Date
 10/10/2012

Dear Ms. O'Brien:

On behalf of Kinder Morgan Liquids Terminals, LLC (KMLT), ARCADIS U.S., Inc. (ARCADIS), is pleased to submit this *Third Quarter 2012 Groundwater Monitoring Report* for the above referenced facility (the site).

The next groundwater monitoring event at the site is scheduled for fourth quarter 2012. Should you have any questions regarding this report, please contact Chris Robinson of ARCADIS at (206) 726-4728 or Robert Truedinger of KMLT at (510) 412-8843.

Executive Summary

ARCADIS U.S., Inc. has prepared this summary report to present the findings of the Third Quarter 2012 groundwater monitoring and sampling event at the Kinder Morgan Liquids Terminals, LLC Harbor Island Terminal located in Seattle, Washington. Groundwater monitoring and sampling were performed in accordance with the KMLT Groundwater Compliance Plan (Plan) on August 23 and 24, 2012. The Plan was developed to describe the protocol and procedures used to monitor whether cleanup requirements are achieved at the site and was included in Exhibit F of the Consent Decree. A Site Location Map and Site Map are included as **Figures 1 and 2**.

Third Quarter 2012 groundwater monitoring and sampling activities were performed in accordance with the Washington State Department of Ecology-approved Site-Wide Groundwater Compliance Monitoring Plan, dated June 21, 2007 and the September 4, 2008 Technical Revision Request. The above referenced documents are presented as **Attachment A**.

Groundwater monitoring for this event included gauging 41 wells and collecting samples from 12 wells. Two wells (MW-18 and A-23R) could not be sampled due to lack of access. Groundwater elevations indicate that groundwater gradient is generally flat across the majority of the site, with a slight trend towards the southeast in the A and B yards and a slight trend to the north in the C and E Yards. Measurable separate phase hydrocarbons (SPH) were not observed in any well gauged during this sampling event.

Concentrations of Total Petroleum Hydrocarbons (TPH) in the Gasoline Range Organics (GRO) ranged from non-detectable at the method reporting limit (MRL) to 11 milligrams per liter (mg/L) in off-site monitoring well MW-24. Concentrations of benzene ranged from below the MRL to 560 micrograms per liter ($\mu\text{g}/\text{L}$) in off-site monitoring well MW-24. Based on comparison of the recent and historical laboratory results for petroleum hydrocarbons in groundwater, concentrations of hydrocarbon constituents are generally consistent with results reported in previous groundwater monitoring and sampling events.

1. Site Description

The Site is currently a 14-acre bulk petroleum storage facility located east of 13th Avenue on Harbor Island in Seattle, King County, Washington. The Site has operated as a bulk petroleum storage terminal since 1944. The Site vicinity is primarily occupied by heavy industry. A Site Location Map and Site Map are included as **Figures 1 and 2**.

The Site is situated at an elevation of approximately 6 to 11 feet (ft) above mean sea level (amsl) and the topography of the Site vicinity is flat.

The Site consists of five yards (A, B, C, D, and E). Aboveground features include aboveground storage tanks (AST) containing refined petroleum products, located in the B and C yards. A Yard, located at the southern end of the property, consists of the terminal office, a truck loading rack, and other support structures. B Yard, located north of A Yard and south of D Yard, is the site of 15 ASTs and associated piping and is surrounded by a 15-foot high concrete wall. D Yard, located north of B Yard, is comprised of a driveway and a maintenance building and is the primary corridor for onsite utilities. C Yard, located north of D Yard and south of E Yard, contains six ASTs and associated piping and is surrounded by a 15-foot high concrete wall. E Yard, located at the north end of the property, is leased to other parties and consists of an office building and vehicle storage facilities (Antea, 2011).

2. Scope of Work

Groundwater monitoring and sampling activities were performed in accordance with Delta Consultant's letter dated March 22, 2007, entitled *Proposed Reduced Monitoring-Site-Wide Groundwater Compliance Monitoring Plan* (Reduced Monitoring Plan). The letter detailed proposed revisions to the Compliance Monitoring Plan included in the Corrective Action Plan, and included a reduction in the number of wells to be gauged, a reduction in the frequency of sampling in select wells, and a reduction in analytes in select wells. On June 13, 2007, Mr. Roger Nye of the Washington Department of Ecology (Ecology) verbally authorized Delta to proceed with the revised monitoring program proposed in the letter. A letter was issued by Mr. Nye on August 7, 2007 to formally authorize the Reduced Monitoring Plan.

The scope of work included:

- Monitor depth to water in 41 groundwater monitoring wells,

- Remove and replace SPH absorbent socks in 9 wells,
- Purge 12 monitoring wells using low-flow sampling methods,
- Collect groundwater samples from 12 monitoring wells,
- Submit groundwater samples to Alpha Analytical, Inc. (Alpha) of Sparks, Nevada for laboratory analyses, and
- Prepare this quarterly groundwater monitoring report.

2.1 Water Level Measurements

Water levels were measured on August 23, 2012 using an electronic oil-water interface probe. No measurable SPH or sheens were observed in any of the wells monitored this event. Groundwater elevations were calculated using depth to water measurements and wellhead survey elevations.

Groundwater elevations were calculated using depth-to-water measurements and wellhead survey elevations obtained in July 2003. A summary of the groundwater elevation data is presented in **Table 1**. A groundwater elevation map is presented in **Figure 3**.

2.2 Groundwater Sampling and Analysis

Groundwater samples were collected from 12 wells on August 24, 2012 in accordance with the Compliance Monitoring Plan.

Groundwater monitoring wells were purged using a low-flow peristaltic pump and dedicated tubing. Groundwater quality parameters were collected for temperature, specific conductivity, turbidity, dissolved oxygen, oxidation reduction potential (ORP), and pH using a Horiba multi parameter meter and flow cell. Monitoring wells were sampled after depth to water, pH, specific conductivity, temperature, ORP, and dissolved oxygen had stabilized. Groundwater monitoring field data sheets are included as **Attachment B**.

Groundwater samples were collected in laboratory provided bottles and placed in coolers with ice. Groundwater samples were submitted to Alpha under standard chain-

of-custody protocol. All groundwater samples were analyzed for the following constituents of concern (COCs):

- Total Petroleum Hydrocarbons (TPH) gasoline range organics (GRO) according to Northwest Method NWTPH-Gx and
- Benzene, toluene, ethylbenzene, and total xylenes (BTEX collectively) according to Environmental Protection Agency (EPA) Method 8260B.

Groundwater samples from monitoring well MW-21 were also analyzed for:

- TPH diesel range organics (DRO) and oil range organics (ORO) according to Northwest Method NWTPH-Dx.

Groundwater analytical results are presented in **Table 2**. Laboratory analytical reports and chain-of-custody documentation are included as **Attachment C**.

2.3 Passive SPH Recovery

During previous groundwater monitoring events, measurable SPH or sheens were observed in nine wells (12, A-4, A-6, A-16, MW-7, MW-9, MW-21, MW-23, and MW-24). Based on these observations, passive SPH recovery is being performed in these wells. Saturated absorbent socks were removed from each of the wells and replaced with new absorbent socks in order to absorb SPH. Currently, socks are replaced on a quarterly basis.

3. Summary of Findings

3.1 Groundwater Monitoring

During the August 23, 2012 monitoring event, groundwater conditions at the Site remained consistent with previous monitoring events. The depth to groundwater during this sampling event ranged between 2.89 feet below top of casing (btoc) (12) and 10.78 feet btoc (A-27). Two monitoring wells, MW-18 and A-23R, were inaccessible due to a parked vehicle and inability to access the adjacent terminal to the west. The inferred direction of groundwater flow was to the north in the C and E yards and to the southeast in the A and B yards. A Groundwater Elevation Map - August 23, 2012 is presented as **Figure 3**. Current and historical groundwater gauging data are presented in **Table 1**.

3.2 Data Validation

All groundwater samples were processed within their specified hold times. Alpha reported the method and laboratory control samples were within acceptable limits. A duplicate sample was collected from MW-24 and analyzed for the same constituents. Analytical results for the duplicate sample were within acceptable limits for all analytes. The detection limits were satisfactory and the surrogate recovery results were acceptable.

3.3 Groundwater Analytical Results

During the August 24, 2012 monitoring event, groundwater samples collected contained the following constituents of concern:

- GRO concentrations ranging from less than the method reporting limit (MRL) to 11 milligrams per Liter (mg/L) in off-site monitoring well MW-24;
- A DRO concentration of 1.8 mg/L in monitoring well MW-21;
- An ORO concentration of 0.59 mg/L in monitoring well MW-21;
- Benzene concentrations ranging from less than the MRL to 560 micrograms per Liter ($\mu\text{g}/\text{L}$) in off-site monitoring well MW-24;
- Toluene concentrations ranging from less than the MRL to 7.6 $\mu\text{g}/\text{L}$ in monitoring well MW-19;
- Ethylbenzene concentrations ranging from less than the MRL to 410 $\mu\text{g}/\text{L}$ in off-site monitoring well MW-24; and
- Total xylenes concentrations ranging from less than the MRL to 1,400 $\mu\text{g}/\text{L}$ in off-site monitoring well MW-24.

Analytical results for groundwater samples collected from monitoring wells A-5, MW-6, MW-9, MW-14, MW-19 and MW21 did not contain COCs at concentrations greater than Ecology MTCA Method C CLs.

A Site Plan with Analytical Results – August 25, 2012 is presented as **Figure 4**. Groundwater analytical results are presented in **Table 2** Historical groundwater

monitoring and natural attenuation results are presented in **Table 3**. Laboratory analytical reports and chain-of-custody documentation are included as **Attachment C**.

Based on a comparison of historical laboratory results and current analytical results for constituents of concern, concentrations remain consistent with results reported previously.

4. Summary

The concentrations of COCs encountered during this monitoring event are consistent with concentrations encountered during the second previous groundwater monitoring events.

Notes:

BTOC = Below Top of casing; Depth to groundwater measured from TOC.

feet-msl = feet above mean sea level.

Wells MW-10D and MW-11D were deep wells, screened from 30 to 35 feet below grade.

[^] = Prior to September 2003 monitoring event, top of casing elevation relative to N.G.V.D. 1929 TIDAL 2 vertical datum (survey benchmark elev=10.617). All TOC elevations were re-surveyed in July 2003, relative to N.A.V.D. 1988 vertical datum with modified benchmark elevations to account for shifts from February 2001 earthquake.

* = Groundwater elevation corrected for separate-phase hydrocarbon thickness using the specific gravity of diesel (0.8).

QA/QC: Rory G. Henneck

Notes:

< = Denotes compound was not detected at designated detection limit.

Bold = Concentration detected above the laboratory reporting limit.

mg/l = Milligrams per liter (parts per million)

-- = Not analyzed for this parameter

* = Also tested for Dissolved Lead (EPA-200.8), results are below detection limit of 0.0050 ppm.

*a = Also tested for Dissolved Lead (EPA-200.8), results are at or above detection limit of 0.0050 ppm.

** = Also tested for Dissolved Lead (EPA-7421), results are below detection limit of 0.004 ppm.

*** = Also tested for Dissolved Lead (EPA-SW6020), results are below detection limit of 0.0050 ppm.

a = Insulating oil range hydrocarbons were reported for MW-22 at concentration of 0.87 ppm.

o = Reporting Limits were increased due to sample foaming.

V = Reporting Limts were increased due to high concentration of target analytes.

TPH as gasoline - Analysis by Washington Method WTPH-G prior to 5/20/98; analysis by Northwest Method NWTPH-Gx from 5/20/98 through present.

TPH as diesel and oil - Analysis by Washington Method WTPH-D+ extended prior to 5/20/98; analysis by Northwest Method NWTPH-Dx from 5/20/98 through present.

BTEX Compounds - Analysis by EPA Method 8020 prior to 5/20/98; analysis by EPA Method 8260B from 5/20/98 through present.

Notes:

< = Denotes compound was not detected at designated detection limit.

Bold = Concentration detected above the laboratory reporting limit.

mg/l = Milligrams per liter (parts per million)

-- = Not analyzed for this parameter

** = Analysis could not be run due to excess particulate matter.

*a = Lab received broken VOA, not able to run analysis

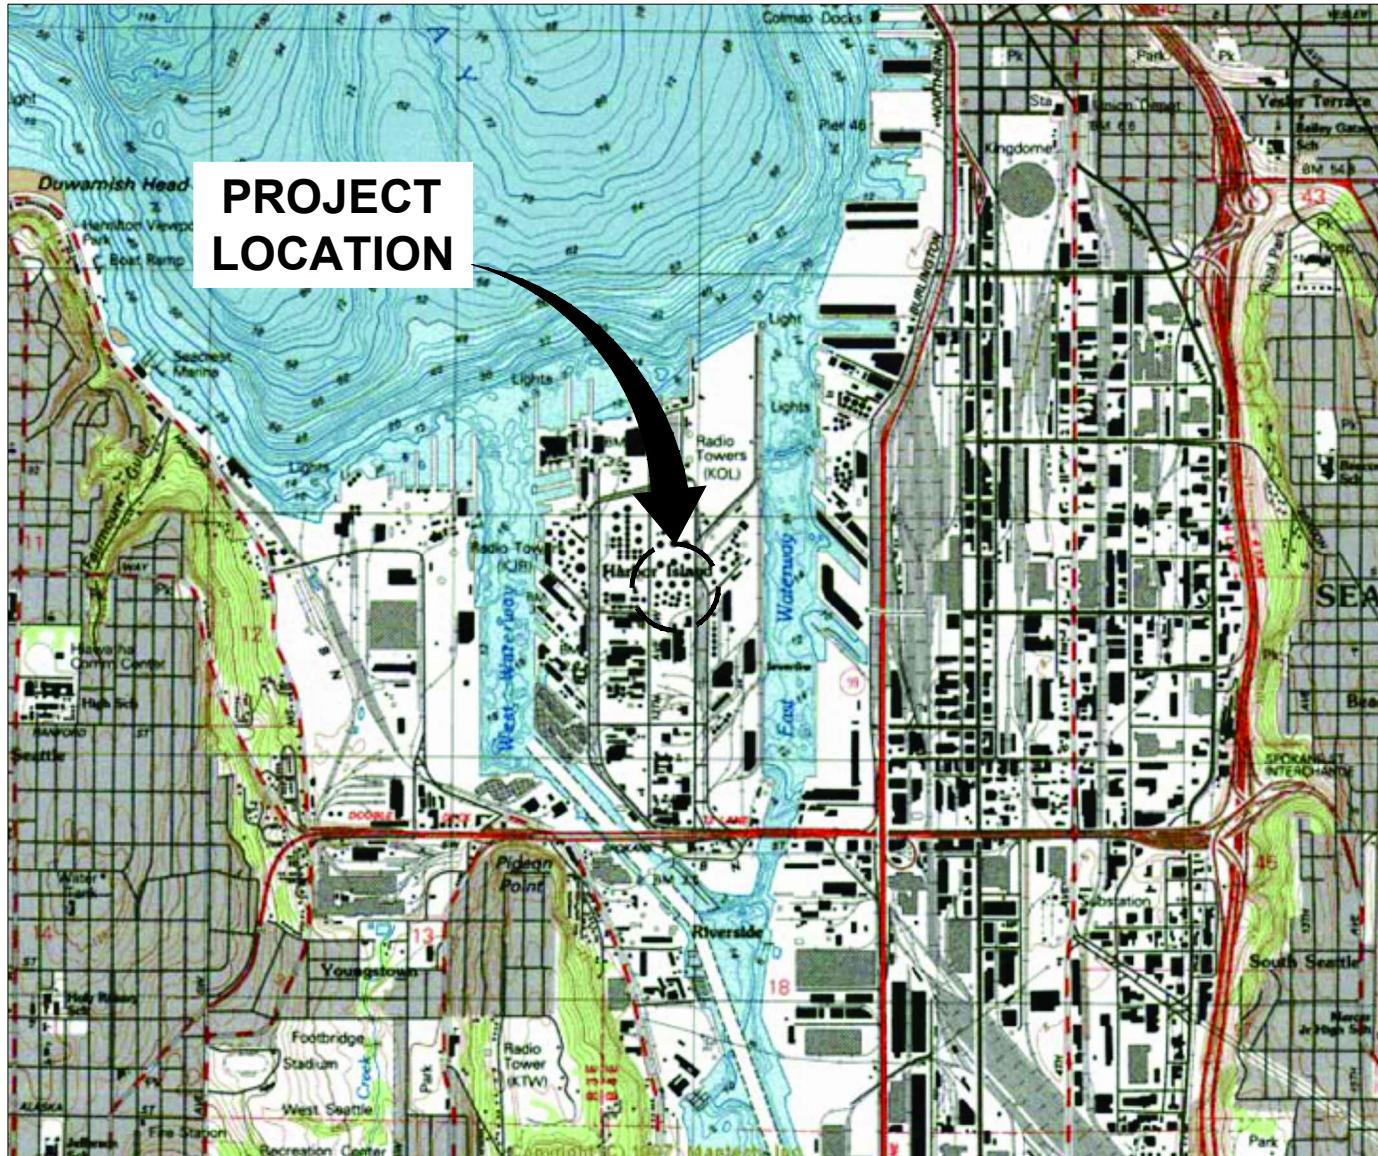

*b = Lab did not receive sample container to run analysis

a = The lab analyzed these samples for nitrate and sulfate together, using non-preserved samples (submitted for sulfate analysis). Holding time for non-preserved samples for nitrate analysis is 48 hours and for sulfate analysis is 28 days. These samples were received within the 48-hour holding time.

b = The lab analyzed these samples for nitrate only, using sulfuric acid preserved samples (submitted for nitrate analysis). Holding time for preserved samples for nitrate analysis is 28 days. The lab analyzed these for nitrate because non-preserved samples were received outside of 48 hours.

SUBJ: Site-Wide Groundwater Compliance Monitoring Plan – Proposed
Reduced Monitoring
Kinder Morgan Harbor Island Terminal
Seattle, Washington
Delta Project No. STKM-001-M.0005

Dear Mr. Nye:

This plan has been prepared on behalf of Kinder Morgan Liquid Terminals, LLC (KMLT) by Delta Environmental Consultants (Delta) and presents a proposed revision to the site-wide groundwater compliance monitoring program for the KMLT Harbor Island Terminal located at 2720 13th Avenue Southwest in Seattle, Washington ("the site"). The revisions included in this document supersede those revisions previously proposed in an August 2, 2006 letter to you, and in a second draft dated March 22, 2007. These plan revisions are proposed in accordance with Section 2.3.4 of the Compliance Monitoring Plan (Plan) developed for the site. Further modifications to the Draft Plan were discussed with you by telephone on June 13, 2007, and this Final Proposed Reduced Monitoring Plan incorporates those modifications.

PROPOSED SITE-WIDE COMPLIANCE MONITORING PLAN

The Plan was developed to describe the protocol and procedures used to confirm that cleanup requirements are achieved at the site. This monitoring plan was prepared to satisfy the requirements of the Model Toxics Control Act (MTCA) regulations WAC 173-340-410, -720, and -820 and in accordance with requirements from Exhibit F of the Consent Decree.

The achievement of cleanup levels in groundwater is measured at points of performance and compliance located within the hydrocarbon plume area and at the downgradient edge of the site. The wells at the downgradient edge of the site are considered conditional points of compliance wells. These points of compliance and performance consist of a network of monitoring wells located in the hydrocarbon plume area and on the downgradient property boundary. Sentry wells are also used to document plume migration, performance standards, and to warn of any unanticipated change in off-site groundwater conditions.

The Compliance Monitoring Plan incorporated in the Consent Decree includes quarterly monitoring for free product, dissolved TPH constituents, total and dissolved lead, and natural attenuation parameters. In accordance with *Section 2.3.4 Monitoring Schedule* of the Plan, the sampling frequency and number of parameters may be reduced if monitoring data indicates that trends are declining. Following are the proposed revisions for each of these compliance monitoring criteria, and the rationale for each revision.

Free Product

As established in the Plan, KMLT currently performs quarterly gauging of 71 wells for monitoring of free product. KMLT proposes to continue monitoring of wells in which free product has been observed during the past 8 quarters, and the 29 wells which were identified as Compliance Monitoring Wells in Table 1 of the Plan. Accordingly, KMLT proposes to continue quarterly gauging of the following 43 wells: A-4, A-5, A-6, A-8, A-10, A-11, A-12, A-14R, A-16, A-18, A-19, A-20, A-21, A-22R, A-23R, A-25, A-26R, A-27, A-28R, 12, MW-1, MW-2, MW-3, MW-4, MW-5, MW-6, MW-7, MW-8, MW-9, MW-12R, MW-13R, MW-14, MW-16, MW-18, MW-19, MW-20, MW-21, MW-22, MW-23, MW-24, SH-02R, SH-05R, and MW-07R.

Dissolved TPH Constituents

The current compliance monitoring program for dissolved TPH constituents includes quarterly sampling of 32 monitoring wells (29 Compliance Monitoring Wells and 3 additional wells which were installed in September 2003 as part of a supplemental study to further characterize free product in the A Yard). A summary of monitoring wells and annual analyses included in the current dissolved TPH constituents compliance monitoring program is presented on Table 1. A site map showing locations of groundwater monitoring wells is included as Figure 2.

An evaluation of groundwater analytical data collected since the execution of the Consent Decree indicates that data collected from numerous monitoring wells have demonstrated that cleanup criteria have either been met from the outset of the program or have demonstrated at least 4 consecutive quarters meeting cleanup criteria. A summary of groundwater analytical results for 2000 through December 2006 are presented in Table 2.

An evaluation of historical groundwater analytical results with respect to established cleanup criteria is summarized in Table 3. Where applicable, wells and corresponding analytes which demonstrate a consistent trend of meeting cleanup criteria are noted. Wells and corresponding analytes are highlighted where historic monitoring indicates a reduction in monitoring frequency or analytes is warranted.

KMLT proposes a revision from quarterly monitoring for TPH parameters as follows. For wells which have demonstrated that cleanup criteria for TPH-G, BTEX, TPH-D, and TPH-O have been met from the outset of the program, KMLT proposes to reduce the frequency of quarterly monitoring to annual monitoring. For wells which have not met the criteria for TPH-G and BTEX, but have met the criteria for TPH-D and TPH-O, KMLT proposes to continue quarterly monitoring for TPH-G and BTEX and discontinue monitoring for TPH-D and TPH-O. Proposed compliance monitoring plan revisions are summarized in Table 4.

After the revised program is initiated, if results demonstrate that any TPH cleanup criteria has been exceeded in a well, KMLT will revert to quarterly monitoring for respective analytes that were exceeded for the well, and will resume quarterly monitoring for natural attenuation parameters.

Total and Dissolved Lead

As established in the Plan, KMLT currently monitors for total lead on a quarterly basis in 20 wells. The purpose of this monitoring is to demonstrate performance and confirmation monitoring of the surface cleanup action for the site. The surface cleanup action, which included removal of surface soils containing concentrations of total lead exceeding the hot-spot cleanup criteria, was executed and completed in April and May 2002. In accordance with *Section 2.2* of the Plan, performance monitoring for total lead has been performed on a quarterly basis since the completion of the surface cleanup action. Following the performance of the surface cleanup action, total lead has infrequently exceeded the cleanup criterion. KMLT proposes to continue monitoring for this parameter on an annual basis.

As required in the Plan, KMLT also currently monitors for dissolved lead on a quarterly basis in the same 20 wells which are monitored for total lead. Cleanup criteria for this parameter was not established in the Cleanup Action Plan. Dissolved lead has been detected in 4 of the 20 wells. Dissolved lead was detected in one or two instances in two wells, and was detected in two wells on a more frequent basis in two wells. Delta proposes to monitor for

dissolved lead in two wells (A-23R and MW-7) which have contained measurable concentrations on a periodic basis in the past.

A summary of monitoring wells and annual analyses included in the current total and dissolved lead compliance monitoring program is presented on Table 1. A summary of groundwater analytical results for 2000 through December 2006 are presented in Table 2. An evaluation of historical groundwater analytical results with respect to established cleanup criteria is summarized in Table 3. Proposed compliance monitoring plan revisions are summarized in Table 4.

Natural Attenuation Parameters

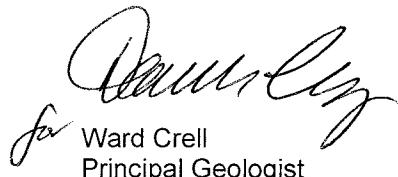

The current compliance monitoring program for natural attenuation parameters includes quarterly sampling of 26 monitoring wells (23 Compliance Monitoring Wells and 3 additional wells which were installed in September 2003 as part of a supplemental study to further characterize free product in the A Yard). In accordance with *Section 2.2.3 Monitoring Schedule* of the Plan which states that natural attenuation monitoring will be conducted quarterly for the first year and annually thereafter, KMLT proposes to discontinue monitoring of wells which have met the criteria for TPH-G, BTEX, TPH-D and TPH-O constituents, and continue monitoring on an annual basis those wells which have not met the criteria. Proposed compliance monitoring plan revisions are summarized in Table 4.

A summary of proposed compliance monitoring plan revisions are presented in Table 4. Wells which are designated for annual monitoring will be monitored during the second quarter event. A summary of monitoring wells and a tally of annual analyses for all parameters proposed in this compliance monitoring program revision is presented on Table 5.

KMLT proposes to incorporate the compliance monitoring plan revisions included herein during the third quarter 2007 monitoring event. Please call if you have any questions regarding the contents of this letter, or if you would like to discuss any aspect of the proposed compliance monitoring plan. Delta looks forward to your approval of this program.

Sincerely,

DELTA ENVIRONMENTAL CONSULTANTS, INC.

for Ward Crell
Principal Geologist

Notes:

< = Denotes compound was not detected at designated detection limit.

NA = Not analyzed for this parameter

NS = Not sampled

^a = Dup-1 is a duplicate sample for A-23R; Dup-2 is a duplicate sample for MW-3.

* = Also tested for Dissolved Lead (EPA-200.8), results are below detection limit of 0.0050 ppm.

^a = Also tested for Dissolved Lead (EPA-200.8), results are at or above detection limit of 0.0050 ppm.

** = Also tested for Dissolved Lead (EPA-7421), results are below detection limit of 0.004 ppm.

^a = Insulating oil range hydrocarbons were reported for MW-22 at concentration of 0.87 ppm.

TPH as gasoline - Analysis by Washington Method WTPH-G prior to 5/20/98; analysis by Northwest Method NWTPH-Gx from 5/20/98 through present.

TPH as diesel and oil - Analysis by Washington Method WTPH-D+ extended prior to 5/20/98; analysis by Northwest Method NWTPH-Dx from 5/20/98 through present.

BTEX Compounds - Analysis by EPA Method 8020 prior to 5/20/98; analysis by EPA Method 8021B from 5/20/98 through present.

SUBJ: Technical Revision Request – Low-Flow Groundwater Sampling
Kinder Morgan Harbor Island Terminal
Seattle, Washington
Delta Project No. STKM-001-P.0005

Dear Mr. Nye:

Delta Consultants (Delta) has prepared this request on behalf of Kinder Morgan Liquid Terminals, LLC (KMLT) to propose a technical revision to Appendix A (Compliance Sampling and Analysis Plan) of the Compliance Monitoring Plan, dated October 27, 1999. This letter request supersedes a previous request, dated July 16, 2008. The Compliance Monitoring Plan was included as Appendix F of the Model Toxics Control Act (MTCA) Consent Decree 00-2-07760-25EA, which was executed to implement remedial actions for the site. As discussed in a March 31, 2008 telephone conversation with you, KMLT is proposing a revision to Section 2.3.2, Sampling Procedures, of the Compliance Sampling and Analysis Plan (Plan) to replace the purge-sampling methodology with low-flow sampling techniques.

CURRENT PURGE-SAMPLING PROCEDURES

Sampling ground water traditionally involves purging a monitoring well to remove stagnant water in the well casing prior to sampling. The current sampling procedure incorporated into the Plan includes purging three to five volumes of the well prior to collecting a groundwater sample. This well evacuation approach can pose several problems, including: 1) as the well recovers, groundwater cascading in the well screen can affect contaminant and dissolved gas concentrations; 2) draining water from the sand pack surrounding the screen can result in air being trapped in the pore spaces, also affecting dissolved gas concentrations; and 3) increased turbidity can affect total and dissolved metal concentrations.

In the Revised Site-Wide Groundwater Compliance Monitoring Plan, dated June 21, 2007, Delta presented an evaluation of historical groundwater analytical results with respect to established cleanup criteria. During the preparation of the Revised Plan, Delta and Ecology discussed the periodic occurrence of dissolved lead in the wells sampled. These occurrences appeared to be random, with no apparent trend to the occurrence.

a member of:

4006 148TH AVENUE NE REDMOND, WASHINGTON 98052 USA
PHONE 425.882.3528 / 800.477.7411 FAX 425.869.1892 WWW.DELTAENV.COM

At the time, it was mentioned that turbulence created during sampling may have caused the occurrence of dissolved lead. Eliminating turbulence during sampling may end or reduce this occurrence.

PROPOSED LOW-FLOW SAMPLING PROCEDURES

Low-flow/low-volume sampling is a method that can be used to overcome many of the problems created by traditional purge-sampling. Low-flow sampling can minimize turbidity and minimize groundwater chemistry alteration. By pumping at very low flowrates from the well screen zone, disturbance to the water column in the well is significantly reduced and stress on the surrounding formation is minimized. Samples obtained in this manner will better reflect contaminant concentrations and ground-water chemistry at ambient flow conditions.

Sampling Procedures

KMLT proposes to replace Section 2.3.2 of the Compliance Sampling and Analysis Plan with the following low-flow procedures for sampling the site's compliance wells.

Water Level Measurements

Water level measurements will be taken prior to purging and will be recorded to the nearest 0.01 foot. Measurements will be taken from least contaminated wells first followed by wells in increasing order of contamination. If product is observed, the thickness will be measured with an electronic oil/water interface meter. Wells with measurable product will not be purged or sampled.

Monitoring Well Purging

Purging will be conducted in a manner such that water levels do not drop more than two feet below static. Wells will be purged using dedicated downhole tubing connected to a surface portable peristaltic pump. The pump rate will be monitored and set at a rate of less than 1,000 ml/min. During purging, the following parameters will be monitored: dissolved oxygen, pH, specific conductance, temperature, turbidity, and depth to water. Field parameters will be measured in a flow-through container. Water level data will be collected with an electronic indicator probe. Measurements will be taken beginning with the first water purged from the well. During purging, additional measurements will be taken and recorded as frequently as possible. Measurements will be recorded to the following standards: dissolved oxygen to 0.05 mg/L; pH to \pm 0.01 units; specific conductance to \pm uS/cm (measured specific conductance \leq 99 uS/cm), to \pm 10 uS/cm (99 uS/cm $<$ specific conductance $<$ 1,000 uS/cm), or to \pm 100 uS/cm (measured specific conductance $>$ 1,000 uS/cm); temperature to \pm 0.5°C; and turbidity to 0.1 NTU. The meters will be calibrated near the beginning and end of each sampling day.

Groundwater samples will be collected after specific conductance and dissolved oxygen measurements are within 10 percent for 3 consecutive readings.

Sample Collection

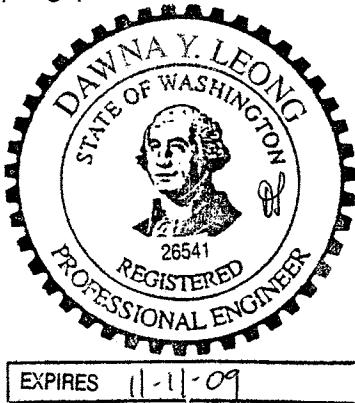

Following purging, samples will be collected for laboratory analyses. Samples will be pumped directly into laboratory-supplied sample containers, and each sample bottle will be labeled with the sample identification number, the sample date, the facility name, and the name of the technician who performed the sampling. Samples will be collected in the following order: TPH-G/BTEX, methane (if analyzed, TPH-Dx, metals (if analyzed), and field analytes (if analyzed). Duplicate samples will be collected by alternately filling the sample and the duplicate sample bottles.

KMLT proposes to implement the low-flow sampling procedures described herein upon approval from Ecology. Please call if you have any questions regarding the contents of this letter, or if you would like to discuss any aspect of the proposed sampling procedures. Delta looks forward to your approval of this proposal.

Sincerely,
DELTA CONSULTANTS, INC.

Re: Reduced Groundwater Monitoring Plan

Dear Mr. Truedinger:

This letter is to indicate the Department of Ecology's approval of the Site-Wide Groundwater Compliance Monitoring Plan – Proposed Reduced Monitoring, as presented in Delta Environmental Consultants' submittal dated June 21, 2007.

Sorry that this approval has taken awhile. Further adjustments / reductions in the monitoring may be appropriate in the future.

Sincerely,

A handwritten signature in black ink that reads "Roger K. Nye".

O = Reporting Limits were increased due to sample foaming.

This replaces the report signed earlier on 9/11/12, due to a change in the analyte list, per client request.

V = Reporting Limits were increased due to high concentrations of target analytes.

ND = Not Detected
