1. DESCRIPTION OF WORK COMPLETED

This Annual Progress Report was prepared to document the corrective action activities conducted in 2020 and to present the results of the sampling activities conducted in the second quarter of 2020 for the Burlington Environmental LLC. (Burlington) Tacoma Facility located at 1701 Alexander Avenue in the City of Tacoma, Washington (the “Facility”). This report was prepared in accordance with the requirements of Section E of the Facility’s Dangerous Waste Permit (Permit No. WAD 020 257 945) (the “Permit”), reissued in March 2012 for the period of March 22, 2012 through March 22, 2022.

A revised Long Term Groundwater Monitoring Plan (GWMP) was submitted to Ecology in October 2011 for review and was included as Section I-5 in the RCRA Part B Permit Application in December 2011, which is a part of the revised permit effective through March 22, 2022. The GWMP was revised with minor changes in May 2019 to update names and reflect abandonment of several groundwater monitoring wells and Ecology approved the revised plan via email on June 3, 2019 for inclusion in the permit.

The GWMP requires groundwater sampling during the second quarter of each year and requires that groundwater level measurements are taken in the second and fourth quarters. Well inspections are required every quarter.

This report, therefore, relates information on the second quarter 2020 Groundwater Monitoring event and the second and fourth quarter 2020 groundwater level measurements.

1.1. Personnel Changes

The responsibilities of former Corrective Actions Project Manager Greg Fink transitioned to Laura Dell’Olio midway through 2020.

1.2. Second and Fourth Quarter 2020 Liquid-Level Measurements and LNAPL Recovery

Groundwater monitoring was conducted at the Tacoma facility during the second and fourth quarters on June 8, 2020 and again on December 2, 2020. Some wells located on the “Potter” property could not be accessed during the June 8, 2020 event due to a lapse in access with the property owner.

Field activities included gauging the depth to groundwater, and where present, the depth to LNAPL. Water level measurements were recorded at the following monitoring points:

- Monitoring points that are part of the routine groundwater program:
 - Facility groundwater-monitoring wells: CTMW-1, CTMW-5, CTMW-7 through CTMW- 10, CTMW-12, CTMW-14, CTMW-17, CTMW-17D, CTMW-18, CTMW-24, and CTMW-24D. CTMW-15, CTMW-20 and CTMW-25D were not measured in June 2020 due to a lapsed access agreement.
 - Potter Property well: MW-1 was not measured in June 2020 due to a lapsed access agreement and could not be measured in December due to debris over well.
 - Facility piezometers: PZ-1, PZ-5, PZ-7, PZ-8, and PZ-9.

- Piezometers associated with the Interim Measure:
 - LNAPL-interceptor trench piezometers: TP-6 through TP-10 were not measured in June 2020 due to a lapsed access agreement. TP-7 was not measured in December 2020 due to truck trailers blocking access to the piezometers.
- Monitoring points added to the semiannual groundwater gauging program at the request of Ecology:
 - Three shallow-aquifer monitoring wells (SB-1A, SB-2A and SB-3A) on the Port of Tacoma property that abuts the Facility on the west.
 - Three monitoring well nests (CCW-2, CCW-3 and CCW-5) on the CleanCare property that abuts the Facility on the east.
- In addition, groundwater elevation data from the adjacent property owner was obtained for the following wells:
 - Monitoring wells (EMW-1, EMW-2R, EMW-3R and EMW-4) located on the Emerald Services, Inc. (Emerald) property located southeast of the Facility.

1.3. Second Quarter 2020 Groundwater Sampling

As part of the second quarter 2020 groundwater monitoring event, groundwater samples were collected from 11 groundwater monitoring wells in Burlington's monitoring network on June 9 -10, 2020. Three wells on the Potter Property (CTMW-15, CMTW-20, and CMTW-25D) were unable to be sampled during the second quarter groundwater monitoring event due to a lapse in access with the property owner. Once access was obtained, these wells were sampled on November 9, 2020. Fifteen wells are identified in the 2019 GWMP; a total of 14 wells were sampled in 2020. Well CMTW-11R was abandoned in 2013 and has therefore not been sampled since.

Prior to sampling, personnel purged each well. During purging, the following groundwater stabilization criteria were monitored: flow rate; volume purged; water temperature; dissolved oxygen; turbidity; specific conductivity; redox potential; pH; and pump speed. Attachment A provides a summary of these and other measurements taken in the field during sampling. When the field parameter measurements indicated that the groundwater quality in the well had stabilized, groundwater samples were collected into laboratory-provided sample containers, and placed in a cooler with ice.

The groundwater samples were submitted to an independent laboratory [ALS Environmental (ALS)] for analysis. The sampling program includes analysis of: volatile organic compounds (VOCs); one semi-volatile organic compound (SVOC), 1,4-dioxane; gasoline-range organics (GRO) as total petroleum hydrocarbons (TPH); diesel-range organics (DRO) and lube oil-range organics (LRO); total metals from unfiltered samples and, when necessary, dissolved from filtered samples.

1.4. Other Activities

The Final Data Gaps Work Plan for the Taylor Way and Alexander Avenue Fill Area Site (TWAAFA), which encompasses the Tacoma facility, was submitted to Ecology in July 20, 2020. Ecology accepted the Data Gaps Work Plan and issued the Agreed Order DE 14260 for the TWAAFA site, which includes the Burlington property, on December 4, 2020.

Burlington changed data validators in 2020. The groundwater samples collected on June 9 and 10, 2020 were validated by James Mc Ateer of QA/QC Data Solutions, LLC. The samples collected on November 9, 2020 were validated by Cari Sayler of Sayler Data Solutions, Inc.

2. SUMMARY OF FINDINGS

2.1. Second Quarter 2020

2.1.1. INTERIM MEASURE

The results of the Interim Measure activities are summarized below:

Upon completion of the water level measurement activities, personnel attempted to recover LNAPL from all wells with measurable LNAPL using a peristaltic pump and disposable tubing. The following documents the LNAPL recovery effort conducted during the second quarter field work on June 8, 2020:

- CTMW-1: Purged approximately 80 milliliter (ml) of product
- CTMW-10: No LNAPL present; did not purge
- PZ-1: Purged approximately 80 ml of product
- MW-1: Not accessible due to a lapsed access agreement

The following documents the LNAPL recovery effort conducted during the fourth quarter field work on December 2, 2020:

- CTMW-1: Trace of LNAPL; did not purge
- CTMW-10: No LNAPL present; did not purge
- PZ-1: Trace of LNAPL; did not purge
- MW-1: Unable to access due to scrap metal covering the well.

The gauging data associated with the Interim Measure are presented in Table 1.

2.1.2. HYDROGEOLOGIC RESULTS

On June 8 and December 2, 2020 groundwater monitoring activities were conducted that included gauging the depth to groundwater from selected wells. The depth to groundwater, LNAPL thickness, and the calculated groundwater elevations are summarized in Table 1.

The results of the second quarter 2020 gauging activities are summarized below:

Second Quarter 2020

Shallow Aquifer

- A groundwater elevation contour map for the shallow-aquifer monitoring points is presented in Figure 2. The groundwater contours indicate the presence of a mound in the groundwater elevation surface near the central portion of the Facility.
- LNAPL was detected in some of the wells and piezometers tested; see Section 2.1.1 for recovery volumes. Only 160 ml of LNAPL was recovered from the wells in the second quarter. Monitoring points and the historic extent of LNAPL are documented in Table 1 and illustrated on Figure 3.

Deep Aquifer

- The deep aquifer beneath the Facility is influenced by tidal fluctuations in Commencement Bay. To obtain representative estimates of deep-aquifer groundwater elevations, hydraulic gradients, and groundwater flow rates; the deep-aquifer water-level measurements are completed within a period of less than four hours. The depth to groundwater and the calculated groundwater elevations at the deep-aquifer monitoring points for these measurements are summarized in Table 1.
- The deep-aquifer groundwater-elevation contours indicate that the direction of groundwater flow during the monitoring period is generally flat with very slight flow to the south. The groundwater elevation contours for the deep-aquifer monitoring points are illustrated on Figure 4.

Fourth Quarter 2020

Shallow Aquifer

- The calculated groundwater elevation contours for the shallow-aquifer monitoring points are illustrated on Figure 5. The groundwater contours indicate the presence of a mound in the groundwater elevation surface near the central portion of the Facility.
- LNAPL was detected in some of the wells and piezometers tested; however due to only traces of LNAPL, no LNAPL was recovered from the wells. Monitoring points and the historic extent of LNAPL are documented in Table 1 and illustrated on Figure 6.

Deep Aquifer

- The depth to groundwater and the calculated groundwater elevations at the deep-aquifer monitoring points for these measurements are summarized in Table 1.
- The deep-aquifer groundwater elevation contours indicate that groundwater flow during the monitoring period is generally flat and flows slightly to the southwest. The groundwater elevation contours for the deep-aquifer monitoring points are illustrated on Figure 7.

2.1.3. GROUNDWATER SAMPLING RESULTS

Personnel conducted groundwater sampling activities on June 9-10 and on November 9, 2020. The groundwater samples collected from select wells were submitted to the project laboratory (ALS) for laboratory analysis. ALS analyzed the samples and prepared reports documenting the results. Copies of the analytical reports are provided in Attachment B.

The groundwater analytical results were reviewed and validated by QA/QC Solutions, LLC. (QA/QC Solutions) for the June 9-10, 2020 sampling event. QA/QC Solutions' data validation report indicated the following:

- Overall, the data are of good quality; 41 results were qualified as estimated (J), 32 results reported as detected and were restated as undetected (U), 5 results reported as detected were restated as undetected and estimated (UJ); and no results were rejected (R).

The groundwater analytical results were reviewed and validated by Sayler Data Solutions, LLC. (QA/QC Solutions) for the November 9, 2020 sampling event. Sayler Data Solutions' data validation report indicated the following:

- Less than 10% of the results required data qualification including: 1 result was qualified as estimated (J), 5 results reported as detected were restated as undetected (U), 7 results reported as detected were restated as undetected and estimated (UJ); and no results were rejected (R).

Copies of the validation reports are provided in Attachment C.

The laboratory analytical results and the data validation qualifiers are summarized in Tables 2 through 7.

The lowest of the Washington State Model Toxics Control Act (MTCA) Method A and Method B groundwater cleanup levels (CULs) were compared to the groundwater analytical results in the attached tables and are summarized below for both the June and November sampling events.

- Concentrations of 1,4-dioxane were detected in excess of the minimum CUL in both shallow and deep aquifer wells CTMW-7, CTMW-9, CTMW-15, CTMW-18, CTMW-24D, and CTMW-25D. The laboratory analytical results and minimum CUL for 1,4-dioxane are presented in Table 3.
- GRO, DRO, and LRO were not detected in excess of their minimum CULs. However, the laboratory reporting limit (RL) for lube oil range organics was reported as slightly higher than the CUL of 500 ug/L – ranging from 500 to 530 ug/L. The laboratory analytical results for petroleum hydrocarbons are presented in Table 4.
- Concentrations of arsenic were detected in excess of its minimum CUL in all of the groundwater samples with a high of 0.0392 mg/L at CTMW-5. The laboratory analytical results for total metals (arsenic, cadmium, chromium, copper, lead, mercury, nickel, and zinc) are presented in Table 5.
- Groundwater samples are no longer routinely analyzed for dissolved metals, unless turbidity stabilizes at a reading of 5 NTU or greater during purging. During the second quarter 2020, turbidity measurements stabilized at levels less than 5 NTU in all the wells tested on site except for CTMW-14. Dissolved metal concentrations were below the minimum CUL at this well, except for arsenic, and are presented in Table 6.

2.1.4. SAMPLING PROBLEMS ENCOUNTERED

Six VOCs and one petroleum hydrocarbon had reporting limits above their applicable MTCA cleanup criteria but only three of these had method detection limits that also exceeded the MTCA criteria (see Table 7). The petroleum hydrocarbon was Lube Oil and the VOCs included: 1,2,3-trichloropropane, acrolein, acrylonitrile, cis-1,3-dichloropropene, methacrylonitrile, and trans-1,3-Dichloropropene.

2.1.5. TOTAL WELL DEPTHS

Annually, total well depths are measured to determine if sediment has accumulated and redevelopment is recommended, in accordance with the Groundwater Monitoring Plan. Total depths were measured in December 2020. No wells had notable sedimentation during annual sounding nor have they shown increased turbidity or decreased flow rates during sampling and therefore no wells are recommended for development. Well inspections were performed quarterly (Attachment D).

3. PROJECTED WORK FOR THE NEXT REPORTING PERIOD

The next progress report will be submitted to Ecology for the Tacoma Facility on April 15, 2022, per the GWMP. The report will include a summary of all annual activities, including the quarterly well assessments, the second quarter 2021 groundwater sampling, and the second and fourth quarter 2021 groundwater level measurements.

The projected corrective action activities for the next reporting period are summarized below:

Personnel plan to conduct second quarter 2021 groundwater-monitoring event in May 2021. As part of the second quarter 2021 groundwater-sampling event, personnel will measure water levels (and where appropriate, LNAPL thicknesses) at monitoring wells and piezometers in the network. Groundwater samples collected during the event will be sent to Agriculture & Priority Pollutants Laboratories, Inc. for laboratory analysis. Laboratory data will be reviewed and validated by Sayler Data Solutions, Inc.

Discussions between Burlington and Ecology regarding the TWAAFA Agreed Order and sampling under the Data Gaps Work Plan are expected to occur before the second quarter 2021 groundwater monitoring event which may lead to changes in the sampling and reporting schedule stated above.

Notes:

- (1) Shading indicates wells/piezometers with a history of LNAPL accumulation.
- (2) **Bold** indicates wells/piezometers whose water levels must be measured within a single one-hour period.

Revised Analytical Report for Service Request No: K2004781.01

Greg Fink
Stericycle Environmental Solutions
2337 North Penn Rd.
Hatfield, PA 19440

RE: Tacoma 2Q20 / 376.01

Dear Greg,

Enclosed is the revised report for the sample(s) submitted to our laboratory June 10, 2020. For your reference, these analyses have been assigned our service request number **K2004781**.

The results for the NWTPH-Dx analysis are now included.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. The test results meet requirements of the current NELAP standards, where applicable, and except as noted in the laboratory case narrative provided. For a specific list of NELAP-accredited analytes, refer to the certifications section at www.alsglobal.com. All results are intended to be considered in their entirety, and ALS Group USA Corp. dba ALS Environmental (ALS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

We apologize for any inconvenience this may have created.

Please contact me if you have any questions. My extension is 3376. You may also contact me via email at Mark.Harris@alsglobal.com.

Respectfully submitted,

ALS Group USA, Corp. dba ALS Environmental

A handwritten signature in black ink, appearing to read "Mark D. Harris".

Acronyms

ASTM	American Society for Testing and Materials
A2LA	American Association for Laboratory Accreditation
CARB	California Air Resources Board
CAS Number	Chemical Abstract Service registry Number
CFC	Chlorofluorocarbon
CFU	Colony-Forming Unit
DEC	Department of Environmental Conservation
DEQ	Department of Environmental Quality
DHS	Department of Health Services
DOE	Department of Ecology
DOH	Department of Health
EPA	U. S. Environmental Protection Agency
ELAP	Environmental Laboratory Accreditation Program
GC	Gas Chromatography
GC/MS	Gas Chromatography/Mass Spectrometry
LOD	Limit of Detection
LOQ	Limit of Quantitation
LUFT	Leaking Underground Fuel Tank
M	Modified
MCL	Maximum Contaminant Level is the highest permissible concentration of a substance allowed in drinking water as established by the USEPA.
MDL	Method Detection Limit
MPN	Most Probable Number
MRL	Method Reporting Limit
NA	Not Applicable
NC	Not Calculated
NCASI	National Council of the Paper Industry for Air and Stream Improvement
ND	Not Detected
NIOSH	National Institute for Occupational Safety and Health
PQL	Practical Quantitation Limit
RCRA	Resource Conservation and Recovery Act
SIM	Selected Ion Monitoring
TPH	Total Petroleum Hydrocarbons
tr	Trace level is the concentration of an analyte that is less than the PQL but greater than or equal to the MDL.

Inorganic Data Qualifiers

- * The result is an outlier. See case narrative.
- # The control limit criteria is not applicable. See case narrative.
- B The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
- E The result is an estimate amount because the value exceeded the instrument calibration range.
- J The result is an estimated value.
- U The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.
DOD-QSM 4.2 definition : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
- i The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
- X See case narrative.
- Q See case narrative. One or more quality control criteria was outside the limits.
- H The holding time for this test is immediately following sample collection. The samples were analyzed as soon as possible after receipt by the laboratory.

Metals Data Qualifiers

- # The control limit criteria is not applicable. See case narrative.
- J The result is an estimated value.
- E The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
- M The duplicate injection precision was not met.
- N The Matrix Spike sample recovery is not within control limits. See case narrative.
- S The reported value was determined by the Method of Standard Additions (MSA).
- U The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.
DOD-QSM 4.2 definition : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
- W The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.
- i The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
- X See case narrative.
- + The correlation coefficient for the MSA is less than 0.995.
- Q See case narrative. One or more quality control criteria was outside the limits.

Organic Data Qualifiers

- * The result is an outlier. See case narrative.
- # The control limit criteria is not applicable. See case narrative.
- A A tentatively identified compound, a suspected aldol-condensation product.
- B The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
- C The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
- D The reported result is from a dilution.
- E The result is an estimated value.
- J The result is an estimated value.
- N The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
- P The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results.
- U The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.
DOD-QSM 4.2 definition : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
- i The MRL/MDL or LOQ/LOD is elevated due to a chromatographic interference.
- X See case narrative.
- Q See case narrative. One or more quality control criteria was outside the limits.

Additional Petroleum Hydrocarbon Specific Qualifiers

- F The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
- L The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
- H The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
- O The chromatographic fingerprint of the sample resembles an oil, but does not match the calibration standard.
- Y The chromatographic fingerprint of the sample resembles a petroleum product eluting in approximately the correct carbon range, but the elution pattern does not match the calibration standard.
- Z The chromatographic fingerprint does not resemble a petroleum product.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. A complete listing of specific NELAP-certified analytes, can be found in the certification section at www.alsglobal.com or at the accreditation bodies web site.

Please refer to the certification and/or accreditation body's web site if samples are submitted for compliance purposes. The states highlighted above, require the analysis be listed on the state certification if used for compliance purposes and if the method/analyte is offered by that state.

Case Narrative

ALS Environmental—Kelso Laboratory

Phone (360)577-7222 Fax (360)636-1068
www.alsglobal.com

Client: Stericycle Environmental Solutions, Inc.
Project: Tacoma 2Q20
Sample Matrix: Water

Service Request: K2004781
Date Received: 06/10/2020 - 06/11/2020

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples for the Tier level IV requested by the client.

Sample Receipt:

Sixteen water samples were received for analysis at ALS Environmental on 06/10/2020 - 06/11/2020. Any discrepancies upon initial sample inspection are annotated on the sample receipt and preservation form included within this report. The samples were stored at minimum in accordance with the analytical method requirements.

Semivolatiles by GC/MS:

No significant anomalies were noted with this analysis.

Semivoa GC:

Method NWTPH-Dx, 6/16/20: The Relative Percent Difference (RPD) criterion for the replicate analysis of diesel range organics in sample CTMW-7-0620 was not applicable because the analyte concentration was below the Method Reporting Limit (MRL). Analytical values derived from measurements close to the detection limit are not subject to the same accuracy and precision criteria as results derived from measurements higher on the calibration range for the method.

Method NWTPH-Dx, 6/24/20: The lower control criterion was exceeded for n-Triacontane and o-Terphenyl in samples CTMW-8-0620 and CTMW-17D-0620. The samples were re-extracted within holding time. The surrogate recovery met control criteria for the reanalysis.

Metals:

No significant anomalies were noted with this analysis.

Volatiles by GC/MS:

Method 8260C, 6/16/20; The following analytes were flagged as outside the control criterion for Continuing Calibration Verification (CCV) MS130616F006.D: Acetone and Acetonitrile. In accordance with the EPA Method, 80% or more of the CCV analytes must pass within 20% of the true value. The ALS SOP allows for 40% difference for the remaining analytes. The CCV met these criteria. The quality of the sample data was not significantly affected. No further corrective action was required.

Method 8260C, 6/16/20; The recovery of Acetone and Acetonitrile in the Duplicate Laboratory Control Sample (DLCS) KQ2008126-08 was outside the recovery control limits listed in the results summary. The DLCS is used to evaluate batch precision. The relative percent difference (RPD) was within control limits indicating the quality of the sample data was not significantly affected. No further corrective action was taken.

Method 8260C, 6/16/20; The control criteria for replicate Matrix Spikes (MS/DMS) KQ2008126-01 and KQ2008126-02 recoveries of Acetone and Acetonitrile for sample CTMW-8-0620 were exceeded. The error associated with an elevated recovery equated to a slight high bias. No further corrective action was appropriate.

Method 8260C SIM, 6/23/20; The upper control criterion was exceeded for Dibromofluoromethane in several field samples and Method Blank (MB) KWG1211849-3. No target analytes were detected above the Method Reporting Limit (MRL) in the samples in question. The error associated with an elevated recovery equated to a high bias. The quality of the sample data was not significantly affected. No further corrective action was appropriate.

Method 8260C SIM, 6/23/20; The lower control criterion was exceeded for surrogate Dibromofluoromethane in sample CTMW-8-0620 due to suspected matrix interference. The error associated with reduced recovery equates to a potential bias. Comparison of the the 8260 full scan and 8260C SIM analyses show consistency in target analyte results. Target analytes were not detected above the MRL in either of the analyses. The results were flagged to indicate the issue. No further corrective action was taken.

Lab Instructions for
Stericycle Tacoma Facility
2nd Quarter 2020
Groundwater Monitoring Event

1. Analyze by Methods:

VOC by 8260B
VOC by 8260B w/SIM
2-Chloroethyl Vinyl Ether
1,4-Dioxane by 8270C w/SIM
TPH-Diesel by NWTPH-Dx with acid silica-gel cleanup
TPH-Gasoline by NWTPH-Gx
Total Metals by 6020 (including mercury by 7470A)
Reductive Precipitation

2. Total metals include:

Arsenic
Cadmium
Chromium
Copper
Nickel
Zinc
Lead
Mercury by 7470A

3. Dissolved Metals (including Dissolved Mercury)

Total metals samples with a turbidity > 5 NTU will be accompanied by field filtered samples and will be labeled as (Dissolved Metals/ Dissolved Mercury).

RELINQUISHED BY:

DATE: 6.10.20

TIME: 15:00

3.4	-	-	-	-				39373536173		

4. Packing material: Inserts Baggies Bubble Wrap Gel Packs Wet Ice Dry Ice Sleeves
5. Were custody papers properly filled out (ink, signed, etc.)? NA Y N
6. Were samples received in good condition (temperature, unbroken)? *Indicate in the table below.*
If applicable, tissue samples were received: Frozen Partially Thawed Thawed
7. Were all sample labels complete (i.e analysis, preservation, etc.)? NA Y N
8. Did all sample labels and tags agree with custody papers? *Indicate major discrepancies in the table on page 2.* NA Y N
9. Were appropriate bottles/containers and volumes received for the tests indicated? NA Y N
10. Were the pH-preserved bottles (see SMO GEN SOP) received at the appropriate pH? *Indicate in the table below.* NA Y N
11. Were VOA vials received without headspace? *Indicate in the table below.* NA Y N
12. Was C12/Res negative? NA Y N

Results flagged with an asterisk (*) indicate values outside control criteria.

Results flagged with a pound (#) indicate the control criteria is not applicable.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

Matrix Spike and Matrix Spike Duplicate Data is presented for information purposes only. The matrix may or may not be relevant to samples reported in this report. The laboratory evaluates system performance based on the LCS and LCSD control limits.

Duplicate Matrix Spike Summary
Volatile Organic Compounds by GC/MS SIM

Sample Name:	CTMW-7-0620	Units:	ng/L
Lab Code:	K2004781-013	Basis:	NA
Analysis Method:	8260C		
Prep Method:	None		

Analyte Name	Sample Result	Result	Matrix Spike KQ2008921-01			Duplicate Matrix Spike KQ2008921-02			% Rec Limits	RPD	RPD Limit
			Spike Amount	% Rec	Result	Spike Amount	% Rec				
Carbon Tetrachloride	ND U	2680	2000	134 *	2490	2000	125	70-130	7	30	
1,2-Dichloroethane	ND U	2090	2000	104	1980	2000	99	70-130	5	30	
1,1-Dichloroethene	ND U	2400	2000	120	2240	2000	112	70-130	7	30	
1,1,2,2-Tetrachloroethane	ND U	2120	2000	106	2010	2000	101	70-130	5	30	
Vinyl Chloride	28 J	1900	2000	94	1760	2000	87	70-130	8	30	

Results flagged with an asterisk (*) indicate values outside control criteria.

Results flagged with a pound (#) indicate the control criteria is not applicable.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

Matrix Spike and Matrix Spike Duplicate Data is presented for information purposes only. The matrix may or may not be relevant to samples reported in this report. The laboratory evaluates system performance based on the LCS and LCSD control limits.

Date Received: 06/10/20
Date Analyzed: 06/12/20
Date Extracted: 06/11/20

Duplicate Matrix Spike Summary
1,4-Dioxane by GC/MS

Sample Name: FieldBlank#1-0620 **Units:** ug/L
Lab Code: K2004781-007 **Basis:** NA
Analysis Method: 8270D SIM
Prep Method: EPA 3535A

Analyte Name	Matrix Spike KQ2007905-01			Duplicate Matrix Spike KQ2007905-02				RPD Limit		
	Sample Result	Result	Spike Amount	% Rec	Result	Spike Amount	% Rec	% Rec Limits		
1,4-Dioxane	ND U	9.10	10.0	91	9.00	10.0	90	33-127	1	30

Results flagged with an asterisk (*) indicate values outside control criteria.

Results flagged with a pound (#) indicate the control criteria is not applicable.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

Matrix Spike and Matrix Spike Duplicate Data is presented for information purposes only. The matrix may or may not be relevant to samples reported in this report. The laboratory evaluates system performance based on the LCS and LCSD control limits.

Analytical Report for Service Request No: K2005612

Greg Fink
Stericycle Environmental Solutions
2337 North Penn Rd.
Hatfield, PA 19440

RE: Tacoma 2Q20 / 376.01

Dear Greg,

Enclosed are the results of the sample(s) submitted to our laboratory June 11, 2020
For your reference, these analyses have been assigned our service request number **K2005612**.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. The test results meet requirements of the current NELAP standards, where applicable, and except as noted in the laboratory case narrative provided. For a specific list of NELAP-accredited analytes, refer to the certifications section at www.alsglobal.com. All results are intended to be considered in their entirety, and ALS Group USA Corp. dba ALS Environmental (ALS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please contact me if you have any questions. My extension is 3376. You may also contact me via email at Mark.Harris@alsglobal.com.

Respectfully submitted,

ALS Group USA, Corp. dba ALS Environmental

A handwritten signature in black ink, appearing to read "Mark D. Harris".

SIM	Selected Ion Monitoring
TPH	Total Petroleum Hydrocarbons
tr	Trace level is the concentration of an analyte that is less than the PQL but greater than or equal to the MDL.

Inorganic Data Qualifiers

- * The result is an outlier. See case narrative.
- # The control limit criteria is not applicable. See case narrative.
- B The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
- E The result is an estimate amount because the value exceeded the instrument calibration range.
- J The result is an estimated value.
- U The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.
DOD-QSM 4.2 definition : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
- i The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
- X See case narrative.
- Q See case narrative. One or more quality control criteria was outside the limits.
- H The holding time for this test is immediately following sample collection. The samples were analyzed as soon as possible after receipt by the laboratory.

Metals Data Qualifiers

- # The control limit criteria is not applicable. See case narrative.
- J The result is an estimated value.
- E The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
- M The duplicate injection precision was not met.
- N The Matrix Spike sample recovery is not within control limits. See case narrative.
- S The reported value was determined by the Method of Standard Additions (MSA).
- U The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.
DOD-QSM 4.2 definition : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
- W The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.
- i The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
- X See case narrative.
- + The correlation coefficient for the MSA is less than 0.995.
- Q See case narrative. One or more quality control criteria was outside the limits.

Organic Data Qualifiers

- * The result is an outlier. See case narrative.
- # The control limit criteria is not applicable. See case narrative.
- A A tentatively identified compound, a suspected aldol-condensation product.
- B The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
- C The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
- D The reported result is from a dilution.
- E The result is an estimated value.
- J The result is an estimated value.
- N The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
- P The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results.
- U The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.
DOD-QSM 4.2 definition : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
- i The MRL/MDL or LOQ/LOD is elevated due to a chromatographic interference.
- X See case narrative.
- Q See case narrative. One or more quality control criteria was outside the limits.

Additional Petroleum Hydrocarbon Specific Qualifiers

- F The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
- L The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
- H The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
- O The chromatographic fingerprint of the sample resembles an oil, but does not match the calibration standard.
- Y The chromatographic fingerprint of the sample resembles a petroleum product eluting in approximately the correct carbon range, but the elution pattern does not match the calibration standard.
- Z The chromatographic fingerprint does not resemble a petroleum product.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. A complete listing of specific NELAP-certified analytes, can be found in the certification section at www.alsglobal.com or at the accreditation bodies web site.

Please refer to the certification and/or accreditation body's web site if samples are submitted for compliance purposes. The states highlighted above, require the analysis be listed on the state certification if used for compliance purposes and if the method/analyte is offered by that state.

1317 South 13th Avenue, Kelso, WA 98626
Phone (360)577-7222 Fax (360)636-1068
www.alsglobal.com

Client: Stericycle Environmental Solutions, Inc.
Project: Tacoma 2Q20
Sample Matrix: Water

Service Request: K2005612
Date Received: 06/11/2020

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples for the Tier level IV requested by the client.

Sample Receipt:

Two water samples were received for analysis at ALS Environmental on 06/11/2020. Any discrepancies upon initial sample inspection are annotated on the sample receipt and preservation form included within this report. The samples were stored at minimum in accordance with the analytical method requirements.

Metals:

No significant anomalies were noted with this analysis.

Approved by Joe D. Orr

Lab Instructions for
Stericycle Tacoma Facility
2nd Quarter 2020
Groundwater Monitoring Event

1. Analyze by Methods:

VOC by 8260B
VOC by 8260B w/SIM
2-Chloroethyl Vinyl Ether
1,4-Dioxane by 8270C w/SIM
TPH-Diesel by NWTPH-Dx with acid silica-gel cleanup
TPH-Gasoline by NWTPH-Gx
Total Metals by 6020 (including mercury by 7470A)
Reductive Precipitation

2. Total metals include:

Arsenic
Cadmium
Chromium
Copper
Nickel
Zinc
Lead
Mercury by 7470A

3. Dissolved Metals (including Dissolved Mercury)

Total metals samples with a turbidity > 5 NTU will be accompanied by field filtered samples and will be labeled as (Dissolved Metals/ Dissolved Mercury).

Results flagged with an asterisk (*) indicate values outside control criteria.

Results flagged with a pound (#) indicate the control criteria is not applicable.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

Analytical Report for Service Request No: K2010392

Laura DellOlio
Philip Services Corporation
20245 77th Ave South
Kent, WA 98032

RE: Tacoma 2Q20 Access / 376.01

Dear Laura,

Enclosed are the results of the sample(s) submitted to our laboratory November 10, 2020
For your reference, these analyses have been assigned our service request number **K2010392**.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. The test results meet requirements of the current NELAP standards, where applicable, and except as noted in the laboratory case narrative provided. For a specific list of NELAP-accredited analytes, refer to the certifications section at www.alsglobal.com. All results are intended to be considered in their entirety, and ALS Group USA Corp. dba ALS Environmental (ALS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please contact me if you have any questions. My extension is 3376. You may also contact me via email at Mark.Harris@alsglobal.com.

Respectfully submitted,

ALS Group USA, Corp. dba ALS Environmental

A handwritten signature in black ink, appearing to read "Mark D. Harris".

DOH	Department of Health
EPA	U. S. Environmental Protection Agency
ELAP	Environmental Laboratory Accreditation Program
GC	Gas Chromatography
GC/MS	Gas Chromatography/Mass Spectrometry
LOD	Limit of Detection
LOQ	Limit of Quantitation
LUFT	Leaking Underground Fuel Tank
M	Modified
MCL	Maximum Contaminant Level is the highest permissible concentration of a substance allowed in drinking water as established by the USEPA.
MDL	Method Detection Limit
MPN	Most Probable Number
MRL	Method Reporting Limit
NA	Not Applicable
NC	Not Calculated
NCASI	National Council of the Paper Industry for Air and Stream Improvement
ND	Not Detected
NIOSH	National Institute for Occupational Safety and Health
PQL	Practical Quantitation Limit
RCRA	Resource Conservation and Recovery Act
SIM	Selected Ion Monitoring
TPH	Total Petroleum Hydrocarbons
tr	Trace level is the concentration of an analyte that is less than the PQL but greater than or equal to the MDL.

Inorganic Data Qualifiers

- * The result is an outlier. See case narrative.
- # The control limit criteria is not applicable. See case narrative.
- B The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
- E The result is an estimate amount because the value exceeded the instrument calibration range.
- J The result is an estimated value.
- U The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.
DOD-QSM 4.2 definition : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
- i The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
- X See case narrative.
- Q See case narrative. One or more quality control criteria was outside the limits.
- H The holding time for this test is immediately following sample collection. The samples were analyzed as soon as possible after receipt by the laboratory.

Metals Data Qualifiers

- # The control limit criteria is not applicable. See case narrative.
- J The result is an estimated value.
- E The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
- M The duplicate injection precision was not met.
- N The Matrix Spike sample recovery is not within control limits. See case narrative.
- S The reported value was determined by the Method of Standard Additions (MSA).
- U The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.
DOD-QSM 4.2 definition : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
- W The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.
- i The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
- X See case narrative.
- + The correlation coefficient for the MSA is less than 0.995.
- Q See case narrative. One or more quality control criteria was outside the limits.

Organic Data Qualifiers

- * The result is an outlier. See case narrative.
- # The control limit criteria is not applicable. See case narrative.
- A A tentatively identified compound, a suspected aldol-condensation product.
- B The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
- C The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
- D The reported result is from a dilution.
- E The result is an estimated value.
- J The result is an estimated value.
- N The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
- P The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results.
- U The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.
DOD-QSM 4.2 definition : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
- i The MRL/MDL or LOQ/LOD is elevated due to a chromatographic interference.
- X See case narrative.
- Q See case narrative. One or more quality control criteria was outside the limits.

Additional Petroleum Hydrocarbon Specific Qualifiers

- F The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
- L The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
- H The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
- O The chromatographic fingerprint of the sample resembles an oil, but does not match the calibration standard.
- Y The chromatographic fingerprint of the sample resembles a petroleum product eluting in approximately the correct carbon range, but the elution pattern does not match the calibration standard.
- Z The chromatographic fingerprint does not resemble a petroleum product.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. A complete listing of specific NELAP-certified analytes, can be found in the certification section at www.alsglobal.com or at the accreditation bodies web site.

Please refer to the certification and/or accreditation body's web site if samples are submitted for compliance purposes. The states highlighted above, require the analysis be listed on the state certification if used for compliance purposes and if the method/analyte is offered by that state.

Case Narrative

ALS Environmental—Kelso Laboratory
1317 South 13th Avenue, Kelso, WA 98626
Phone (360)577-7222 Fax (360)636-1068
www.alsglobal.com

Client: Burlington Environmental
Project: Tacoma 2Q20 Access
Sample Matrix: Water

Service Request: K2010392
Date Received: 11/10/2020

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples for the Tier level IV requested by the client.

Sample Receipt:

Seven water samples were received for analysis at ALS Environmental on 11/10/2020. Any discrepancies upon initial sample inspection are annotated on the sample receipt and preservation form included within this report. The samples were stored at minimum in accordance with the analytical method requirements.

Semivolatiles by GC/MS:

Method 8270D SIM, 11/14/2020: Samples CTMW-25D-1120 and CTMW-9-25D-1120 required dilution due to the presence of elevated levels of target analyte. The reporting limits are adjusted to reflect the dilution.

Semiyoa GC:

No significant anomalies were noted with this analysis.

Metals:

No significant anomalies were noted with this analysis.

Volatiles by GC/MS:

Method 8260C, 11/11/2020: The following analytes were flagged as outside the control criterion for Continuing Calibration Verification (CCV) MS131111F004.D: Vinyl Acetate, 2-Chloroethyl Vinyl Ether, Dichlorodifluoromethane (CFC 12), Carbon Tetrachloride, Iodomethane, Dibromochloromethane. In accordance with the EPA Method, 80% or more of the CCV analytes must have passed within 20% of the true value. The remaining analytes are allowed a 40% difference as per the ALS SOP. The CCV met these criteria except for Iodomethane. In accordance with ALS standard operating procedures, a Method Reporting Limit (MRL) check standard containing the analyte of concern was analyzed each day of analysis. The MRL check standard verified instrument sensitivity was adequate to detect the analyte at the MRL on the day of analysis. No further corrective action was required.

Lead	6020A	0.000020	0.000006	ND U	ND U	ND	-	20
Nickel	6020A	0.00020	0.00004	0.00194	0.00204	0.00199	5	20
Zinc	6020A	0.0020	0.0005	ND U	ND U	ND	-	20

Results flagged with an asterisk (*) indicate values outside control criteria.

Results flagged with a pound (#) indicate the control criteria is not applicable.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

Analyte Name	Analysis Method	MRL	Sample	01	Average	RPD	RPD Limit
			Result	Result			
Diesel Range Organics (C12 - C25 DRO)	NWTPH-Dx	250	ND U	ND U	NC	NC	30
Residual Range Organics (C25 - C36 RRO)	NWTPH-Dx	510	ND U	ND U	NC	NC	30

Results flagged with an asterisk (*) indicate values outside control criteria.

Results flagged with a pound (#) indicate the control criteria is not applicable.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

Matrix Spike
KQ2018216-03 **Duplicate Matrix Spike**
KQ2018216-04

Analyte Name	Sample Result	Result	Spike Amount	% Rec	Result	Spike Amount	% Rec	% Rec Limits	RPD	RPD Limit
Gasoline Range Organics (Toluene-Naphthalene GRO)	ND U	443	500	89	489	500	98	80-119	10	30

Results flagged with an asterisk (*) indicate values outside control criteria.

Results flagged with a pound (#) indicate the control criteria is not applicable.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

Matrix Spike and Matrix Spike Duplicate Data is presented for information purposes only. The matrix may or may not be relevant to samples reported in this report. The laboratory evaluates system performance based on the LCS and LCSD control limits.

Results flagged with an asterisk (*) indicate values outside control criteria.

Results flagged with a pound (#) indicate the control criteria is not applicable.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

Matrix Spike and Matrix Spike Duplicate Data is presented for information purposes only. The matrix may or may not be relevant to samples reported in this report. The laboratory evaluates system performance based on the LCS and LCSD control limits.

Lab Control Sample Summary
Volatile Organic Compounds by GC/MS, Unpreserved

Sample Name: Lab Control Sample **Instrument ID:**K-MS-13
Lab Code: KQ2017754-05 **File ID:**I:\MS13\DATA\111120\1111F005.D\
Analysis Method: 8260C **Analysis Lot:**703049
Prep Method: None

This Lab Control Sample applies to the following analyses.

Sample Name	Lab Code	File ID	Date Analyzed
Duplicate Lab Control Sample	KQ2017754-06	I:\MS13\DATA\111120\1111F006.D\	11/11/20 11:57

Results flagged with an asterisk (*) indicate values outside control criteria.

Results flagged with a pound (#) indicate the control criteria is not applicable.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

Matrix Spike and Matrix Spike Duplicate Data is presented for information purposes only. The matrix may or may not be relevant to samples reported in this report. The laboratory evaluates system performance based on the LCS and LCSD control limits.

Duplicate Matrix Spike Summary
1,4-Dioxane by GC/MS

Sample Name: CTMW-25D-1120 **Units:** ug/L
Lab Code: K2010392-003 **Basis:** NA
Analysis Method: 8270D SIM
Prep Method: EPA 3535A

Analyte Name	Matrix Spike KQ2017808-01				Duplicate Matrix Spike KQ2017808-02				RPD Limit	
	Sample Result	Result	Spike Amount	% Rec	Result	Spike Amount	% Rec	% Rec Limits		
1,4-Dioxane	55	57.6 E	10.0	22 #	57.6 E	10.0	22 #	33-127	<1	30

Results flagged with an asterisk (*) indicate values outside control criteria.

Results flagged with a pound (#) indicate the control criteria is not applicable.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

Matrix Spike and Matrix Spike Duplicate Data is presented for information purposes only. The matrix may or may not be relevant to samples reported in this report. The laboratory evaluates system performance based on the LCS and LCSD control limits.

QA/QC Solutions, LLC Project No.: 070120.1

Dear Laura, Greg, and Duane:

This letter documents the results of the data validation review of the chemical analyses of organic and inorganic compounds completed on groundwater samples associated with Clean Earth Environmental Solutions Tacoma 2nd Quarter 2020 sampling event.

The data were validated to verify applicable laboratory quality assurance and quality control (QA/QC) measurements were reported, documented, and of sufficient quality to support its intended purpose(s). A summary of the overall assessment of data quality, the data set, a summary of the analytical methods used to complete the chemical analyses, a summary of the data validation procedures used, and a summary of the reasons why data were qualified (including other items noted during data validation) is presented below.

Overall Assessment of Data Quality

Overall, the data reported are of good quality and the results for the applicable QA/QC measurements that were used by the laboratory during the analysis of the samples were generally acceptable. Some sample results required qualification during data validation because method-specific QA/QC criteria were not met; results maybe qualified for more than one reason. During data validation the following actions were taken:

- A total of 41 results reported as detected were qualified as estimated (assigned a *J* qualifier).
- A total of 5 results reported as detected were restated as undetected and qualified as estimated (assigned a *UJ* qualifier).
- A total of 32 results reported as detected required restatement as undetected (assigned a *U* qualifier).
- No results required rejection (*R*).

Analytical data that did not meet method- and/or laboratory-established control limits for applicable quality control measurements were qualified as estimated (*J*) by the laboratory or during data validation. These qualified data are usable and represent data of good quality and reasonable confidence and have an acceptable degree of uncertainty (i.e., may be less precise or less accurate than unqualified data). Analytical

data that were reported as undetected (*U*) by the laboratory or that were restated as undetected and estimated (*UJ*) during data validation are usable.

***Data users must note that results may be qualified for more than one reason.**

Data Set

The data set consisted of 16 water samples (i.e., 11 groundwater samples, 2 field duplicates, 2 trip blanks, and 1 field blank) that were collected in June 2020. A summary of the samples collected and the analyses completed is presented in Table 1.

Data users must note the field duplicate sample CTMW-9-18-0620 was not analyzed Gasoline-range petroleum hydrocarbons by the laboratory. No explanation was provided in the case narrative for this omission.

All organic and inorganic chemical analyses were completed by ALS Group USA Corp. dba ALS Environmental (ALS) located in Kelso, Washington. ALS submitted two (2) complete hardcopy data validation deliverables and six (6) electronic data deliverables (EDDSs).).

Analytical Methods

The analytical methods used by the laboratories to complete the chemical analyses included the following:

- Total metals (i.e., arsenic, cadmium, chromium, copper, lead, nickel, and zinc) by digestion with 1% nitric acid and 0.2% hydrochloric acid and analysis by inductively coupled plasma-mass spectrometry (ICP-MS) using U.S. EPA SW-846 Method 6020A (U.S. EPA 2020).
- Dissolved metals (i.e., arsenic, cadmium, chromium, copper, lead, nickel, and zinc) by field filtration through 0.45 µm filter, digestion with 1% nitric acid and 0.2% hydrochloric acid, and analysis by ICP-MS using U.S. SW-846 Method 6020A (U.S. EPA 2020).
- Total mercury by digestion with hydrogen peroxide and nitric acid, addition of nickel nitrate solution, and analysis by cold vapor atomic absorption (CVAA) using U.S. EPA SW-846 Method 7470A (U.S. EPA 2020).
- Dissolved mercury by metals by field filtration through 0.45 µm filter, digestion with hydrogen peroxide and nitric acid, addition of nickel nitrate solution, and analysis by cold vapor atomic absorption (CVAA) using U.S. EPA SW-846 Method 7470A (U.S. EPA 2020).
- Gasoline-range petroleum hydrocarbons by purge and trap and analysis by gas chromatography/flame ionization detection (GC/FID) using the Washington Department of Ecology NWTPH-Gx method (Ecology 1997).
- Diesel- and oil-range petroleum hydrocarbons by extraction and analysis by gas chromatography/flame ionization (GC/FID) using the Washington Department of Ecology NWTPH-Dx (extended) method (Ecology 1997).
- Volatile organic compounds (VOCs) (50 target analytes with co-elutions included) by purge and trap and analysis by gas chromatography/mass spectrometry (GC/MS) operated in the full scan mode using U.S. EPA SW-846 Methods 5030B and 8260C, respectively (U.S. EPA 2020).

- VOCs (5 target analytes) by purge and trap and analysis by GC/MS operated in the selected ion monitoring (SIM) mode to achieve lower reporting limits using U.S. EPA SW-846 Methods 5030B and 8260C, respectively (U.S. EPA 2020). These VOC results were reported in units of ng/L.
- 1,4-Dioxane by solid-phase extraction and analysis by GC/MS operated in the SIM mode using U.S. EPA SW-846 Methods 3535A and 8270D-SIM, respectively (U.S. EPA 2020).

Data Validation Procedures

Data validation procedures included evaluating a summary of the sample results and applicable quality control results reported by the laboratory; this level of validation is also referred to as an abbreviated data review (equivalent to “Stage 2B” review per U.S. EPA 2009, which is equivalent to “Level EPA2B” for use with the Washington Department of Ecology EIMS database). The analytical data were validated generally following the applicable guidance and requirements:

- Method-specific and laboratory-established quality control requirements, as applicable.
- Guidance on Environmental Data Verification and Validation (U.S. EPA 2002)
- Guidance for Labeling Externally Validated Laboratory Analytical Data for Superfund Use. OSWER No. 9200.1-85. EPA 540-R-08-005. (U.S. EPA 2009).
- National Functional Guidelines for Organic Superfund Methods Data Review. Final. OLEM 9355.0-136. USEPA-540-R-2017-002. June 2017. U.S. Environmental Protection Agency (EPA), Office of Superfund Remediation and Technology Innovation (OSRTI), Washington, DC. (U.S. EPA 2017a).
- National Functional Guidelines for Inorganic Data Superfund Data Review. Final. OLEM 9355.0-135. EPA-540-R-2017-001. January 2017. U.S. Environmental Protection Agency (EPA), Office of Superfund Remediation and Technology Innovation (OSRTI), Washington, DC. (U.S. EPA 2017b).

Data validation procedures were modified to accommodate QA/QC requirements for methods that are not specifically addressed by the USEPA functional guidelines. Method-specific and laboratory-established control limits were used, as necessary, to determine if qualification of the data was necessary. The laboratory data deliverables that were validated if reported and available for review included the following:

- Case narratives discussing analytical problems (if any) and procedures.
- Chain-of-custody documentation to verify completeness of the data set.
- Sample preparation logs or laboratory summary result forms to verify analytical holding times were met.
- Results for applicable instrument tuning, initial calibration, and continuing calibration verification (CCV) results to assess instrument performance.
- Results for applicable instrument blanks (i.e., method blanks, trip blanks, and field blanks to determine whether an analyte that was reported as detected in any sample was the result of possible contamination introduced at the laboratory, during transport of samples, or during field sampling, respectively.

- Results for applicable internal standards performance (VOC and 1,4-Dioxane analyses) to verify that instrument sensitivity and response was stable during the analysis of the samples.
- Results for applicable method-specific quality control measurements for metals (i.e., serial dilutions and interference check samples for metals analyses) to assess potential matrix interference effects.
- Results for applicable surrogate compound (or system monitoring compound for VOC analyses), laboratory control sample (LCS) (i.e., blank spike), duplicate LCS, matrix spike (MS), and matrix spike duplicate (MSD) recoveries to assess analytical accuracy.
- Results for applicable laboratory duplicate sample, duplicate LCS, and MSD analyses to assess analytical precision.
- Results for the field duplicate samples to provide additional information in support of the quality assurance review.
- Laboratory summaries of analytical results.

Verification and validation of 100-percent of all applicable laboratory calculations, transcriptions, review of instrument printouts, and review of bench sheets were not completed during the data validation review. There may be analytical problems that could only be identified by reviewing every instrument printouts and associated analytical quality control results. Verification of all possible factors that could result in the degradation of data quality was not completed nor should be inferred at this time. The laboratory case narratives did not indicate any significant problems with data that were not reviewed during data validation. The adequacy of the sampling procedures was not completed during the data validation.

Performance based control limits established by the laboratory, applicable control limits specified in the analytical methods, and best professional judgement were used to evaluate data quality and to determine if specific data required qualification. Data qualifiers were assigned during data validation following guidance specified by U.S. EPA (2002, 2017a, and 2017b) to the EDD when applicable QC measurement criteria were not met and qualification of the data was warranted.

Reasons for Data Qualification

The data and reasons for qualification are summarized below. A summary of the qualified data and the reasons for qualification are summarized in Table 2; results may be qualified for more than one reason.

Total Metals and VOC Analyses

- A total of 40 results reported as detected at a concentration above the method detection limit (MDL), but less than the method reporting limit (MRL) were qualified as estimated (*J*). These qualified results may exhibit a greater degree of uncertainty than a concentration that is reported above the MRL.

Metals Analyses

- A total of nine (9) results reported as detected were restated as undetected (*U*) because the concentrations were less than 5 times the concentration found in the associated method and/or field blank. These results were restated as undetected at

the concentration reported or reported as undetected at the concentration found in the associated blank.

VOC Analyses by GC/MS operated in full scan mode

- Six results reported as detected for carbon disulfide were restated as undetected (*U*) because the concentrations were less than 5 times the concentration found in the associated method or trip blank. These results were restated as undetected at the concentration reported in the sample or was elevated to the concentration found in the applicable blank.
- Four results reported as detected for acetone were qualified as estimated (*J*) because the recovery of this VOC in the LCS was above the upper control limit.

VOC Analyses by GC/MS operated in SIM mode

- A total of 22 results reported as detected for one, or more, of the five target VOCs were restated as undetected (*U*) because the concentrations 5 times the concentration found in the associated method or trip blank. These results were restated as undetected at the concentration reported in the sample or was elevated to the concentration found in the applicable blank.
- A total of five (5) results were qualified as estimated (*J*) because the recovery of one of the three surrogate compounds was below the lower control limit.

General Comments:

- During data validation, it was determined that selected data-validation-specific and/or method-specific QA/QC measurement criteria were not met. Additional information may be found in the laboratory case narratives and sample login summaries. Qualification of the sample results was not required because the overall quality of the data reported was not affected and, therefore, are not summarized herein.
- There was a positive bias for the recovery of the surrogate compound dibromofluoromethane in 14 of 22 total sample and QC samples analyzed by GC/MS operated in the SIM mode. No results required qualification because the affected VOCs in the affected samples were either not detected or were already qualified estimated because the VOC was reported as detected at a concentration was >MDL but < MRL was already qualified as estimated.
- Insufficient sample was volume was apparently available to complete an MS/MSD for 1,4-Dioxane analyses. In these instances, accuracy and precision was assessed based the results of the LCS and duplicate LCS analyses. In some instances, only an LCS were analyzed; therefore, no assessment of precision could be made.

This concludes the data validation review. Should you have any questions regarding the information presented herein, please contact me by telephone at 503.763.6948 or by e-mail at jjmcateer@msn.com.

This concludes the data validation review. Should you have any questions regarding the information presented herein, please contact me by telephone at 503.763.6948 or by e-mail at jjmcateer@msn.com.

Notes on next page

Total results qualified "J" = 41
 Total results qualified "U" = 32
 Total results qualified "UJ" = 5
 Total results qualified "R" = 0

Notes:

GC/MS - gas chromatography/mass spectrometry

J - estimated

LCS - laboratory control sample

MDL - method detection limit

MRL - method reporting limit

NA - not applicable

ND - not detected

SIM - selected ion monitoring

U - undetected at detection limit shown

VOC - volatile organic compound

^a Summary of qualified data is for natural and field quality control samples only

^b Low bias - concentration reported is exhibits low bias and the actual reporting limit or concentration may be greater than reported

^c High bias - result reported exhibits high bias and the actual reporting limit or concentration may be lower than reported

^d False positive - compound is likely not present

DATA VALIDATION REPORT

Tacoma Facility Additional Samples, November 2020

Prepared for:

Dalton Olmsted & Fuglevand, Inc
1001 SW Klickitat Way, Suite 200B
Seattle, Washington 98134

And

CleanEarth
20245 77th Ave S.
Kent, Washington 98032

February 24, 2021

1.0 Introduction

Data set: Data were received for validation under one laboratory sample delivery group (SDG). Data submissions included both the laboratory report and electronic data deliverables (EDD) as shown below:

SDG	EDD File Name	Report File Name	Report Date	Lab Code
K2010392	K21013922.mdb	K2010392-Summary.pdf	12/02/2020	CAS

Analyses were submitted by ALS Environmental Group (formerly Columbia Analytical Services), in Kelso, Washington (CAS).

Analytical methods: Analyses were performed by the following methods:

Analyses	Analytical Method(s)
Volatile Organics Analysis (VOC)	SW8260C, SW8260CSIM
1,4-Dioxane Analysis (1,4-D)	SW8270DSIM/3535A
Gasoline Range Petroleum Hydrocarbons Analysis (GRO)	NWTPH-Gx
Diesel Range Petroleum Hydrocarbons Analysis (DRO)	NWTPH-Dx/ 3510C/SW3630C
ICPMS Metals Analysis (ICPMS)	SW6020A
Mercury Analysis (Hg)	SW7470A

Analytical Schedule: The following samples and analyses were included in this review:

Sample ID	Sample Date/Time	Lab ID	Analyses
TRIP BLANK #1-1120	11/09/2020 08:45	K2010392-001	VOC, GRO
CTMW-15-1120	11/09/2020 09:44	K2010392-002	VOC, SV, DRO, ICPMS, Hg
CTMW-25D-1120	11/09/2020 11:05	K2010392-003	VOC, 1,4-D, DRO, ICPMS, Hg

Sample ID	Sample Date/Time	Lab ID	Analyses
CTMW-9-25D-1120	11/09/2020 11:05	K2010392-004	1,4-D
CTMW-20-1120	11/09/2020 12:04	K2010392-005	VOC, GRO, DRO, ICPMS, Hg
CTMW-9-20-1120	11/09/2020 12:04	K2010392-006	VOC, GRO, DRO, ICPMS, Hg
FIELD BLANK #1-1120	11/09/2020 12:36	K2010392-007	VOC, 1,4-D, DRO, ICPMS, Hg

2.0 Validation

Results were evaluated based on criteria from the analytical methods, project permit documents, and current EPA guidance documents. References for these documents are listed in section 6.0 of this report. The criteria gathered from the above documents are briefly summarized in the Appendix "Data Validation Criteria" at the end of this report.

A stage 2B validation was performed on groundwater results including both the laboratory report and electronic data deliverable (EDD), earning EPA OSWER validation label code S2BVEM. All validation was performed by Cari Sayler.

Data qualifiers, if assigned, are summarized in section 4.0 of this report and added to the validated EDD, in accordance with the EDD field definitions and agreed upon conventions.

3.0 Validation Findings

Data validation criteria specified in the appendix were met except as noted below:

Issues resulting in data qualification:

VOLATILES:

- VOA continuing calibration verification % differences exceeded the ± 20 control limit as follows:

QC Type	Analysis Date/Time	Analyte	% Difference	Control Limits
CCV	11/11/20 11:04	2-Chloroethyl Vinyl Ether	-37.7	< ± 20
CCV	11/11/20 11:04	Carbon Tetrachloride	-22.6	< ± 20
CCV	11/11/20 11:04	Dibromochloromethane	24.2	< ± 20
CCV	11/11/20 11:04	Dichlorodifluoromethane	34.2	< ± 20
CCV	11/11/20 11:04	Iodomethane	-63.5	< ± 20
CCV	11/11/20 11:04	Vinyl Acetate	-24.3	< ± 20

Negative % differences represent lowered instrument responses. Both non-detect and detected results in the associated samples are qualified as estimated.

Positive % differences represent increased instrument responses. Dibromochloromethane and dichlorodifluoromethane were not detected in the associated sample, and no qualifiers are required.

- Target analytes were detected in the volatile method blank at levels below the reporting limit. Specific exceedances are as follows:

Blank ID	Analyte	Concentration (ug/L)	RL (ug/L)
KQ2017754-07	2-Butanone	2.6J	20

Blank ID	Analyte	Concentration (ug/L)	RL (ug/L)
KQ2017754-07	Carbon Disulfide	0.08J	0.5
KQ2017754-07	Iodomethane	0.14J	5
KQ2017754-07	Methylene Chloride	0.11J	2
FIELD BLANK #1-1120	Methylene Chloride	0.14J	2
TRIP BLANK #1-1120	Methylene Chloride	0.1J	2

Carbon Disulfide and Iodomethane results in field duplicate CTMW-9-20-1120 are qualified U and should be considered not detected at the laboratory reporting limit. The remaining analytes were not detected in the associated samples, and no further qualifiers are required.

- Both full scan analyses and SIM analyses were performed on the VOA analytes requiring low reporting limits. The SIM results should be used. The full scan results for these analytes are rejected as replaced by another result, and are qualified R2.

METALS:

- Target analytes were detected in metals calibration blanks and in the field blank. Detections are shown below:

Blank ID	Analyte	Concentration (mg/L)	MDL (mg/L)	RL (mg/L)
FIELD BLANK #1-1120	Chromium	0.000400	0.000008	0.000200
FIELD BLANK #1-1120	Copper	0.000620	0.000050	0.000100
FIELD BLANK #1-1120	Lead	0.000021	0.000006	0.000020
ICB 11/24/20 12:22	Cadmium	0.000016 J	0.000008	0.000020
CCB 11/24/20 12:58	Cadmium	0.000013 J	0.000008	0.000020
CCB 11/24/20 15:02	Lead	0.000018 J	0.000006	0.000020
CCB 11/24/20 15:30	Lead	0.000016 J	0.000006	0.000020
CCB 11/24/20 13:47	Cadmium	0.000013 J	0.000008	0.000020

Results in the associated samples with concentrations below 5 times these levels and also below the reporting limit, should be considered not detected at the level of the reporting limit. Results below 5 times these levels and above the reporting limit should be considered not detected at the reported concentration. Results in the associated samples with concentrations between 5 and 10 times these levels are qualified as estimated.

Issues not resulting in qualification:

- One volatile matrix spike duplicate recovery was slightly high. The analyte was not detected in the associated samples, and no qualifiers are required. The specific exceedance is shown below:

QC ID	Analyte	% Recovery	Lab Control Limit
K2010392 MSD	Dichlorodifluoromethane	136	29 – 133

- 1,4-Dioxane recoveries in the MS and MSD were below the laboratory control limit. However, the concentrations exceeded the calibration range, and control limits do not apply. The specific exceedances are shown below:

QC ID	Analyte	% Recovery	Lab Control Limit
K2010392 MS	1,4-Dioxane	22	33-127
K2010392 MSD	1,4-Dioxane	22	33-127

- Various results for chromium, copper and lead were elevated above the laboratory default reporting limit due to blank qualification. One sample and the field blank had a slightly elevated report limit for diesel range organics. No qualifiers are assigned on the basis of elevated report limits. Specific exceedances are as follows:

Sample ID	Analyte	RL Achieved (mg/L)	Target RL (mg/L)
CTMW-15-1120	Chromium	0.00032	0.0002
CTMW-20-1120	Chromium	0.00055	0.0002
CTMW-9-20-1120	Chromium	0.00056	0.0002
CTMW-15-1120	Copper	0.00024	0.0001
CTMW-25D-1120	Copper	0.0012	0.0001
CTMW-20-1120	Copper	0.00065	0.0001
CTMW-9-20-1120	Copper	0.0006	0.0001
CTMW-9-20-1120	Lead	0.000029	0.00002
Sample ID	Analyte	RL Achieved (ug/L)	Target RL (ug/L)
CTMW-15-1120	C12 - C25 DRO	260	250
FIELD BLANK #1-1120	C12 - C25 DRO	260	250

4.0 Validation Qualifiers

Client ID	Analyte(s)	Qualifier	Reason
Volatile Organics Analyses – Full Scan			
CTMW-15-1120	1,1,2,2-Tetrachloroethane, 1,1-Dichloroethene, 1,2-Dichloroethane, Carbon Tetrachloride, Vinyl Chloride	R2	SIM result available
CTMW-15-1120	2-Chloroethyl Vinyl Ether, Iodomethane, Vinyl Acetate	UJ	Low continuing calibration %D
CTMW-20-1120	1,1,2,2-Tetrachloroethane, 1,1-Dichloroethene, 1,2-Dichloroethane, Carbon Tetrachloride, Vinyl Chloride	R2	SIM result available
CTMW-20-1120	2-Chloroethyl Vinyl Ether, Iodomethane, Vinyl Acetate	UJ	Low continuing calibration %D
CTMW-25D-1120	1,1,2,2-Tetrachloroethane, 1,1-Dichloroethene, 1,2-Dichloroethane, Carbon Tetrachloride, Vinyl Chloride	R2	SIM result available
CTMW-25D-1120	2-Chloroethyl Vinyl Ether, Iodomethane, Vinyl Acetate	UJ	Low continuing calibration %D
CTMW-9-20-1120	1,1,2,2-Tetrachloroethane, 1,1-Dichloroethene, 1,2-Dichloroethane, Carbon Tetrachloride, Vinyl Chloride	R2	SIM result available
CTMW-9-20-1120	Carbon Disulfide	U	Lab blank contamination
CTMW-9-20-1120	Iodomethane	UJ	Lab blank contamination, Low continuing calibration %D
CTMW-9-20-1120	2-Chloroethyl Vinyl Ether, Vinyl Acetate	UJ	Low continuing calibration %D

Client ID	Analyte(s)	Qualifier	Reason
Volatile Organics Analyses – Full Scan			
FIELD BLANK #1-1120	1,1,2,2-Tetrachloroethane, 1,1-Dichloroethene, 1,2-Dichloroethane, Carbon Tetrachloride, Vinyl Chloride	R2	SIM result available
FIELD BLANK #1-1120	2-Chloroethyl Vinyl Ether, Iodomethane, Vinyl Acetate	UJ	Low continuing calibration %D
TRIP BLANK #1-1120	1,1,2,2-Tetrachloroethane, 1,1-Dichloroethene, 1,2-Dichloroethane, Carbon Tetrachloride, Vinyl Chloride	R2	SIM result available
TRIP BLANK #1-1120	2-Chloroethyl Vinyl Ether, Iodomethane, Vinyl Acetate	UJ	Low continuing calibration %D
Metals Analyses			
CTMW-15-1120	Chromium, Copper, Lead	U	Field blank contamination
CTMW-20-1120	Chromium, Copper	U	Field blank contamination
CTMW-25D-1120	Lead	J	Field blank contamination
CTMW-25D-1120	Copper	U	Field blank contamination
CTMW-9-20-1120	Chromium, Copper, Lead	U	Field blank contamination

5.0 Common Abbreviations and Definitions

<u>DV Qualifier</u>	<u>Definition</u>
U	The material was analyzed for, but was not detected above the level of the associated value.
UY	The reporting limit was elevated due to chromatographic overlap with related compounds. The material was analyzed for, but was not detected above the level of the associated value.
J	The analyte was positively identified. The associated numerical value is the approximate concentration of the analyte in the sample.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a tentative identification.
UJ	The material was analyzed for, but was not detected. The associated value is an estimate and may be inaccurate or imprecise.
R	The sample result is rejected. The presence or absence of the analyte cannot be verified and data are not usable.
R1	This sample result has been rejected in favor of a more accurate, precise or conservative result. The other result should be used.
R2	This sample result has been rejected in favor of a more accurate, precise or conservative result from another analytical method. The other result should be used.

<u>QC Element</u>	<u>Definition</u>
ICAL	Initial calibration
ICV	Initial calibration verification
CCV	Continuing calibration verification
LCS	Laboratory control sample
LCSD	Laboratory control sample
MS	Matrix spike
MSD	Matrix spike duplicate
SRM	Standard reference material
RRM	Regional reference material
FD	Field duplicate
FB	Field blank

<u>QC Element</u>	<u>Definition</u>
RB	Rinse blank
TB	Trip blank
IS	Internal standard
RT	Retention time
RRT	Relative retention time
RPD	Relative percent difference

<u>Abbreviation</u>	<u>Definition</u>
CRDL	Contract required detection limit
DV	Data validation
EDL	Estimated detection limit
EMPC	Estimated maximum possible concentration
MDL	Method detection limit
NA	Not applicable
QAPP	Quality Assurance Project Plan
RL	Reporting limit
RSD	Relative standard deviations
SDG	Sample delivery group
SIM	Selective ion monitoring
SRM	Selective reaction monitoring

APPENDIX – DATA VALIDATION CRITERIA

Data Package Completeness and Sample Integrity

QC Element	Criteria
Completeness	Laboratory report includes the appropriate level of detail as described in the EPA Guidance documents (USEPA, January 2009)
Sample ID transcription	Chain of custody and/or sample log-in documentation are present for all samples reported and match sample IDs used in the laboratory report and electronic data deliverable (EDD).
Sample receipt condition	Sample containers are intact upon receipt at the laboratory and preservation and storage requirements meet method specific guidelines.
Requested methods	Table B-2 of the QAPP specifies the following methods: EPA 6020, EPA 7470A, NWTPH-Dx, NWTPH-Gx, EPA 8270C-SIM, EPA 8260B and EPA826B-SIM.
Requested analyte list and reporting limits	Table B-3 of the QAPP specifies the required analytes and default laboratory reporting limits.
Laboratory Narrative	The laboratory narrative, data flags and corrective action documentation detailing any preparation or analytical anomalies are evaluated for impact on data usability.

Notes

- Newer versions of published analytical methods are considered acceptable substitutions.
- Method substitutions utilizing different instrumentation are also considered acceptable, e.g. method 200.8 (ICP-MS) for method 200.7 (ICP-AES).
- Data referencing older versions of published analytical methods may be assessed based on numerical criteria present in newer versions.

Field Quality Control Samples

QC Element	Frequency	Criteria
Field Duplicate	1 per 20 samples	Relative % difference (RPD) ≤30% or absolute difference <± 1 RL where concentrations are below 5x the RL.
Rinse Blank	1 per 20 samples if sampling equipment non-dedicated or non-disposable.	Not specified. Professional judgement (PJ) criteria of < 10% of concentration in field samples.
Field Blank	1 per 20 samples	PJ criteria of < 10% of concentration in field samples.
Trip Blank	1 per cooler for VOC and GRO only.	PJ criteria of < 10% of concentration in field samples.

Volatile Analyses, Stage 2B Validation – Method 8260 – Full Scan And SIM

QC Element	Frequency	Criteria
Holding times	Each sample	Water samples must analyzed within 14 days if preserved with hydrogen chloride and within 7 days if unpreserved. Transportation and storage temperatures should be below 6°C.
Instrument performance	Prior to initial calibration	Ion abundance ratios in bromofluorobenzene (BFB) or instrument manufacturer criteria.
Initial calibration (ICAL)	Prior to analyzing samples, and after CCV criteria exceeded.	<ul style="list-style-type: none"> Utilizes ≥5 points for average response factor (RF) model and ≥6 points for regression models. RF Relative standard deviation (RSD) ≤20% if average RF model. Coefficient of determination (R^2) ≥0.99 if regression model.
Initial calibration verification (ICV)	After each ICAL prior to samples	<ul style="list-style-type: none"> Utilizes second source of standards. Recoveries within 70-130%.
Continuing calibration (CCV)	Once every 12 hours	% difference or % drift <±20%
Laboratory blank (LB)	One per preparation (prep) batch of ≤20 samples	Target analyte concentrations <MDL, or < 10% of concentration in field samples.
Laboratory control sample (LCS)	One per prep batch of ≤20 samples. LCS duplicate if no sample or MS duplicate	Meets performance-based control limits for % recovery and relative % difference (RPD) if applicable.
Matrix spike (MS)	One per batch of ≤20 samples.	Meets performance-based control limits for % recovery.
Duplicates	MS dup (MSD) or sample dup per batch of ≤20 samples.	Meets performance-based control limits for RPD. Not required if insufficient sample volume provided.
Surrogates	Each sample and QC sample	Meets performance-based control limits for % recovery.

Volatile Analyses, Stage 2B Validation – Method 8260 – Full Scan And SIM

QC Element	Frequency	Criteria
Internal standards (IS)	Each sample and QC sample	<ul style="list-style-type: none"> IS response within 50-200% of CCV IS RT with \pm 10 seconds of CCV

Notes:

- Method 8260D allows for sample analysis when $\geq 90\%$ of target compounds meet ICAL criteria..
- Functional Guidelines allows ICAL maximum RSDs between 20 and 40% and ICV/CCV maximum % drift or % differences between ± 20 and $\pm 40\%$ for poorer performing compounds without qualification.

1,4-Dioxane Analyses, Stage 2B Validation – Method 8270

QC Element	Frequency	Criteria
Holding times	Each sample	Samples must be extracted within 7 days and analyzed within 40 days of extraction. Transportation and storage temperatures should be below 6°C.
Instrument performance	Prior to initial calibration	Ion abundance ratios in decafluorotriphenylphosphate (DFTPP) or instrument manufacturer criteria
Initial calibration (ICAL)	Prior to analyzing samples, and after CCV criteria exceeded.	<ul style="list-style-type: none"> Utilizes ≥ 5 points for average response factor (RF) model and ≥ 6 points for regression models. RF Relative standard deviation (RSD) $\leq 20\%$ if average RF model. Coefficient of Determination (R^2) ≥ 0.99 if regression model.
Initial calibration verification (ICV)	After each ICAL prior to samples	Recoveries within 70-130%.
Continuing calibration verification (CCV)	Once every 12 hours	% difference or % drift $< \pm 20\%$
Laboratory blank (LB)	One per preparation (prep) batch of ≤ 20 samples	Target analyte concentrations $<$ MDL, or $<$ 10% of concentration in field samples.
Laboratory control sample (LCS)	One per prep batch of ≤ 20 samples. LCS duplicate if no matrix duplicate	Meets performance-based control limits for % recovery and relative % difference (RPD) if applicable.
Matrix spike (MS)	One per batch of ≤ 20 samples.	Meets performance-based control limits for % recovery. Not required if insufficient sample volume provided.
Duplicates	MS dup (MSD) or sample dup per batch of ≤ 20 samples.	Meets performance-based control limits for RPD. Not required if insufficient sample volume provided.
Surrogates	Each sample and QC sample	Meets performance-based control limits for % recovery.
Internal standards (IS)	Each sample and QC sample	<ul style="list-style-type: none"> IS response within 50-200% of CCV IS RT with \pm 10 seconds of CCV

Gasoline Range Hydrocarbon Analyses, Stage 2B Validation – Method NWTPH-Gx

QC Element	Frequency	Criteria
Holding times	Each sample	Water samples must be analyzed within 14 days if preserved with hydrogen chloride and within 7 days if unpreserved. Transportation and storage temperatures should be below 6°C.
Initial calibration (ICAL)	Prior to analyzing samples, and after CCV criteria exceeded.	<ul style="list-style-type: none"> Utilizes ≥ 5 points for average response factor (RF) model and ≥ 6 points for regression models. RF Relative standard deviation (RSD) $\leq 20\%$ if average RF model. Coefficient of Determination (R^2) ≥ 0.99 if regression model.
Initial calibration verification (ICV)	After each ICAL prior to samples	% difference or % drift $< \pm 20\%$
Continuing calibration (CCV)	Daily	% difference or % drift $< \pm 20\%$
Laboratory blank (LB)	One per preparation (prep) batch of ≤ 20 samples	Target analyte concentrations $<$ MDL, or $<$ 10% of concentration in field samples.
Laboratory control sample (LCS)	One per prep batch of ≤ 20 samples. LCS duplicate if no sample duplicate	Meets performance-based control limits for % recovery and relative % difference (RPD) if applicable.
Duplicates	Sample dup once per 10 samples.	Meets performance-based control limits for RPD. Not required if insufficient sample volume provided.
Surrogates	Each sample and QC sample	Meets performance-based control limits for % recovery.

Diesel Range Hydrocarbon Analyses, Stage 2B Validation – Method NWTPH-Dx

QC Element	Frequency	Criteria
Holding times	Each sample	Samples must be extracted within 7 days and analyzed within 40 days of extraction. Transportation and storage temperatures should be below 6°C.
Initial calibration (ICAL)	Prior to analyzing samples, and after CCV criteria exceeded.	<ul style="list-style-type: none"> Utilizes ≥5 points for average response factor (RF) model and ≥6 points for regression models. RF Relative standard deviation (RSD) ≤20% if average RF model. Coefficient of Determination (R^2) ≥0.99 if regression model.
Initial calibration verification (ICV)	After each ICAL prior to samples	% Difference <±15%
Continuing calibration (CCV)	Daily	% Difference <±15%
Laboratory blank (LB)	One per preparation (prep) batch of ≤20 samples	Target analyte concentrations <MDL, or < 10% of concentration in field samples.
Laboratory control sample (LCS)	One per prep batch of ≤20 samples. LCS duplicate if no sample duplicate	Meets performance-based control limits for % recovery and relative % difference (RPD) if applicable.
Duplicates	Sample dup once per 10 samples.	Meets performance-based control limits for RPD. Not required if insufficient sample volume provided.
Surrogates	Each sample and QC sample	Meets performance-based control limits for % recovery.

ICPMS Metals Analyses, Stage 2B Validation – EPA Method 6020

QC Element	Frequency	Criteria
Holding times	Each sample	Samples must be analyzed within 6 months and preserved with nitric acid. Transportation and storage temperatures should be below 6°C.
Initial calibration verification (ICV)	After each ICAL prior to samples	<ul style="list-style-type: none"> Recoveries within 70-130%.
Reporting Limit Standard (RL Std)	Daily	Recoveries within 70-130%
Continuing calibration (CCV)	Every 10 samples	<ul style="list-style-type: none"> % difference or % drift <±20%
Calibration blank (ICB/CCB)	After each ICV or CCV	Concentration < MDL or < 10% of concentrations in field samples.
Interference Check Sample (ICS)	Daily	Recoveries within 80-120%
Laboratory blank (LB)	One per preparation (prep) batch of ≤20 samples	Target analyte concentrations < 1/2 RL, or < 10% of concentration in field samples.
Laboratory control sample (LCS)	One per prep batch of ≤20 samples. LCS duplicate if no matrix duplicate	Meets performance-based control limits for % recovery and relative % difference (RPD) if applicable.
Matrix spike (MS)	One per prep batch of ≤20 samples	Meets performance-based control limits for % recovery.
Duplicates	MS dup (MSD) or sample dup per batch of ≤20 samples.	Meets performance-based control limits for RPD. Not required if insufficient sample volume provided.
Post Spike (PS)	If MS recoveries out of limits	Recoveries within 80-120%
Serial Dilution (SRD)	If MS recoveries out of limits and concentrations > 25 x RL	% Difference <20%
Internal standards (IS)	Each sample and QC sample	IS response within 60-125% of CCV

Mercury Analyses, Stage 2B Validation – Method 74070

QC Element	Frequency	Criteria
Holding times	Each sample	Samples must be analyzed within 28 days. Transportation and storage temperatures should be below 6°C.
Initial calibration verification (ICV)	After each ICAL prior to samples	Recoveries within 90-110%.
Reporting Limit Standard (RL Std)	Daily	Recoveries within 50-150%

Mercury Analyses, Stage 2B Validation – Method 74070

QC Element	Frequency	Criteria
Continuing calibration (CCV)	After each 10 samples	Recoveries within 90-110%.
Continuing calibration blank (CCB)	After each CCV	Concentrations < MDL or < 10% of concentration in field samples.
Laboratory blank (LB)	One per preparation (prep) batch of ≤20 samples	Concentrations < MDL or < 10% of concentration in field samples.
Laboratory control sample (LCS)	One per prep batch of ≤20 samples. LCS duplicate if no matrix duplicate	Meets performance-based control limits for % recovery and relative % difference (RPD) if applicable.
Matrix spike (MS)	One per prep batch of ≤20 samples	Meets performance-based control limits for % recovery.
Duplicates	MS dup (MSD) or sample dup per batch of ≤20 samples.	Meets performance-based control limits for RPD. Not required if insufficient sample volume provided.
Post Spike (PS)	If MS recoveries out of limits	Recoveries within 80-120%
