Part 6–Project Description

6a. Briefly summarize the overall project. You can provide more detail in 6b. [help]

This project is for commercial intertidal culture of clams and geoduck. Nursery tubes are inserted into the substrate and planted by hand with juvenile clams Canopy nets secured with rebar or individual net coverings may be placed over the tubes. Tubes and nets are removed after approximately two years. Harvest occurs by hand approximately 5-7 years after planting. Clams are cultured at this site using a variety of bottom and near-bottom culture methods. Some netting of clams occurs.

6b. Describe the purpose of the project and why you want or need to perform it. [help]

Commercial production of shellfish.

- Identify where each element will occur in relation to the nearest waterbody.
- Indicate which activities are within the 100-year floodplain.

Nursery tubes, approximately 9" in length, are manually placed in lower intertidal substrate at a density of approximately one tube per square foot. Three to four geoduck seed are placed in the tubes. The tubes are covered with canopy netting secured with rebar or individual net coverings. After approximately 12-15 months, the tubes are removed and the area is re-netted with canopy netting. The net is removed once it has been determined the geoduck are able to evade predation and the beach is left undisturbed until harvest. Harvest occurs by hand approximately 5-7 years after planting.

Manila clam seed is broadcast by hand into the intertidal area. Some areas are netted, and some are not. Harvest takes place manually and clams are placed into sacks for pick up by boat. Littleneck and butter clams may be harvested incidentally when seeded clams are harvested.

6f. What are the anticipated start and end dates for project construction? (Month/Year) [help]

Shellfish aquaculture has been considered a beneficial use of the shoreline area by providing three-dimensional structure, water quality enhancement, eutrophication moderation, and facilitation of benthic-pelagic coupling of nutrients. Shellfish culture requires a healthy marine ecosystem to be successful.

Taylor Shellfish employs Environmental Codes of Practice to ensure all activities meet environmental standards.

Taylor Shellfish adheres to conservation measures identified in the Programmatic Biological Opinion, National Marine Fisheries Service, September 2015. Programmatic Biological Opinion for Shellfish Activities in Washington State Marine Waters, U.S. Fish and Wildlife Service, August 2016.

Additional operational measures include:

1. Routine mapping, or documentation of critical areas, including eelgrass areas
2. Documentation of farm ECOP site visits
3. Employee training to ensure compliance of conservation measures
