Attachments: image001.png

Hello Margaret:

Ecology received the *Groundwater Monitoring Memorandum, Quarter No. 8* dated May 8, 2024. The memo recommends changing the groundwater sampling interval for monitoring well MW-3-19 to semiannual (in February and August) to represent high and low seasonal groundwater elevations, respectively. Ecology concurs with modifying the MW-3-19 sampling schedule from quarterly to semiannually. However, Ecology suggests using the longer-term historical data for boring H-691p-16 to represent seasonal high and low groundwater elevations, which occurred in early April and early October, respectively (see diagram below from the March 2020 *Remedial Investigation Report*.

Ecology also requests including historical and future measurements of floating product thickness in monitoring well MW-3-19 groundwater level summary tables.

Ecology appreciates the ongoing efforts of WSDOT in continuing assessment and cleanup of the off-Property contamination a this Site through the VCP.

Sincerely,

Michael R. (Mike) Warfel, LG, LHG, RG

Subject: 520 Program - Montlake Gas Station (VCP NW3242) - Q8 Report

External Email

Hi Mike – Attached please find the Groundwater Monitoring Memo, Quarter #8 for the Montlake Gas Station site (VCP NW3242). Apologies for the delay in this submittal; we had some absences on our end that affected the schedule of finalizing this document.

This memo includes a recommendation that MW-3-19 (the remaining well) now be sampled on a semi-annual basis, February and August, instead of quarterly sampling. Please see bottom of Page 4. Please review and let us know if you concur with this recommendation. If we needed to continue with quarterly sampling, we would be due for monitoring this month, so we need to mobilize fairly quickly.

Please let us know if you have any questions or would like to discuss.

Thanks much –
Margaret
