Emergency repairs at the Coupeville Ferry Terminal are required to repair a sink-hole that has developed at the bridge seat. The riprap in front of the bridge seat is migrating off-shore exposing the area to more storm and prop-wash damage. The proposed emergency repairs will restore the rip-rap and underneath filter fabric to prevent further damage to the ferry slip.

6b. Describe the purpose of the project and why you want or need to perform it. [\[help\]](#)

6e. Describe how you plan to construct each project element checked in 6d. Include specific construction methods and equipment to be used. [\[help\]](#)

- Identify where each element will occur in relation to the nearest waterbody.
- Indicate which activities are within the 100-year floodplain.

The work can be divided into two separate operations- Grouting and Riprap Repair

**Grouting
Procedure**

- BMPs will be in place to prevent cement slurry from entering the waters of the state
- Most work will be conducted from the level surface above the bridge abutment
- Some existing riprap will be removed to provide access for the grouting
- The disturbed riprap will be replaced after the grout is placed
- Grout will be allowed to cure 24 hours before being contacted by seawater

Equipment

- Grout will be pumped through a hose from a trailer mounted grout pump
- Grout will be delivered via a common 10 cubic yard concrete mixer
- A handheld drill will be used to drill through the bridge abutment or approach slab to access the voids beneath

**Riprap Repair
Procedure**

- Rock will be washed at an offsite facility to remove any loose fines before being brought to the site
- Work will occur in the dry at lower tides
- Some existing riprap will be moved to allow access to put down the new spalls and riprap
- Geotextile (filter) fabric will be placed on the ground immediately beneath the existing riprap- new fabric will overlap existing by 12-inches
- Quarry spalls will be placed on the fabric
- Existing riprap will be moved back into place
- Riprap and other rock will be placed from the shore above the top of the riprap wall
- Some pieces will be pulled under the bridge span once they are placed on the slope
- Some pieces will need to have pins installed in them for pulling them into position
- Although material will be dumped at the site, all material will be placed on the bank by an excavator

Equipment

- Riprap and rock will be delivered in 10 to 12 cubic yard dump trucks
- Riprap and rock will be placed and manipulated with a track mounted excavator from the shore from an elevation above +10.00
- Rock will be pulled under the span with hand operated pulling tools, when the pieces are out of the water
- One or more aluminum skiffs may be on site
- It is not anticipated that the contractor will use any type of barge or landing craft for this work

6f. What are the anticipated start and end dates for project construction? (Month/Year) [\[help\]](#)
