Proposed Removal from the Hazardous Sites List

The Washington State Department of Ecology proposed removing the Sea Alaska Industrial Electric site, located at 415 Maple Avenue, Snohomish, Washington, from its Hazardous Sites List.

We are asking for your comments on the proposed removal of the site from the Hazardous Sites List. You are invited to:

- Review the Sea Alaska Industrial Electric No Further Action Letter, which describes why Ecology believes cleanup is complete.
- Send your comments to us for consideration. Comments will be accepted June 10, 2021 – July 10, 2021.

Site Background

Ecology was investigating an adjacent property and noticed a wet, oily area at the back of the Sea-Alaska property along the east fence. The business had dumped waste liquids and used the cement pad for pressure washing electrical parts, causing cadmium, lead, and heavy oil contamination. The contamination was removed in 2007. After that removal, soil tests under the parking lot showed lead contamination above state standards. However, since the asphalt parking lot prevents exposure to contaminated soil, we are ready to remove the site from the Hazardous Sites List. An environmental covenant will be placed on the property, requiring maintenance of the parking lot.

What Happens Next?

After the public comment period ends, we will review comments received during the comment period. If no changes are necessary, the site will be removed from the Hazardous Sites List.

What is the Hazardous Sites List? A list of sites that Ecology has assessed for their potential threat to human health and the environment. Sites must go through cleanup and meet state standards before Ecology can remove them from the list.
