## PACIFIC groundwater GROUP

July 21, 2021

Rob Olsen, REHS  
Tacoma - Pierce County Health Department  
Environmental Health Specialist  
3629 South D Street  
Tacoma, WA 98418-6813

Re: Birds Eye Foods Boiler Room Site  
Summary Report for 2021 Q1 Semi-Annual Groundwater Monitoring Event

Dear Rob:

Pacific Groundwater Group (PGG) is pleased to present this letter report on behalf of our client, Conagra Brands, to summarize semi-annual groundwater monitoring performed in the first quarter 2021 (2021 Q1) at the former Birds Eye Foods facility located at 3303 South 35<sup>th</sup> Street, Tacoma, Washington. Groundwater monitoring is performed because petroleum-related contamination in soil has been identified in a portion of the facility, referred to as the “Boiler Room Site,” which was the subject of a 2011 Remedial Investigation/Feasibility Study (2011 RI/FS) (PGG 2011). Site contaminants of concern were not detected in the 2021 Q1 groundwater samples. Groundwater concentrations of site contaminants of concern have not exceeded cleanup levels since the 2007 sampling event.

Tacoma – Pierce County Health Department (TPCHD) regulates the Boiler Room Site as an open Underground Storage Tank (UST) Site. Due to the presence of contaminated soil below the water table at the Boiler Room Site, TPCHD requires ongoing semi-annual groundwater monitoring to assess the efficacy of remedial actions and to monitor for potential contaminant migration (Marek, undated; received June 13, 2013). The semi-annual monitoring events shall be performed in spring and fall and shall involve sampling from two (2) shallow and deep well pairs generally located upgradient and downgradient of contaminated soil (Marek, undated; received June 13, 2013). In the absence of evidence of contaminant migration, TPCHD will not require remedial action other than the preferred *Soil Containment and Natural Source Zone Depletion* remedy identified in the 2011 RI/FS (Marek, undated; received June 13, 2013).

The semi-annual monitoring program required by TPCHD is in addition to, and does not alter, the long-term groundwater monitoring program (PGG 2012) required by the *Soil Containment and Natural Source Zone Depletion* remedy that was authorized by the Washington State Department of Ecology (Ecology) and incorporated into the Environmental Restrictive Covenant and No Further Action (Ecology 2013). The Ecology long-term groundwater monitoring events are performed every 18 months. The most recent long-term

monitoring event was performed in September 2020 (2020 Q3) and the next event will be March 2022 (2022 Q1).

Analytical results for groundwater samples collected in 2021 Q1 indicate that the preferred remedial alternative identified in the 2011 RI/FS is effective; the petroleum contamination in soil is not resulting in a dissolved plume with concentrations of site contaminants of concern exceeding the Model Toxics Control Act (MTCA) Method A cleanup levels.

This work was performed, and this report prepared, in accordance with hydrogeologic practices generally accepted at this time and in this area for the exclusive use of the former Birds Eye Foods facility, for specific application to the project site. No other warranty, express or implied, is made.

---

## 2021 Q1 SEMI-ANNUAL GROUNDWATER SAMPLING SUMMARY

The 2021 Q1 groundwater sampling event was performed in compliance with TPCHD requirements (Marek, undated; received June 13, 2013) and the Semi-Annual Groundwater Monitoring Plan (PGG 2013). Groundwater samples were collected from the Boiler Room Site semi-annual well network on March 29, 2021 by representatives of PGG. The semi-annual monitoring well network is presented in Figure 1 and construction details are summarized in Table 1.

The monitoring wells were purged and sampled using new, disposable tubing and peristaltic pumps. Low-flow purging and sampling techniques were used to minimize turbidity in the groundwater samples. During purging, field meters were used to monitor pH, specific conductance, temperature, and turbidity. Samples were collected when these field parameters had stabilized or after a minimum of three casing volumes had been purged. Purge water was drummed onsite prior to anticipated disposal offsite by Marine Vacuum Services, Inc. of Seattle, WA.

---

## CHEMICALS OF CONCERN AND SITE CLEANUP LEVELS

Groundwater samples were received by Analytical Resources, Inc. (ARI), a Washington State certified laboratory, on March 29, 2021. Samples were stored and delivered in ice chests following standard chain-of-custody procedures.

Groundwater samples were analyzed according to Ecology and/or U.S. Environmental Protection Agency (EPA) methods for the following parameters:

- Northwest Total Petroleum Hydrocarbons – Gasoline Range Organics (NWTPH-G), and Diesel-Range and Heavy Oil-Range Organics (NWTPH-Dx) with silica gel cleanup.
- BTEX Compounds – Benzene, Toluene, Ethylbenzene, and Xylenes (EPA Method 8260).

- PAHs – Polynuclear Aromatic Hydrocarbons (EPA Method 8270D with selected ion monitoring modification to achieve required reporting limits).

As described in the 2011 RI/FS (PGG 2011) and Semi-Annual Groundwater Monitoring Plan (PGG 2013), standard MTCA (Ecology 2007) Method A Unrestricted Land Use cleanup levels are applicable to the Boiler Room Site to evaluate the relative chemical effects from soil contamination at the Site on groundwater quality. MTCA Method A cleanup levels meet the criteria of WAC 173-340-704(1) because there are few hazardous substances at the Site and numerical Method A standards have been established. Groundwater cleanup levels presented in Table 2 are consistent with the 2011 RI/FS.

---

## ANALYTICAL RESULTS

The 2021 Q1 groundwater monitoring analytical results are summarized in Table 2 and the analytical lab report is presented in Appendix A. Site contaminants of concern were not detected in the groundwater samples. The analytical reporting limits were less than corresponding Site cleanup levels.

The 2021 Q1 groundwater analytical results indicate that the preferred remedial alternative identified in the 2011 RI/FS is effective; the petroleum contamination in soil is not resulting in a dissolved plume with concentrations exceeding MTCA Method A cleanup levels.

Quality assurance/quality control (QA/QC) data associated with the Boiler Room Site 2021 Q1 groundwater samples were reviewed by PGG. All requested analyses were performed, and the QA/QC assessments indicated acceptable results with the following notations:

- Surrogate Spikes are performed by the lab as part of their internal QA/QC. Surrogate spikes are chemicals unlikely to be in field samples that are added to the sample in a known amount. Surrogates are analyzed using the same procedures as other parameters. The analytical performance is assessed by evaluating the amount of the surrogate recovered from the sample relative to the amount added. The surrogate recoveries of bromofluorobenzene were below acceptable limits in the initial analyses of BTEX and gasoline in samples MW-9S, MW-12S, MW-12D, and MW-22S (duplicate, see below). These samples were reanalyzed, and the surrogate recoveries were acceptable; therefore, no corrective actions were required, and the data are considered acceptable for purposes of the monitoring program without qualification.
- Laboratory Control Samples and Laboratory Control Sample Duplicates (LCS/LCSD) are types of internal laboratory QA/QC samples. LCS/LCSD are similar to surrogate spikes except instead of adding chemicals to *field samples* that are *unlikely to be found in the field samples*, they are chemicals added to *purified media* (e.g. deionized water) that are *likely to be present in the field samples*. LCS/LCSD are analyzed to assess the laboratory performance to successfully recover target analytes from a purified sample material, like deionized water. Recovering the target analytes in the LCS assesses whether the analytical procedure is in control and

evaluates the lab's capability to report unbiased measurements. The LCSD is a replicate of the LCS and monitors the accuracy and precision of the analytical process on a purified material. The BTEX compound m,p-Xylene was recovered above control limits from the LCSD analyzed on April 1, 2021. Since BTEX compounds were not detected in the 2021 Q1 groundwater samples, no corrective actions were required, and the data are considered acceptable for purposes of the monitoring program without qualification.

Field QA/QC included a blind field duplicate labeled MW-22S that was collected at well MW-12S and analyzed for the semi-annual sampling analytical suite to evaluate analytical precision. No Site chemicals of concern were detected in the 2021 Q1 MW-12S sample or the field duplicate MW-22S.

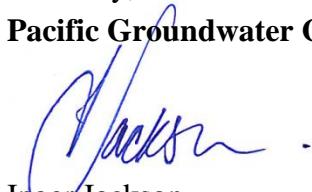

---

## CLOSING

We hope this data contributes to your understanding of the Site and groundwater monitoring data. Please contact Inger Jackson at PGG with questions.

Sincerely,

**Pacific Groundwater Group**

Inger Jackson  
Senior Hydrogeologist

## Work Order Case Narrative

### Gasoline by NWTPH-g (GC/MS)

The sample(s) were analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

Internal standard areas were within limits.

The surrogate percent recoveries were within control limits with the exception of surrogates flagged on the associated forms.  
The samples were re-analyzed with surrogate recoveries in control.

The method blank(s) were clean at the reporting limits.

The blank spike and blank spike duplicate (BS/LCS and BSD/LCSD) spike recoveries and relative percent difference (RPD) were within control limits.

The matrix spike/matrix spike duplicate (MS/MSD) spike recoveries and relative percent difference (RPD) were within advisory control limits.

### Volatiles - EPA Method SW8260D

The sample(s) were analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

Internal standard areas were within limits.

The surrogate percent recoveries were within control limits with the exception of surrogates flagged on the associated forms.  
The samples were re-analyzed with surrogate recovery in control.

The method blank(s) were clean at the reporting limits.

The blank spike and blank spike duplicate (BS/LCS and BSD/LCSD) spike recoveries and relative percent difference (RPD) were within control limits with the exception of analytes flagged on the associated forms.

The matrix spike/matrix spike duplicate (MS/MSD) spike recoveries and relative percent difference (RPD) were within advisory control limits.

### Polynuclear Aromatic Hydrocarbons (PAH) - EPA Method SW8270E-SIM

The sample(s) were extracted and analyzed within the recommended holding times.

## Cooler Receipt Form

ARI Client: PGL

COC No(s): \_\_\_\_\_ NA

Assigned ARI Job No: Z1C0430

### Preliminary Examination Phase:

Were intact, properly signed and dated custody seals attached to the outside of the cooler?  YES  NO

Were custody papers included with the cooler?  YES  NO

Were custody papers properly filled out (ink, signed, etc.)  YES  NO

Temperature of Cooler(s) (°C) (recommended 2.0-6.0 °C for chemistry)

Time 1639

21 44

Temp Gun ID#: D00306

If cooler temperature is out of compliance fill out form 00070F

Cooler Accepted by: JBW Date: 03/09/2021 Time: 1639

*Complete custody forms and attach all shipping documents*

### Log-In Phase:

Was a temperature blank included in the cooler?  YES  NO

What kind of packing material was used? ...  Bubble Wrap  Wet Ice  Gel Packs  Baggies  Foam Block  Paper Other: \_\_\_\_\_

Was sufficient ice used (if appropriate)?  YES  NO

How were bottles sealed in plastic bags?  Individually  Grouped  Not

Did all bottles arrive in good condition (unbroken)?  YES  NO

Were all bottle labels complete and legible?  YES  NO

Did the number of containers listed on COC match with the number of containers received?  YES  NO

Did all bottle labels and tags agree with custody papers?  YES  NO

Were all bottles used correct for the requested analyses?  YES  NO

Do any of the analyses (bottles) require preservation? (attach preservation sheet, excluding VOCs) ...  NA  YES  NO

Were all VOC vials free of air bubbles?  NA  YES  NO

Was sufficient amount of sample sent in each bottle?  NA  YES  NO

Date VOC Trip Blank was made at ARI:  NA  3/22/21

Were the sample(s) split by ARI?  NA  YES  NO  Split by: \_\_\_\_\_

Samples Logged by: KD Date: 3/30/21 Time: 1425 Labels checked by: KD

**\*\* Notify Project Manager of discrepancies or concerns \*\***

Sample ID on Bottle	Sample ID on COC	Sample ID on Bottle	Sample ID on COC

### Additional Notes, Discrepancies, & Resolutions:

*vial had air bubbles, please see preservation sheet.*

### Notes and Definitions

- \* Flagged value is not within established control limits.
- D The reported value is from a dilution
- E The analyte concentration exceeds the upper limit of the calibration range of the instrument established by the initial calibration (ICAL)
- J Estimated concentration value detected below the reporting limit.
- U This analyte is not detected above the reporting limit (RL) or if noted, not detected above the limit of detection (LOD).
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference
- [2C] Indicates this result was quantified on the second column on a dual column analysis.
