APPENDIX F
LABORATORY ANALYTICAL REPORTS

DOCUMENTS INCLUDED IN APPENDIX F

(Part 1 of 10)

Indexes

2006-2007 Index of Validation Reports

2011-2012 Index of MBTL Laboratory Data Reports

2013 Index to Appendices E & F

(Part 2 of 10)

2006-2007 reports

F2523

CH2MHill. October 6, 2006.

F2530

CH2MHill. October 6, 2006.

F2574

CH2MHill. October 12, 2006.

F2582

CH2MHill. October 12, 2006.

F2604

CH2MHill. October 16, 2006.

F2616

CH2MHill. October 16, 2006.

F2628

CH2MHill. October 16, 2006.

F2664

CH2MHill. October 18, 2006.

F2680

CH2MHill. October 18, 2006.

F2712

CH2MHill. October 25, 2006.

G1376

CH2MHill. April 4, 2007.

JW94

Analytical Resources, Inc. October 4, 2006.

JX10

Analytical Resources, Inc. October 9, 2006.

JY35

Analytical Resources, Inc. October 10, 2006.

JY56

Analytical Resources, Inc. October 11, 2006.

JY77

Analytical Resources, Inc. October 11, 2006.

JY78_1-2

Analytical Resources, Inc. October 17, 2006.

JY78_2-2

Analytical Resources, Inc. October 5, 2006.

(Part 3 of 10)

JZ32_1-2

Analytical Resources, Inc. October 14, 2006.

JZ32_2-2

Analytical Resources, Inc. October 6, 2006.

JZ82

Analytical Resources, Inc. October 12, 2006.

JZ83

Analytical Resources, Inc. October 12, 2006.

JZ95

Analytical Resources, Inc. November 8, 2006.

K0608631

Columbia Analytical Services. October 19, 2006.

K0608716

Columbia Analytical Services. October 19, 2006.

K0701562

Columbia Analytical Services. March 7, 2007.

K0701936

Columbia Analytical Services. March 28, 2007.

K0702944

Columbia Analytical Services. April 13, 2007.

KB65

Analytical Resources, Inc. November 9, 2006.

KC54

Analytical Resources, Inc. November 10, 2006.

KG57

Analytical Resources, Inc. December 12, 2006.

(Part 4 of 10)

KG93

Analytical Resources, Inc. December 14, 2006.

KK85_1-2

Analytical Resources, Inc. January 27, 2007.

KK85_2-2

Analytical Resources, Inc. October 11, 2006.

KP85_1-2

Analytical Resources, Inc. March 15, 2007.

KP85_2-2

Analytical Resources, Inc. October 11, 2006.

(Part 5 of 10)

2011-2012 reports

A11E127

Apex Laboratories, LLC. August 11, 2011.

A11E148

Apex Laboratories, LLC. August 16, 2011.

A11G307

Apex Laboratories, LLC. August 24, 2011.

A11G308

Apex Laboratories, LLC. August 24, 2011.

A11G327

Apex Laboratories, LLC. September 7, 2011.

A11G328

Apex Laboratories, LLC. September 7, 2011.

A11G364

Apex Laboratories, LLC. September 7, 2011.

A11G365

Apex Laboratories, LLC. September 6, 2011.

A11G386

Apex Laboratories, LLC. September 6, 2011.

A11H018

Apex Laboratories, LLC. October 7, 2011.

A11H037

Apex Laboratories, LLC. November 7, 2011.

A11I008

Apex Laboratories, LLC. November 21, 2011.

A11I009

Apex Laboratories, LLC. November 21, 2011.

A11I050

Apex Laboratories, LLC. November 22, 2011.

A11I054

Apex Laboratories, LLC. November 22, 2011.

A11J072

Apex Laboratories, LLC. November 7, 2011.

A11J097

Apex Laboratories, LLC. November 9, 2011.

A11H099

Apex Laboratories, LLC. November 10, 2011.

A11J117

Apex Laboratories, LLC. December 1, 2011.

A11J118

Apex Laboratories, LLC. December 1, 2011.

A11J137

Apex Laboratories, LLC. December 1, 2011.

A11J138

Apex Laboratories, LLC. November 10, 2011.

A11J154

Apex Laboratories, LLC. November 10, 2011.

A11J155

Apex Laboratories, LLC. November 10, 2011.

A11J175

Apex Laboratories, LLC. November 22, 2011.

A11J200

Apex Laboratories, LLC. November 29, 2011.

A11J405

Apex Laboratories, LLC. November 29, 2011.

A11K011

Apex Laboratories, LLC. November 30, 2011.

A11L010

Apex Laboratories, LLC. January 13, 2012.

A11L011

Apex Laboratories, LLC. January 17, 2012.

A11L274

Apex Laboratories, LLC. January 16, 2012.

A12A029

Apex Laboratories, LLC. February 9, 2012.

A12A071

Apex Laboratories, LLC. February 9, 2012.

A12A135

Apex Laboratories, LLC. February 9, 2012.

A12A304

Apex Laboratories, LLC. February 9, 2012.

A12B337

Apex Laboratories, LLC. March 7, 2012.

A12C160

Apex Laboratories, LLC. March 28, 2012.

A12C235

Apex Laboratories, LLC. March 23, 2012.

TL20

Analytical Resources, Inc. September 20, 2011.

UE59

Analytical Resources, Inc. February 3, 2012.

UN09

Analytical Resources, Inc. March 21, 2012.

(Part 6 of 10)

2013 NPDES Laboratory reports

A12L233

Apex Laboratories, LLC. January 24, 2013.

A12L259

Apex Laboratories, LLC. January 24, 2013.

A12L261

Apex Laboratories, LLC. January 30, 2013.

A12L294

Apex Laboratories, LLC. January 24, 2013.

A13A229

Apex Laboratories, LLC. February 7, 2013.

A13B318

Apex Laboratories, LLC. February 25, 2013.

VV87

Analytical Resources, Inc. December 26, 2012.

VW48

Analytical Resources, Inc. December 20, 2012.

VW49

Analytical Resources, Inc. December 26, 2012.

(Part 7 of 10)

2013 RI/FS Laboratory reports

31300075

SGS Analytical Perspectives. February 5, 2013.

A12I470

Apex Laboratories, LLC. November 28, 2012.

A12I470 supplemental calibration information

Apex Laboratories, LLC. October 2, 2012.

A12J044

Apex Laboratories, LLC. December 13, 2012.

A12J067

Apex Laboratories, LLC. December 13, 2012.

A12J102

Apex Laboratories, LLC. January 15, 2013.

A12J102 supplemental calibration information

Apex Laboratories, LLC. October 12, 2012.

A12J138

Apex Laboratories, LLC. January 30, 2013.

A12J175

Apex Laboratories, LLC. January 30, 2013.

A12J509

Apex Laboratories, LLC. December 14, 2012.

A12J509 supplemental calibration information

Apex Laboratories, LLC. October 26, 2012.

A12J515

Apex Laboratories, LLC. December 14, 2012.

A12J515 supplemental calibration information

Apex Laboratories, LLC. October 26, 2012.

A12J537

Apex Laboratories, LLC. December 13, 2012.

A12J576

Apex Laboratories, LLC. December 19, 2012.

A12J621

Apex Laboratories, LLC. December 14, 2012.

A12J621 supplemental calibration information

Apex Laboratories, LLC. October 26, 2012.

A12J671

Apex Laboratories, LLC. December 14, 2012.

A12K226

Apex Laboratories, LLC. November 28, 2012.

A12K308

Apex Laboratories, LLC. December 19, 2012.

A12L002

Apex Laboratories, LLC. January 28, 2013.

A12L049

Apex Laboratories, LLC. January 28, 2013.

A12L076

Apex Laboratories, LLC. January 28, 2013.

A12L107

Apex Laboratories, LLC. February 5, 2013.

A12L200

Apex Laboratories, LLC. January 28, 2013.

A12L258

Apex Laboratories, LLC. January 28, 2013.

(Part 8 of 10)

A13A243

Apex Laboratories, LLC. February 12, 2013.

A4908

SGS Analytical Perspectives. December 14, 2012.

A4909

SGS Analytical Perspectives. December 17, 2012.

A4995

SGS Analytical Perspectives. January 4, 2013.

A5019_10601

SGS Analytical Perspectives. February 15, 2013.

A5019_10631

SGS Analytical Perspectives. February 15, 2013.

VM65

Analytical Resources, Inc. October 24, 2012.

VV14

Analytical Resources, Inc. December 13, 2012.

VV48

Analytical Resources, Inc. December 13, 2012.

(Part 9 of 10)

Bioassay Testing of Landfill and Fill Deposit Samples

Summary of Waste Designation Bioassay Testing on Landfill and Fill Deposit Samples

Anchor QEA, LLC. June 2013.

(Part 10 of 10)

NPDES Sediment Bioassays

P840-1 *Hyalella* acute bioassay

Northwestern Aquatic Sciences. March 15, 2013.

P840-2 *Chironomus* chronic bioassay

Northwestern Aquatic Sciences. March 15, 2013.

Data Validation

Supplemental Groundwater Samples (January 2012)					
SSA4-MW-01-011212	1/12/2012	Groundwater	A12A135	AQ DVR 3.28.2012	PAHs (SIM PAH - Low Level)
SSA6-MW-01-011212	1/12/2012	Groundwater	A12A135		NWTPH-Dx, EPH

Notes:

Al = aluminum
Ca = calcium
CN = cyanide
DVR = data validation report
EPH = extractable petroleum hydrocarbon
F = fluoride
Fe = iron
HCID = hydrocarbon identification
K = potassium
Mg = magnesium
Na = sodium
NH_4 = ammonium
NO_2 = nitrite
NO_3 = nitrate
NWTPH-Dx = Northwest Total Petroleum Hydrocarbons diesel-range (analytical method)
P = total phosphorous
PAH = polycyclic aromatic hydrocarbon
PO_4 = orthophosphate
SDG = sample data group
Si = silicon
SIM = selected Ion Monitoring (analytical method)
SO_4 = sulfate
TDS = total dissolved solid
TOC = total organic carbon
TSS = total suspended solid
TPH-Dx = total petroleum hydrocarbon – diesel range
WAD = weak acid dissociable

Notes:
GeoChem = total and dissolved metals: Al, As, Ca, Cr, Cu, Fe, Mg, Mn, Ni, K, Na, Si
Total and Dissolved Metals (for Groundwater)= Ag, Be, Cd, Hg, Pb, Sb, Se, Tl, Zn
Metals (for Total and TCLP Metals analyses of Mud & LF deposits)= Ag, As, Ba, Be, Cd, Cr, Cu, Hg, Ni, Pb, Sb, Se, Tl, Zn
SMS Metals (for Outfall Soils, Sediment) = Sb, As, Cd, Cr, Cu, Pb, Hg, Ni, Ag, Zn

NWTPH-Dx = Northwest Total Petroleum Hydrocarbons - Diesel Range
PAHs = Polycyclic Aromatic Hydrocarbons
PCBs = Polychlorinated Biphenyls
SMS = Sediment Management Standards
SVOCs = Semi-volatile Organic Compounds
TDS = Total Dissolved Solids
TOC = Total Organic Carbon
TS = Total Solids
TSS = Total Suspended Solids
VOCs = Volatile Organic Compounds
WAD = Weak Acid Dissociable

RE: Laboratory Report for Chinook Ventures, Inc
Applied Sciences Laboratory Reference No. F2523

Dear Barry Oliver:

On September 19, 2006, CH2M HILL Applied Sciences Laboratory received seven samples with a request for analysis of selected parameters. All analyses were performed by CH2M HILL unless otherwise indicated below.

The analytical results and associated quality control data are enclosed. Any unusual difficulties encountered during the analysis of your samples are discussed in the case narrative. This data package meets standards requested by client and is not intended or implied to meet any other standard.

CH2M HILL Applied Sciences Laboratory appreciates your business and looks forward to serving your analytical needs again. If you should have any questions concerning the data, or if you need additional information, please call Kathy McKinley at (541) 758-0235, extension 3144.

Sincerely,

Kathy McKinley

Kathy McKinley

Applied Sciences Laboratory

Organic CLP and CLP Like Data Qualifiers

U — The analyte was analyzed for, but not detected above the reported sample quantitation limit.

J — The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

UJ — The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

N — The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".

NJ — The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.

P — The primary and confirmation analyte result recoveries do not match.

E — The analyte was positively identified; the associated numerical value exceeded the instrument calibration range.

R — The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

Inorganic CLP and CLP Like Data Qualifiers

U — The analyte was analyzed for, but not detected above the reported sample quantitation limit.

B — The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

UJ — The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

E — The analyte was positively identified; the associated numerical value exceeded the instrument calibration range.

N — The matrix spike/matrix spike duplicate recovery for the analyte is outside of acceptance criteria—qualifier is applied to the native sample only.

R — The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

FREE CYANIDE BY METHOD ASTM D4282

CASE NARRATIVE
FREE CYANIDE

Analytical Method: ASTM D4282 SDG#: F2523

Lab Name: CH2M HILL Applied Science Laboratories Contract #: 920899.OTC

Client: Chinook Ventures, Inc Prime Contractor: _____

I. Holding Times:
Recovery of free cyanide in the blank spike associated with the initial extraction batch on 9/19/06 exceeded acceptance criteria. Per Kathy McKinley, samples were extracted and reanalyzed outside their holding times. Recovery of free cyanide in the blank spike associated with this second analytical batch met all acceptance criteria.

II. Analysis:

A. Calibration:
All acceptance criteria were met.

B. Blanks:
All acceptance criteria were met.

C. Matrix Spike and Matrix Spike Duplicate Sample(s):
Samples were analyzed in accordance with standard operating procedure.

D. Laboratory Control Spike(LCS)
See comments above.

E. Other:
None.

III. Documentation Exceptions:
None

IV. I certify that this data package is in compliance with the terms and conditions agreed to by the client and CH2M HILL, both technically and for completeness, except for the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or designee, as verified by the following signature.

RE: Laboratory Report for Chinook Ventures, Inc
Applied Sciences Laboratory Reference No. F2530

Dear Barry Oliver:

On September 20, 2006, CH2M HILL Applied Sciences Laboratory received 15 samples with a request for analysis of selected parameters. All analyses were performed by CH2M HILL unless otherwise indicated below.

The analytical results and associated quality control data are enclosed. Any unusual difficulties encountered during the analysis of your samples are discussed in the case narrative. This data package meets standards requested by client and is not intended or implied to meet any other standard.

CH2M HILL Applied Sciences Laboratory appreciates your business and looks forward to serving your analytical needs again. If you should have any questions concerning the data, or if you need additional information, please call Kathy McKinley at (541) 758-0235, extension 3144.

Sincerely,

Kathy McKinley

Applied Sciences Laboratory

Organic CLP and CLP Like Data Qualifiers

U — The analyte was analyzed for, but not detected above the reported sample quantitation limit.

J — The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

UJ — The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

N — The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".

NJ — The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.

P — The primary and confirmation analyte result recoveries do not match.

E — The analyte was positively identified; the associated numerical value exceeded the instrument calibration range.

R — The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

Inorganic CLP and CLP Like Data Qualifiers

U — The analyte was analyzed for, but not detected above the reported sample quantitation limit.

B — The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

UJ — The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

E — The analyte was positively identified; the associated numerical value exceeded the instrument calibration range.

N — The matrix spike/matrix spike duplicate recovery for the analyte is outside of acceptance criteria—qualifier is applied to the native sample only.

R — The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

WEAK ACID DISSOCIABLE CYANIDE
BY METHOD SM4500-CN I

CASE NARRATIVE
WEAK ACID DISSOCIABLE CYANIDE

Analytical Method: SM4500-CN I

SDG#: F2530

Lab Name: CH2M HILL Applied Science Laboratories

Contract #: 920899.OTC

Client: Anchor Environmental

Prime Contractor: _____

I. Holding Times:
All acceptance criteria were met.

II. Analysis:

A. Calibration:
All acceptance criteria were met.

B. Blanks:
All acceptance criteria were met.

C. Matrix Spike and Matrix Spike Duplicate Sample(s):
Samples were analyzed in accordance with standard operating procedure.

D. Laboratory Control Spike(LCS)
All acceptance criteria were met.

E. Other:
None.

III. Documentation Exceptions:
None

IV. I certify that this data package is in compliance with the terms and conditions agreed to by the client and CH2M HILL, both technically and for completeness, except for the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or designee, as verified by the following signature.

RE: Laboratory Report for Chinook Ventures, Inc
Applied Sciences Laboratory Reference No. F2574

Dear Barry Oliver:

On September 27, 2006, CH2M HILL Applied Sciences Laboratory received three samples with a request for analysis of selected parameters. All analyses were performed by CH2M HILL unless otherwise indicated below.

The analytical results and associated quality control data are enclosed. Any unusual difficulties encountered during the analysis of your samples are discussed in the case narrative. This data package meets standards requested by client and is not intended or implied to meet any other standard.

CH2M HILL Applied Sciences Laboratory appreciates your business and looks forward to serving your analytical needs again. If you should have any questions concerning the data, or if you need additional information, please call Kathy McKinley at (541) 758-0235, extension 3144.

Sincerely,

Kathy McKinley

Applied Sciences Laboratory

Organic CLP and CLP Like Data Qualifiers

U — The analyte was analyzed for, but not deteeted above the reported sample quantitation limit.

J — The analyte was positively identified; the assoeiated numerieal value is the approximate eoneentration of the analyte in the sample.

UJ — The analyte was not deteeted above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to aceurately and preeisely measure the analyte in the sample.

N — The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".

NJ — The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.

P — The primary and confirmation analyte result recoveries do not match.

E — The analyte was positively identified; the associated numerical value exceeded the instrument calibration range.

R — The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

Inorganic CLP and CLP Like Data Qualifiers

U — The analyte was analyzed for, but not detected above the reported sample quantitation limit.

B — The analyte was positively identified; the assoeiated numerical value is the approximate concentration of the analyte in the sample.

UJ — The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

E — The analyte was positively identified; the assoeiated numerical value exceeded the instrument calibration range.

N — The matrix spike/matrix spike duplicate recovery for the analyte is outside of acceptance criteria—qualifier is applied to the native sample only.

R — The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

Sample Receipt Exception Report

Sample Batch Number: F2574 **Client /Project** Chinook Ventures /Anchor Env.

	The following exceptions were noted:	Comments (write number of exception description and the Impacted sample numbers)
	1. No custody seal as required by project	8) For total and WAD CN
	2. No chain-of-custody provided	PZ-3-092606 (F2574-01) pH 9
	3. Analysis, description, date of collection not provided	PZ-4-092606 (F2574-02) pH 10
	4. Samples broken or leaking on reciept.	Received at pH <12
	5. Temperature of samples inappropriate for analysis requested	
	6. Container inappropriate for analysis requested	
	7. Inadequate sample volume.	
X	8. Preservation inappropriate for analysis requested	
	9. Samples received out of holding time for analysis requrested	
	10. Discrepancies between COC form and container labels.	
	11. Other.	

ACTION TAKEN: 8) Added preservative to pH >12

RE: Laboratory Report for Chinook Ventures, Inc
Applied Sciences Laboratory Reference No. F2582

Dear Barry Oliver:

On September 28, 2006, CH2M HILL Applied Sciences Laboratory received eight samples with a request for analysis of selected parameters. All analyses were performed by CH2M HILL unless otherwise indicated below.

The analytical results and associated quality control data are enclosed. Any unusual difficulties encountered during the analysis of your samples are discussed in the case narrative. This data package meets standards requested by client and is not intended or implied to meet any other standard.

CH2M HILL Applied Sciences Laboratory appreciates your business and looks forward to serving your analytical needs again. If you should have any questions concerning the data, or if you need additional information, please call Kathy McKinley at (541) 758-0235, extension 3144.

Sincerely,

Kathy McKinley

Applied Sciences Laboratory

Organic CLP and CLP Like Data Qualifiers

U — The analyte was analyzed for, but not detected above the reported sample quantitation limit.

J — The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

UJ — The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

N — The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".

NJ — The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.

P — The primary and confirmation analyte result recoveries do not match.

E — The analyte was positively identified; the associated numerical value exceeded the instrument calibration range.

R — The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

Inorganic CLP and CLP Like Data Qualifiers

U — The analyte was analyzed for, but not detected above the reported sample quantitation limit.

B — The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

UJ — The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

E — The analyte was positively identified; the associated numerical value exceeded the instrument calibration range.

N — The matrix spike/matrix spike duplicate recovery for the analyte is outside of acceptance criteria—qualifier is applied to the native sample only.

R — The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

WEAK ACID DISSOCIABLE CYANIDE

BY METHOD SM4500-CN I

CASE NARRATIVE
WEAK ACID DISSOCIABLE CYANIDE

Analytical Method: SM4500-CN I

SDG#: F2582

Lab Name: CH2M HILL Applied Science Laboratories

Contract #: 920899.OTC

Client: Anchor Environmental

Prime Contractor: _____

I. Holding Times:
All acceptance criteria were met.

II. Analysis:

A. Calibration:
All acceptance criteria were met.

B. Blanks:
All acceptance criteria were met.

C. Matrix Spike and Matrix Spike Duplicate Sample(s):
Samples were analyzed in accordance with standard operating procedure.

D. Laboratory Control Spike(LCS)
All acceptance criteria were met.

E. Other:
None.

III. Documentation Exceptions:
None

IV. I certify that this data package is in compliance with the terms and conditions agreed to by the client and CH2M HILL, both technically and for completeness, except for the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or designee, as verified by the following signature.

RE: Laboratory Report for Chinook Ventures, Inc
Applied Sciences Laboratory Reference No. F2604

Dear Barry Oliver:

On October 03, 2006, CH2M HILL Applied Sciences Laboratory received 10 samples with a request for analysis of selected parameters. All analyses were performed by CH2M HILL unless otherwise indicated below.

The analytical results and associated quality control data are enclosed. Any unusual difficulties encountered during the analysis of your samples are discussed in the case narrative. This data package meets standards requested by client and is not intended or implied to meet any other standard.

CH2M HILL Applied Sciences Laboratory appreciates your business and looks forward to serving your analytical needs again. If you should have any questions concerning the data, or if you need additional information, please call Kathy McKinley at (541) 758-0235, extension 3144.

Sincerely,

Kathy McKinley

Applied Sciences Laboratory

Organic CLP and CLP Like Data Qualifiers

U	The analyte was analyzed for, but not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and prccisely measure the analyte in the sample.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represcnts its approximate concentration.
P	The primary and confirmation analyte result recoveries do not match.
E	The analyte was positively identified; the associated numerical value exceeded the instrument calibration range.
R	The sample results are rejected due to serious defieieneies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

Inorganic CLP and CLP Like Data Qualifiers

U	The analyte was analyzed for, but not deteeted above the reported sample quantitation limit.
B	The analyte was positively identified; the associated numerieal value is the approximate concentration of the analyte in the sample.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the aetual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
E	The analyte was positively identified; the associated numerical value exceeded the instrument calibration range.
N	The matrix spike/matrix spike duplicate recovery for the analyte is outside of acceptance eriteria—qualifier is applied to the native sample only.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

FREE CYANIDE

Analytical Method: ASTM D4282 SDG#: F2604

Lab Name: CH2M HILL Applied Science Laboratories Contract #: 920899.OTC

Client: Chinook Ventures, Inc Prime Contractor: _____

I. Holding Times:
Client samples G2S-100206 and G2D-100206 (F260403 and F260404) were originally extracted and analyzed within the method specified holding time of 24 hrs. However, due to matrix interference issues, the samples needed to be extracted and reanalyzed the following day.

II. Analysis:

A. Calibration:
All acceptance criteria were met.

B. Blanks:
All acceptance criteria were met.

C. Matrix Spike and Matrix Spike Duplicate Sample(s):
Samples were analyzed in accordance with standard operating procedure.

D. Laboratory Control Spike(LCS)
All acceptance criteria were met.

E. Other:
None.

III. Documentation Exceptions:
None

IV. I certify that this data package is in compliance with the terms and conditions agreed to by the client and CH2M HILL, both technically and for completeness, except for the conditions detailed above. WEAK ACID DISSOCIABLE CYANIDE
BY METHOD SM4500-CN I

CASE NARRATIVE
WEAK ACID DISSOCIABLE CYANIDE

Analytical Method: SM4500-CN I

SDG#: F2604

Lab Name: CH2M HILL Applied Science Laboratories

Contract #: 920899.OTC

Client: Anchor Environmental

Prime Contractor: _____

I. Holding Times:
All acceptance criteria were met.

II. Analysis:

A. Calibration:
All acceptance criteria were met.

B. Blanks:
All acceptance criteria were met.

C. Matrix Spike and Matrix Spike Duplicate Sample(s):
Samples were analyzed in accordance with standard operating procedure.

D. Laboratory Control Spike(LCS)
All acceptance criteria were met.

E. Other:
None.

III. Documentation Exceptions:
None

IV. I certify that this data package is in compliance with the terms and conditions agreed to by the client and CH2M HILL, both technically and for completeness, except for the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or designee, as verified by the following signature.

Sample Receipt Exception Report

Sample Batch Number: F2604 **Client /Project** Anchor Env/ Chinook Ventures

The following exceptions were noted:		Comments (write number of exception description and the impacted sample numbers)
	1. No custody seal as required by project	9) Free cyanide has a 24 hour hold time. Samples were taken 10/2/06 at 10:15, 10:45, 10:27, 10:35, 10:52 and not received until 10-3-06 10:30
	2. No chain-of-custody provided	
	3. Analysis, description, date of collection not provided	
	4. Samples broken or leaking on reciept.	8) The following samples for total and WAD Cyanide were received at pH <12.
	5. Temperature of samples inappropriate for analysis requested	F2604-01 (RZ-100206) -03 (GZS-100206) -04 (GZD-100206) -05 (GID-100206) -10 (FB-100206)
	6. Container inappropriate for analysis requested	
	7. Inadequate sample volume.	
X	8. Preservation inappropriate for analysis requested	
X	9. Samples received out of holding time for analysis requrested	
	10. Discrepancies between COC form and container labels.	
	11. Other.	

ACTION TAKEN: 9) Notify client.
8) Preservative added to pH >12

RE: Laboratory Report for Chinook Ventures, Inc
Applied Sciences Laboratory Reference No. F2616

Dear Barry Oliver:

On October 04, 2006, CH2M HILL Applied Sciences Laboratory received nine samples with a request for analysis of selected parameters. All analyses were performed by CH2M HILL unless otherwise indicated below.

The analytical results and associated quality control data are enclosed. Any unusual difficulties encountered during the analysis of your samples are discussed in the case narrative. This data package meets standards requested by client and is not intended or implied to meet any other standard.

CH2M HILL Applied Sciences Laboratory appreciates your business and looks forward to serving your analytical needs again. If you should have any questions concerning the data, or if you need additional information, please call Kathy McKinley at (541) 758-0235, extension 3144.

Sincerely,

Kathy McKinley

Applied Sciences Laboratory

Organic CLP and CLP Like Data Qualifiers

U — The analyte was analyzed for, but not deteeted above the reported sample quantitation limit.

J — The analyte was positively identified; the assoeiated numerieal value is the approximate concentration of the analyte in the sanple.

UJ — The analyte was not deteeted above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the aetual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

N — The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentativc identification".

NJ — The analysis indicates the presence of an analyte that has been "tentatively identificd" and the associated numerical value represents its approximate concentration.

P — The primary and confirmation analyte result recoveries do not match.

E — The analyte was positively identified; the associated numerical valuc exceeded the instrument calibration range.

R — The sample results are rejected duc to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

Inorganic CLP and CLP Like Data Qualifiers

U — The analyte was analyzed for, but not deteeted above the reported sample quantitation limit.

B — The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

UJ — The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

E — The analyte was positively identified; the associated numerical value exceeded the instrument calibration range.

N — The matrix spike/matrix spike duplicate recovery for the analyte is outside of acccptance criteria—qualifier is applied to the native sample only.

R — The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

RE: Laboratory Report for Chinook Ventures, Inc
Applied Sciences Laboratory Reference No. F2628

Dear Barry Oliver:

On October 05, 2006, CH2M HILL Applied Sciences Laboratory received three samples with a request for analysis of selected parameters. All analyses were performed by CH2M HILL unless otherwise indicated below.

The analytical results and associated quality control data are enclosed. Any unusual difficulties encountered during the analysis of your samples are discussed in the case narrative. This data package meets standards requested by client and is not intended or implied to meet any other standard.

CH2M HILL Applied Sciences Laboratory appreciates your business and looks forward to serving your analytical needs again. If you should have any questions concerning the data, or if you need additional information, please call Kathy McKinley at (541) 758-0235, extension 3144.

Sincerely,

Kathy McKinley

Applied Sciences Laboratory

Organic CLP and CLP Like Data Qualifiers

U — The analyte was analyzed for, but not detected above the reported sample quantitation limit.

J — The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

UJ — The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

N — The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".

NJ — The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.

P — The primary and confirmation analyte result recoveries do not match.

E — The analyte was positively identified; the associated numerical value exceeded the instrument calibration range.

R — The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

Inorganic CLP and CLP Like Data Qualifiers

U — The analyte was analyzed for, but not detected above the reported sample quantitation limit.

B — The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

UJ — The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

E — The analyte was positively identified; the associated numerical value exceeded the instrument calibration range.

N — The matrix spike/matrix spike duplicate recovery for the analyte is outside of acceptance criteria—qualifier is applied to the native sample only.

R — The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

RE: Laboratory Report for Chinook Ventures, Inc
Applied Sciences Laboratory Reference No. F2664

Dear Barry Oliver:

On October 11, 2006, CH2M HILL Applied Sciences Laboratory received three samples with a request for analysis of selected parameters. All analyses were performed by CH2M HILL unless otherwise indicated below.

The analytical results and associated quality control data are enclosed. Any unusual difficulties encountered during the analysis of your samples are discussed in the case narrative. This data package meets standards requested by client and is not intended or implied to meet any other standard.

CH2M HILL Applied Sciences Laboratory appreciates your business and looks forward to serving your analytical needs again. If you should have any questions concerning the data, or if you need additional information, please call Kathy McKinley at (541) 758-0235, extension 3144.

Sincerely,

Kathy McKinley

Organic CLP and CLP Like Data Qualifiers

U — The analyte was analyzed for, but not detected above the reported sample quantitation limit.

J — The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

UJ — The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

N — The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".

NJ — The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.

P — The primary and confirmation analyte result recoveries do not match.

E — The analyte was positively identified; the associated numerical value exceeded the instrument calibration range.

R — The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

Inorganic CLP and CLP Like Data Qualifiers

U — The analyte was analyzed for, but not detected above the reported sample quantitation limit.

B — The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

UJ — The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

E — The analyte was positively identified; the associated numerical value exceeded the instrument calibration range.

N — The matrix spike/matrix spike duplicate recovery for the analyte is outside of acceptance criteria—qualifier is applied to the native sample only.

R — The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

Sample Receipt Exception Report

Sample Batch Number: F2680 **Client /Project** Chinook Ventures

	The following exceptions were noted:	Comments (write number of exception description and the impacted sample numbers)
	1. No custody seal as required by project	5) Samples received at 11.6°C on blue ice
	2. No chain-of-custody provided	
	3. Analysis, description, date of collection not provided	
	4. Samples broken or leaking on reciept.	
X	5. Temperature of samples inappropriate for analysis requested	
	6. Container inappropriate for analysis requested	
	7. Inadequate sample volume.	
	8. Preservation inappropriate for analysis requested	
	9. Samples received out of holding time for analysis requrested	
	10. Discrepancies between COC form and container labels.	
	11. Other.

Kathy – Please proceed with analyses.

Tom – We'll need to add more ice to the lysimeter samples for future shipments.

James

Subject: Chinook Recd Today

On the samples we received today, ice was melted and arrived at 11.6.
24 hour holding time... shall we proceed with analysis?
Please let me know ASAP.

Thanks

RE: Laboratory Report for Chinook Ventures, Inc
Applied Sciences Laboratory Reference No. F2712

Dear Barry Oliver:

On October 17, 2006, CH2M HILL Applied Sciences Laboratory received three samples with a request for analysis of selected parameters. All analyses were performed by CH2M HILL unless otherwise indicated below.

The analytical results and associated quality control data are enclosed. Any unusual difficulties encountered during the analysis of your samples are discussed in the case narrative. This data package meets standards requested by client and is not intended or implied to meet any other standard.

CH2M HILL Applied Sciences Laboratory appreciates your business and looks forward to serving your analytical needs again. If you should have any questions concerning the data, or if you need additional information, please call Kathy McKinley at (541) 758-0235, extension 3144.

Sincerely,

Kathy McKinley

Organic CLP and CLP Like Data Qualifiers

U	The analyte was analyzed for, but not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the assoeiated numerical value represents its approximate concentration.
P	The primary and confirmation analyte result recoveries do not match.
E	The analyte was positively identified; the associated numerical value exceeded the instrument calibration range.
R	Thc sample results are rejected due to scrious deficiencics in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

Inorganic CLP and CLP Like Data Qualifiers

U	The analyte was analyzed for, but not detected above the reported sample quantitation limit.
B	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation nccessary to accurately and precisely measurc the analyte in the sample.
E	The analyte was positively identified; the associated numerical value exceeded the instrument calibration range.
N	Thc matrix spikc/matrix spike duplicate recovery for the analyte is outside of acceptance criteria—qualifier is applied to the native sample only.
R	The sample results are rejected duc to serious deficicncics in the ability to analyze thc sample and meet quality control critcria. The presence or abscnce of the analyte cannot be verified.

VERIFICATION OF SAMPLE CONDITIONS (verify all items) * HD = Client Hand delivered Samples

Observation	YES	NO
Radiological Screening for AFCEE		✓
Were custody seals intact and on the outside of the cooler?	✓	
If yes, Where? Front ✓ Rear ✓ Lt Side ___ Rt Side ___		
Type of packing material: Ice ~~Blue Ice~~ ~~Bubble wrap~~		
Was the Chain of Custody inside the cooler?	✓	
Was the Chain of Custody properly filled out?	✓	
Were the sample containers in good condition?	✓	
Containers supplied by ASL?		✓
Any sample with < 1/2 holding time remaining? If so contact LPM Free CN-	✓	
Was there ice in the cooler? Enter temp. 2.4 C	✓	
All VOCs free of air bubbles ?		NA

RE: Laboratory Report for Anchor Environmental, L.L.C
Applied Sciences Laboratory Reference No. G1376

Dear Rebecca Desrosiers:

On March 01, 2007, CH2M HILL Applied Sciences Laboratory received three samples with a request for analysis of selected parameters. All analyses were performed by CH2M HILL unless otherwise indicated below.

The analytical results and associated quality control data are enclosed. Any unusual difficulties encountered during the analysis of your samples are discussed in the case narrative. This data package meets standards requested by client and is not intended or implied to meet any other standard.

CH2M HILL Applied Sciences Laboratory appreciates your business and looks forward to serving your analytical needs again. If you should have any questions concerning the data, or if you need additional information, please call Kathy McKinley at (541) 758-0235, extension 3144.

Sincerely,

Kathy McKinley

Kathy McKinley
Analytical Manager

Organic CLP and CLP Like Data Qualifiers

U The analyte was analyzed for, but not detected above the reported sample quantitation limit.

J The analyte was positively identified; the associated numerical value is the approximate eoneentration of the analyte in the sample.

UJ The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and nay or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

N The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".

NJ The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.

P The primary and confirmation analyte result recoveries do not match.

E The analyte was positively identified; the associated numerical value exceeded the instrumcnt calibration range.

R The sample results are rejccted duc to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

Inorganic CLP and CLP Like Data Qualifiers

U Thc analyte was analyzed for, but not detected above the reported sample quantitation limit.

B The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

UJ The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and nay or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

E The analyte was positively idcntified; thc associated numerical value exceeded the instrument calibration range.

N The matrix spike/matrix spikc duplicate recovery for the analyte is outside of acceptance criteria—qualifier is applicd to the native sample only.

R The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. Thc presence or abscnce of the analyte cannot be verified.

RE: Client Project: Chinook
ARI Job No. JW94

Dear Kristin:

Please find enclosed the original chain of custody documentation and the final data package for samples from the project referenced above.

Problems associated with these analyses are discussed in the Case Narrative.

An electronic copy of this package will remain on file with ARI. Should you have any questions or problems, please feel free to contact me at your convenience.

Sincerely,

ANALYTICAL RESOURCES, INC.

Susan Dunnihoo
Client Service Manager
sue@arilabs.com

Limits of Liability: *ARI will perform all requested services in accordance with appropriate methodology following ARI Standard Operating Procedures and the ARI Quality Assurance Program. This program meets standards for the industry. The total liability of ARI, its officers, agents, employees, or successors, arising out of or in connection with the requested services, shall not exceed the Invoiced amount for said services. The acceptance by the client of a proposal for services by ARI release ARI from any liability in excess thereof, not withstanding any provision to the contrary in any contract, purchase order or co-signed agreement between ARI and the Client.*

Sample Retention Policy: All samples submitted to ARI will be appropriately discarded no sooner than 90 days after receipt or 60 days after submission of hardcopy data, whichever is longer, unless alternate retention schedules have been established by work-order or contract.

Case Narrative

Client: Anchor Environmental
Project: Chinook
Matrix: Water
ARI Job Nos. JW94

Sample receipt

Seven water samples were received September 18, 2006 under ARI Job JW94. Samples were iced and the cooler temperature measured by IR thermometer following ARI SOP was 7.4° C. Samples were received in good condition with no discrepancies in paperwork. Three of the samples, PZ-7-091806, PZ-6-091806 and RL-2s-091806 failed the preservation check. Sample pH was readjusted at login. Failure was attributed to the characteristics of the samples, as samples were an amber to black color with material that flocculated out upon acidification.

ARI was informed verbally that all water samples received from the Chinook site have been field filtered.

Dissolved Metals

As Silica will mineralize under the digestion procedure used for environmental samples, analysis of the Silica was performed on sample that was acidified only (Prep Method 6010B). A large amount of material flocculated out upon acidification, and there were concerns that this material might affect analysis of the remaining target elements. The samples were therefore also digested under prep method 3010A and analyzed for those elements. As a check, samples PZ-6-091806 and PZ-7-091806 were analyzed for the full target list by both methods.

The method blanks were clean at the reporting limit with the exception of low levels of Calcium in the digested blank. As sample results were much higher than the blank, no corrective action was taken.

LCS recoveries were within ARI and method limits.

Duplicate RPDs were within ARI and method limits.

Matrix spike recoveries were within limits with the exception of Iron for the raw sample and Sodium for both the raw and digested sample. Outliers are attributed to high concentration of the element in the parent sample and no corrective action is required.

There were no other incidents of note.

General Chemistry Parameters

Alkalinity

Samples were prepared and analyzed within the required holding time of 14 days.

The replicate analysis has RPDs within limits.

There were no incidents of note.

Total Phosphorous

Samples were prepared and analyzed within the required holding time of 28 days.

The method blank was clean.

Standard reference recoveries were within limits.

The replicate analysis has RPDs within limits.

The matrix spike had recoveries within limits.

There were no incidents of note.

Ion Chromatography – Fluoride, Chloride, Sulfate

Samples were prepared and analyzed within the required holding time of 28 days.

The method blanks were clean.

Standard reference recoveries were within limits.

The replicate analysis has RPDs within limits.

The matrix spike had recoveries within limits.

Sample PZ-7-091806 required analysis at dilution, due to interference in the chromatogram.

There were no other incidents of note.

Geotechnical Parameters

The sample density was measure gravimetrically using a 500-mL calibrated pychnometer, at the temperature indicated.

Data Reporting Qualifiers

Effective 12/28/04

Inorganic Data

U Indicates that the target analyte was not detected at the reported concentration

* Duplicate RPD is not within established control limits

B Reported value is less than the CRDL but ≥ the Reporting Limit

N Matrix Spike recovery not within established control limits

NA Not Applicable, analyte not spiked

H The natural concentration of the spiked element is so much greater than the concentration spiked that an accurate determination of spike recovery is not possible

L Analyte concentration is ≤5 times the Reporting Limit and the replicate control limit defaults to ±1 RL instead of the normal 20% RPD

Organic Data

U Indicates that the target analyte was not detected at the reported concentration

* Flagged value is not within established control limits

B Analyte detected in an associated Method Blank at a concentration greater than one-half of ARI's Reporting Limit or 5% of the regulatory limit or 5% of the analyte concentration in the sample.

J Estimated concentration when the value is less than ARI's established reporting limits

D The spiked compound was not detected due to sample extract dilution

NR Spiked compound recovery is not reported due to chromatographic interference

E Estimated concentration calculated for an analyte response above the valid instrument calibration range. A dilution is required to obtain an accurate quantification of the analyte.

S Indicates an analyte response that has saturated the detector. The calculated concentration is not valid; a dilution is required to obtain valid quantification of the analyte

NA The flagged analyte was not analyzed for

NS The flagged analyte was not spiked into the sample

M Estimated value for an analyte detected and confirmed by an analyst but with low spectral match parameters. This flag is used only for GC-MS analyses

N The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification"

Y The analyte is not detected at or above the reported concentration. The reporting limit is raised due to chromatographic interference. The Y flag is equivalent to the U flag with a raised reporting limit.

C The analyte was positively identified on only one of two chromatographic columns. Chromatographic interference prevented a positive identification on the second column

P The analyte was detected on both chromatographic columns but the quantified values differ by ≥40% RPD with no obvious chromatographic interference

Geotechnical Data

A The total of all fines fractions. This flag is used to report total fines when only sieve analysis is requested and balances total grain size with sample weight.

F Samples were frozen prior to particle size determination

SM Sample matrix was not appropriate for the requested analysis. This normally refers to samples contaminated with an organic product that interferes with the sieving process and/or moisture content, porosity and saturation calculations

SS Sample did not contain the proportion of "fines" required to perform the pipette portion of the grain size analysis

W Weight of sample in some pipette aliquots was below the level required for accurate weighting

RE: Client Project: Chinook
ARI Job No. JX10

Dear Kristin:

Please find enclosed the original chain of custody documentation and the final data package for samples from the project referenced above.

Problems associated with these analyses are discussed in the Case Narrative.

An electronic copy of this package will remain on file with ARI. Should you have any questions or problems, please feel free to contact me at your convenience.

Sincerely,

ANALYTICAL RESOURCES, INC.

Susan Dunnihoo

ANALYTICAL
RESOURCES
INCORPORATED

Case Narrative

Client: Anchor Environmental
Project: Chinook
Matrix: Water
ARI Job Nos. JX10

Sample receipt

Fourteen water samples were received September 20, 2006 under ARI Job JX10. Samples were iced and the cooler temperatures measured by IR thermometer following ARI SOP were 4.6 to 7.7° C. Samples were received in good condition with no discrepancies in paperwork. Two of the samples, G-6d-091906 and RLSW-4-091906 failed the preservation check. Sample pH was readjusted in the laboratory. Failure was attributed to the characteristics of the samples, as samples were amber to black in color with material that flocculated upon acidification.

ARI was informed verbally that all water samples received from the Chinook site have been field filtered.

Dissolved Metals

As Silica will mineralize under the digestion procedure used for environmental samples, analysis of the Silica was performed on sample that was acidified only (Prep Method 6010B). The samples were also digested under prep method 3010A and analyzed for the remaining target elements.

The method blanks were clean at the reporting limit.

LCS recoveries were within ARI and method limits.

Duplicate RPDs were within ARI and method limits.

Matrix spike recoveries were within limits with the exception of Sodium for the digested sample. The outlier was attributed to high concentration of the element in the parent sample and no corrective action is required.

There were no other incidents of note.

General Chemistry Parameters

Alkalinity

Samples were prepared and analyzed within the required holding time of 14 days.

The replicate analysis has RPDs within limits.

There were no incidents of note.

Total Phosphorous

Samples were prepared and analyzed within the required holding time of 28 days.

The method blanks were clean.

Standard reference recoveries were within limits.

The replicate analysis has RPDs within limits.

The matrix spike had recoveries within limits.

There were no incidents of note.

Ion Chromatography – Fluoride, Chloride, Sulfate

Samples were prepared and analyzed within the required holding time of 28 days.

The method blanks were clean.

Standard reference recoveries were within limits.

The replicate had RPDs within limits and the matrix spike had recoveries within limits.

A CCB on 9/20 had a low response of Chloride; samples with results greater than 10 times the CCB were reported, and all other samples were reanalyzed.

There were no other incidents of note.

Geotechnical Parameters

The sample density was measure gravimetrically using a 500-mL calibrated pychnometer, at the temperature indicated.

Data Reporting Qualifiers

Effective 12/28/04

Inorganic Data

U Indicates that the target analyte was not detected at the reported concentration

* Duplicate RPD is not within established control limits

B Reported value is less than the CRDL but ≥ the Reporting Limit

N Matrix Spike recovery not within established control limits

NA Not Applicable, analyte not spiked

H The natural concentration of the spiked element is so much greater than the concentration spiked that an accurate determination of spike recovery is not possible

L Analyte concentration is ≤5 times the Reporting Limit and the replicate control limit defaults to ±1 RL instead of the normal 20% RPD

Organic Data

U Indicates that the target analyte was not detected at the reported concentration

* Flagged value is not within established control limits

B Analyte detected in an associated Method Blank at a concentration greater than one-half of ARI's Reporting Limit or 5% of the regulatory limit or 5% of the analyte concentration in the sample.

J Estimated concentration when the value is less than ARI's established reporting limits

D The spiked compound was not detected due to sample extract dilution

NR Spiked compound recovery is not reported due to chromatographic interference

E Estimated concentration calculated for an analyte response above the valid instrument calibration range. A dilution is required to obtain an accurate quantification of the analyte.

S Indicates an analyte response that has saturated the detector. The calculated concentration is not valid; a dilution is required to obtain valid quantification of the analyte

NA The flagged analyte was not analyzed for

NS The flagged analyte was not spiked into the sample

M Estimated value for an analyte detected and confirmed by an analyst but with low spectral match parameters. This flag is used only for GC-MS analyses

N The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification"

Y The analyte is not detected at or above the reported concentration. The reporting limit is raised due to chromatographic interference. The Y flag is equivalent to the U flag with a raised reporting limit.

C The analyte was positively identified on only one of two chromatographic columns. Chromatographic interference prevented a positive identification on the second column

P The analyte was detected on both chromatographic columns but the quantified values differ by ≥40% RPD with no obvious chromatographic interference

Geotechnical Data

A The total of all fines fractions. This flag is used to report total fines when only sieve analysis is requested and balances total grain size with sample weight.

F Samples were frozen prior to particle size determination

SM Sample matrix was not appropriate for the requested analysis. This normally refers to samples contaminated with an organic product that interferes with the sieving process and/or moisture content, porosity and saturation calculations

SS Sample did not contain the proportion of "fines" required to perform the pipette portion of the grain size analysis

W Weight of sample in some pipette aliquots was below the level required for accurate weighting

ANALYTICAL
RESOURCES
INCORPORATED

CORRECTIVE ACTIONS - Inorganic Analyses

Criteria Flagged

ARI Project No.: JX10 Client Name: ANCHOR ENVIRON.

Date of Out-of-Control Event: 9/20/06 Method/Element: IC CHLORIDE

Unacceptable Blank	✓	Prep Code:
Unacceptable Duplicate		
Unacceptable Spike		Other:
Unacceptable Reference		

Details of Problem/Recommended Corrective Action:

CCB HAD CONTAMINATION BUT REPORTED.
SAMPLES HAD CONCENTRATIONS GREATER THAN
10X THAT CONTAMINATION. POWER OUT
BEFORE CLOSING CCB/CCV ON JX10 K2-N2.

Samples Affected: ~~JW~~ JX10 H2-J2, K2-N2

Corrective Action Taken: NO REANALYSIS FOR REPORTED
SAMPLES. RERUN SAMPLES AFFECTED
BY STOP, POWER OUT

RE: Client Project: Chinook
ARI Job No. JY35

Dear Kristin:

Please find enclosed the original chain of custody documentation and the final data package for samples from the project referenced above.

Problems associated with these analyses are discussed in the Case Narrative.

An electronic copy of this package will remain on file with ARI. Should you have any questions or problems, please feel free to contact me at your convenience.

Sincerely,

ANALYTICAL RESOURCES, INC.

Susan Dunnihoo

Limits of Liability: *ARI will perform all requested services in accordance with appropriate methodology following ARI Standard Operating Procedures and the ARI Quality Assurance Program. This program meets standards for the industry. The total liability of ARI, its officers, agents, employees, or successors, arising out of or in connection with the requested services, shall not exceed the Invoiced amount for said services. The acceptance by the client of a proposal for services by ARI release ARI from any liability in excess thereof, not withstanding any provision to the contrary in any contract, purchase order or co-signed agreement between ARI and the Client.*

Sample Retention Policy: All samples submitted to ARI will be appropriately discarded no sooner than 90 days after receipt or 60 days after submission of hardcopy data, whichever is longer, unless alternate retention schedules have been established by work-order or contract.

   To the outside of the cooler? ..... YES (NO)
2. Were custody papers included with the cooler ..... (YES) NO
3. Were custody papers properly filled out (ink, signed etc.)? ..... (YES) NO
4. Complete custody forms and attach all shipping documents ..... (OK) NA

Cooler Accepted BY: B. Ryl Date: 9/27/06 Time: 1015

Log-IN Phase:

5. Was a temperature blank include in the cooler? ..... YES NO
6. Record Cooler Temperature ..... 3.6 °C
7. What kind of packing material was used? ..... ICE
8. Was sufficient ice used (if appropriate)? ..... (YES) NO
9. Were all bottles sealed in separate plastic bags? ..... YES (NO)
10. Did all bottles arrive in good condition (unbroken)? ..... (YES) NO
11. Were all bottle labels complete and legible? ..... (YES) NO
12. Did all bottle labels and tags agree with custody papers? ..... (YES) NO
13. Were all bottles used correct for the requested analyses? ..... (YES) NO
14. Do any of the analyses (bottles) require preservative?
    (If so, Preservation checklist must be attached) ..... (YES) NO
15. Were all VOA vials free of air bubbles? ..... ~~YES~~ ~~NO~~
16. Was sufficient amount of sample sent in each bottle? ..... (YES) NO
17. Notify Project Manager of any discrepancies or concerns ..... (OK) NA

Cooler Opened By: B. Ryl Date: 9/27/06 Time 1015

Case Narrative

Client: Anchor Environmental
Project: Chinook
Matrix: Water
ARI Job Nos. JY35

Sample receipt

Three water samples were received September 27, 2006 under ARI Job JY35. Samples were well-iced and the cooler temperature measured by IR thermometer following ARI SOP was 3.6° C. Samples were received in good condition with no discrepancies in paperwork. All samples failed the preservation check. Sample pH was readjusted in the laboratory. Failure was attributed to the characteristics of the samples, based on previous experience with the project.

ARI was informed verbally that all water samples received from the Chinook site have been field filtered.

Dissolved Metals

As Silica will mineralize under the digestion procedure used for environmental samples, analysis of the Silica was performed on sample that was acidified only (Prep Method 6010B). The samples were also digested under prep method 3010A and analyzed for the remaining target elements.

The method blanks were clean at the reporting limit.

LCS recoveries were within ARI and method limits.

Duplicate RPDs were within ARI and method limits.

Matrix spike recoveries were within limits with the exception of Sodium for the digested sample. The outlier was attributed to high concentration of the element in the parent sample and no corrective action is required.

There were no other incidents of note.

General Chemistry Parameters

Alkalinity

Samples were prepared and analyzed within the required holding time of 14 days.

The replicate analysis has RPDs within limits.

There were no incidents of note.

Total Phosphorous

Samples were prepared and analyzed within the required holding time of 28 days.

The method blanks were clean.

Standard reference recoveries were within limits.

The replicate analysis has RPDs within limits.

The matrix spike had recoveries within limits.

There were no incidents of note.

Ion Chromatography – Fluoride, Chloride, Sulfate

Samples were prepared and analyzed within the required holding time of 28 days.

The method blanks were clean.

Standard reference recoveries were within limits.

The replicate had RPDs within limits and the matrix spike had recoveries within limits.

There were no incidents of note.

Geotechnical Parameters

A lab specific Case Narrative follows.

Data Reporting Qualifiers

Effective 12/28/04

Inorganic Data

U Indicates that the target analyte was not detected at the reported concentration

* Duplicate RPD is not within established control limits

B Reported value is less than the CRDL but ≥ the Reporting Limit

N Matrix Spike recovery not within established control limits

NA Not Applicable, analyte not spiked

H The natural concentration of the spiked element is so much greater than the concentration spiked that an accurate determination of spike recovery is not possible

L Analyte concentration is ≤5 times the Reporting Limit and the replicate control limit defaults to ±1 RL instead of the normal 20% RPD

Organic Data

U Indicates that the target analyte was not detected at the reported concentration

* Flagged value is not within established control limits

B Analyte detected in an associated Method Blank at a concentration greater than one-half of ARI's Reporting Limit or 5% of the regulatory limit or 5% of the analyte concentration in the sample.

J Estimated concentration when the value is less than ARI's established reporting limits

D The spiked compound was not detected due to sample extract dilution

NR Spiked compound recovery is not reported due to chromatographic interference

E Estimated concentration calculated for an analyte response above the valid instrument calibration range. A dilution is required to obtain an accurate quantification of the analyte.

S Indicates an analyte response that has saturated the detector. The calculated concentration is not valid; a dilution is required to obtain valid quantification of the analyte

NA The flagged analyte was not analyzed for

NS The flagged analyte was not spiked into the sample

M Estimated value for an analyte detected and confirmed by an analyst but with low spectral match parameters. This flag is used only for GC-MS analyses

N The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification"

Y The analyte is not detected at or above the reported concentration. The reporting limit is raised due to chromatographic interference. The Y flag is equivalent to the U flag with a raised reporting limit.

C The analyte was positively identified on only one of two chromatographic columns. Chromatographic interference prevented a positive identification on the second column

P The analyte was detected on both chromatographic columns but the quantified values differ by ≥40% RPD with no obvious chromatographic interference

Geotechnical Data

A The total of all fines fractions. This flag is used to report total fines when only sieve analysis is requested and balances total grain size with sample weight.

F Samples were frozen prior to particle size determination

SM Sample matrix was not appropriate for the requested analysis. This normally refers to samples contaminated with an organic product that interferes with the sieving process and/or moisture content, porosity and saturation calculations

SS Sample did not contain the proportion of "fines" required to perform the pipette portion of the grain size analysis

W Weight of sample in some pipette aliquots was below the level required for accurate weighting

Analytical Resources, Incorporated
Analytical Chemists and Consultants

Client: Anchor Environmental	Project No.: JY35
Client Project: Chinook	

Case Narrative

1. Three samples were submitted for fluid density on September 27, 2006.
2. The samples were measured in calibrated 500 mL flasks and calculated for density.
3. The data is provided in a summary table.
4. There were no other noted anomalies in the samples or methods on this project.

RE: Client Project: Chinook
ARI Job No. JY56

Dear Kristin:

Please find enclosed the original chain of custody documentation and the final data package for samples from the project referenced above.

Problems associated with these analyses are discussed in the Case Narrative.

An electronic copy of this package will remain on file with ARI. Should you have any questions or problems, please feel free to contact me at your convenience.

Sincerely,

ANALYTICAL RESOURCES, INC.

Susan Dunnihoo

Limits of Liability: *ARI will perform all requested services in accordance with appropriate methodology following ARI Standard Operating Procedures and the ARI Quality Assurance Program. This program meets standards for the industry. The total liability of ARI, its officers, agents, employees, or successors, arising out of or in connection with the requested services, shall not exceed the Invoiced amount for said services. The acceptance by the client of a proposal for services by ARI release ARI from any liability in excess thereof, not withstanding any provision to the contrary in any contract, purchase order or co-signed agreement between ARI and the Client.*

Sample Retention Policy: All samples submitted to ARI will be appropriately discarded no sooner than 90 days after receipt or 60 days after submission of hardcopy data, whichever is longer, unless alternate retention schedules have been established by work-order or contract.

ANALYTICAL RESOURCES INCORPORATED

ARI Client: Anchor Project Name: Chinook

COC NO.: ——— Delivered By: Fed Ex

Tracking NO.: 8577 4089 1670/1651 Date: 9/28/06

ARI Job No.: JY56 Lims NO.: ———

Preliminary Examination Phase:

1. Were intact, properly signed and dated custody seals attached
   To the outside of the cooler? ..... YES (NO)
2. Were custody papers included with the cooler ..... (YES) NO
3. Were custody papers properly filled out (ink, signed etc.)? ..... (YES) NO
4. Complete custody forms and attach all shipping documents ..... (OK) NA

Cooler Accepted BY: B. Ryl Date: 9/28/06 Time: 0950

Log-IN Phase:

5. Was a temperature blank include in the cooler? ..... YES NO
6. Record Cooler Temperature ..... 1.5, 2.3 °C
7. What kind of packing material was used? ..... ———
8. Was sufficient ice used (if appropriate)? ..... (YES) NO
9. Were all bottles sealed in separate plastic bags? ..... YES (NO)
10. Did all bottles arrive in good condition (unbroken)? ..... (YES) NO
11. Were all bottle labels complete and legible? ..... (YES) NO
12. Did all bottle labels and tags agree with custody papers? ..... (YES) NO
13. Were all bottles used correct for the requested analyses? ..... (YES) NO
14. Do any of the analyses (bottles) require preservative?
    (If so, Preservation checklist must be attached) ..... (YES) NO
15. Were all VOA vials free of air bubbles? ..... ~~YES~~ ~~NO~~
16. Was sufficient amount of sample sent in each bottle? ..... (YES) NO
17. Notify Project Manager of any discrepancies or concerns ..... (OK) NA

Cooler Opened By: B. Ryl Date: 9/28/06 Time 0950

Case Narrative

Client: Anchor Environmental
Project: Chinook
Matrix: Water
ARI Job Nos. JY56

Sample receipt

Seven water samples were received September 28, 2006 under ARI Job JY56. Samples were well-iced and the cooler temperatures measured by IR thermometer following ARI SOP were 1.5-2.3° C. Samples were received in good condition with no discrepancies in paperwork. Samples R4D-092706, R3-092706 and F43-092706 failed the preservation check. Sample pH was readjusted in the laboratory. Failure was attributed to the characteristics of the samples, based on previous experience with the project.

ARI was informed verbally that all water samples received from the Chinook site have been field filtered.

Dissolved Metals

As Silica will mineralize under the digestion procedure used for environmental samples, analysis of the Silica was performed on sample that was acidified only (Prep Method 6010B). The samples were also digested under prep method 3010A and analyzed for the remaining target elements.

The method blanks were clean at the reporting limit.

LCS recoveries were within ARI and method limits.

Duplicate RPDs were within ARI and method limits.

Matrix spike recoveries were within limits with the exception of Sodium for the digested sample. The outlier was attributed to high concentration of the element in the parent sample and no corrective action is required.

There were no other incidents of note.

General Chemistry Parameters

Alkalinity

Samples were prepared and analyzed within the required holding time of 14 days.

The replicate analysis has RPDs within limits.

There were no incidents of note.

Total Phosphorous

Samples were prepared and analyzed within the required holding time of 28 days.

The method blanks were clean.

Standard reference recoveries were within limits.

The replicate analysis has RPDs within limits.

The matrix spike had recoveries within limits.

There were no incidents of note.

Ion Chromatography – Fluoride, Chloride, Sulfate

Samples were prepared and analyzed within the required holding time of 28 days.

The method blanks were clean.

Standard reference recoveries were within limits.

The replicate had RPDs within limits and the matrix spike had recoveries within limits.

Continuing and closing Calibration Blanks (CB) failed high for Chloride. Affected samples (R3-092706 and R43-092706) had results greater than 10 times the CB results, so no further action was taken.

There were no incidents of note.

Geotechnical Parameters

A lab specific Case Narrative follows.

Data Reporting Qualifiers

Effective 12/28/04

Inorganic Data

U Indicates that the target analyte was not detected at the reported concentration

* Duplicate RPD is not within established control limits

B Reported value is less than the CRDL but ≥ the Reporting Limit

N Matrix Spike recovery not within established control limits

NA Not Applicable, analyte not spiked

H The natural concentration of the spiked element is so much greater than the concentration spiked that an accurate determination of spike recovery is not possible

L Analyte concentration is ≤5 times the Reporting Limit and the replicate control limit defaults to ±1 RL instead of the normal 20% RPD

Organic Data

U Indicates that the target analyte was not detected at the reported concentration

* Flagged value is not within established control limits

B Analyte detected in an associated Method Blank at a concentration greater than one-half of ARI's Reporting Limit or 5% of the regulatory limit or 5% of the analyte concentration in the sample.

J Estimated concentration when the value is less than ARI's established reporting limits

D The spiked compound was not detected due to sample extract dilution

NR Spiked compound recovery is not reported due to chromatographic interference

E Estimated concentration calculated for an analyte response above the valid instrument calibration range. A dilution is required to obtain an accurate quantification of the analyte.

S Indicates an analyte response that has saturated the detector. The calculated concentration is not valid; a dilution is required to obtain valid quantification of the analyte

NA The flagged analyte was not analyzed for

NS The flagged analyte was not spiked into the sample

M Estimated value for an analyte detected and confirmed by an analyst but with low spectral match parameters. This flag is used only for GC-MS analyses

N The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification"

Y The analyte is not detected at or above the reported concentration. The reporting limit is raised due to chromatographic interference. The Y flag is equivalent to the U flag with a raised reporting limit.

C The analyte was positively identified on only one of two chromatographic columns. Chromatographic interference prevented a positive identification on the second column

P The analyte was detected on both chromatographic columns but the quantified values differ by ≥40% RPD with no obvious chromatographic interference

Geotechnical Data

A The total of all fines fractions. This flag is used to report total fines when only sieve analysis is requested and balances total grain size with sample weight.

F Samples were frozen prior to particle size determination

SM Sample matrix was not appropriate for the requested analysis. This normally refers to samples contaminated with an organic product that interferes with the sieving process and/or moisture content, porosity and saturation calculations

SS Sample did not contain the proportion of "fines" required to perform the pipette portion of the grain size analysis

W Weight of sample in some pipette aliquots was below the level required for accurate weighting

Client: Anchor Environmental	Project No.: JY56
Client Project: Chinook 060354-01	

Case Narrative

1. Six samples were submitted for fluid density on September 28, 2006.
2. The samples were measured in calibrated 500 mL flasks and calculated for density.
3. The data is provided in a summary table.
4. There were no other noted anomalies in the samples or methods on this project.
