Re: Amendment to Section 401 Water Quality Certification Order No. 20808 for Corps  
Reference No. 200701286, Nationwide Permit (NWP) 48, Hama Hama Shellfish Farm,  
Mason County, Washington  

Dear Adam James:

Enclosed is an amendment to Water Quality Certification Order No. 20808, NWP 48, issued on  
July 16, 2021, for the above project. We have also included a strikeout version of the Water  
Quality Certification that reflects the changes made. All other conditions of Water Quality  
Certification No. 20808 remain in effect.

The purpose of this amendment is to correct the acreage and parcel numbers for this project,  
due to previous mapping errors that caused the acreage to be underreported and modifications  
made to the subject parcels by Mason County. This is not a request for an expansion; the site  
plans included in the current application and in previous NWP verification letters correctly  
identified the mapped footprint of the overall project area and cultivation areas, and those site  
plans match those of the currently proposed project.

If you have any questions about this decision, please contact Teressa Pucylowski by e-mail at  
teressa.pucylowski@ecy.wa.gov. The enclosed Amendment may be appealed by following the  
procedures described in the Amendment.

Sincerely,

Brenden McFarland, Section Manager  
Environmental Review and Transportation Section  
Shorelands and Environmental Assistance Program

Enclosure
First Amendment to Order No. 20808
Hama Hama Shellfish Farm
Aquatics No. 140137, Corps No. 200701286

IN THE MATTER OF GRANTING A 
WATER QUALITY CERTIFICATION TO 
Hama Hama Oyster Company 
In accordance with 33 U.S.C. 1341 (FWPCA §401), RCW 90.48.120, 
RCW90.48.260 and Chapter 173-201A WAC 

Hama Hama Oyster Company 
Attn: Adam James 
35846 N US Hwy 101 
Lilliwaup, WA 98555 

On November 2, 2021, the Washington Department of Ecology (Ecology) issued a Section 401 Water Quality Certification, Nationwide Permit 48 to Hama Hama Oyster Company for the above-referenced project pursuant to the provisions of 33 U.S.C. 1341 (FWPCA § 401).

Ecology received a notification from the U.S. Army Corps of Engineers (Corps) stating that there was a mapping error causing the acreage for this project to be underreported as well as a modification to certain parcels made by Mason County. Ecology notified Hama Hama Oyster Company on February 14, 2022 that a modification to the Section 401 Water Quality Certification was required to correct the acreage and parcel numbers. This is not a request for an expansion; the site plans included in the current application and in previous NWP verification letters correctly identified the mapped footprint of the overall project area and cultivation areas, and those site plans match those of the currently proposed project.

The purpose of this amendment is to correct the acreage and parcel numbers for this project, due to previous mapping errors that caused the acreage to be underreported and modifications made to the subject parcels by Mason County. This is not a request for an expansion; the site plans included in the current application and in previous NWP verification letters correctly identified the mapped footprint of the overall project area and cultivation areas, and those site plans match those of the currently proposed project.

Order No. 20187 dated November 2, 2021 is hereby amended as follows:

I. The second paragraph which reads:

This project will continue to cultivate 190 acres for shellfish farming on 216 acres of privately-owned tidelands between the ordinary high water mark at (+12ft) and the extreme low tide (-4ft). This farm cultivates geoduck, Pacific oysters, and Manila, littleneck, savory, and butter clams. Oysters occur on 130 acres between +5ft Mean Lower Low Water (MLLW) and the extreme low tidal elevations; clams occur on 60 acres between +4ft MLLW and the -1ft MLLW tidal elevations; and geoduck occur on 30 acres between -1ft MLLW and the extreme low tidal elevations. Polyculture (co-culture) is practiced across much of the farm, meaning in many places multiple species of shellfish are grown in and around one another. There is some eelgrass present at the project site
in the lower areas below -2ft MLLW. Access to tidelands is by boat and by foot through uplands.

Is replaced with:

This project will continue to cultivate 270 acres for shellfish farming on 347 acres of privately-owned tidelands between the ordinary high water mark at (+12ft) and the extreme low tide (-4ft). This farm cultivates geoduck, Pacific oysters, and Manila, littleneck, savory, and butter clams. Oysters occur on 210 acres between +5ft Mean Lower Low Water (MLLW) and the extreme low tidal elevations; at various times oysters will be harvested and containerized and “wet stored” (staged) on project areas between the +5-foot MLLW and +12-foot MLLW elevations. Clams occur on 60 acres between +4ft MLLW and the -1ft MLLW tidal elevations, and geoduck occur on 30 acres between -1ft MLLW and the extreme low tidal elevations. Polyculture (co-culture) is practiced across much of the farm, meaning in many places multiple species of shellfish are grown in and around one another. There is some eelgrass present at the project site in the lower areas below -2ft MLLW. Access to tidelands is by boat and by foot through uplands.

II. The sixth paragraph which reads:

The project site is located on tidelands within Hood Canal, on parcel numbers 324234380690, 324260004000, 324261280700, 324262180910, 324262280410, 324262280420, 324264470940, 32427107000, and 324271070890, adjacent to 35846 N US Hwy 101, near Lilliwaup, Mason County, Washington; Sections 23, 26 and 27, Township 24 North, Range 3 West; WRIA 16, Skokomish-Dosewallips Watershed.

Is replaced with:

The project site is located on tidelands within Hood Canal, on parcel numbers 324234380690, 324260004000, 324261280700, 324262180910, 324262280710, 324264470940, 32427107000, and 324271070890, adjacent to 35846 N US Hwy 101, near Lilliwaup, Mason County, Washington; Sections 23, 26 and 27, Township 24 North, Range 3 West; WRIA 16, Skokomish-Dosewallips Watershed.

No other conditions or requirements of the above referenced Order are affected by this amendment.

Ecology retains continuing jurisdiction to make modifications hereto through supplemental order, if it appears necessary to further protect the public interest.

Failure to comply with this amended Order may result in the issuance of civil penalties or other actions whether administrative or judicial, to enforce the terms of this amended Order.
YOUR RIGHT TO APPEAL

You have a right to appeal this Order to the Pollution Control Hearing Board (PCHB) within 30 days of the date of receipt of this Order. The appeal process is governed by Chapter 43.21B RCW and Chapter 371-08 WAC. “Date of receipt” is defined in RCW 43.21B.001(2).

To appeal you must do both of the following within 30 days of the date of receipt of this Order:

- File your appeal and a copy of this Order with the PCHB (see addresses below). Filing means actual receipt by the PCHB during regular business hours.
- Serve a copy of your appeal and this Order on Ecology in paper form by mail or in person. (See addresses below.) E-mail is not accepted.

You must also comply with other applicable requirements in Chapter 43.21B RCW and Chapter 371-08 WAC.

February 25, 2022
Date
IN THE MATTER OF GRANTING A WATER QUALITY CERTIFICATION TO Hama Hama Oyster Company pursuant to 33 U.S.C. 1341 (FWPCA § 401), RCW 90.48.120, RCW 90.48.260 and Chapter 173-201A WAC

ORDER No. 20808 – 1st Amendment Corps Reference No. 20071286 (NWP 48)
Hama Hama Shellfish Farm located on tidelands within Hood Canal, near Lilliwaup, Mason County, Washington

Hama Hama Oyster Company Attn: Adam James
35846 N US Hwy 101
Lilliwaup, WA 98555

Hama Hama Oyster Company notified the Department of Ecology (Ecology) that they have requested a Nationwide Permit (NWP) 48 authorization from the US Army Corps of Engineers (Corps) for the Hama Hama Shellfish Farm located on tidelands within Hood Canal, near Lilliwaup, Mason County, Washington. Because the Corps Seattle District has notified Ecology that individual Section 401 Water Quality Certifications (WQC) are required for all NWP 48’s, Hama Hama Oyster Company submitted a request for a WQC on October 22, 2021. The Corps has previously issued a joint public notice on June 25, 2021.

This project will continue to cultivate 270 490 acres for shellfish farming on 347 216 acres of privately-owned tidelands between the ordinary high water mark at (+12ft) and the extreme low tide (-4ft). This farm cultivates geoduck, Pacific oysters, and Manila, littleneck, savory, and butter clams. Oysters occur on 210 430 acres between +5ft Mean Lower Low Water (MLLW) and the extreme low tidal elevations; at various times oysters will be harvested and containerized and “wet stored” (staged) on project areas between the +5-foot MLLW and +12-foot MLLW elevations. Clams occur on 60 acres between +4ft MLLW and the -1ft MLLW tidal elevations; and geoduck occur on 30 acres between -1ft MLLW and the extreme low tidal elevations. Polyculture (co-culture) is practiced across much of the farm, meaning in many places multiple species of shellfish are grown in and around one another. There is some eelgrass present at the project site in the lower areas below -2ft MLLW. Access to tidelands is by boat and by foot through uplands.

Oyster cultivation occurs in clusters and singles. Clusters are cultivated through ‘shell cultch’ methodology, which entails oyster shells that are bagged, crated and/or threaded on a line and placed in the intertidal area during summer months to catch natural spat, and then transplanted and spread in a nursery or grow-out area. Harvest is completed by hand and oyster clusters are placed in a bushel basket and retrieved at high tide by a barge. Single oysters are grown directly on the substrate under anti-predator nets, in ‘bag on bottom’ culture method, or through off (near) bottom cultivation methodology that includes the following: ‘rack and bag’ culture, in which oysters are grown in bags secured to a wire mesh frame; floating bags, which are string along 100ft lines that are anchored to the substrate; and tipping bags, which are attached to posts and contain buoys that allow the bag to tip up and down with the tides. Grow out period for oysters is 2-3 years. Harvest takes place manually by hand during low tide and oysters are placed...
into tubs for pick up and transfer. Bags are harvested by pulling and emptying oysters onto barges for transfer. Bags are reused and hatchery seed is used.

Clams beds are ‘frosted’ with a mixture of washed gravel and oyster shell chaff, no more than 1” per acre per year. Clam seed is broadcasted by hand into the intertidal area. Some areas are netted and some are not, and the netted areas move around as needed. Anti-predator netting is installed by staking the net to the substrate using 24” bent rebar that is driven into the substrate. The grow-out period for clams is 18-24 months. Harvest takes place manually by hand at low tide using rakes to loosen the sediment and allow the clams to be collected into 5 gallon buckets. Full buckets are emptied into sacks for pick up by boat.

Geoduck cultivation will entail placing PVC or mesh nursery tubes, approximately 9” in length, manually into the lower intertidal substrate at a density of approximately one tube per square foot. Three to four geoduck seeds are placed in tubes. The PVC tubes are covered with canopy netting secured with rebar or with individual net coverings. Mesh tubes are covered with mesh caps. After approximately 18-24 months, the tubes are removed and the area is re-netted with canopy netting. Harvest occurs by hand using a low-pressure water pump with an attached wand that loosen the sediment around the geoducks for removal by hand. Harvest activity will occur approximately 5-7 years after planting.

The project site is located on tidelands within Hood Canal, on parcel numbers 324234380690, 324260004000, 324261280700, 324262180910, 324262280410, 324262280420, 324264470940, 32427107000, and 324271070890, adjacent to 35846 N US Hwy 101, near Lilliwaup, Mason County, Washington; Sections 23, 26, and 27, Township 24 North, Range 3 West; WRIA 16, Skokomish-Dosewallips Watershed.

With this Order, Ecology is granting Hama Hama Oyster Company’s request for a Section 401 Water Quality Certification for the Hama Hama Shellfish Farm project, provided that the activity is conducted in accordance with the Section 401 Water Quality Certification request and attachments Ecology received on October 22, 2021.

Based on the information submitted, Ecology has determined that the discharge from the project will comply with state water quality requirements. Prior to undertaking any changes that materially alter the project, Hama Hama Oyster Company must contact Ecology to determine whether a new Section 401 Water Quality Certification is required.

Issuance of this Section 401 Water Quality Certification for this proposal does not authorize Hama Hama Oyster Company to exceed applicable state water quality standards (Chapter 173-201A WAC), ground water quality standards (Chapter 173-200 WAC) or sediment quality standards (Chapter 173-204 WAC). Furthermore, nothing in this Section 401 Water Quality Certification absolves the Applicant from liability for contamination and any subsequent cleanup of surface waters, ground waters, or sediments resulting from project construction or operations.
Special Condition:
Any work that causes distressed or dying fish or discharges of oil, fuel, or other chemicals into state waters or onto land with a potential for entry into state waters is prohibited. If such work, conditions, or discharges occur, immediately notify Ecology’s Regional Spill Response Office at 360-407-6300 and the Washington State Department of Fish & Wildlife with the nature and details of the problem, any actions taken to correct the problem, and any proposed changes in operation to prevent further problems. You will also need to notify the Washington Emergency Management Division at 1-800-258-5990, for actual spills to water only. This condition is necessary to prevent oil and hazardous materials spills from causing environmental damage and to ensure compliance with water quality requirements. The sooner a spill is reported, the quicker it can be addressed, resulting in less harm.

In view of the foregoing and in accordance with 33 U.S.C. §1341, RCW 90.48.120, RCW 90.48.260 Chapter 173-200 WAC and Chapter 173-201A WAC, this WQC is granted to the Hama Hama Oyster Company, Hama Hama Shellfish Farm project.

This Certification is not effective until the U.S. Corps of Engineers (Corps) Seattle District issues a Nationwide Permit 48 authorization for this project. Order No. 20808 will remain valid for the duration of the associated Nationwide permit. Hama Hama Oyster Company should send a copy of the final Nationwide permit to fednotification@ecy.wa.gov within two weeks of receiving it.
