ALKALINITY BENCHSHEET

Date: 9/29/2006

Analyst: UW

pH meter verification — **HIGH**

Buffer pH 7.00 Calibration OK

Measured pH 7.02

Standardization of acid titrant (Titration to pH 4.5)

grams Na2CO3 = 0.6245 to 250 ml DI

Normality Na2CO3 = 0.0471

Assumed Acid Normality = 0.1

Standardized Acid Normality= 0.101 **OK!**

BLANK		STANDARD TITRATION		
BLANK	ml ACID	ml Na2CO3	ml ACID	N H2SO4
1	0.05	5	2.35	0.102
2	0.04	5	2.38	0.101
3	0.04	5	2.37	0.101
AVERAGE	0.04			0.101

Partitioning Calculations (T=Total, P=Phenolphthalein)

Obs	HCO3	CO3	OH
P =0	T	0	0
P< 0.5T	T - 2P	2P	0
P= 0.5T	0	2P	0
P> 0.5T	0	2(T - P)	2P - T
P =T	0	0	T

Calibration Verification Standard *(Note: analyzed value will be corrected for blank titration)*

LCS Source (if used): LCS = mg/L CaCO3

CVS Source (if used): ARI # 0063-07

CVS = Added 5 ml Na2CO3 soln to DI and dilute to 100 ml. CVS = 118 mg/l CaCO3

SAMPLE DATA

RE: Client Project: Chinook
ARI Job No. JY77

Dear Kristin:

Please find enclosed the original chain of custody documentation and the final data package for samples from the project referenced above.

Problems associated with these analyses are discussed in the Case Narrative.

An electronic copy of this package will remain on file with ARI. Should you have any questions or problems, please feel free to contact me at your convenience.

Sincerely,

ANALYTICAL RESOURCES, INC.

Susan Dunnihoo

Limits of Liability: *ARI will perform all requested services in accordance with appropriate methodology following ARI Standard Operating Procedures and the ARI Quality Assurance Program. This program meets standards for the industry. The total liability of ARI, its officers, agents, employees, or successors, arising out of or in connection with the requested services, shall not exceed the Invoiced amount for said services. The acceptance by the client of a proposal for services by ARI release ARI from any liability in excess thereof, not withstanding any provision to the contrary in any contract, purchase order or co-signed agreement between ARI and the Client.*

Sample Retention Policy: All samples submitted to ARI will be appropriately discarded no sooner than 90 days after receipt or 60 days after submission of hardcopy data, whichever is longer, unless alternate retention schedules have been established by work-order or contract.

Case Narrative

Client: Anchor Environmental
Project: Chinook
Matrix: Water
ARI Job Nos. JY77

Sample receipt

Nine water samples were received as part of a larger shipment on September 29, 2006 under ARI Job JY77. Samples were iced and the cooler temperatures measured by IR thermometer following ARI SOP were 3.8-6.5° C. Samples were received in good condition with no discrepancies in paperwork, with one exception. R4S-092706 had a sampling date of 09/28/06.

Samples G1S-092806 (metals container only) and G2S-092906 (both metals and T-Phos container) failed the preservation check. Sample pH was readjusted in the laboratory. Failure was attributed to the characteristics of the samples, based on previous experience with the project.

ARI was informed verbally that all water samples received from the Chinook site have been field filtered.

Dissolved Metals

As Silica will mineralize under the digestion procedure used for environmental samples, analysis of the Silica was performed on sample that was acidified only (Prep Method 6010B). The samples were also digested under prep method 3010A and analyzed for the remaining target elements.

The method blanks were clean at the reporting limit.

LCS recoveries were within ARI and method limits.

Duplicate RPDs were within ARI and method limits.

Matrix spike recoveries were within limits with the exception of Iron for the digested sample. The outlier was attributed to high concentration of the element in the parent sample and no corrective action is required. Manganese also had high parent concentration compared to the spike value, although the recovery calculated fell within limits.

There were no other incidents of note.

General Chemistry Parameters

Alkalinity

Samples were prepared and analyzed within the required holding time of 14 days.

The replicate analysis has RPDs within limits.

There were no incidents of note.

Total Phosphorous

Samples were prepared and analyzed within the required holding time of 28 days.

The method blank was clean.

Standard reference recovery were within limits.

The replicate analysis has RPDs within limits.

The matrix spike had recoveries within limits.

There were no incidents of note.

Ion Chromatography – Fluoride, Chloride, Sulfate

Samples were prepared and analyzed within the required holding time of 28 days.

The method blanks were clean.

Standard reference recoveries were within limits.

The replicate had RPDs within limits and the matrix spike had recoveries within limits.

There were no incidents of note.

Geotechnical Parameters

A lab specific Case Narrative follows.

Analytical Resources, Incorporated
Analytical Chemists and Consultants

Client: Anchor Environmental	Project No.: JY77
Client Project: Chinook 060354-01	

Case Narrative

1. Seven samples were submitted for fluid density on September 29, 2006.
2. The samples were measured in calibrated 500 mL flasks and calculated for density.
3. The data is provided in a summary table.
4. There were no other noted anomalies in the samples or methods on this project.

Data Reporting Qualifiers

Effective 12/28/04

Inorganic Data

U Indicates that the target analyte was not detected at the reported concentration

* Duplicate RPD is not within established control limits

B Reported value is less than the CRDL but ≥ the Reporting Limit

N Matrix Spike recovery not within established control limits

NA Not Applicable, analyte not spiked

H The natural concentration of the spiked element is so much greater than the concentration spiked that an accurate determination of spike recovery is not possible

L Analyte concentration is ≤5 times the Reporting Limit and the replicate control limit defaults to ±1 RL instead of the normal 20% RPD

Organic Data

U Indicates that the target analyte was not detected at the reported concentration

* Flagged value is not within established control limits

B Analyte detected in an associated Method Blank at a concentration greater than one-half of ARI's Reporting Limit or 5% of the regulatory limit or 5% of the analyte concentration in the sample.

J Estimated concentration when the value is less than ARI's established reporting limits

D The spiked compound was not detected due to sample extract dilution

NR Spiked compound recovery is not reported due to chromatographic interference

E Estimated concentration calculated for an analyte response above the valid instrument calibration range. A dilution is required to obtain an accurate quantification of the analyte.

S Indicates an analyte response that has saturated the detector. The calculated concentration is not valid; a dilution is required to obtain valid quantification of the analyte

NA The flagged analyte was not analyzed for

NS The flagged analyte was not spiked into the sample

M Estimated value for an analyte detected and confirmed by an analyst but with low spectral match parameters. This flag is used only for GC-MS analyses

N The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification"

Y The analyte is not detected at or above the reported concentration. The reporting limit is raised due to chromatographic interference. The Y flag is equivalent to the U flag with a raised reporting limit.

C The analyte was positively identified on only one of two chromatographic columns. Chromatographic interference prevented a positive identification on the second column

P The analyte was detected on both chromatographic columns but the quantified values differ by ≥40% RPD with no obvious chromatographic interference

Geotechnical Data

A The total of all fines fractions. This flag is used to report total fines when only sieve analysis is requested and balances total grain size with sample weight.

F Samples were frozen prior to particle size determination

SM Sample matrix was not appropriate for the requested analysis. This normally refers to samples contaminated with an organic product that interferes with the sieving process and/or moisture content, porosity and saturation calculations

SS Sample did not contain the proportion of "fines" required to perform the pipette portion of the grain size analysis

W Weight of sample in some pipette aliquots was below the level required for accurate weighting

CORRECTIVE ACTIONS - Inorganic Analyses

Criteria Flagged

ARI Project No.: JY35, JY77 Client Name: ANCHOR

Date of Out-of-Control Event: 10/2/06 Method/Element: IC SO4, Cl

Unacceptable Blank	✓
Unacceptable Duplicate	
Unacceptable Spike	
Unacceptable Reference	✓

Prep Code:

Other:

Details of Problem/Recommended Corrective Action: JY35 WAS NOT RUN FOR PRELIMINARY BY MISTAKE, ANOTHOR SAMPLE JOB WAS. THIS ERROR WAS CAUGHT AFTER RUN AT NO DILUTION WHICH IN TURN THREW OFF THE NEXT CCV/CCB SET. SO4 FAIL IN THE CCV AND Cl FAILED IN CCB. JY77 D HAD A REPORTABLE Cl RESULT PREVIOUSLY WHICH WAS REPORTED. JY35 WILL BE RERUN FOR ALL, JY77 C WILL BE RERUN FOR SO4.

Samples Affected: JY35 A-C, JY77 C, D

Corrective Action Taken: JY77 D REPORTED AT HIGHER DILUTION FOR Cl, JY77 C REANALYZED FOR SO4, JY35 A-C REANALYZED.

RE: Client Project: Chinook
ARI Job No. JY78

Dear Kristin:

Please find enclosed the original chain of custody documentation and the final data package for samples from the project referenced above.

Problems associated with these analyses are discussed in the Case Narrative.

An electronic copy of this package will remain on file with ARI. Should you have any questions or problems, please feel free to contact me at your convenience.

Sincerely,

ANALYTICAL RESOURCES, INC.

Susan Dunnihoo

Limits of Liability: *ARI will perform all requested services in accordance with appropriate methodology following ARI Standard Operating Procedures and the ARI Quality Assurance Program. This program meets standards for the industry. The total liability of ARI, its officers, agents, employees, or successors, arising out of or in connection with the requested services, shall not exceed the Invoiced amount for said services. The acceptance by the client of a proposal for services by ARI release ARI from any liability in excess thereof, not withstanding any provision to the contrary in any contract, purchase order or co-signed agreement between ARI and the Client.*

Sample Retention Policy: All samples submitted to ARI will be appropriately discarded no sooner than 90 days after receipt or 60 days after submission of hardcopy data, whichever is longer, unless alternate retention schedules have been established by work-order or contract.

Tracking NO.: ——— Date: 9/29/06

ARI Job No.: JY78 Lims NO.: 06-18107 — 06-18116

Preliminary Examination Phase:

1. Were intact, properly signed and dated custody seals attached
   To the outside of the cooler? ..... YES (NO)
2. Were custody papers included with the cooler ..... (YES) NO
3. Were custody papers properly filled out (ink, signed etc.)? ..... (YES) NO
4. Complete custody forms and attach all shipping documents ..... OK (NA)

Cooler Accepted BY: BC Congdon Date: 9/29/06 Time: 1145

Log-IN Phase:

5. Was a temperature blank include in the cooler? ..... YES (NO)
6. Record Cooler Temperature ..... 3.8, 6.5 °C
7. What kind of packing material was used? ..... ICE
8. Was sufficient ice used (if appropriate)? ..... (YES) NO
9. Were all bottles sealed in separate plastic bags? ..... YES (NO)
10. Did all bottles arrive in good condition (unbroken)? ..... (YES) NO
11. Were all bottle labels complete and legible? ..... (YES) NO
12. Did all bottle labels and tags agree with custody papers? ..... (YES) NO
13. Were all bottles used correct for the requested analyses? ..... (YES) NO
14. Do any of the analyses (bottles) require preservative?
    (If so, Preservation checklist must be attached) ..... YES (NO)
15. Were all VOA vials free of air bubbles? ..... ~~YES~~ ~~NO~~
16. Was sufficient amount of sample sent in each bottle? ..... (YES) NO
17. Notify Project Manager of any discrepancies or concerns ..... (OK) NA

Cooler Opened By: BC Date: 9/29/06 Time 1145

Explain any discrepancies or negative responses:

Case Narrative

Client: Anchor Environmental
Project: Chinook
Matrix: Soil
ARI Job Nos. JY78

Sample receipt

Ten soil samples were received as part of a larger shipment on September 29, 2006 under ARI Job JY78. Samples were iced and the cooler temperatures measured by IR thermometer following ARI SOP were 3.8-6.5° C. Samples were received in good condition with no discrepancies in paperwork for this sample set.

Three samples were received for Bellack Fluorides. Following instructions from Anchor, these three samples were transferred to CAS for analysis and reporting directly to Anchor.

Diesel/Motor Oil Range Hydrocarbons by NWTPH-Dx

Samples were extracted and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

The method blank was clean at the reporting limit and LCS had recoveries within limits

Surrogates recoveries were within ARI control limits.

The MS/MSD had recoveries and RPDS within limits.

There were no incidents of note.

PAH by SW8270D

Samples were initially screened to determine if a response was present that would affect sample analysis. No modifications were required for these samples.

Samples were extracted and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

The method blank was clean at the reporting limit and LCS had recoveries within limits

Surrogates recoveries were within ARI control limits.

The MS/MSD had recoveries within limits, but RPDs were high. The data reviewer noted the surrogates between the MS and the MSD also had high RPD, indicating the difference may be from procedure the extract concentration step.

Internal standard areas were within method limits.

There were no other incidents of note.

Aroclor-PCBs by SW8082

Samples were initially screened to determine if a response was present that would affect sample analysis. Based on the screens three of the samples were analyzed at slightly lower sample amounts.

Samples were extracted and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

The method blank was clean at the reporting limit and LCS had recoveries within limits

Surrogates recoveries were within ARI control limits.

The MS/MSD had recoveries and RPDs within limits.

Internal standard areas were within method limits with the exception of Hexabromo-biphenyl (HBBP) on one column in sample RY1-092806 (JY78A). Inspection of the chromatogram suggests the outlier is due to matrix interference and no further action was taken.

Some Aroclor results were "Y"-flagged with a raised undetect level, due to interferences from the matrix or identified Aroclors. One Aroclor has been "J" flagged, indicating both columns have positive pattern identification, with the averaged quantitated result below the reporting limit on one or both columns.

There were no other incidents of note.

Total Mercury by SW7471

Samples were digested and digests analyzed within recommended holding times.

The method blank was clean at the reporting limit and LCS recovery was within limits.

Matrix Spike recovery and duplicate RPD was within ARI and method limits.

There were no incidents of note.

General Chemistry Parameters

Total and WAD Cyanide

Samples were prepared and analyzed within the required holding time.

The method blank was clean at the reporting limit and LCS recovery was within limits.

Matrix Spike recovery and duplicate RPD was within ARI and method limits.

There were no incidents of note.

Data Reporting Qualifiers

Effective 12/28/04

Inorganic Data

U Indicates that the target analyte was not detected at the reported concentration

* Duplicate RPD is not within established control limits

B Reported value is less than the CRDL but ≥ the Reporting Limit

N Matrix Spike recovery not within established control limits

NA Not Applicable, analyte not spiked

H The natural concentration of the spiked element is so much greater than the concentration spiked that an accurate determination of spike recovery is not possible

L Analyte concentration is ≤5 times the Reporting Limit and the replicate control limit defaults to ±1 RL instead of the normal 20% RPD

Organic Data

U Indicates that the target analyte was not detected at the reported concentration

* Flagged value is not within established control limits

B Analyte detected in an associated Method Blank at a concentration greater than one-half of ARI's Reporting Limit or 5% of the regulatory limit or 5% of the analyte concentration in the sample.

J Estimated concentration when the value is less than ARI's established reporting limits

D The spiked compound was not detected due to sample extract dilution

NR Spiked compound recovery is not reported due to chromatographic interference

E Estimated concentration calculated for an analyte response above the valid instrument calibration range. A dilution is required to obtain an accurate quantification of the analyte.

S Indicates an analyte response that has saturated the detector. The calculated concentration is not valid; a dilution is required to obtain valid quantification of the analyte

NA The flagged analyte was not analyzed for

NS The flagged analyte was not spiked into the sample

M Estimated value for an analyte detected and confirmed by an analyst but with low spectral match parameters. This flag is used only for GC-MS analyses

N The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification"

Y The analyte is not detected at or above the reported concentration. The reporting limit is raised due to chromatographic interference. The Y flag is equivalent to the U flag with a raised reporting limit.

C The analyte was positively identified on only one of two chromatographic columns. Chromatographic interference prevented a positive identification on the second column

P The analyte was detected on both chromatographic columns but the quantified values differ by ≥40% RPD with no obvious chromatographic interference

Geotechnical Data

A The total of all fines fractions. This flag is used to report total fines when only sieve analysis is requested and balances total grain size with sample weight.

F Samples were frozen prior to particle size determination

SM Sample matrix was not appropriate for the requested analysis. This normally refers to samples contaminated with an organic product that interferes with the sieving process and/or moisture content, porosity and saturation calculations

SS Sample did not contain the proportion of "fines" required to perform the pipette portion of the grain size analysis

W Weight of sample in some pipette aliquots was below the level required for accurate weighting

RE: Client Project: Chinook
ARI Job No. JZ32

Dear Kristin:

Please find enclosed the original chain of custody documentation and the final data package for samples from the project referenced above.

Problems associated with these analyses are discussed in the Case Narrative.

An electronic copy of this package will remain on file with ARI. Should you have any questions or problems, please feel free to contact me at your convenience.

Sincerely,

ANALYTICAL RESOURCES, INC.

Susan Dunnihoo
Client Services Manager

Limits of Liability: *ARI will perform all requested services in accordance with appropriate methodology following ARI Standard Operating Procedures and the ARI Quality Assurance Program. This program meets standards for the industry. The total liability of ARI, its officers, agents, employees, or successors, arising out of or in connection with the requested services, shall not exceed the Invoiced amount for said services. The acceptance by the client of a proposal for services by ARI release ARI from any liability in excess thereof, not withstanding any provision to the contrary in any contract, purchase order or co-signed agreement between ARI and the Client.*

Sample Retention Policy: All samples submitted to ARI will be appropriately discarded no sooner than 90 days after receipt or 60 days after submission of hardcopy data, whichever is longer, unless alternate retention schedules have been established by work-order or contract.

Tracking NO.: 8577 4089 1673 Date: 10/3/02

ARI Job No.: _____ Lims NO.: 06-1845e-1846

Preliminary Examination Phase:

1. Were intact, properly signed and dated custody seals attached To the outside of the cooler?	YES	(NO)
2. Were custody papers included with the cooler	(YES)	NO
3. Were custody papers properly filled out (ink, signed etc.)?	(YES)	NO
4. Complete custody forms and attach all shipping documents	(OK)	NA

Cooler Accepted BY: [signature] Date: 10/3/02 Time: 0945

Log-IN Phase:

5. Was a temperature blank include in the cooler?	YES	NO
6. Record Cooler Temperature	0.2 °C	
7. What kind of packing material was used?	_____	
8. Was sufficient ice used (if appropriate)?	(YES)	NO
9. Were all bottles sealed in separate plastic bags?	YES	(NO)
10. Did all bottles arrive in good condition (unbroken)?	YES	NO
11. Were all bottle labels complete and legible?	YES	NO
12. Did all bottle labels and tags agree with custody papers?	YES	NO
13. Were all bottles used correct for the requested analyses?	YES	NO
14. Do any of the analyses (bottles) require preservative? (If so, Preservation checklist must be attached)	YES	NO
15. Were all VOA vials free of air bubbles?	YES	NO
16. Was sufficient amount of sample sent in each bottle?	YES	NO
17. Notify Project Manager of any discrepancies or concerns	OK	NA

Case Narrative

Client: Anchor Environmental
Project: Chinook
Matrix: Water
ARI Job Nos. JZ32

Sample receipt

Six water samples were received on October 3, 2006 under ARI Job JZ32. Samples were well-iced and the cooler temperature measured by IR thermometer following ARI SOP was 0.2° C. Samples were received in good condition with no discrepancies in paperwork.

Samples PZ5-100206 and PZ45-100206 failed preservation check at receipt. Sample pH was readjusted in the laboratory. Failure was attributed to the characteristics of the samples, based on previous experience with the project.

ARI was informed verbally that all water samples received from the Chinook site have been field filtered.

Dissolved Metals

As Silica will mineralize under the digestion procedure used for environmental samples, analysis of the Silica was performed on sample that was acidified only (Prep Method 6010B). The samples were also digested under prep method 3010A and analyzed for the remaining target elements.

The method blanks were clean at the reporting limit.

LCS recoveries were within ARI and method limits.

Duplicate RPDs were within ARI and method limits with the exception of Manganese in the digested sample. The digests were reanalyzed with similar results. The outlier was considered an indication of sample characteristic and no further action was taken.

Matrix spike recoveries were within limits with the exception of Iron and Sodium in the digested sample. Outliers are attributed to the high concentrations in the parent sample and no further action is required.

There were no other incidents of note.

General Chemistry Parameters

Alkalinity

Samples were prepared and analyzed within the required holding time of 14 days.

The replicate analysis has RPDs within limits.

There were no incidents of note.

Total Phosphorous

Samples were prepared and analyzed within the required holding time of 28 days.

The method blank was clean.

Standard reference recovery was within limits.

The replicate analysis has RPDs within limits.

The matrix spike had recoveries within limits.

There were no incidents of note.

Ion Chromatography – Fluoride, Chloride, Sulfate

Samples were prepared and analyzed within the required holding time of 28 days.

The method blanks were clean.

Standard reference recoveries were within limits.

The replicate had RPDs within limits and the matrix spike had recoveries within limits.

A CCV failed for sulfate and a spike failed for Chloride. All affected samples were reanalyzed and only the valid results have been reported.

There were no other incidents of note.

Geotechnical Parameters

A lab specific Case Narrative follows.

Analytical Resources, Incorporated
Analytical Chemists and Consultants

Client: Anchor Environmental	Project No.: JZ32
Client Project: Chinook 060354-01	

Case Narrative

1. Five samples were submitted for fluid density on October 3, 2006.
2. The samples were measured in calibrated 500 mL flasks at a given temperature and calculated for density.
3. The data is provided in a summary table.
4. There were no other noted anomalies in the samples or methods on this project.

Approved by: Taylor McKenzie Date: 10-5-06

Data Reporting Qualifiers

Effective 12/28/04

Inorganic Data

U Indicates that the target analyte was not detected at the reported concentration

* Duplicate RPD is not within established control limits

B Reported value is less than the CRDL but ≥ the Reporting Limit

N Matrix Spike recovery not within established control limits

NA Not Applicable, analyte not spiked

H The natural concentration of the spiked element is so much greater than the concentration spiked that an accurate determination of spike recovery is not possible

L Analyte concentration is ≤5 times the Reporting Limit and the replicate control limit defaults to ±1 RL instead of the normal 20% RPD

Organic Data

U Indicates that the target analyte was not detected at the reported concentration

* Flagged value is not within established control limits

B Analyte detected in an associated Method Blank at a concentration greater than one-half of ARI's Reporting Limit or 5% of the regulatory limit or 5% of the analyte concentration in the sample.

J Estimated concentration when the value is less than ARI's established reporting limits

D The spiked compound was not detected due to sample extract dilution

NR Spiked compound recovery is not reported due to chromatographic interference

E Estimated concentration calculated for an analyte response above the valid instrument calibration range. A dilution is required to obtain an accurate quantification of the analyte.

S Indicates an analyte response that has saturated the detector. The calculated concentration is not valid; a dilution is required to obtain valid quantification of the analyte

NA The flagged analyte was not analyzed for

NS The flagged analyte was not spiked into the sample

M Estimated value for an analyte detected and confirmed by an analyst but with low spectral match parameters. This flag is used only for GC-MS analyses

N The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification"

Y The analyte is not detected at or above the reported concentration. The reporting limit is raised due to chromatographic interference. The Y flag is equivalent to the U flag with a raised reporting limit.

C The analyte was positively identified on only one of two chromatographic columns. Chromatographic interference prevented a positive identification on the second column

P The analyte was detected on both chromatographic columns but the quantified values differ by ≥40% RPD with no obvious chromatographic interference

Geotechnical Data

A The total of all fines fractions. This flag is used to report total fines when only sieve analysis is requested and balances total grain size with sample weight.

F Samples were frozen prior to particle size determination

SM Sample matrix was not appropriate for the requested analysis. This normally refers to samples contaminated with an organic product that interferes with the sieving process and/or moisture content, porosity and saturation calculations

SS Sample did not contain the proportion of "fines" required to perform the pipette portion of the grain size analysis

W Weight of sample in some pipette aliquots was below the level required for accurate weighting
