#### RECOMMENDATION

| No Further Action (Check appropriate box below):             | LIST on Confirmed and Suspected<br>Contaminated Sites List: |
|--|---|
| Release or threatened release does not pose a threat         |   |
| No release or threatened release                             |   |
| Refer to program/agency (Name:) 🔲                            |   |
| Independent Cleanup Action Completed (contamination removed) |   |

COMPLAINT (Brief Summary of ERTS Complaint):

Complainant indicated that property contained several abandoned underground storage tanks. They are concerned that these tanks have been leaking for over 30 years and adding to contamination at the site.

CURRENT SITE STATUS (Brief Summary of why Site is recommended for Listing or NFA):

Ecology has record that four underground storage tanks were removed from the Site. The location is a known hazardous waste site and the area in guestion is addressed in Site cleanup action plans.

Investigator: Kyle Parker

### OBSERVATIONS

## Please check this box if you included information on the Supplemental Page at end of report.

**Description** (If site visit made, please be sure to include the following: site observations, site features and cover, chronology of events, sources/past practices likely responsible for contamination, presence of water supply wells and other potential exposure pathways, etc.):

Documents reviewed:

Ecology's Cleanup and Tank Search

|-----------------------|---|------|-------------|------------------|-----|----------|--|
|                       | Radioactive Wastes                      |      |             |                  |     |          | Wastes that emit more than background levels of radiation.   |
|                       | Conventional Contaminants,<br>Organic   |      |             |                  |     |          | Unspecified organic matter that imposes an oxygen<br>demand during its decomposition (Example: Total<br>Organic Carbon)  |
|                       | Conventional Contaminants,<br>Inorganic |      |             |                  |     |          | Non-metallic inorganic substances or indicator<br>parameters that may indicate the existence of<br>contamination if present at unusual levels (Examples:<br>Sulfides, ammonia)   |
| Other<br>Contaminants | Asbestos                                |      |             |                  |     |          | All forms of Asbestos. Asbestos fibers have been used<br>in products such as building materials, friction products<br>and heat-resistant materials.  |
|                       | Other Deleterious<br>Substances         |      |             |                  |     |          | Other contaminants or substances that cause subtle or<br>unexpected harm to sediments (Examples: Wood<br>debris; garbage (e.g., dumped in sediments))  |
|                       | Benthic Failures                        |      |             |                  |     |          | Failures of the benthic analysis standards from the Sediment Management Standards.   |
|                       | Bioassay Failures                       |      |             |                  |     |          | For sediments, a failure to meet bioassay criteria from<br>the Sediment Management Standards. For soils, a<br>failure to meet TEE bioassay criteria for plant, animal<br>or soil biota toxicity.   |
|                       | Unexploded Ordinance                    |      |             |                  |     |          | Weapons that failed to detonate or discarded shells containing volatile material.  |
|                       | Other Reactive Wastes                   |      |             |                  |     |          | Other Reactive Wastes (Examples: phosphorous, lithium metal, sodium metal)   |
| Reactive Wastes       | Corrosive Wastes                        |      |             |                  |     |          | Corrosive wastes are acidic or alkaline (basic) wastes<br>that can readily corrode or dissolve materials they<br>come into contact with. Wastes that are highly<br>corrosive as defined by the Dangerous Waste<br>Regulation (WAC 173-303-090(6)). (Examples:<br>Hydrochloric acid; sulfuric acid; caustic soda) |

#### (fill in contaminant matrix above with appropriate status choice from the key below the table)

| Status choices for contaminants        |   |
|--|---|
| Contaminant Status                     | Definition  |
| B— Below Cleanup<br>Levels (Confirmed) | The contaminant was tested and found to be below cleanup levels. (Generally, we would not enter each and every contaminant that was tested; for example if an SVOC analysis was done we would not enter each SVOC with a status of "below". We would use this for contaminants that were believed likely to be present but were found to be below standards when tested |
| S— Suspected                           | The contaminant is suspected to be present; based on some knowledge about the history of the site, knowledge of regional contaminants, or based on other contaminants known to be present   |
| C— Confirmed Above<br>Cleanup Levels   | The contaminant is confirmed to be present above any cleanup level. For example—above MTCA method A, B, or C; above Sediment Quality Standards; or above a presumed site-specific cleanup level (such as human health criteria for a sediment contaminant).   |
| RA— Remediated -<br>Above              | The contaminant was remediated, but remains on site above the cleanup standards (for example—capped area).  |
| RB— Remediated -<br>Below              | The contaminant was remediated, and no area of the site contains this contaminant above cleanup standards (for example— complete removal of contaminated soils).  |

**Halogenated chemicals and solvents**: Any chemical compound with chloro, bromo, iodo or fluoro is halogenated; those with eight or fewer carbons are generally solvents (e.g. halogenated methane, ethane, propane, butane, pentane, hexane, heptane or octane) and may also be used for or registered as pesticides or fumigants. Most are dangerous wastes, either listed or categorical. Organic compounds with more carbons are almost always halogenated pesticides or a contaminant or derivative. Referral to the HSDB is recommended if you are unfamiliar with a chemical name or compound, as it contains useful information about synonyms, uses, trade names, waste codes, and other regulatory information about most toxic or potentially toxic chemicals.

**Dibenzodioxins and dibenzofurans** are normalized to a combined equivalent toxicity based on 2,3,7,8-tetrachloro-pdibenzodioxin as set out in WAC 173-340-708(8)(d) and in the Evaluating the Toxicity and Assessing the Carcinogenic Risk of Environmental Mixtures using Toxicity Equivalency Factors Focus Sheet (https://fortress.wa.gov/ecy/clarc/FocusSheets/tef.pdf). Results may be reported as individual compounds and isomers (usually lab results), or as a toxic equivalency value (reports).
