

APPENDIX P

UPLAND LABORATORY REPORTS

Description: Contains copies of laboratory reports and data validation reports for upland soil and groundwater investigations from 1992 to 2020, as available. Data from these lab reports were used to compile the upland analytical summary tables.

PARAMETRIX SAMPLING EVENT (1991)

NATIONAL
ENVIRONMENTAL
TESTING, INC.

NET Pacific, Inc.

June 18, 1991

William F. Kane
Parametrix Inc.
13020 Northrup Way
Bellevue, WA 98005

Dear Mr. Kane,

Enclosed please find volatile, semivolatile, and diesel data for Washington DoE's Nord Door project. The organophosphorus pesticide data will be sent to you by facsimile June 19, 1991.

If you have any questions, please do not hesitate to contact me at (619) 535-7418.

Sincerely,

A handwritten signature in black ink, appearing to read "N.P. Rottunda", is written over a horizontal line. The signature is somewhat stylized and includes a long horizontal stroke extending to the right.

N.P. Rottunda
Laboratory Project Coordinator

North Creek Analytical routinely provides analytical results for soils, sediments or sludges on a WET WEIGHT "as received" basis. To attain dry weight equivalents for regulatory compliance, divide the soil result by the decimal fraction of percent solids. The results in this report apply only to the samples analyzed, as indicated on the custody document. This analytical report is to be reproduced only in its entirety.

WTPH-HCID is a qualitative screen to determine the presence and the type of petroleum products that exist at a site. It is intended to be performed on representative soils from a site when the type of petroleum hydrocarbon contamination is unknown. When the analytical results for gasoline range organics, diesel range organics or heavy oils are shown as "Present", thereby exceeding the reporting limits, the specific quantitation method must be employed.

Notes and Definitions

Report Specific Notes:

- A-01 - Detected hydrocarbons appear to be due to heavily weathered diesel, oil range overlap, and possibly biogenic interference.
- A-02 - This compound is present in creosote.
- A-03 - Detected hydrocarbons appear to be due to weathered diesel as well as oil overlap.
- A-04 - Detected hydrocarbons appear to be due to heavy oil as well as biogenic interference.
- A-05 - Detected hydrocarbons appear to be due mainly to overlap from the heavy/oil range; however, there is weathered diesel detected.
- A-09 - Reporting limits are elevated due to acidic extract requiring dilution during extraction.
- D-09 - Detected hydrocarbons in the diesel range appear to be due to overlap of heavy/oil range hydrocarbons.
- D-10 - Detected hydrocarbons in the gasoline range appear to be due to overlap of diesel range hydrocarbons.
- D-19 - Detected hydrocarbons do not have pattern and range consistent with typical petroleum products and may be due to biogenic interference.
- Q-01 - The matrix spike recovery, and/or RPD, for this QC sample is outside of established control limits. Failure of a matrix spike QC sample does not represent an out-of-control condition for the batch.
- R-05 - Reporting limits raised due to dilution necessary for analysis. Sample contains high levels of reported analyte, non-target analyte, and/or matrix interference.
- R-08 - Due to matrix unable to resolve Benzo(a)fluoranthene isomers. Value reported only in Benzo(b) category represents Total Benzo(b+k)fluoranthene.
- S-01 - The surrogate recovery for this sample is not available due to sample dilution required from high analyte concentration and/or matrix interferences.
- S-02 - The surrogate recovery for this sample cannot be accurately quantified due to interference from coeluting organic compounds present.

Laboratory Reporting Conventions:

- DET - Analyte DETECTED at or above the Reporting Limit. Qualitative Analyses only.
- ND - Analyte NOT DETECTED at or above the reporting limit (MDL or MRL, as appropriate).
- NR/NA - Not Reported / Not Available
- dry - Sample results reported on a Dry Weight Basis. Results and Reporting Limits have been corrected for Percent Dry Weight.
- wet - Sample results and reporting limits reported on a Wet Weight Basis (as received). Results with neither 'wet' nor 'dry' are reported on a Wet Weight Basis.
- RPD - RELATIVE PERCENT DIFFERENCE (RPDs calculated using Results, not Percent Recoveries).
- MRL - METHOD REPORTING LIMIT. Reporting Level at, or above, the lowest level standard of the Calibration Table.
- MDL* - METHOD DETECTION LIMIT. Reporting Level at, or above, the statistically derived limit based on 40CFR, Part 136, Appendix B. *MDLs are listed on the report only if the data has been evaluated below the MRL. Results between the MDL and MRL are reported as Estimated Results.
- Dil - Dilutions are calculated based on deviations from the standard dilution performed for an analysis, and may not represent the dilution found on the analytical raw data.
- Reporting Limits - Reporting limits (MDLs and MRLs) are adjusted based on variations in sample preparation amounts, analytical dilutions and percent solids, where applicable.

Notes and Definitions

Report Specific Notes:

- A-01 - Detected hydrocarbons have distinct peaks that have elution patterns similar to that of PAH's, as well as other extraneous peaks that may be due to biogenic interference.
- A-01a - This compound was below laboratory criteria. The low recovery is isolated to this sample and does not represent an out of control condition for the batch. See the LCS.
- A-02 - This compound is present in creosote.
- A-03 - Per USEPA, creosote is considered to be present when the level of phenanthrene is 1.4 to 5 times that of carbazole. This sample fits this criterion.
- A-05 - Detected hydrocarbons have distinct peaks that have elution patterns similar to that of PAH's.
- A-07 - Estimated value, the internal standard associated with this analyte was above normal acceptance criteria.
- A-10 - Sample extracted outside of hold time due to extraction problem in the laboratory.
- D-09 - Detected hydrocarbons in the diesel range appear to be due to overlap of heavy/oil range hydrocarbons.
- J - Estimated value.
- O-07 - This sample was extracted outside the EPA recommended holding time.
- Q-01 - The matrix spike recovery, and/or RPD, for this QC sample is outside of established control limits. Failure of a matrix spike QC sample does not represent an out-of-control condition for the batch.
- Q-14 - The matrix spike recovery, and/or RPD, for this QC sample is outside of control limits due to a non-homogeneous sample matrix.
- R-05 - Reporting limits raised due to dilution necessary for analysis. Sample contains high levels of reported analyte, non-target analyte, and/or matrix interference.
- R-08 - Due to matrix unable to resolve Benzo(a)fluoranthene isomers. Value reported only in Benzo(b) category represents Total Benzo(b+k)fluoranthene.
- R-16 - Estimated Value. Sample reported from a vial with headspace.
- S-01 - The surrogate recovery for this sample is not available due to sample dilution required from high analyte concentration and/or matrix interferences.
- S-02 - The surrogate recovery for this sample cannot be accurately quantified due to interference from coeluting organic compounds present.
- S-12 - Unable to calculate surrogate recovery due to high analyte concentration.
- SR-3 - Surrogate recovery was above the acceptance limits. Data not impacted.

Laboratory Reporting Conventions:

- DET - Analyte DETECTED at or above the Reporting Limit. Qualitative Analyses only.
- ND - Analyte NOT DETECTED at or above the reporting limit (MDL or MRL, as appropriate).
- NR/NA - Not Reported / Not Available
- dry - Sample results reported on a Dry Weight Basis. Results and Reporting Limits have been corrected for Percent Dry Weight.
- wet - Sample results and reporting limits reported on a Wet Weight Basis (as received). Results with neither 'wet' nor 'dry' are reported on a Wet Weight Basis.
- RPD - RELATIVE PERCENT DIFFERENCE (RPDs calculated using Results, not Percent Recoveries).
- MRL - METHOD REPORTING LIMIT. Reporting Level at, or above, the lowest level standard of the Calibration Table.

Sarah Rockwell

Sarah Rockwell, Project Manager

SLR-Portland

1800 Blankenship Road Suite 440
West Linn, OR 97068

Project Name: **Jeld Wen- Nord Door**
Project Number: 008.228.00013
Project Manager: R. Scott Miller

Report Created:
05/26/06 17:52

- MDL* - METHOD DETECTION LIMIT. Reporting Level at, or above, the statistically derived limit based on 40CFR, Part 136, Appendix B. *MDLs are listed on the report only if the data has been evaluated below the MRL. Results between the MDL and MRL are reported as Estimated Results.
- Dil - Dilutions are calculated based on deviations from the standard dilution performed for an analysis, and may not represent the dilution found on the analytical raw data.
- Reporting Limits - Reporting limits (MDLs and MRLs) are adjusted based on variations in sample preparation amounts, analytical dilutions and percent solids, where applicable.
- Electronic Signature - Electronic Signature added in accordance with TestAmerica's *Electronic Reporting and Electronic Signatures Policy*. Application of electronic signature indicates that the report has been reviewed and approved for release by the laboratory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Sarah Rockwell, Project Manager

SLR-Portland

1800 Blankenship Road Suite 440
West Linn, OR 97068

Project Name: **Jeld Wen- Nord Door**

Project Number: 008.0228.00013

Project Manager: R. Scott Miller

Report Created:

05/31/06 17:47

Analytical Case Narrative
North Creek Analytical - Portland

PPE0352

Semivolatile Organic Compound per EPA Method 8270C

The method blank surrogate recoveries of 2-fluorophenol, phenol-d6 and nitrobenzene-d5 in batch 6050711 are below acceptable limits. All recoveries for the blank spike are acceptable. The surrogate problem appears to be an isolated incident during the concentration of the extract. Corrective action required re-extraction of sample GP1-10. Re-extraction was done outside of recommended hold time. Both sets of data are reported.

Notes and Definitions

Report Specific Notes:

- A-01 - Detected hydrocarbons have distinct peaks that have elution patterns similar to that of PAH's, as well as other extraneous peaks that may be due to biogenic interference.
- A-01a - Detected hydrocarbons have distinct peaks that have elution patterns similar to that of PAH's.
- A-05 - Surrogate recovery is above control limits. Since no acid analytes were detected in the sample, the quality of the data has not been affected.
- A-08 - This compound is present in creosote.
- D-19 - Detected hydrocarbons do not have pattern and range consistent with typical petroleum products and may be due to biogenic interference.
- J - Estimated value.
- MS-4 - Due to high levels of analyte in the sample, the Matrix Spike/Matrix Spike Duplicate calculation does not provide useful spike recovery information. See Laboratory Control Sample.
- O-07 - This sample was extracted outside the EPA recommended holding time.
- Q-01 - The matrix spike recovery, and/or RPD, for this QC sample is outside of established control limits. Failure of a matrix spike QC sample does not represent an out-of-control condition for the batch.
- Q-32 - No results were reported for the MS and or MSD. The sample used for the MS/MSD required dilution due to the sample matrix. Because of this, the spike compounds were diluted below the detection limit.
- R-03 - The reporting limit for this analyte was raised due to matrix interference.
- R-05 - Reporting limits raised due to dilution necessary for analysis. Sample contains high levels of reported analyte, non-target analyte, and/or matrix interference.
- S-01 - The surrogate recovery for this sample is not available due to sample dilution required from high analyte concentration and/or matrix interferences.
- S-02 - The surrogate recovery for this sample cannot be accurately quantified due to interference from coeluting organic compounds present.
- S-09 - Surrogate recovery is outside control limits due to matrix interference.
- S-10 - The recovery for this parameter is outside acceptance limits. See case narrative.
- X - See case narrative.

Laboratory Reporting Conventions:

- DET - Analyte DETECTED at or above the Reporting Limit. Qualitative Analyses only.
- ND - Analyte NOT DETECTED at or above the reporting limit (MDL or MRL, as appropriate).
- NR/NA - Not Reported / Not Available
- dry - Sample results reported on a Dry Weight Basis. Results and Reporting Limits have been corrected for Percent Dry Weight.
- wet - Sample results and reporting limits reported on a Wet Weight Basis (as received). Results with neither 'wet' nor 'dry' are reported on a Wet Weight Basis.
- RPD - RELATIVE PERCENT DIFFERENCE (RPDs calculated using Results, not Percent Recoveries).
- MRL - METHOD REPORTING LIMIT. Reporting Level at, or above, the lowest level standard of the Calibration Table.

Sarah Rockwell

Sarah Rockwell, Project Manager

SLR-Portland

1800 Blankenship Road Suite 440
West Linn, OR 97068

Project Name: **Jeld Wen- Nord Door**
Project Number: 008.0228.00013
Project Manager: R. Scott Miller

Report Created:
05/31/06 17:47

- MDL* - METHOD DETECTION LIMIT. Reporting Level at, or above, the statistically derived limit based on 40CFR, Part 136, Appendix B. *MDLs are listed on the report only if the data has been evaluated below the MRL. Results between the MDL and MRL are reported as Estimated Results.
- Dil - Dilutions are calculated based on deviations from the standard dilution performed for an analysis, and may not represent the dilution found on the analytical raw data.
- Reporting Limits - Reporting limits (MDLs and MRLs) are adjusted based on variations in sample preparation amounts, analytical dilutions and percent solids, where applicable.
- Electronic Signature - Electronic Signature added in accordance with TestAmerica's *Electronic Reporting and Electronic Signatures Policy*. Application of electronic signature indicates that the report has been reviewed and approved for release by the laboratory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Notes and Definitions

Report Specific Notes:

- A-01 - The detected hydrocarbons appear to be due to a mixture of heavy gas and light diesel components, as well as biogenic interference.
- A-02 - The MS/MSD was not bracketed by passing CCVs. These samples are being reported without MS/MSD QC data.
- A-08 - This compound is present in creosote.
- Q-01 - The matrix spike recovery, and/or RPD, for this QC sample is outside of established control limits. Failure of a matrix spike QC sample does not represent an out-of-control condition for the batch.
- Q-14 - The matrix spike recovery, and/or RPD, for this QC sample is outside of control limits due to a non-homogeneous sample matrix.
- S-02 - The surrogate recovery for this sample cannot be accurately quantified due to interference from coeluting organic compounds present.

Laboratory Reporting Conventions:

- DET - Analyte DETECTED at or above the Reporting Limit. Qualitative Analyses only.
- ND - Analyte NOT DETECTED at or above the reporting limit (MDL or MRL, as appropriate).
- NR/NA - Not Reported / Not Available
- dry - Sample results reported on a Dry Weight Basis. Results and Reporting Limits have been corrected for Percent Dry Weight.
- wet - Sample results and reporting limits reported on a Wet Weight Basis (as received). Results with neither 'wet' nor 'dry' are reported on a Wet Weight Basis.
- RPD - RELATIVE PERCENT DIFFERENCE (RPDs calculated using Results, not Percent Recoveries).
- MRL - METHOD REPORTING LIMIT. Reporting Level at, or above, the lowest level standard of the Calibration Table.
- MDL* - METHOD DETECTION LIMIT. Reporting Level at, or above, the statistically derived limit based on 40CFR, Part 136, Appendix B. *MDLs are listed on the report only if the data has been evaluated below the MRL. Results between the MDL and MRL are reported as Estimated Results.
- Dil - Dilutions are calculated based on deviations from the standard dilution performed for an analysis, and may not represent the dilution found on the analytical raw data.
- Reporting Limits - Reporting limits (MDLs and MRLs) are adjusted based on variations in sample preparation amounts, analytical dilutions and percent solids, where applicable.
- Electronic Signature - Electronic Signature added in accordance with TestAmerica's *Electronic Reporting and Electronic Signatures Policy*. Application of electronic signature indicates that the report has been reviewed and approved for release by the laboratory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Notes and Definitions

Report Specific Notes:

- A-01 - Detected hydrocarbons have distinct peaks that have elution patterns similar to that of PAH's, and possibly biogenic interference.
- A-01a - Detected hydrocarbons have distinct peaks that have elution patterns similar to that of PAH's.
- A-02 - The detected hydrocarbons appear to be due to weathered diesel as well as heavy/oil range overlap.
- D-19 - Detected hydrocarbons do not have pattern and range consistent with typical petroleum products and may be due to biogenic interference.
- J - Estimated value.
- Q-01 - The matrix spike recovery, and/or RPD, for this QC sample is outside of established control limits. Failure of a matrix spike QC sample does not represent an out-of-control condition for the batch.
- Q-14 - The matrix spike recovery, and/or RPD, for this QC sample is outside of control limits due to a non-homogeneous sample matrix.
- R-05 - Reporting limits raised due to dilution necessary for analysis. Sample contains high levels of reported analyte, non-target analyte, and/or matrix interference.
- S-01 - The surrogate recovery for this sample is not available due to sample dilution required from high analyte concentration and/or matrix interferences.

Laboratory Reporting Conventions:

- DET - Analyte DETECTED at or above the Reporting Limit. Qualitative Analyses only.
- ND - Analyte NOT DETECTED at or above the reporting limit (MDL or MRL, as appropriate).
- NR/NA - Not Reported / Not Available
- dry - Sample results reported on a Dry Weight Basis. Results and Reporting Limits have been corrected for Percent Dry Weight.
- wet - Sample results and reporting limits reported on a Wet Weight Basis (as received). Results with neither 'wet' nor 'dry' are reported on a Wet Weight Basis.
- RPD - RELATIVE PERCENT DIFFERENCE (RPDs calculated using Results, not Percent Recoveries).
- MRL - METHOD REPORTING LIMIT. Reporting Level at, or above, the lowest level standard of the Calibration Table.
- MDL* - METHOD DETECTION LIMIT. Reporting Level at, or above, the statistically derived limit based on 40CFR, Part 136, Appendix B. *MDLs are listed on the report only if the data has been evaluated below the MRL. Results between the MDL and MRL are reported as Estimated Results.
- Dil - Dilutions are calculated based on deviations from the standard dilution performed for an analysis, and may not represent the dilution found on the analytical raw data.
- Reporting Limits - Reporting limits (MDLs and MRLs) are adjusted based on variations in sample preparation amounts, analytical dilutions and percent solids, where applicable.
- Electronic Signature - Electronic Signature added in accordance with TestAmerica's *Electronic Reporting and Electronic Signatures Policy*. Application of electronic signature indicates that the report has been reviewed and approved for release by the laboratory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Analytical Case Narrative

TestAmerica - Portland, OR

PPI0520

8270M SIM PAH/PCP

Sample GP206-P was spiked incorrectly during extraction process. The SIM PAH spike was not included in the Blank Spike. All PCP QC is valid and all surrogates were added correctly. Corrective action performed by re-extracting sample. Re-extraction was done outside of hold time. Both sets of data are reported.

No additional anomalies or discrepancies were associated with this analysis other than those already qualified in the data.

TestAmerica - Portland, OR

Notes and Definitions

Report Specific Notes:

- A-01 - Detected hydrocarbons have distinct peaks that have elution patterns similar to that of PAH's, as well as other extraneous peaks that may be due to biogenic interference, as well as diesel.
- A-03 - Detected hydrocarbons have distinct peaks that have elution patterns similar to that of PAH's, as well as other extraneous peaks that may be due to biogenic interference.
- A-04 - Detected hydrocarbons appear to be due to heavy gas/light diesel components.
- A-05 - Detected hydrocarbons appear to be due mainly to oil as well as biogenic interference.
- A-07 - Detected hydrocarbons appear to be due to diesel as well as oil overlap.
- A-09 - QC performed on this sample indicates a non-homogeneous matrix.
- D-17 - Detected hydrocarbons in the diesel range do not have a distinct diesel pattern and may be due to heavily weathered diesel or possibly biogenic interference.
- E - Estimated value. The reported value exceeds the calibration range of the analysis.
- J - Estimated value.
- O-07 - This sample was extracted outside the EPA recommended holding time.
- Q-01 - The matrix spike recovery, and/or RPD, for this QC sample is outside of established control limits. Failure of a matrix spike QC sample does not represent an out-of-control condition for the batch.
- Q-06 - RPD is not applicable for analyte concentrations less than 5 times the MRL.
- Q-32 - No results were reported for the MS and/or MSD. The sample used for the MS/MSD required dilution due to the sample matrix. Because of this, the spike compounds were diluted below the detection limit.
- R-03 - The reporting limit for this analyte was raised due to matrix interference.
- R-05 - Reporting limits raised due to dilution necessary for analysis. Sample contains high levels of reported analyte, non-target analyte, and/or matrix interference.
- R-16 - Estimated Value. Sample reported from a vial with headspace.
- RP-2 - The RPD exceeded the laboratory control limit.
- S-01 - The surrogate recovery for this sample is not available due to sample dilution required from high analyte concentration and/or matrix interferences.
- S-02 - The surrogate recovery for this sample cannot be accurately quantified due to interference from coeluting organic compounds present.
- S-09 - Surrogate recovery is outside control limits due to matrix interference.
- S-10 - The recovery for this parameter is outside acceptance limits. See case narrative.
- X - See case narrative.

Laboratory Reporting Conventions:

- DET - Analyte DETECTED at or above the Reporting Limit. Qualitative Analyses only.
- ND - Analyte NOT DETECTED at or above the reporting limit (MDL or MRL, as appropriate).
- NR/NA - Not Reported / Not Available
- dry - Sample results reported on a Dry Weight Basis. Results and Reporting Limits have been corrected for Percent Dry Weight.
- wet - Sample results and reporting limits reported on a Wet Weight Basis (as received). Results with neither 'wet' nor 'dry' are reported on a Wet Weight Basis.

TestAmerica - Portland, OR

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

SLR-Portland	Project Name: Jeld Wen- Nord Door	Report Created:
1800 Blankenship Road Suite 440	Project Number: 008.0228.00018	10/26/06 16:07
West Linn, OR 97068	Project Manager: R. Scott Miller	

- RPD - RELATIVE PERCENT DIFFERENCE (RPDs calculated using Results, not Percent Recoveries).
- MRL - METHOD REPORTING LIMIT. Reporting Level at, or above, the lowest level standard of the Calibration Table.
- MDL* - METHOD DETECTION LIMIT. Reporting Level at, or above, the statistically derived limit based on 40CFR, Part 136, Appendix B. *MDLs are listed on the report only if the data has been evaluated below the MRL. Results between the MDL and MRL are reported as Estimated Results.
- Dil - Dilutions are calculated based on deviations from the standard dilution performed for an analysis, and may not represent the dilution found on the analytical raw data.
- Reporting Limits - Reporting limits (MDLs and MRLs) are adjusted based on variations in sample preparation amounts, analytical dilutions and percent solids, where applicable.
- Electronic Signature - Electronic Signature added in accordance with TestAmerica's *Electronic Reporting and Electronic Signatures Policy*. Application of electronic signature indicates that the report has been reviewed and approved for release by the laboratory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Notes and Definitions

Report Specific Notes:

- D-03 - The hydrocarbon concentration result in this sample is partially due to an individual peak(s) eluting in the diesel/motor oil carbon range.
- D-09 - Detected hydrocarbons in the diesel range appear to be due to overlap of heavy/oil range hydrocarbons.
- J - Estimated value.
- Q-01 - The matrix spike recovery, and/or RPD, for this QC sample is outside of established control limits. Failure of a matrix spike QC sample does not represent an out-of-control condition for the batch.
- Q-14 - The matrix spike recovery, and/or RPD, for this QC sample is outside of control limits due to a non-homogeneous sample matrix.
- R-05 - Reporting limits raised due to dilution necessary for analysis. Sample contains high levels of reported analyte, non-target analyte, and/or matrix interference.
- S-01 - The surrogate recovery for this sample is not available due to sample dilution required from high analyte concentration and/or matrix interferences.
- S-09 - Surrogate recovery is outside control limits due to matrix interference.

Laboratory Reporting Conventions:

- DET - Analyte DETECTED at or above the Reporting Limit. Qualitative Analyses only.
- ND - Analyte NOT DETECTED at or above the reporting limit (MDL or MRL, as appropriate).
- NR/NA - Not Reported / Not Available
- dry - Sample results reported on a Dry Weight Basis. Results and Reporting Limits have been corrected for Percent Dry Weight.
- wet - Sample results and reporting limits reported on a Wet Weight Basis (as received). Results with neither 'wet' nor 'dry' are reported on a Wet Weight Basis.
- RPD - RELATIVE PERCENT DIFFERENCE (RPDs calculated using Results, not Percent Recoveries).
- MRL - METHOD REPORTING LIMIT. Reporting Level at, or above, the lowest level standard of the Calibration Table.
- MDL* - METHOD DETECTION LIMIT. Reporting Level at, or above, the statistically derived limit based on 40CFR, Part 136, Appendix B. *MDLs are listed on the report only if the data has been evaluated below the MRL. Results between the MDL and MRL are reported as Estimated Results.
- Dil - Dilutions are calculated based on deviations from the standard dilution performed for an analysis, and may not represent the dilution found on the analytical raw data.
- Reporting Limits - Reporting limits (MDLs and MRLs) are adjusted based on variations in sample preparation amounts, analytical dilutions and percent solids, where applicable.
- Electronic Signature - Electronic Signature added in accordance with TestAmerica's *Electronic Reporting and Electronic Signatures Policy*. Application of electronic signature indicates that the report has been reviewed and approved for release by the laboratory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Notes and Definitions

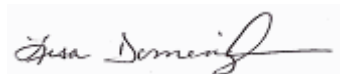

Report Specific Notes:

- A-01 - Detected hydrocarbons have distinct peaks that have elution patterns similar to that of PAH's.
- A-02 - Detected hydrocarbons appear to be due to heavy gas/light diesel components, as well as oil overlap.
- D-09 - Detected hydrocarbons in the diesel range appear to be due to overlap of heavy/oil range hydrocarbons.
- D-14 - Hydrocarbon pattern and range are consistent with heavy oil and biogenic interference..
- D-16 - Detected hydrocarbons in the diesel range do not have a distinct diesel pattern and may be due to heavily weathered diesel.
- J - Estimated value.
- Q-01 - The matrix spike recovery, and/or RPD, for this QC sample is outside of established control limits. Failure of a matrix spike QC sample does not represent an out-of-control condition for the batch.
- Q-16 - RPD is not applicable for analyte concentrations less than 5 times the MRL.
- R-05 - Reporting limits raised due to dilution necessary for analysis. Sample contains high levels of reported analyte, non-target analyte, and/or matrix interference.
- R-08 - Due to matrix unable to resolve Benzo(a)fluoranthene isomers. Value reported only in Benzo(b) category represents Total Benzo(b+k)fluoranthene.

Laboratory Reporting Conventions:

- DET - Analyte DETECTED at or above the Reporting Limit. Qualitative Analyses only.
- ND - Analyte NOT DETECTED at or above the reporting limit (MDL or MRL, as appropriate).
- NR/NA - Not Reported / Not Available
- dry - Sample results reported on a Dry Weight Basis. Results and Reporting Limits have been corrected for Percent Dry Weight.
- wet - Sample results and reporting limits reported on a Wet Weight Basis (as received). Results with neither 'wet' nor 'dry' are reported on a Wet Weight Basis.
- RPD - RELATIVE PERCENT DIFFERENCE (RPDs calculated using Results, not Percent Recoveries).
- MRL - METHOD REPORTING LIMIT. Reporting Level at, or above, the lowest level standard of the Calibration Table.
- MDL* - METHOD DETECTION LIMIT. Reporting Level at, or above, the statistically derived limit based on 40CFR, Part 136, Appendix B. *MDLs are listed on the report only if the data has been evaluated below the MRL. Results between the MDL and MRL are reported as Estimated Results.
- Dil - Dilutions are calculated based on deviations from the standard dilution performed for an analysis, and may not represent the dilution found on the analytical raw data.
- Reporting Limits - Reporting limits (MDLs and MRLs) are adjusted based on variations in sample preparation amounts, analytical dilutions and percent solids, where applicable.
- Electronic Signature - Electronic Signature added in accordance with TestAmerica's *Electronic Reporting and Electronic Signatures Policy*. Application of electronic signature indicates that the report has been reviewed and approved for release by the laboratory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Notes and Definitions

Report Specific Notes:

None

Laboratory Reporting Conventions:

- DET - Analyte DETECTED at or above the Reporting Limit. Qualitative Analyses only.
- ND - Analyte NOT DETECTED at or above the reporting limit (MDL or MRL, as appropriate).
- NR/NA - Not Reported / Not Available
- dry - Sample results reported on a Dry Weight Basis. Results and Reporting Limits have been corrected for Percent Dry Weight.
- wet - Sample results and reporting limits reported on a Wet Weight Basis (as received). Results with neither 'wet' nor 'dry' are reported on a Wet Weight Basis.
- RPD - RELATIVE PERCENT DIFFERENCE (RPDs calculated using Results, not Percent Recoveries).
- MRL - METHOD REPORTING LIMIT. Reporting Level at, or above, the lowest level standard of the Calibration Table.
- MDL* - METHOD DETECTION LIMIT. Reporting Level at, or above, the statistically derived limit based on 40CFR, Part 136, Appendix B. *MDLs are listed on the report only if the data has been evaluated below the MRL. Results between the MDL and MRL are reported as Estimated Results.
- Dil - Dilutions are calculated based on deviations from the standard dilution performed for an analysis, and may not represent the dilution found on the analytical raw data.
- Reporting Limits - Reporting limits (MDLs and MRLs) are adjusted based on variations in sample preparation amounts, analytical dilutions and percent solids, where applicable.
- Electronic Signature - Electronic Signature added in accordance with TestAmerica's *Electronic Reporting and Electronic Signatures Policy*. Application of electronic signature indicates that the report has been reviewed and approved for release by the laboratory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Notes and Definitions

Report Specific Notes:

- A-01 - Recoveries and/or RPD is outside control limit due to an isolated extraction error. Recoveries for batch BS and MS are acceptable. Batch data is not compromised.
- J - Estimated value. Analyte detected at a level less than the Reporting Limit (RL) and greater than or equal to the Method Detection Limit (MDL). The user of this data should be aware that this data is of limited reliability.
- Q9 - Hydrocarbon pattern most closely resembles weathered diesel.
- RL3 - Reporting limit raised due to high concentrations of non-target analytes.
- Z9 - Unable to calculate surrogate recovery due to matrix interference.

Laboratory Reporting Conventions:

- DET - Analyte DETECTED at or above the Reporting Limit. Qualitative Analyses only.
- ND - Analyte NOT DETECTED at or above the reporting limit (MDL or MRL, as appropriate).
- NR/NA - Not Reported / Not Available
- dry - Sample results reported on a Dry Weight Basis. Results and Reporting Limits have been corrected for Percent Dry Weight.
- wet - Sample results and reporting limits reported on a Wet Weight Basis (as received). Results with neither 'wet' nor 'dry' are reported on a Wet Weight Basis.
- RPD - RELATIVE PERCENT DIFFERENCE (RPDs calculated using Results, not Percent Recoveries).
- MRL - METHOD REPORTING LIMIT. Reporting Level at, or above, the lowest level standard of the Calibration Table.
- MDL* - METHOD DETECTION LIMIT. Reporting Level at, or above, the statistically derived limit based on 40CFR, Part 136, Appendix B. *MDLs are listed on the report only if the data has been evaluated below the MRL. Results between the MDL and MRL are reported as Estimated Results.
- Dil - Dilutions are calculated based on deviations from the standard dilution performed for an analysis, and may not represent the dilution found on the analytical raw data.
- Reporting Limits - Reporting limits (MDLs and MRLs) are adjusted based on variations in sample preparation amounts, analytical dilutions and percent solids, where applicable.
- Electronic Signature - Electronic Signature added in accordance with TestAmerica's *Electronic Reporting and Electronic Signatures Policy*. Application of electronic signature indicates that the report has been reviewed and approved for release by the laboratory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

RE: Jeld Wen- Nord Door

Enclosed are the results of analyses for samples received by the laboratory on 05/14/07 08:45.
The following list is a summary of the Work Orders contained in this report, generated on 05/29/07
11:14.

If you have any questions concerning this report, please feel free to contact me.

<u>Work Order</u>	<u>Project</u>	<u>ProjectNumber</u>

Notes and Definitions

Report Specific Notes:

R7 - LCS/LCSD RPD exceeded the acceptance limit. Recovery met acceptance criteria.

Laboratory Reporting Conventions:

- DET - Analyte DETECTED at or above the Reporting Limit. Qualitative Analyses only.
- ND - Analyte NOT DETECTED at or above the reporting limit (MDL or MRL, as appropriate).
- NR/NA - Not Reported / Not Available
- dry - Sample results reported on a Dry Weight Basis. Results and Reporting Limits have been corrected for Percent Dry Weight.
- wet - Sample results and reporting limits reported on a Wet Weight Basis (as received). Results with neither 'wet' nor 'dry' are reported on a Wet Weight Basis.
- RPD - RELATIVE PERCENT DIFFERENCE (RPDs calculated using Results, not Percent Recoveries).
- MRL - METHOD REPORTING LIMIT. Reporting Level at, or above, the lowest level standard of the Calibration Table.
- MDL* - METHOD DETECTION LIMIT. Reporting Level at, or above, the statistically derived limit based on 40CFR, Part 136, Appendix B. *MDLs are listed on the report only if the data has been evaluated below the MRL. Results between the MDL and MRL are reported as Estimated Results.
- Dil - Dilutions are calculated based on deviations from the standard dilution performed for an analysis, and may not represent the dilution found on the analytical raw data.
- Reporting Limits - Reporting limits (MDLs and MRLs) are adjusted based on variations in sample preparation amounts, analytical dilutions and percent solids, where applicable.
- Electronic Signature - Electronic Signature added in accordance with TestAmerica's *Electronic Reporting and Electronic Signatures Policy*. Application of electronic signature indicates that the report has been reviewed and approved for release by the laboratory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

RE: Project: JELD-WEN Nord Door
ARI Job No: PB35

Dear Mr. Willis:

Please find enclosed the Chain-of-Custody (COC) records, sample receipt documentation, and the final data package for samples from the project referenced above.

Sample receipt and details of the analyses are discussed in the Case Narrative.

An electronic copy of this data and associated raw data will be kept on file with ARI. Should you have any questions or problems, please feel free to contact me at any time.

Sincerely,

ANALYTICAL RESOURCES, INC.

Analytical Resources, Inc.

Case Narrative

Client: Environmental Science Corp.
Project: JELD-WEN Nord Door
Matrix: Sediment
ARI Job No.: PB35

Sample receipt

Eighteen sediment samples were received June 3, 2009, under ARI Job PB35. The cooler temperatures measured by IR thermometer following ARI SOP were 3.4, 5.8, and 10.6°C. For further details regarding sample receipt, please refer to the Cooler Receipt Form.

Semivolatiles by SW8270

The samples were initially screened to determine if there was a response that would require modification of the extraction process. Based on the screen, extraction weights were reduced for samples **3SED1-C** and **3SED2-C**. The samples and associated laboratory QC were extracted and analyzed within method recommended holding times.

Please note that several samples were analyzed at dilutions due the color and/or the viscosity of the sample matrices after extraction.

The internal standard areas of Perylene-d12 were outside the control limit high for samples **3SED1-C**, **3SED2-A**, and **3SED2-C**. The samples were re-analyzed at dilutions and all internal standard areas were within control limits. Both sets of data have been included in this package for review. No further corrective action was required.

The surrogate percent recoveries of 2-Fluorobiphenyl and d5-Phenol were outside the control limits for sample **3SED1-B**. All other surrogate percent recoveries were within control limits. No corrective action was required.

Diethylphthalate was present in **MB-060809** at a level that was greater than the reporting limit. All samples were undetected for this compound. No corrective action was required.

The LCS percent recoveries were within control limits.

The matrix spike and matrix spike duplicate percent recoveries were within advisory control limits.

SIM Semivolatiles by SW8270

The samples and associated laboratory QC were extracted and analyzed within method recommended holding times.

Please note that several samples were analyzed at dilutions due to the color and/or the viscosity of the sample matrices after extraction.

Initial and continuing calibrations were within method requirements.

The internal standard area of Phenanthrene-d10 fell outside the control limit for sample **3SED2-C**. The sample was re-analyzed several times and the internal standards were comparable to the original analysis. Only data analyzed on 6/15/09 have been reported for this sample. No further corrective action was required.

The surrogate percent recoveries were within control limits.

The method blank was clean at the reporting limits. The LCS percent recoveries were within control limits.

The matrix spike and matrix spike percent recoveries were within advisory control limits.

The undetected results for several analytes were raised and “Y”-flagged due to interference from the matrix.

Aroclor PCBs by 8082

The samples were initially screened to determine if there was a response that would require modification of the extraction process. Based on the screen, extraction weights were reduced for samples **3SED11-A**, **3SED11-B**, and **3SED12-A**. The samples and associated laboratory QC were extracted and analyzed within method recommended holding times.

Initial and continuing calibrations were within method requirements. Internal standard areas were within limits.

The surrogate percent recoveries were within control limits.

The method blank was clean at the reporting limit. The LCS percent recoveries were within control limits.

The matrix spike and matrix spike percent recoveries were within advisory control limits.

Total Metals

The samples and associated QC were digested and analyzed within method recommended holding times.

The method blank was clean at the reporting limits. The LCS percent recoveries were within control limits.

The matrix spike percent recoveries and duplicate RPDs were within control limits.

Conventional Parameters

The samples and associated laboratory QC were prepared and analyzed within method recommended holding times.

The method blanks were clean at the reporting limits. The LCS percent recoveries were within control limits.

The SRM percent recoveries were within control limits.

The matrix spike percent recoveries and replicate RPDs were within control limits.

Geotechnical Parameters

A laboratory-specific narrative follows.

Client: Environmental Science Corp.

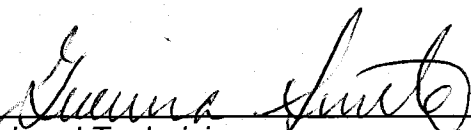

ARI Project No.: PB35

Client Project: JELD-WEN NORD DOOR

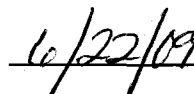

Case Narrative

1. Ten samples were submitted for grain size analysis according to Puget Sound Estuary Protocol (PSEP) methodology on June 3, 2009.
2. The samples were run in a single batch and one sample from this job, 3SED12-A, was chosen for triplicate analysis. The triplicate data is reported on the QA summary.
3. Samples 3SED2-C and 3SED11-B contained woody or other organic matter, which may have broken down during the sieving process, affecting grain size analysis.
4. Sample 3SED1-B contained some shells.
5. The data is provided in summary tables and plots.
6. There were no other noted anomalies in this project.

Approved by:

Lead Technician

Date:

Data Reporting Qualifiers

Effective 12/28/04

Inorganic Data

- U Indicates that the target analyte was not detected at the reported concentration
- * Duplicate RPD is not within established control limits
- B Reported value is less than the CRDL but \geq the Reporting Limit
- N Matrix Spike recovery not within established control limits
- NA Not Applicable, analyte not spiked
- H The natural concentration of the spiked element is so much greater than the concentration spiked that an accurate determination of spike recovery is not possible
- L Analyte concentration is ≤ 5 times the Reporting Limit and the replicate control limit defaults to ± 1 RL instead of the normal 20% RPD

Organic Data

- U Indicates that the target analyte was not detected at the reported concentration
- * Flagged value is not within established control limits
- B Analyte detected in an associated Method Blank at a concentration greater than one-half of ARI's Reporting Limit or 5% of the regulatory limit or 5% of the analyte concentration in the sample.
- J Estimated concentration when the value is less than ARI's established reporting limits
- D The spiked compound was not detected due to sample extract dilution
- NR Spiked compound recovery is not reported due to chromatographic interference
- E Estimated concentration calculated for an analyte response above the valid instrument calibration range. A dilution is required to obtain an accurate quantification of the analyte.
- S Indicates an analyte response that has saturated the detector. The calculated concentration is not valid; a dilution is required to obtain valid quantification of the analyte
- NA The flagged analyte was not analyzed for

- NS The flagged analyte was not spiked into the sample
- M Estimated value for an analyte detected and confirmed by an analyst but with low spectral match parameters. This flag is used only for GC-MS analyses
- M2 The sample contains PCB congeners that do not match any standard Aroclor pattern. The PCBs are identified and quantified as the Aroclor whose pattern most closely matches that of the sample. The reported value is an estimate.
- N The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification"
- Y The analyte is not detected at or above the reported concentration. The reporting limit is raised due to chromatographic interference. The Y flag is equivalent to the U flag with a raised reporting limit.
- C The analyte was positively identified on only one of two chromatographic columns. Chromatographic interference prevented a positive identification on the second column
- P The analyte was detected on both chromatographic columns but the quantified values differ by $\geq 40\%$ RPD with no obvious chromatographic interference

Geotechnical Data

- A The total of all fines fractions. This flag is used to report total fines when only sieve analysis is requested and balances total grain size with sample weight.
- F Samples were frozen prior to particle size determination
- SM Sample matrix was not appropriate for the requested analysis. This normally refers to samples contaminated with an organic product that interferes with the sieving process and/or moisture content, porosity and saturation calculations
- SS Sample did not contain the proportion of "fines" required to perform the pipette portion of the grain size analysis
- W Weight of sample in some pipette aliquots was below the level required for accurate weighting

SAMPLE

Lab Sample ID: PB35A

QC Report No: PB35-ENVIRONMENTAL SCIENCE CORP.

LIMS ID: 09-12717

Project: JELD-WEN NORD DOOR

Matrix: Sediment

Event: NA

Data Release Authorized:

Date Sampled: 06/03/09

Reported: 06/17/09

Date Received: 06/03/09

Date Extracted: 06/08/09

Sample Amount: 16.4 g-dry-wt

Date Analyzed: 06/13/09 15:51

Final Extract Volume: 1.0 mL

Instrument/Analyst: NT2/PK

Dilution Factor: 3.00

GPC Cleanup: Yes

Percent Moisture: 37.1%

Silica Gel Cleanup: No
