On May 14, 2021 the Washington Department of Ecology (Ecology) received a Joint Aquatic Resources Permit Application (JARPA) from KAL Farms, LLC requesting a Section 401 Water Quality Certification (WQC). A public notice regarding the request was distributed by Ecology on June 3, 2021.

The proposed project entails replacing and relocating aging irrigation intake screens and placing a new, buried 42-inch diameter pipe with two new barrel half-screens extending 100-feet from existing structure. The new pipe and screens will be placed by excavating 254 cubic yards of sediment over 631 square feet and placing 200 cubic yards of fill over 3,754 square feet of the Snake River in Walla Walla County, WA. Up to four, 12-inch diameter steel piles will anchor the structure and a new 143-square foot sheet pile wall will be installed at the pump deck to create a sump and replace the existing screens around the pump deck. The purpose of the project is to ensure continued irrigation intake operation.

On behalf of the State of Washington, Ecology certifies that the work described in the May 14, 2021 Request for Water Quality Certification and June 3, 2021 public notice complies with applicable provisions of Sections 301, 302, 303, 306, and 307 of the Clean Water Act, as amended, and applicable state laws. The certification is subject to the conditions contained in the enclosed Order.

If you have any questions, please contact Hallie Ladd at (509) 329-3474 or via email at Hallie.Ladd@ecy.wa.gov. The enclosed Order may be appealed by following the procedures described in the Order.

4. Work causing distressed or dying fish and discharges of oil, fuel, or chemicals into state waters or onto land with a potential for entry into state waters is prohibited. If such work, conditions, or discharges occur, the Project Proponent shall notify Ecology's Federal Permit Manager per condition A2 and immediately take the following actions:
 - a. Cease operations at the location of the non-compliance.
 - b. Assess the cause of the water quality problem and take appropriate measures to correct the problem and prevent further environmental damage.
 - c. In the event of a discharge of oil, fuel, or chemicals into state waters, or onto land with a potential for entry into state waters, containment and cleanup efforts shall begin immediately and be completed as soon as possible, taking precedence over normal work. Cleanup shall include proper disposal of any spilled material and used cleanup materials.
 - d. Immediately notify Ecology's Regional Spill Response Office and the Washington State Department of Fish & Wildlife with the nature and details of the problem, any actions taken to correct the problem, and any proposed changes in operation to prevent further problems.
 - e. Immediately notify the National Response Center at 1-800-424-8802, for actual spills to water only.
 - *Justification - This condition is necessary to prevent oil and hazardous materials spills from causing environmental damage and to ensure compliance with water quality requirements. The sooner a spill is reported, the quicker it can be addressed, resulting in less harm. Ecology must protect waters of the state from all discharges and potential discharges of pollution that can affect water quality to protect aquatic life and beneficial uses.*
