Volatile Organic Compounds (GC) by Washington State Method NWTPHGx (using a gas chromatograph/flame ionization detector (GC/FID)) and Pace reported gasoline range organic-NWTPH results. Several chlorinated VOC compounds (including cis-1,2-dichloroethene, trans-1,2-dichloroethene, trichloroethene, and tetrachloroethene) elute within the gasoline range organics (GRO) retention time range as specified by Washington State (detections falling between the toluene and dodecane range).

Non-petroleum organics (e.g. chlorinated VOC compounds) eluting within the gasoline range contribute to the GRO result and GRO results are likely biased high (J+). PES requested that Pace evaluate chromatograms associated with positive sample detections to confirm the potential presence of gasoline. Per PES's request Pace reviewed selected sample chromatograms against the gasoline standard chromatograms and assigned "no discernible petroleum pattern" or "chromatogram pattern most closely resembles diesel fuel" to GRO results associated with this Task. PES assigned an additional project level qualifier (Z) to GRO results when the chromatogram for the sample does not match a discernible petroleum pattern. Associated chromatograms and qualified samples for this Task are as follows:

Sample ID	Laboratory Identification	Gasoline Range Organic Result (mg/Kg)	DV Qualifier	Data Validation Comments	Pace Chromatogram Review Notes
B-270-2	L1200909-03	82.5	Z,J+	Refer to diesel results.	Chromatographic pattern most closely resembles diesel fuel.
B-273-6	L1200909-09	10.7	Z, J+	Low levels of chlorinated VOCs detected within the GRO elution range	No discernible petroleum pattern
B-274-6	L1200909-12	10.7	Z, J+	Low levels of chlorinated VOCs detected within the GRO elution range	No discernible petroleum pattern

Completeness

The samples were collected and analyzed as requested. Data completeness is 100%.

Data Assessment

The laboratory data reported for this project were reviewed based on laboratory control limit acceptance criteria and criteria outlined in:

- USEPA Contract Laboratory Program National Functional Guidelines for Organic Superfund Methods Data Review (USEPA, 2017)

Data qualifiers are assigned and laboratory report pages with qualifiers are attached. All data, including qualified data, are judged to be acceptable for their intended use.

MEMORANDUM

TO: Project File **DATE:** April 21, 2020

FROM: Jessie Compeau

SUBJECT: Laboratory Data Validation Review

PROJECT: American Linen Data Validation

PROJECT #: 1413.001.02.501F

TASK: EIM Data Validation Level EPA2A for April 2020 – Soil Vapor Samples

LAB: Pace Sample Delivery Groups (SDG): L1205183

Two (2) soil vapor samples (including one field duplicate) were collected as part of the ongoing sampling monitoring event at the Former American Linen Supply Site, in Seattle, Washington on April 01, 2020. The samples were shipped and delivered to Pace Lab Sciences (Pace) of Mount Juliet, TN for laboratory analysis. Samples were analyzed for the following:

- Volatile organic compounds (VOCs) by United States Environmental Protection Agency (USEPA) Method TO-15

The quality assurance review of the sample data associated with SDG L1205183 is summarized below.

DATA QUALIFICATIONS

Guidelines established by USEPA for a limited data validation review of analytical data along with PACE control limit criteria were used to validate the data. The comments presented in this memorandum refer to the laboratory's performance in meeting the quality control criteria outlined in the USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review (USEPA, 2017). Following Guidelines, non-project-specific laboratory duplicates and matrix spike results were not evaluated as part of this data validation.

DATA VALIDATION

Completeness

All samples were collected and analyzed as requested.

Sample Collection and Preservation

The laboratory supplied a Summa Canister ^{TM} canister (1Liter) for the air sample. The samples were shipped, delivered by FedEx, and received in good condition by the laboratory. The sample was collected, handled, and delivered in an appropriate manner. No data qualifications were warranted based upon sampling techniques.

Holding Times

The analyses for VOCs by Method TO-15 were performed within the 30-day recommended holding time limit for the air samples collected in Summa canisters. All holding time criteria are met.

Initial and Continuing Calibration

Initial and continuing calibration data for this project are retained by the laboratory and available for review if necessary. Case narrative and laboratory notes do not indicate that there are any issues with calibration.

Method Blank Results

A laboratory method blank is included with the analytical batch per method requirement. The target analytes were not detected in the method blank at or above the RDLs with one exception:

- Low levels of acetone, benzyl chloride, 1,3-dichlorobenzene, 1,4-dichlorobenzene, and propene were detected in the method blank. No action is necessary is these were either not detected or detected well above the RDLs in the associated samples.

Trip Blank Results

A trip blank was not required for the VOCs by TO-15 analyses. No action is taken other than to note this.

Field Duplicate Analyses

Field duplicate sample pair is as follows:

- Samples SV01-040120 and SV01-040120-D

Target analyte results are comparable and within a relative percent difference (RPD) of 30% for the field duplicate pair with the following exceptions:

- Samples SV01-040120 and SV01-040120-D – VOC results are not comparable with an RPD greater than 30% (or for results < 5X RDL the absolute difference < 1X RDL). **Field duplicate results for acetone are estimated and qualified (J).**

Laboratory Duplicate/Replicate Analyses

A laboratory replicate was not performed. Refer to the Laboratory Control Sample section for additional information.

Surrogate Recoveries

The surrogate percent recovery (% R) results for the VOCs by TO-15 air samples, method blank, and laboratory control samples are within the laboratory surrogate control limits of 60 -140% R. No data qualifications were warranted.

Laboratory Control Samples

A laboratory control sample/laboratory control sample duplicate (LCS/LCSD) were analyzed for the VOCs by TO-15 along with each analytical batch. The LCS/LCSD recovery and relative percent differences (RPDs) for all control compounds met laboratory control limit criteria with the following discussion:

- LCS recoveries for 2-propanol and methyl butyl ketone are slightly below laboratory acceptance criteria and laboratory qualified (J4). No action is taken since LCSD recoveries as well as associated RPD criteria are met.

Matrix Spike/Matrix Spike Duplicates

A matrix spike/matrix spike duplicate (MS/MSD) is not required for the VOCs by TO-15 method.

Other Quality Control Issues

No laboratory quality control issues were identified in the laboratory report with the following discussion:

- Electronic data deliverables (EDDs) for these SDGs were provided by the laboratory and data validator qualifiers were entered. In some cases, different chemical synonyms are used between the EDD and the hardcopy however associated Chemical Abstracts Service (CAS) numbers are provided in the EDD to confirm chemical identifications.

Quantitation Limits

Results of the VOCs by TO-15 analysis are reported based on laboratory MRLs (assuming standard temperature and pressure is equal to 24.45) and reported in units of ppbv and $\mu g/m^3$.

The RDLs indicate the minimum quantity of a target analyte that can be confidently determined by the reference method. The RDLs were acceptable for the project; therefore, no data qualifications were warranted.

Data Assessment

The laboratory data reported for this project were reviewed based on the criteria outlined in:

- USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review (USEPA, 2017).

No data qualifiers are assigned and laboratory report pages with qualifiers are attached. All data, including qualified data, are judged to be acceptable for their intended use.

Volatile Organic Compounds (MS) by Method TO-15

MEMORANDUM

TO: Project File **DATE:** April 27, 2020

FROM: Jessie Compeau

SUBJECT: Laboratory Data Validation Review

PROJECT: American Linen Data Validation

PROJECT #: 1413.001.02.501E

TASK: EIM Data Validation Level EPA2A for 2nd Quarter Monitoring – Groundwater Samples

LAB: Pace Sample Delivery Groups (SDGs): L1204945, L1205427, L1205430, L1205456, L1205789, L1206575, L1207108, and L1205708

Thirty-nine (39) groundwater samples (including one field duplicate), one equipment blank, and two trip blanks were collected as part of the 2nd Quarterly Monitoring Round for 2020 for the ongoing Remedial Investigation (RI) sampling at the Former American Linen Supply Site, in Seattle, Washington in April of 2020. The samples were shipped and delivered to Pace Lab Sciences (Pace) of Mount Juliet, TN for laboratory analysis. Selected samples were analyzed for the following:

- Volatile organic compounds (VOCs) by United States Environmental Protection Agency (USEPA) Method 8260D;
- Total petroleum hydrocarbons as gasoline (TPH-Gx) by NWTPH-Gx per analytical method stipulated by Washington State Department of Ecology;
- VOCs (dissolved gases – methane, ethane, and ethene) by EPA SOP RSK 175;
- Alkalinity by Method 2320 B-2011;
- Anions (chloride, nitrate, and sulfate) by USEPA Method 9056A;
- Total Organic Carbon (TOC) by USEPA Method 9060A; and
- Metals (iron and manganese) by USEPA Method 6020B.

The RI sampling was conducted mostly during the month of April with a few samples collected 2020. Results are reported in multiple SDGs from Pace. Pace SDGs are reviewed in groups (approximately 10 SDGs) for each data validation report. Group 1 analytical results are reported in SDGs L1204945, L1205427, L1205430, L1205456, L1205789, L1206575, L1207108, and L1205708. The quality assurance review of the laboratory data associated with Group 1 is summarized below.

DATA QUALIFICATIONS

Guidelines established by USEPA for a limited data validation review of analytical data along with Pace control limit criteria were used to validate the data. The comments presented in this memorandum refer to the laboratory's performance in meeting the quality control criteria

outlined in the USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review (USEPA, 2017) and USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017). Following Guidelines, non-project-specific laboratory duplicates and matrix spike results were not evaluated as part of this data validation.

DATA VALIDATION

Completeness

All samples were collected and analyzed as requested with the following exceptions:

- SDG L1205427: Date of sample receipt at the laboratory is not included on the associated chain of custody. No action is taken other than to not that the courier FedEx bill of lading (#167627498142) shows that the cooler was received on 4/3/2020 at 8:07 am and signed for by Pace (C. Green).

Sample Collection and Preservation

Samples were collected in laboratory-supplied sample containers preserved as appropriate for the individual analyses conducted. The samples were packed on ice in coolers and delivered by courier to the analytical laboratory. The laboratory reported that the coolers were received at a cooler temperature less than the recommended temperature preservation of 6°C. Samples were received in good condition except for issues mentioned in the Completeness section. No data were qualified based upon the sample collection and preservation information.

Holding Times

USEPA Method 8260D:
All samples were analyzed for VOCs within the EPA recommended holding time of fourteen days for preserved waters from the date of collection. All holding time criteria are met.

NWTPH-Gx Method:
All samples were analyzed within the WA State recommended holding time of fourteen days for preserved waters from the date of sample collection. All holding time criteria are met.

Dissolved Gases (Methane, Ethane, and Ethene) by RSK 175:
All samples were analyzed within the WA State recommended holding time of fourteen days for preserved waters from the date of sample collection. All holding time criteria are met.

USEPA Method 6020B:
All samples were analyzed within the USEPA recommended holding time for iron and manganese of 180 days for preserved waters from the date of sample collection. All holding time criteria are met.

General Chemistry (Alkalinity, Chloride, Sulfate, Nitrate, and TOC):

All samples were analyzed within the USEPA recommended holding time for alkalinity (14 days), chloride (28 days), sulfate (28 days), and nitrate (48 hours), and TOC (28 days) for preserved waters from the date of sample collection. All holding time criteria are met.

Initial and Continuing Calibration

Calibration data for this project are not required for this deliverable however Pace's notes indicate the following:

- Multiple SDGs - *USEPA Method 8260D:* Continuing calibration verification (CCV) issues were noted by Pace for multiple compounds associated with analytical batches in each SDG. These compounds are qualified by the laboratory "J0" to indicate that percent difference CCV is outside of laboratory acceptance criteria. **Associated sample results with laboratory qualified (J0) results are estimated and qualified (J/UJ).**

Method Blank Results

USEPA Method 8260D:
Laboratory method blanks were included with the analytical batches per method requirement. The target analytes were not detected in the method blanks at or above the reporting detection limits (RDLs) with the following exceptions:

- SDG L1204945 - Analytical batch WG1455710: Low levels of naphthalene, 1,2,3-trichlorobenzene, and 1,2,4-trimethylbenzene are detected in the method blank. **Associated 1,2,4-trimethylbenzene detection in sample SCL-MW105-040120 is below the RDL and qualified as not detected (U).**   No action is taken for naphthalene and 1,2,3-trichlorobenzene as these are either not detected or are detected above the RDL.

- SDG L1205427 - Analytical batch WG1455710: Low levels of naphthalene, 1,2,3-trichlorobenzene, and 1,2,4-trimethylbenzene is detected in the method blank. **Associated naphthalene detection in sample MW-178-040220 is below the RDL and qualified as not detected (U).**

- SDG L1205456 – Analytical batch WG1456345: A low level of acetone is detected in the method blank. **Associated acetone detection in sample MW-144R-040220 is below the RDL and qualified as not detected (U).**

NWTPH-Gx Method:
Laboratory method blanks were included with the analytical batches per method requirement. The target analyte (gasoline) was not detected in the method blanks at or above the RDLs with one exception:

- SDG L1204945 – Analytical batch WG1454847: A low level gasoline concentration is detected in the method blank. **Associated gasoline detections in samples MW-180-040120 and MW104-040120 are below the RDL and qualified as not detected (U).**

- SDG L1205789 – Analytical batch WG1456436: A low level gasoline concentration is detected in the method blank. **Associated gasoline detections in samples MW124-040320 and MW-161-040320 are below the RDL and qualified as not detected (U).**

- SDG L1205427 – Analytical batch WG1455833: A low level gasoline concentration is detected in the method blank. **Associated gasoline detections in samples MW-178-040220 and MW-171-040220 are below the RDL and qualified as not detected (U).**

Dissolved Gases (Methane, Ethane, and Ethene) by RSK 175:
Laboratory method blanks were included with the analytical batches per method requirement. The target analytes (dissolved gases) are not detected in the method blanks at or above the RDLs.

USEPA Method 6020B and General Chemistry (Alkalinity, Chloride, Sulfate, Nitrate, and TOC):
Laboratory method blanks were included with the analytical batches per method requirement. The target analytes were detected in the method blanks below the RDLs. Per Guidance, no action is taken for blank detections less than the RDL when associated sample detections are greater than the RDL. General chemistry and metal blank detections are shown below:

SDG	Batch	Method	Analyte	Method Blank Result	Qualifier	RDL	Units	Associated Result(s) Qualified

L1206575	WG1458143	9060A	TOC	449	J	1000	µg/L	NO

SDG	Batch	Method	Analyte	Method Blank Result	Qualifier	RDL	Units	Associated Result(s) Qualified
L1207108	WG1458780	9060A	TOC	250	J	1000	µg/L	NO
L1205708	WG1458781	9060A	TOC	542	J	1000	µg/L	NO

Target analytes were detected in method blanks at low levels with no impact to the associated samples with the following exception:

- SDG L1204945 – Analytical batch WG1454414: A low level of sulfate is detected in the method blank. **Samples MW-181-040120 and W-MW-02-040120 sulfate detections are below the RDL and qualified as not detected (U).**

- SDG L1204945 – Analytical batch WG1454414: A low level of sulfate (290 µg/L) is detected in the method blank. Sample MW-160-040120 sulfate detection is 3,290 µg/L and is also below the RDL (5,000 µg/L). *In this case, using professional judgement, no action is taken other than to note this.*

- SDG L1205430 – Analytical batch WG1455131: A low level of sulfate is detected in the method blank. **Samples MW-183-040220 and MW-185-040220 sulfate detections are below the RDL and qualified as not detected (U).**

- SDG L1205456 – Analytical batch WG1455131: A low level of sulfate (273 µg/L) is detected in the method blank. Sample MW-145R-040220 sulfate detection is 1,070 µg/L and is also below the RDL (5,000 µg/L). *In this case, using professional judgement, no action is taken other than to note this.*

- SDG L1205456 – Analytical batch WG1455131: A low level of sulfate is detected in the method blank. **Samples MW-144R-040220 sulfate detections are below the RDL and qualified as not detected (U).**

Trip Blank Results

USEPA Method 8260D and NWTPH-Gx:
Two trip blanks were collected. Low levels of gasoline and acetone were detected in the trip blank (TB-040120). A low level of gasoline is also detected in the associated method blank. Actions are as follows:

- **SDG L1204945: Low levels of gasoline were detected in associated samples MW-180-040120 and MW104-040120 and detections are qualified as not detected (U).**

- **SDG L1204945: Low levels of acetone were detected in associated samples MW-160-040120 and MW-180-040120 and detections are qualified as not detected (U).**

Field, Rinsate, or Equipment Blank Results

All Analytical Methods:

One equipment blank (EQ-040320 with SDG L1205789) is associated with samples collected April 3, 2020. Low levels of acetone and cis-1,2-dichloroethene were detected in the equipment blank as well as low levels of TOC, manganese, and chloride. No action is taken for low levels of TOC, manganese, and chloride detections since amounts in the associated samples are far greater than the detections in the equipment blank. **Low levels of cis-1,2-dichloroethene were detected in associated samples MW-189-040320 and MW-927-040320. These detections are qualified as not detected (U) due to equipment blank contamination.** No action was taken for acetone since it was not detected in the associated samples.

Field Duplicate Analyses

Field duplicate pairs were submitted and analyzed. Field duplicate sample pair is as follows:

- SDG L1205789: MW-189-040320 and MW-927-040320

Target analyte results are comparable and within a relative percent difference (RPD) of 30% (± 1x RDL for groundwater results <5X the RDL) for the field duplicate pair.

Laboratory Duplicate Analyses

USEPA Method 8260D:
Laboratory duplicate samples were not analyzed. Refer to laboratory control sample/sample duplicate (LCS/LCSD) or matrix spike/matrix spike duplicate (MS/MSD) results for precision data.

NWTPH-Gx Method:
Laboratory duplicate samples were not analyzed. Refer to field duplicate, LCS, or MS results for additional information.

Dissolved Gases (Methane, Ethane, and Ethene) by RSK 175:
Laboratory duplicate sample analyses were performed on client and non-client samples within the analytical batches. The primary/duplicate RPDs for dissolved gas analyses are within the laboratory control limit of 20%.

USEPA Method 6020B:
Laboratory duplicate samples were not analyzed. Refer to LCS/LCSD or MS/MSD results for precision data.

General Chemistry (Alkalinity, Chloride, Sulfate, Nitrate, and TOC):
Laboratory duplicate sample analyses were performed on client samples and/or on non-client samples. The primary/duplicate RPDs for general chemistry parameters are within the laboratory control RPD limits or ± 1x RDL for groundwater results <5X the RDL.

Surrogate Recoveries

USEPA Method 8260D:

The surrogate recovery results for the samples, laboratory control samples, matrix spike samples, and the method blanks are within the laboratory surrogate control limits for all the analyses with the following exception:

- SDG L1205456: Sample MW-144R-040220 surrogate recovery (4-Bromofluorobenzene) associated with analytical batch WG1456345 (April 6, 2020) is recovered below QC criteria and laboratory qualified (J2). **Associated sample MW-144R-040220 vinyl chloride result is above the RDL and is estimated (J-) due to low surrogate recovery except for acetone which is qualified non-detect (U) due to blank contamination. Associated sample MW-144R-040220 results below the RDL are not assigned negative bias though these detections are still considered estimated values (J). Remaining non-detected results associated with analytical batch WG1456345 (April 6, 2020) are qualified as (UJ).**

NWTPH-Gx Method:
The surrogate recovery results for the samples, laboratory control samples, matrix spike samples, and the method blanks are within the laboratory surrogate control limits for all analyses.

Laboratory Control Samples

USEPA Method 8260D:
Laboratory control sample/laboratory control sample duplicate (LCS/LCSD) or laboratory control sample (LCS) were analyzed by USEPA Method 8260D method. The LCS % Rs or LCS/LCSD % Rs and RPDs for the all target compounds are within the laboratory control criteria for waters with the following discussion:

- SDG L1204945 - Analytical batch WG1456142: LCS/LCSD % recoveries for acetone, acrylonitrile, and n-hexane recovery are above laboratory acceptance criteria and laboratory qualified (J4). No action is needed for these compound as they are not detected in the associated samples.

- SDG L1205427 - Analytical batch WG1455831: LCS % recoveries for carbon tetrachloride and trichloroethene and are above laboratory acceptance criteria and laboratory qualified (J4). No action is needed for carbon tetrachloride as it was not detected in the associated sample. **Trichloroethene was detected in sample MW-171-040220 below the RDL and the result is estimated (J).**

- SDG L1205430 - Analytical batch WG1455831: LCS % recoveries for carbon tetrachloride and trichloroethene and are above laboratory acceptance criteria and laboratory qualified (J4). No action is needed for carbon tetrachloride as it was not detected in the associated sample. **Trichloroethene was detected in sample MW-186-040220 below the RDL and the result is estimated (J).**

- SDG L1205789 - Analytical batch WG1456237: LCS/LCSD % recoveries for 1,4-dichlorobenzene and is below laboratory acceptance criteria and laboratory qualified (J4). **1,4-Dichlorobenzene associated results below the RDL, and the results are estimated (UJ).**

NWTPH-Gx Method:
The LCS % Rs for the target compound (gasoline) are within the laboratory control criteria for waters. In many cases, no measure of precision is provided with the analytical batch. No action is taken other than to note this.

Dissolved Gases (Methane, Ethane, and Ethene) by RSK 175:
The LCS/LCSD % Rs and RPDs for the target compound (dissolved gases) are within the laboratory control criteria for waters.

USEPA Method 6020B:
The LCS/LCSD % Rs and RPDs for the target compound (iron and manganese) are within the laboratory control criteria for waters with the following exceptions:

- SDG L1205789: MS/MSD was performed on sample MW124-040320 with recoveries outside of criteria for iron and manganese. No action is taken for manganese since the sample amount is greater than four times the spike amount. Matrix spike recovery for iron is above QC criteria. Sample MW124-040320 iron result is qualified (J) due to elevated spike recovery.

General Chemistry (Alkalinity, Chloride, Sulfate, Nitrate, and TOC):
The LCS % Rs for general chemistry parameters are within the laboratory control criteria for waters.

Matrix Spike/Matrix Spike Duplicates

USEPA Method 8260D:
Matrix spike/matrix spike duplicate (MS/MSD) analyses were performed on client and on non-client samples within select analytical batches. The MS/MSD % Rs and RPD were acceptable and within laboratory control limit criteria for water samples with the following discussion:

- SDGs L1205427, L1205430, and L1205456: MS/MSD was performed on a non-client sample with multiple spike recovery and RPD exceedances. No action was taken since the spike was performed on a non-client sample.

- SDG L1205789: MS/MSD was performed on sample W-MW-01-040320 with six MSD recoveries above criteria. No action was taken since none of the spiked compounds are not detected in the associated sample.

NWTPH-Gx Method:
MS/MSD analyses were not performed. Refer to LCS results. No measure of precision was provided. No action was taken other than to note this.

Dissolved Gases (Methane, Ethane, and Ethene) by RSK 175:
MS/MSD analyses were not performed. Refer to LCS results and field duplicate sample for accuracy and precision data.

USEPA Method 6020B:
MS/MSD analyses were performed on client and on non-client samples within the analytical batches. The MS/MSD % Rs and RPD were acceptable and within laboratory control limit criteria for water samples with the following discussion:

- SDG L1156109: Matrix spike analysis was performed on a non-client sample and spike results are laboratory qualified (V) to indicate that the sample concentration is greater than 4X the spike amount. No action is taken in this case since the spike was performed on a non-client sample. Refer to LCS/LCSD results for accuracy and precision data.

General Chemistry (Alkalinity, Chloride, Sulfate, Nitrate, and TOC):
MS or MS/MSD analyses were performed on client and/or non-client samples within the analytical batches. In cases where MS/MSD spike analyses are not performed refer to LCS/LCSD or laboratory duplicate data for accuracy and precision data. The MS/MSD % Rs and RPDs are acceptable and within laboratory control limit criteria for water samples.

Other Quality Control Issues

No laboratory quality control issues were identified in the laboratory report with the following discussions:

- Multiple SDGs: Selected sample narratives for alkalinity results indicate that several sample containers had some headspace and exposure to air may have impacted the reported results. No action was taken other than to note this.

- Electronic data deliverables (EDDs) for these SDGs were provided by the laboratory and data validator qualifiers were entered. In some cases, different chemical synonyms are used between the EDD and the hardcopy however associated Chemical Abstracts Service (CAS) numbers are provided in the EDD to confirm chemical identifications.

Compound Identification and Quantitation Limits

Results of the analyses were reported based on laboratory RDLs for all compounds. RDLs for selected compounds are elevated due to method-required dilutions. No action is taken other than to note this.

Gasoline and gasoline range organics are analyzed for via Volatile Organic Compounds (GC) by Washington State Method NWTPHGx (using a gas chromatograph/flame ionization detector (GC/FID)) and Pace reported gasoline range organic-NWTPH results. Several chlorinated VOC compounds (including cis-1,2-dichloroethene, trans-1,2-dichloroethene, trichloroethene, and tetrachloroethene) elute within the gasoline range organics (GRO) retention time range as specified by Washington State (detections falling between the toluene and dodecane range).

Non-petroleum organics (e.g. chlorinated VOC compounds) eluting within the gasoline range contribute to the GRO result and GRO results are likely biased high (J+). PES requested that Pace evaluate chromatograms associated with positive sample detections to confirm the potential presence of gasoline. Per PES's request Pace reviewed selected sample chromatograms against the gasoline standard chromatograms and assigned "no discernible petroleum pattern" to GRO results associated with this Task. PES assigned an additional project level qualifier (Z) to GRO results when the chromatogram for the sample does not match a discernible gasoline standard pattern. In two cases (SDG L1204945) Pace included the statement for non-detected gasoline range organics. No action is taken in these cases other than to note that this is likely due to report formatting error. Associated chromatograms and qualified samples for this Task are as follows:

Sample ID	Laboratory Identification	Gasoline Range Organic Result (µg/L)	DV Qualifier	Data Validation Comments	Pace Chromatogram Review Notes
MW-181-040120	L1204945-02	12,200	Z, J+	Elevated chlorinated VOCs detected within the GRO elution range	No discernible petroleum pattern present.
MW-177-040120	L1204945-03	77,100	Z, J+	Elevated chlorinated VOCs detected within the GRO elution range	No discernible petroleum pattern present.
MW-184-040120	L1204945-04	212	Z, J+	Elevated chlorinated VOCs detected within the GRO elution range	No discernible petroleum pattern present.
MW-182-040120	L1204945-07	1,760	Z, J+	Elevated chlorinated VOCs detected within the GRO elution range	No discernible petroleum pattern present.
MW-179-040220	L1205427-01	424	Z, J+	Elevated chlorinated VOCs detected within the GRO elution range	No discernible petroleum pattern present.
MW-172-040220	L1205427-03	5,310	Z, J+	Elevated chlorinated VOCs detected within the GRO elution range	No discernible petroleum pattern present.
MW-170-040220	L1205427-04	17,000	Z, J+	Elevated chlorinated VOCs detected within the GRO elution range	No discernible petroleum pattern present.
MW107-040320	L1205789-05	1,420	Z, J+	Elevated chlorinated VOCs detected within the GRO elution range	No discernible petroleum pattern present.

Project level qualifiers have been included to the PES's project database (Epiphany) as (ZJ+). Washington State EIM valid values were reviewed. In this case no Washington State EIM valid value descriptor is ideal and the default estimated value (J) has been selected as the best match to qualify GRO (Z,J+) data.

Data Assessment

The laboratory data reported for this project were reviewed based on the criteria outlined in:

- USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review (USEPA, 2017); and
- USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017).

Data qualifiers are assigned and laboratory report pages with qualifiers are attached. All data, including qualified data, are judged to be acceptable for their intended use.

MEMORANDUM

TO: Project File **DATE:** May 20, 2020

FROM: Jessie Compeau

SUBJECT: Laboratory Data Validation Review

PROJECT: American Linen Data Validation

PROJECT #: 1413.001.02.501E

TASK: EIM Data Validation Level EPA2A for 2nd Quarter Monitoring – Groundwater Samples - Group 2

LAB: Pace Sample Delivery Groups (SDGs): L1211046, L1211489, L1211929, L1212335, and L1212802

Thirty-one (31) groundwater samples (including one field duplicate), one equipment blank, and four trip blanks were collected as part of the 2nd Quarterly Monitoring Round for 2020 for the ongoing Remedial Investigation (RI) sampling at the Former American Linen Supply Site, in Seattle, Washington in April of 2020. The samples were shipped and delivered to Pace Lab Sciences (Pace) of Mount Juliet, TN for laboratory analysis. Selected samples were analyzed for the following:

- Volatile organic compounds (VOCs) by United States Environmental Protection Agency (USEPA) Method 8260D;
- Total petroleum hydrocarbons as gasoline (TPH-Gx) by NWTPH-Gx per analytical method stipulated by Washington State Department of Ecology;
- VOCs (dissolved gases – methane, ethane, and ethene) by EPA SOP RSK 175;
- Alkalinity by Method 2320 B-2011;
- Anions (chloride, nitrate, and sulfate) by USEPA Method 9056A;
- Total Organic Carbon (TOC) by USEPA Method 9060A; and
- Metals (iron and manganese) by USEPA Method 6020B.

The RI sampling was conducted spring of 2020. Results are reported in multiple SDGs from Pace. Pace SDGs are reviewed in groups (up to 10 SDGs) for each data validation report. Group 2 analytical results are reported in SDGs L1211046, L1211489, L1211929, L1212335, and L1212802. The quality assurance review of the laboratory data associated with Group 2 is summarized below.

DATA QUALIFICATIONS

Guidelines established by USEPA for a limited data validation review of analytical data along with Pace control limit criteria were used to validate the data. The comments presented in this memorandum refer to the laboratory's performance in meeting the quality control criteria outlined in the USEPA Contract Laboratory Program National Functional Guidelines for

Superfund Organic Methods Data Review (USEPA, 2017) and USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017). Following Guidelines, non-project-specific laboratory duplicates and matrix spike results were not evaluated as part of this data validation.

DATA VALIDATION

Completeness

All samples were collected and analyzed as requested with the following discussion:

- SDG 1211929 – Chain of custody was modified by Pace on April 24, 2020 to include a request for VOC analysis on the trip blank (TB-042320). No action is taken other than to note this.

Sample Collection and Preservation

Samples were collected in laboratory-supplied sample containers preserved as appropriate for the individual analyses conducted. The samples were packed on ice in coolers and delivered by courier to the analytical laboratory. The laboratory reported that the coolers were received at a cooler temperature less than the recommended temperature preservation of 6°C. Samples were received in good condition except for issues mentioned in the Completeness section. No data were qualified based upon the sample collection and preservation information.

Holding Times

USEPA Method 8260D:
All samples were analyzed for VOCs within the EPA recommended holding time of fourteen days for preserved waters from the date of collection. All holding time criteria are met.

NWTPH-Gx Method:
All samples were analyzed within the WA State recommended holding time of fourteen days for preserved waters from the date of sample collection. All holding time criteria are met.

Dissolved Gases (Methane, Ethane, and Ethene) by RSK 175:
All samples were analyzed within the WA State recommended holding time of fourteen days for preserved waters from the date of sample collection. All holding time criteria are met.

USEPA Method 6020B:
All samples were analyzed within the USEPA recommended holding time for iron and manganese of 180 days for preserved waters from the date of sample collection. All holding time criteria are met.

General Chemistry (Alkalinity, Chloride, Sulfate, Nitrate, and TOC):
All samples were analyzed within the USEPA recommended holding time for alkalinity (14 days), chloride (28 days), sulfate (28 days), and nitrate (48 hours), and TOC (28 days) for preserved waters from the date of sample collection. All holding time criteria are met.

Initial and Continuing Calibration

Calibration data for this project are not required for this deliverable however Pace's notes indicate the following:

- Multiple SDGs - *USEPA Method 8260D:* Continuing calibration verification (CCV) issues were noted by Pace for multiple compounds associated with analytical batches in each SDG. These compounds are qualified by the laboratory "J0" to indicate that percent difference CCV is outside of laboratory acceptance criteria. **Associated sample results with laboratory qualified (J0) results are estimated and qualified (J/UJ).**

Method Blank Results

USEPA Method 8260D:
Laboratory method blanks were included with the analytical batches per method requirement. The target analytes were not detected in the method blanks at or above the reporting detection limits (RDLs) with the following exceptions:

- SDG L1211929 - Analytical batch WG1466619: Low levels of naphthalene and 1,2,3-trichlorobenzene are detected in the method blank. No action is taken for naphthalene and 1,2,3-trichlorobenzene as these compounds are not detected in the associated samples.

- SDG L1212335 - Analytical batch WG1468990: Low levels of hexachloro-1,3-butadiene, naphthalene, and 1,2,4-trimethylbenzene is detected in the method blank. No action is taken as these compounds are not detected in the associated samples.

- SDG L1212802 - Analytical batch WG1468990: Low levels of hexachloro-1,3-butadiene, naphthalene, and 1,2,4-trimethylbenzene are detected in the method blank. No action is taken as these are not detected in the associated samples. Naphthalene is detected in the associated trip blank but no action is taken on this basis.

NWTPH-Gx Method:
Laboratory method blanks were included with the analytical batches per method requirement. The target analyte (gasoline) was not detected in the method blanks at or above the RDLs with one exception:

- SDG L1211929 – Analytical batch WG1466240: Low levels of gasoline were detected in the method and equipment blanks. The associated gasoline detection in sample MW120-042320 is above the RDL and no action is taken.

- SDG L1211929 – Analytical batch WG1466362: Low levels of gasoline were detected in the method and equipment blanks. The associated gasoline detection in sample MW127-042320 is slightly above the RDL and no action is taken.

- SDG L1212335 - Analytical batch WG1469249: A low level of gasoline was detected in the method blank. **The associated gasoline detections in samples MW-158A-042420 and MW-142-042420 are below the RDL and qualified (U) as not detected.**

- SDG L1212335 - Analytical batch WG1467703: A low level of gasoline was detected in the method blank. **The associated gasoline detection in sample MW-143-042420 is below the RDL and qualified (U) as not detected.**

Dissolved Gases (Methane, Ethane, and Ethene) by RSK 175:
Laboratory method blanks were included with the analytical batches per method requirement. The target analytes (dissolved gases) are not detected in the method blanks at or above the RDLs.

USEPA Method 6020B and General Chemistry (Alkalinity, Chloride, Sulfate, Nitrate, and TOC):
Laboratory method blanks were included with the analytical batches per method requirement. The target analytes were detected in the method blanks below the RDLs. Per Guidance, no action is taken for blank detections less than the RDL when associated sample detections are greater than the RDL. General chemistry and metal blank detections are shown below:

SDG	Batch	Method	Analyte	Method Blank Result	Qualifier	RDL	Units	Associated Result(s) Qualified
L1211046	WG1465355	9060A	TOC	162	J	1000	µg/L	NO
L1211929	WG1466185	9060A	TOC	222	J	1000	µg/L	NO
L1212335	WG1467393	9060A	TOC	173	J	1000	µg/L	NO
L1212802	WG1467994	9060A	TOC	394	J	1000	µg/L	NO

Target analytes were detected in method blanks at low levels with no impact to the associated samples.

Trip Blank Results

USEPA Method 8260D, NWTPH-Gx:
Three trip blanks were collected. The target analytes (dissolved gases) are not detected in the method blanks at or above the RDLs with the following exceptions:

- SDG L1211929: Low levels of gasoline, benzene, and total xylenes are detected in the trip blank (TB-042320). No action is required for benzene since it was not detected in the associated samples. **Total xylenes are non-detected in associated samples with one exception. Total xylenes were detected below the RDL in sample MW-928-042320 and are qualified as not detected (U) due to trip blank contamination.** Low levels of gasoline are also detected in the associated equipment and method blanks. Low levels of gasoline were detected in associated samples MW127-042320 and MW120-042320 but no action is taken because both detections are above the RDL.

- SDG L1212802: A low level of naphthalene was detected in the associated trip blank (TB-042720) and in the associated method blank. No action is necessary since naphthalene was not detected in the associated samples.

Field, Rinsate, or Equipment Blank Results

All Analytical Methods:
One equipment blank (EQ-042320 with SDG L1211929) is associated with all samples collected by bladder pump on April 23, 2020. Low levels of gasoline and TOC were detected in the equipment blank. No action is taken for the low level of TOC contamination since the amounts in the associated samples are greater than the RDL. Low levels of gasoline were detected in associated samples above the RDL. No action is taken since the gasoline detections above the RDL.

Field Duplicate Analyses

Field duplicate pairs were submitted and analyzed. Field duplicate sample pair is as follows:

- SDG L1211929: MW103-042320 is a field duplicate of MW-928-042320

Target analyte results are comparable and within a relative percent difference (RPD) of 30% (± 1x RDL for groundwater results <5X the RDL) for the field duplicate pair.

Laboratory Duplicate Analyses

USEPA Method 8260D:
Laboratory duplicate samples were not analyzed. Refer to laboratory control sample/sample duplicate (LCS/LCSD) or matrix spike/matrix spike duplicate (MS/MSD) results for precision data.

NWTPH-Gx Method:
Laboratory duplicate samples were not analyzed. Refer to field duplicate, LCS, or MS results for additional information.

Dissolved Gases (Methane, Ethane, and Ethene) by RSK 175:
Laboratory duplicate sample analyses were performed on client and non-client samples within the analytical batches. The primary/duplicate RPDs for dissolved gas analyses are within the laboratory control limit of 20%.

USEPA Method 6020B:
Laboratory duplicate samples were not analyzed. Refer to LCS/LCSD or MS/MSD results for precision data.

General Chemistry (Alkalinity, Chloride, Sulfate, Nitrate, and TOC):
Laboratory duplicate sample analyses were performed on client samples and/or on non-client samples. The primary/duplicate RPDs for general chemistry parameters are within the laboratory control RPD limits or ± 1x RDL for groundwater results <5X the RDL with the following discussion:

- SDG L1212802: A laboratory duplicate was performed on a non-client sample with a TOC RPD result exceeding laboratory QC criteria. No action is taken on this basis since the laboratory duplicate was performed on a non-client sample. Refer to matrix spike results for precision data.

Surrogate Recoveries

USEPA Method 8260D:
The surrogate recovery results for the samples, laboratory control samples, matrix spike samples, and the method blanks are within the laboratory surrogate control limits for all the analyses with the following exception:

- SDG L1211489: Trip blank surrogate recovery (1,2-dichloroethane-d4) associated with analytical batch WG1466101 (April 6, 2020) is recovered above QC criteria and laboratory qualified (J1). No action is taken on this basis since the associated sample is a trip blank and the high surrogate does not impact associated samples.

NWTPH-Gx Method:
The surrogate recovery results for the samples, laboratory control samples, matrix spike samples, and the method blanks are within the laboratory surrogate control limits for all analyses.

Laboratory Control Samples

USEPA Method 8260D:
Laboratory control sample/laboratory control sample duplicate (LCS/LCSD) or laboratory control sample (LCS) were analyzed by USEPA Method 8260D method. The LCS % Rs or LCS/LCSD % Rs and RPDs for the all target compounds are within the laboratory control criteria for waters with the following discussion:

- SDGs L1211046 and L1211489 - Analytical batch WG1466101: LCS/LCSD % recoveries for 2,2-dichloropropane and di-isopropyl ether recovery are above laboratory acceptance criteria and laboratory qualified (J4). No action is needed for these compounds as they are not detected in the associated samples.

- SDG L1212335 - Analytical batch WG1468990: LCS % recovery for hexachloro-1,3-butadiene recovery is below the laboratory acceptance criteria and laboratory qualified (J4). **Associated sample results for hexachloro-1,3-butadiene are estimated and qualified (UJ).**

- SDG L1212335 - Analytical batch WG1470366: LCS % recovery for n-hexane recovery is below the laboratory acceptance criteria and laboratory qualified (J4). **Associated sample MW-157-042420 result for n-hexane is estimated and qualified (UJ).**

NWTPH-Gx Method:
The LCS % Rs for the target compound (gasoline) are within the laboratory control criteria for waters. In many cases, no measure of precision is provided with the analytical batch. No action is taken other than to note this.

Dissolved Gases (Methane, Ethane, and Ethene) by RSK 175:

The LCS/LCSD % Rs and RPDs for the target compound (dissolved gases) are within the laboratory control criteria for waters.

USEPA Method 6020B:
The LCS/LCSD % Rs and RPDs for the target compound (iron and manganese) are within the laboratory control criteria for waters.
General Chemistry (Alkalinity, Chloride, Sulfate, Nitrate, and TOC):
The LCS % Rs for general chemistry parameters are within the laboratory control criteria for waters.

Matrix Spike/Matrix Spike Duplicates

USEPA Method 8260D:
Matrix spike/matrix spike duplicate (MS/MSD) analyses were not performed on client. Refer to LCS results. In some cases, no measure of precision was provided. No action was taken other than to note this.

NWTPH-Gx Method:
MS/MSD analyses were not performed. Refer to LCS results. No measure of precision was provided. In some cases, no measure of precision was provided. No action was taken other than to note this.

Dissolved Gases (Methane, Ethane, and Ethene) by RSK 175:
MS/MSD analyses were not performed. Refer to LCS results and field duplicate sample for accuracy and precision data.

USEPA Method 6020B:
MS/MSD analyses were performed on client and on non-client samples within the analytical batches. The MS/MSD % Rs and RPD were acceptable and within laboratory control limit criteria for water samples with the following discussion:

- SDG L1212335: Matrix spike analysis was performed on client sample MW-331-042420 and manganese spike results are laboratory qualified (V) to indicate that the sample concentration is greater than 4X the spike amount. Per guidance no action is necessary due to the elevated sample concentration. Refer to LCS/LCSD results for accuracy and precision data.

General Chemistry (Alkalinity, Chloride, Sulfate, Nitrate, and TOC):
MS or MS/MSD analyses were performed on client and/or non-client samples within the analytical batches. In cases where MS/MSD spike analyses are not performed refer to LCS/LCSD or laboratory duplicate data for accuracy and precision data. The MS/MSD % Rs and RPDs are acceptable and within laboratory control limit criteria for water samples with the following discussion:

- L1211046: Matrix spike analysis was performed on a non-client sample and chloride spike results are laboratory qualified (EV) to indicate that the sample concentration exceeds the linear calibration range and is greater than 4X the spike amount. No action is taken in this case since the spike was performed on a non-client sample. Refer to MS/MSD results for client sample MW-326-042120 for accuracy and precision data.

Other Quality Control Issues

No laboratory quality control issues were identified in the laboratory report with the following discussions:

- Multiple SDGs: Selected sample narratives for alkalinity results indicate that several sample containers had some headspace and exposure to air may have impacted the reported results. No action was taken other than to note this.
- Electronic data deliverables (EDDs) for these SDGs were provided by the laboratory and data validator qualifiers were entered. In some cases, different chemical synonyms are used between the EDD and the hardcopy however associated Chemical Abstracts Service (CAS) numbers are provided in the EDD to confirm chemical identifications.

Compound Identification and Quantitation Limits

Results of the analyses were reported based on laboratory RDLs for all compounds. RDLs for selected compounds are elevated due to method-required dilutions. No action is taken other than to note this.

Gasoline and gasoline range organics are analyzed for via Volatile Organic Compounds (GC) by Washington State Method NWTPHGx (using a gas chromatograph/flame ionization detector (GC/FID)) and Pace reported gasoline range organic-NWTPH results. Several chlorinated VOC compounds (including cis-1,2-dichloroethene, trans-1,2-dichloroethene, trichloroethene, and tetrachloroethene) elute within the gasoline range organics (GRO) retention time range as specified by Washington State (detections falling between the toluene and dodecane range).

Non-petroleum organics (e.g. chlorinated VOC compounds) eluting within the gasoline range contribute to the GRO result and GRO results are likely biased high (J+). PES requested that Pace evaluate chromatograms associated with positive sample detections to confirm the potential presence of gasoline. Per PES's request Pace reviewed selected sample chromatograms against the gasoline standard chromatograms and assigned "no discernible petroleum pattern" to GRO results associated with this Task. PES assigned an additional project level qualifier (Z) to GRO results when the chromatogram for the sample does not match a discernible gasoline standard pattern. No action is taken in these cases other than to note that this is likely due to report formatting error. Associated chromatograms and qualified samples for this Task are as follows:

Sample ID	Laboratory Identification	Gasoline Range Organic Result (µg/L)	DV Qualifier	Data Validation Comments	Pace Chromatogram Review Notes
MW127-042320	L1211929-03	121	Z, J+	Elevated chlorinated VOCs detected within the GRO elution range	No discernible petroleum pattern present.

MW120-042320	L1211929-05	481	Z, J+	Elevated chlorinated VOCs detected within the GRO elution range	No discernible petroleum pattern present.
MW-156-042420	L1212335-06	756	Z, J+	Elevated chlorinated VOCs detected within the GRO elution range	No discernible petroleum pattern present.
MW-157-042420	L1212335-07	770	Z, J+	Elevated chlorinated VOCs detected within the GRO elution range	No discernible petroleum pattern present.

Project level qualifiers have been included to the PES's project database (Epiphany) as (ZJ+). Washington State EIM valid values were reviewed. In this case no Washington State EIM valid value descriptor is ideal and the default estimated value (J) has been selected as the best match to qualify GRO (Z,J+) data.

Data Assessment

The laboratory data reported for this project were reviewed based on the criteria outlined in:

- USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review (USEPA, 2017); and
- USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017).

Data qualifiers are assigned and laboratory report pages with qualifiers are attached. All data, including qualified data, are judged to be acceptable for their intended use.

MEMORANDUM

TO: Project File **DATE:** May 20, 2020

FROM: Jessie Compeau

SUBJECT: Laboratory Data Validation Review

PROJECT: American Linen Data Validation

PROJECT #: 1413.001.02.501E

TASK: EIM Data Validation Level EPA2A for 2nd Quarter Monitoring – Groundwater Samples - Group 3

LAB: Pace Sample Delivery Groups (SDGs): L1213148, L1213621, L1214057, L1214418, and L1214811

Thirty-two (32) groundwater samples (including one field duplicate), one equipment blank, and two trip blanks were collected as part of the 2nd Quarterly Monitoring Round for 2020 for the ongoing Remedial Investigation (RI) sampling at the Former American Linen Supply Site, in Seattle, Washington in April and May of 2020. The samples were shipped and delivered to Pace Lab Sciences (Pace) of Mount Juliet, TN for laboratory analysis. Selected samples were analyzed for the following:

- Volatile organic compounds (VOCs) by United States Environmental Protection Agency (USEPA) Method 8260D;
- Total petroleum hydrocarbons as gasoline (TPH-Gx) by NWTPH-Gx per analytical method stipulated by Washington State Department of Ecology;
- VOCs (dissolved gases – methane, ethane, and ethene) by EPA SOP RSK 175;
- Alkalinity by Method 2320 B-2011;
- Anions (chloride, nitrate, and sulfate) by USEPA Method 9056A;
- Total Organic Carbon (TOC) by USEPA Method 9060A; and
- Metals (iron and manganese) by USEPA Method 6020B.

The RI sampling was conducted in the spring of 2020. Results are reported in multiple SDGs from Pace. Pace SDGs are reviewed in groups (up to 10 SDGs) for each data validation report. Group 3 analytical results are reported in SDGs L1213148, L1213621, L1214057, L1214418, and L1214811. The quality assurance review of the laboratory data associated with Group 3 is summarized below.

DATA QUALIFICATIONS

Guidelines established by USEPA for a limited data validation review of analytical data along with Pace control limit criteria were used to validate the data. The comments presented in this memorandum refer to the laboratory's performance in meeting the quality control criteria

outlined in the USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review (USEPA, 2017) and USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017). Following Guidelines, non-project-specific laboratory duplicates and matrix spike results were not evaluated as part of this data validation.

DATA VALIDATION

Completeness

All samples were collected and analyzed as requested.

Sample Collection and Preservation

Samples were collected in laboratory-supplied sample containers preserved as appropriate for the individual analyses conducted. The samples were packed on ice in coolers and delivered by courier to the analytical laboratory. The laboratory reported that the coolers were received at a cooler temperature less than the recommended temperature preservation of 6°C. Samples were received in good condition except for issues mentioned in the Completeness section. No data were qualified based upon the sample collection and preservation information with the following discussions:

- SDG L1213621: PES review of field notes indicated that there was a work trailer parked over the top of monitoring well FMW-131 and it was sampled with the peristaltic pump instead of the bladder pump. The depth to water was measured at 22.4 feet below top of casing (TOC) however the SAP stipulates that well locations with water levels lower than 20.0 feet below TOC should be sampled with a bladder pump. Past and current data sets of analytical data for monitoring well FMW-131 were reviewed for comparability. The historical data appear to be generally consistent with current analytical data from monitoring well FMW-131. No further action is taken other than to note this.

- SDG L1213621: Pace's original sample narrative (May 8, 2020) for VOC results on sample MW-322-042920 read "non-target compounds too high to run at a dilution". PES followed up to confirm the types of non-target compounds that may have been present. Pace confirmed, May 27, 2020, that the statement was erroneously added by the bench analyst and should have read "target compounds too high to run at a lower dilution". SDG L1213621 was reissued on May 27, 2020 with the modified sample narrative for sample MW-322-042920 VOC results.

- SDG L1214418: Pace Log In comments indicate that samples were shipped without ice and received at 8.7 °C however emails between Pace and PES indicate that ice was included in the coolers prior to shipment. Validator recommends that PES pack coolers with additional bags of ice particularly for the upcoming warmer seasons. No action is taken on this basis since the cooler temperatures only marginally exceeded the recommended temperature and were received less than 10 °C.

- SDG L1213621: PES requested on May 1, 2020 that sample MW-116-042920 identification on the chain of custody be changed to sample MW116-042920.

Holding Times

USEPA Method 8260D:
All samples were analyzed for VOCs within the EPA recommended holding time of fourteen days for preserved waters from the date of collection. All holding time criteria are met.

NWTPH-Gx Method:
All samples were analyzed within the WA State recommended holding time of fourteen days for preserved waters from the date of sample collection. All holding time criteria are met.

Dissolved Gases (Methane, Ethane, and Ethene) by RSK 175:
All samples were analyzed within the WA State recommended holding time of fourteen days for preserved waters from the date of sample collection. All holding time criteria are met.

USEPA Method 6020B:
All samples were analyzed within the USEPA recommended holding time for iron and manganese of 180 days for preserved waters from the date of sample collection. All holding time criteria are met.

General Chemistry (Alkalinity, Chloride, Sulfate, Nitrate, and TOC):
All samples were analyzed within the USEPA recommended holding time for alkalinity (14 days), chloride (28 days), sulfate (28 days), and nitrate (48 hours), and TOC (28 days) for preserved waters from the date of sample collection. All holding time criteria are met.

Initial and Continuing Calibration

Calibration data for this project are not required for this deliverable however Pace's notes indicate the following:

- Multiple SDGs - *USEPA Method 8260D:* Continuing calibration verification (CCV) issues were noted by Pace for multiple compounds associated with analytical batches in each SDG. These compounds are qualified by the laboratory "J0" to indicate that percent difference CCV is outside of laboratory acceptance criteria. **Associated sample results with laboratory qualified (J0) results are estimated and qualified (J/UJ).**

Method Blank Results

USEPA Method 8260D:
Laboratory method blanks were included with the analytical batches per method requirement. The target analytes were not detected in the method blanks at or above the reporting detection limits (RDLs).

NWTPH-Gx Method:

Laboratory method blanks were included with the analytical batches per method requirement. The target analyte (gasoline) was not detected in the method blanks at or above the RDLs with one exception:

- SDG L1213148 – Analytical batch WG1469578: A low level of gasoline was detected in the method blank. The associated gasoline detection in sample MW-307-042820 is above the RDL and no action is taken. **Gasoline was detected below the RDL in samples MW-305-042820 and MW-306-042820. Gasoline results for samples are qualified as non-detected (U) due to blank contamination.**

- SDG L1213621 – Analytical batch WG1469667: Low levels of gasoline concentrations were detected in the method, trip, and equipment blanks. No action is taken on this basis.

- SDG L1213621 – Analytical batch WG1470018: Low level of gasoline concentrations were detected in the method, trip, and equipment blanks. Associated sample MW-147-042920 result is greater than the RDL and no action is taken on this basis.

- SDG L1214057 - Analytical batch WG1470453: A low levels of gasoline was detected in the method blank. The associated gasoline detection in sample MW-146-043020 is above the RDL and no action is taken. **Gasoline was detected below the RDL in samples MW-154-043020, MW-153-043020, and MW-148-043020. Gasoline results for these samples are qualified as non-detected (U) due to blank contamination.**

- SDG L1214418 - Analytical batch WG1472292: Low levels of gasoline concentrations were detected in the method and trip blank. The associated gasoline detection in sample MW-146-043020 is above the RDL and no action is taken. **Gasoline was detected below the RDL in samples MW-168-050120, MW-176-050120, MW-167-050120, MW-175-050120, MW-165-050120, MW-174-050120, and MW-166-050120. Gasoline results for these samples are qualified as non-detected (U) due to blank contamination.**

- SDG L1214418 - Analytical batch WG1472903: Low levels of gasoline concentrations were detected in the method and trip blank. No action is needed since gasoline was not detected in the associated sample (MW-173-050120).

Dissolved Gases (Methane, Ethane, and Ethene) by RSK 175:
Laboratory method blanks were included with the analytical batches per method requirement. The target analytes (dissolved gases) are not detected in the method blanks at or above the RDLs.

USEPA Method 6020B and General Chemistry (Alkalinity, Chloride, Sulfate, Nitrate, and TOC):
Laboratory method blanks were included with the analytical batches per method requirement. The target analytes were detected in the method blanks below the RDLs. Per Guidance, no action is taken for blank detections less than the RDL when associated sample detections are greater than the RDL. General chemistry and metal blank detections are shown below:

SDG	Batch	Method	Analyte	Method Blank Result	Qualifier	RDL	Units	Associated Result(s) Qualified
L1213148	WG1468666	9060A	TOC	193	J	1000	µg/L	NO
L1213148	WG1470661	9060A	TOC	445	J	1000	µg/L	NO
L1213621	WG1469258	9060A	TOC	389	J	1000	µg/L	NO
L1213621	WG1470661	9060A	TOC	445	J	1000	µg/L	NO
L1214057	WG1471458	9060A	TOC	347	J	1000	µg/L	NO
L1214057	WG1471459	9060A	TOC	227	J	1000	µg/L	NO
L1214418	WG1471459	9060A	TOC	227	J	1000	µg/L	NO
L1214418	WG1472044	9060A	TOC	247	J	1000	µg/L	NO
L1214811	WG1472044	9060A	TOC	247	J	1000	µg/L	NO
L1214811	WG1472048	9060A	TOC	530	J	1000	µg/L	NO

Target analytes were detected in method blanks at low levels with no impact to the associated samples with the following discussions:

- SDGs L1213148: TOC was detected in sample MW-305-042820 at 921 µg/L slightly below the RDL of 1000 µg/L. TOC was also detected in the method blank at 193 µg/L. In this case professional judgment was used and no action is taken other than to remove the “B” qualifier from the EDD and Form 1 results.

- SDG L1214057: TOC was detected in sample MW-153-043020 at 843 µg/L slightly below the RDL. TOC was also detected in the method blank at 227 ug/L. In this case professional judgment was used and no action is taken other than to remove the “B” qualifier from the EDD and Form 1 results.

Trip Blank Results

USEPA Method 8260D, NWTPH-Gx:
Two trip blanks were collected. The target analytes are not detected in the method blanks at or above the RDLs with the following exceptions:

- SDG L1213621: A low level of gasoline is detected in the trip blank (TB-042920). Low levels of gasoline were also detected in the equipment and method blanks. Associated sample MW-147-042920 gasoline result is not impacted since the detection is significantly greater than the RDL.

- SDG L1214418: A low level of gasoline is detected in the trip blank (TB-050120). A low level of gasoline was also detected in the method blank. Associated sample MW-147-042920 is not impacted since the gasoline detection is significantly greater than the RDL. **Gasoline was detected below the RDL in samples MW-168-050120, MW-176-050120, MW-167-050120, MW-175-050120, MW-165-050120, MW-174-050120, and MW-166-050120. Gasoline results for these samples are qualified as non-detected (U) due to blank (method and trip) contamination.**

Field, Rinsate, or Equipment Blank Results

All Analytical Methods:

One equipment blank (EQ-042920 with SDG L1213621) is associated with all samples collected via bladder pump on April 29, 2020. Associated samples are MW-320-042920, MW-333-042920, MW-322-042920**,** MW116-042920, and MW-147-042920. Low levels of gasoline, TOC, and manganese were detected in the equipment blank. No action is taken for low level of gasoline, TOC, and manganese since the amounts in the associated samples are far greater than the detections in the equipment blank.

Field Duplicate Analyses

Field duplicate pairs were submitted and analyzed. Field duplicate sample pair is as follows:

- SDG L1213621: Sample GEI-1-042920 is a field duplicate of MW-929-042920

Target analyte results are comparable and within a relative percent difference (RPD) of 30% (± 1x RDL for groundwater results <5X the RDL) for the field duplicate pair.

Laboratory Duplicate Analyses

USEPA Method 8260D:
Laboratory duplicate samples were not analyzed. Refer to laboratory control sample/sample duplicate (LCS/LCSD) or matrix spike/matrix spike duplicate (MS/MSD) results for precision data.

NWTPH-Gx Method:
Laboratory duplicate samples were not analyzed. Refer to field duplicate, LCS, or MS results for additional information.

Dissolved Gases (Methane, Ethane, and Ethene) by RSK 175:
Laboratory duplicate sample analyses were performed on client and non-client samples within the analytical batches. The primary/duplicate RPDs for dissolved gas analyses are within the laboratory control limit of 20%.

USEPA Method 6020B:
Laboratory duplicate samples were not analyzed. Refer to LCS/LCSD or MS/MSD results for precision data.

General Chemistry (Alkalinity, Chloride, Sulfate, Nitrate, and TOC):
Laboratory duplicate sample analyses were performed on client samples and/or on non-client samples. The primary/duplicate RPDs for general chemistry parameters are within the laboratory control RPD limits or ± 1x RDL for groundwater results <5X the RDL with the following discussions:

- SDG L1214057: A laboratory duplicate was performed on a non-client sample with a nitrate RPD result exceeding laboratory QC criteria and laboratory qualified (J3). No action is taken on this basis since the laboratory duplicate was performed on a non-client sample. Refer to matrix spike results for precision data.

- SDG L1214811: A laboratory duplicate was performed on a non-client sample with a chloride RPD result exceeding laboratory QC criteria and laboratory qualified (P1). No action is taken on this basis since the results are less than 5X the RL and ± <1X the RDL.

- SDG L1214811: A laboratory duplicate was performed on a non-client sample with a TOC RPD result exceeding laboratory QC criteria and laboratory qualified (P1). No action is taken on this basis since the results are less than 5X the RL and ± <1X the RDL.

Surrogate Recoveries

USEPA Method 8260D:
The surrogate recovery results for the samples, laboratory control samples, matrix spike samples, and the method blanks are within the laboratory surrogate control limits for all the analyses.

NWTPH-Gx Method:
The surrogate recovery results for the samples, laboratory control samples, matrix spike samples, and the method blanks are within the laboratory surrogate control limits for all analyses.

Laboratory Control Samples

USEPA Method 8260D:
Laboratory control sample/laboratory control sample duplicate (LCS/LCSD) or laboratory control sample (LCS) were analyzed by USEPA Method 8260D method. The LCS % Rs or LCS/LCSD % Rs and RPDs for the all target compounds are within the laboratory control criteria for waters with the following discussion:

- SDG L1210457 - Analytical batch WG1470473: LCS/LCSD % recoveries for acetone are above laboratory acceptance criteria and laboratory qualified (J4). No action is needed since acetone is not detected in the associated samples.

- SDG L1214811 - Analytical batch WG1470473: LCS/LCSD RPD exceeds criteria for two compounds (trans-1,4-dichloro-2-butene and 2-butanone) and laboratory qualified (J3). Recoveries are within criteria but are recovered wide. No action is taken on this basis.

NWTPH-Gx Method:
The LCS % Rs for the target compound (gasoline) are within the laboratory control criteria for waters. No measures of precision are provided with the analytical batch. No action is taken other than to note this.

Dissolved Gases (Methane, Ethane, and Ethene) by RSK 175:
The LCS/LCSD % Rs and RPDs for the target compound (dissolved gases) are within the laboratory control criteria for waters.

USEPA Method 6020B:
The LCS % Rs or LCS/LCSD % Rs and RPDs for the target compound (iron and manganese) are within the laboratory control criteria for waters.

General Chemistry (Alkalinity, Chloride, Sulfate, Nitrate, and TOC):
The LCS % Rs for general chemistry parameters are within the laboratory control criteria for waters.

Matrix Spike/Matrix Spike Duplicates

USEPA Method 8260D:
Matrix spike/matrix spike duplicate (MS/MSD) analyses were not performed. Refer to LCS results. In some cases, no measure of precision was provided. Refer to the field duplicate results for precision data. No action was taken other than to note this.

NWTPH-Gx Method:
MS/MSD analyses were not performed. Refer to LCS results. No measure of precision was provided. In some cases, no measure of precision was provided. No action was taken other than to note this.

Dissolved Gases (Methane, Ethane, and Ethene) by RSK 175:
MS/MSD analyses were not performed. Refer to LCS results and field duplicate sample for accuracy and precision data.

USEPA Method 6020B:
MS/MSD analyses were performed on client and on non-client samples within the analytical batches. The MS/MSD % Rs and RPD were acceptable and within laboratory control limit criteria for water samples with the following discussion:

- SDG L1213621: MS/MSD was performed on sample MW-929-042920 with MSD recovery below criteria for manganese and laboratory qualified (V). Per Guidelines, no action is taken for manganese since the sample amount is greater than four times the spike amount.

- SDG L1214057: Matrix spike analysis was performed on client sample MW-146-043020 and manganese spike results are laboratory qualified (V) to indicate that the sample concentration is greater than 4X the spike amount. Per guidance no action is necessary. Refer to LCS results for accuracy data.

General Chemistry (Alkalinity, Chloride, Sulfate, Nitrate, and TOC):
MS or MS/MSD analyses were performed on client and/or non-client samples within the analytical batches. In cases where MS/MSD spike analyses are not performed refer to LCS/LCSD or laboratory duplicate data for accuracy and precision data. The MS/MSD % Rs and RPDs are acceptable and within laboratory control limit criteria for water samples with the following discussion:

- SDG L1213148: Matrix spike analysis was performed on client sample MW-307-042820 and sulfate spike results are laboratory qualified (E) to indicate that the sample concentration exceeds the linear calibration range. No action is taken in this case since the RPD criteria is met.

- SDG L1214418: Matrix spike analysis was performed on a non-client sample. Chloride and sulfate spike results are laboratory qualified (EV) to indicate that the sample concentration exceeds the linear calibration range and is greater than 4X the spike amount. No action is taken in this case since the spike was performed on a non-client sample. Refer to MS results on client sample MW-175-050120 for accuracy data.

Other Quality Control Issues

No laboratory quality control issues were identified in the laboratory report with the following discussions:

- Multiple SDGs: Sample narratives for alkalinity results indicate that the endpoint pH is 4.5. No action was taken other than to note that this reflects total alkalinity.

- Electronic data deliverables (EDDs) for these SDGs were provided by the laboratory and data validator qualifiers were entered. In some cases, different chemical synonyms are used between the EDD and the hardcopy however associated Chemical Abstracts Service (CAS) numbers are provided in the EDD to confirm chemical identifications.

Compound Identification and Quantitation Limits

Results of the analyses were reported based on laboratory RDLs for all compounds. RDLs for selected compounds are elevated due to method-required dilutions. In some cases, non-target compounds are too high to run at a lower dilution. No action is taken other than to note this.

Gasoline and gasoline range organics are analyzed for via Volatile Organic Compounds (GC) by Washington State Method NWTPHGx (using a gas chromatograph/flame ionization detector (GC/FID)) and Pace reported gasoline range organic-NWTPH results. Several chlorinated VOC compounds (including cis-1,2-dichloroethene, trans-1,2-dichloroethene, trichloroethene, and tetrachloroethene) elute within the gasoline range organics (GRO) retention time range as specified by Washington State (detections falling between the toluene and dodecane range).

Non-petroleum organics (e.g. chlorinated VOC compounds) eluting within the gasoline range contribute to the GRO result and GRO results are likely biased high (J+). PES requested that Pace evaluate chromatograms associated with positive sample detections to confirm the potential presence of gasoline. Per PES's request Pace reviewed selected sample chromatograms against the gasoline standard chromatograms and assigned "no discernible petroleum pattern" to GRO results associated with this Task. PES assigned an additional project level qualifier (Z) to GRO results when the chromatogram for the sample does not match a discernible gasoline standard pattern. No action is taken in these cases other than to note that this is likely due to report formatting error. Associated chromatograms and qualified samples for this Task are as follows:

Sample ID	Laboratory Identification	Gasoline Range Organic Result (μg/L)	DV Qualifier	Data Validation Comments	Pace Chromatogram Review Notes

MW-307-042820	L1213148-02	146	Z, J+	Elevated chlorinated VOCs detected within the GRO elution range	No discernible petroleum pattern present.
MW-147-042920	L1213621-10	1,150	Z, J+	Elevated chlorinated VOCs detected within the GRO elution range	No discernible petroleum pattern present.
MW-146-043020	L1214057-01	1,080	Z, J+	Elevated chlorinated VOCs detected within the GRO elution range	No discernible petroleum pattern present.

Project level qualifiers have been included to the PES's project database (Epiphany) as (ZJ+). Washington State EIM valid values were reviewed. In this case no Washington State EIM valid value descriptor is ideal and the default estimated value (J) has been selected as the best match to qualify GRO (Z,J+) data.

Data Assessment

The laboratory data reported for this project were reviewed based on the criteria outlined in:

- USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review (USEPA, 2017); and
- USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017).

Data qualifiers are assigned and laboratory report pages with qualifiers are attached. All data, including qualified data, are judged to be acceptable for their intended use.

MEMORANDUM

TO: Project File **DATE:** May 27, 2020

FROM: Jessie Compeau

SUBJECT: Laboratory Data Validation Review

PROJECT: American Linen Data Validation

PROJECT #: 1413.001.02.501E

TASK: EIM Data Validation Level EPA2A for 2nd Quarter Monitoring – Groundwater Samples - Group 4

LAB: Pace Sample Delivery Groups (SDGs): L1215318, L1215869, L1216431, L1216893, L1217858, and L1218975

Twenty-six (26) groundwater samples (including three field duplicates), one equipment blank, and three trip blanks were collected as part of the 2nd Quarterly Monitoring Round for 2020 for the ongoing Remedial Investigation (RI) sampling at the Former American Linen Supply Site, in Seattle, Washington in May of 2020. The samples were shipped and delivered to Pace Lab Sciences (Pace) of Mount Juliet, TN for laboratory analysis. Selected samples were analyzed for the following:

- Volatile organic compounds (VOCs) by United States Environmental Protection Agency (USEPA) Method 8260D;
- Total petroleum hydrocarbons as gasoline (TPH-Gx) by NWTPH-Gx per analytical method stipulated by Washington State Department of Ecology;
- VOCs (dissolved gases – methane, ethane, and ethene) by EPA SOP RSK 175;
- Alkalinity by Method 2320 B-2011;
- Anions (chloride, nitrate, and sulfate) by USEPA Method 9056A;
- Total Organic Carbon (TOC) by USEPA Method 9060A; and
- Metals (iron and manganese) by USEPA Method 6020B.

The RI sampling was conducted in the spring of 2020. Results are reported in multiple SDGs from Pace. Pace SDGs are reviewed in groups (up to 10 SDGs) for each data validation report. Group 4 analytical results are reported in SDGs L1215318, L1215869, L1216431, L1216893, L1217858, and L1218975. The quality assurance review of the laboratory data associated with Group 4 is summarized below.

DATA QUALIFICATIONS

Guidelines established by USEPA for a limited data validation review of analytical data along with Pace control limit criteria were used to validate the data. The comments presented in this memorandum refer to the laboratory's performance in meeting the quality control criteria outlined in the USEPA Contract Laboratory Program National Functional Guidelines for

Superfund Organic Methods Data Review (USEPA, 2017) and USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017). Following Guidelines, non-project-specific laboratory duplicates and matrix spike results were not evaluated as part of this data validation.

DATA VALIDATION

Completeness

All samples were collected and analyzed as requested with the following discussion:

- SDG L1215318: Sample MW123-050520 request for gasoline analysis was placed on hold per PES's May 6, 2020 request. No action is taken other than note this.

Sample Collection and Preservation

Samples were collected in laboratory-supplied sample containers preserved as appropriate for the individual analyses conducted. The samples were packed on ice in coolers and delivered by courier to the analytical laboratory. The laboratory reported that the coolers were received at a cooler temperature less than the recommended temperature preservation of 6°C. Samples were received in good condition except for issues mentioned in the Completeness section. No data were qualified based upon the sample collection and preservation information.

Holding Times

USEPA Method 8260D:
All samples were analyzed for VOCs within the EPA recommended holding time of fourteen days for preserved waters from the date of collection. All holding time criteria are met.

NWTPH-Gx Method:
All samples were analyzed within the WA State recommended holding time of fourteen days for preserved waters from the date of sample collection. All holding time criteria are met.

Dissolved Gases (Methane, Ethane, and Ethene) by RSK 175:
All samples were analyzed within the WA State recommended holding time of fourteen days for preserved waters from the date of sample collection. All holding time criteria are met.

USEPA Method 6020B:
All samples were analyzed within the USEPA recommended holding time for iron and manganese of 180 days for preserved waters from the date of sample collection. All holding time criteria are met.

General Chemistry (Alkalinity, Chloride, Sulfate, Nitrate, and TOC):
All samples were analyzed within the USEPA recommended holding time for alkalinity (14 days), chloride (28 days), sulfate (28 days), and nitrate (48 hours), and TOC (28 days) for preserved waters from the date of sample collection. All holding time criteria are met.

Initial and Continuing Calibration

Calibration data for this project are not required for this deliverable however Pace's notes indicate the following:

- Multiple SDGs - *USEPA Method 8260D:* Continuing calibration verification (CCV) issues were noted by Pace for multiple compounds associated with analytical batches in each SDG. These compounds are qualified by the laboratory "J0" to indicate that percent difference CCV is outside of laboratory acceptance criteria. **Associated sample results with laboratory qualified (J0) results are estimated and qualified (J/UJ).**

Method Blank Results

USEPA Method 8260D:
Laboratory method blanks were included with the analytical batches per method requirement. The target analytes were not detected in the method blanks at or above the reporting detection limits (RDLs) with the following discussions:

- SDG L1215318 – Analytical batch WG1472450: A low level of 1,2,3-trichlorobenzene is detected in the method blank. No action is required since 1,2,3-trichlorobenzene is not detected in the associated samples.

- SDG L1215869 – Analytical batch WG1472732: A low level of naphthalene is detected in the method blank. No action is required since naphthalene is not detected in the associated sample (equipment blank).

- SDG L1216431 – Analytical batch WG1473710: Low levels of isopropylbenzene and 1,2,3-trichlorobenzene are detected in the method blank. No action is required since isopropylbenzene and 1,2,3-trichlorobenzene are not detected in the associated samples. A low level of isopropylbenzene is detected in the associated trip blank but not action is taken on this basis since it was not detected in the associated samples.

- SDG L1218975 – Analytical batch WG1477940: Low levels of naphthalene and 1,2,3-trichlorobenzene are detected in the method blank. No action is required since these compounds are not detected in the associated samples.

NWTPH-Gx Method:
Laboratory method blanks were included with the analytical batches per method requirement. The target analyte (gasoline) was not detected in the method blanks at or above the RDLs with the following exceptions:

- SDG L1215869 – Analytical batch WG1475231: Low levels of gasoline were detected in the method and equipment blanks. **Gasoline was detected below the RDL in samples MW-930-050620 and MW106-050620. Gasoline results for samples are qualified as non-detected (U) due to blank contamination.**

- SDG L1216431 – Analytical batch WG1477085: A low level of gasoline was detected in the method blank. **Gasoline was detected below the RDL in sample MW-303-050720. Gasoline result for this sample is qualified as non-detected (U) due to blank contamination.**

- SDG L1216893 – Analytical batch WG1477292: A low level of gasoline was detected in the method blank. **Gasoline was detected below the RDL in sample MW-138-050820. Gasoline results for this sample is qualified as non-detected (U) due to blank contamination.**

- SDG L1217858 – Analytical batch WG1478160: A low level of gasoline was detected in the method blank. No action was taken for sample BB-8-051220 since the detection was slightly above the RDL. **Gasoline was detected below the RDL in sample** MW105-051220**. Gasoline results for this sample is qualified as non-detected (U) due to blank contamination.**

- SDG L1218975 – Analytical batch WG1479186: A low level of gasoline was detected in the method blank. No action was taken for the associated samples since gasoline is not detected.

Dissolved Gases (Methane, Ethane, and Ethene) by RSK 175:
Laboratory method blanks were included with the analytical batches per method requirement. The target analytes (dissolved gases) are not detected in the method blanks at or above the RDLs.

USEPA Method 6020B and General Chemistry (Alkalinity, Chloride, Sulfate, Nitrate, and TOC):
Laboratory method blanks were included with the analytical batches per method requirement. The target analytes were detected in the method blanks below the RDLs. Per Guidance, no action is taken for blank detections less than the RDL when associated sample detections are greater than the RDL. General chemistry and metal blank detections are shown below:

SDG	Batch	Method	Analyte	Method Blank Result	Qualifier	RDL	Units	Associated Result(s) Qualified
L1215318	WG1472815	9060A	TOC	361	J	1000	µg/L	NO
L1215869	WG1472819	9060A	TOC	179	J	1000	µg/L	NO
L1216431	WG1474460	9060A	TOC	213	J	1000	µg/L	NO
L1216431	WG1472616	9056A	Chloride	403	J	1000	µg/L	NO
L1216893	WG1476027	9060A	TOC	281	J	1000	µg/L	NO
L1217858	WG1476840	9060A	TOC	247	J	1000	µg/L	NO
L1218975	WG1478610	9060A	TOC	469	J	1000	µg/L	NO
L1218975	WG1478998	9060A	TOC	184	J	1000	µg/L	NO

Target analytes were detected in method blanks at low levels with no impact to the associated samples.

Trip Blank Results

USEPA Method 8260D, NWTPH-Gx:

One trip blank was collected. The target analytes are not detected in the trip blanks at or above the RDLs with the following exception:

- SDG L1216431: A low level of isopropylbenzene is detected in the trip blank (TB-050720) and in the associated method blank. No action is needed since isopropylbenzene is not detected in the associated samples.

Field, Rinsate, or Equipment Blank Results

All Analytical Methods:
One equipment blank (EQ-050620 with SDG L1215869) is associated with all samples collected via bladder pump on May 6, 2020. This equipment blank is associated with samples FMW-137-050620, MW-930-050620, MW106-050620, and FMW-129-050620. Low levels of gasoline, nitrate, TOC, iron, and manganese were detected in the equipment blank. No action is taken for these nitrate, TOC, iron, and manganese detections since these are either not detected in the associated samples or sample detections are far greater than detections in the equipment blank. **Associated gasoline results for samples MW-930-050620 and MW106-050620 are detected below the RDL. These results are qualified as not detected (U) due to method and/or equipment blank contamination**

Field Duplicate Analyses

Field duplicate pairs were submitted and analyzed. Field duplicate sample pair is as follows:

- SDG L1215869: MW-930-050620 is a field duplicate of MW106-050620
- SDG L1218975: MW-931-051420 is a field duplicate of MW-339-051420
- SDG L1218975: MW-932-051420 is a field duplicate of MW-330-051420

Target analyte results are comparable and within a relative percent difference (RPD) of 30% (± 1x RDL for groundwater results <5X the RDL) for the field duplicate pair with the following exceptions:

- SDG L1218975: MW-931-051420 is a field duplicate of MW-339-051420. **Methane RPD exceeds acceptance criteria and methane results for this field duplicate pair are estimated and qualified (J).**

- SDG L1218975: MW-932-051420 is a field duplicate of MW-330-051420. **Methane RPD exceeds acceptance criteria and methane results for this field duplicate pair are estimated and qualified (J).**

Laboratory Duplicate Analyses

USEPA Method 8260D:
Laboratory duplicate samples were not analyzed. Refer to laboratory control sample/sample duplicate (LCS/LCSD) or matrix spike/matrix spike duplicate (MS/MSD) results for precision data.

NWTPH-Gx Method:
Laboratory duplicate samples were not analyzed. Refer to field duplicate, LCS, or MS results for additional information.

Dissolved Gases (Methane, Ethane, and Ethene) by RSK 175:
Laboratory duplicate sample analyses were performed on client and non-client samples within the analytical batches. The primary/duplicate RPDs for dissolved gas analyses are within the laboratory control limit of 20%.

USEPA Method 6020B:
Laboratory duplicate samples were not analyzed. Refer to LCS/LCSD or MS/MSD results for precision data.

General Chemistry (Alkalinity, Chloride, Sulfate, Nitrate, and TOC):
Laboratory duplicate sample analyses were performed on client samples and/or on non-client samples. The primary/duplicate RPDs for general chemistry parameters are within the laboratory control RPD limits or ± 1x RDL for groundwater results <5X the RDL with the following discussion:

- SDG L1215318: A laboratory duplicate was performed on a non-client sample with chloride, nitrate, and sulfate results exceeding upper calibration limits and laboratory qualified (E or EV). No action is taken on this basis since the laboratory duplicate was performed on a non-client sample. Refer to additional laboratory quality control results for precision and accuracy data.

Surrogate Recoveries

USEPA Method 8260D:
The surrogate recovery results for the samples, laboratory control samples, matrix spike samples, and the method blanks are within the laboratory surrogate control limits for all the analyses.

NWTPH-Gx Method:
The surrogate recovery results for the samples, laboratory control samples, matrix spike samples, and the method blanks are within the laboratory surrogate control limits for all analyses.

Laboratory Control Samples

USEPA Method 8260D:
Laboratory control sample/laboratory control sample duplicate (LCS/LCSD) or laboratory control sample (LCS) were analyzed by USEPA Method 8260D method. The LCS % Rs or LCS/LCSD % Rs and RPDs for the all target compounds are within the laboratory control criteria for waters with the following discussions:

- SDG L1215869 - Analytical batch WG1472732: LCS/LCSD RPD exceeds QC criteria for trans-1,4-dichloro-2-butene and is laboratory qualified (J3). Recoveries are within criteria but are recovered wide. No action is taken on this basis.

- SDG L1215869 - Analytical batch WG1472992: LCS % recovery exceeds QC criteria for acetone and is laboratory qualified (J4). No action is needed since acetone is not detected in the associated samples.

- SDG L1216431 - Analytical batch WG1473710: LCS/LCSD recoveries exceed QC criteria for multiple compounds and are laboratory qualified (J4). No action is needed since these compounds are not detected in the associated samples.

- SDG L1218975 - Analytical batch WG1477940: LCS and/or LCSD % recoveries for sec-butylbenzene and 4-chlorotoluene are above laboratory acceptance criteria and laboratory qualified (J4). No action is needed since these compounds are not detected in the associated samples. RPD criteria are exceeded for naphthalene and 1,2,3-trichlorobenzene. Recoveries are within criteria but are recovered wide. No action is taken on this basis.

NWTPH-Gx Method:
The LCS % Rs for the target compound (gasoline) are within the laboratory control criteria for waters. No measures of precision are provided with the analytical batch. No action is taken other than to note this.

Dissolved Gases (Methane, Ethane, and Ethene) by RSK 175:
The LCS/LCSD % Rs and RPDs for the target compound (dissolved gases) are within the laboratory control criteria for waters.

USEPA Method 6020B:
The LCS % Rs or LCS/LCSD % Rs and RPDs for the target compound (iron and manganese) are within the laboratory control criteria for waters.

General Chemistry (Alkalinity, Chloride, Sulfate, Nitrate, and TOC):
The LCS % Rs for general chemistry parameters are within the laboratory control criteria for waters.

Matrix Spike/Matrix Spike Duplicates

USEPA Method 8260D:
Matrix spike/matrix spike duplicate (MS/MSD) analyses were performed on non-client samples within the analytical batches. In cases where matrix spike analyses were not performed refer to LCS results. Refer to the field duplicate results for precision data. The MS/MSD % Rs and RPDs are acceptable and within laboratory control limit criteria for water samples with the following discussions:

- SDG L1215869 - Analytical batch WG1472732: Matrix spike was performed on a non-client sample. MS/MSD RPD exceeds criteria for multiple compounds and laboratory qualified (J3). MS/MSD recoveries are outside of criteria due to elevated sample concentrations or matrix interferences and laboratory qualified (V, J6 or J5). No action is taken on this basis since the spike is performed on a non-client sample. Refer to LCS/LCSD results for precision and accuracy data.

- SDG L1216431 - Analytical batch WG1473710: Matrix spike was performed on a non-client sample. MS/MSD recoveries and RPDs are outside of criteria for multiple compounds and laboratory qualified (J3, J5, J6, V, E, EV) due to matrix interferences and elevated targets. No action is taken on this basis since the spike is performed on a non-client sample. Refer to LCS/LCSD results for precision and accuracy data.

NWTPH-Gx Method:
MS/MSD analyses were not performed. Refer to LCS results. No measure of precision was provided. In some cases, no measure of precision is provided. Refer to field duplicate results for precision data. No action was taken other than to note this.

Dissolved Gases (Methane, Ethane, and Ethene) by RSK 175:
MS/MSD analyses were performed on a non-client sample. In cases where matrix spike data are not provided refer to laboratory QC results and field duplicate sample for accuracy and precision data. The MS/MSD % Rs and RPD were acceptable and within laboratory control limit criteria for water samples with the following discussion:

- SDG L1215318: MS/MSDs were performed on a non-client sample with poor spike recoveries due to elevated methane concentration or interference and laboratory qualified (V or J6). No action is taken since the spike was performed on a non-client sample. Refer to laboratory duplicate and laboratory control sample results for precision and accuracy data.

USEPA Method 6020B:
MS/MSD analyses were performed on client and on non-client samples within the analytical batches. The MS/MSD % Rs and RPD were acceptable and within laboratory control limit criteria for water samples with the following discussion:

- SDG L1218975: Matrix spike analysis was performed on client sample MW-931-051420 and manganese spike results are laboratory qualified (V) to indicate that the sample concentration is greater than 4X the spike amount. Per guidance no action is necessary. Refer to LCS results for accuracy data.

General Chemistry (Alkalinity, Chloride, Sulfate, Nitrate, and TOC):
MS or MS/MSD analyses were performed on client and/or non-client samples within the analytical batches. In cases where MS/MSD spike analyses are not performed refer to LCS/LCSD or laboratory duplicate data for accuracy and precision data. The MS/MSD % Rs and RPDs are acceptable and within laboratory control limit criteria for water samples with the following discussions:

- SDG L1217858: Matrix spike analysis was performed on sample BB-8-051220 with all RPD criteria met for chloride, nitrate, and sulfate. Sulfate results are laboratory qualified (E) to indicate that the sample concentration exceeds the linear calibration range. No action is taken in this case since the RPD criteria is met.

- SDG L1217858: Matrix spike analysis was performed on a non-client sample with sulfate recovery results laboratory qualified (E, J6) to indicate that the sample concentration exceeds the linear calibration range and MS % R is slightly below criteria due to matrix interference. No action is taken on this basis since the spike was performed on a non-client sample. Refer to additional laboratory quality control results for precision and accuracy data.

- SDG L1218975: Matrix spike analysis was performed on client sample FMW-143-051420 with chloride and sulfate recovery results laboratory qualified (E) to indicate that the sample concentration exceeds the linear calibration range. No action is taken on this basis since the spike recoveries are within criteria. Refer to additional laboratory quality control results for precision and accuracy data.

Other Quality Control Issues

No laboratory quality control issues were identified in the laboratory report with the following discussions:

- Multiple SDGs: Sample narratives for alkalinity results indicate that the endpoint pH is 4.5. No action was taken other than to note that this reflects total alkalinity.

- Electronic data deliverables (EDDs) for these SDGs were provided by the laboratory and data validator qualifiers were entered. In some cases, different chemical synonyms are used between the EDD and the hardcopy however associated Chemical Abstracts Service (CAS) numbers are provided in the EDD to confirm chemical identifications.

Compound Identification and Quantitation Limits

Results of the analyses were reported based on laboratory RDLs for all compounds. RDLs for selected compounds are elevated due to method-required dilutions. In some cases, non-target compounds are too high to run at a lower dilution with the following discussion:

- SDG L1215318: Sample MW-169-050520 sample for gasoline analysis was diluted five-fold due to sample foaming. Pace indicated that anti-foam was not added to gasoline because the anti-foam peaks are within the GRO range and will cause a biased high result.

Gasoline and gasoline range organics are analyzed for via Volatile Organic Compounds (GC) by Washington State Method NWTPHGx (using a gas chromatograph/flame ionization detector (GC/FID)) and Pace reported gasoline range organic-NWTPH results. Several chlorinated VOC compounds (including cis-1,2-dichloroethene, trans-1,2-dichloroethene, trichloroethene, and tetrachloroethene) elute within the gasoline range organics (GRO) retention time range as specified by Washington State (detections falling between the toluene and dodecane range).

Non-petroleum organics (e.g. chlorinated VOC compounds) eluting within the gasoline range contribute to the GRO result and GRO results are likely biased high (J+). PES requested that Pace evaluate chromatograms associated with positive sample detections to confirm the potential presence of gasoline. Per PES's request Pace reviewed selected sample chromatograms against the gasoline standard chromatograms and assigned “no discernible petroleum pattern” to GRO results associated with this Task. PES assigned an additional project level qualifier (Z) to GRO results when the chromatogram for the sample does not match a discernible gasoline standard pattern. Associated chromatograms and qualified samples for this Task are as follows:

Sample ID	Laboratory Identification	Gasoline Range Organic Result (µg/L)	DV Qualifier	Data Validation Comments	Pace Chromatogram Review Notes
BB-8-051220	L1217858-01	101	Z, J+	Elevated chlorinated VOCs detected within the GRO elution range	No sample narrative included.

Project level qualifiers have been included to the PES’s project database (Epiphany) as (ZJ+). Washington State EIM valid values were reviewed. In this case no Washington State EIM valid value descriptor is ideal and the default estimated value (J) has been selected as the best match to qualify GRO (Z,J+) data.

Data Assessment

The laboratory data reported for this project were reviewed based on the criteria outlined in:

- USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review (USEPA, 2017); and
- USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017).

Data qualifiers are assigned and laboratory report pages with qualifiers are attached. All data, including qualified data, are judged to be acceptable for their intended use.
