QUALIFIER DEFINITIONS

Client Sample and Quality Control (QC) Sample Qualifier Definitions:

Apex Laboratories

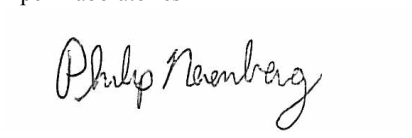
A-01	Closing Calibration Verification Standard (CCV) failed method criteria by -5% due to sample matrix affect. Results are estimated.
A-01a	MDL raised to MRL due to possible carryover.
AMEND	Result for this sample or analyte has been amended from the original report. See Case Narrative for details.
B-02	Analyte detected in an associated blank at a level between one-half the MRL and the MRL. (See Notes and Conventions below.)
C-07	Extract has undergone Sulfuric Acid Cleanup by EPA 3665A, Sulfur Cleanup by EPA 3660B, and Florisil Cleanup by EPA 3620B in order to minimize matrix interference.
Cr6-01	Matrix Spike fails due to probable reducing conditions present in the sample. Sample is ND. Data quality is not affected because any hexavalent chromium present in the sample is likely to have been reduced to chromium three.
F-03	The result for this hydrocarbon range is elevated due to the presence of individual analyte peaks in the quantitation range that are not representative of the fuel pattern reported.
F-09	Results in the Gasoline Range are primarily due to overlap from a heavier fuel hydrocarbon product.
F-15	Results for diesel are estimated due to overlap from the reported oil result.
F-16	Results for oil are estimated due to overlap from the reported diesel result.
F-17	No fuel pattern detected. The Diesel result represents carbon range C12 to C24, and the Oil result represents >C24 to C40.
J	Estimated Result. Result detected below the lowest point of the calibration curve, but above the specified MDL.
M-02	Due to matrix interference, this analyte cannot be accurately quantified. The reported result is estimated.
M-04	Due to matrix interference, this analyte cannot be accurately quantified. The reported result may contain a high bias.
M-05	Estimated results. Peak separation for structural isomers is insufficient for accurate quantification.
P-10	Result estimated due to the presence of multiple PCB Aroclors and/or matrix interference.
Q-01	Spike recovery and/or RPD is outside acceptance limits.
Q-03	Spike recovery and/or RPD is outside control limits due to the high concentration of analyte present in the sample.
Q-04	Spike recovery and/or RPD is outside control limits due to a non-homogeneous sample matrix.
Q-05	Analyses are not controlled on RPD values from sample and duplicate concentrations that are below 5 times the reporting level.
Q-11	Spike recovery cannot be accurately quantified due to sample dilution required for high analyte concentration and/or matrix interference.
Q-16	Reanalysis of an original Batch QC sample.
Q-18	Matrix Spike results for this extraction batch are not reported due to the high dilution necessary for analysis of the source sample.
Q-19	Blank Spike Duplicate (BSD) sample analyzed in place of Matrix Spike/Duplicate samples due to limited sample amount available for analysis.

Apex Laboratories



Philip Nerenberg, Lab Director

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

AMENDED REPORT

Maul Foster & Alongi, INC.	Project: **Seaport Upland**	
2001 NW 19th Ave, STE 200	Project Number: **1044.02.13**	**Report ID:**
Portland, OR 97209	Project Manager: **Emily Hess**	**A9L0097 - 02 13 20 1501**

Q-24	The RPD for this spike and spike duplicate is above established control limits. Recoveries for both the spike and spike duplicate are within control limits.
Q-29	Recovery for Lab Control Spike (LCS) is above the upper control limit. Data may be biased high.
Q-30	Recovery for Lab Control Spike (LCS) is below the lower control limit. Data may be biased low.
Q-31	Estimated Results. Recovery of Continuing Calibration Verification sample below lower control limit for this analyte. Results are likely biased low.
Q-39	Results for sample duplicate are significantly higher than the sample results. See duplicate results in QC section of the report.
Q-41	Estimated Results. Recovery of Continuing Calibration Verification sample above upper control limit for this analyte. Results are likely biased high.
Q-42	Matrix Spike and/or Duplicate analysis was performed on this sample. % Recovery or RPD for this analyte is outside laboratory control limits. (Refer to the QC Section of Analytical Report.)
Q-52	Due to erratic or low blank spike recoveries, results for this analyte are considered Estimated Values.
Q-54	Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260C/8270D by +1%. The results are reported as Estimated Values.
Q-54a	Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260C/8270D by +10%. The results are reported as Estimated Values.
Q-54b	Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260C/8270D by +2%. The results are reported as Estimated Values.
Q-54c	Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260C/8270D by +2.3%. The results are reported as Estimated Values.
Q-54d	Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260C/8270D by +27%. The results are reported as Estimated Values.
Q-54e	Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260C/8270D by +3%. The results are reported as Estimated Values.
Q-54f	Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260C/8270D by +5%. The results are reported as Estimated Values.
Q-54g	Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260C/8270D by +5.6%. The results are reported as Estimated Values.
Q-54h	Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260C/8270D by +6%. The results are reported as Estimated Values.
Q-54i	Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260C/8270D by +7%. The results are reported as Estimated Values.
Q-54j	Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260C/8270D by +8%. The results are reported as Estimated Values.
Q-54k	Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260C/8270D by +8.1%. The results are reported as Estimated Values.
Q-54l	Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260C/8270D by +9.6%. The results are reported as Estimated Values.

AMENDED REPORT

Maul Foster & Alongi, INC.	Project: **Seaport Upland**	
2001 NW 19th Ave, STE 200	Project Number: **1044.02.13**	**Report ID:**
Portland, OR 97209	Project Manager: **Emily Hess**	**A9L0097 - 02 13 20 1501**

Q-54m	Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260C/8270D by -0.7%. The results are reported as Estimated Values.
Q-54n	Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260C/8270D by -1%. The results are reported as Estimated Values.
Q-54o	Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260C/8270D by -1.6%. The results are reported as Estimated Values.
Q-54p	Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260C/8270D by -11%. The results are reported as Estimated Values.
Q-54q	Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260C/8270D by -2%. The results are reported as Estimated Values.
Q-54r	Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260C/8270D by -2.6%. The results are reported as Estimated Values.
Q-54s	Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260C/8270D by -3%. The results are reported as Estimated Values.
Q-54t	Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260C/8270D by -4%. The results are reported as Estimated Values.
Q-54u	Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260C/8270D by -5.5%. The results are reported as Estimated Values.
Q-54v	Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260C/8270D by -6.2%. The results are reported as Estimated Values.
Q-54w	Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260C/8270D by -6.8%. The results are reported as Estimated Values.
Q-54x	Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260C/8270D by -7.3%. The results are reported as Estimated Values.
Q-54y	Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260C/8270D by -8.3%. The results are reported as Estimated Values.
Q-55	Daily CCV/LCS recovery for this analyte was below the +/-20% criteria listed in EPA 8260C, however there is adequate sensitivity to ensure detection at the reporting level.
Q-56	Daily CCV/LCS recovery for this analyte was above the +/-20% criteria listed in EPA 8260C
R-02	The Reporting Limit for this analyte has been raised to account for interference from coeluting organic compounds present in the sample.
R-04	Reporting levels elevated due to preparation and/or analytical dilution necessary for analysis.
S-01	Surrogate recovery for this sample is not available due to sample dilution required from high analyte concentration and/or matrix interference.
S-05	Surrogate recovery is estimated due to sample dilution required for high analyte concentration and/or matrix interference.
S-06	Surrogate recovery is outside of established control limits.
TEMP	Sample(s) received outside of recommended temperature. See Case Narrative.
V-15	Sample aliquot was subsampled from the sample container. The subsampled aliquot was preserved in the laboratory within 48 hours of sampling.

AMENDED REPORT

Maul Foster & Alongi, INC.	Project: **Seaport Upland**	
2001 NW 19th Ave, STE 200	Project Number: **1044.02.13**	**Report ID:**
Portland, OR 97209	Project Manager: **Emily Hess**	**A9L0097 - 02 13 20 1501**

REPORTING NOTES AND CONVENTIONS:

Abbreviations:

DET Analyte DETECTED at or above the detection or reporting limit.

ND Analyte NOT DETECTED at or above the detection or reporting limit.

NR Result Not Reported

RPD Relative Percent Difference. RPDs for Matrix Spikes and Matrix Spike Duplicates are based on concentration, not recovery.

Detection Limits: Limit of Detection (LOD)

Limits of Detection (LODs) are normally set at a level of one half the validated Limit of Quantitation (LOQ).
If no value is listed ('-----'), then the data has not been evaluated below the Reporting Limit.

Reporting Limits: Limit of Quantitation (LOQ)

Validated Limits of Quantitation (LOQs) are reported as the Reporting Limits for all analyses where the LOQ, MRL, PQL or CRL are requested. The LOQ represents a level at or above the low point of the calibration curve, that has been validated according to Apex Laboratories' comprehensive LOQ policies and procedures.

Reporting Conventions:

Basis: Results for soil samples are generally reported on a 100% dry weight basis.
The Result Basis is listed following the units as " dry", " wet", or " " (blank) designation.

" dry" Sample results and Reporting Limits are reported on a dry weight basis. (i.e. "ug/kg dry")
See Percent Solids section for details of dry weight analysis.

" wet" Sample results and Reporting Limits for this analysis are normally dry weight corrected, but have not been modified in this case.

" " Results without 'wet' or 'dry' designation are not normally dry weight corrected. These results are considered 'As Received'.

QC Source:

In cases where there is insufficient sample provided for Sample Duplicates and/or Matrix Spikes, a Lab Control Sample Duplicate (LCS Dup) may be analyzed to demonstrate accuracy and precision of the extraction batch.

Non-Client Batch QC Samples (Duplicates and Matrix Spike/Duplicates) may not be included in this report. Please request a Full QC report if this data is required.

Miscellaneous Notes:

" --- " QC results are not applicable. For example, % Recoveries for Blanks and Duplicates, % RPD for Blanks, Blank Spikes and Matrix Spikes, etc.

" *** " Used to indicate a possible discrepancy with the Sample and Sample Duplicate results when the %RPD is not available. In this case, either the Sample or the Sample Duplicate has a reportable result for this analyte, while the other is Non Detect (ND).

Blanks:

Standard practice is to evaluate the results from Blank QC Samples down to a level equal to ½ the Reporting Limit (RL).
-For Blank hits falling between ½ the RL and the RL (J flagged hits), the associated sample and QC data will receive a 'B-02' qualifier.
-For Blank hits above the RL, the associated sample and QC data will receive a 'B' qualifier, per Apex Laboratories' Blank Policy.
For further details, please request a copy of this document.

Apex Laboratories

Philip Nerenberg, Lab Director

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Apex Laboratories, LLC

6700 S.W. Sandburg Street
Tigard, OR 97223
503-718-2323
EPA ID: OR01039

AMENDED REPORT

Maul Foster & Alongi, INC.	Project: **Seaport Upland**	
2001 NW 19th Ave, STE 200	Project Number: **1044.02.13**	**Report ID:**
Portland, OR 97209	Project Manager: **Emily Hess**	**A9L0097 - 02 13 20 1501**

REPORTING NOTES AND CONVENTIONS (Cont.):

Blanks (Cont.):

Sample results flagged with a 'B' or 'B-02' qualifier are potentially biased high if the sample results are less than ten times the level found in the blank for inorganic analyses, or less than five times the level found in the blank for organic analyses.

'B' and 'B-02' qualifications are only applied to sample results detected above the Reporting Level.

Preparation Notes:

Mixed Matrix Samples:

Water Samples:

Water samples containing significant amounts of sediment are decanted or separated prior to extraction, and only the water portion analyzed, unless otherwise directed by the client.

Soil and Sediment Samples:

Soil and Sediment samples containing significant amounts of water are decanted prior to extraction, and only the solid portion analyzed, unless otherwise directed by the client.

Sampling and Preservation Notes:

Certain regulatory programs, such as National Pollutant Discharge Elimination System (NPDES), require that activities such as sample filtration (for dissolved metals, orthophosphate, hexavalent chromium, etc.) and testing of short hold analytes (pH, Dissolved Oxygen, etc.) be performed in the field (on-site) within a short time window. In addition, sample matrix spikes are required for some analyses, and sufficient volume must be provided, and billable site specific QC requested, if this is required. All regulatory permits should be reviewed to ensure that these requirements are being met.

Data users should be aware of which regulations pertain to the samples they submit for testing. If related sample collection activities are not approved for a particular regulatory program, results should be considered estimates. Apex Laboratories will qualify these analytes according to the most stringent requirements, however results for samples that are for non-regulatory purposes may be acceptable.

Samples that have been filtered and preserved at Apex Laboratories per client request are listed in the preparation section of the report with the date and time of filtration listed.

Apex Laboratories maintains detailed records on sample receipt, including client label verification, cooler temperature, sample preservation, hold time compliance and field filtration. Data is qualified as necessary, and the lack of qualification indicates compliance with required parameters.

LABORATORY ACCREDITATION INFORMATION

TNI Certification ID: OR100062 (Primary Accreditation) - EPA ID: OR01039

All methods and analytes reported from work performed at Apex Laboratories are included on Apex Laboratories' ORELAP Scope of Certification, with the exception of any analyte(s) listed below:

Apex Laboratories

Matrix	Analysis	TNI_ID	Analyte	TNI_ID	Accreditation

All reported analytes are included in Apex Laboratories' current ORELAP scope.

Secondary Accreditations

Apex Laboratories also maintains reciprocal accreditation with non-TNI states (Washington DOE), as well as other state specific accreditations not listed here.

Subcontract Laboratory Accreditations

Subcontracted data falls outside of Apex Laboratories' Scope of Accreditation.
Please see the Subcontract Laboratory report for full details, or contact your Project Manager for more information.

Field Testing Parameters

Results for Field Tested data are provded by the client or sampler, and fall outside of Apex Laboratories' Scope of Accreditation.

RE: A9L0191 - Seaport Tidelands - 1044.02.13

Thank you for using Apex Laboratories. We greatly appreciate your business and strive to provide the highest quality services to the environmental industry.

Enclosed are the results of analyses for work order A9L0191, which was received by the laboratory on 12/6/2019 at 12:10:00PM.

If you have any questions concerning this report or the services we offer, please feel free to contact me by email at: pnerenberg@apex-labs.com, or by phone at 503-718-2323.

Please note: All samples will be disposed of within 30 days of sample receipt, unless prior arrangements have been made.

Cooler Receipt Information

(See Cooler Receipt Form for details)

Cooler #01	2.9 degC	Cooler #02	0.3 degC
Cooler #03	0.6 degC	Cooler #04	1.8 degC

QUALIFIER DEFINITIONS

Client Sample and Quality Control (QC) Sample Qualifier Definitions:

Apex Laboratories

B	Analyte detected in an associated blank at a level above the MRL. (See Notes and Conventions below.)
B-02	Analyte detected in an associated blank at a level between one-half the MRL and the MRL. (See Notes and Conventions below.)
C-07	Extract has undergone Sulfuric Acid Cleanup by EPA 3665A, Sulfur Cleanup by EPA 3660B, and Florisil Cleanup by EPA 3620B in order to minimize matrix interference.
Cr6-01	Matrix Spike fails due to probable reducing conditions present in the sample. Sample is ND. Data quality is not affected because any hexavalent chromium present in the sample is likely to have been reduced to chromium three.
F-03	The result for this hydrocarbon range is elevated due to the presence of individual analyte peaks in the quantitation range that are not representative of the fuel pattern reported.
F-15	Results for diesel are estimated due to overlap from the reported oil result.
F-16	Results for oil are estimated due to overlap from the reported diesel result.
F-17	No fuel pattern detected. The Diesel result represents carbon range C12 to C24, and the Oil result represents >C24 to C40.
J	Estimated Result. Result detected below the lowest point of the calibration curve, but above the specified MDL.
M-05	Estimated results. Peak separation for structural isomers is insufficient for accurate quantification.
P-10	Result estimated due to the presence of multiple PCB Aroclors and/or matrix interference.
Q-03	Spike recovery and/or RPD is outside control limits due to the high concentration of analyte present in the sample.
Q-04	Spike recovery and/or RPD is outside control limits due to a non-homogeneous sample matrix.
Q-05	Analyses are not controlled on RPD values from sample and duplicate concentrations that are below 5 times the reporting level.
Q-16	Reanalysis of an original Batch QC sample.
Q-18	Matrix Spike results for this extraction batch are not reported due to the high dilution necessary for analysis of the source sample.
Q-19	Blank Spike Duplicate (BSD) sample analyzed in place of Matrix Spike/Duplicate samples due to limited sample amount available for analysis.
Q-29	Recovery for Lab Control Spike (LCS) is above the upper control limit. Data may be biased high.
Q-30	Recovery for Lab Control Spike (LCS) is below the lower control limit. Data may be biased low.
Q-31	Estimated Results. Recovery of Continuing Calibration Verification sample below lower control limit for this analyte. Results are likely biased low.
Q-39	Results for sample duplicate are significantly higher than the sample results. See duplicate results in QC section of the report.
Q-41	Estimated Results. Recovery of Continuing Calibration Verification sample above upper control limit for this analyte. Results are likely biased high.
Q-42	Matrix Spike and/or Duplicate analysis was performed on this sample. % Recovery or RPD for this analyte is outside laboratory control limits. (Refer to the QC Section of Analytical Report.)

AMENDED REPORT

Maul Foster & Alongi, INC.	Project: **Seaport Tidelands**	
2001 NW 19th Ave, STE 200	Project Number: **1044.02.13**	**Report ID:**
Portland, OR 97209	Project Manager: **Emily Hess**	**A9L0191 - 01 30 20 1613**

Q-52	Due to erratic or low blank spike recoveries, results for this analyte are considered Estimated Values.
Q-54	Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260C/8270D by +1%. The results are reported as Estimated Values.
Q-54a	Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260C/8270D by +2%. The results are reported as Estimated Values.
Q-54b	Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260C/8270D by +2.3%. The results are reported as Estimated Values.
Q-54c	Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260C/8270D by +3%. The results are reported as Estimated Values.
Q-54d	Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260C/8270D by +5%. The results are reported as Estimated Values.
Q-54e	Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260C/8270D by +8.1%. The results are reported as Estimated Values.
Q-54f	Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260C/8270D by +9.6%. The results are reported as Estimated Values.
Q-54g	Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260C/8270D by -0.7%. The results are reported as Estimated Values.
Q-54h	Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260C/8270D by -1.6%. The results are reported as Estimated Values.
Q-54i	Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260C/8270D by -11%. The results are reported as Estimated Values.
Q-54j	Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260C/8270D by -2%. The results are reported as Estimated Values.
Q-54k	Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260C/8270D by -2.6%. The results are reported as Estimated Values.
Q-54l	Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260C/8270D by -8%. The results are reported as Estimated Values.
Q-55	Daily CCV/LCS recovery for this analyte was below the +/-20% criteria listed in EPA 8260C, however there is adequate sensitivity to ensure detection at the reporting level.
Q-56	Daily CCV/LCS recovery for this analyte was above the +/-20% criteria listed in EPA 8260C
R-02	The Reporting Limit for this analyte has been raised to account for interference from coeluting organic compounds present in the sample.
R-04	Reporting levels elevated due to preparation and/or analytical dilution necessary for analysis.
S-01	Surrogate recovery for this sample is not available due to sample dilution required from high analyte concentration and/or matrix interference.
S-04	Surrogate recovery is outside of established control limits due to a sample matrix effect.
S-05	Surrogate recovery is estimated due to sample dilution required for high analyte concentration and/or matrix interference.
TEMP	Sample(s) received outside of recommended temperature. See Case Narrative.

AMENDED REPORT

Maul Foster & Alongi, INC.	Project: **Seaport Tidelands**	
2001 NW 19th Ave, STE 200	Project Number: **1044.02.13**	**Report ID:**
Portland, OR 97209	Project Manager: **Emily Hess**	**A9L0191 - 01 30 20 1613**

REPORTING NOTES AND CONVENTIONS:

Abbreviations:

DET Analyte DETECTED at or above the detection or reporting limit.

ND Analyte NOT DETECTED at or above the detection or reporting limit.

NR Result Not Reported

RPD Relative Percent Difference. RPDs for Matrix Spikes and Matrix Spike Duplicates are based on concentration, not recovery.

Detection Limits: Limit of Detection (LOD)

Limits of Detection (LODs) are normally set at a level of one half the validated Limit of Quantitation (LOQ).
If no value is listed ('-----'), then the data has not been evaluated below the Reporting Limit.

Reporting Limits: Limit of Quantitation (LOQ)

Validated Limits of Quantitation (LOQs) are reported as the Reporting Limits for all analyses where the LOQ, MRL, PQL or CRL are requested. The LOQ represents a level at or above the low point of the calibration curve, that has been validated according to Apex Laboratories' comprehensive LOQ policies and procedures.

Reporting Conventions:

Basis: Results for soil samples are generally reported on a 100% dry weight basis.
The Result Basis is listed following the units as " dry", " wet", or " " (blank) designation.

" dry" Sample results and Reporting Limits are reported on a dry weight basis. (i.e. "ug/kg dry")
See Percent Solids section for details of dry weight analysis.

" wet" Sample results and Reporting Limits for this analysis are normally dry weight corrected, but have not been modified in this case.

" " Results without 'wet' or 'dry' designation are not normally dry weight corrected. These results are considered 'As Received'.

QC Source:

In cases where there is insufficient sample provided for Sample Duplicates and/or Matrix Spikes, a Lab Control Sample Duplicate (LCS Dup) may be analyzed to demonstrate accuracy and precision of the extraction batch.

Non-Client Batch QC Samples (Duplicates and Matrix Spike/Duplicates) may not be included in this report. Please request a Full QC report if this data is required.

Miscellaneous Notes:

" --- " QC results are not applicable. For example, % Recoveries for Blanks and Duplicates, % RPD for Blanks, Blank Spikes and Matrix Spikes, etc.

" *** " Used to indicate a possible discrepancy with the Sample and Sample Duplicate results when the %RPD is not available. In this case, either the Sample or the Sample Duplicate has a reportable result for this analyte, while the other is Non Detect (ND).

Blanks:

Standard practice is to evaluate the results from Blank QC Samples down to a level equal to ½ the Reporting Limit (RL).
-For Blank hits falling between ½ the RL and the RL (J flagged hits), the associated sample and QC data will receive a 'B-02' qualifier.
-For Blank hits above the RL, the associated sample and QC data will receive a 'B' qualifier, per Apex Laboratories' Blank Policy.
For further details, please request a copy of this document.

Apex Laboratories

Philip Nerenberg, Lab Director

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Apex Laboratories, LLC

6700 S.W. Sandburg Street
Tigard, OR 97223
503-718-2323
EPA ID: OR01039

AMENDED REPORT

Maul Foster & Alongi, INC.	Project: **Seaport Tidelands**	
2001 NW 19th Ave, STE 200	Project Number: **1044.02.13**	**Report ID:**
Portland, OR 97209	Project Manager: **Emily Hess**	**A9L0191 - 01 30 20 1613**

REPORTING NOTES AND CONVENTIONS (Cont.):

Blanks (Cont.):

Sample results flagged with a 'B' or 'B-02' qualifier are potentially biased high if the sample results are less than ten times the level found in the blank for inorganic analyses, or less than five times the level found in the blank for organic analyses.

'B' and 'B-02' qualifications are only applied to sample results detected above the Reporting Level.

Preparation Notes:

Mixed Matrix Samples:

Water Samples:

Water samples containing significant amounts of sediment are decanted or separated prior to extraction, and only the water portion analyzed, unless otherwise directed by the client.

Soil and Sediment Samples:

Soil and Sediment samples containing significant amounts of water are decanted prior to extraction, and only the solid portion analyzed, unless otherwise directed by the client.

Sampling and Preservation Notes:

Certain regulatory programs, such as National Pollutant Discharge Elimination System (NPDES), require that activities such as sample filtration (for dissolved metals, orthophosphate, hexavalent chromium, etc.) and testing of short hold analytes (pH, Dissolved Oxygen, etc.) be performed in the field (on-site) within a short time window. In addition, sample matrix spikes are required for some analyses, and sufficient volume must be provided, and billable site specific QC requested, if this is required. All regulatory permits should be reviewed to ensure that these requirements are being met.

Data users should be aware of which regulations pertain to the samples they submit for testing. If related sample collection activities are not approved for a particular regulatory program, results should be considered estimates. Apex Laboratories will qualify these analytes according to the most stringent requirements, however results for samples that are for non-regulatory purposes may be acceptable.

Samples that have been filtered and preserved at Apex Laboratories per client request are listed in the preparation section of the report with the date and time of filtration listed.

Apex Laboratories maintains detailed records on sample receipt, including client label verification, cooler temperature, sample preservation, hold time compliance and field filtration. Data is qualified as necessary, and the lack of qualification indicates compliance with required parameters.

LABORATORY ACCREDITATION INFORMATION

TNI Certification ID: OR100062 (Primary Accreditation) - EPA ID: OR01039

All methods and analytes reported from work performed at Apex Laboratories are included on Apex Laboratories' ORELAP Scope of Certification, with the exception of any analyte(s) listed below:

Apex Laboratories

Matrix	Analysis	TNI_ID	Analyte	TNI_ID	Accreditation

All reported analytes are included in Apex Laboratories' current ORELAP scope.

Secondary Accreditations

Apex Laboratories also maintains reciprocal accreditation with non-TNI states (Washington DOE), as well as other state specific accreditations not listed here.

Subcontract Laboratory Accreditations

Subcontracted data falls outside of Apex Laboratories' Scope of Accreditation.
Please see the Subcontract Laboratory report for full details, or contact your Project Manager for more information.

Field Testing Parameters

Results for Field Tested data are provded by the client or sampler, and fall outside of Apex Laboratories' Scope of Accreditation.

RE: A9L0524 - Seaport Upland - 1044.02.13

Thank you for using Apex Laboratories. We greatly appreciate your business and strive to provide the highest quality services to the environmental industry.

Enclosed are the results of analyses for work order A9L0524, which was received by the laboratory on 12/12/2019 at 12:10:00PM.

If you have any questions concerning this report or the services we offer, please feel free to contact me by email at: pnerenberg@apex-labs.com, or by phone at 503-718-2323.

Please note: All samples will be disposed of within 30 days of sample receipt, unless prior arrangements have been made.

QUALIFIER DEFINITIONS

Client Sample and Quality Control (QC) Sample Qualifier Definitions:

Apex Laboratories

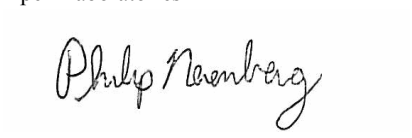
A-03	Reporting Limit raised due to analyte in Blank. Sample can not be reextracted for a lower reporting limit due to sample matrix.
B	Analyte detected in an associated blank at a level above the MRL. (See Notes and Conventions below.)
B-02	Analyte detected in an associated blank at a level between one-half the MRL and the MRL. (See Notes and Conventions below.)
C-07	Extract has undergone Sulfuric Acid Cleanup by EPA 3665A, Sulfur Cleanup by EPA 3660B, and Florisil Cleanup by EPA 3620B in order to minimize matrix interference.
J	Estimated Result. Result detected below the lowest point of the calibration curve, but above the specified MDL.
Q-01	Spike recovery and/or RPD is outside acceptance limits.
Q-03	Spike recovery and/or RPD is outside control limits due to the high concentration of analyte present in the sample.
Q-16	Reanalysis of an original Batch QC sample.
Q-19	Blank Spike Duplicate (BSD) sample analyzed in place of Matrix Spike/Duplicate samples due to limited sample amount available for analysis.
Q-24	The RPD for this spike and spike duplicate is above established control limits. Recoveries for both the spike and spike duplicate are within control limits.
Q-30	Recovery for Lab Control Spike (LCS) is below the lower control limit. Data may be biased low.
Q-31	Estimated Results. Recovery of Continuing Calibration Verification sample below lower control limit for this analyte. Results are likely biased low.
Q-41	Estimated Results. Recovery of Continuing Calibration Verification sample above upper control limit for this analyte. Results are likely biased high.
Q-52	Due to erratic or low blank spike recoveries, results for this analyte are considered Estimated Values.
R-01	The Reporting Limit for this analyte has been raised to account for matrix interference.
R-04	Reporting levels elevated due to preparation and/or analytical dilution necessary for analysis.

Analytical Resources, Inc.

D	The reported value is from a dilution
U	This analyte is not detected above the reporting limit (RL) or if noted, not detected above the limit of detection (LOD).

Apex Laboratories



Philip Nerenberg, Lab Director

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Apex Laboratories, LLC

6700 S.W. Sandburg Street
Tigard, OR 97223
503-718-2323
EPA ID: OR01039

Maul Foster & Alongi, INC.	Project: **Seaport Upland**	
2001 NW 19th Ave, STE 200	Project Number: **1044.02.13**	**Report ID:**
Portland, OR 97209	Project Manager: **Emily Hess**	**A9L0524 - 01 14 20 0956**

REPORTING NOTES AND CONVENTIONS:

Abbreviations:

DET Analyte DETECTED at or above the detection or reporting limit.

ND Analyte NOT DETECTED at or above the detection or reporting limit.

NR Result Not Reported

RPD Relative Percent Difference. RPDs for Matrix Spikes and Matrix Spike Duplicates are based on concentration, not recovery.

Detection Limits: Limit of Detection (LOD)

Limits of Detection (LODs) are normally set at a level of one half the validated Limit of Quantitation (LOQ).
If no value is listed ('-----'), then the data has not been evaluated below the Reporting Limit.

Reporting Limits: Limit of Quantitation (LOQ)

Validated Limits of Quantitation (LOQs) are reported as the Reporting Limits for all analyses where the LOQ, MRL, PQL or CRL are requested. The LOQ represents a level at or above the low point of the calibration curve, that has been validated according to Apex Laboratories' comprehensive LOQ policies and procedures.

Reporting Conventions:

Basis: Results for soil samples are generally reported on a 100% dry weight basis.
The Result Basis is listed following the units as " dry", " wet", or " " (blank) designation.

" dry" Sample results and Reporting Limits are reported on a dry weight basis. (i.e. "ug/kg dry")
See Percent Solids section for details of dry weight analysis.

" wet" Sample results and Reporting Limits for this analysis are normally dry weight corrected, but have not been modified in this case.

" " Results without 'wet' or 'dry' designation are not normally dry weight corrected. These results are considered 'As Received'.

QC Source:

In cases where there is insufficient sample provided for Sample Duplicates and/or Matrix Spikes, a Lab Control Sample Duplicate (LCS Dup) may be analyzed to demonstrate accuracy and precision of the extraction batch.

Non-Client Batch QC Samples (Duplicates and Matrix Spike/Duplicates) may not be included in this report. Please request a Full QC report if this data is required.

Miscellaneous Notes:

" --- " QC results are not applicable. For example, % Recoveries for Blanks and Duplicates, % RPD for Blanks, Blank Spikes and Matrix Spikes, etc.

" *** " Used to indicate a possible discrepancy with the Sample and Sample Duplicate results when the %RPD is not available. In this case, either the Sample or the Sample Duplicate has a reportable result for this analyte, while the other is Non Detect (ND).

Blanks:

Standard practice is to evaluate the results from Blank QC Samples down to a level equal to ½ the Reporting Limit (RL).
-For Blank hits falling between ½ the RL and the RL (J flagged hits), the associated sample and QC data will receive a 'B-02' qualifier.
-For Blank hits above the RL, the associated sample and QC data will receive a 'B' qualifier, per Apex Laboratories' Blank Policy.
For further details, please request a copy of this document.

Apex Laboratories

Philip Nerenberg, Lab Director

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Apex Laboratories, LLC

6700 S.W. Sandburg Street
Tigard, OR 97223
503-718-2323
EPA ID: OR01039

Maul Foster & Alongi, INC.	Project: **Seaport Upland**	
2001 NW 19th Ave, STE 200	Project Number: **1044.02.13**	**Report ID:**
Portland, OR 97209	Project Manager: **Emily Hess**	**A9L0524 - 01 14 20 0956**

REPORTING NOTES AND CONVENTIONS (Cont.):

Blanks (Cont.):

Sample results flagged with a 'B' or 'B-02' qualifier are potentially biased high if the sample results are less than ten times the level found in the blank for inorganic analyses, or less than five times the level found in the blank for organic analyses.

'B' and 'B-02' qualifications are only applied to sample results detected above the Reporting Level.

Preparation Notes:

Mixed Matrix Samples:

Water Samples:

Water samples containing significant amounts of sediment are decanted or separated prior to extraction, and only the water portion analyzed, unless otherwise directed by the client.

Soil and Sediment Samples:

Soil and Sediment samples containing significant amounts of water are decanted prior to extraction, and only the solid portion analyzed, unless otherwise directed by the client.

Sampling and Preservation Notes:

Certain regulatory programs, such as National Pollutant Discharge Elimination System (NPDES), require that activities such as sample filtration (for dissolved metals, orthophosphate, hexavalent chromium, etc.) and testing of short hold analytes (pH, Dissolved Oxygen, etc.) be performed in the field (on-site) within a short time window. In addition, sample matrix spikes are required for some analyses, and sufficient volume must be provided, and billable site specific QC requested, if this is required. All regulatory permits should be reviewed to ensure that these requirements are being met.

Data users should be aware of which regulations pertain to the samples they submit for testing. If related sample collection activities are not approved for a particular regulatory program, results should be considered estimates. Apex Laboratories will qualify these analytes according to the most stringent requirements, however results for samples that are for non-regulatory purposes may be acceptable.

Samples that have been filtered and preserved at Apex Laboratories per client request are listed in the preparation section of the report with the date and time of filtration listed.

Apex Laboratories maintains detailed records on sample receipt, including client label verification, cooler temperature, sample preservation, hold time compliance and field filtration. Data is qualified as necessary, and the lack of qualification indicates compliance with required parameters.

LABORATORY ACCREDITATION INFORMATION

TNI Certification ID: OR100062 (Primary Accreditation) - EPA ID: OR01039

All methods and analytes reported from work performed at Apex Laboratories are included on Apex Laboratories' ORELAP Scope of Certification, with the exception of any analyte(s) listed below:

Apex Laboratories

Matrix	Analysis	TNI_ID	Analyte	TNI_ID	Accreditation

All reported analytes are included in Apex Laboratories' current ORELAP scope.

Secondary Accreditations

Apex Laboratories also maintains reciprocal accreditation with non-TNI states (Washington DOE), as well as other state specific accreditations not listed here.

Subcontract Laboratory Accreditations

Subcontracted data falls outside of Apex Laboratories' Scope of Accreditation.
Please see the Subcontract Laboratory report for full details, or contact your Project Manager for more information.

Field Testing Parameters

Results for Field Tested data are provded by the client or sampler, and fall outside of Apex Laboratories' Scope of Accreditation.

Re: DXN & PCB Subcontract
Work Order: 15921
SDG: A9L0097

Dear Mr. Nerenberg:

Cape Fear Analytical LLC (CFA) appreciates the opportunity to provide the enclosed analytical results for the sample(s) we received on December 06, 2019. This original data report has been prepared and reviewed in accordance with CFA's standard operating procedures.

Our policy is to provide high quality, personalized analytical services to enable you to meet your analytical needs on time every time. We trust that you will find everything in order and to your satisfaction. If you have any questions, please do not hesitate to call me at 910-795-0421.

Sincerely,

Cynde Larkins

High Resolution Dioxins and Furans Analysis

Case Narrative

HDOX Case Narrative
Apex Laboratories (APEX)
SDG A9L0097
Work Order 15921

Method/Analysis Information

Product:	**Dioxins/Furans by EPA Method 1613B in Solids**
Analytical Method:	EPA Method 1613B
Extraction Method:	SW846 3540C
Analytical Batch Number:	42622
Clean Up Batch Number:	42621
Extraction Batch Number:	42620

Sample Analysis

Samples were received at 2.7°C (15921001, 15921002, 15921003). The following samples were analyzed using the analytical protocol as established in Method 1613B:

Sample ID	Client ID
12025574	Method Blank (MB)
12025575	Laboratory Control Sample (LCS)
12025576	Laboratory Control Sample Duplicate (LCSD)
15921001	RAU1-04-SO-0.25
15921002	RAU1-05-SO-0.25
15921003	RAU1-06-SO-1.75

The samples in this SDG were analyzed on a "dry weight" basis.

SOP Reference

Procedure for preparation, analysis and reporting of analytical data are controlled by Cape Fear Analytical LLC (CFA) as Standard Operating Procedure (SOP). The data discussed in this narrative has been analyzed in accordance with CF-OA-E-002 REV# 15.

Raw data reports are processed and reviewed by the analyst using the TargetLynx software package.

Calibration Information

Initial Calibration

All initial calibration requirements have been met for this sample delivery group (SDG).

Continuing Calibration Verification (CCV) Requirements
All associated calibration verification standard(s) (CCV) met the acceptance criteria.

Quality Control (QC) Information

Certification Statement
The test results presented in this document are certified to meet all requirements of the 2009 TNI Standard.

Method Blank (MB) Statement
The MB(s) analyzed with this SDG met the acceptance criteria.

Surrogate Recoveries
All surrogate recoveries were within the established acceptance criteria for this SDG.

Laboratory Control Sample (LCS) Recovery
The LCS spike recoveries met the acceptance limits.

Laboratory Control Sample Duplicate (LCSD) Recovery
The LCSD spike recoveries met the acceptance limits.

LCS/LCSD Relative Percent Difference (RPD) Statement
The RPD(s) between the LCS and LCSD met the acceptance limits.

QC Sample Designation
A matrix spike and matrix spike duplicate analysis was not required for this SDG.

Technical Information

Holding Time Specifications
CFA assigns holding times based on the associated methodology, which assigns the date and time from sample collection. Those holding times expressed in hours are calculated in the AlphaLIMS system. Those holding times expressed as days expire at midnight on the day of expiration. All samples in this SDG met the specified holding time.

Preparation/Analytical Method Verification
All procedures were performed as stated in the SOP.

Sample Dilutions
The samples in this SDG did not require dilutions.

Sample Re-extraction/Re-analysis
The samples were re-extracted using a 1g aliquot due to matrix interference. Batch 42622.

Miscellaneous Information

Nonconformance (NCR) Documentation
A NCR was not required for this SDG.

Manual Integrations
Certain standards and QC samples required manual integrations to correctly position the baseline as set in the calibration standard injections. Where manual integrations were performed, copies of all manual integration peak profiles are included in the raw data section of this fraction. Manual integrations were required for data files in this SDG.

Sample preparation
No difficulties were encountered during sample preparation.

Electronic Packaging Comment

This data package was generated using an electronic data processing program referred to as virtual packaging. In an effort to increase quality and efficiency, the laboratory has developed systems to generate all data packages electronically. The following change from traditional packages should be noted: Analyst/peer reviewer initials and dates are not present on the electronic data files. Presently, all initials and dates are present on the original raw data. These hard copies are temporarily stored in the laboratory. An electronic signature page inserted after the case narrative will include the data validator's signature and title. The signature page also includes the data qualifiers used in the fractional package. Data that are not generated electronically, such as hand written pages, will be scanned and inserted into the electronic package.

Qualifier Definition Report
for

APEX001 Apex Laboratories

Client SDG: A9L0097 CFA Work Order: 15921

The Qualifiers in this report are defined as follows:

* A quality control analyte recovery is outside of specified acceptance criteria

** Analyte is a surrogate compound

J Value is estimated

K Estimated Maximum Possible Concentration

U Analyte was analyzed for, but not detected above the specified detection limit.

DL Indicates that sample is diluted.
RA Indicates that sample is re-analyzed without re-extraction.
RE Indicates that sample is re-extracted.

Review/Validation

Cape Fear Analytical requires all analytical data to be verified by a qualified data reviewer.

The following data validator verified the information presented in this case narrative:

Signature:  **Name: Heather Patterson**

Date: 30 DEC 2019 **Title: Group Leader**

Re: 2018 DXN & PCB IDIQ
Work Order: 15951
SDG: A9L0191

Dear Mr. Nerenberg:

Cape Fear Analytical LLC (CFA) appreciates the opportunity to provide the enclosed analytical results for the sample(s) we received on December 11, 2019. This original data report has been prepared and reviewed in accordance with CFA's standard operating procedures.

Our policy is to provide high quality, personalized analytical services to enable you to meet your analytical needs on time every time. We trust that you will find everything in order and to your satisfaction. If you have any questions, please do not hesitate to call me at 910-795-0421.

Sincerely,

Cynde Larkins

High Resolution Dioxins and Furans Analysis

Case Narrative

HDOX Case Narrative
Apex Laboratories (APEX)
SDG A9L0191
Work Order 15951

Method/Analysis Information

Product:	**Dioxins/Furans by EPA Method 1613B in Solids**
Analytical Method:	EPA Method 1613B
Extraction Method:	SW846 3540C
Analytical Batch Number:	42598
Clean Up Batch Number:	42596
Extraction Batch Number:	42595

Sample Analysis

Samples were received at 1.5°C (15951001, 15951002, 15951003, 15951004, 15951005, 15951006, 15951007). The following samples were analyzed using the analytical protocol as established in EPA Method 1613B:

Sample ID	Client ID
12025551	Method Blank (MB)
12025552	Laboratory Control Sample (LCS)
12025553	Laboratory Control Sample Duplicate (LCSD)
15951001	RAU1-10-SO-2.0
15951002	RAU2-GA1-SO-3.25
15951003	RAU2-GA1-SO-5.75
15951004	RAU2-GA1-SO-8.25
15951005	RAU2-GA2-SO-3.25
15951006	RAU2-GA2-SO-5.75
15951007	RAU2-GA2-SO-8.25

The samples in this SDG were analyzed on a "dry weight" basis.

SOP Reference

Procedure for preparation, analysis and reporting of analytical data are controlled by Cape Fear Analytical LLC (CFA) as Standard Operating Procedure (SOP). The data discussed in this narrative has been analyzed in accordance with CF-OA-E-002 REV# 15.

Raw data reports are processed and reviewed by the analyst using the TargetLynx software package.

Calibration Information

Initial Calibration
All initial calibration requirements have been met for this sample delivery group (SDG).

Continuing Calibration Verification (CCV) Requirements
All associated calibration verification standard(s) (CCV) met the acceptance criteria.

Quality Control (QC) Information

Certification Statement
The test results presented in this document are certified to meet all requirements of the 2009 TNI Standard.

Method Blank (MB) Statement
The MB(s) analyzed with this SDG met the acceptance criteria.

Surrogate Recoveries
All surrogate recoveries were within the established acceptance criteria for this SDG.

Laboratory Control Sample (LCS) Recovery
The LCS spike recoveries met the acceptance limits.

Laboratory Control Sample Duplicate (LCSD) Recovery
The LCSD spike recoveries met the acceptance limits.

LCS/LCSD Relative Percent Difference (RPD) Statement
The RPD(s) between the LCS and LCSD met the acceptance limits.

QC Sample Designation
A matrix spike and matrix spike duplicate analysis was not required for this SDG.

Technical Information

Holding Time Specifications
CFA assigns holding times based on the associated methodology, which assigns the date and time from sample collection. Those holding times expressed in hours are calculated in the AlphaLIMS system. Those holding times expressed as days expire at midnight on the day of expiration. All samples in this SDG met the specified holding time.

Preparation/Analytical Method Verification
All procedures were performed as stated in the SOP.

Sample Dilutions
Sample 15951005 (RAU2-GA2-SO-3.25)- Batch 42598 was diluted due to the presence of over-range target analytes.

Sample Re-extraction/Re-analysis
Re-extractions or re-analyses were not required in this SDG.

Miscellaneous Information

Nonconformance (NCR) Documentation
A NCR was not required for this SDG.

Manual Integrations
Certain standards and QC samples required manual integrations to correctly position the baseline as set in the calibration standard injections. Where manual integrations were performed, copies of all manual integration peak profiles are included in the raw data section of this fraction. Manual integrations were required for data files in this SDG.

Sample preparation
No difficulties were encountered during sample preparation.

Electronic Packaging Comment

This data package was generated using an electronic data processing program referred to as virtual packaging. In an effort to increase quality and efficiency, the laboratory has developed systems to generate all data packages electronically. The following change from traditional packages should be noted: Analyst/peer reviewer initials and dates are not present on the electronic data files. Presently, all initials and dates are present on the original raw data. These hard copies are temporarily stored in the laboratory. An electronic signature page inserted after the case narrative will include the data validator's signature and title. The signature page also includes the data qualifiers used in the fractional package. Data that are not generated electronically, such as hand written pages, will be scanned and inserted into the electronic package.

Sample Data Summary

Cape Fear Analytical, LLC

Qualifier Definition Report
for

APEX001 Apex Laboratories

Client SDG: A9L0191 CFA Work Order: 15951

The Qualifiers in this report are defined as follows:

* A quality control analyte recovery is outside of specified acceptance criteria

** Analyte is a surrogate compound

B The target analyte was detected in the associated blank.

J Value is estimated

K Estimated Maximum Possible Concentration

Q Quantitative Interference; value is estimated

U Analyte was analyzed for, but not detected above the specified detection limit.

DL Indicates that sample is diluted.

RA Indicates that sample is re-analyzed without re-extraction.

RE Indicates that sample is re-extracted.

Review/Validation

Cape Fear Analytical requires all analytical data to be verified by a qualified data reviewer.

The following data validator verified the information presented in this case narrative:

Signature:  **Name: Heather Patterson**

Date: 03 JAN 2020 **Title: Group Leader**

APPENDIX L

DATA VALIDATION MEMORANDA

DATA QUALITY ASSURANCE/QUALITY CONTROL REVIEW

PROJECT NO. 1044.02.13 | DECEMBER 30, 2019 | GRAYS HARBOR HISTORICAL SEAPORT AUTHORITY

Maul Foster & Alongi, Inc. (MFA) conducted an independent review of the quality of analytical results for groundwater and soil samples collected at the upland portion of the Seaport Landing Site. The samples were collected on December 4 and 5, 2019.

Apex Laboratories, LLC (Apex), Analytical Resources, Inc. (ARI), Cape Fear Analytical (CFA), and ALS Environmental performed the analyses. Apex report numbers A9L0097, A9L0191 01 30 20 1613, A9L0524; CFA reports WO15921 and WO16303; ARI reports 19L0091 and 19L0152; and ALS Environmental report 957456 were reviewed. Some samples originally submitted to Apex for report A9L0191 were later identified as sediment and were reported in a separate split report at the request of the MFA project manager. The associated sub-contract CFA lab report WO16303 had been similarly reissued as a split report. The report timestamps are referenced below to distinguish them from the split laboratory report containing sediment data, which are validated in a separate memorandum. The analyses performed, and samples analyzed are listed below.

Analysis	Reference
BTEX Compounds	USEPA 8260C USEPA 5035A/8260C
Dioxin and Furans	USEPA 1613B
Diesel- and Oil-Range-Hydrocarbons	NWTPH-Dx

DATA QUALIFICATIONS

Analytical results were evaluated according to applicable sections of USEPA procedures (USEPA, 2014, 2016, 2017a,b) and appropriate laboratory and method-specific guidelines (ALS, 2018; Apex, 2019; ARI, 2018; CFA, 2018; USEPA, 1986).

Data validation procedures were modified, as appropriate, to accommodate quality-control requirements for methods not specifically addressed by the USEPA procedures (e.g., NWTPH-Dx).

Apex noted that, to minimize matrix interference, USEPA Method 8082A samples and associated batch quality control samples were processed with sulfuric acid cleanup by USEPA Method 3665A, sulfur cleanup by USEPA Method 3660B, and florisil cleanup by USEPA Method 3620B. No action was required.

According to reports A9L0097 and A9L0191 01 30 20 1613, Apex qualified the NWTPH-Dx diesel-range hydrocarbon results for samples RAU1-11-GW-7.0, RAU1-12-GW-7.0, and RAU1-10-SO-2.0 as an elevated result due to overlap from the reported oil-range hydrocarbon result. Apex flagged the oil-range hydrocarbon results as estimated due to overlap from the reported diesel-range hydrocarbon results. The results have been qualified by the reviewer with a "J" as estimated in the table below.

Report	Sample	Component	Unit	Original Result	Qualified Result
A9L0097	RAU1-11-GW-7.0	Diesel	mg/L	0.781	0.781 J
		Oil		1.99	1.99 J
	RAU1-12-GW-7.0	Diesel		0.683	0.683 J
		Oil		1.29	1.29 J
A9L0191 01 30 20 1613	RAU1-10-SO-2.0	Diesel	mg/kg	180	180 J
		Oil		489	489 J

NOTES:
J = Result is estimated.
mg/L = milligram per liter.
mg/kg = milligram per kilogram.

According to reports A9L0097 and A9L0191 01 30 20 1613, the NWTPH-Dx oil-range hydrocarbon results from samples RAU1-06-SO-3.5 and RAU4-04-SO-3.45 were elevated due to the presence of individual analyte peaks in the quantitation range that are not representative of the fuel pattern reported. The associated results were reported as oil-range hydrocarbons; thus, qualification was not required.

According to report A9L0097, the NWTPH-Gx gasoline-range organic result from sample RAU1-12-SO-2.7 was primarily due to overlap from a heavier fuel hydrocarbon product. The validator qualified the detected oil range hydrocarbon result with "J" as estimated in the table below.

Report	Sample	Component	Original Result	Qualified Result
A9L0097	RAU1-12-SO-2.7	Gasoline Range Organics	118	118 J

NOTES:
J = Result is estimated.
mg/L = milligram per liter.
mg/kg = milligram per kilogram.

According to reports A9L0097 and A9L0191 01 30 20 1613, the NWTPH-Dx diesel range hydrocarbon results from samples RAU1-01-GW-7.5, RAU1-10-GW-8.5 and RAU2-07-GW-

7.5 had no fuel pattern detected. The associated results were reported as diesel-range hydrocarbons; thus, qualification was not required.

According to report A9L0097, the USEPA 5035A/8260C n-butylbenzene and naphthalene results from sample RAU1-12-SO-2.7 were flagged by Apex as estimated due to matrix interference. The results have been qualified by the reviewer with "J" as estimated.

Report	Sample	Component	Original Result (ug/kg)	Qualified Result (ug/kg)
A9L0097	RAU1-12-SO-2.7	n-Butylbenzene	113	113 J
		Naphthalene	204	204 J

NOTES:
J = Result is estimated.
ug/kg = micrograms per kilogram.

According to reports A9L0097 and A9L0191 01 30 20 1613, some USEPA Method 8082A Aroclor 1254 and Aroclor 1260 results were flagged by Apex as estimated due to the presence of overlapping polychlorinated biphenyl Aroclors. The results have been qualified by the reviewer with "J" as estimated.

Report	Sample	Component	Original Result (ug/kg)	Qualified Result (ug/kg)
A9L0097	RAU3-05-SO-1.6	Aroclor 1254	32.7	32.7 J
		Aroclor 1260	8.87	8.87 J
A9L0191 01 30 20 1613	RAU6-03-SO-2.5	Aroclor 1254	158	158 J
		Aroclor 1260	46.8	46.8 J

NOTES:
J = Result is estimated.
ug/kg = micrograms per kilogram.

According to reports A9L0097 and A9L0191 01 30 20 1613, the USEPA Method 8270D result for samples RAU5-02-SO-2, RAU7-02-GW-9.5, RAU1-08-SO-7.0, and RAU2-GA2-SO-3.25 were flagged by Apex as estimated due to matrix interference. Some results were flagged by Apex as estimated due to insufficient chromatographic peak separation and have been qualified by the reviewer with "J" as estimated.

Report	Sample	Component	Units	Original Result	Qualified Result
A9L0097	RAU5-02-SO-2	Benzo(k)fluoranthene	ug/kg	45.9	45.9 J
	RAU3-02-SO-2.5			114	114 J
	RAU1-09-SO-1.5			457	457 J
A9L0191 01 30 20 1613	RAU7-02-GW-9.5	Chrysene	ug/L	0.0269	0.0269 J
	RAU1-08-SO-7.0	Benzo(a)anthracene	ug/kg	162	162 J
	RAU2-GA2-SO-3.25	Benzo(k)fluoranthene		1340	1340 J

NOTES:
J = Result is estimated.
ug/kg = milligrams per kilogram.
ug/L = micrograms per liter.

In report A9L0524, the USEPA 8270D 3,3'-dichlorobenzidine results from sample RAU2-08-GW-9 and RAU2-09-GW-9 were flagged by Apex due to erratic or low blank spike recoveries. The validator confirmed that the 3,3'-diclorobenzidiene recovery was within acceptable limits; thus, no qualifications were necessary.

USEPA Method 1613B laboratory-flagged estimated maximum potential concentration (EMPC) results were qualified by the reviewer as estimated and not detected, at the reported concentration, in accordance with USEPA Region 10 guidance for data validation of polychlorinated dibenzodioxins and polychlorinated dibenzo-furans (USEPA, 2014) and USEPA national functional guidelines for high-resolution Superfund methods data review (USEPA, 2016).

USEPA Method 1613B results reported by CFA as EMPCs that were also associated with method blank detections requiring qualification are discussed in the method blank section of this validation report and are not discussed in the EMPC qualification tables below.

USEPA Method 1613B total homolog results flagged as EMPCs by the laboratory were qualified by the reviewer with "UJ" as estimated and non-detect, at the reported concentration when all associated congeners were reported by the laboratory as either EMPCs or as non-detect. However, when one or more associated congener was reported as a detection without an EMPC qualifier, the total homolog result was qualified by the reviewer with "J" as estimated. Total homolog results already flagged with "J" by CFA due to detection below the reporting limit did not require additional qualification. The reviewer qualified the following results:

Report	Sample	Component	Original Result (pg/g)	Qualified Result (pg/g)
WO15921	RAU1-04-SO-0.25	1,2,3,4,7,8-HxCDD	5.45 JK	5.45 UJK

NOTES:
J = Result is estimated.
K = Result is an estimated maximum potential concentration.
pg/g = picograms per gram.
Q = Result is estimated due to quantitative interference.
U = Result is non-detect.

The data are considered acceptable for their intended use, with the appropriate data qualifiers assigned.

HOLDING TIMES, PRESERVATION, AND SAMPLE STORAGE

Holding Times

Extractions and analyses were performed within the recommended holding time criteria.

Preservation and Sample Storage

The samples were preserved and stored appropriately.

In report A9L0097, the USEPA Method 5035A/8260C batch 9120608 matrix spike (MS) (9120608-MS1) was flagged by the laboratory as subsampled from the sample container after the USEPA-recommended 48-hour hold time. The MS was prepared with a sample from an unrelated project; thus, qualification was not required.

According to reports A9L0097 and A9L0191 01 30 20 1613, the USEPA Method 8082A batch 9120759 MS (9120759-MS1) was flagged by the laboratory as received outside of the USEPA-recommended temperature range. The MS was prepared with a sample from an unrelated project; thus, qualification was not required.

In reports A9L0097 and A9L0191 01 30 20 1613, Apex noted on the cooler receipt form that one of the three volatile organic analysis (VOA) vials from sample RAU5-01-GW-7.0 and RAU4-10-GW-8.0 had head space, and that all VOA vials for samples RAU1-06-GW-7.5, RAU1-11-GW-7.0, RAU1-12-GW-7.0, RAU5-01-GW-7.0, RAU1-09-GW-7.0, RAU4-01-GW-6.5, RAU4-02-GW-7, RAU4-07-GW-7.0, RAU4-02-GW-7-DUP, RAU1-02-GW-6, RAU1-07-GW-7.5, RAU2-07-GW-7.5, RAU4-06-GW-4.5 and RAU-GW-IDW (on hold) had sediment. Apex also noted that samples RAU1-02-GW-6, RAU1-02-GW-7.5 and RAU4-11-GW-7.0 had a pH of 8 when they should have been greater than 9 standard units. The validator confirmed with the lab that the samples without headspace were used, and the pH was adjusted upon receipt; thus, no qualifications were necessary.

In report A9L0191 01 30 20 1613, sample RAU4-04-SO-3.45 read RAU4-11-S-3.45 on the bottle. Through the process of elimination and the sample time, the lab was able to fix the naming error. No qualifications were necessary.

In report 19L0152, ARI noted that samples RAU4-10-GW-8.0 and RAU4-11-GW-7.0 failed the preservation confirmation assessment. ARI adjusted the pH when the samples were received; thus, no qualifications were necessary.

BLANKS

Method Blanks

Method blank results are used to demonstrate a lack of contamination from laboratory processes. Laboratory method blank analyses were performed at the required frequencies. For purposes of data qualification, the method blanks were associated with all samples prepared in the analytical batch. Where an analyte was detected in a sample and in the associated method blank above the method reporting limit (MRL), the sample result was qualified if the concentration was less than ten times the USEPA Method 200.8 and 6020A method blank concentration or five times the method blank concentration for all other methods. MRLs were elevated to the concentration detected in the samples, and results were qualified as not detected "U" at the elevated MRL. Where an analyte was detected below the MRL in both the sample and the method blank, the sample result was qualified as not detected "U" at the MRL or practical quantitation level for USEPA 1613B. Where associated results were above the MRL and less than ten times the method blank concentration, results were qualified with "J" as estimated.

In report A9L0097, the USEPA Method 5035A/8260C batch 9120813 laboratory method blank (9120813-BLK1) had a methylene chloride detection between the detection limit and MRL at 94.9 ug/kg. Methylene chloride was not detected in the associated samples; thus, no qualifications were necessary.

In report A9L0097, the USEPA Method 8270D batch 9120673 laboratory method blank (9120673-BLK1) had a naphthalene detection between the detection limit and MRL at 0.0183 ug/L. The associated samples were either non-detect or detected at a concentration greater than five times the concentration of the detected blank with the exception of RAU2-03-GW-7.5, which was detected above the MRL at 0.0420 ug/L. The validator qualified the associated sample result with "J" in the table below.

Report	Sample	Component	Laboratory Method Blank (ug/L)	Original Result (ug/L)	Qualified Result (ug/L)
A9L0097	RAU2-03-GW-7.5	Naphthalene	0.0183 J	0.0420	0.0420 J

NOTES:
J = Result is estimated.
ug/L = micrograms per liter.

In report A9L0097 and A9L0191 01 30 20 1613, the USEPA Method 8270D batch 9120690 laboratory method blank (9120690-BLK1) had a naphthalene detection between the detection

limit and MRL at 0.0237 ug/L. The associated samples were either non-detect or detected at a concentration greater than five times the concentration of the laboratory method blank; thus, no qualifications were necessary.

In reports A9L0097 and A9L0191 01 30 20 1613, the USEPA Method 8270D batch 9120852 laboratory method blank (9120852-BLK1) diethylphthalate and di-n-butylphthalate were detected between the detection limit and MRL at 14.2 ug/kg and 20.3 ug/kg, respectively. Diethylphthalate and di-n-butylphthalate were not detected in the associated samples; thus, no qualifications were necessary.

In report A9L0191 01 30 20 1613, the USEPA 200.8 batch 9120878 laboratory method blank (9120878-BLK1) had total calcium and total magnesium detection of 134 ug/L and 26.7 ug/L, respectively. The associated sample results were detected at concentrations greater than ten times the associated concentrations of the detected blank; thus, no qualifications were necessary.

In report A9L0524, the USEPA Method 8270D batch 9121037 laboratory method blank had naphthalene and benzoic acid detections of 0.0309 ug/L and 1.22 ug/L, respectively. The associated samples were either non-detect or detected at a concentration greater than five times the concentration of the detected blank except for RAU2-09-GW-9, which had detections above the MRL. The validator qualified the associated sample result with "J" in the table below

Report	Sample	Component	Laboratory Method Blank (ug/L)	Original Result (ug/L)	Qualified Result (ug/L)
A9L0524	RAU2-09-GW-9	Benzoic Acid	1.22 J	3.20	3.20 J
		Naphthalene	0.0309 J	0.0647	0.0647 J

NOTES:
J = Result is estimated.
ug/L = micrograms per liter.

In report A9L0524, the USEPA 6020A batch 9121327 laboratory method blank (9121327-BLK1) had a nickel detection of 1.17 ug/L. Nickel was non-detect or not reported from the associated samples; thus, no qualifications are necessary.

According to report WO15921, the USEPA Method 1613B batch 42622 laboratory method blank had some detections below MRLs. Associated sample results were either non-detect or detected at concentrations greater than five times the method blank detections; thus, no qualifications were necessary.

According to report WO16303, the USEPA Method 1613B batch 42595 laboratory method blank had some detections below MRLs. Associated sample results less than five times the method blank detections were qualified as follows:

Report	Sample	Component	Method Blank Result (pg/g)	Original Result (pg/g)	Qualified Result (pg/g)
WO16303	RAU1-10-SO-2.0	1,2,3,7,8,9-HxCDD	0.152 J	0.563 J	0.563 UJ
	RAU1-10-SO-2.0	1,2,3,4,7,8-HxCDF	0.106 JK	0.238 JK	0.238 UJ
	RAU1-10-SO-2.0	1,2,3,6,7,8-HxCDF	0.148 J	0.169 JK	0.169 UJ
	RAU1-10-SO-2.0	Total PeCDD	0.13 J	0.519 J	0.519 UJ

NOTES:
U = Result is non-detect.
pg/g = picograms per gram.

Several of the USEPA 1613B sample results in the bullet items above were qualified as EMPCs by the laboratory. Since these results were qualified as not detected "U" due to method blank contamination, no additional action was required. Due to the high resolution of USEPA 1613B, results less than five times the method blank detections were "UJ" qualified at the detected value, rather than the reporting limit.

All remaining laboratory method blank results were non-detect.

Trip Blanks

Two trip blanks (sample names TRIP BLANK and TRIP BLANK) were submitted with lab report A9L0097 and A9L0191 01 30 20 1613 for USEPA 8260C analysis. All trip blank results were non-detect to detection limits.

Equipment Rinsate Blanks

One equipment rinsate blank (sample name RB) was submitted with lab report A9L0191 01 30 20 1613 for USEPA Method 6020A, USEPA Method 8270D, and NWTPH-HCID analysis. The equipment rinsate blank is associated with only the groundwater samples from this sampling event and was collected to evaluate new single-use equipment used during groundwater collection for both reports. Field quality control results may be qualified as a result of laboratory instrument or batch information, but original or unvalidated laboratory results associated with field quality control samples are used to assess impact on field samples.

Naphthalene, total lead, chromium, and copper were detected at concentrations of 0.0568 ug/L, 0.495 ug/L, 0.678 ug/L, and 0.513 ug/L, respectively. The associated sample results less than five times the blank detection (or ten times for USEPA 6020A analysis) are qualified in the table below as follows: compounds detected in both the equipment rinsate blank and associated samples below MRLs resulted in sample qualification with "U" as non-detect at the sample MRL. Equipment rinsate blank results that were below the MRL and associated with sample results above the MRL resulted in sample qualification with "J" as estimated at the sample result value. Equipment rinsate blank results that were above the MRL and associated with sample results above the MRL resulted in sample qualification with "U" as non-detect at the sample result value.

Report	Sample	Component	Rinse Blank (ug/L)	Original Result (ug/L)	Qualified Result (ug/L)
A9L0191 01 30 20 1613	RAU4-04-GW-7.0	Naphthalene	0.0568 J	0.0843	0.0843 J
	RAU4-05-GW-7.5			0.102	0.102 J
A9L0097	RAU2-03-GW-7.5			0.042	0.042 J

SURROGATE RECOVERY RESULTS

The samples were spiked with surrogate compounds to evaluate laboratory performance on individual samples.

The reviewer took no action based on surrogate percent recoveries that were outside of acceptance criteria due to dilutions necessary to quantify high concentrations of target analytes present in the samples. The laboratory appropriately documented and qualified surrogate outliers. Associated batch quality assurance/quality control for samples with surrogate outliers was within acceptance criteria.

In report A9L0097, the USEPA Method 8270D base/neutral surrogate compounds nitrobenzene-d5 and 2-fluorobiphenyl fell below the lower acceptance limit of 44 percent, at 41 percent and 39 percent, respectively for sample RAU1-07-GW-7.5. The analytes associated with these basic surrogate compounds are "J" qualified as estimated in the table below.

Report	Sample	Component	Original Result (ug/L)	Qualified Result (ug/L)

ug/L = micrograms per liter.
UJ = Result is non-detect and estimated.

In report A9L0191 01 30 20 1613, the USEPA 8082A surrogate compound decachlorobiphenyl recovery fell below the lower acceptance limit of 40 percent, at 35 percent for RAU4-06-GW-4.5. The validator "J" qualified the non-detect USEPA 8082A results from sample RAU4-06-GW-4.5 as estimated for the final qualification of "UJ" as non-detect and estimated in the table below.

Report	Sample	Component	Original Result (ug/L)	Qualified Result (ug/L)
A9L0191 01 30 20 1613	RAU4-06-GW-4.5	Aroclor 1016	0.0568 U	0.0568 UJ
		Aroclor 1221	0.0455 U	0.0455 UJ

		Aroclor 1254	0.0568 U	0.0568 UJ
		Aroclor 1260	0.0227 U	0.0227 UJ

NOTES:
U = Result is non-detect.
ug/L = micrograms per liter.
UJ = Result is non-detect and estimated.

All remaining surrogate recoveries were within acceptance criteria.

MATRIX SPIKE/MATRIX SPIKE DUPLICATE RESULTS

Matrix spike/matrix spike duplicate (MS/MSD) results are used to evaluate laboratory precision and accuracy. All MS/MSD samples were extracted and analyzed at the required frequency. When MS/MSD percent recoveries and relative percent differences (RPDs) were outside acceptance criteria because of high concentrations of analyte in the sample and when the laboratory flagged MS/MSD exceedances because of high concentrations of analyte, no qualifications were made by the reviewer. Where MS/MSD results were not reported, batch precision was evaluated with laboratory duplicate or laboratory control sample/laboratory control sample duplicate (LCS/LCSD) sample results.

According to report A9L0097, the USEPA 5035A/8260C batch 9120603 MS (9120603-MS1) chloroethane recovery exceeded the upper acceptance limit of 139 percent, at 157 percent. The MS was prepared with a sample from an unrelated project; thus, qualification was not required.

According to report A9L0097, the USEPA 5053A/8260C batch 9120608 MS (9120608-MS1) 1,1-dichloroethane recovery exceeded the upper acceptance limit of 125 percent, at 128 percent. The MS was prepared with a sample from an unrelated project; thus, qualification was not required.

According to report A9L0097, the USEPA 8260C batch 9120593 MS (9120593-MS1) and MSD (9120593-MSD1) bromochloromethane recoveries exceeded the upper acceptance limit of 123 percent, both at 132 percent; and MS/MSD dibromochloromethane recovery exceeded the upper acceptance limit of 126 percent, both at 131 percent. Bromochloromethane and dibromochloromethane were not detected in the associated sample; thus, no qualifications were necessary.

According to report A9L0097, the USEPA 8260C batch 9120635 MS (9120635-MS1) bromochloromethane (131 percent) and dibromochloromethane (134 percent) exceeded the upper acceptance limit of 123 percent and 126 percent, respectively. The MS was prepared with a sample from an unrelated project; thus, qualification was not required.

According to report A9L0097 and A9L0191 01 30 20 1613, the USEPA 8260C batch 9120654 MS (9120654-MS1) bromochloromethane recovery exceeded the upper control limit of 123 percent, at 126 percent and dibromochloromethane recovery exceeded the upper acceptance limit of 126 percent, at 128 percent. The MS was prepared with a sample from an unrelated project; thus, qualification was not required.

According to report A9L0097, the USEPA 8270D batch 9120673 MS (9120673-MS1) and MSD (9120673-MSD1) 3+4-methylphenol (2 percent, -7 percent) and pyridine (0 percent, 16 percent) recoveries were below the lower acceptance of 29 percent, and 5 percent, respectively. Additionally, phenol and 3,3'-dichlorobenzidine were non-detect in the MS and MSD. Bis(2-chloroethyl)ether recovery fell below the lower acceptance limit of 43 percent, at 41 percent, and azobenzene fell below the lower acceptance limit of 61 percent, at 56 percent in the MSD. Bis(2-chloroethyl)ether and azobenzene had acceptable recovery in the MS; thus, no additional qualifications were necessary. Sample RAU2-05-GW-7.5 used to prepare the MS/MSD had a detection of 3+4-methylphenol(s), and the validator qualified this result with "J" as estimated. The associated sample result for pyridine was non-detect, and "J" qualified as estimated for a final qualification of "UJ" as estimated and non-detect. The associated sample results for phenol and 3,3'-dichlorobenzidine were non-detect; thus, were qualified by the reviewer with "R" as rejected based to the low recovery.

Report	Sample	Component	Original Result (ug/L)	Qualified Result (ug/L)
A9L0097	RAU2-05-GW-7.5	3+4-Methylphenol(s)	2.78	2.78 J
		Phenol	0.851 U	0.851 R
		3,3'-Dichlorobenzidine	2.13 U	2.13 R
		Pyridine	0.426 U	0.426 UJ

NOTES:
J = Result is estimated.
R = Result is rejected.
U = Result is non-detect.
ug/L = micrograms per liter.
UJ = Result is estimated and non-detect.

According to report A9L0097, the USEPA 8270D batch 9120673 MS results for 1,2-dichlorobenzene, 4-chloroaniline, 3-nitroaniline, and 4-nitroaniline were below lower percent recovery acceptance limits, ranging from 27 percent to 34 percent. The MSD result for 4-chloroaniline and 3-nitroaniline were below lower percent recovery acceptance limits, at 22 percent and 39 percent, respectively. The MS/MSD had no recovery for 3,3'-dichlorobenzene. Additionally, several MS/MSD RPD exceeded control limits, ranging from 31 percent to 48 percent. Sample RAU1-07-GW-7.5 used to prepare the MS/MSD, did not require qualification based on RPD exceedances as all associated results were non-detect. Sample RAU1-07-GW-7.5 1,2-dichlorobenzene and 4-nitroaniline results did not require qualification, as they were associated with acceptable MSD percent recoveries. Results for 4-chloroaniline and 3-nitroaniline were previously qualified in the surrogate section for sample RAU1-07-GW-7.5 and require no further qualification except for the 3,3'-dichlorobenzidine result, which was non-detect and qualified with "R" as rejected.

Report	Sample	Component	Original Result (ug/L)	Qualified Result (ug/L)
A9L0097	RAU1-07-GW-7.5	3,3-Dichlorobenzendine	0.495 U	0.495 R

NOTES:
R = Result is rejected.
U = Result is non-detect.
ug/L = micrograms per liter.

According to report A9L0097, the USEPA Method 8270D batch 9120708 MS (9120708-MS2) compounds had numerous exceedances of both upper and lower acceptance limits. The MS was prepared with a sample from an unrelated project; thus, qualification was not required.

According to report A9L0097, the USEPA Method 6020A batch 9120890 MS (9120890-MS1) copper recovery exceeded the upper control limit of 125 percent, at 189 percent. The validator qualified the detected copper result in the sample used to prepare the MS with "J" as estimated in the table below.

Report	Sample	Component	Original Result (mg/kg)	Qualified Result (mg/kg)
A9L0097	RAU1-11-SO-3.5	Copper	42.9	42.9 J

NOTES:
J = Result is estimated.
mg/kg = milligram per kilogram.

According to report A9L0191 01 30 20 1613, the USEPA Method 8260C batch 9120943 MS (9120943-MS1) chloroethane recovery exceeded the upper control limit of 138 percent, at 147 percent. The MS was prepared with a sample from an unrelated project; thus, qualification was not required.

According to report A9L0191 01 30 20 1613, the USEPA Method 6020A batch 9120890 MS (9120890-MS1) copper recovery exceeded the upper acceptance limit of 125 percent, at 189 percent; and the manganese recovery fell below the lower acceptance limit of 75 percent at 28 percent. The MS was prepared with a sample from an unrelated project; thus, qualification was not required.

According to report A9L0191 01 30 20 1613, the USEPA Method 6020A batch 9120937 MS (9120937-MS1) chromium, copper, manganese, nickel, and zinc recoveries exceeded the upper acceptance range of 125 percent, at 139 percent, 175 percent, 188 percent, 149 percent, and 145 percent, respectively. The validator qualified associated results that were less than four times the concentration of the MS in the table below. The remaining associated sample results did not require qualification.

Report	Sample	Component	Original Result (ug/L)	Qualified Result (ug/L)
A9L0191	RAU4-06-GW-4.5	Chromium	123	123 J
		Nickel	96.8	96.8 J

NOTES:
J = Result is estimated.
ug/L = micrograms per liter.

According to report A9L0191 01 30 20 1613, the USEPA Method 6020A batch 9120960 MS (9120960-MS1) lead recovery exceeded the upper acceptance limit of 125 percent, at 216 percent; and manganese and zinc fell below the lower acceptance limit of 75 percent, at 12 percent and 44 percent, respectively. The validator qualified results in the sample used to prepare the MS that were less than four times the concentration of the MS with "J" as estimated in the table below.

Report	Sample	Component	Original Result (mg/kg)	Qualified Result (mg/kg)
A9L0191	RAU2-09-SO-1.5	Lead	11.1	11.1 J
		Zinc	86.9	86.9 J

NOTES:
J = Result is estimated.
mg/kg = milligram per kilogram.

According to report A9L0191 01 30 20 1613, the USEPA 6020A batch 9120988 MS (9120988-MS1) manganese recovery exceeded the upper acceptance limit of 125 percent, at 151 percent. The MS was prepared with a sample from an unrelated project; thus, qualification was not required.

According to report A9L0524, the USEPA 6020A batch 9121311 MS (9121311-MS1) manganese recovery fell below the lower acceptance limit of 75 percent, at 2 percent. The MS was prepared with a sample from an unrelated project; thus, no further qualification was necessary.

According to report A9L0097, batch 9121432 MS (9212432-MS1) hexavalent chromium recovery grossly exceeded the lower acceptance limits of 83 percent, at -0.2 percent. The post dilution spike preformed on the same source sample was within acceptance recovery. The validator qualified result in the sample used to prepare the MS with "J" as estimated in the table below.

Report	Sample	Component	Original Result (mg/kg)	Qualified Result (mg/kg)
A9L0097	RAU1-01-SO-2.4	Hexavalent Chromium	0.293	0.293 J

NOTES:
J = Result is estimated.
mg/kg = milligram per kilogram.

According to report 957456, batch 232617 MS (3067892) and MSD (3067893) hexavalent chromium recovery grossly exceeded the lower acceptance limits of 90 percent, at 8.16 percent and 2.64 percent, respectively. Additionally, the RPD between the MS and MSD exceeded the maximum RPD of 20 percent, at 102 percent. The validator rejected the hexavalent chromium result in the sample used to prepare the MS with "R" in the table below.

Report	Sample	Component	Original Result (ug/L)	Qualified Result (ug/L)
957456	RAU4-06-GW-4.5	Hexavalent Chromium	0.25 U	0.25 R

NOTES:
R = Result is rejected.
ug/L = micrograms per liter.

All remaining MS/MSD results were within acceptance limits for percent recovery and RPDs.

LABORATORY DUPLICATE RESULTS

Duplicate results are used to evaluate laboratory precision. All duplicate samples were extracted and analyzed at the required frequency. Laboratory duplicate results within five times the MRL were not evaluated for precision.

According to report A9L0097, the NWTPH-Gx batch 9120608 laboratory duplicate (9120608-DUP1) exceeded the RPD control limit of 30 percent for gasoline range organics, at 96 percent. The validator qualified the detected gasoline range organic result with "J" as estimated in the table below.

Report	Sample	Component	Original Result (mg/kg)	Qualified Result (mg/kg)
A9L0097	RAU1-12-SO-2.7	Gasoline Range Organics	118	118 J

NOTES:
J = Result is estimated.
mg/kg = milligram per kilogram.

According to reports A9L0097 and A9L0191 01 30 20 1613, some USEPA Method 8082A batch 9120759 laboratory duplicate (9120759-DUP1) Aroclor 1254 and Aroclor 1260 results were flagged by Apex as estimated, due to the presence of overlapping polychlorinated biphenyl Aroclors. Results are qualified in the data qualifications section.

According to report A9L0097, the USEPA Method 6020A batch 9120880 laboratory duplicate (9120880-DUP1) exceeded the RPD control limit of 40 percent for mercury, at 66 percent. The validator qualified the detected gasoline range organic result for the sample used to prepare the laboratory duplicate with "J" as estimated in the table below.

Report	Sample	Component	Original Result (mg/kg)	Qualified Result (mg/kg)
A9L0097	RAU1-07-SO-1.8	Mercury	0.261	0.261 J

NOTES:
J = Result is estimated.
mg/kg = milligram per kilogram.

According to report A9L0191 01 30 20 1613, the NWTPH-Dx batch 9120775 laboratory duplicate (9120775-DUP2) oil result was flagged by the laboratory due to elevation of the oil-range hydrocarbon range from the presence of individual analyte peaks that were not representative of the fuel pattern reported. The laboratory duplicate was prepared with a sample from an unrelated project; thus, qualification was not required.

According to report A9L0191 01 30 20 1613, the NWTPH-Dx batch 9120804 laboratory duplicate (9120804-DUP1) exceeded the RPD control limit of 30 percent for diesel, at 143 percent. The laboratory duplicate was prepared with a sample from an unrelated project; thus, qualification was not required.

According to report A9L0191 01 30 20 1613, the USEPA 6020B batch 9120960 laboratory duplicate (9120960-DUP1) exceeded the RPD control limit of 40 percent for mercury, at 48

percent. The validator qualified the mercury result in the sample used to prepare the laboratory duplicate with "J" as estimated in the table below.

Report	Sample	Component	Original Result (mg/kg)	Qualified Result (mg/kg)
A9L0191 01 30 20 1613	RAU2-09-SO-1.5	Mercury	0.252	0.252 J

NOTES:
J = Result is estimated.
mg/kg = milligram per kilogram.

All remaining laboratory duplicate RPDs were within acceptance criteria.

LABORATORY CONTROL SAMPLE/LABORATORY CONTROL SAMPLE DUPLICATE RESULTS

An LCS/LCSD is spiked with target analytes to provide information on laboratory precision and accuracy. The LCS/LCSD samples were extracted and analyzed at the required frequency.

According to report A9L0097, the USEPA 5035A/8260C batch 9120603 LCS (9120603-BS1) chloroethane recovery exceeded the upper acceptance limit of 120 percent, at 126 percent; and the chloromethane and dichlorodifluoromethane recoveries fell below the lower acceptance limit of 80 percent, at 74 percent and 73 percent, respectively. Chloroethane was not detected in the associated samples and required no qualifications. Chloromethane and dichlorodifluoromethane were not detected in the associated sample; thus, the validator qualified the results from the associated sample with "J" as estimated in the table below for a final qualification of "UJ" as non-detect and estimated.

Report	Sample	Component	Original Result (ug/kg)	Qualified Result (ug/kg)
A9L0097	RAU1-04-SO-1.3	Chloromethane	625 U	625 UJ
		Dichlorodifluoromethane	250 U	250 UJ

NOTES:
U = Result is non-detect.
ug/kg = microgram per kilogram.
UJ = Result is non-detect and estimated.

According to report A9L0097, the USEPA 5035A/8260C batch 9120608 LCS (9120608-BS1) bromomethane, chloroethane, and trichlorofluoromethane recoveries exceeded the upper acceptance limit of 120 percent, at 122 percent, 147 percent, and 122 percent, respectively. Bromomethane, chloroethane, and trichlorofluoromethane were non-detect in the associated sample; thus, no qualifications were necessary for those results.

According to report A9L0097, the USEPA 5035A/8260C batch 9120751 LCS (9120751-BS1) chloroethane, chloromethane, and trichlorofluoromethane recoveries fell below the lower acceptance limit of 80 percent, at 72 percent, 73 percent, and 75 percent, respectively. Chloromethane, chloroethane, and trichlorofluoromethane were non-detect in the associated

samples; thus, the validator qualified the results from the associated samples with "J" as estimated in the table below for a final qualification of "UJ" as non-detect and estimated.

Report	Sample	Component	Original Result (ug/kg)	Qualified Result (ug/kg)
A9L0097	RAU1-07-SO-1.8	Chloroethane	740 U	740 UJ

According to report A9L0097, the USEPA 8260C batch 9120593 LCS (9120593-BS1) bromochloromethane, bromoform, bromomethane, and dibromochloromethane recoveries exceeded the upper acceptance limit of 120 percent, at 127 percent, 130 percent, 123 percent, and 130 percent, respectively. Additionally, the 2-hexanone recovery fell below the lower acceptance limit of 80 percent, at 79 percent. Bromochloromethane, bromoform, bromomethane, and dibromochloromethane were non-detect in the associated samples; qualification of these results was not required. The associated sample results for 2-hexanone were non-detect; the validator qualified the results with "J" as estimated for a final qualification of "UJ" as non-detect and estimated.

Report	Sample	Component	Original Result (ug/L)	Qualified Result (ug/L)

UJ = Result is non-detect and estimated.

According to report A9L0097, the USEPA 8260C batch 9120654 LCS (9120654-BS1) acetone, 2-hexanone, and naphthalene recoveries fell below the lower acceptance limit of 80 percent, at 78 percent, 77 percent, and 79 percent, respectively. Additionally, bromochloromethane, bromoform, and dibromochloromethane recoveries exceeded the upper acceptance limit of 120 percent, at 122 percent, 128 percent, and 130 percent, respectively. Bromochloromethane, bromoform, and dibromochloromethane were non-detect in the associated samples and the

naphthalene result from sample RAU1-12-GW-7.0 was re-analyzed and reported in a different batch; therefore, qualification was not required for these analytes. The associated sample results for acetone, 2-hexanone, and naphthalene were non-detect; therefore , the validator qualified the acetone, 2-hexanone, and naphthalene results from the associated samples with "J" as estimated in the table below for a final qualification of "UJ" as non-detect and estimated.

Report	Sample	Component	Original Result (ug/kg)	Qualified Result (ug/kg)
A9L0097	RAU1-11-GW-7.0	Acetone	20.0 U	20.0 UJ

	RAU1-12-GW-7.0	Acetone	20.0 U	20.0 UJ
		2-Hexanone	10.0 U	10.0 UJ

NOTES:
U = Result is non-detect.
ug/kg = microgram per kilogram.
UJ = Result is non-detect and estimated.

According to report A9L0097 and A9L0191 01 30 20 1613, the USEPA 8260C batch 9120700 LCS (9120700-BS1) chloroethane, 2,2-dichloropropane, and 1,2,3-trichlorobenzene recoveries exceeded the upper acceptance limit of 120 percent, at 121 percent, 122 percent, and 125 percent respectively. Additionally, the chloromethane recovery fell below the lower acceptance limit of 80 percent, at 69 percent. Only naphthalene results were reported from this batch in both lab reports; thus, no qualifications were necessary.

According to report A9L0097, the USEPA 8270D batch 9120673 LCS (9120673-BS1) 1-methylnapthalene (35 percent), 2-methylnapthalene (34 percent), naphthalene (35 percent), hexachlorobutadiene (20 percent), hexachloroethane (19 percent), 2-chloronaphthalene (39 percent), 1,2-dichlorobenzene (23 percent), 1,3-dichlorobenzene (21 percent), 1,4-dichlorobenzene (22 percent), and 1,2,4-trichlrobenzene (25 percent) recoveries fell below the lower acceptance limit. Additionally, in a second LCS analyzed for batch 9120673 (9120673-BS2) 3,3'-dichlorobenzidiene recovery exceeded the upper acceptance limit of 129 percent, at 134 percent. Associated sample results were non-detect for 3,3'-dichlorobenzidine; thus, qualification of 3,3'-dichlorobenzidine was no required. The remaining LCS percent recovery exceedances were associated with only non-detect sample results; all associated sample results were qualified by the reviewer with "J" as estimated, for final qualification of "UJ" as non-detect and estimated. The qualified results are indicated in the following table:

UJ = Result is non-detect and estimated.

According to reports A9L0097 and A9L0191 01 30 20 1613, the USEPA 8270D batch 9120690 LCS (9120690-BS2) and LCSD (9120690-BSD2) 3,3'-dichlorobenzidine recovery exceeded the upper acceptance limit of 129 percent, at 166 percent and 159 percent, respectively. 3,3'-Dichlorobenzidine results from the associated samples were non-detect; thus, no qualifications were necessary.

According to report A9L0097, the USEPA 8270D batch 9120708 LCS (9120708-BS2) 4-chloro-3-methylphenol recovery exceeded the upper acceptance limit of 122 percent, at 125 percent. 4-Chloro-3-methylphenol results from the associated samples were non-detect; thus, no qualifications were necessary.

According to report A9L0097 and A9L0191 01 30 20 1613, the USEPA 8270D batch 9120852 LCS (9120852-BS1) 2,4-dinitrophenol recovery exceeded the upper acceptance limit of 137 percent, at 144 percent; benzoic acid recovery exceeded the upper acceptance limit of 140 percent, at 145 percent; and 3,3'-dichlorobenzidine recovery fell below the lower acceptance limit of 22 percent, at 21 percent. 2,4-Dinitrophenol and benzoic acid were not detected in the associated samples; thus, qualification for these two compounds were not required. 3,3'-Dichlorobenzidine results from report A9L0191 01 30 20 1613 were reported off a different batch; thus, no qualifications were necessary. The validator qualified associated 3,3'-dinitrophenol results from report A9L0097, which were all non-detect with "J" as estimated in the table below for a final qualification of "UJ" as non-detect and estimated.

Report	Sample	Component	Original Result (ug/kg)	Qualified Result (ug/kg)
A9L0097	RAU1-04-SO-1.3	3,3'-Dichlorobenzidine	4350 U	4350 UJ

Report	Sample	Component	Original Result (ug/L)	Qualified Result (ug/L)
A9L0191 01		2-Hexanone	10.0 U	10.0 UJ

NOTES:
U = Result is non-detect.
ug/L = micrograms per liter.
UJ = Result is non-detect and estimated.

According to report A9L0191 01 30 20 1613, the USEPA 8260C batch 9120943 LCS (9120943-BS1) chloroethane and 2,2-dichloropropane recoveries exceeded the upper acceptance limit of 120 percent, at 123 percent and 122 percent, respectively. Chloroethane and 2,2-dichloropropane were non-detect in the associated samples; thus, no qualifications were necessary.

According to report A9L0524, the USEPA 8270D batch 9121037 LCS (9121037-BS1) had numerous of recoveries below the lower acceptance limits. Additionally, several LCS/LCSD RPD exceeded control limits, ranging from 32 percent to 46 percent. The sample results associated with the RPD exceedances are non-detect and, thus, require no qualification. All associated sample results were qualified by the reviewer with "J" as estimated. The qualified results are indicated in the following table:

Report	Sample	Component	Original Result (ug/L)	Qualified Result (ug/L)
A9L0524	RAU2-08-GW-9	1-Methylnaphthalene	0.0213 U	0.0213 UJ

NOTES:
J = Result is estimated.
U = Result is non-detect.
ug/L = micrograms per liter.
UJ = Result is non-detect and estimated.

According to report 19L0152, the SM 4500-S2 D-00 batch BHL0315 LCS fell below the lower acceptance limits of 75 percent, at 68.1 percent. The associated sample result for sulfide was non-detect and has been qualified by the reviewer as estimated with "J," with final qualification of "UJ" as non-detect and estimated.

Report	Sample	Component	Original Result (mg/L)	Qualified Result (mg/L)
19L0152	RAU4-10-GW-8.0	Sulfide	0.050 U	0.050 UJ
	RAU4-11-GW-7.0		0.050 U	0.050 UJ

NOTES:
mg/L = milligrams per liter.
U = Result is non-detect.
UJ = Result is estimated and non-detect.

All remaining LCS/LCSD results were within acceptance limit for percent recovery and RPD.

FIELD DUPLICATE RESULTS

Field duplicate samples measure both field and laboratory precision. One field duplicate was submitted with report A9L0097 (RAU4-05-SO-1.75/RAU4-05-SO-1.75-DUP) and one field duplicate was submitted with report A9L0191 01 30 20 1613 (RAU4-08-SO-1.75/ RAU4-08-SO-1.75-DUP) for analysis. MFA uses acceptance limit of 100 percent RPD for results that are less than five times the MRL, or 50 percent RPD for results that are greater than five times the MRL. Non-detect data are not used in the evaluation of field duplicate results.

In report A9L0097, the USEPA Method 6020B lead results for sample RAU2-05-SO-2.5 and its field duplicate RAU2-05-SO-2.5-DUP exceeded the RPD control limit of 50 percent, at 129 percent. The validator qualified the detected lead results from the associated samples with "J" as estimated in the table below.

Report	Sample	Component	RPD (%)	Original Result (mg/kg)	Qualified Result (mg/kg)
A9L0097	RAU2-05-SO-2.5	Lead	129	3.44	3.44 J
	RAU2-05-SO-2.5-DUP			16.0	16.0 J

NOTES:
% = percent.
J = result is estimated.
mg/kg = milligram per kilogram.

All remaining analytes were within the acceptance criteria.

CONTINUING CALIBRATION VERIFICATION RESULTS

Continuing calibration verification (CCV) results are used to demonstrate instrument precision and accuracy through the end of the sample batch. Quality control results that were flagged by the laboratory based on CCV exceedances required no action from the reviewer when the results met percent recovery and RPD acceptance criteria. In report A9L0097, some USEPA 8082A results from samples RAU1-02-SO-1 and RAU3-06-SO-3 were flagged by Apex as estimated results due to associated CCV recoveries below the lower

control limits. The validator qualified the associated non-detect results with "J" as estimated in the table, below for a final qualification of "UJ" as non-detect and estimated.

Report	Sample	Component	Original Result (ug/kg)	Qualified Result (ug/kg)
A9L0097	RAU1-02-SO-1	Aroclor 1016	2.33 U	2.33 UJ
		Aroclor 1221	2.33 U	2.33 UJ
		Aroclor 1232	2.33 U	2.33 UJ
		Aroclor 1242	2.33 U	2.33 UJ
		Aroclor 1248	2.33 U	2.33 UJ
	RAU3-06-SO-3	Aroclor 1016	2.00 U	2.00 UJ
		Aroclor 1221	2.00 U	2.00 UJ
		Aroclor 1232	2.00 U	2.00 UJ
		Aroclor 1242	2.00 U	2.00 UJ
		Aroclor 1248	2.00 U	2.00 UJ

NOTES:
U = Result is non-detect.
Ug/kg = microgram per kilogram.
UJ = Result is non-detect and estimated.

All remaining CCVs were within acceptance criteria for percent recovery.

REPORTING LIMITS

Apex reported non-detect results to detection limits. CFA reported non-detect results to estimated detection limits. Samples requiring dilutions because of high analyte concentrations and/or matrix interferences were reported with raised detection limits and reporting limits. Results between the detection limit and the reporting limit were qualified by Apex with "J" as estimated.

The reviewer confirmed that USEPA 5035A/8260C results were reported with a base dilution factor of 1:50 due to a dilution required for analysis.

Some reporting limits and detection limits were raised by Apex due to matrix interference or the lab was confident of the response to report above the MRL. Results were flagged appropriately or confirmed with the lab, and qualification was not required.

In report A9L0097 and A9L0191 01 30 20 1613, some of the USEPA Methods 8260C, 8082A, 8270D large volume injection, and 8270D results were flagged by Apex as having raised detection limits and reporting limits due to interferences from coeluting organic compounds in the samples. No qualifications were necessary.

In report A9L0097, A9L0191 01 30 20 1613, and A9L0524, some of the USEPA Methods 8270D USEPA 6020A and colorometric spectrophotometry results were flagged by Apex as having raised detection limits due to the preparation and/or analytical dilution necessary for analysis. No qualifications were necessary.

In report A9L0097, the USEPA 6020A mercury result from sample RAU1-03-GW-7.5 was flagged by Apex as the MDL was raised to the MRL due to possible carryover. No qualifications were necessary.

In report A9L0524, the USEPA 6020A nickel result from sample RAU2-09-GW-9 was flagged by Apex as the reporting limit being raised due to the analyte in the blank. The sample cannot be reextracted for a lower reporting limit due to the sample matrix. No qualifications were necessary.

DATA PACKAGE

The data packages were reviewed for transcription errors, omissions, and anomalies.

In report A9L0097, the chain of custody/container discrepancies states that the chain of custody (COC) mentioned one trip blank when three trip blanks were sent with the coolers. Additionally, sample RAU-03-GW-7.5-DUP did not include a date on the hydrochloric acid amber. It is best practice for the sample labels to match the COC and for the COC to be fully filled out, but no qualifications were necessary.

Report A9L0191 01 30 20 1613 and WO16303 were reissued as split reports from original reports A0L0191 and WO15951 at the request of the MFA project manager. Split reports containing sediment data are validated in a separate memorandum

In report A9L0191 01 30 20 1613, the cooler receipt form states that RAU4-04-SO-3.45 read as RAU4-11-SO-3.45 and RAU7-02-GW-9.5 had no sample ID on the second bottle. The lab was able to accurately match the COC with the sample labels. Additionally, sample RAU04-09-SO-2.5 did not include a date on the methanol VOAs amber and sample RAU4-06-SO-1.5 did not include a date on the sample jar. It is best practice for the sample labels to match the COC, but no sample qualifications were necessary.

No additional errors were found.

DATA QUALITY ASSURANCE/QUALITY CONTROL REVIEW

PROJECT NO. 1044.02.13 | DECEMBER 7, 2020 | GRAYS HARBOR HISTORICAL SEAPORT AUTHORITY

Maul Foster & Alongi, Inc. (MFA) conducted an independent review of the quality of analytical results for groundwater and soil samples collected at the upland portion of the Seaport Landing Site. The samples were collected on July 21 and 22, 2020.

Apex Laboratories, LLC (Apex) performed the analyses. Apex report number A0G0634, was reviewed. The analyses performed and samples analyzed are listed below.

Analysis	Reference
Diesel- and Oil-Range Hydrocarbons	NWTPH-Dx
Diesel- and Oil-Range Hydrocarbons with Acid/Silica-Gel Cleanup	NWTPH-Dx-SG
Dry Weight	EPA 8000C
Total and Dissolved Metals	EPA 6020A

NOTES:
EPA = United States Environmental Protection Agency.
NWTPH = Northwest Total Petroleum Hydrocarbon.
SG = silica-gel treatment.

Samples Analyzed			
Report A0G0634			
RAU4-17-SO-2.5	RAU4-15-SO-3	RAU4-17-GW-4.5	RAU4-14-GW-6.0
RAU4-19-SO-2.5	RAU4-14-SO-3.5	RAU4-19-GW-5.0	RAU4-13-GW-6.5
RAU4-16-SO-3	RAU4-13-SO-4.5	RAU4-16-GW-4.0	RAU1-13-GW-7
RAU4-20-SO-2.5	RAU1-13-SO-3.5	RAU4-20-GW-10.5	RAU1-13-GW-7-DUP
RAU4-18-SO-3	RAU1-14-SO-3.5	RAU4-18-GW-5.0	RAU1-14-GW-6.0
RAU4-21-SO-3.5	RAU5-03-SO-2.5	RAU4-21-GW-13.0	RAU5-03-GW-6.5
RAU4-21-SO-11	RAU5-03-SO-2.5-DUP	RAU4-15-GW-5.0	--

DATA QUALIFICATIONS

Analytical results were evaluated according to applicable sections of EPA procedures (EPA, 2017a,b) and appropriate laboratory and method-specific guidelines (Apex, 2019; EPA, 1986).

Data validation procedures were modified, as appropriate, to accommodate quality-control requirements for methods not specifically addressed by the EPA procedures (e.g., NWTPH-Dx).

NWTPH-Dx diesel- and oil-range hydrocarbon results were evaluated with respect to the associated NWTPH-Dx-SG acid/silica-gel cleanup diesel- and oil-range hydrocarbon results. Acid/silica-gel cleanup diesel- and oil-range hydrocarbon results greater than associated

standard diesel- and oil-range hydrocarbon results were not qualified if the relative percent difference (RPD) was less than 20 percent. No qualification was required.

Total and dissolved metals results were also evaluated with respect to each other. Dissolved results greater than associated total results were not qualified if the RPD was less than 20 percent. No qualification was required.

According to report A0G0634, Apex flagged NWTPH-Dx and NWTPH-Dx-SG diesel- and oil-range hydrocarbon results for sample RAU4-14-SO-35 as estimated due to overlap from the associated diesel- or oil-range hydrocarbon results. The results have been qualified by the reviewer with a "J" as estimated in the table below.

Report	Sample	Method	Component	Original Result (mg/kg)	Qualified Result (mg/kg)
A0G0634	RAU4-14-SO-3.5	NWTPH-Dx	Diesel-Range Hydrocarbons	206	206 J
			Oil-Range Hydrocarbons	769	769 J
		NWTPH-Dx-SG	Diesel-Range Hydrocarbons	173	173 J
			Oil-Range Hydrocarbons	630	630 J

NOTES:
J = result is estimated.
mg/kg = milligram per kilogram.

According to report A0G0634, Apex flagged NWTPH-Dx diesel-range hydrocarbon results for samples RAU4-14-SO-3.5, RAU4-19-GW-5.0, RAU4-20-GW-10.5, and RAU4-14-GW-6.0 because the chromatographic patterns either did not resemble the diesel fuel standard used for quantification or indicated possible weathered diesel, mineral oil, or contribution from a related product. Results were reported as hydrocarbon range instead of a specific hydrocarbon product; thus, qualification was not required.

The data are considered acceptable for their intended use, with the appropriate data qualifiers assigned.

HOLDING TIMES, PRESERVATION, AND SAMPLE STORAGE

Holding Times

Extractions and analyses were performed within the recommended holding time criteria.

Preservation and Sample Storage

According to report A0G0634, samples RAU4-20-GW-10.5, RAU4-18-GW-5.0, RAU4-21-GW-13.0, and RAU4-14-GW-6.0 were incompletely preserved for NWTPH-Dx analysis. Apex completed preservation and performed the NWTPH-Dx extraction within recommended holding times; thus, qualification was not required.

The remaining samples were preserved and stored appropriately.

BLANKS

Method Blanks

Method blank results are used to demonstrate a lack of contamination from laboratory processes. Laboratory method blank analyses were performed at the required frequencies. For purposes of data qualification, the method blanks were associated with all samples in the analytical batch. All laboratory method blank results were non-detect to method reporting limits for all target analytes.

Trip Blanks

Trip blank samples were not submitted for analysis as volatile analyses were not performed.

Equipment Rinsate Blanks

Equipment rinsate blank samples were not submitted for analysis.

SURROGATE RECOVERY RESULTS

The samples were spiked with surrogate compounds to evaluate laboratory performance on individual samples.

The reviewer took no action based on surrogate percent recoveries that were outside of acceptance criteria due to dilutions necessary to quantify high concentrations of target analytes present in the samples. The laboratory appropriately documented and qualified surrogate outliers. Associated batch quality assurance/quality control for samples with surrogate outliers was within acceptance criteria.

All remaining surrogate recoveries were within acceptance criteria.

MATRIX SPIKE/MATRIX SPIKE DUPLICATE RESULTS

Matrix spike/matrix spike duplicate (MS/MSD) results are used to evaluate laboratory precision and accuracy. All MS/MSD samples were extracted and analyzed at the required frequency. When MS/MSD percent recoveries and RPDs were outside acceptance criteria because of high concentrations of analyte in the sample and when the laboratory flagged MS/MSD exceedances because of high concentrations of analyte, no qualifications were made by the reviewer. Where MS/MSD results were not reported, batch precision was evaluated with laboratory duplicate or laboratory control sample/laboratory control sample duplicate (LCS/LCSD) sample results.

All remaining MS/MSD results were within acceptance limits for percent recovery and RPDs.

LABORATORY DUPLICATE RESULTS

Duplicate results are used to evaluate laboratory precision. All duplicate samples were extracted and analyzed at the required frequency with the exceptions listed below. Laboratory duplicate results within five times the MRL were not evaluated for precision.

According to report A0G0634, the NWTPH-Dx-SG acid/silica-gel cleanup soil batches 0070845 and 0070888 did not include results for the laboratory duplicates from the original NWTPH-Dx batches. The reviewer confirmed that the laboratory duplicates were not included because the source samples were not selected for acid/silica-gel cleanup. Batch precision could not be evaluated for NWTPH-Dx-SG batches 0070845 and 0070888.

According to report A0G0634, the NWTPH-Dx batch 0070845 laboratory duplicate (0070845-DUP2) exceeded the RPD control limit of 30 percent for diesel, at 35 percent. The laboratory duplicate was prepared with a sample from an unrelated project; thus, qualification was not required.

All remaining laboratory duplicate RPDs were within acceptance criteria.

LABORATORY CONTROL SAMPLE/LABORATORY CONTROL SAMPLE DUPLICATE RESULTS

An LCS/LCSD is spiked with target analytes to provide information on laboratory precision and accuracy. The LCS/LCSD samples were extracted and analyzed at the required frequency.

All LCS/LCSD results were within acceptance limit for percent recovery and RPD.

FIELD DUPLICATE RESULTS

Field duplicate samples measure both field and laboratory precision. Two field duplicates were submitted with report A0G0634 (RAU5-03-SO-2.5/RAU5-03-SO-2.5-DUP and RAU1-13-GW-7/RAU1-13-GW-7-DUP) for analysis. MFA uses acceptance limit of 100 percent RPD for results that are less than five times the MRL, or 50 percent RPD for results that are greater than five times the MRL. Non-detect data are not used in the evaluation of field duplicate results.

All field duplicate results met within the RPD acceptance criteria.

CONTINUING CALIBRATION VERIFICATION RESULTS

Continuing calibration verification (CCV) results are used to demonstrate instrument precision and accuracy through the end of the sample batch. Quality control results that were flagged by the laboratory based on CCV exceedances required no action from the reviewer when the results met percent recovery and RPD acceptance criteria.

REPORTING LIMITS

Apex reported non-detect results to reporting limits. Samples requiring dilutions because of high analyte concentrations and/or matrix interferences were reported with raised reporting limits.

DATA PACKAGE

The data packages were reviewed for transcription errors, omissions, and anomalies.

In report A0G0634, Apex noted on the cooler receipt form that the collection dates recorded on container labels for sample RAU4-13-S0-4.5 were incomplete, written as "7/ /20" and missing the collection day. Apex also noted that sample collection time was not recorded on the nitric acid-preserved containers for sample RAU4-14-GW-6.0. The reviewer confirmed that the sample collection date and time were reported by Apex based on information recorded on the chain of custody. No qualification was required.

No additional issues were found.
