Re: Coastal Zone Consistency for Corps Reference No. **202200055**,
Eld Inlet Evergreen Shellfish Farm, Thurston County, Washington

Dear Joseph Schreiber:

On April 21, 2022, the Department of Ecology received a Certification of Consistency with the Washington State Coastal Zone Management Program (CZMP) for the above project.

This determination is for a new shellfish farm that proposes to commercially cultivate up to 7 acres of Pacific oysters (*Crassostrea gigas*) and Manila clams (*Venerupis philipparum*) between +7.0 feet (ft.) and -4.0 ft. Mean Lower Low Water (MLLW) tidal elevation on parcel numbers 60920000600, 60920000700, 60920000800, 60920000900, 60920001000, 60920001100, and 60920001200. Access to tidelands is by boat.

Below is the cultivation and harvesting methods for this site location:

Manila Clams:

Juvenile seed will be dispersed onto the intertidal sediment once every couple of years and allowed to grow under clam nets. The clam harvest and seeding area is approximately 50 ft. in width and 900 ft. in length. Within this area, clam nets will be used to protect freshly seeded areas. The clam nets are 50 ft. by 15 ft. and will be placed in two rows that equal 30 ft. width total where seed is planted. The nets will be secured along the perimeter with rebar hooks that do not protrude the sediment surface. The subsequent adults will be harvested by hand and placed in plastic mesh bags, which are carried by hand to the boat for removal at Goodro Shellfish's upland shop in Shelton, WA.

Naturally occurring manila clams will be harvested by hand using clam forks and placed in plastic mesh bags so they can be carried by hand to the boat for removal to Goodro Shellfish's upland shop in Shelton, WA.

Pacific Oysters (Ground Culture):

Juvenile seed will be dispersed onto the intertidal sediment and allowed to grow. The subsequent adults will be harvested by hand and placed in plastic mesh bags, which are then carried by hand to the boat for removal to Goodro Shellfish's upland shop in Shelton, WA.

Gravelling is also proposed at this location. Washed pea gravel will be added to enhance setting substrate on the upper parts of the beach between 5.0 ft. and 1.0 ft. as well as to some soft areas on the beach to improve oyster ground between 1.0 ft. and -4.0 ft. This will be done in sections approximately 900 ft. by 50 ft. at a gravel depth of one inch, which is approximately 140 yards of gravel. Additionally, this area may have gravel added piecemeal over the course of a few years and small sections may have gravel added more than once, but not more than 1 inch per year.

The project site is located on tidelands within Eld Inlet, on parcel numbers 60920000600, 60920000700, 60920000800, 60920000900, 60920001000, 60920001100, and 60920001200, near Olympia, Thurston County, Washington; Section 06, Township 18 North, Range 2 West; WRIA 13, Deschutes Watershed.

Pursuant to Section 307(c)(3) of the Coastal Zone Management Act of 1972 as amended, Ecology concurs with Goodro Shellfish's determination that the proposed work is consistent with Washington's CZMP.

If you have any questions regarding Ecology's consistency determination, please contact Jennifer Riedmayer at Jennifer.Riedmayer@ecy.wa.gov.

YOUR RIGHT TO APPEAL

You have a right to appeal this decision to the Pollution Control Hearing Board (PCHB) within 30 days of the date of receipt of this decision. The appeal process is governed by Chapter 43.21B RCW and Chapter 371-08 WAC. "Date of receipt" is defined in RCW 43.21B.001(2).

To appeal you must do all of the following within 30 days of the date of receipt of this decision:

- File your appeal and a copy of this decision with the PCHB (see addresses below). Filing means actual receipt by the PCHB during regular business hours.

- Serve a copy of your appeal and this decision on Ecology in paper form - by mail or in person. (See addresses below.) E-mail is not accepted.

You must also comply with other applicable requirements in Chapter 43.21B RCW and Chapter 371-08 WAC.

Address and location information

Filing an appeal with the PCHB:

Mailing Address:

Pollution Control Hearings Board
PO Box 40903
Olympia, WA 98504-0903

Street Address:

Added Information:**Pacific Oysters (Pillow Bag Culture Method):**

Oyster seed are placed into a black plastic mesh bag (approx. ¼ mesh) offsite. The seeded bags are then transported by boat to the property and are laid flat onto the beach. The bags are then secured by wires to ropes already laid on the beach. Ropes are secured to metal fence posts already on beach. When the oysters are ready to be harvested, the bags are untied from the rope, and oysters are unbagged onto the beach. Oysters are hand counted and loaded onto the boat, along with the used mesh bags. The boat then transports materials to Goodro Shellfish's upland shop in Shelton, WA.

Pacific Oysters (Rope Bag Culture Method):

Oyster seed are placed into a black plastic mesh bag offsite. The seeded bags are transported by boat to the property and are secured by wire to rope. The rope is attached to T posts approximately 1 ½ inch wide by 5 feet long, made of steel, and are secured in the sediment with 2' exposed. There is approximately 50 feet between posts. When the animals are ready for harvest, the bags are untied from the rope by hand and oysters are dumped onto the beach and counted. Subsequent product is then bagged and removed by boat to Goodro Shellfish's upland shop in Shelton, WA.
