MEMORANDUM

TO: Project File **DATE:** May 29, 2020

FROM: Jessie Compeau

SUBJECT: Laboratory Data Validation Review

PROJECT: American Linen Data Validation

PROJECT #: 1413.001.02.501B

TASK: EIM Data Validation Level EPA2A for Remedial Investigation (RI) Well Drilling and Installation. April and May 2020 Soil Samples.

LAB: Pace Sample Delivery Groups (SDGs): L1209078, L1210278, L1212082, L1214576, and L1215745

One hundred and four (104) soil samples, including five (5) field duplicates, and four (4) trip blanks were collected on April 13,14, 16, 17, 20, and 22, May 1 and 4, 2020 as part of the RI effort at the Former American Linen Supply Site, in Seattle, Washington. The samples were delivered to Pace Analytical (Pace) of Mount Juliet, TN for laboratory analysis. Selected samples were analyzed for the following parameters:

- Volatile organic compounds (VOCs) by United States Environmental Protection Agency (USEPA) Method 8260D;
- Total petroleum hydrocarbons (TPH) as gasoline (TPH-Gx) by NWTPH-GX per analytical methods stipulated by Washington State Department of Ecology; and
- Total Solids by Standard Methods (SM) 2540 G-2011.

The RI Well Drilling and Installation sampling results are reported in multiple SDGs from Pace. Analytical results are reported in Pace SDGs L1209078, L1210278, L1212082, L1214576, and L1215745. The quality assurance review of the laboratory data associated with these SDGs are summarized below.

DATA QUALIFICATIONS

Guidelines established by USEPA for review of analytical data were used to validate the data. The comments presented in this memorandum refer to the laboratory's performance in meeting the quality control criteria outlined in the USEPA Contract Laboratory Program National Functional Guidelines for Organic Superfund Methods Data Review (USEPA, 2017). Following Guidelines, non-project-specific laboratory duplicates and matrix spike results were not evaluated as part of this data validation.

DATA VALIDATION

Sample Receipt, Preservation and Handling

The samples were collected and delivered to the laboratory by courier. The samples were delivered to the project laboratory in coolers under standard chain-of-custody protocols. Review of Pace's chain of custody (COC) notes indicate that all samples were received in good condition below the recommended preservation temperature 6.0°C. No data qualifications were assigned due to sample receipt or temperature preservation issues.

Holding Times

USEPA Method 8260D:
All samples were analyzed for VOCs within the USEPA recommended holding time of fourteen days for soils and waters (trip blanks) from the date of sample collection. All holding time criteria are met.

NWTPH-Gx Method:
All samples were analyzed for gasoline within the USEPA recommended holding time of fourteen days for preserved soils from the date of sample collection. All holding time criteria were met.

Total Solids by SM 2540 G-2011:
Samples were analyzed within the USEPA recommended holding time of seven days for total solids.

Initial and Continuing Calibration

Calibration data for this project are not required for this deliverable however PACE’s notes indicate the following:

- Multiple SDGs - *USEPA Method 8260D:* Continuing calibration verification (CCV) issues were noted by Pace for multiple compounds associated with analytical batches in each SDG. These compounds are qualified by the laboratory “J0” to indicate that percent difference CCV is outside of laboratory acceptance criteria. **Associated sample results with laboratory qualified (J0) results are estimated and qualified (J/UJ).**

Method Blank Results

USEPA Method 8260D:
Laboratory method blanks are included with the analytical batches per method requirement. The target analytes are not detected in the method blanks at or above the method detection limit (MDLs) or the reporting detection limit (RDLs) with the following exceptions:

- SDG L1209078: Several compounds are detected below the RDLs in the method blank associated with the trip blank (analytical batch WG1461987). No action is taken since associated samples are not impacted.

- SDG L1210278: Chloroform, 1,1,1,2-tetrachloroethane, and 1,2,4-trichlorobenzene are detected below the RDL in the method blank (analytical batch WG1464831). A**ssociated chloroform detections (samples MW-334-17, MW-334-63, and MW-332-25) are detected below the RDL and are qualified as not detected (U) due to blank contamination.** No action is required for 1,1,1,2-tetrachloroethane, and 1,2,4-trichlorobenzene because these compounds are not detected in the associated samples.

- SDG L1212082: 1,2,3-Trichlorobenzene is detected below the RDL in the method blank (analytical batch WG1466619). No action is taken since this compound is not detected in the associated trip blank sample.

- SDG L1146028: Chloroform, trans-1,2-dichloroethene, and methylene chloride are detected below the RDLs in the method blank (analytical batch WG1361775). No action was necessary since these compounds are not detected in the associated sample MW-2014-65.

- SDG L1214576: 2-Butanone (MEK) is detected below the RDL in the method blank (analytical batch WG1473272). No action was necessary since these compounds were not detected in the associated samples.

- SDG L1147037: Chloroform, trans-1,2-dichloroethene, 2-butanone (MEK), and methylene chloride are detected below the RDLs in the method blank (analytical batch WG1361818). **All associated chloroform, trans-1,2-dichloroethene, 2-butanone (MEK), and methylene chloride detections below the RDL and are qualified as not detected (U) due to blank contamination.**

- SDG L1147037: 2-Butanone (MEK), methylene chloride, and 1,2,4-trimethylbenzene are detected below the RDLs in the method blank (analytical batch WG1362726). **All associated 2-butanone (MEK), methylene chloride, and 1,2,4-trimethylbenzene detections below the RDL and are qualified as not detected (U) due to blank contamination.**

NWTPH-Gx Method:
A laboratory method blank was included with the analytical batch per method requirement. The target analyte (gasoline) is not detected in the method blanks at a concentration at or above the RDL with the following exceptions:

- SDG L1210278: Gasoline is detected below the RDL in the method blank (analytical batch WG1465276). All associated gasoline detections (samples MW-334-10, MW-334-13, MW-334-17, and MW-334-23) are detected above the RDL and no action is taken on this basis.

Trip Blank Results

USEPA Method 8260D:
Three trip blanks (TB-041420, TB-042320, and TB-050520) were collected and analyzed. The target analytes were not detected in the trip blanks at or above the MDLs or RDLs with the following exceptions:

- SDG L1215745: A low level of naphthalene (below the RDL) is detected in the trip blank TB-050520. No action is required as naphthalene is not detected in the associated samples.

Field, Rinsate, or Equipment Blank Results

Field, rinsate or equipment blanks were not collected.

Field Duplicate Analyses

Field duplicate sample pairs are as follows:

- SDG L1209078: Samples MW-343-102 and MW-2017-102;
- SDG L1210278: Samples MW-331-35 and W-2018-35;
- SDG L1212082: Samples MW-336-11.5 and MW-2019-11.5;
- SDG L1212082: Samples MW-336-95 and MW-2020-95; and
- SDG L1215745: Samples MW-341-85 and MW-2021-85.

Field duplicate pairs were submitted and analyzed for VOCs and percent solids. Percent solids and VOC target analyte results are comparable and within a relative percent difference (RPD) of 30% (± 2x RDL for soil results <5X the RDL) for the field duplicates with the following exception:

- SDG L1212082: Samples MW-336-11.5 and MW-2019-11.5 – Isopropyltoluene RPD is greater than the acceptance criteria and results are estimated and qualified (J).

Laboratory Duplicate Analyses

USEPA Method 8260D:
Laboratory duplicate analyses were not performed. Refer to laboratory control samples, field duplicate samples, or matrix spike results for precision data.

NWTPH-Gx Method:
Laboratory duplicate analyses were not performed. Refer to matrix spike results for precision data.

Total Solids by SM 2540 G-2011:
Laboratory duplicate samples were performed on client and non-client samples associated with the analytical batches. The RPDs for percent moisture are within the laboratory control limit of 20% RPD.

Surrogate Recoveries

USEPA Method 8260D:
The surrogate recovery results for the samples, laboratory control samples, matrix spike samples, and the method blanks are within the laboratory surrogate control limits for all the analyses.

NWTPH-Gx Method:
The surrogate recovery results for the samples, matrix spike samples, laboratory control sample, and the method blank are within the laboratory surrogate control limits for all the analyses.

Matrix Spike/ Matrix Spike Duplicates

USEPA Method 8260D:
Matrix spike/matrix spike duplicate (MS/MSD) analyses were performed on non-client samples within the analytical batch. In cases where MS/MSDs were not performed refer to laboratory control samples, field duplicate data for accuracy and precision data. The MS/MSD %R's and RPDs for the target compounds are within the laboratory control criteria for soil and waters with the following discussion:

- SDG L1215745: Matrix spike analyses (associated with the Trip Blank) was performed on two non-client samples within the analytical batch. Multiple RPDs are outside of laboratory control limit criteria. No action is taken since the spikes was performed on a non-client sample. Refer to laboratory control sample results for additional quality control data.

NWTPH-Gx Method:
MS/MSD analyses were performed on a non-client soil sample within the analytical batch. MS/MSD spike recoveries and RPD are within laboratory control limit criteria.

Laboratory Control Samples

USEPA Method 8260D:
Laboratory control sample/laboratory control sample duplicates (LCS/LCSD) were analyzed by USEPA Method 8260D. In some cases, only an LCS was analyzed. For precision data refer to laboratory duplicate or field duplicate results. The LCS or LCS/LCSD %R's and RPDs for the target compounds are within the laboratory control criteria for soils with the following discussion:

- SDG L1209078: LCS/LCSD (analytical batch WG1461987) recoveries for several compounds are recovered wide with elevated RPDs and laboratory qualified (J3). No action is taken since the associated sample is the trip blank (TB-041420).

- SDG L1209078: LCS (analytical batch WG1462208) recoveries for acetone and 1,2-dichloropropane are detected above criteria and laboratory qualified (J4). No action is taken since these compounds are not detected in the associated samples.

- SDG L1209078: LCS (analytical batch WG1462349) recoveries for 2-chlorotoluene and 1,4-dichlorobenzene are detected below criteria and laboratory qualified (J4). No action is taken with 2-chlorotoluene as the recovery is 74.7% and the control limit criteria is 75-124%. **All four associated sample results (MW-343-102, MW-343-106, MW-343-108, and MW-2017-102) for 1,4-dichlorobenzene are estimated and qualified UJ/J.**

- SDG L1210278: LCS (analytical batch WG1464831) recovery for chlorodibromomethane, 2,2-dichloropropane, and vinyl chloride are detected above criteria and laboratory qualified (J4). No action is taken since these compounds are not detected in the associated samples.

- SDG L1210278: LCSD (analytical batch WG1464913) recovery for bromochloromethane is detected below detected below criteria and laboratory qualified (J4). **All associated bromochloromethane detections are estimated and qualified (UJ/J).**

- SDG L1212082: LCS (analytical batch WG1467660) recoveries for multiple compounds (1,2-dichloropropane, 2-hexanone, 4-methyl-2-pentanone (MIBK), styrene, vinyl acetate, and vinyl chloride) are detected above detected criteria and laboratory qualified (J4). No action is needed since all associated results are non-detected for these compounds.

- SDG L1212082: LCS (analytical batch WG1467916) recoveries for chloromethane, trans-1,4-dichloro-2-butene, and vinyl chloride are detected above detected criteria and laboratory qualified (J4). No action is needed since all associated results are non-detected.

- SDG L1215745: LCS (analytical batch WG1474179) recovery for bromochloromethane is detected above detected criteria and laboratory qualified (J4). No action is needed since all associated results are non-detected.

NWTPH-Gx Method:
LCS were analyzed by NWTPH-GX. For precision data refer matrix spike results. The LCS %R's for the target compounds are within the laboratory control criteria for soils.

Moisture by Method 8000D:
LCS were analyzed within the analytical batch. For precision data refer to laboratory or field duplicate results. The LCS %Rs for the target compound is within the laboratory control criteria for soils.

Other Quality Control Issues

No laboratory quality control issues were identified in the laboratory reports.

- SDG L1210278: Sample narrative indicated that VOC results for sample MW-334-13 'NT too high to run lower' meaning that non-targets were too high to run at a lower dilution. Pace clarified that interferences include elevated gasoline range organics and non-target unidentified peaks were detected in sample MW-334-13 during the VOC analysis.

- SDG L1210278: Sample narratives for gasoline results indicate that no discernible petroleum pattern is present for samples MW-334-10, MW-334-13, MW-334-17, MW-334-23, MW-331-11, MW-331-16, and MW-334-10. No action is taken in these cases other than to note that no discernible petroleum patterns are present.
- SDG L1210278: The sample narrative for the gasoline result indicates no discernable petroleum pattern present for sample MW-331-7. In addition, the sample narrative indicates that there is an elevated RDL due to limited sample volume. No action is taken in this case other than to note that no discernible petroleum pattern is present.
- Electronic data deliverables (EDDs) for these Work Orders were provided by the laboratory and data validator qualifiers were entered, as appropriate, into the EDDs.

Quantitation Limits

Results of all analyses were reported based on standard laboratory RLs. The reported RLs are considered appropriate for this project.

Completeness

The samples were collected and analyzed as requested. Data completeness is 100%.

Data Assessment

The laboratory data reported for this project were reviewed based on laboratory control limit acceptance criteria and criteria outlined in:

- USEPA Contract Laboratory Program National Functional Guidelines for Organic Superfund Methods Data Review (USEPA, 2017)

Data qualifiers are assigned and laboratory report pages with qualifiers are attached. All data, including qualified data, are judged to be acceptable for their intended use.

MEMORANDUM

TO:	Project File	**DATE:**	August 3, 2020

FROM: Jessie Compeau

SUBJECT: Laboratory Data Validation Review

PROJECT: American Linen Data Validation

PROJECT #: 1413.001.02.501G

TASK: EIM Data Validation Level EPA2A for 3rd Quarter Monitoring – Groundwater Samples – Group 1

LAB: Pace Sample Delivery Groups (SDGs): L1234588, L1237210, L1237219, L1237678, and L1238146

Thirty-four (34) groundwater samples and three trip blanks were collected as part of the 3rd Quarterly Monitoring Round for 2020 for the ongoing Remedial Investigation (RI) sampling at the Former American Linen Supply Site, in Seattle, Washington in late June and early July 2020. The samples were shipped and delivered to Pace Lab Sciences (Pace) of Mount Juliet, TN for laboratory analysis. Selected samples were analyzed for the following:

- Volatile organic compounds (VOCs) by United States Environmental Protection Agency (USEPA) Method 8260D;
- Total petroleum hydrocarbons as gasoline (TPH-Gx) by NWTPH-Gx per analytical method stipulated by Washington State Department of Ecology;
- VOCs (dissolved gases – methane, ethane, and ethene) by EPA SOP RSK 175;
- Alkalinity by Method 2320 B-2011;
- Anions (chloride, nitrate, and sulfate) by USEPA Method 9056A;
- Total Organic Carbon (TOC) by USEPA Method 9060A; and
- Metals (iron and manganese) by USEPA Method 6020B.

Results are reported in multiple SDGs from Pace. Pace SDGs are reviewed in small groups for each data validation report. Group 1 analytical results are reported in SDGs L1234588, L1237210, L1237219, L1237678, and L1238146. The quality assurance review of the laboratory data associated with Group 1 is summarized below.

DATA QUALIFICATIONS

Guidelines established by USEPA for a limited data validation review of analytical data along with Pace control limit criteria were used to validate the data. The comments presented in this memorandum refer to the laboratory's performance in meeting the quality control criteria outlined in the USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review (USEPA, 2017) and USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review

(USEPA, 2017). Following Guidelines, non-project-specific laboratory duplicates and matrix spike results were not evaluated as part of this data validation.

DATA VALIDATION

Completeness

All samples were collected and analyzed as requested with the following exceptions:

- SDG L1237210: Dates of sample collection are not listed on the chain of custody for nine samples (drop down arrow was not included). No action is taken other than to note that the dates of collection are included within the sample identification.

- SDGs L1237678, and L1238146: Per PES's (via email on August 5, 2020) request detected gasoline range results were reviewed by Pace. SDGs were revised, where appropriate, to include requested footnote "no discernable petroleum pattern" on gasoline range organic results. Refer to Section on Compound Identification for further discussion.

Sample Collection and Preservation

Samples were collected in laboratory-supplied sample containers preserved as appropriate for the individual analyses conducted. The samples were packed on ice in coolers and delivered by courier to the analytical laboratory. The laboratory reported that the coolers were received at a cooler temperature less than the recommended temperature preservation of 6°C. Samples were received in good condition. No data were qualified based upon the sample collection and preservation information.

Holding Times

USEPA Method 8260D:
All samples were analyzed for VOCs within the EPA recommended holding time of fourteen days for preserved waters from the date of collection. All holding time criteria are met.

NWTPH-Gx Method:
All samples were analyzed within the WA State recommended holding time of fourteen days for preserved waters from the date of sample collection. All holding time criteria are met.

Dissolved Gases (Methane, Ethane, and Ethene) by RSK 175:
All samples were analyzed within the WA State recommended holding time of fourteen days for preserved waters from the date of sample collection. All holding time criteria are met.

USEPA Method 6020B:
All samples were analyzed within the USEPA recommended holding time for iron and manganese of 180 days for preserved waters from the date of sample collection. All holding time criteria are met.

General Chemistry (Alkalinity, Chloride, Sulfate, Nitrate, and TOC):

All samples were analyzed within the USEPA recommended holding time for alkalinity (14 days), chloride (28 days), sulfate (28 days), and nitrate (48 hours), and TOC (28 days) for preserved waters from the date of sample collection. All holding time criteria are met with the following exceptions:

- SDG L1237219: Samples MW-331-070620 and MW103-070620 were analyzed for nitrate a few hours past the 48-hour holding time. **Sample MW-331-070620 and MW103-070620 nitrate results are estimated (UJ) due to holding time exceedance.**

Initial and Continuing Calibration

Calibration data for this project are not required for this deliverable however Pace's notes indicate the following:

- Multiple SDGs - *USEPA Method 8260D:* Continuing calibration verification (CCV) issues were noted by Pace for multiple compounds associated with analytical batches in each SDG. These compounds are qualified by the laboratory "J0" to indicate that percent difference CCV is outside of laboratory acceptance criteria. **Associated sample results with laboratory qualified (J0) results are estimated and qualified (J/UJ).**

Method Blank Results

USEPA Method 8260D:
Laboratory method blanks were included with the analytical batches per method requirement. The target analytes were not detected in the method blanks at or above the reporting detection limits (RDLs) with the following exception:

- SDG L1234588 - Analytical batch WG1504320: A low level of methylene chloride is detected in the method blank. No action is required since methylene chloride is not detected in the associated sample (MW128-062920).

NWTPH-Gx Method:
Laboratory method blanks were included with the analytical batches per method requirement. The target analyte (gasoline) was not detected in the method blanks at or above the RDLs with the following exception:

- SDG L1237678 – Analytical batch WG1507596: A low level gasoline concentration is detected in the method blank and in the trip blank. **Low levels of gasoline, below the RDL, are detected in five samples (MW-183-070820, MW-188-070820, MW-185-070820, MW-186-070820, and MW-187-070820) and are laboratory qualified (BJ). Gasoline detections in these samples are qualified as not detected (U).**

Dissolved Gases (Methane, Ethane, and Ethene) by RSK 175:
Laboratory method blanks were included with the analytical batches per method requirement. The target analytes (dissolved gases) are not detected in the method blanks at or above the RDLs.

USEPA Method 6020B and General Chemistry (Alkalinity, Chloride, Sulfate, Nitrate, and TOC):

Laboratory method blanks were included with the analytical batches per method requirement. The target analytes were detected in the method blanks below the RDLs. Per Guidance, no action is taken for blank detections less than the RDL when associated sample detections are greater than the RDL. General chemistry and metal blank detections are shown below:

SDG	Batch	Method	Analyte	Method Blank Result	Qualifier	RDL	Units	Associated Result(s) Qualified
L1234588	WG1504356	9060A	TOC	340	J	1000	µg/L	NO
L1237210	WG1506939	9060A	TOC	301	J	1000	µg/L	NO
L1237219	WG1506939	9060A	TOC	301	J	1000	µg/L	NO
L1237678	WG1506941	9060A	TOC	268	J	1000	µg/L	NO
L1238146	WG1507486	9060A	TOC	368	J	1000	µg/L	NO

Target analytes were detected in method blanks at low levels with no impact to the associated samples with the following discussion:

- SDG L1237678: TOC was detected at 268 µg/L in the method blank and is detected in associated sample MW-188-070820 at 958 µg/L slightly below the RDL of 1000 µg/L. In this case no action is taken.

Trip Blank Results

USEPA Method 8260D and NWTPH-Gx:
Three trip blanks (TB-070620 (SDG L1237219), TB-070820 (SDG L1237678), and TB-070920 (SDG L1238146)) were collected and analyzed for VOCs only or both VOCs and gasoline. The target analytes were not detected in the associated samples with the following exceptions:

- SDG L1237678: A low level of gasoline was detected in the trip blank (TB-070820) and in the associated method blank. **Low levels of gasoline, below the RDL, are detected in samples MW-183-070820, MW-188-070820, MW-185-070820, MW-186-070820, and MW-187-070820 and laboratory qualified (BJ). Gasoline detections in these samples are qualified as not detected (U).**

Field, Rinsate, or Equipment Blank Results

All Analytical Methods:
Field, rinsate, and/or equipment blanks were not collected.

Field Duplicate Analyses

Field duplicate pairs were not collected. Refer to LCS/LCSD and laboratory duplicate results for precision data.

Laboratory Duplicate Analyses

USEPA Method 8260D:
Laboratory duplicate samples were not analyzed. Refer to laboratory control sample/sample duplicate (LCS/LCSD) or matrix spike/matrix spike duplicate (MS/MSD) results for precision data.

NWTPH-Gx Method:
Laboratory duplicate samples were not analyzed. Precision data are not provided for (SDGs L1237219 and L1237678). Refer to MS/MSD results associated with SDG L1238146 for precision data.

Dissolved Gases (Methane, Ethane, and Ethene) by RSK 175:
Laboratory duplicate sample analyses were performed on client and non-client samples within the analytical batches. The primary/duplicate RPDs for dissolved gas analyses are within the laboratory control limit of 20%.

USEPA Method 6020B:
Laboratory duplicate samples were not analyzed. Precision data are not available for Refer to MS/MSD results for precision data.

General Chemistry (Alkalinity, Chloride, Sulfate, Nitrate, and TOC):
Laboratory duplicate sample analyses were performed on client samples and/or on non-client samples. The primary/duplicate RPDs for general chemistry parameters are within the laboratory control RPD limits or ± 1x RDL for groundwater results <5X the RDL with one exception:

- SDG L1237678: A laboratory duplicate on sulfate was performed on a non-client sample. Sulfate RPD is high however no action is taken since the laboratory duplicate was performed on a nonclient sample.

Surrogate Recoveries

USEPA Method 8260D:
The surrogate recovery results for the samples, laboratory control samples, matrix spike samples, and the method blanks are within the laboratory surrogate control limits for all the analyses.

NWTPH-Gx Method:
The surrogate recovery results for the samples, laboratory control samples, matrix spike samples, and the method blanks are within the laboratory surrogate control limits for all analyses.

Laboratory Control Samples

USEPA Method 8260D:
Laboratory control sample/laboratory control sample duplicate (LCS/LCSD) or laboratory control sample (LCS) were analyzed by USEPA Method 8260D method. The LCS % Rs or LCS/LCSD % Rs and RPDs for the all target compounds are within the laboratory control criteria for waters with the following discussion:

- SDG L1234588 - Analytical batch WG1504320: LCS % recoveries for carbon tetrachloride and chlorodibromomethane, hexachloro-1,3-butadiene, and tetrahydrofuran are above laboratory acceptance criteria and laboratory qualified (J4). No action is needed for these compound as they are not detected in the associated sample.

- SDG L1237210 - Analytical batch WG1506638: LCS % recoveries for 1,2-dichlorobenzene and is below laboratory acceptance criteria and laboratory qualified (J4). **associated sample 1,2-dichlorobenzene results below the RDL are estimated and qualified (UJ).**

- SDG L1237210 - Analytical batch WG1507807: LCS % recovery for trans-1,2-dichloroethene recovery is greater than laboratory acceptance criteria and laboratory qualified (J4). No action is taken since the LCSD recovery for trans-1,2-dichloroethene is acceptable.

- SDG L1237210 - Analytical batch WG1507807: LCS tetrahydrofuran RPD is greater than laboratory acceptance criteria and laboratory qualified (J3). No action is taken since the recoveries are within criteria but are recovered wide.

- SDGs L1237219 and L1237678 - Analytical batch WG1508223: LCS tetrahydrofuran RPD is greater than laboratory acceptance criteria and laboratory qualified (J3). No action is taken since the recoveries are within criteria but are recovered wide.

- SDGs L1237219 and L1237678 - Analytical batch WG1508223: LCS % recovery for trans-1,2-dichloroethene recovery is greater than laboratory acceptance criteria and laboratory qualified (J4). No action is taken since the LCSD recovery for trans-1,2-dichloroethene is acceptable.

NWTPH-Gx Method:
The LCS % Rs for the target compound (gasoline) are within the laboratory control criteria for waters. In many cases, no measure of precision is provided with the analytical batch. No action is taken other than to note this.

Dissolved Gases (Methane, Ethane, and Ethene) by RSK 175:
The LCS/LCSD % Rs and RPDs for the target compound (dissolved gases) are within the laboratory control criteria for waters.

USEPA Method 6020B:
The LCS/LCSD % Rs and RPDs for the target compound (iron and manganese) are within the laboratory control criteria for waters.

General Chemistry (Alkalinity, Chloride, Sulfate, Nitrate, and TOC):
The LCS % Rs for general chemistry parameters are within the laboratory control criteria for waters.

Matrix Spike/Matrix Spike Duplicates

USEPA Method 8260D:
Matrix spike/matrix spike duplicate (MS/MSD) analyses were performed on client and on non-client samples within select analytical batches. The MS/MSD % Rs and RPD were acceptable and within laboratory control limit criteria for water samples.

NWTPH-Gx Method:
MS/MSD analyses were not performed. Refer to LCS results. No measure of precision was provided. No action was taken other than to note this.

Dissolved Gases (Methane, Ethane, and Ethene) by RSK 175:
MS/MSD analyses were not performed. Refer to LCS results and field duplicate sample for accuracy and precision data.

USEPA Method 6020B:
MS/MSD analyses were performed on client and on non-client samples within the analytical batches. The MS/MSD % Rs and RPD were acceptable and within laboratory control limit criteria for water samples with the following discussion:

- SDG L1234588: Matrix spike analysis was performed on client sample MW128-062920 and manganese spike results are laboratory qualified (V) to indicate that the sample concentration is greater than 4X the spike amount. Per Guidance no action is taken.

- SDGs L1237210 and L1237219: Matrix spike analysis was performed on client sample FMW-140-070720 (SDG L1237210) and manganese spike result is laboratory qualified (V) to indicate that the sample concentration is greater than 4X the spike amount. Per Guidance no action is taken.

General Chemistry (Alkalinity, Chloride, Sulfate, Nitrate, and TOC):
MS or MS/MSD analyses were performed on client and/or non-client samples within the analytical batches. In cases where MS/MSD spike analyses are not performed refer to LCS/LCSD or laboratory duplicate data for accuracy and precision data. The MS/MSD % Rs and RPDs are acceptable and within laboratory control limit criteria for water samples.

Other Quality Control Issues

No laboratory quality control issues were identified in the laboratory report with the following discussions:

- SDG L1234588: Sample MW128-062920 results for iron and manganese are laboratory qualified (O1) because serial dilution results are >10% D (results >50X MDL). **Sample MW128-062920 iron and manganese results are estimated and qualified (J).**

- Multiple SDGs: Selected sample narratives for alkalinity results indicate that several sample containers had some headspace and exposure to air may have impacted the reported results. No action was taken other than to note this.

- Electronic data deliverables (EDDs) for these SDGs were provided by the laboratory and data validator qualifiers were entered. In some cases, different chemical synonyms are used between the EDD and the hardcopy however associated Chemical Abstracts Service (CAS) numbers are provided in the EDD to confirm chemical identifications.

Compound Identification and Quantitation Limits

Results of the analyses were reported based on laboratory RDLs for all compounds. RDLs for selected compounds are elevated due to method-required dilutions. No action is taken other than to note this.

Gasoline and gasoline range organics are analyzed for via Volatile Organic Compounds (GC) by Washington State Method NWTPHGx (using a gas chromatograph/flame ionization detector (GC/FID)) and Pace reported gasoline range organic-NWTPH results. Several chlorinated VOC compounds (including cis-1,2-dichloroethene, trans-1,2-dichloroethene, trichloroethene, and tetrachloroethene) elute within the gasoline range organics (GRO) retention time range as specified by Washington State (detections falling between the toluene and dodecane range).

Non-petroleum organics (e.g. chlorinated VOC compounds) eluting within the gasoline range contribute to the GRO result and GRO results are likely biased high (J+). PES requested that Pace evaluate chromatograms associated with positive sample detections to confirm the potential presence of gasoline. Per PES's request Pace reviewed selected sample chromatograms against the gasoline standard chromatograms and assigned "no discernible petroleum pattern" to GRO results associated with this Task. PES assigned an additional project level qualifier (Z) to GRO results when the chromatogram for the sample does not match a discernible gasoline standard pattern. Associated chromatograms and qualified samples for this Task are as follows:

Sample ID	Laboratory Identification	Gasoline Range Organic Result (µg/L)	DV Qualifier	Data Validation Comments	Pace Chromatogram Review Notes
MW-181-070820	L1237678-02	15,400	Z, J+	Elevated chlorinated VOCs detected within the GRO elution range	No discernible petroleum pattern present.
MW-184-070820	L1237678-03	260	Z, J+	Elevated chlorinated VOCs detected within the GRO elution range	No discernible petroleum pattern present.
MW-182-070820	L1237678-05	1000	Z, J+	Elevated chlorinated VOCs detected within the GRO elution range	No discernible petroleum pattern present.
MW-172-070920	L1238146-02	4430	Z, J+	Elevated chlorinated VOCs detected within the GRO elution range	No discernible petroleum pattern present.
MW-170-070920	L1238146-03	24300	Z, J+	Elevated chlorinated VOCs detected within the GRO elution range	No discernible petroleum pattern present.

Project level qualifiers have been included to the PES's project database (Epiphany) as (ZJ+). Washington State EIM valid values were reviewed. In this case no Washington State EIM valid value descriptor is ideal, and the default estimated value (J) has been selected as the best match to qualify GRO (Z, J+) data.

Data Assessment

The laboratory data reported for this project were reviewed based on the criteria outlined in:

- USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review (USEPA, 2017); and

- USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017).

Data qualifiers are assigned and laboratory report pages with qualifiers are attached. All data, including qualified data, are judged to be acceptable for their intended use.

MEMORANDUM

TO: Project File **DATE:** August 18, 2020

FROM: Jessie Compeau

SUBJECT: Laboratory Data Validation Review

PROJECT: American Linen Data Validation

PROJECT #: 1413.001.02.501G

TASK: EIM Data Validation Level EPA2A for 3rd Quarter Monitoring – Groundwater Samples – Group 2

LAB: Pace Sample Delivery Groups (SDGs): L1238175, L1238602, L1239455, L1240037, and L1240639

Thirty-two (32) groundwater samples including three field duplicates, two equipment blanks, and one trip blank were collected as part of the 3rd Quarterly Monitoring Round for 2020 for the ongoing Remedial Investigation (RI) sampling at the Former American Linen Supply Site, in Seattle, Washington in July 2020. The samples were shipped and delivered to Pace Lab Sciences (Pace) of Mount Juliet, TN for laboratory analysis. Selected samples were analyzed for the following:

- Volatile organic compounds (VOCs) by United States Environmental Protection Agency (USEPA) Method 8260D;
- Total petroleum hydrocarbons as gasoline (TPH-Gx) by NWTPH-Gx per analytical method stipulated by Washington State Department of Ecology;
- VOCs (dissolved gases – methane, ethane, and ethene) by EPA SOP RSK 175;
- Alkalinity by Method 2320 B-2011;
- Anions (chloride, nitrate, and sulfate) by USEPA Method 9056A;
- Total Organic Carbon (TOC) by USEPA Method 9060A; and
- Metals (iron and manganese) by USEPA Method 6020B.

Results are reported in multiple SDGs from Pace. Pace SDGs are reviewed in small groups for each data validation report. Group 2 analytical results are reported in SDGs L1238175, L1238602, L1239455, L1240037, and L1240639. The quality assurance review of the laboratory data associated with Group 2 is summarized below.

DATA QUALIFICATIONS

Guidelines established by USEPA for a limited data validation review of analytical data along with Pace control limit criteria were used to validate the data. The comments presented in this memorandum refer to the laboratory's performance in meeting the quality control criteria outlined in the USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review (USEPA, 2017) and USEPA Contract Laboratory

Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017). Following Guidelines, non-project-specific laboratory duplicates and matrix spike results were not evaluated as part of this data validation.

DATA VALIDATION

Completeness

All samples were collected and analyzed as requested with the following exceptions:

- SDG L1238175: Pace corrected sample MW-171-070920 to read MW-174-070920 per PES's July 10, 2020 request.
- SDG L1238602: Sample MW-178-071020 was received unpreserved for metals. The sample was preserved with nitric acid in the laboratory. No action is taken other than to note this.

Sample Collection and Preservation

Samples were collected in laboratory-supplied sample containers preserved as appropriate for the individual analyses conducted. The samples were packed on ice in coolers and delivered by courier to the analytical laboratory. The laboratory reported that the coolers were received at a cooler temperature less than the recommended temperature preservation of 6°C. Samples were received in good condition. No data were qualified based upon the sample collection and preservation information.

Holding Times

USEPA Method 8260D:
All samples were analyzed for VOCs within the EPA recommended holding time of fourteen days for preserved waters from the date of collection. All holding time criteria are met.

NWTPH-Gx Method:
All samples were analyzed within the WA State recommended holding time of fourteen days for preserved waters from the date of sample collection. All holding time criteria are met.

Dissolved Gases (Methane, Ethane, and Ethene) by RSK 175:
All samples were analyzed within the WA State recommended holding time of fourteen days for preserved waters from the date of sample collection. All holding time criteria are met.

USEPA Method 6020B:
All samples were analyzed within the USEPA recommended holding time for iron and manganese of 180 days for preserved waters from the date of sample collection. All holding time criteria are met.

General Chemistry (Alkalinity, Chloride, Sulfate, Nitrate, and TOC):

All samples were analyzed within the USEPA recommended holding time for alkalinity (14 days), chloride (28 days), sulfate (28 days), and nitrate (48 hours), and TOC (28 days) for preserved waters from the date of sample collection. All holding time criteria are met.

Initial and Continuing Calibration

Calibration data for this project are not required for this deliverable however Pace's notes indicate the following:

- Multiple SDGs - *USEPA Method 8260D:* Continuing calibration verification (CCV) issues were noted by Pace for multiple compounds associated with analytical batches in each SDG. These compounds are qualified by the laboratory "J0" to indicate that percent difference CCV is outside of laboratory acceptance criteria. **Associated sample results with laboratory qualified (J0) results are estimated and qualified (J/UJ).**

Method Blank Results

USEPA Method 8260D:
Laboratory method blanks were included with the analytical batches per method requirement. The target analytes were not detected in the method blanks at or above the reporting detection limits (RDLs).

NWTPH-Gx Method:
Laboratory method blanks were included with the analytical batches per method requirement. The target analyte (gasoline) was not detected in the method blanks at or above the RDLs with the following exceptions:

- SDG L1238602 – Analytical batch WG1509433: A low level gasoline concentration is detected in the method blank. No action is required since concentrations are greater than the RDL.

- SDG L1238602 – Analytical batch WG1511658: A low level gasoline concentration is detected in the method blank. **A low level of gasoline, below the RDL, is detected in sample (MW-178-071020) and is laboratory qualified (BJ). Gasoline detection in sample MW-178-071020 is qualified as not detected (U).**

- SDG L1239455 – Analytical batch WG1510803: A low level gasoline concentration is detected in the method blank. A low level of gasoline, below the RDL, are detected in equipment blank sample (EQ-071420) and is laboratory qualified (BJ). No action is taken other than to note this.

Dissolved Gases (Methane, Ethane, and Ethene) by RSK 175:
Laboratory method blanks were included with the analytical batches per method requirement. The target analytes (dissolved gases) are not detected in the method blanks at or above the RDLs.

USEPA Method 6020B and General Chemistry (Alkalinity, Chloride, Sulfate, Nitrate, and TOC):

Laboratory method blanks were included with the analytical batches per method requirement. The target analytes were detected in the method blanks below the RDLs. Per Guidance, no action is taken for blank detections less than the RDL when associated sample detections are greater than the RDL. General chemistry and metal blank detections are shown below:

SDG	Batch	Method	Analyte	Method Blank Result	Qualifier	RDL	Units	Associated Result(s) Qualified
L1238175	WG1507487	9060A	TOC	296	J	1000	µg/L	NO
L1238602	WG1508116	9060A	TOC	238	J	1000	µg/L	NO
L1239455	WG1509588	9060A	TOC	408	J	1000	µg/L	NO
L1240037	WG1510700	9060A	TOC	367	J	1000	µg/L	NO
L1240639	WG1511400	9060A	TOC	351	J	1000	µg/L	NO

Target analytes were detected in method blanks at low levels with no impact to the associated samples.

Trip Blank Results

USEPA Method 8260D:
One trip blank TB-071520 (SDG L1240037) was collected and analyzed for VOCs. The target analytes were not detected in the trip blank at or above the RDLs.

Field, Rinsate, or Equipment Blank Results

All Analytical Methods:
Two equipment blanks were collected and analyzed. Details are as follows:

- Equipment blank (EQ-071420 with SDG L1239455) is associated with all samples collected via bladder pump on July 14, 2020. Specifically, this equipment blank is associated with samples MW127-071420, MW-934-071420, and MW120-071420. Low levels of gasoline and TOC were detected in the equipment blank. No action is taken for these TOC detections since these are either not detected in the associated samples or sample detections are far greater than detection in the equipment blank. Associated samples were not analyzed for gasoline. Low levels of acetone, benzene, toluene, and 1,2,3-trimethylbenzene are detected in the equipment blank. **Associated TOC results for samples MW127-071420 and MW-934-071420 are detected below the RDL. These results are qualified as not detected (U) due to method and/or equipment blank contamination.**

- Equipment blank (EQ-071620 with SDG L1240639) is associated with all samples collected via bladder pump on July 16, 2020. This equipment blank is associated with samples MW108-071620, MW-314-071620, MW-311-071620, MW110-071620, MW-935-071620, and MW-330-071620. A low level of TOC was detected in the equipment blank and detected greater than the action level in associated samples. No action is necessary. Low levels of acetone, benzene, toluene, and 1,2,3-trimethylbenzene are detected in the equipment blank. No action is necessary since the associated sample results are non-detect for these compounds.

Field Duplicate Analyses

Field duplicate pairs were submitted and analyzed. Field duplicate sample pair is as follows:

- SDG L1238175: MW-166-070920 is a field duplicate of MW-933-070920
- SDG L1239455: MW127-071420 is a field duplicate of MW-934-071420
- SDG L1240639: MW108-071620 is a field duplicate of MW-935-071620

Target analyte results are comparable and within a relative percent difference (RPD) of 30% (± 1x RDL for groundwater results <5X the RDL) for the field duplicate pairs with the following exception:

- SDG L1238175: MW-166-070920 is a field duplicate of MW-933-070920. **Acetone RPD exceeds acceptance criteria for this field duplicate pair are estimated and qualified (J).**

Laboratory Duplicate Analyses

USEPA Method 8260D:
Laboratory duplicate samples were not analyzed. Refer to laboratory control sample/sample duplicate (LCS/LCSD) or matrix spike/matrix spike duplicate (MS/MSD) results for precision data.

NWTPH-Gx Method:
Laboratory duplicate samples were not analyzed. Precision data are not provided. Refer to field duplicate results for precision data.

Dissolved Gases (Methane, Ethane, and Ethene) by RSK 175:
Laboratory duplicate sample analyses were performed on client and non-client samples within the analytical batches. The primary/duplicate RPDs for dissolved gas analyses are within the laboratory control limit of 20%.

USEPA Method 6020B:
Laboratory duplicate samples were not analyzed. Refer to MS/MSD results for precision data.

General Chemistry (Alkalinity, Chloride, Sulfate, Nitrate, and TOC):
Laboratory duplicate sample analyses were performed on client samples and/or on non-client samples. The primary/duplicate RPDs for general chemistry parameters are within the laboratory control RPD limits or ± 1x RDL for groundwater results <5X the RDL with the following exception:

- SDG L1238175: Laboratory duplicates for alkalinity were performed on non-client samples. Laboratory duplicate RPD result on one of the non-client samples exceeds laboratory criteria. No action is taken since the duplicate was performed on a non-client sample.

Surrogate Recoveries

USEPA Method 8260D:
The surrogate recovery results for the samples, laboratory control samples, matrix spike samples, and the method blanks are within the laboratory surrogate control limits for all the analyses.

NWTPH-Gx Method:
The surrogate recovery results for the samples, laboratory control samples, matrix spike samples, and the method blanks are within the laboratory surrogate control limits for all analyses.

Laboratory Control Samples

USEPA Method 8260D:
Laboratory control sample/laboratory control sample duplicate (LCS/LCSD) or laboratory control sample (LCS) were analyzed by USEPA Method 8260D method. The LCS % Rs or LCS/LCSD % Rs and RPDs for all target compounds are within the laboratory control criteria for waters with the following exceptions:

- SDG L1238175 - Analytical batch WG1510563: LCS % recovery for 1,2-dichlorobenzene is below laboratory acceptance criteria and laboratory qualified (J4). **Associated sample (MW-167-070920 and MW-166-070920) 1,2-dichlorobenzene results are below the RDL and estimated (UJ).**

- SDG L1238602 - Analytical batch WG1510563: LCS % recovery for 1,2-dichlorobenzene is below laboratory acceptance criteria and laboratory qualified (J4). **Associated sample 1,2-dichlorobenzene results are below the RDL and estimated (UJ).**

- SDG L1238602 - Analytical batch WG1511065: LCS/LCSD RPD results for several compounds are greater than laboratory acceptance criteria and laboratory qualified (J3). No action is taken since the recoveries are within criteria but were recovered wide with one exception. LCSD recovery for trichlorofluoromethane is below laboratory acceptance criteria but LCS recovery is within. No action is taken in this case since the LCS is within criteria.

- SDG L1239455 - Analytical batch WG1510563: LCS % recovery for 1,2-dichlorobenzene is below laboratory acceptance criteria and laboratory qualified (J4). **Associated sample 1,2-dichlorobenzene results are below the RDL and estimated (UJ).**

- SDG L1240037 - Analytical batch WG1511418: LCS/LCSD RPD result for acetone is greater than laboratory acceptance criteria and laboratory qualified (J3). No action is taken since the recoveries are within criteria but are recovered wide.

- SDG L1240037 - Analytical batch WG1511418: LCSD recovery for 1,2-dichlorobenzene less than laboratory acceptance criteria and laboratory qualified (J4). No action is taken since the LCS recovery is within criteria.

- SDG L1240037 - Analytical batch WG1511418: LCS recovery for trans-1,2-dichloroethene is greater than laboratory acceptance criteria and laboratory qualified (J4). No action is taken since trans-1,2-dichloroethene was not detected in the associated samples.

- SDG L1240639 - Analytical batch WG1511692: LCS/LCSD RPD result for acetone is greater than laboratory acceptance criteria and laboratory qualified (J3). No action is taken since the recoveries are within criteria but are recovered wide. LCS/LCSD % recoveries for 1,2-dichlorobenzene are below laboratory acceptance criteria and laboratory qualified (J4). **Associated sample 1,2-dichlorobenzene results are below the RDL and estimated (UJ).** LCS cis-1,2-dichloroethene recovery is below criteria but LCSD recovery is within criteria. No action is taken since the LCSD recovery is within criteria.

NWTPH-Gx Method:
The LCS % Rs for the target compound (gasoline) are within the laboratory control criteria for waters. In many cases, no measure of precision is provided with the analytical batch. No action is taken other than to note this.

Dissolved Gases (Methane, Ethane, and Ethene) by RSK 175:
The LCS/LCSD % Rs and RPDs for the target compound (dissolved gases) are within the laboratory control criteria for waters.

USEPA Method 6020B:
The LCS/LCSD % Rs and RPDs for the target compound (iron and manganese) are within the laboratory control criteria for waters.

General Chemistry (Alkalinity, Chloride, Sulfate, Nitrate, and TOC):
The LCS % Rs for general chemistry parameters are within the laboratory control criteria for waters.

Matrix Spike/Matrix Spike Duplicates

USEPA Method 8260D:
Matrix spike/matrix spike duplicate (MS/MSD) analyses were not performed. Refer to LCS results and field duplicate sample for accuracy and precision data.

NWTPH-Gx Method:
MS/MSD analyses were not performed. Refer to LCS results. No measure of precision was provided. No action was taken other than to note this.

Dissolved Gases (Methane, Ethane, and Ethene) by RSK 175:
MS/MSD analyses were not performed. Refer to LCS results and field duplicate sample for accuracy and precision data with the following exceptions:

- SDG L1238602: Methane MS/MSD spike was performed on a non-client sample and results are laboratory qualified (E,V) to indicate that the results exceeded the linear calibration range and the sample concentration is greater than 4X the spike amount. Per Guidance no action is taken.

- SDG L1240037: MS/MSD spike was performed on a non-client sample and methane ethane and ethene results are laboratory qualified (J6) to indicate that MS recoveries are due to matrix interference. No action is taken since the spike was performed on a non-client sample.

USEPA Method 6020B:
MS/MSD analyses were performed on client and on non-client samples within the analytical batches. The MS/MSD % Rs and RPD were acceptable and within laboratory control limit criteria for water samples with the following discussion:

- SDG L1238175: Matrix spike analysis was performed on a non-client sample and manganese spike results are laboratory qualified (V) to indicate that the sample concentration is greater than 4X the spike amount. Per Guidance no action is taken.

General Chemistry (Alkalinity, Chloride, Sulfate, Nitrate, and TOC):
MS or MS/MSD analyses were performed on client and/or non-client samples within the analytical batches. In cases where MS/MSD spike analyses are not performed refer to LCS/LCSD or laboratory duplicate data for accuracy and precision data. The MS/MSD % Rs and RPDs are acceptable and within laboratory control limit criteria for water samples with the following discussion:

- SDG L1239455: MS/MSD spike was performed on a non-client sample and chloride results are laboratory qualified (E,V) to indicate that the results exceeded the linear calibration range and the sample concentration is greater than 4X the spike amount. Per Guidance no action is taken.

Other Quality Control Issues

No laboratory quality control issues were identified in the laboratory report with the following discussions:

- Multiple SDGs: Selected sample narratives for alkalinity results indicate that several sample containers had some headspace and exposure to air may have impacted the reported results. No action was taken other than to note this.

- Electronic data deliverables (EDDs) for these SDGs were provided by the laboratory and data validator qualifiers were entered. In some cases, different chemical synonyms are used between the EDD and the hardcopy however associated Chemical Abstracts Service (CAS) numbers are provided in the EDD to confirm chemical identifications.

Compound Identification and Quantitation Limits

Results of the analyses were reported based on laboratory RDLs for all compounds. RDLs for selected compounds are elevated due to method-required dilutions with the following discussion:

- SDG L1240639: Sample MW-935-071620 (SDG L1240639) tetrachloroethene was detected above the upper limit of the calibration range of the instrument and qualified (E). **Sample MW-935-071620 tetrachloroethene result is estimated (J) because the result exceeds the upper limit of the calibration range.**

Gasoline and gasoline range organics are analyzed for via Volatile Organic Compounds (GC) by Washington State Method NWTPHGx (using a gas chromatograph/flame ionization detector (GC/FID)) and Pace reported gasoline range organic-NWTPH results. Several chlorinated VOC compounds (including cis-1,2-dichloroethene, trans-1,2-dichloroethene, trichloroethene, and tetrachloroethene) elute within the gasoline range organics (GRO) retention time range as specified by Washington State (detections falling between the toluene and dodecane range).

Non-petroleum organics (e.g. chlorinated VOC compounds) eluting within the gasoline range contribute to the GRO result and GRO results are likely biased high (J+). PES requested that Pace evaluate chromatograms associated with positive sample detections to confirm the potential presence of gasoline. Per PES's request Pace reviewed selected sample chromatograms against the gasoline standard chromatograms and assigned “no discernible petroleum pattern” to GRO results associated with this Task. PES assigned an additional project level qualifier (Z) to GRO results when the chromatogram for the sample does not match a discernible gasoline standard pattern. Associated chromatograms and qualified samples for this Task are as follows:

Sample ID	Laboratory Identification	Gasoline Range Organic Result (µg/L)	DV Qualifier	Data Validation Comments	Pace Chromatogram Review Notes
MW-169-071020	L1238602-01	2400	Z, J+	Elevated chlorinated VOCs detected within the GRO elution range	No discernible petroleum pattern present.
MW-179-071020	L1238602-03	924	Z, J+	Elevated chlorinated VOCs detected within the GRO elution range	No discernible petroleum pattern present.
MW-180-071020	L1238602-04	122	Z, J+	Elevated chlorinated VOCs detected within the GRO elution range	No discernible petroleum pattern present.
MW-177-071020	L1238602-05	92500	Z, J+	Elevated chlorinated VOCs detected within the GRO elution range	No discernible petroleum pattern present.

Project level qualifiers have been included to the PES's project database (Epiphany) as (ZJ+). Washington State EIM valid values were reviewed. In this case no Washington State EIM valid value descriptor is ideal, and the default estimated value (J) has been selected as the best match to qualify GRO (Z, J+) data.

Data Assessment

The laboratory data reported for this project were reviewed based on the criteria outlined in:

- USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review (USEPA, 2017); and
- USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017).

Data qualifiers are assigned and laboratory report pages with qualifiers are attached. All data, including qualified data, are judged to be acceptable for their intended use.

JC 8/18/2020

MEMORANDUM

TO: Project File **DATE:** August 25, 2020

FROM: Jessie Compeau

SUBJECT: Laboratory Data Validation Review

PROJECT: American Linen Data Validation

PROJECT #: 1413.001.02.501G

TASK: EIM Data Validation Level EPA2A for 3rd Quarter Monitoring – Groundwater Samples – Group 3

LAB: Pace Sample Delivery Groups (SDGs): L1241067, L1242545, L1242992, L1243496, and L1244760

Seventeen (17) groundwater samples and one trip blank were collected as part of the 3rd Quarterly Monitoring Round for 2020 for the ongoing Remedial Investigation (RI) sampling at the Former American Linen Supply Site, in Seattle, Washington in July 2020. The samples were shipped and delivered to Pace Lab Sciences (Pace) of Mount Juliet, TN for laboratory analysis. Selected samples were analyzed for the following:

- Volatile organic compounds (VOCs) by United States Environmental Protection Agency (USEPA) Method 8260D;
- VOCs (dissolved gases – methane, ethane, and ethene) by EPA SOP RSK 175;
- Alkalinity by Method 2320 B-2011;
- Anions (chloride, nitrate, and sulfate) by USEPA Method 9056A;
- Total Organic Carbon (TOC) by USEPA Method 9060A; and
- Metals (iron and manganese) by USEPA Method 6020B.

Results are reported in multiple SDGs from Pace. Pace SDGs are reviewed in small groups for each data validation report. Group 3 analytical results are reported in SDGs L1241067, L1242545, L1242992, L1243496, and L1244760. The quality assurance review of the laboratory data associated with Group 3 is summarized below.

DATA QUALIFICATIONS

Guidelines established by USEPA for a limited data validation review of analytical data along with Pace control limit criteria were used to validate the data. The comments presented in this memorandum refer to the laboratory's performance in meeting the quality control criteria outlined in the USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review (USEPA, 2017) and USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017). Following Guidelines, non-project-specific laboratory duplicates and matrix spike results were not evaluated as part of this data validation.

DATA VALIDATION

Completeness

All samples were collected and analyzed as requested with the following exceptions:

- SDG L1242992: PES requested that chain of custody listed sample MW-340-072320 be excluded from analysis since this sample was collected on July 17, 2020 and submitted for analysis (refer to SDG L1241067).

Sample Collection and Preservation

Samples were collected in laboratory-supplied sample containers preserved as appropriate for the individual analyses conducted. The samples were packed on ice in coolers and delivered by courier to the analytical laboratory. The laboratory reported that the coolers were received at a cooler temperature less than the recommended temperature preservation of 6°C. Samples were received in good condition. No data were qualified based upon the sample collection and preservation information.

Holding Times

USEPA Method 8260D:
All samples were analyzed for VOCs within the EPA recommended holding time of fourteen days for preserved waters from the date of collection. All holding time criteria are met.

Dissolved Gases (Methane, Ethane, and Ethene) by RSK 175:
All samples were analyzed within the WA State recommended holding time of fourteen days for preserved waters from the date of sample collection. All holding time criteria are met.

USEPA Method 6020B:
All samples were analyzed within the USEPA recommended holding time for iron and manganese of 180 days for preserved waters from the date of sample collection. All holding time criteria are met.

General Chemistry (Alkalinity, Chloride, Sulfate, Nitrate, and TOC):
All samples were analyzed within the USEPA recommended holding time for alkalinity (14 days), chloride (28 days), sulfate (28 days), and nitrate (48 hours), and TOC (28 days) for preserved waters from the date of sample collection. All holding time criteria are met.

Initial and Continuing Calibration

Calibration data for this project are not required for this deliverable however Pace's notes indicate the following:

- Multiple SDGs - *USEPA Method 8260D:* Continuing calibration verification (CCV) issues were noted by Pace for multiple compounds associated with analytical batches in each SDG. These compounds are qualified by the laboratory "J0" to indicate that percent

difference CCV is outside of laboratory acceptance criteria. **Associated sample results with laboratory qualified (J0) results are estimated and qualified (J/UJ).**

Method Blank Results

USEPA Method 8260D:
Laboratory method blanks were included with the analytical batches per method requirement. The target analytes were not detected in the method blanks at or above the reporting detection limits (RDLs) with the following exception:

- SDG L1243496 – Analytical batch WG1519557: One compound (2-butanone (MEK)) is detected above the RDL in the method blank. No action is required since MEK is not detected in the associated samples.

Dissolved Gases (Methane, Ethane, and Ethene) by RSK 175:
Laboratory method blanks were included with the analytical batches per method requirement. The target analytes (dissolved gases) are not detected in the method blanks at or above the RDLs.

USEPA Method 6020B and General Chemistry (Alkalinity, Chloride, Sulfate, Nitrate, and TOC):
Laboratory method blanks were included with the analytical batches per method requirement. The target analytes were detected in the method blanks below the RDLs. Per Guidance, no action is taken for blank detections less than the RDL when associated sample detections are greater than the RDL. General chemistry and/or metal method blank detections are shown below:

SDG	Batch	Method	Analyte	Method Blank Result	Qualifier	RDL	Units	Associated Result(s) Qualified
L1241067	WG1511965	9060A	TOC	517	J	1000	µg/L	NO
L1242545	WG1514838	9060A	TOC	385	J	1000	µg/L	NO
L1242992	WG1514838	9060A	TOC	385	J	1000	µg/L	NO
L1242992	WG1515181	9060A	TOC	325	J	1000	µg/L	NO
L1243496	WG1516221	9060A	TOC	273	J	1000	µg/L	NO
L1244760	WG1518848	9060A	TOC	249	J	1000	µg/L	NO

Target analytes were detected in method blanks at low levels with no impact to the associated samples.

Trip Blank Results

USEPA Method 8260D:
One trip blank TB-072420 (SDG L1243496) was collected and analyzed for VOCs. The target analytes were not detected in the trip blank at or above the RDLs.

Field, Rinsate, or Equipment Blank Results

All Analytical Methods:
Field, rinsate, or equipment blanks were not collected.

Field Duplicate Analyses

Field duplicate pairs were not collected.

Laboratory Duplicate Analyses

USEPA Method 8260D:
Laboratory duplicate samples were not analyzed. Refer to laboratory control sample/sample duplicate (LCS/LCSD) or matrix spike/matrix spike duplicate (MS/MSD) results for precision data.

Dissolved Gases (Methane, Ethane, and Ethene) by RSK 175:
Laboratory duplicate sample analyses were performed on client and/or on non-client samples within the analytical batches. The primary/duplicate RPDs for dissolved gas analyses are within the laboratory control limit of 20%.

USEPA Method 6020B:
Laboratory duplicate samples were not analyzed. Refer to MS/MSD results for precision data.

General Chemistry (Alkalinity, Chloride, Sulfate, Nitrate, and TOC):
Laboratory duplicate sample analyses were performed on client samples and/or on non-client samples. The primary/duplicate RPDs for general chemistry parameters are within the laboratory control RPD limits or ± 1x RDL for groundwater results <5X the RDL.

Surrogate Recoveries

USEPA Method 8260D:
The surrogate recovery results for the samples, laboratory control samples, and the method blanks are within the laboratory surrogate control limits for all the analyses.

Laboratory Control Samples

USEPA Method 8260D:
Laboratory control sample/laboratory control sample duplicate (LCS/LCSD) or laboratory control sample (LCS) were analyzed by USEPA Method 8260D method. The LCS % Rs or LCS/LCSD % Rs and RPDs for all target compounds are within the laboratory control criteria for waters with the following exceptions:

- SDG L1241067 - Analytical batch WG1511692: LCS % recovery for 1,2-dichlorobenzene is below laboratory acceptance criteria and laboratory qualified (J4). **Sample MW-340-071720 result for 1,2-dichlorobenzene is estimated (UJ).**

- SDG L1241067 - Analytical batch WG1511692: LCS/LCSD RPD result for acetone is greater than laboratory acceptance criteria and laboratory qualified (J3). No action is taken since the recoveries are within criteria but are recovered wide. **LCS/LCSD % recoveries for 1,2-dichlorobenzene are below laboratory acceptance criteria and laboratory qualified (J4). Again, sample MW-340-071720 result for 1,2-dichlorobenzene is estimated and qualified (UJ).** LCS cis-1,2-dichloroethene %

recovery is below criteria but the LCSD % recovery is within criteria. In this case no action is taken since the LCSD recovery is within criteria.

- SDGs L1242545, L1242992, and L1243496: Analytical batch WG1516510: LCS recoveries for chloroethane, chloromethane, trans-1,2-dichloroethene, and vinyl chloride are above QC criteria and laboratory qualified (J4). No action is taken since associated sample results for these compounds are non-detect. Note that certain targets including trans-1,2-dichloroethene and vinyl chloride were re-analyzed (analytical batches WG1517119 and WG1518009) and respective LCS recoveries are within QC criteria.

- SDG L1243496 - Analytical batch WG1519557: LCS % recovery for chloromethane is above control limit criteria. No action is necessary since chloromethane is not detected in the associated samples. LCS recoveries for 1,4-dichlorobenzene and 1,3-dichloropropane are below QC criteria. **Associated sample MW126-072420, MW-333-072420, and SCL-MW105-072420 results for 1,4-dichlorobenzene and 1,3-dichloropropane are estimated and qualified (UJ).**

- SDG L1244760 - Analytical batch WG1519935: LCS/LCSD RPD result for acetone is greater than laboratory acceptance criteria and laboratory qualified (J3). No action is taken since the recoveries are within criteria but are recovered wide.

- SDG L1244760 - Analytical batch WG1519935: LCS/LCSD recoveries for trichlorofluoromethane result are less than laboratory acceptance criteria and laboratory qualified (J4). **All sample results for trichlorofluoromethane are estimated and qualified (UJ) due to low LCS/LSCD recoveries.**

Dissolved Gases (Methane, Ethane, and Ethene) by RSK 175:
The LCS/LCSD % Rs and RPDs for the target compound (dissolved gases) are within the laboratory control criteria for waters.

USEPA Method 6020B:
The LCS/LCSD % Rs and RPDs for the target compound (iron and manganese) are within the laboratory control criteria for waters.

General Chemistry (Alkalinity, Chloride, Sulfate, Nitrate, and TOC):
The LCS % Rs for general chemistry parameters are within the laboratory control criteria for waters.

Matrix Spike/Matrix Spike Duplicates

USEPA Method 8260D:
Matrix spike/matrix spike duplicate (MS/MSD) analyses were not performed. Refer to LCS results and field duplicate sample for accuracy and precision data.

Dissolved Gases (Methane, Ethane, and Ethene) by RSK 175:
MS/MSD analyses were not performed. Refer to LCS results and field duplicate sample for accuracy and precision data.

USEPA Method 6020B:
MS/MSD analyses were performed on client and on non-client samples within the analytical batches. The MS/MSD % Rs and RPD were acceptable and within laboratory control limit criteria for water samples with the following discussion:

- SDG L1243496: Matrix spike analysis was performed on a non-client sample and manganese spike results are laboratory qualified (EV or V) to indicate that the sample concentration is greater than 4X the spike amount and that the MSD recovery exceeded upper limit of the calibration range. Per Guidance no action is taken.

General Chemistry (Alkalinity, Chloride, Sulfate, Nitrate, and TOC):
MS or MS/MSD analyses were performed on client and/or non-client samples within the analytical batches. In cases where MS/MSD spike analyses are not performed refer to LCS/LCSD or laboratory duplicate data for accuracy and precision data. The MS/MSD % Rs and RPDs are acceptable and within laboratory control limit criteria for water samples with the following discussion:

- SDG L1242545: MS/MSD spike was performed on a non-client sample with nitrate % Rs above QC criteria. MS/MSD results are laboratory qualified (J5) due to matrix interference. No action is taken since the spike was performed on a non-client sample. Refer to MS result for sample FMW-143-072220 with acceptable nitrate spike recovery.

Other Quality Control Issues

No laboratory quality control issues were identified in the laboratory report with the following discussions:

- Multiple SDGs: Selected sample narratives for alkalinity results indicate that several sample containers had some headspace and exposure to air may have impacted the reported results. No action was taken other than to note this.

- Electronic data deliverables (EDDs) for these SDGs were provided by the laboratory and data validator qualifiers were entered. In some cases, different chemical synonyms are used between the EDD and the hardcopy however associated Chemical Abstracts Service (CAS) numbers are provided in the EDD to confirm chemical identifications.

Compound Identification and Quantitation Limits

Results of the analyses were reported based on laboratory RDLs for all compounds. RDLs for selected compounds are elevated due to method-required dilutions with the following discussions:

- SDG L1242545: Sample narrative indicates that sample FMW-141-072220 non-target VOC compounds were too high to run at a lower dilution and that there was headspace. In response to PES's request to clarify the sample narrative the report was revised to indicate that sample FMW-141-072220 target VOC compounds were too high to run at a lower dilution. The sample narrative indicated that the sample was reanalyzed multiple times and the third run was unacceptable due to instrument performance quality control issues related to vinyl chloride. The fourth run (7/31/2020) for vinyl chloride was reported with headspace due to multiple reanalyses. No action is taken other than to note this.

- SDG L1242992: Sample narrative indicates vinyl chloride was reported with headspace on samples MW-337-072320 and MW-326-072320 due to instrument performance and quality control failures for vinyl chloride on prior analyses. No action is taken other than to note this.

Data Assessment

The laboratory data reported for this project were reviewed based on the criteria outlined in:

- USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review (USEPA, 2017); and
- USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017).

Data qualifiers are assigned and laboratory report pages with qualifiers are attached. All data, including qualified data, are judged to be acceptable for their intended use.

MEMORANDUM

TO: Project File **DATE:** August 25, 2020

FROM: Jessie Compeau

SUBJECT: Laboratory Data Validation Review

PROJECT: American Linen Data Validation

PROJECT #: 1413.001.02.501G

TASK: EIM Data Validation Level EPA2A for 3rd Quarter Monitoring – Groundwater Samples – Group 4

LAB: Pace Sample Delivery Groups (SDGs): L1243922, L1244396, L1245254, L1245641, L1246080, L1246679, and L12482660

Forty five (45) groundwater samples including four field duplicate samples, two equipment blanks, and two trip blanks were collected as part of the 3rd Quarterly Monitoring Round for 2020 for the ongoing Remedial Investigation (RI) sampling at the Former American Linen Supply Site, in Seattle, Washington in July and August 2020. The samples were shipped and delivered to Pace Lab Sciences (Pace) of Mount Juliet, TN for laboratory analysis. Selected samples were analyzed for the following:

- Volatile organic compounds (VOCs) by United States Environmental Protection Agency (USEPA) Method 8260D;
- VOCs (dissolved gases – methane, ethane, and ethene) by EPA SOP RSK 175;
- Alkalinity by Method 2320 B-2011;
- Anions (chloride, nitrate, and sulfate) by USEPA Method 9056A;
- Total Organic Carbon (TOC) by USEPA Method 9060A; and
- Metals (iron and manganese) by USEPA Method 6020B.

Results are reported in multiple SDGs from Pace. Pace SDGs are reviewed in small groups for each data validation report. Group 4 analytical results are reported in SDGs L1243922, L1244396, L1245254, L1245641, L1246080, L1246679, and L1248266. The quality assurance review of the laboratory data associated with Group 4 is summarized below.

DATA QUALIFICATIONS

Guidelines established by USEPA for a limited data validation review of analytical data along with Pace control limit criteria were used to validate the data. The comments presented in this memorandum refer to the laboratory's performance in meeting the quality control criteria outlined in the USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review (USEPA, 2017) and USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review

(USEPA, 2017). Following Guidelines, non-project-specific laboratory duplicates and matrix spike results were not evaluated as part of this data validation.

DATA VALIDATION

Completeness

All samples were collected and analyzed as requested.

Sample Collection and Preservation

Samples were collected in laboratory-supplied sample containers preserved as appropriate for the individual analyses conducted. The samples were packed on ice in coolers and delivered by courier to the analytical laboratory. The laboratory reported that the coolers were received at a cooler temperature less than the recommended temperature preservation of 6°C. Samples were received in good condition. No data were qualified based upon the sample collection and preservation information.

Holding Times

USEPA Method 8260D:
All samples were analyzed for VOCs within the EPA recommended holding time of fourteen days for preserved waters from the date of collection. All holding time criteria are met.

Dissolved Gases (Methane, Ethane, and Ethene) by RSK 175:
All samples were analyzed within the WA State recommended holding time of fourteen days for preserved waters from the date of sample collection. All holding time criteria are met.

USEPA Method 6020B:
All samples were analyzed within the USEPA recommended holding time for iron and manganese of 180 days for preserved waters from the date of sample collection. All holding time criteria are met.

General Chemistry (Alkalinity, Chloride, Sulfate, Nitrate, and TOC):
All samples were analyzed within the USEPA recommended holding time for alkalinity (14 days), chloride (28 days), sulfate (28 days), and nitrate (48 hours), and TOC (28 days) for preserved waters from the date of sample collection. All holding time criteria are met.

Initial and Continuing Calibration

Calibration data for this project are not required for this deliverable however Pace's notes indicate the following:

- Multiple SDGs - *USEPA Method 8260D:* Continuing calibration verification (CCV) issues were noted by Pace for multiple compounds associated with analytical batches in each SDG. These compounds are qualified by the laboratory "J0" to indicate that percent

difference CCV is outside of laboratory acceptance criteria. **Associated sample results with laboratory qualified (J0) results are estimated and qualified (J/UJ).**

Method Blank Results

USEPA Method 8260D:
Laboratory method blanks were included with the analytical batches per method requirement. The target analytes were not detected in the method blanks at or above the reporting detection limits (RDLs) with the following exceptions:

- SDGs L1246080 and L1246679 – Analytical batch WG1522682: Three compounds (ethyl ether, tetrahydrofuran, and 1,2,3-trichlorobenzene) are detected either above or below their respective RDLs in the method blank. No action is required since these compounds are not detected in the associated samples.

Dissolved Gases (Methane, Ethane, and Ethene) by RSK 175:
Laboratory method blanks were included with the analytical batches per method requirement. The target analytes (dissolved gases) are not detected in the method blanks at or above the RDLs.

USEPA Method 6020B and General Chemistry (Alkalinity, Chloride, Sulfate, Nitrate, and TOC):
Laboratory method blanks were included with the analytical batches per method requirement. The target analytes were detected in the method blanks below the RDLs. Per Guidance, no action is taken for blank detections less than the RDL when associated sample detections are greater than the RDL. General chemistry and/or metal method blank detections are shown below:

SDG	Batch	Method	Analyte	Method Blank Result	Qualifier	RDL	Units	Associated Result(s) Qualified
L1243922	WG1516423	9060A	TOC	219	J	1000	µg/L	YES
L1244396	WG1518323	9060A	TOC	238	J	1000	µg/L	NO
L1245254	WG1518849	9060A	TOC	198	J	1000	µg/L	NO
L1245641	WG1520074	9060A	TOC	344	J	1000	µg/L	NO
L1246080	WG1521819	9060A	TOC	263	J	1000	µg/L	NO
L1246679	WG1523290	9060A	TOC	259	J	1000	µg/L	NO
L1246679	WG1521039	6020B	Iron	1.49	J	5.00	µg/L	NO
L1248266	WG1524491	9060A	TOC	163	J	1000	µg/L	NO

Target analytes were detected in method blanks at low levels with no impact to the associated samples with the following exception:

- SDG L1243922: **Associated TOC result for sample MW-305-072720 is qualified as not detected (U) due to method and/or equipment blank contamination.**

Trip Blank Results

USEPA Method 8260D:
Two trip blanks (TB-073120 and TB-080420) from SDGs L1245641 and L1246679 were collected and analyzed for VOCs. The target analytes were not detected in the trip blank at or above the RDLs with the following exceptions:

- SDG L1246679: Low levels of acetone and toluene are detected in the trip blank (TB-080420). **Associated acetone results in samples MW-938-080420, MW-190-080420, and MW-312-080420 are qualified as not detected (U) due to blank contamination. Associated toluene result in sample MW-312-080420 is qualified as not detected (U) due to blank contamination.**

Field, Rinsate, or Equipment Blank Results

All Analytical Methods:
Two equipment blanks were collected and analyzed. Details are as follows:

- SDG L1243922: Equipment blank (EQ-072720) is associated with all samples collected via bladder pump on July 27, 2020. Low levels of nitrate, TOC, manganese, VOC compounds (acetone and MEK) are detected in the equipment blank. **Associated TOC result for sample MW-305-072720 is qualified as not detected (U) due to method and/or equipment blank contamination. Associated acetone result for sample MW-936-072720 is qualified as not detected (U) due to equipment blank contamination.** No action is required for nitrate, manganese, or MEK detections in the associated samples.
- SDG L1245641: Equipment blank (EQ-073120) is associated with all samples collected via bladder pump on July 31, 2020. Low levels of chloride, TOC, iron, manganese, VOC compound (acetone) are detected in the equipment blank. **Associated iron results for samples MW-161-073120, W-MW-01-073120, MW107-073120, MW-937-073120, and MW104-073120 are qualified as estimated with high bias (J+) due to equipment blank contamination.** No action is required for chloride, manganese, TOC, or MEK detections in the associated samples.

Field Duplicate Analyses

Field duplicate pairs were submitted and analyzed. Field duplicate sample pair is as follows:

- SDG L1243922: Sample BB-8-072720 field duplicate is MW-936-072720
- SDG L1245641: Sample MW104-073120 field duplicate is MW-937-073120
- SDG L1246679: Sample MW102-080420 field duplicate is MW-938-080420
- SDG L1246679: Sample MW-310-080420 field duplicate is MW-939-080420

Target analyte results are comparable and within a relative percent difference (RPD) of 30% (± 1x RDL for groundwater results <5X the RDL) for the field duplicate pairs with the following exception:

- SDG L1243922: Sample BB-8-072720 field duplicate is MW-936-072720. **Methane and toluene RPDs exceed acceptance criteria for this field duplicate pair. Results for methane and toluene are estimated and qualified (J).**

- SDG L1245641: Sample MW104-073120 field duplicate is MW-937-073120. **Methane RPD exceeds acceptance criteria for this field duplicate pair. Result for methane is estimated and qualified (J).**

- SDG L1246679: Sample MW102-080420 field duplicate is MW-938-080420. **TOC, iron, and methane RPDs exceed acceptance criteria for this field duplicate pair. Results for TOC, iron, and methane are estimated and qualified (J).**

Laboratory Duplicate Analyses

USEPA Method 8260D:
Laboratory duplicate samples were not analyzed. Refer to laboratory control sample/sample duplicate (LCS/LCSD) or matrix spike/matrix spike duplicate (MS/MSD) results for precision data.

Dissolved Gases (Methane, Ethane, and Ethene) by RSK 175:
Laboratory duplicate sample analyses were performed on client and/or on non-client samples within the analytical batches. The primary/duplicate RPDs for dissolved gas analyses are within the laboratory control limit of 20%.

USEPA Method 6020B:
Laboratory duplicate samples were not analyzed. Refer to MS/MSD results for precision data.

General Chemistry (Alkalinity, Chloride, Sulfate, Nitrate, and TOC):
Laboratory duplicate sample analyses were performed on client samples and/or on non-client samples. The primary/duplicate RPDs for general chemistry parameters are within the laboratory control RPD limits or ± 1x RDL for groundwater results <5X the RDL.

Surrogate Recoveries

USEPA Method 8260D:
The surrogate recovery results for the samples, laboratory control samples, and the method blanks are within the laboratory surrogate control limits for all the analyses.

Laboratory Control Samples

USEPA Method 8260D:
Laboratory control sample/laboratory control sample duplicate (LCS/LCSD) or laboratory control sample (LCS) were analyzed by USEPA Method 8260D method. The LCS % Rs or LCS/LCSD % Rs and RPDs for all target compounds are within the laboratory control criteria for waters with the following exceptions:

- SDG L1243922 - Analytical batch WG1519557: LCS % recovery for chloromethane is above control limit criteria. No action is necessary since chloromethane is not detected in the associated samples. LCS recoveries for 1,4-dichlorobenzene and 1,3-dichloropropane are below QC criteria. **Associated samples MW-936-072720, MW-305-072720, and**

BB-8-072720 results for 1,4-dichlorobenzene and 1,3-dichloropropane are estimated and qualified (UJ).

- SDG L1243922 - Analytical batch WG1519931: LCS/LCSD recoveries for tetrahydrofuran are above QC criteria and laboratory qualified (J4). No action is necessary since tetrahydrofuran is not detected in the associated samples. LCS recovery for trichlorofluoromethane is within criteria however the LCSD recovery at 60.6% is marginally below QC criteria (61-142%) and laboratory qualified (J4). No action is taken since the LCS is within criteria. LCS/LCSD RPD result for trichlorofluoromethane is greater than laboratory acceptance criteria and laboratory qualified (J3). No action is taken since are recoveries are wide.

- SDG L1243496 - Analytical batch WG1519557: LCS % recovery for chloromethane is above control limit criteria. No action is necessary since chloromethane is not detected in the associated samples. LCS recoveries for 1,4-dichlorobenzene and 1,3-dichloropropane are below QC criteria. **Associated sample (MW126-072420, MW-333-072420, and SCL-MW105-072420) results for 1,4-dichlorobenzene and 1,3-dichloropropane are estimated and qualified (J).**

- SDGs L1246080 and L1246679 - Analytical batch WG1522682: LCS % recoveries for chloromethane, trans-1,2-dichloroethene, and vinyl chloride are above laboratory acceptance criteria and laboratory qualified (J4). Detections are qualified as estimated (J) and no action is taken for associated non-detects. LCS % R for 1,3-dichloropropane is below laboratory acceptance criteria and laboratory qualified (J4). **All associated sample results for 1,3-dichloropropane are estimated (UJ).**

- SDGs L1246679 and L1248266 - Analytical batch WG1524178: LCS % recovery for methylene chloride is above laboratory acceptance criteria and laboratory qualified (J4). No action is needed since methylene chloride was not detected in the associated samples.

Dissolved Gases (Methane, Ethane, and Ethene) by RSK 175:
The LCS/LCSD % Rs and RPDs for the target compound (dissolved gases) are within the laboratory control criteria for waters.

USEPA Method 6020B:
The LCS/LCSD % Rs and RPDs for the target compound (iron and manganese) are within the laboratory control criteria for waters.

General Chemistry (Alkalinity, Chloride, Sulfate, Nitrate, and TOC):
The LCS % Rs for general chemistry parameters are within the laboratory control criteria for waters.

Matrix Spike/Matrix Spike Duplicates

USEPA Method 8260D:
Matrix spike/matrix spike duplicate (MS/MSD) analyses were not performed on a non-client sample associated with SDG L1248266. MS/MSD recoveries and RPDs are within criteria with

several exceptions. No action is taken since the spike was performed on a non-client sample. Refer to LCS results and field duplicate sample for accuracy and precision data.

Dissolved Gases (Methane, Ethane, and Ethene) by RSK 175:
MS/MSD analyses were not performed. Refer to LCS results and field duplicate sample for accuracy and precision data.

USEPA Method 6020B:
MS/MSD analyses were performed on client and on non-client samples within the analytical batches. The MS/MSD % Rs and RPD were acceptable and within laboratory control limit criteria for water samples with the following discussion:

- SDG L1243922: Matrix spike analysis was performed on a client sample MW-936-072720 and manganese spike results are laboratory qualified (V) to indicate that the sample concentration is greater than 4X the spike amount and that the MSD recovery exceeded upper limit of the calibration range. Per Guidance no action is taken.

- SDG L1244396: Matrix spike analysis was performed on a non-client sample and manganese spike results are laboratory qualified (V) to indicate that the sample concentration is greater than 4X the spike amount. Per Guidance no action is taken.

General Chemistry (Alkalinity, Chloride, Sulfate, Nitrate, and TOC):
MS or MS/MSD analyses were performed on client and/or non-client samples within the analytical batches. In cases where MS/MSD spike analyses are not performed refer to LCS/LCSD or laboratory duplicate data for accuracy and precision data. The MS/MSD % Rs and RPDs are acceptable and within laboratory control limit criteria for water samples with the following discussions:

- SDG L1245641: MS/MSD spike was performed on a non-client sample with % R below QC criteria. MS/MSD results are laboratory qualified (EV) due to elevated sample chloride concentration exceeding upper calibration limit. No action is taken since the spike was performed on a non-client sample. Refer to MS result for sample MW-937-073120 with acceptable chloride spike recovery.

- SDG L1246080: MS/MSD spikes were performed on non-client samples with sulfate % R below QC criteria. MS/MSD results are laboratory qualified (E, J6) due to matrix interference and elevated sample sulfate concentration exceeding upper calibration limit. No action is taken since the spikes were performed on non-client samples. Refer to MS result for sample MW124-080320 with acceptable sulfate spike recoveries.

Other Quality Control Issues

No laboratory quality control issues were identified in the laboratory report with the following discussions:

- Multiple SDGs: Selected sample narratives for alkalinity results indicate that several sample containers had some headspace and exposure to air may have impacted the reported results. No action was taken other than to note this.

- Electronic data deliverables (EDDs) for these SDGs were provided by the laboratory and data validator qualifiers were entered. In some cases, different chemical synonyms are used between the EDD and the hardcopy however associated Chemical Abstracts Service (CAS) numbers are provided in the EDD to confirm chemical identifications.

Compound Identification and Quantitation Limits

Results of the analyses were reported based on laboratory RDLs for all compounds. RDLs for selected compounds are elevated due to method-required dilutions with the following discussion:

- SDG L1246080: Sample narrative (under the report case narrative) indicates vinyl chloride was reported with headspace on sample MW-155-080320 due to instrument performance and quality control failures for vinyl chloride on prior analyses. No action is taken other than to note this.

Data Assessment

The laboratory data reported for this project were reviewed based on the criteria outlined in:

- USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review (USEPA, 2017); and
- USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017).

Data qualifiers are assigned and laboratory report pages with qualifiers are attached. All data, including qualified data, are judged to be acceptable for their intended use.

JC 8/24/2020

MEMORANDUM

TO: Project File **DATE:** August 6, 2020

FROM: Jessie Compeau

SUBJECT: Laboratory Data Validation Review

PROJECT: American Linen Data Validation

PROJECT #: 1413.001.02.501G

TASK: EIM Data Validation Level EPA2A for June and July 2020 – Soil Samples

LAB: Pace Sample Delivery Groups (SDGs): L1237982 and L1238798

Twenty-eight (28) soil samples (including one field duplicate) and a trip blank were collected as part of the during installation of the new soil vapor probes at the Former American Linen Supply Site, in Seattle, Washington on June 29-30, July 1-2, and 9-10 of 2020. The samples were shipped and delivered to Pace Lab Sciences (Pace) of Mount Juliet, TN for laboratory analysis. Samples were analyzed for the following:

- Volatile organic compounds (VOCs) by United States Environmental Protection Agency (USEPA) Method 8260D

The quality assurance review of the sample data associated with SDGs L1237982 and L1238798 are summarized below.

DATA QUALIFICATIONS

Guidelines established by USEPA for a limited data validation review of analytical data along with PACE control limit criteria were used to validate the data. The comments presented in this memorandum refer to the laboratory's performance in meeting the quality control criteria outlined in the USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review (USEPA, 2017). Following Guidelines, non-project-specific laboratory duplicates and matrix spike results were not evaluated as part of this data validation.

DATA VALIDATION

Completeness

All samples were collected and analyzed as requested.

Sample Collection and Preservation

The samples were delivered to the project laboratory in coolers under standard chain-of-custody protocols. Review of Pace's notes on the chain of custody form indicates that all samples were received in good condition below the recommended preservation temperature 6.0°C. No data qualifications were assigned due to sample receipt or temperature preservation issues with the following discussion:

- SDG L1238798: Soil sample SV-**28**-13.5 was incorrectly recorded on the chain of custody (COC) and should read SV-**27**-13.5. PES contacted Pace on July 21, 2020 and the report was revised and reissued.
- SDG L1237982: Pace contacted PES to confirm requested analysis on the COC and proceeded once confirming requests for analysis.

Holding Times

USEPA Method 8260D:
All samples were analyzed for VOCs within the USEPA recommended holding time of fourteen days for soils (preserved waters) from the date of sample collection. All holding time criteria were met.

Initial and Continuing Calibration

USEPA Method 8260D (VOCs):
Initial and continuing calibration data for this project are retained by the laboratory and available for review if necessary. Pace indicated within the laboratory report that continuing calibration verification (CCV) criteria for were not met for the following:

- SDGs L1237982 and L1238798: CCV compounds outside of criteria are qualified by the laboratory (J0). **The associated sample results with laboratory qualifiers (J0) are estimated (UJ/J) as the associated CCV recoveries are outside of laboratory control limits.**

Method Blank Results

USEPA Method 8260D:
Laboratory method blanks are included with the analytical batches per method requirement. The target analytes are not detected in the method blanks at or above the reporting detection limits (RDLs).

Trip Blank Results

One trip blank (TB-071020) were collected and submitted for analysis. The target analytes were not detected in the trip blank at or above the RDLs with the following exception:

- SDG L1238798: A low level of 2-butanone is detected at a low level in the trip blank and in the associated sample SV-27-13.5. **Sample SV-27-13.5 2-butanone (methyl ethyl ketone) result is qualified as not detected (U) due to trip blank contamination.**

Field Duplicate Analyses

Field duplicate sample pair is as follows:

- SDG L1237982: Samples SV-16-5 and SV-100-5

Target analyte results are comparable and within a relative percent difference (RPD) of 30% for the field duplicate pair with the following exceptions:

- Samples SV-16-5 and SV-100-5: Select VOC results are not comparable with an RPD greater than 30% (or for results < 5X RDL the absolute difference < 1X RDL). **Field duplicate results for ethylbenzene, n-hexane, p-isopropyltoluene, tetrachloroethene, toluene, 1,2,4-trimethylbenzene, and 1,2,3-trimethylbenzene, and total xylenes are estimated and qualified (J).**

Laboratory Duplicate/Replicate Analyses

USEPA Method 8260D:
Laboratory duplicate samples were not analyzed. Refer to laboratory control sample/sample duplicate (LCS/LCSD) or matrix spike/matrix spike duplicate (MS/MSD) results for precision data.

Surrogate Recoveries

USEPA Method 8260D:
The surrogate recovery results for the samples, laboratory control samples, matrix spike samples, and the method blanks are within the laboratory surrogate control limits for all the analyses.

Laboratory Control Samples

USEPA Method 8260D:
Laboratory control sample/laboratory control sample duplicates (LCS/LCSD) were analyzed by USEPA Method 8260D. In some cases, only an LCS was analyzed. Refer to matrix spike duplicate or field duplicate results in these cases. The LCS or LCS/LCSD %R's and RPDs for the target compounds are within the laboratory control criteria for soils with the following exceptions:

- SDG L1238798: LCS/LCSD (analytical batch WG1510393) RPDs for acetone and carbon disulfide are laboratory qualified (J3) to indicate an elevated RPD exceeding laboratory criterion. No action is taken since the spike recoveries are within acceptance criteria but are recovered wide.

- SDG L1238798: LCS (analytical batch WG1510393) recovery for n-hexane is above acceptance criteria and laboratory qualified (J4). **Positive detection in sample SV-22-8.5 for n-hexane are qualified as estimated (J).** No action is required for n-hexane non-detects in the associated samples.

- SDG L1238798: LCS (analytical batch WG1510584) recovery for chloroform and n-hexane are above acceptance criteria and laboratory qualified (J4). No action is taken since chloroform and n-hexane are not detected in the associated samples.

- SDG L1237982: LCS (analytical batch WG1507172) recoveries for 1,2-dichlorobenzene and cis-1,2-dichloroethene are slightly below acceptance criteria and laboratory qualified (J4). No action is taken since the LCSD results are within criteria and LCS recoveries are only marginally outside of criteria.

- SDG L1237982: LCS (analytical batch WG1507499) recovery for trans-1,2-dichloroethene is above acceptance criteria and laboratory qualified (J4). No action is taken since trans-1,2-dichloroethene is not detected in the associated samples.

Matrix Spike/Matrix Spike Duplicates

USEPA Method 8260D:
Matrix spike/matrix spike duplicate (MS/MSD) analyses were performed on non-client samples. The MS/MSD percent recoveries (%R's) and RPDs for all target compounds are within the laboratory control criteria for soil with the following exceptions:

- SDG L1238798: MS/MSD (analytical batch WG1509734) was performed on a non-client sample within the analytical batch. No action is taken since the non-client MS/MSD is associated with the trip blank and samples are not impacted by associated spike QC.

Other Quality Control Issues

No laboratory quality control issues were identified in the laboratory report with the following discussion:

- Electronic data deliverables (EDDs) for these SDGs were provided by the laboratory and data validator qualifiers were entered. In some cases, different chemical synonyms are used between the EDD and the hardcopy however associated Chemical Abstracts Service (CAS) numbers are provided in the EDD to confirm chemical identifications.

Quantitation Limits

Electronic data deliverables (EDDs) for these SDGs were provided by the laboratory and data validator qualifiers were entered, as appropriate, into the EDDs.

Data Assessment

The laboratory data reported for this project were reviewed based on the criteria outlined in:

- USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review (USEPA, 2017).

Data qualifiers are assigned and laboratory report pages with qualifiers are attached. All data, including qualified data, are judged to be acceptable for their intended use.

JC 8/3/2020

MEMORANDUM

TO: Project File **DATE:** August 6, 2020

FROM: Jessie Compeau

SUBJECT: Laboratory Data Validation Review

PROJECT: American Linen Data Validation

PROJECT #: 1413.001.02.501F

TASK: EIM Data Validation Level EPA2A for July 2020 – Soil Vapor Samples

LAB: Pace Sample Delivery Groups (SDG): L1241285

Twenty-nine (29) soil vapor samples (including two field duplicates) were collected as part of the ongoing soil vapor probe monitoring event at the Former American Linen Supply Site, in Seattle, Washington on July 14-17, 2020. The samples were shipped via courier and delivered to Pace Lab Sciences (Pace) of Mount Juliet, TN for laboratory analysis. Samples were analyzed for the following:

- Volatile organic compounds (VOCs) by United States Environmental Protection Agency (USEPA) Method TO-15

The quality assurance review of the sample data associated with SDG L1241285 is summarized below.

DATA QUALIFICATIONS

Guidelines established by USEPA for a limited data validation review of analytical data along with PACE control limit criteria were used to validate the data. The comments presented in this memorandum refer to the laboratory's performance in meeting the quality control criteria outlined in the USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review (USEPA, 2017). Following Guidelines, non-project-specific laboratory duplicates and matrix spike results were not evaluated as part of this data validation.

DATA VALIDATION

Completeness

All samples were collected and analyzed as requested.

Sample Collection and Preservation

The laboratory supplied Summa Canister TM canisters (1Liter) for the air samples. The samples were shipped, delivered by FedEx, and received in good condition by the laboratory. The sample was collected, handled, and delivered in an appropriate manner. No data qualifications were warranted based upon sampling techniques.

Holding Times

The analyses for VOCs by Method TO-15 were performed within the 30-day recommended holding time limit for the air samples collected in Summa canisters. All holding time criteria are met.

Initial and Continuing Calibration

Initial and continuing calibration data for this project are retained by the laboratory and available for review if necessary. Case narrative and laboratory notes do not indicate that there are any issues with calibration.

Method Blank Results

A laboratory method blank is included with each analytical batch per method requirement. The target analytes were not detected in the method blank at or above the RDLs with one exception:

- Analytical Batch WG1514010: A low level of ethanol was detected in the method blank. No action is required since the associated sample detections are much higher than the detected concentration in the blank.

- Analytical Batch WG1514571: A low level of propene was detected in the method blank. No action is required since the associated sample detection is much higher than the propene concentration in the blank.

- Analytical Batch WG1514638: A low level of propene was detected in the method blank. No action is required since either the associated sample propene detections are either much greater than the method blank or are not detected.

- Analytical Batch WG1515454: A low level of propene was detected in the method blank. No action is required since either the associated propene detections are either much greater than the method blank or are not detected in the associated samples.

Trip Blank Results

A trip blank was not required for the VOCs by TO-15 analyses. No action is taken other than to note this.

Field Duplicate Analyses

Field duplicate sample pair is as follows:

- Samples SV-09-071420 and SV-900-071420
- Samples SV-07-071620 and SV-901-071620

Target analyte results are comparable and within a relative percent difference (RPD) of 30% for the field duplicate pair with the following exceptions:

- Samples SV-07-071620 and SV-901-071620. VOC results are not comparable with an RPD greater than 30% (or for results < 5X RDL the absolute difference < 1X RDL). **Field duplicate results for 1,2,4-trimethylbenzene, p-ethyltoluene (4-ethyltoluene), ethanol, m,p-xylene, and tetrahydrofuran are estimated and qualified (UJ/J).**

Laboratory Duplicate/Replicate Analyses

A laboratory replicate was not performed. Refer to the Laboratory Control Sample section for additional information.

Surrogate Recoveries

The surrogate percent recovery (% R) results for the VOCs by TO-15 air samples, method blank, and laboratory control samples are within the laboratory surrogate control limits of 60 -140% R with the following exception:

- Surrogate 1,4-bromoflurobenzene (analytical batch WG1514010) recovery is above criteria in sample SV-24-071420 due to matrix interference. **Associated sample SV-24-071420 positive detections are estimated and qualified (J).**

Laboratory Control Samples

A laboratory control sample/laboratory control sample duplicate (LCS/LCSD) were analyzed for the VOCs by TO-15 along with each analytical batch. The LCS/LCSD recovery and relative percent differences (RPDs) for all control compounds met laboratory control limit criteria.

Matrix Spike/Matrix Spike Duplicates

A matrix spike/matrix spike duplicate (MS/MSD) is not required for the VOCs by TO-15 method.

Other Quality Control Issues

No laboratory quality control issues were identified in the laboratory report with the following discussion:

- Electronic data deliverables (EDDs) for these SDGs were provided by the laboratory and data validator qualifiers were entered. In some cases, different chemical synonyms are used between the EDD and the hardcopy however associated Chemical Abstracts Service (CAS) numbers are provided in the EDD to confirm chemical identifications.

Quantitation Limits

Results of the VOCs by TO-15 analysis are reported based on laboratory MRLs (assuming standard temperature and pressure is equal to 24.45) and reported in units of ppbv and µg/m^3.

The RDLs indicate the minimum quantity of a target analyte that can be confidently determined by the reference method. The RDLs were acceptable for the project; therefore, no data qualifications were warranted.

Data Assessment

The laboratory data reported for this project were reviewed based on the criteria outlined in:

- USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review (USEPA, 2017).

Data qualifiers are assigned and laboratory report pages with qualifiers are attached. All data, including qualified data, are judged to be acceptable for their intended use.

MEMORANDUM

TO: Project File **DATE:** May 29, 2020

FROM: Jessie Compeau

SUBJECT: Laboratory Data Validation Review

PROJECT: American Linen Data Validation

PROJECT #: 1413.001.05.202

TASK: EIM Data Validation Level EPA2A for Interim Action for Utility Borings - August 2020 Soil Samples.

LAB: Pace Sample Delivery Groups (SDGs): L1253451, L1253974, and L1255238

Twenty-nine (29) soil samples, including one field duplicate, and one trip blank were collected on August 19, 20, 22, and 26, 2020 as part of the Interim Action (IA) portion of the Work Plan at the Former American Linen Supply Site, in Seattle, Washington. The samples were delivered to Pace Analytical (Pace) of Mount Juliet, TN for laboratory analysis. Selected samples were analyzed for the following parameters:

- Volatile organic compounds (VOCs) by United States Environmental Protection Agency (USEPA) Method 8260D; and
- Total Solids by Standard Methods (SM) 2540 G-2011.

The utility boring soil sampling results are reported in Pace SDGs L1253451, L1253974, and L1255238. The quality assurance review of the laboratory data associated with these SDGs are summarized below.

DATA QUALIFICATIONS

Guidelines established by USEPA for review of analytical data were used to validate the data. The comments presented in this memorandum refer to the laboratory’s performance in meeting the quality control criteria outlined in the USEPA Contract Laboratory Program National Functional Guidelines for Organic Superfund Methods Data Review (USEPA, 2017). Following Guidelines, non-project-specific laboratory duplicates and matrix spike results were not evaluated as part of this data validation.

DATA VALIDATION

Sample Receipt, Preservation and Handling

The samples were collected and delivered to the laboratory by courier. The samples were delivered to the project laboratory in coolers under standard chain-of-custody protocols. Review of Pace's chain of custody (COC) notes indicate that all samples were received in good condition below the recommended preservation temperature 6.0°C. No data qualifications were assigned due to sample receipt or temperature preservation issues.

Holding Times

USEPA Method 8260D:
All samples were analyzed for VOCs within the USEPA recommended holding time of fourteen days for soils and waters (trip blanks) from the date of sample collection. All holding time criteria are met.

Total Solids by SM 2540 G-2011:
Samples were analyzed within the USEPA recommended holding time of seven days for total solids.

Initial and Continuing Calibration

Calibration data for this project are not required for this deliverable however PACE's notes indicate the following:

- Multiple SDGs - *USEPA Method 8260D:* Continuing calibration verification (CCV) issues were noted by Pace for multiple compounds associated with analytical batches in each SDG. These compounds are qualified by the laboratory "J0" to indicate that percent difference CCV is outside of laboratory acceptance criteria. **Associated sample results with laboratory qualified (J0) results are estimated and qualified (J/UJ).**

Method Blank Results

USEPA Method 8260D:
Laboratory method blanks are included with the analytical batches per method requirement. The target analytes are not detected in the method blanks at or above the method detection limit (MDLs) or the reporting detection limit (RDLs) with the following exceptions:

- SDG L1255238: Naphthalene is detected below the RDL in the method blank (analytical batch WG1534818). **Associated naphthalene detections in B-297-5 and B-298-5 are detected below the RDL and are qualified as not detected (U) due to method or trip blank contamination.** Refer to Trip Blank Results for further information.

Trip Blank Results

USEPA Method 8260D:
One trip blank (TB-082620) was collected and analyzed. The target analytes were not detected in the trip blanks at or above the MDLs or RDLs with the following exceptions:

- SDG L1255238: Low levels of 2-butanone (MEK), naphthalene, toluene, and total xylenes are detected in the trip blank TB-082620.
    - **Associated MEK detection in sample B-294-10 is qualified as not detected (U) due to blank contamination.**

  - **Associated naphthalene detections in samples B-294-10, B-295-1, B-295-7, B-295-10, B-296-1, B-293-1, B-297-1, B-297-3, B-297-5, B-298-5, and B-500-1 are qualified as not detected (U) due to method or trip blank contamination.** Refer to Method Blank Results for further information.

  - **Associated toluene detections in samples B-294-6, B-294-10, B-295-3, B-295-7, B-295-10, B-293-1, B-297-3, B-297-5, and B-298-5 are qualified as not detected (U) due to trip blank contamination.**

  - **Associated total xylene detections in samples B-294-6, B-294-10, B-295-1, B-295-3, B-295-7, B-295-10, B-296-1, B-293-1, B-297-3, B-297-5, B-298-5, and B-500-1 are qualified as not detected (U) due to trip blank contamination.**

Field, Rinsate, or Equipment Blank Results

Field, rinsate or equipment blanks were not collected.

Field Duplicate Analyses

Field duplicate sample pair is as follows:

- SDG L1255238: Samples B-297-3 and B-500-1

Field duplicate pair was submitted and analyzed for VOCs and percent solids. Percent solids and VOC target analyte results are comparable and within a relative percent difference (RPD) of 30% (± 2x RDL for soil results <5X the RDL) for the field duplicate.

Laboratory Duplicate Analyses

USEPA Method 8260D:
Laboratory duplicate analyses were not performed. Refer to laboratory control samples, field duplicate samples, or matrix spike results for precision data.

Total Solids by SM 2540 G-2011:
Laboratory duplicate samples were performed on client and non-client samples associated with the analytical batches. The RPDs for percent moisture are within the laboratory control limit of 20% RPD.

Surrogate Recoveries

USEPA Method 8260D:
The surrogate recovery results for the samples, laboratory control samples, matrix spike samples, and the method blanks are within the laboratory surrogate control limits for all the analyses.

Matrix Spike/ Matrix Spike Duplicates

USEPA Method 8260D:
Matrix spike/matrix spike duplicate (MS/MSD) analyses were performed on non-client samples within the analytical batch. In cases where MS/MSDs were not performed refer to laboratory control samples, field duplicate data for accuracy and precision data. The MS/MSD %R's and RPDs for the target compounds are within the laboratory control criteria for soil and waters with the following discussion:

- SDG L1255238: Matrix spike analyses (analytical batch WG1534490) were performed on a non-client sample within the analytical batch. MS/MSD iodomethane recoveries are wide with an elevated RPD and laboratory qualified (J3). MS/MSD recoveries for vinyl acetate were below criteria due to matrix interference and laboratory qualified (J6). No action is taken since the spike is performed on a non-client sample.

- SDG L1255238: Matrix spike analyses (analytical batch WG1534818) was performed on a non-client sample within the analytical batch. MS/MSD recoveries for acetone and trichlorofluoromethane are recovered wide and laboratory qualified (J3). MS recovery for trichlorofluoromethane is below criteria due to matrix interference and laboratory qualified (J6). No action is taken since the spike is performed on a non-client sample.

Laboratory Control Samples

USEPA Method 8260D:
Laboratory control sample/laboratory control sample duplicates (LCS/LCSD) were analyzed by USEPA Method 8260D. The LCS/LCSD %R's and RPDs for the target compounds are within the laboratory control criteria for soils with the following discussion:

- SDG L1255238: LCS/LCSD (analytical batch WG1534490) recoveries for multiple compounds are recovered wide with elevated RPDs and laboratory qualified (J3). No action is taken since the recoveries are within criteria but are recovered wide (due to wide recovery control limits).

- SDG L1255238: LCS/LCSD (analytical batch WG1534818) recoveries for acetone and acrylonitrile are recovered wide with elevated RPDs and laboratory qualified (J3). No action is taken since the recoveries are within criteria but are recovered wide.

Moisture by Method 8000D:
LCS were analyzed within the analytical batch. For precision data refer to laboratory or field duplicate results. The LCS %Rs for the target compound is within the laboratory control criteria for soils.

Other Quality Control Issues

No laboratory quality control issues were identified in the laboratory reports with the following discussion:

- Electronic data deliverables (EDDs) for these Work Orders were provided by the laboratory and data validator qualifiers were entered, as appropriate, into the EDDs.

Quantitation Limits

Results of all analyses were reported based on standard laboratory RLs. The reported RLs are considered appropriate for this project.

Completeness

The samples were collected and analyzed as requested. Data completeness is 100%.

Data Assessment

The laboratory data reported for this project were reviewed based on laboratory control limit acceptance criteria and criteria outlined in:

- USEPA Contract Laboratory Program National Functional Guidelines for Organic Superfund Methods Data Review (USEPA, 2017)

Data qualifiers are assigned and laboratory report pages with qualifiers are attached. All data, including qualified data, are judged to be acceptable for their intended use.
