1.0 INTRODUCTION

Environmental Partners, Inc. (EPI) completed a Phase I Environmental Site Assessment (ESA) of the Modera River Trail Property located at 15801 and 15945 Northeast 85th Street in Redmond, Washington, which will be referred to as the "subject property." EPI performed environmental consulting services on behalf of MCRT River Trail LLC (MCRT), who requested this Phase I ESA as a part of normal pre-purchase due diligence.

1.1 Purpose

A Phase I ESA is intended to permit the user to satisfy one of the requirements to qualify for one or more liability defenses available under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) by conducting all appropriate inquiries into the ownership and uses of the subject property consistent with good commercial or customary practice as defined by 42 U.S.C. §9601 (35)(B), or similar defenses available under the Model Toxics Control Act as defined in RCW 70.105D040 (3)(b). The goal of this Phase I ESA is to identify recognized environmental conditions using the level of care that is standard in the environmental industry today.

The term *recognized environmental conditions (RECs),* as defined by American Society for Testing and Materials (ASTM), is the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. RECs are not intended to include *de minimis* conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

ASTM 2013 also identifies the following environmental condition:

- Business Environmental Risks (BERs), defined as *"a risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated..."* BERs may include impacts to soil which do not require cleanup or trigger regulatory reporting but that may affect the cost of development or affect the property use.

1.2 Scope of Services

This Phase I ESA was performed in general accordance with ASTM Practice E 1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* (ASTM 2013). The Phase I ESA also meets 40 CFR §312, *Standards and Practices for All Appropriate Inquiries* (AAI). This assessment did not include testing related to asbestos, lead-based paint, radon, regulatory compliance, mold, or ecological resources.

1.3 Significant Assumptions

The conclusions of this Phase I ESA are based on research of readily available current and historical information sources, subject property and local agency personnel interviews, review of previous environmental investigations, and a site visit. Whenever possible, EPI researched more than one information source in order to substantiate the findings and conclusions. Whether EPI relied on one or multiple information sources, EPI must assume that the information source(s) are correct unless another source indicates otherwise.

1.4 Limitations

The conclusions of this report are based on the information described herein and EPI's experience and professional judgment. The information was either made available to EPI or reasonably obtained within the practical constraints of our scope of services. It is not possible to eliminate all uncertainties; however, steps can be taken to reduce their impact. If you become aware of information EPI did not consider, or have any questions concerning our conclusions and recommendations, please advise EPI immediately.

No practical study or procedure can or should be expected to discover all potential contamination. However, EPI believes this ESA, in conjunction with any recommended additional studies, does represent due diligence as determined in accordance with the professional standard of care. This standard is the current level of care and skill ordinarily exercised by members of the engineering profession practicing under similar conditions in the project area. EPI cannot be held responsible if due diligence standards change or if MCRT is required to meet a higher standard.

1.5 Special Terms and Conditions

There are no special terms or conditions associated with this Phase I ESA.

2.0 SUBJECT PROPERTY

2.1 Subject Property Information

Addresses:	15801 and 15945 Northeast 85th Street
Parcel Numbers:	719890-0170 and 719890-0180
Property Acreage:	1.5
Latitude:	47.6781690°
Longitude:	-122.1294750°
Present Use:	Office Building
Q-S-T-R:	SE-2-25-5

The subject property location is depicted on Figure 1. A representation of the subject property is provided as Figure 2.

2.2 Subject Property Owner/Key Site Manager

The fee owners of record of the two parcels comprising the subject property are:

- BJT Investments LLC (Parcel No. 719890-0170); and
- Sammamish Valley Dental Center LLC (Parcel No. 719890-0180; King County Assessor 2019).

Mr. Joseph Tassia of BJT Investments LLC and Mr. Rod D. Robinson completed EPI's Property Owner Questionnaire. Their responses have been incorporated into the appropriate sections of this report. A copy of the completed questionnaire is included in Attachment A.

2.3 Subject Property Description and Improvements

The subject property is identified as King County tax parcel numbers 719290-0170 and 719290-0180, and totals approximately 1.5 acres (Figure 2). The subject property includes an office building and the Sammamish Dental Center. The office building is a 1990-vintage 2-story building of wood-frame construction enclosing a total of approximately 10,362 square feet of space. The Sammamish Dental Center building is a 1973-vintage single-story building of masonry construction enclosing a total of approximately 4,673 square feet of space. Additional details regarding these structures is presented below.

Access to 15801 NE 85th Street (719290-0170) is gained from 158th Avenue NE, which forms the western property boundary. At the time of the reconnaissance visit, ground surfaces within the subject property boundaries were paved with asphalt, with some landscaped areas and trees.

Access to 15945 NE 85th Street (719290-0180) is gained from NE 85th Street, which forms the northern property boundary. At the time of the reconnaissance visit, ground surfaces within the subject property boundaries were paved with asphalt, with some landscaped areas and trees.

2.3.1 Structure Details

Details regarding the structures on the subject property are presented below:

Building 1 – 1990 Office Building (719290-0170)

Building Square Footage:	10,362 ft^2
General Construction:	Standard wood construction over slab on grade
Current Occupants:	Multiple businesses

Building 2 – 1973 Sammamish Dental Center (719890-0180)

Building Square Footage:	4,673 ft^2
General Construction:	Masonry construction
Current Occupant:	Sammamish Dental Center

2.4 Previous Environmental Documentation

This section presents summaries of the previous environmental documentation reviewed for this assessment.

2.4.1 2.4.1 2009 Phase I ESA

EPI was provided a copy of the *Phase I ESA, First Citizens Bank, 15801 NE 85th Street, Redmond, Washington 98052* dated November 5, 2009 prepared by O'Neill Environmental (2009 Phase I ESA). The 2009 Phase I ESA included King County Parcel 719290-0170 and was prepared for First Citizens Bank. The 2009 Phase I ESA identified no evidence of RECs in connection with the property. A copy of the 2009 Phase I ESA is included in Attachment B.

2.4.2 2.4.2 2017 Redmond Wellhead Report

Based on EPI's experiences and actual knowledge of regional groundwater conditions in the City of Redmond, EPI requested the most recent report pertaining to the City of Redmond's Wellhead Protection Program. The City provided a copy of the letter report regarding Summer 2017 Groundwater Monitoring Event City of Redmond Wellhead Protection Program dated November 10, 2017 prepared by Golder Associates (2017 Redmond Wellhead Report). A copy of the report is included in Attachment B.

The 2017 Redmond Wellhead Report includes reference that during a recent sampling event [unrelated to the project] (i.e., summer 2017) low-level concentrations of tetrachloroethene (PCE) were detected in groundwater samples collected from monitoring wells located at the intersection of Northeast 85th Street and 161st Avenue Northeast, approximately 0.2 mile east of the subject property. The report does not identify the source of the PCE; however, low-level concentrations of PCE in groundwater has been known as a regional condition for the City of Redmond. According to the report, the regional groundwater flow direction is west, toward the Sammamish River.

The detected concentrations of PCE ranged from 0.80 micrograms per liter (µg/L) to 1.9 µg/L. None of the detected concentrations exceed the Model Toxics Control Act (MTCA) Method A Groundwater Cleanup Level of 5 µg/L for PCE. EPI is not aware of empirical groundwater data collected by the City of Redmond at the subject property. Because the offsite detected concentrations do not exceed the MTCA Method A Cleanup Level of 5 µg/L, the presence of PCE detected in groundwater proximate to the subject property is not considered a REC. However, the presence of low concentration PCE may represent an additional development cost for dewatering and therefore is considered a BER.

2.4.3 2017 Phase I ESA

EPI prepared a Phase I ESA Report for the subject property dated December 5, 2017 (EPI 2017). The 2017 Phase I ESA Report was prepared for MCRT West Coast LLC. The 2017 Phase I ESA revealed no evidence of RECs in connection with the subject property. One BER was identified for the property. The 2017 Redmond Wellhead Report includes reference that during the recent sampling event (i.e., summer 2017) low-level concentrations of PCE were detected in groundwater samples collected from monitoring wells located at the intersection of Northeast 85th Street and 161st Avenue Northeast, approximately 0.2 mile east of the subject property. The report does not identify the source of the PCE; however, low-level concentrations of PCE in groundwater is a known regional issue for the City of Redmond. Because the detected concentrations do not exceed the MTCA Method A Cleanup Level of 5 µg/L, the presence of PCE detected in groundwater proximate to the subject property is not considered a REC. However, the presence of low concentration PCE in groundwater may represent an additional development cost for dewatering and therefore is considered a BER.

2.4.4 2018 Groundwater Sampling Letter Report

EPI conducted a groundwater sampling event at the subject property to further evaluate the BER. The results are documented in the letter regarding Groundwater Sampling Letter Report, Redmond II, 15801 and 15945 Northeast 85th Street, Redmond, Washington dated January 31, 2018 (EPI 2018). The sampling event included collecting groundwater samples from monitoring wells B-1, B-2, and B-4 for laboratory analysis. The approximate well locations are depicted on Figure 2.

The following conclusions were supported by the findings of the sampling event:

- Based on the analytical results and field screening performed, groundwater at the subject property does not appear to be adversely impacted from the regional PCE groundwater issues within the City of Redmond. This BER is resolved.

- Due to the City of Redmond regional PCE conditions in the vicinity of the subject property, caution should be taken if dewatering is part of the redevelopment plan. Impacted groundwater from the City of Redmond regional PCE plume could be drawn to the subject property during redevelopment that may require special permitting and monitoring associated with dewatering activities.

A copy of the letter report is included in Attachment B.

2.4.5 Further Assessment

During the construction bidding process, it was noted that approximately 50 8-inch diameter timber piles were used in the construction of the two story current building located at 15801 NE 85th Street (constructed in 1990 per King County Assessor).

EPI conducted an additional groundwater sampling event to screen for creosote-like compounds. Groundwater samples were again collected from wells B-1, B-2, and B-4 for laboratory analysis. Each sample was submitted for analysis of carcinogenic polycyclic aromatic hydrocarbons (cPAHs) by U.S. Environmental Protection Agency (EPA) Method 8270DSIM, which are compounds commonly associated with creosote. No cPAH compounds were detected in groundwater in the samples submitted for analysis.

Several test pits were additionally advanced to evaluate the location and condition of the geo-piers; however, the wooden piers could not be exposed without undermining the building.

One soil sample (TP-3:5) was submitted for analysis from test pit TP-3, which was excavated to within a few feet from one of the piers. This soil sample was submitted for laboratory analysis of cPAHs by EPA Method 8270DSIM. The location of TP-3:5 is depicted on Figure 2. No concentrations of cPAHs exceeding the laboratory method detection limited were detected in the soil sample.

Copies of the laboratory analytical reports are included in Attachment B.

Although no concentrations of cPAHs were detected in the soil and groundwater samples collected at the subject property, the geo-piers may present a risk which can have a material environmental or environmentally-driven impact on the planned use of the subject property. Based on the data collected to date, no further investigation of the geo-piers appears necessary at this time, but they are considered a BER.

2.5 Physical Setting

The subject property is located in a commercial area about 0.75 miles north of Washington State Highway 520. The subject property resides at an approximate elevation of 38 feet above mean sea level, and is relatively flat with a slight topographic gradient toward the west-northwest.

2.5.1 Geology/Hydrogeology

According to the 2009 Phase I ESA, the subject property lies within the Puget-Willamette Trough aquifer system that underlies an elongated basin that extends southward from near the Canadian border in Washington south to central Oregon. The dominant soil composition in the vicinity of the subject property is reportedly classified as Alderwood gravelly sandy loam. This soil consists of deep, somewhat excessively-drained soils formed on till plains formed from basal till. The soil extends to a depth of approximately 10 to 40 inches below ground surface (bgs). This soil is moderately well drained, and the available water capacity is very low.

EPI completed online research of the Washington State Department of Ecology (Ecology) Resource Protection Well Reports website. Resource protection well reports for soil borings or wells in the vicinity of the subject property indicated soil conditions include brown organic gravelly fill from ground surface to a depth of approximately 5 feet bgs, silty tan gray brown gravel from 5 to 10 feet bgs, and sandy gravelly wet soil from 10 to 13 feet bgs (Ecology 2017). Copies of the resource protection well logs obtained from the Ecology website are included in Attachment B.

The 2017 Wellhead Report indicates that shallow groundwater in the vicinity of the subject property may be encountered at depths between 20 and 25 feet bgs. Depth to a shallow water table aquifer at the subject property, if present, and groundwater flow direction cannot be determined without a minimum of three groundwater monitoring wells surveyed to a common datum. The nearest surface water body is the Sammamish River, located approximately 200 feet west of the subject property. The Sammamish River flows in a northerly direction and discharges to Lake Washington approximately 8 miles northwest of the subject property, near Bothell, Washington. Based on the available information, the inferred hydrogeologic gradient is west, toward and with the Sammamish River.

2.5.2 Vicinity and Adjacent-Property Land Uses

The City of Redmond was incorporated in 1912 and includes approximately 17 square miles. The subject property is located in a mixed commercial and residential area. The Sammamish River is located approximately 200 feet west of the subject property. Property uses in the vicinity are primarily multi-family residential and commercial.

Adjacent-property land uses include:

- North-adjacent – The subject property is bordered on the north by Northeast 85th Street with the City of Redmond City Hall, King County Redmond Library, and a parking lot farther north across the street.
- East-adjacent – The east-adjacent property is occupied by a dental office.
- South-adjacent – Northeast 84th Way adjoins the southern property boundary. The south-adjacent property is occupied by multi-family residences.
- West-adjacent – The western property boundary is formed by 158th Avenue Northeast. Farther west is the Allez multi-family residential building.

Observations of the surrounding properties made during the reconnaissance visit are provided in Section 6.0, Site Reconnaissance.

3.0 USER RELIANCE AND PROVIDED INFORMATION

This report was prepared for exclusive use by MCRT, its investors, lenders, partners, and affiliates for this project only. The scope of services was developed in conjunction with MCRT involvement to achieve specific project objectives, with the intent of establishing an appropriate balance between level of effort and uncertainty. Providing the report to others not party to this mutual scope determination, or using it for other projects or purposes can result in misunderstandings or incorrect conclusions. EPI cannot be responsible for interpretation or extrapolation of the data contained herein, except as stated in our conclusions or recommendations.

Mr. Sean G. Hyatt, Senior Managing Director of MCRT, completed the ASTM 1527-13 User Questionnaire form as part of EPIs 2017 Phase I ESA. Mr. Hyatt's information from the questionnaire is presented below or has been incorporated into the appropriate sections of the report. A copy of the completed questionnaire is included in Attachment A.

3.1 Environmental Liens or Activity and Use Limitations

No records of environmental liens or activity and use limitations were identified in connection with the subject property according to Mr. Hyatt.

3.2 Specialized Knowledge

Mr. Hyatt indicated that he has no specialized knowledge regarding the subject property, adjacent properties, or their on-site processes.

3.3 Valuation Reduction for Environmental Issues

A valuation reduction occurs when the value of the property has been reduced below comparable properties due at least in part to environmental conditions associated with the property. Mr. Hyatt indicated that he is not aware of any property devaluation associated with environmental issues.

3.4 Common Knowledge or Reasonably Ascertainable Information

Mr. Hyatt was not aware of any commonly known or reasonably ascertainable information within the local community about the property that is material to RECs in connection with the subject property.

4.0 HISTORICAL USE INFORMATION

The history of the subject property was researched to identify and evaluate past uses that might have affected environmental conditions, primarily through operations that included the use of hazardous substances or petroleum products. The following standard historical sources were used to identify historical use of the subject property and adjacent properties:

- The previous environmental reports presented in Section 2.4.
- Property Tax Files – Online property records available from the King County Assessor webpage (King County Assessor 2019); and historical tax records obtained from the Puget Sound Regional Archives.
- Aerial Photographs – obtained from Environmental Data Resources, Inc. (EDR) for years 1943, 1965, 1968, 1978, 1980, 1985, 1990, 2005, 2006, 2009, and 2011.
- United States Geologic Survey (USGS) Topographic Maps – obtained from EDR for years 1895, 1897, 1950, 1968, 1973, and 2014.

- Local Street Directories – historical city directories research completed by EDR for years 1971, 1976, 1981, 1986, 1995, 2000, 2005, 2010, and 2014; no records were identified for the year 1992.

- Fire Insurance Maps – Sanborn Fire Insurance Maps were not available for the subject property.

- Title Records – This assessment did not include obtaining a chain-of-title report, and a chain-of-title was not provided to EPI for review.

Copies of the standard historical sources reviewed during this assessment are provided in Attachment C.

4.1 Historical Use of the Subject Property

The historical property tax records indicate that Sammamish Dental Center building located on parcel 719890-0180, at 15945 NE 85th Street, was constructed in 1973. Aerial photographs prior to that date show the subject property and surrounding areas as largely undeveloped and vegetated. The office building located on parcel 719890-0170, at 15801 NE 85th Street, was constructed in 1990 and initially used as a bank. The office building is first visible in the 2005 aerial photograph.

The historical city directories document the following occupants at the subject property addresses.

Year	Address	Occupant
1971	15801 NE 85th St	No address identified
	15945 NE 85th St	No address identified
1976	15801 NE 85th St	No address identified
	15945 NE 85th St	Sammamish Vy Dental
1981	15801 NE 85th St	No address identified
	15945 NE 85th St	Sammamish Vly Dental
1986	15801 NE 85th St	No address listed
	15945 NE 85th St	Orion Dental Lab
1995	15801 NE 85th St	Washington Commercial Bancorp
	15945 NE 85th St	Sammamish Valley Dental Center
2000	15801 NE 85th St	Washington Commercial Bancorp
	15945 NE 85th St	Sammamish Valley Dental Center
2005	15801 NE 85th St	Washington Commercial Bancorp
	15945 NE 85th St	Sammamish Valley Dental Center
2010	15801 NE 85th St	First-Citizens Bank & Trust Co, Washington Commercial Bancorp
	15945 NE 85th St	Sammamish Valley Dental Center and Tangen Dental Lab
2014	15801 NE 85th St	Northwest Nexus Inc., Unisoft Networks, Unixon International Inc., Washington Commercial Bancorp
	15945 NE 85th St	Sammamish Valley Dental Center and Tangen Dental Lab

Based on the historical sources obtained and reviewed by EPI, the subject property was developed in the 1970s with the existing dental office building. Other portions of the subject property remained largely undeveloped until construction of the existing office building in 1990. Historical operations at the subject property have included the dental office and commercial offices. These historical uses are not considered a REC.

4.2 Historical Use of Adjacent Properties

Adjacent properties appear largely undeveloped prior to 1978. The 1978 aerial photograph shows development of the east- and north-adjacent properties. Areas to the west are not visible in the 1978 aerial photograph. Areas surrounding the subject property appear in a similar configuration in the 1980 aerial photograph.

Development on the west-adjacent property is first visible in the 1985 aerial photograph and the south-adjacent property is undeveloped and wooded. Further development of the west-adjacent property is observed in the 1990 aerial photograph, as is initial development of the City of Redmond municipal campus located farther north beyond the current City Hall building.

The existing south-adjacent multi-family residential development is first visible in the 2005 aerial photograph. Subsequent aerial photographs show the surrounding property similar to the current configuration, except for the west-adjacent Allez multi-family residential development that was constructed in 2013.

Based on the limited historical materials available, adjacent properties appear to be first developed in the 1970s and have been used for residential and commercial purposes.

5.0 REGULATORY RECORDS REVIEW

Facilities that generate, transport, store, or dispose of hazardous materials—or that have known or potentially identified contamination that could impact the subject property—were identified using federal, state, and local databases. EDR conducted the database search. The EDR Radius Map™ Report is included in Attachment D.

EDR conducted a search of federal and state regulatory agency databases based on the location and address of the subject property; and using the search radii prescribed under ASTM Standard E 1527-13. A summary of the number of facilities identified, and databases searched, is provided in Table 1. The table indicates the total number of listings identified for each database, and highlights if the subject property was identified.

The EDR Radius Map™ Report included seven "orphan" sites that could not be located due to inadequate address information contained within the regulatory databases. EPI reviewed the limited information provided by EDR and has incorporated the results for the orphan sites into Table 1, if applicable.

EPI used the Vapor Encroachment Worksheet provided by EDR to meet the search requirements of the ASTM Standard Practice for Assessment of Vapor Encroachment into Structures on Property Involved in

Real Estate Transactions (ASTM 2008). A copy of the EDR Vapor Encroachment Screen report is included in Attachment D.

The following sections present facility listings identified by EDR and are organized by subject property, adjacent properties, and vicinity facilities.

5.1 Subject Property

The subject property addresses, 15801 and 15945 Northeast 85th Street, were not identified in the databases searched by EDR.

5.2 Adjacent Properties

The following adjacent properties were identified in The EDR Radius Map™ Report.

- Highlander Oil – Located at 15955 NE 85th St, this facility is located on the east-adjacent property. This facility was identified on the ALLSITES, RCRA NonGen/NLR, FINDS, and ECHO databases. This listing is associated with disposal of ignitable waste in 1993. No violations for this facility were identified in the EDR report. Based on the regulatory status of this facility it is not a REC for the subject property.

- 85th Street Apartment – Located at 15655 NE 85th St, this facility is located on the west-adjacent property across 158th Avenue Northeast. This facility is identified on Figure 2 as the Allez multi-family residential property. This facility was identified on the ALLSITES database. This listing is associated with a construction stormwater general permit likely associated with the construction of the existing building in 2013. Based on the regulatory status of this facility it is not a REC for the subject property.

- City of Redmond – Located at 15670 NE 85th St, this facility is located on the north-adjacent property across NE 85th St. This facility is identified on Figure 2 as City of Redmond City Hall. This facility was identified on the ALLSITES, SPILLS, ASBESTOS, and NPDES databases. The EDR report indicates the SPILLS listing is associated with a spill of 2 quarts of hydraulic oil in 2007 and removal of asbestos-containing building materials in 2017. Based on the regulatory status of this facility it is not a REC for the subject property.

5.3 Vicinity Facilities

As indicated in Table 1, several other addresses near the subject property were listed in The EDR Radius Map™ Report; however, none of these facilities appear to represent a REC for the subject property for one or more of the following reasons:

- The facility is not listed on a database indicating a release to the environment.

- The regulatory status indicates that cleanup is complete, the site is closed, no violations are present, and/or the site no longer requires permits to handle hazardous wastes.

- The facility is located at least one-eighth of a mile from the subject property.

- The facility is located in an inferred down- or cross-gradient hydrogeologic position relative to the subject property.

6.0 SITE RECONNAISSANCE

Mr. Brett Carp, Senior Environmental Scientist, completed a reconnaissance visit on September 4, 2019 to obtain information indicating the likelihood of identifying RECs for the subject property. The reconnaissance visit was conducted without escort. The weather at the time of the visit was partly sunny and approximately 65°F (WeatherUnderground 2019). Weather conditions did not restrict the reconnaissance observations of the subject property.

The reconnaissance visit methodology consisted of walking the subject property exterior areas. EPI did not review interior areas of the office tenant spaces during the 2019 reconnaissance visit. EPI had previously reviewed the interior areas of the existing building under similar conditions during completion of the 2017 Phase I ESA. No limiting conditions such as physical obstructions or constraints were encountered during the reconnaissance visit. A limited visual reconnaissance of adjacent properties was also conducted. The limited visual reconnaissance was restricted to observations made from public areas/rights-of-way.

6.1 Subject Property Observations

EPI's observations of the subject property uses and conditions are documented on Table 2. Details regarding pertinent observations are presented below. Representative photographs collected during the visit are included in Attachment E.

6.1.1 General Observations

- Drums: A single 30-gallon mini drum of investigation-derived waste (IDW) was observed on the south side of the property.

- Hazardous substances and petroleum products in connection with identified uses: A dental amalgam separator is located at the southwest corner of the dental office building (15945 NE 85th St). The separator was in service during the 2017 reconnaissance visit.

- Polychlorinated biphenyls (PCBs): A pad-mounted electrical transformer was observed at the southwest corner of the subject property. No labels regarding PCBs were observed on the transformer. Responsibility for maintenance of the transformer resides with the local electrical power provider.

6.1.2 Utilities

- Electrical power: Electrical service is provided by Puget Sound Energy.

- Garbage and recycling: Garbage and recycling containers were observed on the south side of both buildings on the subject property. Garbage and recycling service is provided by Waste Management.

- Natural gas: Natural gas service is provided by Puget Sound Energy.

- Potable water: Potable water is provided by the City of Redmond.

- Sewer or septic system: Sewer service is provided by the City of Redmond.

- Stormwater: Stormwater catch basins were observed throughout the asphalt-paved parking areas. Stormwater service is provided by the City of Redmond.

6.1.3 Building Interior Observations

EPI did not review interior areas of the office tenant spaces during the 2019 reconnaissance visit. EPI had previously reviewed the interior areas of the existing building under similar conditions during completion of the 2017 Phase I ESA.

6.1.4 Exterior Features

None of the exterior features listed on Table 2 were observed on the subject property by EPI during the reconnaissance visit.

6.2 Adjacent-Property Observations

EPI conducted a limited visual reconnaissance of the adjacent properties. The limited visual reconnaissance was restricted to observations made from public areas/rights-of-way. The following adjacent-property uses were observed during the reconnaissance visit:

- North-adjacent – The subject property is bordered on the north by Northeast 85th Street with the City of Redmond City Hall, King County Redmond Library, and a parking lot farther north across the street.

- East-adjacent – The east-adjacent property is occupied by a dental office.

- South-adjacent – Northeast 84th Way adjoins the southern property boundary. The south-adjacent property is occupied by multi-family residences.

- West-adjacent – The western property boundary is formed by 158th Avenue Northeast. Farther west is the Allez multi-family residential building.

7.0 INTERVIEWS

This section presents a summary of the interviews conducted by EPI during this assessment. The objective of interviews was to obtain information indicating RECs for the subject property.

- Fire Department – EPI submitted a request to the local fire department by phone on September 4, 2019. No response had been received at the time of this report. The lack of this response is not considered a data gap.

8.0 FINDINGS AND CONCLUSIONS

EPI has performed this Phase I ESA in general conformance with the scope and limitations of ASTM Practice E 1527-13 of the Modera River Trail Property located at 15801 and 15945 NE 85th Street in Redmond, Washington. Any exceptions to, or deletions from, this practice are described in Section 8.1 of this report. This assessment has revealed no evidence of RECs in connection with the subject property.

As previously noted in the 2017 Phase I ESA, low-level concentrations of PCE have been detected in groundwater samples collected from monitoring wells located proximate to the subject property. Low-level concentrations of PCE in groundwater is a known regional issue for the City of Redmond. The analytical results for samples collected at the subject property demonstrate groundwater has not been adversely impacted from the regional groundwater issue. EPI recommends caution should be taken if dewatering is part of a redevelopment plan. PCE-impacted groundwater associated with the known regional plume could be drawn to the subject property during dewatering and may require special permitting and/or monitoring.

The geo-piers present beneath the 15801 building may present a risk that could have a material environmental or environmentally-driven impact on the planned use of the subject property due to the potential for creosote preservatives, and are therefore considered a BER. Based on the data collected to date, no further investigation of the geo-piers appears necessary or recommended at this time and the risk appears to be minimal. However, if creosote-like materials appear to be present on the piers during development, additional investigation may be warranted.

8.1 Deviations, Exceptions, and Data Gaps

EPI has made an appropriate inquiry into the commonly known and reasonably ascertainable resources concerning the historical ownership and use of the subject property. No significant deviations or data gaps occurred from the ASTM Practice E 1527-13, *Standard Practice for Environmental Site Assessments; Phase I Environmental Site Assessment Process* and 40 CFR §312.

8.2 Environmental Professional Statement

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR § 312. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of

the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

The qualifications of the Environmental Professional who prepared this assessment are included in Attachment F.

Subject Property Reconnaissance Observations
Phase I Environmental Site Assessment
Modera River Trail Property
15801 and 15945 Northeast 85th Street, Redmond, Washington

Date of visit: September 4, 2019
EPI Personnel: B. Carp

Current Use(s): Vacant Office and Dental Office

Subject Property Features	Observed (Y/N Unknown)	Location	Notes	Photographs
General Observations				
Aboveground Storage Tanks (ASTs)	N			
Drums	Y	South side of property.	A single 30-gallon mini drum of investigation-derived waste (IDW) was observed on the south side of the property.	
Hazardous Substances & Petroleum Products (in connection with Identified Uses)	Y	A dental amalgam separator is located at the southwest corner of the dental office building (15945 NE 85th St).	The seperator was in service during the 2017 reconnaissance visit.	
Hazardous Substances & Petroleum Products (not in connection with identified Uses)	N			
Odors	N			
Polychlorinated Byphenyls (PCBs)	Y	Pad-mounted transformer at southwest corner of subject property	A pad-mounted electrical transformer was observed at the southwest corner of the subject property. No labels regarding PCBs were observed on the transformer. Responsibility for maintenance of the transformer resides with the local elecrical power provider.	
Pools of liquid	N			
Underground Storage Tanks (USTs)	N			
Unidentified substance containers	N			
Utilities				
Electrical Power	Y		Electrical service is provided by Puget Sound Energy.	
Garbage & Recyling	Y	Garbage and recycling containers were observed on the south side of each of the subject property buildings.	Garbage and recycling service is provided by Waste Management.	
Natural Gas	Y		Natural gas service is provided by Puget Sound Energy.	
Potable Water	Y		Potable water is provided by the City of Redmond.	
Sewer or Septic System	Y		Sewer service is provided by the City of Redmond.	
Stormwater	Y	Stormwater catch basins were observed throughout the asphalt-paved parking areas.	Stormwater service is provided by the City of Redmond.	
Building Interior Observations				
Building Heating/Cooling		EPI did not access the interiors of the vacant buildings during the 2019 reconnaissance visit.		
Drains and Sumps				
Stains or Corrosion				
Exterior Features				
Pits, ponds, or lagoons	N			
Solid Waste or Fill-areas	N			
Stained soil or pavement	N			
Stressed vegetation	N			
Wastewater (i.e., wastewater or other liquid discharged into a drain, ditch, underground injection system, or stream)	N			
Wells (e.g., dry, irrigation, injection, abandonded, water, monitoring)	N

B. Please provide a chronology of the subject property ownership and history:
To the best of my knowledge as I wasn't involved until 1976.
The building was built on a slab approximately 1973-1974. It was put together by Dr. Dan Braughton, Dr. Alvin Taniguchi, Dr. Mike Molvar and Dr. John Huleen. I purchased a 1/4 share in 1978 from Dr. Molvar. Subsequently Dr. Huleen and I purchased shares from Dr. Taniguchi and Dr. Broughton.

ENVIRONMENTAL SITE ASSESSMENT QUESTIONNAIRE
Property Owner/Representative or Facility Manager

QUESTIONNAIRE PART II: ENVIRONMENTAL QUESTIONS

A. To your knowledge, is the subject property and/or adjoining properties used or have/has been used in the following manner:

1. Any industrial use	☐ Yes	☑ No	☐ Unknown
2. Fuel station (i.e., gas station)	☐ Yes	☑ No	☐ Unknown
3. Motor or equipment repair facility	☐ Yes	☑ No	☐ Unknown
4. Commercial printing facility	☐ Yes	☑ No	☐ Unknown
5. Dry cleaner	☐ Yes	☑ No	☐ Unknown
6. Photo developing laboratory	☐ Yes	☑ No	☐ Unknown
7. Junkyard or landfill	☐ Yes	☑ No	☐ Unknown
8. A waste treatment, storage, disposal, processing, or recycling facility (if applicable, identify which)?	☐ Yes	☑ No	☐ Unknown

If yes for any of the above, please provide additional information regarding location and type of facility that is or was present:

B. Are there currently or have there been in the past any of the following materials stored at, used at, or brought onto the subject property or facility and/or adjoining properties or facilities?

1. Automotive or industrial batteries	☐ Yes	☑ No	☐ Unknown
2. Pesticides	☐ Yes	☑ No	☐ Unknown
3. Paint periodic refurbishing interior	☑ Yes	☐ No	☐ Unknown
4. Other chemicals	☐ Yes	☑ No	☐ Unknown
5. Fill dirt originated from an unknown origin or a contaminated site (if applicable, identify which)?	☐ Yes	☑ No	☐ Unknown

If yes for any of the above, please provide additional information regarding location and type of material that is or was present:

The interior has been repainted three times over the last 4 1/2 years. No paint was stored on site.

ENVIRONMENTAL SITE ASSESSMENT QUESTIONNAIRE
Property Owner/Representative or Facility Manager

C. Are there currently or have there been in the past any of the following features located on the property and/or adjoining properties:

1. Pits	☑ Yes	☐ No	☐ Unknown
2. Lagoons or ponds	☐ Yes	☑ No	☐ Unknown
3. Septic systems	☐ Yes	☑ No	☐ Unknown
4. Floor drains	☐ Yes	☑ No	☐ Unknown
5. Clarifiers or sumps	☐ Yes	☑ No	☐ Unknown
6. Stained soil	☐ Yes	☑ No	☐ Unknown
7. Registered or unregistered aboveground or underground storage tanks (if applicable, identify which type below)	☐ Yes	☑ No	☐ Unknown

If yes for any of the above, please provide additional information regarding location and the item that is or was present:

Small sinkhole southwest corner of building. It was the result of a broken storm water pipe. So storm water undermined part of the parking lot rather than being directed into the catch basin. The pipe was repaired and the hole filled with gravel and asphalt.

D. To your knowledge, are there any aboveground storage tanks (ASTs) or underground storage tanks (USTs) currently located on the property and/or adjoining property? Or, have there been any of the following objects or evidence located on the property or adjacent to any structure located on the property and/or adjoining property:

1. Vent pipes	☐ Yes	☑ No	☐ Unknown
2. Fill pipes	☐ Yes	☑ No	☐ Unknown
3. Access ways indicating a fill pipe protruding from the ground	☐ Yes	☑ No	☐ Unknown
4. Leaks, spills, or staining by substances other than water (if applicable, identify which below)	☐ Yes	☑ No	☐ Unknown
5. Foul odors associated with any flooring, drains, walls, ceilings, or exposed ground (if applicable, identify which below)	☐ Yes	☑ No	☐ Unknown

If yes for any of the above, please provide additional information regarding location and the item that is or was present:

ENVIRONMENTAL SITE ASSESSMENT QUESTIONNAIRE
Property Owner/Representative or Facility Manager

E. If the property and/or adjoining property is served by a private well or non-public water system, do you have any knowledge that:

1. Contaminants have been identified in the well or water system that exceed guidelines applicable to the water system?	☐ Yes	☑ No	☐ Unknown
2. The well has been designated by any government environmental/health agency as being contaminated?	☐ Yes	☑ No	☐ Unknown

If yes, please provide any additional information you have regarding the location of the well and the contaminant(s) and concentration(s) present:

F. With respect to the property or any facility located on the property and/or adjoining properties, do you have any knowledge of or have you been informed of:

1. Past or current existence of hazardous substances or petroleum products	☐ Yes	☑ No	☐ Unknown
2. Past or current existence of environmental violations	☐ Yes	☑ No	☐ Unknown
3. Any permits, orders, or waste discharge requirements issued by or requested from any environmental regulatory agency in relation to the properties	☐ Yes	☑ No	☐ Unknown
4. Any environmental assessment indicating the presence or contamination of hazardous substances or petroleum products or recommended further assessment	☐ Yes	☑ No	☐ Unknown
5. Any past, threatened, or pending lawsuits or administrative proceedings concerning a release or threatened release of any hazardous substance or petroleum products?	☐ Yes	☑ No	☐ Unknown

If yes for any of the above, please provide any additional information you have regarding the location of the substance or violation and the basis of your knowledge:

ENVIRONMENTAL SITE ASSESSMENT QUESTIONNAIRE
Property Owner/Representative or Facility Manager

G. Has the property and/or adjoining properties discharged, dumped above grade, buried and/or burned any of the following materials on or adjacent to the property and/or into a storm water or sanitary sewer system (if applicable, identity which):

1. Industrial wash or wastewater (not including sanitary waste or stormwater)	☐ Yes	☑ No	☐ Unknown
2. Any hazardous substances or petroleum products	☐ Yes	☑ No	☐ Unknown
3. Unidentified waste materials	☐ Yes	☑ No	☐ Unknown
4. Tires	☐ Yes	☑ No	☐ Unknown
5. Automotive or industrial batteries	☐ Yes	☑ No	☐ Unknown
6. Any other waste materials?	☐ Yes	☑ No	☐ Unknown

If yes for any of the above, please provide any additional information you have regarding the location or former location of the material and current disposition of the material (i.e., tires buried in back of subject property lot, etc.):

H. Are there or have there been any of the following equipment for which there are any records indicating the presence of polychlorinated biphenyls (PCBs)?

1. Electrical transformers	☐ Yes	☑ No	☐ Unknown
2. Capacitors	☐ Yes	☑ No	☐ Unknown
3. Air or gas compressors	☐ Yes	☐ No	☑ Unknown
4. Fluorescent light ballasts	☐ Yes	☐ No	☑ Unknown
5. Any hydraulic equipment?	☐ Yes	☑ No	☐ Unknown

If yes for any of the above, please provide any additional information regarding the location or former location of the item and current disposition of the material (i.e., original air compressor located in garage but replaced in 2007 with current compressor):

ENVIRONMENTAL SITE ASSESSMENT QUESTIONNAIRE
Property Owner/Representative or Facility Manager

I. To your knowledge, have any environmental or geotechnical assessments of the subject property and/or adjoining properties been conducted?

1. Environmental	☐ Yes	☑ No	☐ Unknown
2. Geotechnical	☐ Yes	☐ No	☑ Unknown
3. Other?	☐ Yes	☑ No	☐ Unknown

Please provide the nature and dates of these assessments, if known.

J. Are you aware of any environmental cleanup liens against the subject property, governmental orders, consent decrees, cleanup and abatement orders, or lawsuits that are filed or recorded under federal, state, tribal, or local law? ☐ Yes ☑ No ☐ Unknown

If yes, please provide any additional information regarding which property, nature of environmental action, and status of environmental action:

K. Are you aware of any activity or land use limitations, such as engineering controls, land use restrictions or institutional controls, that are in place on the site or that have been filed or recorded in a registry (40 CFR 312.26)? Please provide the nature and dates of these assessments, if known.

1. Engineering Controls (e.g., engineered cap, subsurface barrier wall, etc.)	☐ Yes	☑ No	☐ Unknown
2. Land Use Restrictions (e.g., industrial only, no groundwater removal, etc.)	☐ Yes	☑ No	☐ Unknown
3. Institutional Controls (e.g., deed restrictions, financial assurances, etc.)	☐ Yes	☑ No	☐ Unknown

ENVIRONMENTAL SITE ASSESSMENT QUESTIONNAIRE
Property Owner/Representative or Facility Manager

This questionnaire was completed by:

Name:	ROD D ROBINSON DDS
Title:	CO-OWNER
Representing:	SAMMAMISH VALLEY DENTAL CENTER
Address:	15945 NE 85TH ST
City, State, Zip:	REDMOND WA 98052
Phone Number:	425 822 6279 425 246 1324
Signature:	Rodd Robinson
Date:	11/2/2017

I have confirmed with Arielle that we will meet on Monday at 3PM -

ENVIRONMENTAL PARTNERS INC 1180 NW Maple Street, Suite 310 Issaquah, Washington 98027 ph 425.395.0010

ENVIRONMENTAL SITE ASSESSMENT QUESTIONNAIRE
Property Owner/Representative or Facility Manager

Subject Property: 15801 and 15945 NE 85th St, Redmond, Washington

Project: **Phase I Environmental Site Assessment**

Introduction: The following questionnaire has been prepared in accordance with the U.S. EPA All Appropriate Inquiries (AAI) Final Rule and ASTM International (ASTM) Standard E1527-13, Standard Practice for Environmental Site Assessments, adopted by the ASTM as part of the Phase I Environmental Site Assessment standard process.

Questionnaire Purpose: Environmental Partners, Inc. (EPI) has been retained to conduct an environmental site assessment of the subject property. The purpose of the assessment is to evaluate the property for evidence of current and historical dangerous/hazardous waste and/or hazardous material releases to the environment. As the property owner, owner's representative, or current or past lessee/tenant, your knowledge of the subject property is requested to collect information that may not be found in public records or is not visually apparent. Please answer the following questions by checking the appropriate response. If an employee has better knowledge of subject property history related to dangerous/hazardous waste or hazardous material releases, please have him/her complete a copy of the questionnaire by checking the appropriate answer to each of the following questions. The completed questionnaire should be signed by the preparer and returned to EPI. Please send the completed questionnaire to:

Environmental Partners, Inc.
1180 NW Maple Street, Suite 310
Issaquah, WA 98027
Attention: Brett Carp
or by Fax to (425) 395-0011
or by Email to brettc@epi-wa.com

QUESTIONNAIRE PART I: ESA BACKGROUND INFORMATION

A. Please provide all current and historical addresses for the subject property:

15945 NE 85th St
Redmond WA 98052

B. Please provide a chronology of the subject property ownership and history:

To the best of my knowledge as I wasn't involved until 1976.
The building was built on a slab approximately 1973-1974. It was put together by Dr. Dan Braughton, Dr. Alvin Taniguchi, Dr. Mike Molvar and Dr. John Huleen. I purchased a 1/4 share in 1978 from Dr. Molvar. Subsequently Dr. Huleen and I purchased shares from Dr. Taniguchi and Dr. Braughton.

QUESTIONNAIRE PART I: ESA BACKGROUND INFORMATION

A. Please provide all current and historical addresses for the subject property:
B. Please provide a chronology of the subject property ownership and history:

QUESTIONNAIRE PART II: ENVIRONMENTAL QUESTIONS

A. To your knowledge, is the subject property and/or adjoining properties used or have/has been used in the following manner:

1. Any industrial use	☐ Yes	☐ No	☒ Unknown
2. Fuel station (i.e., gas station)	☐ Yes	☐ No	☒ Unknown
3. Motor or equipment repair facility	☐ Yes	☐ No	☒ Unknown
4. Commercial printing facility	☐ Yes	☐ No	☒ Unknown
5. Dry cleaner	☐ Yes	☐ No	☒ Unknown
6. Photo developing laboratory	☐ Yes	☐ No	☒ Unknown
7. Junkyard or landfill	☐ Yes	☐ No	☒ Unknown
8. A waste treatment, storage, disposal, processing, or recycling facility (if applicable, identify which)?	☐ Yes	☐ No	☒ Unknown

If yes for any of the above, please provide additional information regarding location and type of facility that is or was present:

B. Are there currently or have there been in the past any of the following materials stored at, used at, or brought onto the subject property or facility and/or adjoining properties or facilities?

1. Automotive or industrial batteries	☐ Yes	☐ No	☒ Unknown
2. Pesticides	☐ Yes	☐ No	☒ Unknown
3. Paint	☐ Yes	☐ No	☒ Unknown
4. Other chemicals	☐ Yes	☐ No	☒ Unknown
5. Fill dirt originated from an unknown origin or a contaminated site (if applicable, identify which)?	☐ Yes	☐ No	☒ Unknown

If yes for any of the above, please provide additional information regarding location and type of material that is or was present:

C. Are there currently or have there been in the past any of the following features located on the property and/or adjoining properties:

1. Pits	☐ Yes	☐ No	☒ Unknown
2. Lagoons or ponds	☐ Yes	☐ No	☒ Unknown
3. Septic systems	☐ Yes	☐ No	☒ Unknown
4. Floor drains	☐ Yes	☐ No	☒ Unknown
5. Clarifiers or sumps	☐ Yes	☐ No	☒ Unknown
6. Stained soil	☐ Yes	☐ No	☒ Unknown
7. Registered or unregistered aboveground or underground storage tanks (if applicable, identify which type below)	☐ Yes	☐ No	☒ Unknown

If yes for any of the above, please provide additional information regarding location and the item that is or was present:

D. To your knowledge, are there any aboveground storage tanks (ASTs) or underground storage tanks (USTs) currently located on the property and/or adjoining property? Or, have there been any of the following objects or evidence located on the property or adjacent to any structure located on the property and/or adjoining property:

1. Vent pipes	☐ Yes	☐ No	☒ Unknown
2. Fill pipes	☐ Yes	☐ No	☒ Unknown
3. Access ways indicating a fill pipe protruding from the ground	☐ Yes	☐ No	☒ Unknown
4. Leaks, spills, or staining by substances other than water (if applicable, identify which below)	☐ Yes	☐ No	☒ Unknown
5. Foul odors associated with any flooring, drains, walls, ceilings, or exposed ground (if applicable, identify which below)	☐ Yes	☐ No	☒ Unknown

If yes for any of the above, please provide additional information regarding location and the item that is or was present:

E. If the property and/or adjoining property is served by a private well or non-public water system, do you have any knowledge that:

1. Contaminants have been identified in the well or water system that exceed guidelines applicable to the water system?	☐ Yes	☐ No	☒ Unknown
2. The well has been designated by any government environmental/health agency as being contaminated?	☐ Yes	☐ No	☒ Unknown

If yes, please provide any additional information you have regarding the location of the well and the contaminant(s) and concentration(s) present:

F. With respect to the property or any facility located on the property and/or adjoining properties, do you have any knowledge of or have you been informed of:

1. Past or current existence of hazardous substances or petroleum products	☐ Yes	☐ No	☒ Unknown
2. Past or current existence of environmental violations	☐ Yes	☐ No	☒ Unknown
3. Any permits, orders, or waste discharge requirements issued by or requested from any environmental regulatory agency in relation to the properties	☐ Yes	☐ No	☒ Unknown
4. Any environmental assessment indicating the presence or contamination of hazardous substances or petroleum products or recommended further assessment	☐ Yes	☐ No	☒ Unknown
5. Any past, threatened, or pending lawsuits or administrative proceedings concerning a release or threatened release of any hazardous substance or petroleum products?	☐ Yes	☐ No	☒ Unknown

If yes for any of the above, please provide any additional information you have regarding the location of the substance or violation and the basis of your knowledge:

G. Has the property and/or adjoining properties discharged, dumped above grade, buried and/or burned any of the following materials on or adjacent to the property and/or into a storm water or sanitary sewer system (if applicable, identity which):

1. Industrial wash or wastewater (not including sanitary waste or stormwater)	☐ Yes	☐ No	☒ Unknown
2. Any hazardous substances or petroleum products	☐ Yes	☐ No	☒ Unknown
3. Unidentified waste materials	☐ Yes	☐ No	☒ Unknown
4. Tires	☐ Yes	☐ No	☒ Unknown
5. Automotive or industrial batteries	☐ Yes	☐ No	☒ Unknown
6. Any other waste materials?	☐ Yes	☐ No	☒ Unknown

If yes for any of the above, please provide any additional information you have regarding the location or former location of the material and current disposition of the material (i.e., tires buried in back of subject property lot, etc.):

H. Are there or have there been any of the following equipment for which there are any records indicating the presence of polychlorinated biphenyls (PCBs)?

1. Electrical transformers	☐ Yes	☐ No	☒ Unknown
2. Capacitors	☐ Yes	☐ No	☒ Unknown
3. Air or gas compressors	☐ Yes	☐ No	☒ Unknown
4. Fluorescent light ballasts	☐ Yes	☐ No	☒ Unknown
5. Any hydraulic equipment?	☐ Yes	☐ No	☒ Unknown

If yes for any of the above, please provide any additional information regarding the location or former location of the item and current disposition of the material (i.e., original air compressor located in garage but replaced in 2007 with current compressor):

ENVIRONMENTAL SITE ASSESSMENT QUESTIONNAIRE

Property Owner/Representative or Facility Manager

I. To your knowledge, have any environmental or geotechnical assessments of the subject property and/or adjoining properties been conducted?

1. Environmental	☐ Yes	☐ No	☒ Unknown
2. Geotechnical	☐ Yes	☐ No	☒ Unknown
3. Other?	☐ Yes	☐ No	☒ Unknown

Please provide the nature and dates of these assessments, if known.

J. Are you aware of any environmental cleanup liens against the subject property, governmental orders, consent decrees, cleanup and abatement orders, or lawsuits that are filed or recorded under federal, state, tribal, or local law? ☐ Yes ☒ No ☐ Unknown

If yes, please provide any additional information regarding which property, nature of environmental action, and status of environmental action:

K. Are you aware of any activity or land use limitations, such as engineering controls, land use restrictions or institutional controls, that are in place on the site or that have been filed or recorded in a registry (40 CFR 312.26)? Please provide the nature and dates of these assessments, if known.

1. Engineering Controls (e.g., engineered cap, subsurface barrier wall, etc.)	☐ Yes	☐ No	☒ Unknown
2. Land Use Restrictions (e.g., industrial only, no groundwater removal, etc.)	☐ Yes	☐ No	☒ Unknown
3. Institutional Controls (e.g., deed restrictions, financial assurances, etc.)	☐ Yes	☐ No	☒ Unknown

1527-13 USER QUESTIONNAIRE

Date: November 9, 2017 **EPI Interviewer:** Brett Carp

EPI Project No.: 63807.0 **Email:** brettc@epi-wa.com

Subject Property Address:

User Name: MCRT WEST COAST LLC

Organization: Mill Creek Residential 15801 and 15945 NE 85th St

Phone Number: 206.396.6004 Redmond, Washington

In order to qualify for one of the Landowner Liability Protections (LLPs) offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "Brownfields Amendments"), the user should provide the following information (if available) to the environmental professional. Failure to conduct these inquiries could result in a determination that "all appropriate inquiries" is not complete.

(1.) Environmental liens that are filed or recorded against the property (40 CFR 312.25).
Are you aware of any environmental liens filed or recorded against the property under federal, tribal, state or local law?

No

(2.) Activity and land use limitations that are in place on the property or that have been filed or recorded against the property (40 CFR 312.26(a)(1)(v) and (vi)).
Are you aware of any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the property and/or have been filed or recorded in a registry under federal, tribal, state or local law?

No

(3.) Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CF$ 312.28).
As the user of this ESA do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

No

(4.) Relationship of the purchase price to the fair market value of the property if it were not contaminated (40 CFR 312.29).
Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?

Yes

(5.) Commonly known or reasonably ascertainable information about the property (40 CFR 312.30).
Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, as user,

(a.) Do you know the past users of the property? No

(b.) Do you know of specific chemicals that are present or once were present at the property? No

Do you know of spills or other chemical releases that have taken place at the property? No

(c.) Do you know of any environmental cleanups that have taken place at the property? No

(6.) The degree of obviousness of he presence or likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).
As the user of this ESA, based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of releases at the property?

No

(7.) Prior Environmental Documentation.
Are you aware of any of the following environmental documents? No

If you are in possession of such documentation, will it be provided for review as part of the Phase I ESA process?

- Environmental site assessment reports
- Environmental compliance audit reports
- Environmental permits (for example, solid waste, disposal permits, hazardous waste disposal permits, wastewater permits, NPDES permits, underground injection permits)
- Registrations for underground and above-ground storage tanks
- Registrations for underground injection systems
- Material safety data sheets
- Community right-to-know plan
- Safety plans; preparedness and prevention plans; spill prevention, countermeasure and control plans; etc.
- Reports regarding hydrogeologic conditions on the property or surrounding area
- Notices or other correspondence from any government agency relating to past or current violations of environmental laws with respect to the property or relating to environmental liens encumbering the property
- Hazardous waste generator notices or reports
- Geotechnical studies
- Risk assessments
- Recorded AULs

Subject: Phase I Environmental Site Assessment
First Citizens Bank
15801 NE 85th Street
Redmond, Washington 98052

Dear Ms. Fobes,

Attached, please find our Phase I Environmental Site Assessment (ESA) for the above-referenced asset (the Subject Property). During the survey and research, our surveyor met with agents representing the Subject Property, or agents of the owner, and reviewed the Subject Property and its history. The report was completed according to the terms and conditions authorized by you. This report has been completed in general conformance with the ASTM Standard E 1527-05. An executive summary is provided; however, we recommend that the report be read in its entirety for a comprehensive understanding of the items contained therein.

This report is addressed to First Citizens Bank and such other persons as may be designated by First Citizens Bank and their respective successors and assigns. There are no intended or unintended third party beneficiaries to this report, except as expressly stated herein.

O'Neill Environmental Service (OES) is an independent contractor, not an employee of either the issuer or the borrower, and its compensation was not based on the findings or recommendations made in the report or on the closing of any business transaction.

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312 and we have the specific

qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Subject Property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

We appreciate the opportunity to provide environmental consulting services to First Citizens Bank. Should you have any questions or require additional information, please do contact the undersigned.

Respectfully submitted,
O'Neill Environmental Services

EXECUTIVE SUMMARY

At the request of First Citizens Bank, O'Neill Environmental Services (OES) has performed a Phase I Environmental Site Assessment (ESA) of the property located at 15801 NE 85th Street in Redmond, Washington, herein referred to as the Subject Property. The main objective of this ESA was to identify *recognized environmental conditions* in connection with the Subject Property, defined in ASTM Practice E 1527-05 as the presence or likely presence of any hazardous substances or petroleum products that indicate an existing release, a past release, or a material threat of a release. This ESA also includes a preliminary evaluation of certain potential environmental conditions that are outside the scope of ASTM Practice E 1527-05.

The Subject Property includes one rectangular-shaped parcel totaling approximately 0.81 acres. The Subject Property is currently improved with a two-story, bank building, with a gross area of approximately 8,521± square feet. There is no basement present beneath the existing structure. The existing improvements were reportedly constructed in 1990.

The existing building is located on the northwestern portion of the property. Areas of the Subject Property surrounding the existing building include asphalt-paved surface parking, concrete walkways, and landscaping.

At the time of inspection, the Subject Property was occupied by First Citizens Bank. There are currently no manufacturing or industrial operations conducted at the Subject Property.

Below is the Assessment Summary Table presenting our recommended actions for the Subject Property. OES findings and opinions are presented in Section 8.0, and recommendations for further action or investigation are presented in Section 9.0.

1.0 INTRODUCTION

O'Neill Environmental Services (OES) has completed a Phase I Environmental Site Assessment (ESA) for the property located at 15801 NE 85th Street in Redmond, Washington. This work was conducted under contract to First Citizens Banks and outlined in our Phase I ESA Proposal (Work Order 1), dated October 13, 2009. This study was conducted to assist First Citizens Bank with the plans to acquire the subject property as part of the overall acquisition of the former Venture Bank facilities located throughout western Washington State.

1.1 Purpose

The purpose of this ESA was to identify *recognized environmental conditions* and certain environmental conditions outside the scope of ASTM Practice E 1527-05 in connection with the property at the time of the property reconnaissance.

1.2 Scope-of-Services

This ESA was conducted utilizing a standard of good commercial and customary practice that was consistent with the ASTM Practice E 1527-05. Any significant scope-of-work additions, deletions or deviations to ASTM Practice E 1527-05 are noted below or in the corresponding sections of this report. The scope-of-work for this assessment included an evaluation of the following:

- Physical characteristics of the Subject Property through a review of referenced sources for topographic, geologic, soils and hydrologic data.
- Subject Property history through a review of referenced sources such as land deeds, fire insurance maps, city directories, aerial photographs, prior reports, and interviews.
- Current Subject Property conditions, including observations and interviews regarding the following: the presence or absence of hazardous substances or petroleum products; generation, treatment, storage, or disposal of hazardous, regulated, or biomedical waste; equipment that utilizes oils which potentially contain PCBs; and storage tanks (aboveground and underground).
- Usage of surrounding area properties and the likelihood for releases of hazardous substances and petroleum products (if known and/or suspected) to migrate onto the Subject Property.
- Information in referenced environmental agency databases and local environmental records, within specified minimum search distances.
- Past ownership through a review of available prior reports and local municipal file review.

Copyright 2009 OES

The scope-of-work also included consideration of the following potential environmental conditions that are outside the scope of ASTM Practice E 1527-05: asbestos-containing materials (ACM).

1.3 Assumptions, Limitations and Exceptions

This Phase I ESA has been prepared for the use of First Citizens Bank, in accordance with our Standard Conditions for Engagement and Authorization Letter and Agreement for Environmental Services approved and signed by First Citizens Bank, and with the limitations described below, all of which are integral parts of this report. A copy of the signed Standard Conditions For Engagement and Authorization Letter and Agreement for Environmental Services is maintained at the OES in Issaquah, Washington. .

OES has performed this Phase I ESA in conformance with the scope and limitations of *ASTM Standard E 1527-05, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process.* This report was prepared with no exceptions or deletions from ASTM Standard E 1527-05.

This Phase I ESA has been prepared to assess a parcel of commercial real estate with respect to the range of contaminants within the scope of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. §9601) and petroleum products. As such, this practice is intended to permit First Citizens Bank to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on CERCLA liability: that is, the practices that constitute "all appropriate inquiry into the previous ownership and uses of the Subject Property consistent with good commercial or customary practice" as defined in 42 U.S.C. § 9601(35)(B).

In defining a standard of good commercial and customary practice for conducting an environmental site assessment of a parcel of property, the goal of the processes established by this practice is to identify *recognized environmental conditions*. The term recognized environmental conditions means the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, ground water, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include *de minimis conditions* that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be de minimis are not recognized environmental conditions.

Copyright 2009 OES

The information reported was obtained through sources deemed reasonably ascertainable, as defined in ASTM Standard E 1527-05; a visual site survey of areas readily observable, easily accessible or made accessible by the Subject Property contact and interviews with owners, agents, occupants, or other appropriate persons involved with the Subject Property. Municipal information was obtained through review of reasonably ascertainable standard government record sources and interviews with the authorities having jurisdiction over the Subject Property. Findings, conclusions, and recommendations included in the report are based on our visual observations in the field, the municipal information reasonably obtained, information provided by the Client, and/or a review of readily available and supplied documents and drawings. OES relies completely on the information, whether written, graphic, or verbal, provided by the Subject Property contact or as shown on any documents reviewed or received from the Subject Property contact, owner or agent, or municipal source, and assumes that information to be true and correct. Although there may have been some degree of overlap in the information provided by these various sources, OES did not attempt to independently verify the accuracy or completeness of all information reviewed or received during the course of these environmental services.

The observations in this report are valid on the date of the investigation. Where access to portions of the Subject Property or to structures on the Subject Property was unavailable or limited, OES renders no opinion as to the presence of hazardous substances or petroleum products in that portion of the Subject Property or structure. Inaccessible portions of the Subject Property are described below. In addition, OES renders no opinion as to the presence of, or indirect evidence relating to, hazardous substances or petroleum products where direct observation of the interior walls, floor, or ceiling of a structure was obstructed by objects or coverings on or over these surfaces.

It is acknowledged that OES judgments shall not be based on scientific or technical tests or procedures beyond the scope of the Services or beyond the time and budgetary constraints imposed by the Client. It is acknowledged further that OES conclusions shall not rest on pure science but on such considerations as economic feasibility and available alternatives. Client also acknowledges that, because geologic and soil formations are inherently random, variable, and indeterminate in nature, the Services and opinions provided under this Agreement with respect to such Services are not guaranteed to be a representation of actual conditions on the Subject Property, which are also subject to change with time as a result of natural or man-made processes, including water permeation. In performing the Services, OES shall use that degree of care and skill ordinarily exercised by environmental consultants or engineers performing similar services in the same or similar locality. The standard of care shall be determined solely at the time the

Copyright 2009 OES

Services are rendered and not according to standards utilized at a later date. The Services shall be rendered without any other warranty, expressed or implied, including, without limitation, the warranty of merchantability and the warranty of fitness for a particular purpose.

Client and OES agree that to the fullest extent permitted by law, OES shall not be liable to Client for any special, indirect or consequential damages whatsoever, whether caused by OES negligence, errors, omissions, strict liability, breach of contract, breach of warranty or other cause or causes whatsoever.

The ASTM Standard E 1527-05 does not encompass analytical testing to evaluate asbestos containing materials, radon, lead-based paint, drinking water quality, indoor air quality, stored chemicals, debris, fill materials, surface water, or subsurface samples (soil and groundwater) as part of a Phase I ESA. Any analytical testing performed at the Subject Property has been conducted in accordance with the Standard Conditions for Engagement and Authorization Letter and Agreement for Environmental Services and the client-specific Scope of Work. Unless otherwise specified herein, such testing involves screening methods intended to provide a broad and approximate evaluation of conditions at readily accessible portions of the Subject Property, limited by project constraints, and should not be construed as a comprehensive program designed to comply with a specific regulatory program. If a thorough and regulatory-compliant study is warranted based on the findings of the Phase I ESA, OES will recommend the appropriate further investigation. In certain cases, quantitative laboratory testing is performed as part of the assessment and analyses have been conducted by an outside laboratory. OES relies upon the data provided by the outside laboratory, and has not conducted an independent evaluation of the reliability of this data.

The assessment was conducted in a manner consistent with the level of care and skill ordinarily exercised by members of the profession, and in accordance with generally accepted practices of other consultants currently practicing in the same locality under similar conditions. No other representation, expressed or implied, and no warranty or guarantee is included or intended. The report speaks only as of its date, in the absence of a specific written update of the report, signed and delivered by OES.

Additional information that becomes available after our survey and draft submission concerning the Subject Property should be provided to OES so that our conclusions may be revised and modified if necessary, at additional cost. This report has been prepared in accordance with our Standard Conditions for Engagement, which is an integral part of this report.

Copyright 2009 OES

1.4 Special Terms and Conditions

This Phase I ESA has been prepared to assist First Citizens Bank in its underwriting of a proposed mortgage loan on the Subject Property. This report can be relied upon by only the parties stated in the transmittal letter at the front of this report. OES liability to a purchaser wishing to use this report is limited to the cost of the report. Amendments to OES limitations as stated herein that may occur after issuance of the report are considered to be included in this report. Payment for the report is made by, and OES contract and report extends to First Citizens Bank only, in accordance with our Standard Conditions For Engagement and, Authorization Letter and Agreement for Environmental Services.

1.5 Data Gaps

Any data gaps identified herein, as defined by ASTM Practice E 1527-05 § 3.2.20, are not considered to have significantly affected the ability to identify recognized environmental conditions in connection with the Subject Property and do not alter the conclusions of this report.

Copyright 2009 OES

2.0 SUBJECT PROPERTY DESCRIPTION

2.1 Ownership and Location

According to the King County Assessor's Office, the Subject Property is currently owned by Venture Bank (Redmond National Bank).

The Subject Property is located at 15801 NE 85th Street in Redmond, King County, Washington. The Subject Property includes one rectangular-shaped parcel, identified by the King County Washington Assessor's Office as Parcel Number 7198900170 totaling approximately 0.81 acres. The Subject Property is located approximately on the southeast intersection of NE 85th Street and 158th Avenue NE. Figure 1 – Site Plan depicts the configuration of the Subject Property and adjoining properties. Figure 2 - Vicinity Map depicts the location of the Subject Property on a street map of Redmond, Washington. Figure 3 – Tax Map depicts the parcel number assigned to the Subject Property and vicinity.

2.2 Subject Property Improvements

The Subject Property is currently improved with a two-story, bank building, with a gross area of approximately 8,521± square feet. There is no basement present beneath the existing structure. The existing improvements were reportedly constructed in 1990.

The existing building is located on the northwestern portion of the property. Areas of the Subject Property surrounding the existing building include asphalt-paved surface parking, concrete walkways, and landscaping.

2.3 Current Use of the Subject Property

At the time of inspection, the Subject Property was occupied by First Citizens Bank. There are currently no manufacturing or industrial operations conducted at the Subject Property.

Please refer to Section 5.3 for further discussion regarding hazardous substances and petroleum products at the Subject Property.

Copyright 2009 OES

2.4 Municipal Services and Utilities

The Subject Property is serviced by the following municipal services and utilities:

MUNICIPAL SERVICES AND UTILITIES	
Utility	Provider/Source
Potable Water Supply	City of Redmond
Sewage Disposal System	City of Redmond
Electrical Service	Puget Sound Energy
Natural Gas Service	Puget Sound Energy
Heating/Cooling Systems	Natural gas / Electric split system HVAC units
Emergency Power	Not Provided

2.5 Adjoining Properties

Property use in the vicinity of the Subject Property is primarily characterized by primarily light commercial office properties and multi-residential dwellings.

ADJOINING PROPERTIES	
North	The Subject Property is bound to the north by NE 85th Street, with a City of Redmond asphalt-covered parking lot.
South	The Subject Property is bound to the south by a two-story residential apartment/condo complex (8334 158th Ave NE.
East	The Subject Property is bound to the east by a one-story Medial Dental Building and asphalt-covered parking areas.
West	The Subject Property is bound to the west by 158th Ave NE and a vacant lot.

No visual evidence of adverse environmental conditions was observed during the survey of the adjoining properties.

Copyright 2009 OES

3.0 USER PROVIDED INFORMATION

The following section summarizes information provided by First Citizens Bank with regard to this Phase I EAS. Additionally, a User Questionnaire was forwarded to the designated Client contact. The User Questionnaire has been completed and returned to our offices. The information requested in the User Questionnaire is intended to assist in gathering information that may be material to identifying recognized environmental conditions in connection with the Subject Property. The User Questionnaire and any additional documentation referenced below are presented in Appendix C.

3.1 Title Records

Title record information associated with the Subject Property has not been provided to OES by First Citizens Bank. A detailed discussion regarding review of information obtained from other sources is presented in Section 4.3.5 of this report.

3.2 Environmental Liens and Activity and Use Limitations

First Citizens Bank has provided no information regarding environmental liens or activity and use limitations in connection with the Subject Property. A detailed discussion regarding environmental liens is presented in Section 4.3.7 of this report. A detailed discussion regarding activity and use limitations is presented in Sections 4.1.1 and 4.1.2 of this report.

3.3 Specialized Knowledge

First Citizens Bank provided no specialized knowledge that is material to recognized environmental conditions in connection with the Subject Property. OES was not provided with or made aware of previous environmental assessments or other documentation that is material to recognize environmental conditions in connection with the Subject Property, except as presented in Section 4.3.8 of this report.

3.4 Commonly Known or Reasonably Ascertainable Information

First Citizens Bank has provided no commonly known or reasonably ascertainable information within the local community about the Subject Property that is material to recognized environmental conditions in connection with the Subject Property.

3.5 Valuation Reduction for Environmental Issues

First Citizens Bank has provided no information regarding valuation reduction for environmental issues in connection with the Subject Property.

Copyright 2009 OES

3.6 Owner, Property Manager, and Occupant Information

First Citizens Bank provided contact information for the Subject Property owner, manager and/or occupants.

3.7 Reason for Performing Phase I ESA

First Citizens Bank retained OES to complete this Phase I ESA in connection with a real estate transaction process.

Copyright 2009 OES

4.0 RECORDS REVIEW

4.1 Standard Environmental Records

A review of standard environmental databases maintained by Federal, state, and tribal offices was completed through Environmental Data Resources, Inc. (EDR) of Milford, Connecticut. The databases were searched for properties with reported environmental conditions located within approximate minimum search distances as specified by ASTM Standard E 1527-05, by using geocoding information that identified the coordinates of the properties in the databases or by checking the street addresses of practically reviewable non-geocoded "orphan" properties within the same zip code. The database report is presented in Appendix E.

The database report identified thirty-five (35) "orphan sites." Orphan sites are those sites that could not be accurately mapped or geocoded due to inadequate location information. OES attempted to locate these sites via vehicular reconnaissance and interviews with personnel familiar with the area. Based on this research, OES did not identify listed orphan sites within the approximate minimum search distances that may be considered likely to have impacted conditions at the Subject Property.

It should be noted that plotted locations of listed sites are not always accurate. With regard to listings that are determined or suspected to be inaccurate, based on information from other sources such as direct observation or consultation with individuals familiar with the property, OES uses the best available data when evaluating the location of listed sites discussed below.

The Subject Property was not listed in any of the databases searched by EDR. The following Table provides a summary of the findings of the environmental database report. Specific properties identified within the database report are further discussed below.

Copyright 2009 OES

SUMMARY OF FEDERAL, STATE, AND TRIBAL AGENCY DATABASE FINDINGS			
Regulatory Database	Approximate Minimum Search Distance	Subject Property Listed	Off-site Listings Within Search Distance
Federal NPL Sites	One mile	No	0
Federal Delisted NPL Sites	½ mile	No	0
Federal CERCLIS Sites	½ mile	No	1

4.1.1 Federal Agency Database Records

National Priority List (NPL)

The NPL database, also known as the Superfund List, is a subset of CERCLIS and identifies sites that are ranked as high priority for remedial action under the Federal Superfund Act. Neither the Subject Property nor any sites located within one mile of the Subject Property were identified on the NPL.

Delisted National Priority List (NPL)

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425(e), sites may be deleted from the NPL where no further response is appropriate. Neither the Subject Property nor any sites located within ½ mile of the Subject Property were identified on the Delisted NPL database.

Copyright 2009 OES

Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS)

CERCLIS contains data regarding potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies, and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability ACT (CERCLA). CERCLIS contains sites that are included on the National Priority List (NPL), as well as sites which are in the screening and assessment phase for possible inclusion on the NPL. The Subject Property was not listed. One site located within ½ mile of the Subject Property was identified on the CERCLIS database. Information regarding the site is provided in the following table.

STATE AND TRIBAL EQUIVALENT NPL & CERCLIS SITES			
Site	Distance / Direction / Gradient*	ID No.	Regulatory Status
Sammamish Slough Truck Accident W. Lake Sammamish Parkway NE, Redmond	0.40 miles / Southwest / Downgradient	1002674	Notification Date: 8/30/06 Contaminants: Petroleum Media Impacted: Soil Only Status: Awaiting Cleaned up Date of Closure: 9/1/2006

* Presumed hydrogeologic gradient based upon regional topography

Based upon the current regulatory status, distance/presumed hydrogeologic gradient relative to the Subject Property, and/or reported nature/extent of contamination, it is considered unlikely that conditions associated with the identified site represent an environmental concern to the Subject Property.

Copyright 2009 OES

CERCLIS – No Further Remedial Action Planned (CERCLIS-NFRAP)

As of February 1995, CERCLIS sites designated as No Further Remedial Action Planned (NFRAP) have been removed from the CERCLIS list. NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed without the need for the site to be placed on the NPL, or the contamination was not considered sufficient to warrant Federal Superfund action or NPL consideration. The Subject Property was not listed. Neither the Subject Property nor any sites located within ½ mile of the Subject Property were identified on the CERCLIS-NFRAP database.

Resource Conservation and Recovery Act (RCRA) – Corrective Action Tracking System (CORRACTS)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS). The database includes selective information regarding sites that generate, transport, store, treat, and/or dispose of hazardous waste as defined by RCRA. The RCRA-CORRACTS database identifies TSD facilities that have conducted, or are currently conducting, corrective action(s) as regulated under RCRA. Neither the Subject Property nor any sites located within one mile of the Subject Property were identified on the RCRA CORRACTS database.

RCRA non-CORRACTS Treatment, Storage and/or Disposal (TSD) Facilities

RCRA non-CORRACTS Treatment, Storage and/or Disposal (TSD) facilities are required to register hazardous waste activity under the Resource Conservation and Recovery Act (RCRA). Neither the Subject Property nor any sites located within ½ mile of the Subject Property were identified on the RCRA non-CORRACTS TSD database.

Copyright 2009 OES

RCRA Hazardous Waste Generators

Hazardous waste generators tracked under the Resource Conservation and Recovery Act (RCRA) are classified as either Large Quantity Generators (LQGs), Small Quantity Generators (SQGs), or Conditionally Exempt Small Quantity Generators (CESQG). A RCRA-LQG is defined as a facility that generates over 1,000 kilograms (Kg) of hazardous waste, or over 1 Kg of acutely hazardous waste per month. A RCRA-SQG is defined as a facility that generates between 100 Kg and 1,000 Kg of hazardous waste per month. A RCRA-CESQG is defined as a facility that generates less than 100 Kg of hazardous waste, or less than 1 Kg of acutely hazardous waste per month. Neither the Subject Property nor any adjoining sites were identified on the RCRA Generator database.

Federal Engineering Control / Institutional Control Registries

The completion of site cleanup activities may include the implementation of engineering controls or institutional controls as part of the response action. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls. Neither the Subject Property nor any sites located within ½ mile of the Subject Property were identified on Federal Engineering Control or Institutional Control Registries.

Emergency Response Notification System (ERNS)

ERNS is a national database used to collect information regarding reported releases of petroleum products and/or hazardous substances. The database contains information from spill reports submitted to Federal agencies, including the EPA, the U.S. Coast Guard, the National Response Center, and the U.S. Department of Transportation. A review of this database was conducted in order to determine whether any spills or incidents involving releases of hazardous substances or petroleum products have occurred at the Subject Property. The Subject Property was not identified on the ERNS database.

Copyright 2009 OES

4.1.2 State and Tribal Agency Database Records

State and Tribal Equivalent NPL Sites and CERCLIS Sites

State and tribal equivalent NPL and CERCLIS databases were searched for sites located within one mile and ½ mile of the Subject Property, respectively. The Subject Property was not identified on the State Equivalent CERCLIS Sites database. However, 11 sites located within one mile of the Subject Property were identified on the State Equivalent CERCLIS and NPL Sites database. Based upon the current regulatory status, distance/presumed hydrogeologic gradient relative to the Subject Property, and/or reported nature/extent of contamination, it is considered unlikely that conditions associated with the identified site represent an environmental concern to the Subject Property.

State and Tribal Spills Sites (Spills)

A review of available Spills databases was conducted in order to determine whether any spills or incidents involving releases of hazardous substances or petroleum products have occurred at the Subject Property. The Subject Property was not listed on the Spills database in the EDR Report.

State and Tribal Landfill Sites and Solid Waste Disposal Sites

The state and tribal landfill and solid waste disposal site databases identify active or inactive landfill and transfer station facilities, as well as open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites. Neither the Subject Property nor any sites located within 0.5 mile of the Subject Property were identified on state or tribal landfill and solid waste disposal site databases.

State and Tribal Leaking Storage Tank Sites

Leaking Storage Tank Sites are properties where releases of hazardous substances or petroleum products from underground storage tanks (USTs) and/or aboveground storage tanks (ASTs) have been identified and reported to state, tribal, or local agencies. The Subject Property was not identified on the Leaking Storage Tank Sites database. However, five sites located within ½ mile of the Subject Property were identified on the Leaking Storage Tank Sites database. Information regarding the listed site is presented in the following table:

Copyright 2009 OES

LEAKING STORAGE TANK SITES			
Site	Distance / Direction / Gradient*	ID No.	Regulatory Status
Bedrock Northwest/Chevron SVC 16000 Redmond Way	0.26 miles / SSE down-gradient	5253	Notification Date: 2/26/2004 Contaminants: Petroleum Media Impacted: GW Status: Cleanup Awaiting Cleanup Date of Closure: N/A
Jackpot Country Store 7725 150th Place NE	0.37 miles South down-gradient	9805524309	Notification Date: 4/8/2003 Contaminants; Petroleum Media Impacted: GW Status: Cleanup Cleanup Started Date of Closure: N/A
J.E. Work Inc. 8525 152nd Ave NE	0.4 miles West Down-gradient	9805523510	Notification Date: 6/5/1996 Contaminants: Petroleum Media Impacted: Soil Status: Cleanup Cleaned up Date of Closure: 8/6/2002
ARCO #6067 8009 164th Ave NE	0.44 miles Southeast down-gradient	980523819	Notification Date: 6/11/1991 Contaminants: Petroleum Media Impacted: GW Status: Cleanup Cleaned up Date of Closure: N9/28/2006
Redmond 7733 Leary Way NE	0.48 miles southeast, down-gradient	980524339	Notification Date: 6/12/1998 Contaminants: Petroleum Media Impacted: Soil Status: Cleanup Cleaned Up Date of Closure: N/A

* Presumed hydrogeologic gradient based upon regional topography

Based upon the current regulatory status, distance/presumed hydrogeologic gradient relative to the Subject Property, and/or reported nature/extent of contamination, it is considered unlikely that conditions associated with the identified site represent an environmental concern to the Subject Property.

State and Tribal Registered Storage Tanks

Neither the Subject Property nor any adjoining properties were identified on state or tribal Registered Storage Tank databases. However, the City of Redmond Fire Department located within a 1/4 –mile of Subject Property contains multiple USTs. All the USTs are in compliance with current UST codes.

Copyright 2009 OES

State and Tribal Engineering Control / Institutional Control Registries

The completion of site cleanup activities may include the implementation of engineering controls or institutional controls as part of the response action. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls. Neither the Subject Property nor any sites located within ½ mile of the Subject Property were identified on state or tribal Engineering Control or Institutional Control Registries.

State and Tribal Voluntary Cleanup Sites

The Subject Property was not identified on state or tribal Voluntary Cleanup Site databases. However, seven sites located within ½ mile of the Subject Property were identified on state or tribal Voluntary Cleanup Site databases. Information regarding the listed sites is presented in the following table:

Information regarding the listed sites is presented in the following table:

STATE AND TRIBAL ICR SITES			
Site	Distance / Direction / Gradient	ID No.	Regulatory Status
Bedrock Northwest/Chevron SVC 16000 Redmond Way	0.26 miles / SSE down-gradient	5253	Notification Date: 2/26/2004 Contaminants: Petroleum Media Impacted: GW Status: Cleanup Awaiting Cleanup Date of Closure: N/A
Jackpot Country Store 7725 150th Place NE	0.37 miles South down-gradient	9805524309	Notification Date: 4/8/2003 Contaminants: Petroleum Media Impacted: GW Status: Cleanup Cleanup Started Date of Closure: N/A
Skyline Cleaners. 8460 164th Avenue NE	0.4 miles East cross-gradient	9805523510	Notification Date: 6/5/1996 Contaminants: Petroleum Media Impacted: Soil Status: Cleanup Cleaned up Date of Closure: 8/6/2002

* Presumed hydrogeologic gradient based upon regional topography

Based upon the current regulatory status, distance/presumed hydrogeologic gradient relative to the Subject Property, and/or reported nature/extent of contamination, it is considered unlikely that conditions associated with the identified sites represent an environmental concern to the Subject Property.

State and Tribal Independent Cleanup Report (ICR) Sites

The Subject Property was not identified on state or tribal ICR Sites databases. However, four sites located within ½ mile of the Subject Property were identified on state or tribal ICR Sites databases. Information regarding the listed sites is presented in the following table:

Copyright 2009 OES

STATE AND TRIBAL ICR SITES			
Site	Distance / Direction / Gradient	ID No.	Regulatory Status
Working Inc. Construction Co. 8525 152nd Ave. NE	0.39 miles / WNW / Upgradient	34881715	Notification Date: 6/05/1995 Contaminants: Petroleum Media Impacted: Soil Status: Interim Cleanup Report Date of Closure: NA
ARCO #6067 8009 164th Ave NE	0.44 miles Southeast down-gradient	980523819	Notification Date: 6/11/1991 Contaminants: Petroleum Media Impacted: GW Status: Cleanup Cleaned up Date of Closure: N9/28/2006
ARCO #6067 8008 164th Ave NE	0.44 miles Southeast down-gradient	980523819	Notification Date: 6/11/1991 Contaminants: Petroleum Media Impacted: GW Status: Cleanup Cleaned up Date of Closure: N9/28/2006
King County Maintenance 7722 Leary Way NE	0.48 miles Southeast down-gradient	9283347	Notification Date: 5/22/2009 Contaminants: Petroleum Media Impacted: Soil Status: NFA Date of Closure: 5/22/2009

* Presumed hydrogeologic gradient based upon regional topography

Based upon the current regulatory status, distance/presumed hydrogeologic gradient relative to the Subject Property, and/or reported nature/extent of contamination, it is considered unlikely that conditions associated with the identified sites represent an environmental concern to the Subject Property.

State and Tribal Brownfield Sites

Neither the Subject Property nor any sites located within ½ mile of the Subject Property were identified on state or tribal Brownfield Sites databases.

Copyright 2009 OES

CSCSL-NFA Sites

The Subject Property was not identified on state or tribal CSCSL NFA databases.

4.1.3 Local Regulatory Agency Records

Local municipal offices consulted during the completion of this assessment included the City of Redmond Planning Department and Development Services. OES did not identify documented adverse environmental conditions, violations, or complaints associated with the Subject Property. OES did not identify records of spills or releases of hazardous substances or petroleum products having occurred at the Subject Property.

City of Redmond of Planning Department

OES has visited the City of Redmond and requested information regarding the generation, transportation, storage, treatment, disposal, and/or spills or releases of hazardous substances or petroleum products at the Subject Property, information on building permits, and past uses of the Subject Property. According to Kim Smith there are no building code violations or incidences regarding spills or releases of hazardous substances or petroleum products on the Subject Property. In addition, no stormwater violations or records of USTs or ASTS have been recorded for the Subject Property. Mr. Jeff Dendy of the Public Works Department indicated there have been no stormwater, NPDES or spill violations reported for the Subject Property. Ms. Smith also indicated that the City of Redmond Fire Department did not have any record of USTs or ASTs pertaining to the Subject Property.

4.2 Physical Setting

4.2.1 Topography

The Subject Property is located at an elevation of approximately 37 feet above mean sea level (msl). The topography of the Subject Property is relatively flat and slopes gently to the southeast. The Subject Property is located in a relatively flat area, and the general slope of the surrounding region is to the southeast (according to the Redmond, Washington USGS 7.5 Minute Topographic Quadrangle).

Copyright 2009 OES

4.2.2 Geology and Soils

No bedrock outcroppings were observed at the Subject Property. The Subject Property lies within the Puget-Willamette Trough aquifer system which underlies an elongated basin that extends southward from near the Canadian border in Washington to central Oregon.

The major aquifers that compose the Puget-Willamette Trough regional aquifer system are unconsolidated-deposit and Miocene basaltic-rock aquifers. Unconsolidated-deposit aquifers are the principal aquifers in the Puget Sound lowland, whereas unconsolidated-deposit and Miocene basaltic-rock aquifers are the principal aquifers in the central area. In the Puget Sound lowland, the unconsolidated-deposit aquifers consist chiefly of glacial deposits that are as much as 3,000 feet thick near Seattle. Sand and gravel that were deposited during the last period of glaciation compose the most productive aquifers in the lowland and generally form the upper 200 to 300 feet of the unconsolidated deposits. At depth, sand and gravel deposits typically are discontinuous lenses that can be present as much as 2,000 feet below the land surface. Although usually much less permeable at depth because of compaction, lenses of sand and gravel can yield large volumes of water to wells. Even though well yields vary greatly, yields from sand and gravel aquifers commonly exceed 2,000 gallons per minute. Some public-supply and industrial wells in the Redmond area that were completed in shallow sand and gravel of glacial origin, yield from 1,000 to 9,000 gallons per minute. Other public-supply wells that were completed in coarse-grained alluvial deposits along the Green River in King County yield from 8,000 to 10,000 gallons per minute. Some artesian wells in the Seattle-Tacoma area that were completed in deeply buried lenses of sand and gravel yield from 150 to 1,700 gallons per minute. In the southern and western parts of the Puget Sound lowland, glacial deposits are fine-grained, and the unconsolidated-deposit aquifers in these areas are much less productive than similar aquifers near Tacoma. Public-supply and irrigation wells in these areas generally yield from 50 to 750 gallons per minute.

According to the Natural Resources Conservation Service (NRCS) Web Soil Survey (WSS) website (http://websoilsurvey.nrcs.usda.gov/app/), the dominant soil composition in the vicinity of the Subject Property is classified as Alderwood gravelly sandy loam, 0 to 6 percent slopes. This soil consists of deep, somewhat excessively-drained soils formed on till plains formed from basal till. The soil extends to a depth of approximately 20 to 40 inches. This soil is moderately well drained, and the available water capacity is very low. The depth to bedrock is typically 20 to 40 inches.

Copyright 2009 OES

4.2.3 Hydrogeology and Hydrology

No natural surface water bodies were identified on or adjacent to the Subject Property. The nearest downgradient surface water body is the Sammamish River, located approximately 400 feet west of the Subject Property. The Lake Sammamish is located approximately 1.5 miles south of the Subject Property.

Local groundwater gradient is expected to follow surface topography; therefore, groundwater flow near the Subject Property is expected to flow to the southwest. Groundwater depths and flow gradients are best evaluated by a subsurface investigation involving the installation of at least three groundwater monitoring wells and precise measurements of hydrostatic pressure. Monitoring wells were not observed on the Subject Property. Localized perched groundwater conditions are believe to be present in the site vicinity at depths less 20 feet bgs.

4.3 Historical Use of the Subject Property and Adjoining Properties

OES attempted to determine the history of the Subject Property dating back to 1940 or first developed use. The following table summarizes the historical use of the Subject Property and surrounding area.

HISTORICAL USE SUMMARY			
Period	Historical Uses		Source(s)
	Subject Property	Surrounding Area	
At least 1936-1995	Undeveloped	Primarily undeveloped, limited single-family residential development.	Aerial Photographs Topographic Maps City Directories Municipal Records Personal Interviews
1990 to Present	Current Structure	Primarily commercial/residential development.	Aerial Photographs Topographic Maps City Directories Municipal Records Personal Interviews

No environmentally significant conditions were identified on the Subject Property or surrounding properties during the historical review.

4.3.1 Aerial Photographs

Historical aerial photographs may be used to evaluate changes in land use and to identify visible areas of potential environmental concern. A search for historical aerial photographs depicting the Subject Property and vicinity was conducted by Environmental Data Resources, Inc. (EDR). Additional aerial

Copyright 2009 OES

photographs were available from the King County iMap website. It should be noted that the scale of the available aerial photographs precludes the distinct identification of structures and/or land uses on or in the vicinity of the Subject Property. Aerial photographs depicting the Subject Property were reviewed and are summarized below. Copies of the aerial photographs are presented in Appendix F.

Date: **1936**

Description: The Subject Property is undeveloped. Surrounding properties appear to be primarily undeveloped, with the exception of agricultural land.

Date: **1965**

Description: Conditions on the Subject Property and surrounding areas appear to be similar to those depicted on the 1936 photograph, except the area to the south and southeast of the Subject Property is undergoing development associated with the City of Redmond.

Date: **1977**

Description: Conditions on the Subject Property and surrounding areas appear to be similar to those depicted on the 1965 photograph; however, the neighboring to the east is developed by a commercial building, similar to today structure. The access road NE 85th Street has been constructed. The City of Redmond property located across NE 85th Street has been developed with two structures. The City of Redmond to the south continues to experience increase growth.

Date: **1985**

Description: The Subject Property is undeveloped. The surrounding areas appear to be more dense with commercial development. The City of Redmond property has expended. The surface street 158th Avenue NE has been constructed west of the Subject Property. A vacant lot west of 158th Avenue NE appears to have been graded.

Date: **1990**

Description: The Subject Property is occupied by the existing building and surrounding asphalt-covered parking areas. Land use is the site vicinity continues to increase in commercial building density.

Copyright 2009 OES

Date: **2000**

Description: Conditions on the Subject Property and surrounding areas appear to be similar to the current layout. A significant residential development is neighboring the south portion of the Subject Property.

Date: **2007**

Description: Conditions on the Subject Property and surrounding areas appear to be similar to the current layout, except a major expansion of the City of Redmond facilities to the north of the Subject Property.

4.3.2 Fire Insurance Maps

A search for historical fire insurance maps depicting the Subject Property and vicinity was conducted by EDR Sanborn Maps, Inc. The EDR Report indicated that coverage for the vicinity of the Subject Property was not available. A copy of the search documentation letter is presented in Appendix F.

4.3.3 Topographic Maps

Historical topographic maps provide information related to physical land configuration such as elevation, ground slope, surface water and other features. While most buildings in densely developed urban centers are not depicted, topographic maps typically show structures equal to or larger than the size of a single-family residence in rural areas. Other notable features such as woods, pipelines, municipal boundaries, and areas of filled land are often marked on topographic maps.

A search for historical topographic maps depicting the Subject Property and vicinity was conducted by Environmental Data Resources, Inc. (EDR). Historical topographic maps depicting the Subject Property were reviewed and are summarized below. Copies of the topographic maps are presented in Appendix F.

Date: **1897, Redmond, WA**

Description: Based on the scale of the topographic map, specific features are difficult to identify; however, the Subject Property and surrounding area appears to be primarily undeveloped and located within Sammamish River corridor.

Copyright 2009 OES

Date: **1950, Redmond, WA**

Description: The Subject Property appears as undeveloped. The surrounding area appears to be primarily undeveloped, with the exception of scattered structures to the southeast. The Sammamish River appears to be channelized into linear feature west of the Subject Property.

Date: **1968, Redmond, WA**

Description: The Subject Property and surrounding area appear as similar to the layout depicted in the 1950 map, except for additional development east within the City of Redmond.

Date: **1973, Redmond, WA**

Description: The Subject Property and surrounding area appear as similar to the layout depicted in the 1949 map, additional development to the south and east of the Subject Property

Date: **1992, Redmond, WA**

Description: The Subject Property and surrounding area to the north, and are shaded to represent development. The City of Redmond structures to the north are noticeable on the maps. Increase development is noted to the south and southwest within the City of Redmond.

4.3.4 Street Directories

Street directories are commercial publications containing names and addresses, and in many cases, occupations of the occupants of a particular community. The directories may also contain information pertaining to business processes conducted within a community. A search for historical street directories was conducted by Environmental Data Resources, Inc. (EDR). Historical street directories were reviewed and are summarized below. Copies of the street directories are presented in Appendix F.

Date: **1976-1996**

Listings: The Subject Property address is not listed. Surrounding addresses are listed as similar to their current uses.

Copyright 2009 OES

4.3.5 Recorded Land Title Records

Land title records provide information on previous ownership of a property. Typically, deeds signifying transfer of a land parcel are recorded in county files and can be researched to determine the identity of past owners. A "chain of title" is a continuous record of ownership for a specific parcel. A 50-year chain of title search was not included in the scope of work for this assessment.

4.3.6 Property Tax Records

The property card for the Subject Property was obtained at the King County Assessor's Office. The property card identifies the current owner as Redmond National Bank, which acquired the Subject Property in 1988. Assessor's Office records indicate that the existing building was constructed in 1990. A listing of the former Subject Property owners was not available for review. Copies of the property tax records are presented in Appendix F.

4.3.7 Environmental Liens and Activity and Use Limitations

A search for Environmental Liens and Activity and Use Limitations was not included in the scope of this assessment.

4.3.8 Previous Environmental Reports

OES was not provided with or made aware of previous environmental assessments or other documentation regarding environmental investigations performed for the Subject Property. OES did not identify previous environmental reports for the Subject Property at local agencies or other sources contacted during this assessment.

4.3.9 Other Historical Records and Interviews

Ms. Barbara Gordon, Assistant Vice President, Financial Center Manager, was interviewed to obtain information regarding history of the Subject Property. Ms. Travis reported that she was unaware of any environmental issues associated with the Subject Property.

Copyright 2009 OES

5.0 SUBJECT PROPERTY RECONNAISSANCE

The Subject Property reconnaissance was conducted by Mr. Dennis O'Neill, OES Environmental Scientist, on November October 30, 2009. Mr. O'Neill was accompanied by and interviewed Ms. Barbara Gordon, Financial Center Manager.

5.1 Methodology and Limiting Conditions

The Subject Property reconnaissance consisted of visual and/or physical observations of the Subject Property and improvements, adjoining properties as viewed from the Subject Property boundaries, and the surrounding area based on visual observations made from adjacent public thoroughfares. Building exteriors were observed along the perimeter from the ground, unless described otherwise. Building interiors were observed as they were made safely accessible, unless described otherwise.

At the time of the survey, the weather was partly cloudy and approximately 55° Fahrenheit. During the survey, representative tenant spaces, mechanical spaces, and/or equipment components were observed. There were no significant portions of the Subject Property that were inaccessible or excluded from this survey.

5.2 Hazardous Substances and Petroleum Products

5.2.1 Hazardous Substances and Petroleum Products (Identified Uses)

Routine quantities of cleaning compounds and janitorial supplies are used to maintain the Subject Property. These materials are stored in containers ranging in size from aerosol cans to five-gallon pails and are located in janitorial closets and storage rooms located throughout the facility. These materials appeared to be securely stored and properly labeled, and no evidence of significant leaks, spills or materials mismanagement was observed at the time of reconnaissance. These materials are utilized during routine operations and do not result in the generation of regulated wastes.

OES did not identify evidence of significant leaks, spills, or the improper handling of petroleum or hazardous substances that might impact the environmental condition of the Subject Property.

5.2.2 Hazardous Substances and Petroleum Products (Unidentified Uses)

OES did not observe evidence of hazardous substance or petroleum products containers at the Subject Property that were not in connection with identified uses.

Copyright 2009 OES

5.2.3 Unidentified Substances Containers

OES did not observe evidence of unidentified substances containers at the Subject Property.

5.3 Waste Generation, Storage, and Disposal

Non-regulated solid waste generated at the Subject Property is placed in two solid waste dumpsters, located on the southeastern portion of the Subject Property. Solid waste is collected daily (Monday through Friday) by the City of Redmond municipal trash service. No evidence of improper solid waste management or the improper disposal of hazardous substances or petroleum products was observed at the time of reconnaissance.

5.4 Underground Storage Tanks (USTs) & Aboveground Storage Tanks (ASTs)

5.4.1 Existing Storage Tanks

Based upon site reconnaissance, interviews, and a review of state and local records, OES identified no evidence of existing USTs or ASTs located at the Subject Property.

5.4.2 Former Storage Tanks

Based upon site reconnaissance, interviews, and a review of state and local records, OES identified no evidence of former USTs or ASTs located at the Subject Property.

5.5 Oil-Containing Equipment and Polychlorinated Biphenyls (PCBs)

Polychlorinated biphenyls (PCBs) are a chemical component of many dielectric fluids, heat transfer fluids, hydraulic fluids, lubricating oils, paints, or coatings manufactured prior to July 2, 1979. Equipment that may potentially contain PCBs includes electrical equipment such as transformers or capacitors or hydraulically operated equipment, such as elevators, compaction equipment, or manufacturing equipment. The manufacture and distribution in commerce of PCBs was banned for use in 1979 by the United States Congress, which enacted the Toxic Substance and Control Act (TSCA). In accordance with *US Code of Federal Regulations Title 40 - Protection of Environment, Chapter I - Environmental Protection Agency, Subchapter R - Toxic Substance Control Act (TSCA), Part 761 - Polychlorinated Biphenyls (PCBs) Manufacturing, Processing, Distribution in Commerce, and Use Prohibitions*, the owner of a transformer or other PCB-containing equipment is responsible for equipment maintenance and remediation in the event of a leak or release.

Copyright 2009 OES

OES observed a pad-mounted electrical transformer at the Subject Property. The pad-mounted electrical transformer was located on the southwest corner of the Subject Property. The transformer appeared to be in good condition, and no staining or other evidence of a release of dielectric fluid was observed in the vicinity of the transformer unit. The transformer unit is owned and operated by the regional electrical utility provider, PSE. The transformer was installed at the time of construction in 1990 and based upon the date of installation is not considered to be PCB-containing. In the event of a release of dielectric fluid from one of its transformers, the utility company typically conducts regulatory response actions and cleanup.

5.6 Additional Site Conditions

The ground surface outside the building is relatively flat, with a gentle slope to the southeast. Stormwater runoff from the asphalt-paved parking areas adjacent to the building discharges to catch basins located throughout the property. The catch basins are associated with the municipal stormwater sewer system, operated by the City of Redmond. No odors or staining was observed within the vicinity of the stormwater catch basins.

Copyright 2009 OES

6.0 INTERVIEWS

The following persons were interviewed to obtain information regarding recognized environmental conditions in connection with the property. Additionally, a Pre-Survey Questionnaire was forwarded to the designated Subject Property contact. The Pre-Survey Questionnaire has been completed and returned to our offices. The information requested in the Pre-Survey Questionnaire is intended to assist in gathering information that may be material to identifying recognized environmental conditions in connection with the Subject Property. The Pre-Survey Questionnaire and any accompanying documentation are presented in Appendix C.

INTERVIEWS

7.0 CONDITIONS OUTSIDE THE SCOPE OF ASTM PRACTICE E 1527-05

The following sections address environmental issues or conditions at the Subject Property that parties may wish to assess in connection with commercial real estate that are outside the scope of ASTM Practice E 1527-05 (non-scope considerations).

7.1 Asbestos-Containing Material (ACM)

Asbestos is a term used to describe a group of six naturally occurring crystalline fiber minerals. Asbestos has excellent thermal stability, a high degree of tensile strength, and has been used extensively in the textile, insulation, and building industries, particularly as a component in fireproofing, decorative coatings, insulation materials, and as reinforcement for plaster binders in building products. Asbestos-containing building materials are generally classified as friable or non-friable. Friable materials are those which can be crumbled, pulverized, or reduced to powder by hand pressure, or by normal use or maintenance can be expected to emit asbestos fibers into the air. Non-friable ACM is a potential concern if it is damaged by maintenance work, demolition, or other activities, at which time it may be considered friable.

Based upon the date of construction and in accordance with the scope of work for this assessment, OES did not conduct a survey for the presence of ACM.

7.2 Radon

Radon is a naturally-occurring, colorless and odorless radioactive gas that is generated primarily in granitic rocks. The United States Surgeon General has published information that radon is a cause of lung cancer. Radon usually enters a building through openings in the foundation, and therefore is a potential health concern to residents of the lowest level of a building with inadequate ventilation.

The EPA Map of Radon Zones indicates that King County is located within a Zone 3 radon area. Zone 3 is defined as an area that has a low potential for radon gas, with a predicted average indoor radon screening level less than 2.0 picoCuries per liter (pCi/L). The EPA recommended Action Level for radon is 4.0 pCi/L.

Based upon the non-residential nature of the Subject Property and in accordance with the scope of work for this assessment, OES did not conduct a limited short-term radon screening at the Subject Property.

Copyright 2009 OES

7.3 Lead-Based Paint (LBP)

Use of lead in household paint was banned by the U.S. Environmental Protection Agency (EPA) effective January 1, 1978. The EPA and the U.S. Department of Housing and Urban Development (HUD) consider lead-based paint as containing a lead concentration equal to or greater than 1.0 milligram per square centimeter (mg/cm^2) or 0.5% lead by weight, as defined by Title X of the 1992 Housing and Community Development Act.

Based on the non-residential use of the existing building and in accordance with the scope of work of this assessment, a lead-based paint (LBP) survey was not conducted at the Subject Property.

7.4 Lead in Drinking Water

Lead has historically been used in pipes, solder, and brass fixtures used in water distribution systems and building plumbing systems. In 1986, EPA banned the use of lead at concentrations exceeding 0.2% lead in solder and 8% lead in other plumbing materials. Lead in drinking water results primarily from corrosion of lead containing materials in service lines or from corrosion of lead containing materials in building plumbing systems such as lead solder, brass, bronze, and other lead containing alloys. The EPA Action Level for lead in public drinking water supplies is 0.015 parts per million (ppm) or 0.015 milligrams per liter (mg/L).

Municipal water service is provided to the Subject Property by the City of Redmond. Based upon review of the 2008 Drinking Water Supply and Water Quality Report, the municipal water supply meets all current criteria established by the Safe Drinking Water Act (SDWA) and local municipal drinking water standards, including those for lead. Based upon the existing municipal water service and in accordance with the scope of work for this assessment, OES did not conduct lead-in-drinking water sampling at the Subject Property.

Copyright 2009 OES

8.0 FINDINGS AND OPINIONS

OES has performed this Phase I ESA of the Subject Property in conformance with the scope and limitations of ASTM Standard E 1527-05. Any exceptions to, or deletions from, this practice are described in Section 1.0 of this report. This assessment has identified no evidence of *recognized environmental conditions (RECs)* in connection with the Subject Property.

9.0 RECOMMENDATIONS

Based upon the findings of this investigation, no further action is recommended.

Golder Associates

November 10, 2017

Project No. 1403741-707

Amanda Balzer, Environmental Geologist
City of Redmond
Public Works Department
Mail Stop: 2NPW
PO Box 97010
Redmond, WA 98073

RE: SUMMER 2017 GROUNDWATER MONITORING EVENT CITY OF REDMOND WELLHEAD PROTECTION PROGRAM

Dear Ms. Balzer:

Golder Associates Inc. (Golder) completed the summer 2017 semi-annual groundwater monitoring for the City of Redmond (City) between July 28 and August 4, 2017. This letter report presents the results of the summer 2017 groundwater monitoring event, which was conducted as part of the City's Wellhead Protection Program. This report summarizes results including a groundwater potentiometric surface map; hydrographs for wells fitted with pressure transducers; and tables listing well construction details, water levels, and chemical analytical data.

Groundwater samples were collected from 30 wells during the sampling event. Samples were collected in accordance with the City's Sampling and Analysis Plan[1] (SAP) and the summer 2017 sampling requirements (analytes and locations) provided by the City. Monitoring well locations are shown in Figure 1. Construction details for the City-owned monitoring wells are summarized in Table 1.

1.0 SAMPLING PROTOCOL

Groundwater sampling was conducted in accordance with the SAP, and included the following activities:

- Measurement of static water elevations at monitoring wells.
  - Static water levels were measured prior to sampling at each well sampled, and
  - Static water levels were measured by the City and Golder at 90 wells during a synoptic sampling event on July 27, 2017 (all measurements are included in Table 5 of this report)
- Download of data from pressure transducers installed in select monitoring wells.
- Use of dedicated tubing connected to a portable, stainless steel bladder pump or a peristaltic pump (if groundwater elevation allowed):
  - Groundwater was purged using low-flow sampling techniques
  - Pumping rates ranged between approximately 120 and 350 milliliters (mL) per minute
- Measurement and recording of field parameters, including pH, specific conductance, temperature, dissolved oxygen, oxidation-reduction potential (ORP/EH), and turbidity approximately every 5 minutes during purging until parameters were stable. Parameters

were considered stable when three consecutive readings of pH, temperature, and conductivity were within 5 percent (no percentage change threshold is listed in the SAP).

- The purging process was considered complete once the field parameters stabilized. Samples were collected directly from the dedicated sample tubing.
- Collection of all purge water in appropriate containers for characterization prior to disposal.
- Collection of representative and quality assurance / quality control (QA/QC) samples in appropriate containers.
- Analyses of groundwater for one or more of the following according to the summer 2017 sampling requirements requested by the City:
  - Total Metals by Environmental Protection Agency (EPA) Method 200.8/6010C
  - Alkalinity and bicarbonate by Standard Method (SM) 2320B
  - Chloride by SM 4500-CL
  - Fluoride by SM 4500-F C
  - Nitrate (as Nitrogen) by EPA Method 353.2
  - Sulfate by American Society for Testing and Materials (ASTM) Method D516-07
  - Total Dissolved Solids (TDS) by SM 2540C
  - Volatile Organic Compounds (VOCs) by EPA Method 8260C
  - Semi Volatile Organic Compounds (SVOCs) by EPA Method 8270D
  - Northwest Total Petroleum Hydrocarbons – Hydrocarbon Identification Scan by NWTPH-HCID
  - Perfluorooctane Sulfonate (PFOS) and Perfluorooctanoic Acid (PFOA) with preparation by EPA 537M
  - Pharmaceuticals and Personal Care Products (PPCP) by EPA 1694
  - Fecal/Total Coliforms and E.coli by SM 9222B/CALC or SM 9222D
  - Total Organic Carbon (TOC) by SM 5310B
  - Glyphosate and AMPA by modified EPA Method 547

Water levels, field-measured water-quality parameters, and laboratory chemical data for the 30 wells that were sampled are listed in Tables 2 and 3. Water quality standards for groundwater (Washington Administrative Code [WAC] Chapter 173-200) (Department of Ecology Criteria) and drinking water (WAC Chapter 246-290) (Department of Health Maximum Contaminant Levels [MCLs]) along with practical quantitation limits (PQL) are summarized in Table 4 and are compared to the groundwater analytical results. Water levels from the City's synoptic groundwater level sampling event on July 27, 2017 are listed in Table 5. Table 6 provides details on the pressure transducers that are installed in the City's wells.

2.0 SUMMER 2017 SEMI-ANNUAL GROUNDWATER SAMPLING RESULTS

Following sample collection, all bottles were sealed, labeled, and placed in an iced cooler until delivery to the laboratory. All groundwater samples were transported under chain-of-custody procedures to Onsite Environmental Laboratories (Onsite), in Redmond, Washington, for analysis. Upon receipt of laboratory data reports, Golder performed a data validation review in accordance with EPA's National Functional

Guidelines[2,3]. Appendix A presents the laboratory analytical reports for all analyses, and Appendix B presents the Data Validation Memorandum.

In general, groundwater geochemical field data from the summer 2017 monitoring event were similar to data collected in the winter 2017 and both 2016 events (when comparing the wells that were sampled during both events). A summary of the results from the summer 2017 event are summarized in the sections below.

2.1 Field Parameters

- The average groundwater temperature during the summer 2017 was 13.7 degrees Celsius (°C) which is lower than the summer 2016 event average temperature of 14.2°C. The winter 2017 monitoring event was 12.1°C.
- The electrical conductivity observed in all 30 monitoring wells was below the drinking water secondary MCL of 0.7 mS/cm (millisiemens per centimeter).
- Groundwater pH values were less than the lower-end Ecology criterion for pH (6.5 standard units) at 28 of the 30 wells sampled. The average pH values for the summer 2017 was 6.26 which is similar to the average pH for the winter 2017 event. The average pH for both 2017 sampling events are less than the average pH value of 6.43 for the summer 2016 event, and the winter 2016 event average pH of 6.47.
- The average ORP/EH measurements were higher in the summer 2017 event (97 millivolts [mV]) than the ORP/EH measurements collected in the summer 2016 event (40 mV). The average summer 2017 ORP/EH measurements are lower than the winter 2017 event (170 mV) and the winter 2016 event (229 mV). The variability associated with the field measurement of ORP/EH is likely due to changes in groundwater chemistry during the different seasons.

2.2 Metals and Inorganics

- Total arsenic was detected in groundwater samples from four monitoring wells (MW012, MW014, MW022, and MW023). Samples from MW012, MW014, and MW022 exceed water quality criterion of 5 micrograms per liter (µg/L).
  - The arsenic concentrations from samples collected at MW012, MW014, and MW022 exceed the MCL of 10 µg/L.
  - Arsenic has been previously detected in these wells and the summer 2017 concentrations fall within the range of concentrations measured since winter 2016, except at MW014 where summer 2017 concentration was 15 µg/L (next highest concentration was 13 µg/L in winter 2017).
- Total iron was detected at concentrations greater than the Ecology criterion and the MCL of 300 µg/L in groundwater samples in nine monitoring wells, including a maximum value of 49,000 µg/L in the sample from MW022. Iron has ranged between 47,000 and 51,000 µg/L at MW022 since winter 2016.
- Total manganese was detected at concentrations greater than the Ecology criterion and MCL of 50 µg/L in groundwater samples in eight monitoring wells, including a peak value of 3,600 µg/L in the sample from MW022. Manganese has ranged from 3,100 to 3,700 µg/L in MW022 since winter 2016.
- Locations where arsenic was detected also generally had elevated detections of manganese, iron, bicarbonate, and TDS.

[2] United States Environmental Protection Agency (EPA). 2014a. National Functional Guidelines for Superfund Organic Methods Data Review. OSWER 9355.0-132. EPA-540-R-014-002. Washington, D.C. August.

[3] EPA 2014b. National Functional Guidelines for Inorganic Superfund Data Review. OSWER 9355.0-131. EPA-540-R-013-001. Washington, D.C. August.

2.3 Total Petroleum Hydrocarbons

- Gasoline range and diesel range hydrocarbons were not detected in the four wells sampled for Total Petroleum Hydrocarbons (TPH).
- In summer 2016 lube oil was detected in MW022 (0.46 mg/L). Samples collected from MW022 in summer 2017, winter 2017, winter 2016, and summer 2015 events were non-detect for lube oil.

2.4 Tetrachloroethene

- Tetrachloroethene (also known as perchloroethene [PCE]) was detected in groundwater in six monitoring wells at concentrations ranging from 0.36 to 1.9 µg/L. PCE concentrations were greater than the State groundwater quality criterion of 0.8 µg/L in four monitoring wells (MW003, MW031, MW036, and MW062). None of the detected concentrations exceeded the MCL or the MTCA Method A cleanup level of 5 µg/L.
- The average detected PCE concentration from groundwater samples obtained near the intersection of NE 85th Street and 161st Avenue NE (wells MW003, MW004, MW006, MW031, MW033, and MW036) during summer 2017 was 1.12 µg/L. The monitoring wells from this area sampled in winter 2017 had an average PCE concentration of 0.96 µg/L. The average PCE concentration from wells sampled in this area during summer 2016 was 1.4 µg/L.
- The PCE concentrations from groundwater samples obtained near the intersection of Bear Creek Parkway and Redmond Way (MW062, MW392, and MW393) in summer 2017 was consistent with previous events. The average concentrations ranged between 0.9 and 1.0 µg/L in summer and winter 2016. In winter 2017, MW392 did not have a PCE detection and MW062 had a concentration of 1.8 µg/L. In summer 2017, MW062 and MW322 had PCE concentrations of 1.5 µg/L and 0.36 µg/L, respectively.
- The PCE concentration at MW322 was 0.36 µg/L, summer 2017 was the first PCE analysis at this well since Golder began conducting the sampling in winter 2016.

2.5 Other VOCs

In addition to Tetrachloroethene, the following VOC's (Table 3) were also detected at concentrations above reporting limits:

- Acetone was detected in MW003 (6.2 µg/L), MW014 (9.0 µg/L), MW024 (8.0 µg/L), and MW371 (7.9 µg/L) above the laboratory reporting limit of 5.0 µg/L. Acetone detections have not previously been reported in these wells. There is no MCL for acetone and all concentrations are significantly less than the MTCA B non-cancer level of 7,200 µg/L. Further investigation may be warranted if acetone is present in these wells during future sampling events.
- Chloroform was detected in MW062 (0.33 µg/L) and MW322 (0.22 µg/L) slightly above the laboratory reporting limit of 0.2 µg/L but below the water quality criterion of 7.0 µg/L.

2.6 SVOCs

No SVOCs were detected in concentrations above reporting limits in the wells submitted for SVOC, PAH, or low-level 1,4 Dioxane.

2.7 Additional/Emerging Contaminants

- PFOS was detected in 12 of the 13 wells sampled, with detections ranging from 5.6 to 19 nanograms per liter (ng/L). The concentrations are below the United States Environmental Protection Agency's (EPA) Drinking Water Health Advisory value of 70 ng/L.

- PFOA was detected in all 13 wells, with detections ranging from 2.1 to 12 ng/L. The concentrations are below the EPA's Drinking Water Health Advisory value of 70 ng/L.
- PPCP samples were collected in seven wells (MW017, MW061, MW331, MW337, MW341, MW356, and MW391). Atrazine was detected in three wells with detections ranging from 0.98 to 2.2 ng/L. These concentrations are well below the MTCA Method B value of 380 ng/L and the MCL of 3000 ng/L.
- Caffeine was detected in two wells. MW341 has a caffeine concentration of 3.0 ng/L and MW371 has a caffeine concentration of 2.7 ng/L.
- Sulfamethoxazole was detected in two wells MW331 and MW337. MW331 has a concentration of 1.3 ng/L. MW337 has a Sulfamethoxazole concentration of 6.7 ng/L which is greater than the winter 2017 concentration of 1.3 ng/L, and the summer concentration of 2.1 ng/L.
- Oxybenzone was detected in MW341 (22 ng/L). Oxybenzone has not been detected previously in MW341.
- Note: caffeine and oxybenzone were also detected in a field blank sample, see Section 4.0 for details.

2.8 Microbiological

Total coliform, fecal coliform and E. coli were detected above reporting limits in MW010 (11 colony forming units/100ml [CFU/100ml], 9 CFU/100ml, and 9 CFU/100ml, respectively). MW036 also had 2 CFU/100ml of total coliform. MW036 has not been sampled for total coliform, fecal coliform and E. coli since Golder began conducting the sampling in winter 2016.

3.0 GROUNDWATER ELEVATIONS

The City conducted a synoptic water level survey on July 27, 2017 collecting static water levels from 90 wells. The measurements are reported in Table 5. A potentiometric groundwater surface map is presented in Figure 1.

Two brands of data loggers are deployed in select monitoring wells: *INW* and *In Situ*. The *In Situ* loggers have vented cables and do not require barometric compensation. The *INW* loggers are unvented and require barometric compensation. Barometric data is available from a barometric sensor installed in MW089 and from a King County weather station near Marymoor Park in Redmond. Barometric sensor data from the King County weather station were used for the time period before the MW089 sensor was installed (May 2016). Monitoring wells with pressure transducers are detailed in Table 6. The pressure transducer data are provided as an electronic data deliverable (EDD) that accompanies this report.

Four hydrographs (Figures 2A through 2D) are presented by geographic region: East, Northwest, West-Central, West hydrographs. The hydrographs are plotted from 2014 or 2015 up to the date the loggers were downloaded (July and August 2017). Elevations are referenced from the manual water levels collected at the time of data downloads. Manual water levels from the July 2017 gauging event are also plotted on the hydrographs.

The hydrographs show that groundwater elevations vary seasonally in response to precipitation, maximum groundwater elevations are typically observed during winter months and then decline through the summer and early fall. Groundwater elevations in the select wells shown on Figures 2A to 2D were generally not below typical summer conditions in most wells during summer 2017. However, Table 1 shows that 32 wells recorded record low groundwater elevations during the July 27 synoptic survey. This is attributed to the drier than normal precipitation totals in summer 2017.

Construction dewatering projects may have also affected groundwater elevations in some areas- most notably in the West-Central portion of Redmond shown on Figure 2C. In particular, groundwater levels in MW008 and MW331 were lower than normal in summer 2017 and then increased slightly (2 ft or less) in

mid-July, a period without precipitation. This response is most likely attributed to construction dewatering activities in the vicinity of these wells that were ongoing during winter 2017 and ended in spring/summer 2017. Three construction dewatering projects of note are:

- Triangle project at NE 79th St and 166th Ave NE is immediately south of MW008 and was actively dewatering from 10/6/16 through 7/10/17 with approximate flow rates between 1400 and 3800 gpm.
- Station House Lofts project at NE 80th St and 166th Ave NE is adjacent to the north of the Triangle project and was dewatering from February 17, 2017 through May 30, 2017 with approximate flow rates between 1200 and 2300 gpm.
- The Ravello project at NE 80th St and 162nd Ave NE is located to the west of the Triangle and Station House projects and was dewatering from February 24, 2017 through April 28, 2017 with approximate flow rates between 300 and 1200 gpm.

4.0 DATA QUALITY ASSURANCE / VALIDATION

A data validation review was performed on all laboratory data. The full validation results are presented in detail in Appendix B. In general, the data were acceptable, with only two qualifications:

- Chloride results for MW022 and the field duplicate sample collected at MW022 were qualified as estimated (J) when the field duplicate precision was outside QC criteria.

The field blank sample collected on August 7, 2017 contained small concentrations of PPCP constituents: caffeine, DEET and oxybenzone. These detections did not result in qualified sample results because none of the other samples collected on that date had detectable concentrations of these constituents.

5.0 SUMMARY

The summer 2017 sampling event consisted of collecting groundwater samples from 30 wells between July 28 and August 7, 2017. During the summer 2017 sampling event, notes were made of the well and transducer conditions. In general, the wells are in good condition. Repairs, transducer cleaning, and equipment replacement were performed during the field effort.

All analytical data, field parameter, water elevation, and transducer data have been summarized in the appropriate EQuIS tables for upload to the City's EQuIS database and are provided with this technical memorandum.

Thank you for the opportunity to provide groundwater sampling services for the City. We look forward to providing more services to you in the future.

If you have any questions or require any additional information, please contact Jay Pietraszek at (425) 883-0777.

Sincerely,

GOLDER ASSOCIATES INC.

Notes:

1. This table is not an all-inclusive list of monitoring stations within the City of Redmond. It lists the City-owned stations that are currently (Winter 2017) accessible for monitoring as part of the Wellhead Protection Program.
2. All locations are monitoring wells given unique reference numbers by the City of Redmond.
3. Coordinates (X,Y) and elevations updated based on June 2016 survey by Dowl KHM for the following wells: MW052, MW012, MW013, MW007, MW006, MW391, MW033, MW003, and MW009.
4. Stickup refers to the vertical distance from ground surface (GS) to the top of the PVC well casing (TOC). Positive values indicate that the TOC is above GS. Negative values indicate that it is beneath GS.
5. Installed equipment may include a bladder or peristaltic pump for groundwater sampling ("pump") and/or a sensor/data logger for water level, temperature and/or conductivity monitoring ("sensor"). Sensor depths are based on the depth at the time of removal to facilitate data download. Sensors are replaced after download at approximately the same depth; however, minor changes in depth (up to several inches) may occur during replacement. Exact sensor depths will be confirmed at the time of the next data download
6. There are five different combinations of methods to access the monitoring casings: (1) "standard" refers to the use of standard 9/16-inch hex-bolts to secure the well monument, and a compression cap using the City's standard PVC H-Key to secure the well casing; (2) "padlock" refers to the use of the City's keyed padlock to secure an above-grade well monument, and a compression cap using the City's standard PVC H-Key to secure the well casing; (3) "padlock only" is the same as "padlock" except that the well casing is covered with a slip cap; (4) "hex- pin" is the same as "standard" except that Allen-type bolts with a security pin are used to secure the well monument; (5) "hex-pin only" is the same as "hex-pin" except that the well casing is covered with a slip cap.
7. The measured range of groundwater levels in the available historical record for each well is indicated by the high (shallowest) and low (deepest) values (excludes pressure sensor measurements). Values shaded green and in bold represent new historical high/low measurements recorded during the Summer 2017 monitoring.
8. Sensors were pulled from MW014 and MW391 for repair in Summer 2017

Abbreviations

GS	ground surface
TOC	top of the monitoring well casing
--	no data/not applicable

Table 2: Summer 2017 Groundwater Field Parameters and Total Metals Analytical Data

Abbreviations:

5	Bolded result exceeds Screening Level (SL)
-	Not measured or not available
°C	Degrees Celsius
feet BGS	Feet below ground surface
feet BTOC	Feet below measuring point (top of casing)
MCL	Maximum Contaminant Level
mg/L	Milligrams per liter
mS/cm	Millisiemens per centimeter
mV	Milli-Volts
NTU	Nephelometric Turbidity Unit
TOC	Top of casing inside PVC well
U	Analyte not detected above the reporting limit shown
µg/L	Micrograms per liter

Notes:

1. Chemical analyses conducted by OnSite Environmental of Redmond, Washington.
2. The first six digits of the monitoring well identification have been omitted.
3. Groundwater levels are presented as the depth beneath the top of the PVC well casing (TOC) and the depth below ground surface (BGS).
4. Field-measured parameters include temperature (T), conductivity (Cond.), pH, dissolved oxygen (DO), oxidation-reduction potential (EH/ORP) and turbidity.
5. Target Analyte List (TAL) of total metals analyzed by EPA Methods 200.8/6010C . Selected wells were analyzed only for the TAL metals short list which excludes Sb, Be, Se, Ag, and Tl. The Trip Blank samples were not analyzed for TAL total metals.
6. Groundwater sample WGMW01220170804FD is a field duplicate from well MW012; Groundwater sample WGMW02220170728FD is a field duplicate from well MW022
7. Groundwater Quality Criteria (Criteria) used by the Washington State Department of Ecology are based on Chapter 173-200 Washington Administrative Code (WAC).
8. Maximum Contaminant Levels (MCLs) used by the Washington State Department of Health are based on Chapter 246-290 WAC and EPA's "National Primary Drinking Water Regulations," dated May 2009.
9. Field Blank was collected by pumping lab-prepared DI into sample bottles.
10. Model Toxics Control Act (MTCA) Method A value for Washington.

Abbreviations:

5	Bolded result exceeds Screening Level (SL)
-	Not measured or not available
CFU	Colony Forming Units
EPA	Environmental Protection Agency
HCID	Hydrocarbon Identification Scan
J+	Estimated value, high bias.
MCL	Maximum Contaminant Level
mg/L	Milligrams per liter
mL	Milliliter
MPN	Most Probably Number
N	Nitrogen
NWTPH	Northwest Total Petroleum Hydrocarbons
PPCP	Pharmaceuticals and Personal Care Products
SIM PAH	Selective Ion Monitoring Polycyclic Aromatic Hydrocarbons
SVOC	Semi-Volatile Organic Compounds
U	Analyte not detected above the reporting limit shown
VOC	Volatile Organic Compounds
µg/L	Micrograms per liter

Notes:

1. Chemical analyses conducted by OnSite Environmental of Redmond, Washington, Am Test Inc. of Kirkland, Washington, ALS of Kelso, Washington, and Pacific Agricultural Laboratory of Sherwood, Oregon
2. The first six digits of the monitoring well identification shown in Table 1 have been omitted.
3. Only the detected analytes are listed for VOCs, SVOCs, and CECs. Refer to the laboratory reports for a complete list of analytes and detection limits.
4. Tetrachloroethene (CAS No. 127-18-4) is also known as Tetrachloroethylene and Perchloroethene (PCE).
5. Bicarbonate analyzed by standard method (SM) 2320B. Chloride analyzed by SM 4500-CL. Fluoride analyzed by SM 4500-FC. Nitrate analyzed by EPA Method 353.2. Sulfate analyzed by Method ASTM D516-07, Total Dissolved Solids analyzed by SM 2540C. Phosphorous analyzed by EPA Method 365.1.
6. Glyphosate and AMPA area analyzed by EPA Method 547
7. Total Coliforms analyzed by SM 9222B. Fecal Coliforms and E. coli analyzed by SM 9222 Calculation.
8. Units are CFU/100 mL.
9. Groundwater sample WGMW01220170804FD is a field duplicate from well MW012; Groundwater sample WGMW02220170728FD is a field duplicate from well MW022
10. Field Blank was collected by pumping lab-prepared DI into sample bottles using new tubing.
11. Groundwater Quality Criteria (Criteria) used by the Washington State Department of Ecology are based on Chapter 173-200 Washington Administrative Code (WAC).
12. Maximum Contaminant Levels (MCLs) used by the Washington State Department of Health are based on Chapter 246-290 WAC and EPA's "National Primary Drinking Water Regulations," dated May 2009.
13. United States Environmental Protection Agency's (EPA) Drinking Water Health Advisory for PFOA and PFOS.
14. Model Toxics Control Act (MTCA) Method B value for Washington.

Golder Associates

Sulfate	250 mg/L	250 mg/L	5 mg/L
Total Dissolved Solids	500 mg/L	500 mg/L	13 mg/L
Zinc[4]	5000 µg/L	5000 µg/L	28 µg/L
Contaminants of Emerging Concern			
Perfluorooctane Sulfonate (PFOS)	200 ng/L[6]	--	5.0 ng/L

Table 4: Water Quality Standards
Wellhead Protection Program - Redmond, Washington

Contaminant	Department of Ecology Criteria[1]	Department of Health MCLs[2]	PQL[3]
Atrazine	380 ng/L[7]	3000 ng/L	0.95 ng/L
Carcinogenic/Primary Contaminants	**Carcinogenic**	**Primary**	
Arsenic[4]	0.05 µg/L	10 µg/L	**3.3 µg/L**
Tetrachloroethylene (PCE)	0.8 µg/L	5 µg/L	0.20 µg/L

Notes:

1. Groundwater Quality Criteria (Criteria) used by the Washington State Department of Ecology are based on Chapter 173-200 Washington Administrative Code (WAC).

2. Maximum Contaminant Levels (MCLs) used by the Washington State Department of Health are based on Chapter 246-290 WAC.

3. Practical quantitation limit (PQL) reported by the laboratory. pH and Specific Conductivity were measured in the field.

4. Metals are measured as total metals.

5. Model Toxics Control Act (MTCA) Method A value for Washington. This value is considered the background value for Arsenic.

6. United States Environmental Protection Agency's (EPA) Office of Water Provisional Health Advisory (PHA) value.

7. Model Toxics Control Act (MTCA) Method B value for Washington.

PQLs that are greater than their respective Criteria and/or MCLs are **bolded**.

Abbreviations:
mg/L - milligrams per liter
µg/L - micrograms per liter
ng/L - nanograms per liter
mS/cm - milliSiemens per centimeter
CFU/100mL - colony forming units per 100 milliliters
-- - not applicable

490020MW361	MW361	7/27/17 11:00 AM	12.40	12.89	41.71
110000MW362	MW362	7/27/17 10:57 AM	10.22	10.66	22.57
490170MW371[8]	MW371	7/27/17 11:00 AM	12.58	12.83	30.70
560000MW391	MW391	7/27/17 8:55 AM	11.85	12.17	22.87
550000MW392	MW392	7/27/17 8:50 AM	18.90	19.15	24.21
550000MW393[8]	MW393	7/27/17 8:18 AM	17.29	17.64	23.86
550000MW394[8]	MW394	7/27/17 10:00 AM	11.05	11.38	22.73
490020MW395	MW395	7/27/17 12:38 PM	23.66	23.93	41.84
460000MW396	MW396	7/27/17 10:12 AM	64.42	65.16	67.87

Notes:

1. This table is not an all-inclusive list of monitoring stations within the City of Redmond. It lists the City-owned stations that are currently (Summer 2017) accessible for monitoring as part of the Wellhead Protection Program.
2. The first six digits of the monitoring well identification have been omitted.
3. Groundwater levels are presented as the depth beneath the top of the PVC well casing (TOC) and the depth below ground surface (BGS). Bolded values for depth BGS are estimated.
4. MW048 depth to water was not measured because the well was inaccessible.
5. MW110 was dry
6. Privately-owned wells that are not a part of the City of Redmond's network of wells, no survey elevation data are available.
7. King County wells that are not a part of the City of Redmond's network of wells, no survey elevation data are available.
8. Well MW371 replaces well MW329, well MW393 replaces MW344, well MW394 replaces MW351

-- - not measured/not applicable

Notes:

1. All of the sensors have built-in data loggers. The In-Situ pressure sensors (Level TROLL 500) have a 15 pounds per square inch (psi) range and are attached to vented cables. Vented cables include a desiccant chamber containing a blue indicator silica gel that should prevent moisture from condensing inside the vent cable. If the desiccant turns pink, it should be replaced when data are being downloaded. The INW sensors (CT2X) have a 30 psi range, are unvented and also measure conductivity. The INW pressure sensor used to monitor barometric pressure (PT2X-BV) has a 15 psi range and is unvented.

2. The first six digits of the monitoring well identification have been omitted (except for the barometric pressure station).

3. The next data downloads are expected during the next round of groundwater sampling/monitoring (Winter 2018), select wells may be downloaded earlier.

4. While attempting to calibrate the sensor at MW339 (serial number 126250) on 02/19/11, it was determined that the sensor was damaged and unrepairable. This sensor is now inoperable and has been removed from MW339.

5. The barometric pressure sensor was originally kept at GeoEngineers Redmond Office. A new sensor (unvented INW transducer) was hung in the upper part of MW089, installed on May 25, 2016.

6. The INW sensor from MW014 was sent INW for repair and reinstalled in May 2016.

7. Golder was instructed to remove the INW sensors from MW333 and MW393. These sensors were faulty and had limited battery life.

8. Could not communicate with sensors in MW032 or MW337 during August 2016 sampling event. Analysis and communication with InSitu indicates that the MW337 battery is expired. Batteries cannot be replaced in InSitu sensors.

9. Could not communicate with sensors in MW014 or MW391 during summer 2017 sampling event. Sensors pulled from wells for evaluation, status pending.

Recent specification modifications are **bolded.**

APPENDIX A
LABORATORY ANALYTICAL RESULTS
(PROVIDED ON USB)

APPENDIX B
DATA VALIDATION MEMORANDUM

Data Usability Summary Report
City of Redmond, Wellhead Protection Program
July 2017 Sampling
Redmond, Washington

This Data Usability Summary Report (DUSR) presents the findings of the data quality assessment (DQA) performed on the analyses of groundwater samples collected from July 28 through August 7, 2017 in the City of Redmond monitoring well network located in the City of Redmond, Washington (Site). Samples submitted to the laboratory in the sample delivery groups (SDGs) indicated in Table 1 were reviewed in this DUSR to identify quality issues which could affect the use of the sample data for decision making purposes.

The groundwater samples were submitted to Onsite Environmental Inc. Laboratories, of Redmond, Washington to perform requested analyses. Select samples were subcontracted to AM Test Inc. of Kirkland, Washington; ALS Environmental of Kelso, Washington; and Pacific Agricultural Laboratory of Sherwood, Oregon. Information regarding the sample point identifications, analytical parameters, quality control (QC) samples, sampling dates, and laboratory SDG designations are summarized in Table 1. Samples were analyzed utilizing one or more of the following method guidelines:

- Total Metals by Environmental Protection Agency (EPA) Method 200.8 and SW-846 6010C
- Total Organic Carbon by Standard Method (SM) 5310B
- Alkalinity by SM 2320B
- Bicarbonate by SM 2320B
- Chloride by SM 4500-Cl
- Fluoride by SM 4500-F
- Nitrate (as Nitrogen) by EPA Method 353.2
- Sulfate by American Society for Testing and Materials (ASTM) Method D516-07
- Total Dissolved Solids (TDS) by SM 2540C
- Fecal/Total Coliforms and E.coli by SM 9222/CALC, SM 9222B, or SM 9222D
- Northwest Total Petroleum Hydrocarbons – Hydrocarbon Identification Scan by NWTPH-HCID
- Volatile Organic Compounds (VOCs) by EPA Method SW-846 8260C
- Semi Volatile Organic Compounds (SVOCs) by EPA Method SW-846 8270D
- 1,4-Dioxane by EPA Method SW-846 8270D Selective Ion Monitoring (SIM)
- Perfluorooctane Sulfonate (PFOS) and Perfluorooctanoic Acid (PFOA) by PFC/537
- Pharmaceuticals and Personal Care Products (PPCP) by EPA 1694
- Polycyclic Aromatic Hydrocarbons (PAHs) by EPA Method SW-846 8270D and SW-846 8270D SIM
- Aminomethylphosphonic acid (AMPA) and Glyphosate by EPA 547

In addition to the thirty-two (32) primary groundwater samples, two (2) field duplicate samples, one (1) field blank, and eight (8) trip blanks were collected and analyzed for QC purposes.

The data quality assessment was performed in accordance with the Sampling and Analysis Plan (SAP)[1] and the City of Redmond 2017 Sampling Matrix, United Stated Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) National Functional Guidelines for Inorganic Superfund Data Review (January 2017) and National Functional Guidelines for Organic Superfund Data Review (January 2017). Where there was a discrepancy between the QC criteria in the Guidelines and the QC criteria established in the analytic methodology, method-specific criteria, the SAP, or professional judgment was used.

In general, chemical results for the samples collected at the Site were qualified on the basis of laboratory preservation, hold times, blank contamination, outlying precision or accuracy parameters, or on the basis of professional judgment. The following definition provides a brief explanation of the qualifier which may have been assigned to data during the data validation process.

J The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.

In cases where the laboratory qualifier was also associated with a common qualifier (J or U), additional laboratory qualifiers (ex. Y) outside of the common qualifiers were removed.

The validation level for the data is Tier 2, and included the following:

- Data Package Completeness
- Verification of required deliverables
- Evaluation of field forms and field instrument calibrations (as provided)
- Evaluation of holding times and preservations
- Laboratory narrative evaluation
- Evaluation and qualification of QC elements for: Surrogates, Matrix Spike, Laboratory Control samples, Laboratory Duplicates, Method Blanks, Field Blank, Trip Blank, and Field Duplicate evaluation as applicable.
- Evaluation of detection limits

Data review and validation was performed by an experienced quality assurance chemist independent of the analytical laboratory. Data qualifiers that were applied by the laboratory have been removed from the data summary report sheets, when applicable, and superseded by data validation qualifiers (Table 2).

[1] GeoEngineers. 2008. Sampling and Analysis Plan – Groundwater Monitoring Program – City of Redmond Wellhead Protection Program. Redmond, Washington. April 18.

In general, the data generated as part of the groundwater sampling event met the QC criteria established in the respective methods and the Inorganic and Organic Guidelines. The following bulleted items highlight qualifications to specific parameters and/or samples. Table 2 summarizes all qualifications applied to the data, with applicable qualifier codes. Certain samples may have been qualified for multiple DQA findings, as shown on Table 2.

- Chloride results for select primary and field duplicate samples were qualified as estimated (J) when the field duplicate precision was outside QC criteria.
- Laboratory Y qualifiers were removed. Continuing calibration verification data was not provided in the laboratory data packages, however the laboratory indicated the flag was applied in response to exceeding the drift criteria of 20%. Since the laboratory did not make mention of relative response factors below quality control minimums, no qualifications are applied to data based on drift criteria exceeding QC limits in a Tier 2 validation.

Based on the data validations and data quality assessment, the analytical data for samples collected at the Site were determined to be acceptable (including estimated data) for their intended use. The data completeness (i.e. the ratio of the amount of valid data obtained to the amount expected, including estimated (J) data) was 100%.

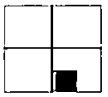
Well Group 2 of 2 for Decommissioning

Construction Notice of Intent Number: SE52209
Decommissioning Notice of Intent Number: AE27991
Unique Ecology Well ID Tag Number: N/A
Property Owner Name: Raptery
Property Owner Address: 1215 Fourth Ave 2400, Seattle, WA 98161

Well Location:
Well Street Address: 8310 154th Ave NE
City, State, Zip: Redmond, WA
County: King
Township: 25N Range: 5E Section: 2 in the SW 1/4 of the SE 1/4



Well Head Elevation:
Elevation Datum:
Elevation Method:
Latitude (DD): Longitude (DD):
Datum:
Horizontal Coordinate Collection Method:
Tax parcel No.:

Lithology

Layer: Describe by color, character, size of material and structure, and the kind and nature of the material in each layer penetrated, with at least one entry for each change of information.

From	To	Material
0 ft 0 in	25 ft 0 in	Sand and gravel

Well Construction Certification: I constructed and/or accept responsibility for construction of this well and its compliance with all Washington well construction standards. Material used and information reported above are true to the best of my knowledge and belief.

Driller/Engineer/Trainee Printed Name: RITCH GIBSON	Drilling Company: GEOLOGIC DRILL EXPLORATIONS INC
Driller or trainee License Number: 1816	Address: 14811 W COULEE HITE RD
If trainee, Driller's License Number:	City, State, Zip: SPOKANE, WA, 99224

Type: _____ H.P. _____

WATER LEVELS: Land-surface elevation above mean sea level _____ ft.

Static level 7' ft. below top of well Date 9/28

Artesian pressure _____ lbs. per square inch Date _____

Artesian water is controlled by _____ (cap, valve, etc.)

WELL TESTS: Drawdown is amount water level is lowered below static level

Was a pump test made? ☐ Yes ☒ No If yes, by whom? _____

Yield: _____ gal./min. with _____ ft. drawdown after _____ hrs.

Yield: _____ gal./min. with _____ ft. drawdown after _____ hrs.

Yield: _____ gal./min. with _____ ft. drawdown after _____ hrs.

Recovery data (time taken as zero when pump turned off) (water level measured from well top to water level)

Time	Water Level	Time	Water Level	Time	Water Level

Date of test _____

Bailer test _____ gal./min. with _____ ft. drawdown after _____ hrs.

Airtest _____ gal./min. with stem set at _____ ft. for _____ hrs.

Artesian flow _____ g.p.m. Date _____

Temperature of water _____ Was a chemical analysis made? ☐ Yes ☒ No

CONSTRUCTION OR DECOMMISSION PROCEDURE

Formation: Describe by color, character, size of material and structure, and the kind and nature of the material in each stratum penetrated, with at least one entry for each change of information. (USE ADDITIONAL SHEETS IF NECESSARY.)

1.0 INTRODUCTION

Environmental Partners, Inc. (EPI) completed a Phase I Environmental Site Assessment (ESA) of two commercial parcels located at 15801 and 15945 NE 85th Street in Redmond, King County, Washington, which will be referred to as the "subject property." EPI performed environmental consulting services on behalf of MCRT West Coast LLC (MCRT), who requested this Phase I ESA as a part of pre-purchase due diligence.

1.1 Purpose

A Phase I ESA is intended to permit the user to satisfy one of the requirements to qualify for one or more liability defenses available under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) by conducting all appropriate inquiries into the ownership and uses of the subject property consistent with good commercial or customary practice as defined by 42 U.S.C. §9601 (35)(B), or similar defenses available under the Model Toxics Control Act as defined in RCW 70.105D040 (3)(b). The goal of this Phase I ESA is to identify recognized environmental conditions using the level of care that is standard in the environmental industry today.

The term *recognized environmental conditions (RECs),* as defined by American Society for Testing and Materials (ASTM), is the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. RECs are not intended to include *de minimis* conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

1.2 Scope of Services

This Phase I ESA was performed in general accordance with ASTM Practice E 1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* (ASTM 2013). The Phase I ESA also meets 40 CFR §312, *Standards and Practices for All Appropriate Inquiries* (AAI). This assessment did not include testing related to asbestos, lead-based paint, radon, regulatory compliance, mold, or ecological resources.

1.3 Significant Assumptions

The conclusions of this Phase I ESA are based on research of readily available current and historical information sources, subject property and local agency personnel interviews, review of previous environmental investigations, and a site visit. Whenever possible, EPI researched more than one information source in order to substantiate the findings and conclusions. Whether EPI relied on one or multiple information sources, EPI must assume that the information source(s) are correct unless another source indicates otherwise.

1.4 Limitations

The conclusions of this report are based on the information described herein and EPI's experience and professional judgment. The information was either made available to EPI or reasonably obtained within the practical constraints of our scope of services. It is not possible to eliminate all uncertainties; however, steps can be taken to reduce their impact. If you become aware of information EPI did not consider, or have any questions concerning our conclusions and recommendations, please advise EPI immediately.

No practical study or procedure can or should be expected to discover all potential contamination. However, EPI believes this ESA, in conjunction with any recommended additional studies, does represent due diligence as determined in accordance with the professional standard of care. This standard is the current level of care and skill ordinarily exercised by members of the engineering profession practicing under similar conditions in the project area. EPI cannot be held responsible if due diligence standards change or if MCRT is required to meet a higher standard.

1.5 Special Terms and Conditions

There are no special terms or conditions associated with this Phase I ESA.

2.0 SUBJECT PROPERTY

2.1 Subject Property Information

Addresses:	15801 NE 85th Street, Redmond, King County, Washington 15945 NE 85th Street, Redmond, King County, Washington
Parcel Numbers:	719890-0170 719890-0180
Property Acreage:	1.5
Legal Description	REDMOND CENTER, PLAT LOTS: 17 AND 18
Latitude:	47.678152
Longitude:	-122.129434
Land Use/Zoning:	Commercial
T R S Q:	T25 R05 S2 QSE

The subject property location is depicted on Figure 1. A representation of the subject property is provided as Figure 2.

2.2 Subject Property Owner/Key Site Manager

The fee owners of record for the two parcels comprising the subject property are:

- BJT Investments LLC for parcel 719290-0170; and

- Mr. Rod D. Robinson, DDS, for parcel 719290-0180 (King County Assessor 2017).

Mr. Joseph Tassia of BJT Investments LLC and Mr. Rod D. Robinson completed EPI's Property Owner Questionnaire. Their responses have been incorporated into the appropriate sections of this report. A copy of the completed questionnaire is included in Attachment A.

2.3 Subject Property Description and Improvements

The subject property is identified as King County tax parcel numbers 719290-0170 and 719290-0180, and totals approximately 1.5 acres (Figure 2). The subject property includes an office building and the Sammamish Dental Center. The office building is a 1990-vintage 2-story building of wood-frame construction enclosing a total of approximately 10,362 square feet of space. The Sammamish Dental Center building is a 1973-vintage single-story building of masonry construction enclosing a total of approximately 4,673 square feet of space. Additional details regarding these structures is presented below.

Access to 15801 NE 85th Street (719290-0170) is gained from 158th Avenue NE, which forms the western property boundary. At the time of the reconnaissance visit, ground surfaces within the subject property boundaries were paved with asphalt, with some landscaped areas and trees.

Access to 15945 NE 85th Street (719290-0180) is gained from NE 85th Street, which forms the northern property boundary. At the time of the reconnaissance visit, ground surfaces within the subject property boundaries were paved with asphalt, with some landscaped areas and trees.

2.3.1 Structure Details

Details regarding the structures on the subject property are presented below:

Building 1 – 1990 Office Building (719290-0170)

Building Square Footage:	10,362 ft^2
General Construction:	Standard wood construction over slab on grade
Current Occupants:	Multiple businesses

Building 2 – 1973 Sammamish Dental Center (719890-0180)

Building Square Footage:	4,673 ft^2
General Construction:	Masonry construction
Current Occupant:	Sammamish Dental Center

2.4 Previous Environmental Documentation

2.4.1 2009 Phase I ESA

EPI was provided a copy of the *Phase I ESA, First Citizens Bank, 15801 NE 85th Street, Redmond, Washington 98052* dated November 5, 2009 prepared by O'Neill Environmental (2009 Phase I ESA). The 2009 Phase I ESA included King County Parcel 719290-0170 and was prepared for First Citizens Bank. The 2009 Phase I ESA identified no evidence of RECs in connection with the property. A copy of the 2009 Phase I ESA is included in Attachment B.

2.4.2 2017 Redmond Wellhead Report

Based on EPIs experiences and actual knowledge of regional groundwater concerns in the City of Redmond, EPI requested the most recent report pertaining to the City of Redmond's Wellhead Protection Program. The City provided a copy of the letter report regarding *Summer 2017 Groundwater Monitoring Event City of Redmond Wellhead Protection Program* dated November 10, 2017 prepared by Golder Associates (2017 Redmond Wellhead Report). A copy of the report is included in Attachment B.

The 2017 Redmond Wellhead Report includes reference that during the recent sampling event (i.e., summer 2017) low-level concentrations of tetrachloroethene (PCE) were detected in groundwater samples collected from monitoring wells located at the intersection of Northeast 85th Street and 161st Avenue Northeast, approximately 0.2-mile east of the subject property. The report does not identify the source of the PCE, however, low-level concentrations of PCE in groundwater is a known regional issue for the City of Redmond. According to the report, the regional groundwater flow direction is west, toward the Sammamish River.

The detected concentrations of PCE ranged from 0.80 micrograms per liter (µg/L) to 1.9 µg/L. None of the detected concentrations exceed the Model Toxics Control Act (MTCA) Method A Cleanup Level for Groundwater of 5 µg/L for PCE. EPI is not aware of empirical groundwater data collected at the subject property. Because the detected concentrations do not exceed the MTCA Method A Cleanup Level of 5 µg/L, the presence of PCE detected in groundwater proximate to the subject property is not considered a REC. However, the presence of low concentration PCE may represent an additional development cost for dewatering and therefore is considered a business environmental risk (BER).

2.5 Physical Setting

The subject property is located in a commercial area about 0.75 miles north of Washington State Highway 520. The subject property resides at an approximate elevation of 38 feet above mean sea level, and is relatively flat with a slight topographic gradient toward the west-northwest.

2.5.1 Geology/Hydrogeology

According to the 2009 Phase I ESA, the subject property lies within the Puget-Willamette Trough aquifer system that underlies an elongated basin that extends southward from near the Canadian border in Washington south to central Oregon. The dominant soil composition in the vicinity of the subject property

is reportedly classified as Alderwood gravelly sandy loam. This soil consists of deep, somewhat excessively-drained soils formed on till plains formed from basal till. The soil extends to a depth of approximately 10 to 40 inches below ground surface (bgs). This soil is moderately well drained, and the available water capacity is very low.

EPI completed online research of the Washington State Department of Ecology (Ecology) Resource Protection Well Reports website. Resource protection well reports for soil borings or wells in the vicinity of the subject property indicated soil conditions include brown organic gravelly fill from ground surface to a depth of approximately 5 feet bgs, silty tan gray brown gravel from 5 to 10 feet bgs, and sandy gravelly wet soil from 10 to 13 feet bgs (Ecology 2017). Copies of the resource protection well logs obtained from the Ecology website are included in Attachment B.

The 2017 Wellhead Report indicates that shallow groundwater in the vicinity of the subject property may be encountered at depths between 20 and 25 feet bgs. Depth to a shallow water table aquifer at the subject property, if present, and groundwater flow direction cannot be determined without a minimum of three groundwater monitoring wells surveyed to a common datum. The nearest surface water body is the Sammamish River, located approximately 200 feet west of the subject property. The Sammamish River flows in a northerly direction and discharges to Lake Washington approximately 8 miles northwest of the subject property, near Bothell, Washington. Based on the available information, the inferred hydrogeologic gradient is west, toward and with the Sammamish River.

2.5.2 Vicinity and Adjacent-Property Land Uses

The City of Redmond was incorporated in 1912 and includes approximately 17 square miles. The subject property is located in a mixed commercial and residential area. The Sammamish River is located approximately 200 feet west of the subject property. Property uses in the vicinity are primarily multi-family residential and commercial.

Adjacent-property land uses include:

- North-adjacent – The subject property is bordered on the north by Northeast 85th Street with the City of Redmond City Hall, King County Redmond Library, and a parking lot farther north across the street.
- East-adjacent – The east-adjacent property is occupied by a dental office.
- South-adjacent – Northeast 84th Way adjoins the southern property boundary. The south-adjacent property is occupied by multi-family residences.
- West-adjacent – The western property boundary is formed by 158th Avenue Northeast. Farther west is the Allez multi-family residential building.

Observations of the surrounding properties made during the reconnaissance visit are provided in Section 6.0, Site Reconnaissance.

3.0 USER RELIANCE AND PROVIDED INFORMATION

This report was prepared for exclusive use by MCRT, its investors, lenders, partners, and affiliates for this project only. The scope of services was developed in conjunction with MCRT involvement to achieve specific project objectives, with the intent of establishing an appropriate balance between level of effort and uncertainty. Providing the report to others not party to this mutual scope determination, or using it for other projects or purposes can result in misunderstandings or incorrect conclusions. EPI cannot be responsible for interpretation or extrapolation of the data contained herein, except as stated in our conclusions or recommendations.

Mr. Sean G. Hyatt, Senior Managing Director of MCRT, completed the ASTM 1527-13 User Questionnaire form. Mr. Hyatt's information from the questionnaire is presented below or has been incorporated into the appropriate sections of the report. A copy of the completed questionnaire is included in Attachment A.

3.1 Environmental Liens or Activity and Use Limitations

No records of environmental liens or activity and use limitations were identified in connection with the subject property according to the King County Assessor's website information.

3.2 Specialized Knowledge

Mr. Hyatt indicated that he has no specialized knowledge regarding the subject property, adjacent properties, or their on-site processes.

3.3 Valuation Reduction for Environmental Issues

A valuation reduction occurs when the value of the property has been reduced below comparable properties due at least in part to environmental conditions associated with the property. Mr. Hyatt indicated that he is not aware of any property devaluation associated with environmental issues.

3.4 Common Knowledge or Reasonably Ascertainable Information

Mr. Hyatt was not aware of any commonly known or reasonably ascertainable information within the local community about the property that is material to RECs in connection with the subject property.

4.0 HISTORICAL USE INFORMATION

The history of the subject property was researched to identify and evaluate past uses that might have effected environmental conditions, primarily through operations that included the use of hazardous substances or petroleum products. The following standard historical sources were used to identify historical use of the subject property and adjacent-properties:

- Property Tax Files – Online property records available from the King County Assessor webpage (King County Assessor 2017); and historical tax records obtained from the Puget Sound Regional Archives.

- Aerial Photographs – obtained from Environmental Data Resources, Inc. (EDR) for years 1943, 1965, 1968, 1978, 1980, 1985, 1990, 2005, 2006, 2009, and 2011.

- United States Geologic Survey (USGS) Topographic Maps – obtained from EDR for years 1895, 1897, 1950, 1968, 1973, and 2014.

- Local Street Directories – historical city directories research completed by EDR for years 1971, 1976, 1981, 1986, 1995, 2000, 2005, 2010, and 2014; no records were identified for the year 1992.

- Fire Insurance Maps –Sanborn Fire Insurance Maps were not available for the subject property.

- Title Records – This assessment did not include obtaining a chain-of-title report, and a chain-of-title was not provided to EPI for review.

Copies of the standard historical sources reviewed during this assessment are provided in Attachment C.

4.1 Historical Use of the Subject Property

The historical property tax records indicate that Sammamish Dental Center building located on parcel 719890-0180, at 15945 NE 85th Street, was constructed in 1973. Aerial photographs prior to that date show the subject property and surrounding areas as largely undeveloped and vegetated. The office building located on parcel 719890-0170, at 15801 NE 85th Street, was constructed in 1990 and initially used as a bank. The office building is first visible in the 2005 aerial photograph.

The historical city directories document the following occupants at the subject property addresses.

Year	Address	Occupant
1971	15801 NE 85th St	No address identified
	15945 NE 85th St	No address identified
1976	15801 NE 85th St	No address identified
	15945 NE 85th St	Sammamish Vy Dental
1981	15801 NE 85th St	No address identified
	15945 NE 85th St	Sammamish Vly Dental
1986	15801 NE 85th St	No address listed
	15945 NE 85th St	Orion Dental Lab
1995	15801 NE 85th St	Washington Commercial Bancorp
	15945 NE 85th St	Sammamish Valley Dental Center

Year	Address	Occupant
2000	15801 NE 85th St	Washington Commercial Bancorp
	15945 NE 85th St	Sammamish Valley Dental Center
2005	15801 NE 85th St	Washington Commercial Bancorp
	15945 NE 85th St	Sammamish Valley Dental Center
2010	15801 NE 85th St	First-Citizens Bank & Trust Co, Washington Commercial Bancorp
	15945 NE.85th St	Sammamish Valley Dental Center and Tangen Dental Lab
2014	15801 NE 85th St	Northwest Nexus Inc., Unisoft Networks, Unixon International Inc., Washington Commercial Bancorp
	15945 NE 85th St	Sammamish Valley Dental Center and Tangen Dental Lab

Based on the historical sources obtained and reviewed by EPI, the subject property was developed in the 1970s with the existing dental office building. Other portions of the subject property remained largely undeveloped until construction of the existing office building in 1990. Historical operations at the subject property have included the dental office and commercial offices. These historical uses are not considered a REC.

4.2 Historical Use of Adjacent Properties

Adjacent properties appear largely undeveloped prior to 1978. The 1978 aerial photograph shows development of the east- and north-adjacent properties. Areas to the west are not visible in the 1978 aerial photograph. Areas surrounding the subject property appear in a similar configuration in the 1980 aerial photograph.

Development on the west-adjacent property is first visible in the 1985 aerial photograph and the south-adjacent property is undeveloped and wooded. Further development of the west-adjacent property is observed in the 1990 aerial photograph, as is initial development of the City of Redmond municipal campus located farther north beyond the current City Hall building.

The existing south-adjacent multi-family residential development is first visible in the 2005 aerial photograph. Subsequent aerial photographs show the surrounding property similar to the current configuration, except for the west-adjacent Allez multi-family residential development that was constructed in 2013.

Based on the limited historical materials available, adjacent properties appear to be first developed in the 1970s and have been used for residential and commercial purposes.

5.0 REGULATORY RECORDS REVIEW

Facilities that generate, transport, store, or dispose of hazardous materials—or that have known or potentially identified contamination that could impact the subject property—were identified using federal, state, and local databases. EDR conducted the database search. The EDR Radius Map™ Report is included in Attachment D.

EDR conducted a search of federal and state regulatory agency databases based on the location and address of the subject property; and using the search radii prescribed under ASTM Standard E 1527-13. A summary of the number of facilities identified, and databases searched, is provided in Table 1. The table indicates the total number of listings identified for each database, and highlights if the subject property was identified.

The EDR Radius Map™ Report included three "orphan" sites that could not be located due to inadequate address information contained within the regulatory databases. EPI reviewed the limited information provided by EDR and has incorporated the results for the orphan sites into Table 1, if applicable.

EPI used the Vapor Encroachment Worksheet provided by EDR to meet the search requirements of the ASTM Standard Practice for Assessment of Vapor Encroachment into Structures on Property Involved in Real Estate Transactions (ASTM 2008). A copy of the EDR Vapor Encroachment Screen report is included in Attachment D.

The following sections present facility listings identified by EDR and are organized by subject property, adjacent properties, and vicinity facilities.

5.1 Subject Property

The subject property addresses, 15801 and 15945 Northeast 85th Street, were not identified in the databases searched by EDR.

5.2 Adjacent Properties

The following adjacent properties were identified in The EDR Radius Map™ Report.

- Highlander Oil – Located at 15955 NE 85th St, this facility is located on the east-adjacent property. This facility was identified on the ALLSITES, RCRA NonGen/NLR, FINDS, and ECHO databases. This listing is associated with disposal of ignitable waste in 1993. No violations for this facility were identified in the EDR report. Based on the regulatory status of this facility it is not a REC for the subject property.

- 85th Street Apartment – Located at 15655 NE 85th St, this facility is located on the west-adjacent property across 158th Avenue Northeast. This facility is identified on Figure 2 as the Allez multi-family residential property. This facility was identified on the ALLSITES database. This listing is associated with a construction stormwater general permit likely associated with

the construction of the existing building in 2013. Based on the regulatory status of this facility it is not a REC for the subject property.

- City of Redmond – Located at 15670 NE 85th St, this facility is located on the north-adjacent property across NE 85th St. This facility is identified on Figure 2 as City of Redmond City Hall. This facility was identified on the ALLSITES, SPILLS, ASBESTOS, and NPDES databases. The EDR report indicates the SPILLS listing is associated with a spill of 2 quarts of hydraulic oil in 2007 and removal of asbestos-containing building materials in 2017. Based on the regulatory status of this facility it is not a REC for the subject property.

5.3 Vicinity Facilities

As indicated in Table 1, several other addresses near the subject property were listed in The EDR Radius Map™ Report; however, none of these facilities appear to represent a REC for the subject property for one or more of the following reasons:

- The facility is not listed on a database indicating a release to the environment.
- The regulatory status indicates that cleanup is complete, the site is closed, no violations are present, and/or the site no longer requires permits to handle hazardous wastes.
- The facility is located at least one-eighth of a mile from the subject property.
- The facility is located in an inferred down- or cross-gradient hydrogeologic position relative to the subject property.

6.0 SITE RECONNAISSANCE

Mr. Brett Carp, Senior Environmental Scientist, completed a reconnaissance visit on November 6, 2017 to obtain information indicating the likelihood of identifying RECs for the subject property. Arielle Dorman of Kidder Mathews, the listing agent, served as escort during the reconnaissance visit.

The weather at the time of the visit was overcast and approximately 41°F (WeatherUnderground 2017). Weather conditions did not restrict the reconnaissance observations of the subject property.

The reconnaissance visit methodology consisted of walking the subject property exterior areas and viewing representative interior areas of the two on-property buildings. No limiting conditions such as physical obstructions or constraints were encountered during the reconnaissance visit. A limited visual reconnaissance of adjacent properties was also conducted. The limited visual reconnaissance was restricted to observations made from public areas/rights-of-way.

6.1 Subject Property Observations

EPI's observations of the subject property uses and conditions are documented in Table 2. Details regarding pertinent observations are presented below. Representative photographs collected during the visit are included in Attachment E.

6.1.1 General Observations

- Hazardous substances and petroleum products in connection with identified uses: A dental amalgam separator is located inside an exterior storage closet at the southwest corner of the dental office building. According to the operator, the separator has been serviced in the past 6 months and all dental wastes captured by the separator are disposed off-property.

- Polychlorinated biphenyls (PCBs): A pad-mounted electrical transformer is located proximate to the southwest corner of the subject property. No labels were observed on the transformer. Responsibility for maintenance of the transformer resides with local electrical power provider (Puget Sound Energy).

6.1.2 Utilities

- Electrical power: Electrical service is provided by Puget Sound Energy.

- Garbage and recycling: Garbage and recycling containers were observed on the south side of both buildings on the subject property. Garbage and recycling service is provided by Waste Management.

- Natural gas: Natural gas service is provided by Puget Sound Energy.

- Potable water: Potable water is provided by the City of Redmond.

- Sewer or septic system: Sewer service is provided by the City of Redmond.

- Stormwater: Stormwater catch basins were observed throughout the asphalt-paved parking areas. Stormwater service is provided by the City of Redmond.

6.1.3 Building Interior Observations

- Building heating/cooling: Building interior areas are heated with electrical and natural gas-fired furnaces.

6.1.4 Exterior Features

EPI did not observe any exterior features listed on Table 2 on the subject property.

6.2 Adjacent-Property Observations

EPI conducted a limited visual reconnaissance of the adjacent-properties. The limited visual reconnaissance was restricted to observations made from public areas/rights-of-way. The following adjacent-property uses were observed during the reconnaissance visit:

- North-adjacent – The subject property is bordered on the north by Northeast 85th Street with the City of Redmond City Hall, King County Redmond Library, and a parking lot farther north across the street.
- East-adjacent – The east-adjacent property is occupied by a dental office.
- South-adjacent – Northeast 84th Way adjoins the southern property boundary. The south-adjacent property is occupied by multi-family residences.
- West-adjacent – The western property boundary is formed by 158th Avenue Northeast. Farther west is the Allez multi-family residential building.

7.0 INTERVIEWS

This section presents a summary of the interviews conducted by EPI during this assessment. The objective of interviews was to obtain information indicating RECs for the subject property.

- Fire Department – EPI submitted a request to the local fire department by phone on November 6, 2017. No response had been received at the time of this report. The lack of this response is not considered a data gap.
- City of Redmond – EPI submitted a request to the City of Redmond by phone on November 6, 2017. No response had been received at the time of this report. The lack of this response is not considered a data gap.

8.0 FINDINGS AND CONCLUSIONS

EPI has performed this Phase I ESA in general conformance with the scope and limitations of ASTM Practice E 1527-13 of the two commercial parcels located at 15801 and 15945 NE 85th Street, in Redmond, King County, Washington. Any exceptions to, or deletions from, this practice are described in Section 8.1 of this report. This assessment has revealed no evidence of RECs in connection with the subject property.

EPI identified one BER in connection with the property. The 2017 Redmond Wellhead Report includes reference that during the recent sampling event (i.e., summer 2017) low-level concentrations of PCE were detected in groundwater samples collected from monitoring wells located at the intersection of Northeast 85th Street and 161st Avenue Northeast, approximately 0.2-mile east of the subject property. The report does not identify the source of the PCE, however, low-level concentrations of PCE in groundwater is a known regional issue for the City of Redmond. Because the detected concentrations

do not exceed the MTCA Method A Cleanup Level of 5 µg/L, the presence of PCE detected in groundwater proximate to the subject property is not considered a REC. However, the presence of low concentration PCE in groundwater may represent an additional development cost for dewatering and therefore is considered a BER.

8.1 Deviations, Exceptions, and Data Gaps

EPI has made an appropriate inquiry into the commonly known and reasonably ascertainable resources concerning the historical ownership and use of the subject property. No significant deviations or data gaps occurred from the ASTM Practice E 1527-13, *Standard Practice for Environmental Site Assessments; Phase I Environmental Site Assessment Process* and 40 CFR §312.

8.2 Environmental Professional Statement

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR § 312. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

The qualifications of the Environmental Professional who prepared this assessment are included in Attachment F.

Table 2
Subject Property Reconnaissance Observations
Phase I Environmental Site Assessment
Two Commercial Parcels
15801 and 15945 NE 85th Street, Redmond, Washington

Date of visit: November 6, 2017
EPI Personnel: B. Carp

Current Use(s): Commercial office space (15801 NE 85th St) and dental office (15945 NE 85th St)

Subject Property Features	Observed (Y/N)	Location	Notes	Photographs
General Observations				
Aboveground Storage Tanks (ASTs)	N			
Drums	N			
Hazardous Substances & Petroleum Products (in connection with Identified Uses)	Y	A dental amalgam seperator is located at the southwest corner of the dental office building (15945 NE 85th St).	According to the operator, the seperator was serviced in the past 6 months and all waste captured by the seperator is disposed of off-property.	Photo 8
Hazardous Substances & Petroleum Products (not in connection with identified Uses)	N			
Odors	N			
Polychlorinated Byphenyls (PCBs)	N	Pad-mounted transformer at southwest corner of subject property	A pad-mounted electrical transformer was observed at the southwest corner of the subject property. No labels regarding PCBs were observed on the transformer. Responsibility for maintenance of the transformer resides with the local elecrical power provider.	Photo 7
Pools of liquid	N			
Underground Storage Tanks (USTs)	N			
Unidentified substance containers	N			
Utilities				
Electrical Power	Y		Electrical service is provided by Puget Sound Energy.	
Garbage & Recyling	Y	Garbage and recycling containers were observed on the south side of each of the subject property buildings.	Garbage and recycling service is provided by Waste Management.	
Natural Gas	Y		Natural gas service is provided by Puget Sound Energy.	
Potable Water	Y		Potable water is provided by the City of Redmond.	
Sewer or Septic System	Y		Sewer service is provided by the City of Redmond.	
Stormwater	Y	Stormwater catch basins were observed throughout the asphalt-paved parking areas.	Stormwater service is provided by the City of Redmond.	
Building Interior Observations				
Building Heating/Cooling	Y		Building interior areas are heating with electrical and natural gas fired furnaces.	
Drains and Sumps	N			
Stains or Corrosion	N			
Exterior Features				
Pits, ponds, or lagoons	N			
Solid Waste or Fill-areas	N			
Stained soil or pavement	N			
Stressed vegetation	N			
Wastewater (i.e., wastewater or other liquid discharged into a drain, ditch, underground injection system, or stream)	N			
Wells (e.g., dry, irrigation, injection, abandonded, water, monitoring)	N

B. Please provide a chronology of the subject property ownership and history:

To the best of my knowledge as I wasn't involved until 1976.

The building was built on a slab approximately 1973-1974. It was put together by Dr. Dan Braughton, Dr. Alvin Taniguchi, Dr. Mike Molvar and Dr. John Huleen. I purchased a 1/4 share in 1978 from Dr. Molvar. Subsequently Dr. Huleen and I purchased shares from Dr. Taniguchi and Dr. Broughton.

ENVIRONMENTAL SITE ASSESSMENT QUESTIONNAIRE
Property Owner/Representative or Facility Manager

QUESTIONNAIRE PART II: ENVIRONMENTAL QUESTIONS

A. To your knowledge, is the subject property and/or adjoining properties used or have/has been used in the following manner:

1. Any industrial use	☐ Yes	☑ No	☐ Unknown
2. Fuel station (i.e., gas station)	☐ Yes	☑ No	☐ Unknown
3. Motor or equipment repair facility	☐ Yes	☑ No	☐ Unknown
4. Commercial printing facility	☐ Yes	☑ No	☐ Unknown
5. Dry cleaner	☐ Yes	☑ No	☐ Unknown
6. Photo developing laboratory	☐ Yes	☑ No	☐ Unknown
7. Junkyard or landfill	☐ Yes	☑ No	☐ Unknown
8. A waste treatment, storage, disposal, processing, or recycling facility (if applicable, identify which)?	☐ Yes	☑ No	☐ Unknown

If yes for any of the above, please provide additional information regarding location and type of facility that is or was present:

B. Are there currently or have there been in the past any of the following materials stored at, used at, or brought onto the subject property or facility and/or adjoining properties or facilities?

1. Automotive or industrial batteries	☐ Yes	☑ No	☐ Unknown
2. Pesticides	☐ Yes	☑ No	☐ Unknown
3. Paint periodic refurbishing interior	☑ Yes	☐ No	☐ Unknown
4. Other chemicals	☐ Yes	☑ No	☐ Unknown
5. Fill dirt originated from an unknown origin or a contaminated site (if applicable, identify which)?	☐ Yes	☑ No	☐ Unknown

If yes for any of the above, please provide additional information regarding location and type of material that is or was present:

The interior has been repainted three times over the last 44 years. No paint was stored on site.

ENVIRONMENTAL SITE ASSESSMENT QUESTIONNAIRE
Property Owner/Representative or Facility Manager

C. Are there currently or have there been in the past any of the following features located on the property and/or adjoining properties:

1. Pits	☑ Yes	☐ No	☐ Unknown
2. Lagoons or ponds	☐ Yes	☑ No	☐ Unknown
3. Septic systems	☐ Yes	☑ No	☐ Unknown
4. Floor drains	☐ Yes	☑ No	☐ Unknown
5. Clarifiers or sumps	☐ Yes	☑ No	☐ Unknown
6. Stained soil	☐ Yes	☑ No	☐ Unknown
7. Registered or unregistered aboveground or underground storage tanks (if applicable, identify which type below)	☐ Yes	☑ No	☐ Unknown

If yes for any of the above, please provide additional information regarding location and the item that is or was present:

Small sinkhole southwest corner of building. It was the result of a broken storm water pipe. So storm water undermined part of the parking lot rather than being directed into the catch basin. The pipe was repaired and the hole filled with gravel and asphalt.

D. To your knowledge, are there any aboveground storage tanks (ASTs) or underground storage tanks (USTs) currently located on the property and/or adjoining property? Or, have there been any of the following objects or evidence located on the property or adjacent to any structure located on the property and/or adjoining property:

1. Vent pipes	☐ Yes	☑ No	☐ Unknown
2. Fill pipes	☐ Yes	☑ No	☐ Unknown
3. Access ways indicating a fill pipe protruding from the ground	☐ Yes	☑ No	☐ Unknown
4. Leaks, spills, or staining by substances other than water (if applicable, identify which below)	☐ Yes	☑ No	☐ Unknown
5. Foul odors associated with any flooring, drains, walls, ceilings, or exposed ground (if applicable, identify which below)	☐ Yes	☑ No	☐ Unknown

If yes for any of the above, please provide additional information regarding location and the item that is or was present:

ENVIRONMENTAL SITE ASSESSMENT QUESTIONNAIRE
Property Owner/Representative or Facility Manager

E. If the property and/or adjoining property is served by a private well or non-public water system, do you have any knowledge that:

1. Contaminants have been identified in the well or water system that exceed guidelines applicable to the water system? ☐ Yes ☑ No ☐ Unknown
2. The well has been designated by any government environmental/health agency as being contaminated? ☐ Yes ☑ No ☐ Unknown

If yes, please provide any additional information you have regarding the location of the well and the contaminant(s) and concentration(s) present:

F. With respect to the property or any facility located on the property and/or adjoining properties, do you have any knowledge of or have you been informed of:

1. Past or current existence of hazardous substances or petroleum products ☐ Yes ☑ No ☐ Unknown
2. Past or current existence of environmental violations ☐ Yes ☑ No ☐ Unknown
3. Any permits, orders, or waste discharge requirements issued by or requested from any environmental regulatory agency in relation to the properties ☐ Yes ☑ No ☐ Unknown
4. Any environmental assessment indicating the presence or contamination of hazardous substances or petroleum products or recommended further assessment ☐ Yes ☑ No ☐ Unknown
5. Any past, threatened, or pending lawsuits or administrative proceedings concerning a release or threatened release of any hazardous substance or petroleum products? ☐ Yes ☑ No ☐ Unknown

If yes for any of the above, please provide any additional information you have regarding the location of the substance or violation and the basis of your knowledge:

ENVIRONMENTAL SITE ASSESSMENT QUESTIONNAIRE
Property Owner/Representative or Facility Manager

G. Has the property and/or adjoining properties discharged, dumped above grade, buried and/or burned any of the following materials on or adjacent to the property and/or into a storm water or sanitary sewer system (if applicable, identity which):

1. Industrial wash or wastewater (not including sanitary waste or stormwater)	☐ Yes	☑ No	☐ Unknown
2. Any hazardous substances or petroleum products	☐ Yes	☑ No	☐ Unknown
3. Unidentified waste materials	☐ Yes	☑ No	☐ Unknown
4. Tires	☐ Yes	☑ No	☐ Unknown
5. Automotive or industrial batteries	☐ Yes	☑ No	☐ Unknown
6. Any other waste materials?	☐ Yes	☑ No	☐ Unknown

If yes for any of the above, please provide any additional information you have regarding the location or former location of the material and current disposition of the material (i.e., tires buried in back of subject property lot, etc.):

H. Are there or have there been any of the following equipment for which there are any records indicating the presence of polychlorinated biphenyls (PCBs)?

1. Electrical transformers	☐ Yes	☑ No	☐ Unknown
2. Capacitors	☐ Yes	☑ No	☐ Unknown
3. Air or gas compressors	☐ Yes	☐ No	☑ Unknown
4. Fluorescent light ballasts	☐ Yes	☐ No	☑ Unknown
5. Any hydraulic equipment?	☐ Yes	☑ No	☐ Unknown

If yes for any of the above, please provide any additional information regarding the location or former location of the item and current disposition of the material (i.e., original air compressor located in garage but replaced in 2007 with current compressor):

ENVIRONMENTAL SITE ASSESSMENT QUESTIONNAIRE

Property Owner/Representative or Facility Manager

I. To your knowledge, have any environmental or geotechnical assessments of the subject property and/or adjoining properties been conducted?

1. Environmental	☐ Yes	☑ No	☐ Unknown
2. Geotechnical	☐ Yes	☐ No	☑ Unknown
3. Other?	☐ Yes	☑ No	☐ Unknown

Please provide the nature and dates of these assessments, if known.

J. Are you aware of any environmental cleanup liens against the subject property, governmental orders, consent decrees, cleanup and abatement orders, or lawsuits that are filed or recorded under federal, state, tribal, or local law? ☐ Yes ☑ No ☐ Unknown

If yes, please provide any additional information regarding which property, nature of environmental action, and status of environmental action:

K. Are you aware of any activity or land use limitations, such as engineering controls, land use restrictions or institutional controls, that are in place on the site or that have been filed or recorded in a registry (40 CFR 312.26)? Please provide the nature and dates of these assessments, if known.

1. Engineering Controls (e.g., engineered cap, subsurface barrier wall, etc.)	☐ Yes	☑ No	☐ Unknown
2. Land Use Restrictions (e.g., industrial only, no groundwater removal, etc.)	☐ Yes	☑ No	☐ Unknown
3. Institutional Controls (e.g., deed restrictions, financial assurances, etc.)	☐ Yes	☑ No	☐ Unknown

ENVIRONMENTAL PARTNERS INC 1180 NW Maple Street, Suite 310 Issaquah, Washington 98027 ph 425.395.0010

ENVIRONMENTAL SITE ASSESSMENT QUESTIONNAIRE
Property Owner/Representative or Facility Manager

Subject Property: 15801 and 15945 NE 85th St, Redmond, Washington

Project: **Phase I Environmental Site Assessment**

Introduction: The following questionnaire has been prepared in accordance with the U.S. EPA All Appropriate Inquiries (AAI) Final Rule and ASTM International (ASTM) Standard E1527-13, Standard Practice for Environmental Site Assessments, adopted by the ASTM as part of the Phase I Environmental Site Assessment standard process.

Questionnaire Purpose: Environmental Partners, Inc. (EPI) has been retained to conduct an environmental site assessment of the subject property. The purpose of the assessment is to evaluate the property for evidence of current and historical dangerous/hazardous waste and/or hazardous material releases to the environment. As the property owner, owner's representative, or current or past lessee/tenant, your knowledge of the subject property is requested to collect information that may not be found in public records or is not visually apparent. Please answer the following questions by checking the appropriate response. If an employee has better knowledge of subject property history related to dangerous/hazardous waste or hazardous material releases, please have him/her complete a copy of the questionnaire by checking the appropriate answer to each of the following questions. The completed questionnaire should be signed by the preparer and returned to EPI. Please send the completed questionnaire to:

Environmental Partners, Inc.
1180 NW Maple Street, Suite 310
Issaquah, WA 98027
Attention: Brett Carp
or by Fax to (425) 395-0011
or by Email to brettc@epi-wa.com

QUESTIONNAIRE PART I: ESA BACKGROUND INFORMATION

A. Please provide all current and historical addresses for the subject property:

15945 NE 85th St
Redmond WA 98052

B. Please provide a chronology of the subject property ownership and history:

To the best of my knowledge as I wasn't involved until 1976.
The building was built on a slab approximately 1973-1974. It was put together by Dr. Dan Braughton, Dr. Alvin Taniguchi, Dr. Mike Molvar and Dr. John Huleen. I purchased a ¼ share in 1978 from Dr. Molvar. Subsequently Dr. Huleen and I purchased shares from Dr. Taniguchi and Dr. Broughton.

QUESTIONNAIRE PART II: ENVIRONMENTAL QUESTIONS

A. To your knowledge, is the subject property and/or adjoining properties used or have/has been used in the following manner:

1.	Any industrial use	☐ Yes	☐ No	☒ Unknown
2.	Fuel station (i.e., gas station)	☐ Yes	☐ No	☒ Unknown
3.	Motor or equipment repair facility	☐ Yes	☐ No	☒ Unknown
4.	Commercial printing facility	☐ Yes	☐ No	☒ Unknown
5.	Dry cleaner	☐ Yes	☐ No	☒ Unknown
6.	Photo developing laboratory	☐ Yes	☐ No	☒ Unknown
7.	Junkyard or landfill	☐ Yes	☐ No	☒ Unknown
8.	A waste treatment, storage, disposal, processing, or recycling facility (if applicable, identify which)?	☐ Yes	☐ No	☒ Unknown

If yes for any of the above, please provide additional information regarding location and type of facility that is or was present:

B. Are there currently or have there been in the past any of the following materials stored at, used at, or brought onto the subject property or facility and/or adjoining properties or facilities?

1.	Automotive or industrial batteries	☐ Yes	☐ No	☒ Unknown
2.	Pesticides	☐ Yes	☐ No	☒ Unknown
3.	Paint	☐ Yes	☐ No	☒ Unknown
4.	Other chemicals	☐ Yes	☐ No	☒ Unknown
5.	Fill dirt originated from an unknown origin or a contaminated site (if applicable, identify which)?	☐ Yes	☐ No	☒ Unknown

If yes for any of the above, please provide additional information regarding location and type of material that is or was present:

C. Are there currently or have there been in the past any of the following features located on the property and/or adjoining properties:

1. Pits	☐ Yes	☐ No	☒ Unknown
2. Lagoons or ponds	☐ Yes	☐ No	☒ Unknown
3. Septic systems	☐ Yes	☐ No	☒ Unknown
4. Floor drains	☐ Yes	☐ No	☒ Unknown
5. Clarifiers or sumps	☐ Yes	☐ No	☒ Unknown
6. Stained soil	☐ Yes	☐ No	☒ Unknown
7. Registered or unregistered aboveground or underground storage tanks (If applicable, identify which type below)	☐ Yes	☐ No	☒ Unknown

If yes for any of the above, please provide additional information regarding location and the item that is or was present:

D. To your knowledge, are there any aboveground storage tanks (ASTs) or underground storage tanks (USTs) currently located on the property and/or adjoining property? Or, have there been any of the following objects or evidence located on the property or adjacent to any structure located on the property and/or adjoining property:

1. Vent pipes	☐ Yes	☐ No	☒ Unknown
2. Fill pipes	☐ Yes	☐ No	☒ Unknown
3. Access ways indicating a fill pipe protruding from the ground	☐ Yes	☐ No	☒ Unknown
4. Leaks, spills, or staining by substances other than water (if applicable, identify which below)	☐ Yes	☐ No	☒ Unknown
5. Foul odors associated with any flooring, drains, walls, ceilings, or exposed ground (if applicable, identify which below)	☐ Yes	☐ No	☒ Unknown

If yes for any of the above, please provide additional information regarding location and the item that is or was present:

E. If the property and/or adjoining property is served by a private well or non-public water system, do you have any knowledge that:

1. Contaminants have been identified in the well or water system that exceed guidelines applicable to the water system?	☐ Yes	☐ No	☒ Unknown
2. The well has been designated by any government environmental/health agency as being contaminated?	☐ Yes	☐ No	☒ Unknown

If yes, please provide any additional information you have regarding the location of the well and the contaminant(s) and concentration(s) present:

F. With respect to the property or any facility located on the property and/or adjoining properties, do you have any knowledge of or have you been informed of:

1. Past or current existence of hazardous substances or petroleum products	☐ Yes	☐ No	☒ Unknown
2. Past or current existence of environmental violations	☐ Yes	☐ No	☒ Unknown
3. Any permits, orders, or waste discharge requirements issued by or requested from any environmental regulatory agency in relation to the properties	☐ Yes	☐ No	☒ Unknown
4. Any environmental assessment indicating the presence or contamination of hazardous substances or petroleum products or recommended further assessment	☐ Yes	☐ No	☒ Unknown
5. Any past, threatened, or pending lawsuits or administrative proceedings concerning a release or threatened release of any hazardous substance or petroleum products?	☐ Yes	☐ No	☒ Unknown

If yes for any of the above, please provide any additional information you have regarding the location of the substance or violation and the basis of your knowledge:

G. Has the property and/or adjoining properties discharged, dumped above grade, buried and/or burned any of the following materials on or adjacent to the property and/or into a storm water or sanitary sewer system (if applicable, identity which):

1. Industrial wash or wastewater (not including sanitary waste or stormwater)	☐ Yes	☐ No	☒ Unknown
2. Any hazardous substances or petroleum products	☐ Yes	☐ No	☒ Unknown
3. Unidentified waste materials	☐ Yes	☐ No	☒ Unknown
4. Tires	☐ Yes	☐ No	☒ Unknown
5. Automotive or industrial batteries	☐ Yes	☐ No	☒ Unknown
6. Any other waste materials?	☐ Yes	☐ No	☒ Unknown

If yes for any of the above, please provide any additional information you have regarding the location or former location of the material and current disposition of the material (i.e., tires buried in back of subject property lot, etc.):

H. Are there or have there been any of the following equipment for which there are any records indicating the presence of polychlorinated biphenyls (PCBs)?

1. Electrical transformers	☐ Yes	☐ No	☒ Unknown
2. Capacitors	☐ Yes	☐ No	☒ Unknown
3. Air or gas compressors	☐ Yes	☐ No	☒ Unknown
4. Fluorescent light ballasts	☐ Yes	☐ No	☒ Unknown
5. Any hydraulic equipment?	☐ Yes	☐ No	☒ Unknown

If yes for any of the above, please provide any additional information regarding the location or former location of the item and current disposition of the material (i.e., original air compressor located in garage but replaced in 2007 with current compressor):

ENVIRONMENTAL SITE ASSESSMENT QUESTIONNAIRE

Property Owner/Representative or Facility Manager

I. To your knowledge, have any environmental or geotechnical assessments of the subject property and/or adjoining properties been conducted?

1. Environmental	☐ Yes	☐ No	☒ Unknown
2. Geotechnical	☐ Yes	☐ No	☒ Unknown
3. Other?	☐ Yes	☐ No	☒ Unknown

Please provide the nature and dates of these assessments, if known.

J. Are you aware of any environmental cleanup liens against the subject property, governmental orders, consent decrees, cleanup and abatement orders, or lawsuits that are filed or recorded under federal, state, tribal, or local law? ☐ Yes ☒ No ☐ Unknown

If yes, please provide any additional information regarding which property, nature of environmental action, and status of environmental action:

K. Are you aware of any activity or land use limitations, such as engineering controls, land use restrictions or institutional controls, that are in place on the site or that have been filed or recorded in a registry (40 CFR 312.26)? Please provide the nature and dates of these assessments, if known.

1. Engineering Controls (e.g., engineered cap, subsurface barrier wall, etc.)	☐ Yes	☐ No	☒ Unknown
2. Land Use Restrictions (e.g., industrial only, no groundwater removal, etc.)	☐ Yes	☐ No	☒ Unknown
3. Institutional Controls (e.g., deed restrictions, financial assurances, etc.)	☐ Yes	☐ No	☒ Unknown

1527-13 USER QUESTIONNAIRE

Date: November 9, 2017 **EPI Interviewer:** Brett Carp

EPI Project No.: 63807.0 **Email:** brettc@epi-wa.com

Subject Property Address:

User Name: MCRT WEST COAST LLC

Organization: Mill Creek Residential 15801 and 15945 NE 85th St

Phone Number: 206.396.6004 Redmond, Washington

In order to qualify for one of the Landowner Liability Protections (LLPs) offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "Brownfields Amendments"), the user should provide the following information (if available) to the environmental professional. Failure to conduct these inquiries could result in a determination that "all appropriate inquiries" is not complete.

(1.) Environmental liens that are filed or recorded against the property (40 CFR 312.25).
Are you aware of any environmental liens filed or recorded against the property under federal, tribal, state or local law?

No

(2.) Activity and land use limitations that are in place on the property or that have been filed or recorded against the property (40 CFR 312.26(a)(1)(v) and (vi)).
Are you aware of any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the property and/or have been filed or recorded in a registry under federal, tribal, state or local law?

No

(3.) Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CF$ 312.28).
As the user of this ESA do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

No

(4.) Relationship of the purchase price to the fair market value of the property if it were not contaminated (40 CFR 312.29).
Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?

Yes

(5.) Commonly known or reasonably ascertainable information about the property (40 CFR 312.30).
Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, as user,

(a.) Do you know the past users of the property? No

(b.) Do you know of specific chemicals that are present or once were present at the property? No

Do you know of spills or other chemical releases that have taken place at the property? No

(c.) Do you know of any environmental cleanups that have taken place at the property? No

(6.) The degree of obviousness of he presence or likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).
As the user of this ESA, based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of releases at the property?

No

(7.) Prior Environmental Documentation.
Are you aware of any of the following environmental documents? No

If you are in possession of such documentation, will it be provided for review as part of the Phase I ESA process?

- Environmental site assessment reports
- Environmental compliance audit reports
- Environmental permits (for example, solid waste, disposal permits, hazardous waste disposal permits, wastewater permits, NPDES permits, underground injection permits)
- Registrations for underground and above-ground storage tanks
- Registrations for underground injection systems
- Material safety data sheets
- Community right-to-know plan
- Safety plans; preparedness and prevention plans; spill prevention, countermeasure and control plans; etc.
- Reports regarding hydrogeologic conditions on the property or surrounding area
- Notices or other correspondence from any government agency relating to past or current violations of environmental laws with respect to the property or relating to environmental liens encumbering the property
- Hazardous waste generator notices or reports
- Geotechnical studies
- Risk assessments
- Recorded AULs

Ms. Lori Fobes
First Citizens Bank
1495 Wilmington Drive
P.O. Box 970
DuPont, WA 98327

Subject: Phase I Environmental Site Assessment
First Citizens Bank
15801 NE 85th Street
Redmond, Washington 98052

Dear Ms. Fobes,

Attached, please find our Phase I Environmental Site Assessment (ESA) for the above-referenced asset (the Subject Property). During the survey and research, our surveyor met with agents representing the Subject Property, or agents of the owner, and reviewed the Subject Property and its history. The report was completed according to the terms and conditions authorized by you. This report has been completed in general conformance with the ASTM Standard E 1527-05. An executive summary is provided; however, we recommend that the report be read in its entirety for a comprehensive understanding of the items contained therein.

This report is addressed to First Citizens Bank and such other persons as may be designated by First Citizens Bank and their respective successors and assigns. There are no intended or unintended third party beneficiaries to this report, except as expressly stated herein.

O'Neill Environmental Service (OES) is an independent contractor, not an employee of either the issuer or the borrower, and its compensation was not based on the findings or recommendations made in the report or on the closing of any business transaction.

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312 and we have the specific

qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Subject Property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

We appreciate the opportunity to provide environmental consulting services to First Citizens Bank. Should you have any questions or require additional information, please do contact the undersigned.

Respectfully submitted,
O'Neill Environmental Services

Dennis J. O'Neill, LHG, LEG
Principal Engineering Geologist/Hydrogeologist

EXECUTIVE SUMMARY

At the request of First Citizens Bank, O'Neill Environmental Services (OES) has performed a Phase I Environmental Site Assessment (ESA) of the property located at 15801 NE 85th Street in Redmond, Washington, herein referred to as the Subject Property. The main objective of this ESA was to identify *recognized environmental conditions* in connection with the Subject Property, defined in ASTM Practice E 1527-05 as the presence or likely presence of any hazardous substances or petroleum products that indicate an existing release, a past release, or a material threat of a release. This ESA also includes a preliminary evaluation of certain potential environmental conditions that are outside the scope of ASTM Practice E 1527-05.

The Subject Property includes one rectangular-shaped parcel totaling approximately 0.81 acres. The Subject Property is currently improved with a two-story, bank building, with a gross area of approximately 8,521± square feet. There is no basement present beneath the existing structure. The existing improvements were reportedly constructed in 1990.

The existing building is located on the northwestern portion of the property. Areas of the Subject Property surrounding the existing building include asphalt-paved surface parking, concrete walkways, and landscaping.

At the time of inspection, the Subject Property was occupied by First Citizens Bank. There are currently no manufacturing or industrial operations conducted at the Subject Property.

Below is the Assessment Summary Table presenting our recommended actions for the Subject Property. OES findings and opinions are presented in Section 8.0, and recommendations for further action or investigation are presented in Section 9.0.

1.0 INTRODUCTION

O'Neill Environmental Services (OES) has completed a Phase I Environmental Site Assessment (ESA) for the property located at 15801 NE 85th Street in Redmond, Washington. This work was conducted under contract to First Citizens Banks and outlined in our Phase I ESA Proposal (Work Order 1), dated October 13, 2009. This study was conducted to assist First Citizens Bank with the plans to acquire the subject property as part of the overall acquisition of the former Venture Bank facilities located throughout western Washington State.

1.1 Purpose

The purpose of this ESA was to identify *recognized environmental conditions* and certain environmental conditions outside the scope of ASTM Practice E 1527-05 in connection with the property at the time of the property reconnaissance.

1.2 Scope-of-Services

This ESA was conducted utilizing a standard of good commercial and customary practice that was consistent with the ASTM Practice E 1527-05. Any significant scope-of-work additions, deletions or deviations to ASTM Practice E 1527-05 are noted below or in the corresponding sections of this report. The scope-of-work for this assessment included an evaluation of the following:

- Physical characteristics of the Subject Property through a review of referenced sources for topographic, geologic, soils and hydrologic data.
- Subject Property history through a review of referenced sources such as land deeds, fire insurance maps, city directories, aerial photographs, prior reports, and interviews.
- Current Subject Property conditions, including observations and interviews regarding the following: the presence or absence of hazardous substances or petroleum products; generation, treatment, storage, or disposal of hazardous, regulated, or biomedical waste; equipment that utilizes oils which potentially contain PCBs; and storage tanks (aboveground and underground).
- Usage of surrounding area properties and the likelihood for releases of hazardous substances and petroleum products (if known and/or suspected) to migrate onto the Subject Property.
- Information in referenced environmental agency databases and local environmental records, within specified minimum search distances.
- Past ownership through a review of available prior reports and local municipal file review.

Copyright 2009 OES

The scope-of-work also included consideration of the following potential environmental conditions that are outside the scope of ASTM Practice E 1527-05: asbestos-containing materials (ACM).

1.3 Assumptions, Limitations and Exceptions

This Phase I ESA has been prepared for the use of First Citizens Bank, in accordance with our Standard Conditions for Engagement and Authorization Letter and Agreement for Environmental Services approved and signed by First Citizens Bank, and with the limitations described below, all of which are integral parts of this report. A copy of the signed Standard Conditions For Engagement and Authorization Letter and Agreement for Environmental Services is maintained at the OES in Issaquah, Washington. .

OES has performed this Phase I ESA in conformance with the scope and limitations of *ASTM Standard E 1527-05, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process.* This report was prepared with no exceptions or deletions from ASTM Standard E 1527-05.

This Phase I ESA has been prepared to assess a parcel of commercial real estate with respect to the range of contaminants within the scope of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. §9601) and petroleum products. As such, this practice is intended to permit First Citizens Bank to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on CERCLA liability: that is, the practices that constitute "all appropriate inquiry into the previous ownership and uses of the Subject Property consistent with good commercial or customary practice" as defined in 42 U.S.C. § 9601(35)(B).

In defining a standard of good commercial and customary practice for conducting an environmental site assessment of a parcel of property, the goal of the processes established by this practice is to identify *recognized environmental conditions*. The term recognized environmental conditions means the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, ground water, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include *de minimis conditions* that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be de minimis are not recognized environmental conditions.

Copyright 2009 OES

The information reported was obtained through sources deemed reasonably ascertainable, as defined in ASTM Standard E 1527-05; a visual site survey of areas readily observable, easily accessible or made accessible by the Subject Property contact and interviews with owners, agents, occupants, or other appropriate persons involved with the Subject Property. Municipal information was obtained through review of reasonably ascertainable standard government record sources and interviews with the authorities having jurisdiction over the Subject Property. Findings, conclusions, and recommendations included in the report are based on our visual observations in the field, the municipal information reasonably obtained, information provided by the Client, and/or a review of readily available and supplied documents and drawings. OES relies completely on the information, whether written, graphic, or verbal, provided by the Subject Property contact or as shown on any documents reviewed or received from the Subject Property contact, owner or agent, or municipal source, and assumes that information to be true and correct. Although there may have been some degree of overlap in the information provided by these various sources, OES did not attempt to independently verify the accuracy or completeness of all information reviewed or received during the course of these environmental services.

The observations in this report are valid on the date of the investigation. Where access to portions of the Subject Property or to structures on the Subject Property was unavailable or limited, OES renders no opinion as to the presence of hazardous substances or petroleum products in that portion of the Subject Property or structure. Inaccessible portions of the Subject Property are described below. In addition, OES renders no opinion as to the presence of, or indirect evidence relating to, hazardous substances or petroleum products where direct observation of the interior walls, floor, or ceiling of a structure was obstructed by objects or coverings on or over these surfaces.

It is acknowledged that OES judgments shall not be based on scientific or technical tests or procedures beyond the scope of the Services or beyond the time and budgetary constraints imposed by the Client. It is acknowledged further that OES conclusions shall not rest on pure science but on such considerations as economic feasibility and available alternatives. Client also acknowledges that, because geologic and soil formations are inherently random, variable, and indeterminate in nature, the Services and opinions provided under this Agreement with respect to such Services are not guaranteed to be a representation of actual conditions on the Subject Property, which are also subject to change with time as a result of natural or man-made processes, including water permeation. In performing the Services, OES shall use that degree of care and skill ordinarily exercised by environmental consultants or engineers performing similar services in the same or similar locality. The standard of care shall be determined solely at the time the

Copyright 2009 OES

Services are rendered and not according to standards utilized at a later date. The Services shall be rendered without any other warranty, expressed or implied, including, without limitation, the warranty of merchantability and the warranty of fitness for a particular purpose.

Client and OES agree that to the fullest extent permitted by law, OES shall not be liable to Client for any special, indirect or consequential damages whatsoever, whether caused by OES negligence, errors, omissions, strict liability, breach of contract, breach of warranty or other cause or causes whatsoever.

The ASTM Standard E 1527-05 does not encompass analytical testing to evaluate asbestos containing materials, radon, lead-based paint, drinking water quality, indoor air quality, stored chemicals, debris, fill materials, surface water, or subsurface samples (soil and groundwater) as part of a Phase I ESA. Any analytical testing performed at the Subject Property has been conducted in accordance with the Standard Conditions for Engagement and Authorization Letter and Agreement for Environmental Services and the client-specific Scope of Work. Unless otherwise specified herein, such testing involves screening methods intended to provide a broad and approximate evaluation of conditions at readily accessible portions of the Subject Property, limited by project constraints, and should not be construed as a comprehensive program designed to comply with a specific regulatory program. If a thorough and regulatory-compliant study is warranted based on the findings of the Phase I ESA, OES will recommend the appropriate further investigation. In certain cases, quantitative laboratory testing is performed as part of the assessment and analyses have been conducted by an outside laboratory. OES relies upon the data provided by the outside laboratory, and has not conducted an independent evaluation of the reliability of this data.

The assessment was conducted in a manner consistent with the level of care and skill ordinarily exercised by members of the profession, and in accordance with generally accepted practices of other consultants currently practicing in the same locality under similar conditions. No other representation, expressed or implied, and no warranty or guarantee is included or intended. The report speaks only as of its date, in the absence of a specific written update of the report, signed and delivered by OES.

Additional information that becomes available after our survey and draft submission concerning the Subject Property should be provided to OES so that our conclusions may be revised and modified if necessary, at additional cost. This report has been prepared in accordance with our Standard Conditions for Engagement, which is an integral part of this report.

Copyright 2009 OES

1.4 Special Terms and Conditions

This Phase I ESA has been prepared to assist First Citizens Bank in its underwriting of a proposed mortgage loan on the Subject Property. This report can be relied upon by only the parties stated in the transmittal letter at the front of this report. OES liability to a purchaser wishing to use this report is limited to the cost of the report. Amendments to OES limitations as stated herein that may occur after issuance of the report are considered to be included in this report. Payment for the report is made by, and OES contract and report extends to First Citizens Bank only, in accordance with our Standard Conditions For Engagement and, Authorization Letter and Agreement for Environmental Services.

1.5 Data Gaps

Any data gaps identified herein, as defined by ASTM Practice E 1527-05 § 3.2.20, are not considered to have significantly affected the ability to identify recognized environmental conditions in connection with the Subject Property and do not alter the conclusions of this report.

Copyright 2009 OES

2.0 SUBJECT PROPERTY DESCRIPTION

2.1 Ownership and Location

According to the King County Assessor's Office, the Subject Property is currently owned by Venture Bank (Redmond National Bank).

The Subject Property is located at 15801 NE 85th Street in Redmond, King County, Washington. The Subject Property includes one rectangular-shaped parcel, identified by the King County Washington Assessor's Office as Parcel Number 7198900170 totaling approximately 0.81 acres. The Subject Property is located approximately on the southeast intersection of NE 85th Street and 158th Avenue NE. Figure 1 – Site Plan depicts the configuration of the Subject Property and adjoining properties. Figure 2 - Vicinity Map depicts the location of the Subject Property on a street map of Redmond, Washington. Figure 3 – Tax Map depicts the parcel number assigned to the Subject Property and vicinity.

2.2 Subject Property Improvements

The Subject Property is currently improved with a two-story, bank building, with a gross area of approximately 8,521± square feet. There is no basement present beneath the existing structure. The existing improvements were reportedly constructed in 1990.

The existing building is located on the northwestern portion of the property. Areas of the Subject Property surrounding the existing building include asphalt-paved surface parking, concrete walkways, and landscaping.

2.3 Current Use of the Subject Property

At the time of inspection, the Subject Property was occupied by First Citizens Bank. There are currently no manufacturing or industrial operations conducted at the Subject Property.

Please refer to Section 5.3 for further discussion regarding hazardous substances and petroleum products at the Subject Property.

Copyright 2009 OES

2.4 Municipal Services and Utilities

The Subject Property is serviced by the following municipal services and utilities:

MUNICIPAL SERVICES AND UTILITIES	
Utility	Provider/Source
Potable Water Supply	City of Redmond
Sewage Disposal System	City of Redmond
Electrical Service	Puget Sound Energy
Natural Gas Service	Puget Sound Energy
Heating/Cooling Systems	Natural gas / Electric split system HVAC units
Emergency Power	Not Provided

2.5 Adjoining Properties

Property use in the vicinity of the Subject Property is primarily characterized by primarily light commercial office properties and multi-residential dwellings.

ADJOINING PROPERTIES	
North	The Subject Property is bound to the north by NE 85th Street, with a City of Redmond asphalt-covered parking lot.
South	The Subject Property is bound to the south by a two-story residential apartment/condo complex (8334 158th Ave NE.
East	The Subject Property is bound to the east by a one-story Medial Dental Building and asphalt-covered parking areas.
West	The Subject Property is bound to the west by 158th Ave NE and a vacant lot.

No visual evidence of adverse environmental conditions was observed during the survey of the adjoining properties.

Copyright 2009 OES

3.0 USER PROVIDED INFORMATION

The following section summarizes information provided by First Citizens Bank with regard to this Phase I EAS. Additionally, a User Questionnaire was forwarded to the designated Client contact. The User Questionnaire has been completed and returned to our offices. The information requested in the User Questionnaire is intended to assist in gathering information that may be material to identifying recognized environmental conditions in connection with the Subject Property. The User Questionnaire and any additional documentation referenced below are presented in Appendix C.

3.1 Title Records

Title record information associated with the Subject Property has not been provided to OES by First Citizens Bank. A detailed discussion regarding review of information obtained from other sources is presented in Section 4.3.5 of this report.

3.2 Environmental Liens and Activity and Use Limitations

First Citizens Bank has provided no information regarding environmental liens or activity and use limitations in connection with the Subject Property. A detailed discussion regarding environmental liens is presented in Section 4.3.7 of this report. A detailed discussion regarding activity and use limitations is presented in Sections 4.1.1 and 4.1.2 of this report.

3.3 Specialized Knowledge

First Citizens Bank provided no specialized knowledge that is material to recognized environmental conditions in connection with the Subject Property. OES was not provided with or made aware of previous environmental assessments or other documentation that is material to recognize environmental conditions in connection with the Subject Property, except as presented in Section 4.3.8 of this report.

3.4 Commonly Known or Reasonably Ascertainable Information

First Citizens Bank has provided no commonly known or reasonably ascertainable information within the local community about the Subject Property that is material to recognized environmental conditions in connection with the Subject Property.

3.5 Valuation Reduction for Environmental Issues

First Citizens Bank has provided no information regarding valuation reduction for environmental issues in connection with the Subject Property.

Copyright 2009 OES

3.6 Owner, Property Manager, and Occupant Information

First Citizens Bank provided contact information for the Subject Property owner, manager and/or occupants.

3.7 Reason for Performing Phase I ESA

First Citizens Bank retained OES to complete this Phase I ESA in connection with a real estate transaction process.

Copyright 2009 OES

4.0 RECORDS REVIEW

4.1 Standard Environmental Records

A review of standard environmental databases maintained by Federal, state, and tribal offices was completed through Environmental Data Resources, Inc. (EDR) of Milford, Connecticut. The databases were searched for properties with reported environmental conditions located within approximate minimum search distances as specified by ASTM Standard E 1527-05, by using geocoding information that identified the coordinates of the properties in the databases or by checking the street addresses of practically reviewable non-geocoded "orphan" properties within the same zip code. The database report is presented in Appendix E.

The database report identified thirty-five (35) "orphan sites." Orphan sites are those sites that could not be accurately mapped or geocoded due to inadequate location information. OES attempted to locate these sites via vehicular reconnaissance and interviews with personnel familiar with the area. Based on this research, OES did not identify listed orphan sites within the approximate minimum search distances that may be considered likely to have impacted conditions at the Subject Property.

It should be noted that plotted locations of listed sites are not always accurate. With regard to listings that are determined or suspected to be inaccurate, based on information from other sources such as direct observation or consultation with individuals familiar with the property, OES uses the best available data when evaluating the location of listed sites discussed below.

The Subject Property was not listed in any of the databases searched by EDR. The following Table provides a summary of the findings of the environmental database report. Specific properties identified within the database report are further discussed below.

Copyright 2009 OES

SUMMARY OF FEDERAL, STATE, AND TRIBAL AGENCY DATABASE FINDINGS			
Regulatory Database	Approximate Minimum Search Distance	Subject Property Listed	Off-site Listings Within Search Distance
Federal NPL Sites	One mile	No	0
Federal Delisted NPL Sites	½ mile	No	0
Federal CERCLIS Sites	½ mile	No	1
Federal CERCLIS NFRAP Sites	½ mile	No	0
Federal RCRA CORRACTS Sites	One mile	No	0
Federal RCRA non-CORRACTS TSD Sites	½ mile	No	0
Federal RCRA Generators Sites	Property & Adjoining	No	0
Federal Engineering / Institutional Control Sites	½ mile	No	0
Federal ERNS Sites	Property	No	0
State and Tribal equivalent NPL / CERCLIS Sites	One mile	No	11

4.1.1 Federal Agency Database Records

National Priority List (NPL)

The NPL database, also known as the Superfund List, is a subset of CERCLIS and identifies sites that are ranked as high priority for remedial action under the Federal Superfund Act. Neither the Subject Property nor any sites located within one mile of the Subject Property were identified on the NPL.

Delisted National Priority List (NPL)

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425(e), sites may be deleted from the NPL where no further response is appropriate. Neither the Subject Property nor any sites located within ½ mile of the Subject Property were identified on the Delisted NPL database.

Copyright 2009 OES

Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS)

CERCLIS contains data regarding potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies, and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability ACT (CERCLA). CERCLIS contains sites that are included on the National Priority List (NPL), as well as sites which are in the screening and assessment phase for possible inclusion on the NPL. The Subject Property was not listed. One site located within ½ mile of the Subject Property was identified on the CERCLIS database. Information regarding the site is provided in the following table.

STATE AND TRIBAL EQUIVALENT NPL & CERCLIS SITES			
Site	Distance / Direction / Gradient	ID No.	Regulatory Status
Sammamish Slough Truck Accident W. Lake Sammamish Parkway NE, Redmond	0.40 miles / Southwest / Downgradient	1002674	Notification Date: 8/30/06 Contaminants: Petroleum Media Impacted: Soil Only Status: Awaiting Cleaned up Date of Closure: 9/1/2006

* Presumed hydrogeologic gradient based upon regional topography

Based upon the current regulatory status, distance/presumed hydrogeologic gradient relative to the Subject Property, and/or reported nature/extent of contamination, it is considered unlikely that conditions associated with the identified site represent an environmental concern to the Subject Property.

Copyright 2009 OES

CERCLIS – No Further Remedial Action Planned (CERCLIS-NFRAP)

As of February 1995, CERCLIS sites designated as No Further Remedial Action Planned (NFRAP) have been removed from the CERCLIS list. NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed without the need for the site to be placed on the NPL, or the contamination was not considered sufficient to warrant Federal Superfund action or NPL consideration. The Subject Property was not listed. Neither the Subject Property nor any sites located within ½ mile of the Subject Property were identified on the CERCLIS-NFRAP database.

Resource Conservation and Recovery Act (RCRA) – Corrective Action Tracking System (CORRACTS)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS). The database includes selective information regarding sites that generate, transport, store, treat, and/or dispose of hazardous waste as defined by RCRA. The RCRA-CORRACTS database identifies TSD facilities that have conducted, or are currently conducting, corrective action(s) as regulated under RCRA. Neither the Subject Property nor any sites located within one mile of the Subject Property were identified on the RCRA CORRACTS database.

RCRA non-CORRACTS Treatment, Storage and/or Disposal (TSD) Facilities

RCRA non-CORRACTS Treatment, Storage and/or Disposal (TSD) facilities are required to register hazardous waste activity under the Resource Conservation and Recovery Act (RCRA). Neither the Subject Property nor any sites located within ½ mile of the Subject Property were identified on the RCRA non-CORRACTS TSD database.

Copyright 2009 OES

RCRA Hazardous Waste Generators

Hazardous waste generators tracked under the Resource Conservation and Recovery Act (RCRA) are classified as either Large Quantity Generators (LQGs), Small Quantity Generators (SQGs), or Conditionally Exempt Small Quantity Generators (CESQG). A RCRA-LQG is defined as a facility that generates over 1,000 kilograms (Kg) of hazardous waste, or over 1 Kg of acutely hazardous waste per month. A RCRA-SQG is defined as a facility that generates between 100 Kg and 1,000 Kg of hazardous waste per month. A RCRA-CESQG is defined as a facility that generates less than 100 Kg of hazardous waste, or less than 1 Kg of acutely hazardous waste per month. Neither the Subject Property nor any adjoining sites were identified on the RCRA Generator database.

Federal Engineering Control / Institutional Control Registries

The completion of site cleanup activities may include the implementation of engineering controls or institutional controls as part of the response action. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls. Neither the Subject Property nor any sites located within ½ mile of the Subject Property were identified on Federal Engineering Control or Institutional Control Registries.

Emergency Response Notification System (ERNS)

ERNS is a national database used to collect information regarding reported releases of petroleum products and/or hazardous substances. The database contains information from spill reports submitted to Federal agencies, including the EPA, the U.S. Coast Guard, the National Response Center, and the U.S. Department of Transportation. A review of this database was conducted in order to determine whether any spills or incidents involving releases of hazardous substances or petroleum products have occurred at the Subject Property. The Subject Property was not identified on the ERNS database.

Copyright 2009 OES

4.1.2 State and Tribal Agency Database Records

State and Tribal Equivalent NPL Sites and CERCLIS Sites

State and tribal equivalent NPL and CERCLIS databases were searched for sites located within one mile and ½ mile of the Subject Property, respectively. The Subject Property was not identified on the State Equivalent CERCLIS Sites database. However, 11 sites located within one mile of the Subject Property were identified on the State Equivalent CERCLIS and NPL Sites database. Based upon the current regulatory status, distance/presumed hydrogeologic gradient relative to the Subject Property, and/or reported nature/extent of contamination, it is considered unlikely that conditions associated with the identified site represent an environmental concern to the Subject Property.

State and Tribal Spills Sites (Spills)

A review of available Spills databases was conducted in order to determine whether any spills or incidents involving releases of hazardous substances or petroleum products have occurred at the Subject Property. The Subject Property was not listed on the Spills database in the EDR Report.

State and Tribal Landfill Sites and Solid Waste Disposal Sites

The state and tribal landfill and solid waste disposal site databases identify active or inactive landfill and transfer station facilities, as well as open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites. Neither the Subject Property nor any sites located within 0.5 mile of the Subject Property were identified on state or tribal landfill and solid waste disposal site databases.

State and Tribal Leaking Storage Tank Sites

Leaking Storage Tank Sites are properties where releases of hazardous substances or petroleum products from underground storage tanks (USTs) and/or aboveground storage tanks (ASTs) have been identified and reported to state, tribal, or local agencies. The Subject Property was not identified on the Leaking Storage Tank Sites database. However, five sites located within ½ mile of the Subject Property were identified on the Leaking Storage Tank Sites database. Information regarding the listed site is presented in the following table:

Copyright 2009 OES

LEAKING STORAGE TANK SITES			
Site	Distance / Direction / Gradient*	ID No.	Regulatory Status
Bedrock Northwest/Chevron SVC 16000 Redmond Way	0.26 miles / SSE down-gradient	5253	Notification Date: 2/26/2004 Contaminants: Petroleum Media Impacted: GW Status: Cleanup Awaiting Cleanup Date of Closure: N/A

* Presumed hydrogeologic gradient based upon regional topography

Based upon the current regulatory status, distance/presumed hydrogeologic gradient relative to the Subject Property, and/or reported nature/extent of contamination, it is considered unlikely that conditions associated with the identified site represent an environmental concern to the Subject Property.

State and Tribal Registered Storage Tanks

Neither the Subject Property nor any adjoining properties were identified on state or tribal Registered Storage Tank databases. However, the City of Redmond Fire Department located within a 1/4 –mile of Subject Property contains multiple USTs. All the USTs are in compliance with current UST codes.

Copyright 2009 OES

State and Tribal Engineering Control / Institutional Control Registries

The completion of site cleanup activities may include the implementation of engineering controls or institutional controls as part of the response action. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls. Neither the Subject Property nor any sites located within ½ mile of the Subject Property were identified on state or tribal Engineering Control or Institutional Control Registries.

State and Tribal Voluntary Cleanup Sites

The Subject Property was not identified on state or tribal Voluntary Cleanup Site databases. However, seven sites located within ½ mile of the Subject Property were identified on state or tribal Voluntary Cleanup Site databases. Information regarding the listed sites is presented in the following table:

Information regarding the listed sites is presented in the following table:

STATE AND TRIBAL ICR SITES			
Site	Distance / Direction / Gradient	ID No.	Regulatory Status

* Presumed hydrogeologic gradient based upon regional topography

Based upon the current regulatory status, distance/presumed hydrogeologic gradient relative to the Subject Property, and/or reported nature/extent of contamination, it is considered unlikely that conditions associated with the identified sites represent an environmental concern to the Subject Property.

State and Tribal Brownfield Sites

Neither the Subject Property nor any sites located within ½ mile of the Subject Property were identified on state or tribal Brownfield Sites databases.

Copyright 2009 OES

CSCSL-NFA Sites

The Subject Property was not identified on state or tribal CSCSL NFA databases.

4.1.3 Local Regulatory Agency Records

Local municipal offices consulted during the completion of this assessment included the City of Redmond Planning Department and Development Services. OES did not identify documented adverse environmental conditions, violations, or complaints associated with the Subject Property. OES did not identify records of spills or releases of hazardous substances or petroleum products having occurred at the Subject Property.

City of Redmond of Planning Department

OES has visited the City of Redmond and requested information regarding the generation, transportation, storage, treatment, disposal, and/or spills or releases of hazardous substances or petroleum products at the Subject Property, information on building permits, and past uses of the Subject Property. According to Kim Smith there are no building code violations or incidences regarding spills or releases of hazardous substances or petroleum products on the Subject Property. In addition, no stormwater violations or records of USTs or ASTS have been recorded for the Subject Property. Mr. Jeff Dendy of the Public Works Department indicated there have been no stormwater, NPDES or spill violations reported for the Subject Property. Ms. Smith also indicated that the City of Redmond Fire Department did not have any record of USTs or ASTs pertaining to the Subject Property.

4.2 Physical Setting

4.2.1 Topography

The Subject Property is located at an elevation of approximately 37 feet above mean sea level (msl). The topography of the Subject Property is relatively flat and slopes gently to the southeast. The Subject Property is located in a relatively flat area, and the general slope of the surrounding region is to the southeast (according to the Redmond, Washington USGS 7.5 Minute Topographic Quadrangle).

Copyright 2009 OES

4.2.2 Geology and Soils

No bedrock outcroppings were observed at the Subject Property. The Subject Property lies within the Puget-Willamette Trough aquifer system which underlies an elongated basin that extends southward from near the Canadian border in Washington to central Oregon.

The major aquifers that compose the Puget-Willamette Trough regional aquifer system are unconsolidated-deposit and Miocene basaltic-rock aquifers. Unconsolidated-deposit aquifers are the principal aquifers in the Puget Sound lowland, whereas unconsolidated-deposit and Miocene basaltic-rock aquifers are the principal aquifers in the central area. In the Puget Sound lowland, the unconsolidated-deposit aquifers consist chiefly of glacial deposits that are as much as 3,000 feet thick near Seattle. Sand and gravel that were deposited during the last period of glaciation compose the most productive aquifers in the lowland and generally form the upper 200 to 300 feet of the unconsolidated deposits. At depth, sand and gravel deposits typically are discontinuous lenses that can be present as much as 2,000 feet below the land surface. Although usually much less permeable at depth because of compaction, lenses of sand and gravel can yield large volumes of water to wells. Even though well yields vary greatly, yields from sand and gravel aquifers commonly exceed 2,000 gallons per minute. Some public-supply and industrial wells in the Redmond area that were completed in shallow sand and gravel of glacial origin, yield from 1,000 to 9,000 gallons per minute. Other public-supply wells that were completed in coarse-grained alluvial deposits along the Green River in King County yield from 8,000 to 10,000 gallons per minute. Some artesian wells in the Seattle-Tacoma area that were completed in deeply buried lenses of sand and gravel yield from 150 to 1,700 gallons per minute. In the southern and western parts of the Puget Sound lowland, glacial deposits are fine-grained, and the unconsolidated-deposit aquifers in these areas are much less productive than similar aquifers near Tacoma. Public-supply and irrigation wells in these areas generally yield from 50 to 750 gallons per minute.

According to the Natural Resources Conservation Service (NRCS) Web Soil Survey (WSS) website (http://websoilsurvey.nrcs.usda.gov/app/), the dominant soil composition in the vicinity of the Subject Property is classified as Alderwood gravelly sandy loam, 0 to 6 percent slopes. This soil consists of deep, somewhat excessively-drained soils formed on till plains formed from basal till. The soil extends to a depth of approximately 20 to 40 inches. This soil is moderately well drained, and the available water capacity is very low. The depth to bedrock is typically 20 to 40 inches.

Copyright 2009 OES

4.2.3 Hydrogeology and Hydrology

No natural surface water bodies were identified on or adjacent to the Subject Property. The nearest downgradient surface water body is the Sammamish River, located approximately 400 feet west of the Subject Property. The Lake Sammamish is located approximately 1.5 miles south of the Subject Property.

Local groundwater gradient is expected to follow surface topography; therefore, groundwater flow near the Subject Property is expected to flow to the southwest. Groundwater depths and flow gradients are best evaluated by a subsurface investigation involving the installation of at least three groundwater monitoring wells and precise measurements of hydrostatic pressure. Monitoring wells were not observed on the Subject Property. Localized perched groundwater conditions are believe to be present in the site vicinity at depths less 20 feet bgs.

4.3 Historical Use of the Subject Property and Adjoining Properties

OES attempted to determine the history of the Subject Property dating back to 1940 or first developed use. The following table summarizes the historical use of the Subject Property and surrounding area.

HISTORICAL USE SUMMARY			
Period	Historical Uses		Source(s)
	Subject Property	Surrounding Area	
At least 1936-1995	Undeveloped	Primarily undeveloped, limited single-family residential development.	Aerial Photographs Topographic Maps City Directories Municipal Records Personal Interviews
1990 to Present	Current Structure	Primarily commercial/residential development.	Aerial Photographs Topographic Maps City Directories Municipal Records Personal Interviews

No environmentally significant conditions were identified on the Subject Property or surrounding properties during the historical review.

4.3.1 Aerial Photographs

Historical aerial photographs may be used to evaluate changes in land use and to identify visible areas of potential environmental concern. A search for historical aerial photographs depicting the Subject Property and vicinity was conducted by Environmental Data Resources, Inc. (EDR). Additional aerial

Copyright 2009 OES

photographs were available from the King County iMap website. It should be noted that the scale of the available aerial photographs precludes the distinct identification of structures and/or land uses on or in the vicinity of the Subject Property. Aerial photographs depicting the Subject Property were reviewed and are summarized below. Copies of the aerial photographs are presented in Appendix F.

Date: **1936**

Description: The Subject Property is undeveloped. Surrounding properties appear to be primarily undeveloped, with the exception of agricultural land.

Date: **1965**

Description: Conditions on the Subject Property and surrounding areas appear to be similar to those depicted on the 1936 photograph, except the area to the south and southeast of the Subject Property is undergoing development associated with the City of Redmond.

Date: **1977**

Description: Conditions on the Subject Property and surrounding areas appear to be similar to those depicted on the 1965 photograph; however, the neighboring to the east is developed by a commercial building, similar to today structure. The access road NE 85th Street has been constructed. The City of Redmond property located across NE 85th Street has been developed with two structures. The City of Redmond to the south continues to experience increase growth.

Date: **1985**

Description: The Subject Property is undeveloped. The surrounding areas appear to be more dense with commercial development. The City of Redmond property has expended. The surface street 158th Avenue NE has been constructed west of the Subject Property. A vacant lot west of 158th Avenue NE appears to have been graded.

Date: **1990**

Description: The Subject Property is occupied by the existing building and surrounding asphalt-covered parking areas. Land use is the site vicinity continues to increase in commercial building density.

Copyright 2009 OES

Date: **2000**

Description: Conditions on the Subject Property and surrounding areas appear to be similar to the current layout. A significant residential development is neighboring the south portion of the Subject Property.

Date: **2007**

Description: Conditions on the Subject Property and surrounding areas appear to be similar to the current layout, except a major expansion of the City of Redmond facilities to the north of the Subject Property.

4.3.2 Fire Insurance Maps

A search for historical fire insurance maps depicting the Subject Property and vicinity was conducted by EDR Sanborn Maps, Inc. The EDR Report indicated that coverage for the vicinity of the Subject Property was not available. A copy of the search documentation letter is presented in Appendix F.

4.3.3 Topographic Maps

Historical topographic maps provide information related to physical land configuration such as elevation, ground slope, surface water and other features. While most buildings in densely developed urban centers are not depicted, topographic maps typically show structures equal to or larger than the size of a single-family residence in rural areas. Other notable features such as woods, pipelines, municipal boundaries, and areas of filled land are often marked on topographic maps.

A search for historical topographic maps depicting the Subject Property and vicinity was conducted by Environmental Data Resources, Inc. (EDR). Historical topographic maps depicting the Subject Property were reviewed and are summarized below. Copies of the topographic maps are presented in Appendix F.

Date: **1897, Redmond, WA**

Description: Based on the scale of the topographic map, specific features are difficult to identify; however, the Subject Property and surrounding area appears to be primarily undeveloped and located within Sammamish River corridor.

Copyright 2009 OES

Date: **1950, Redmond, WA**

Description: The Subject Property appears as undeveloped. The surrounding area appears to be primarily undeveloped, with the exception of scattered structures to the southeast. The Sammamish River appears to be channelized into linear feature west of the Subject Property.

Date: **1968, Redmond, WA**

Description: The Subject Property and surrounding area appear as similar to the layout depicted in the 1950 map, except for additional development east within the City of Redmond.

Date: **1973, Redmond, WA**

Description: The Subject Property and surrounding area appear as similar to the layout depicted in the 1949 map, additional development to the south and east of the Subject Property

Date: **1992, Redmond, WA**

Description: The Subject Property and surrounding area to the north, and are shaded to represent development. The City of Redmond structures to the north are noticeable on the maps. Increase development is noted to the south and southwest within the City of Redmond.

4.3.4 Street Directories

Street directories are commercial publications containing names and addresses, and in many cases, occupations of the occupants of a particular community. The directories may also contain information pertaining to business processes conducted within a community. A search for historical street directories was conducted by Environmental Data Resources, Inc. (EDR). Historical street directories were reviewed and are summarized below. Copies of the street directories are presented in Appendix F.

Date: **1976-1996**

Listings: The Subject Property address is not listed. Surrounding addresses are listed as similar to their current uses.

Copyright 2009 OES

4.3.5 Recorded Land Title Records

Land title records provide information on previous ownership of a property. Typically, deeds signifying transfer of a land parcel are recorded in county files and can be researched to determine the identity of past owners. A "chain of title" is a continuous record of ownership for a specific parcel. A 50-year chain of title search was not included in the scope of work for this assessment.

4.3.6 Property Tax Records

The property card for the Subject Property was obtained at the King County Assessor's Office. The property card identifies the current owner as Redmond National Bank, which acquired the Subject Property in 1988. Assessor's Office records indicate that the existing building was constructed in 1990. A listing of the former Subject Property owners was not available for review. Copies of the property tax records are presented in Appendix F.

4.3.7 Environmental Liens and Activity and Use Limitations

A search for Environmental Liens and Activity and Use Limitations was not included in the scope of this assessment.

4.3.8 Previous Environmental Reports

OES was not provided with or made aware of previous environmental assessments or other documentation regarding environmental investigations performed for the Subject Property. OES did not identify previous environmental reports for the Subject Property at local agencies or other sources contacted during this assessment.

4.3.9 Other Historical Records and Interviews

Ms. Barbara Gordon, Assistant Vice President, Financial Center Manager, was interviewed to obtain information regarding history of the Subject Property. Ms. Travis reported that she was unaware of any environmental issues associated with the Subject Property.

Copyright 2009 OES

5.0 SUBJECT PROPERTY RECONNAISSANCE

The Subject Property reconnaissance was conducted by Mr. Dennis O'Neill, OES Environmental Scientist, on November October 30, 2009. Mr. O'Neill was accompanied by and interviewed Ms. Barbara Gordon, Financial Center Manager.

5.1 Methodology and Limiting Conditions

The Subject Property reconnaissance consisted of visual and/or physical observations of the Subject Property and improvements, adjoining properties as viewed from the Subject Property boundaries, and the surrounding area based on visual observations made from adjacent public thoroughfares. Building exteriors were observed along the perimeter from the ground, unless described otherwise. Building interiors were observed as they were made safely accessible, unless described otherwise.

At the time of the survey, the weather was partly cloudy and approximately 55° Fahrenheit. During the survey, representative tenant spaces, mechanical spaces, and/or equipment components were observed. There were no significant portions of the Subject Property that were inaccessible or excluded from this survey.

5.2 Hazardous Substances and Petroleum Products

5.2.1 Hazardous Substances and Petroleum Products (Identified Uses)

Routine quantities of cleaning compounds and janitorial supplies are used to maintain the Subject Property. These materials are stored in containers ranging in size from aerosol cans to five-gallon pails and are located in janitorial closets and storage rooms located throughout the facility. These materials appeared to be securely stored and properly labeled, and no evidence of significant leaks, spills or materials mismanagement was observed at the time of reconnaissance. These materials are utilized during routine operations and do not result in the generation of regulated wastes.

OES did not identify evidence of significant leaks, spills, or the improper handling of petroleum or hazardous substances that might impact the environmental condition of the Subject Property.

5.2.2 Hazardous Substances and Petroleum Products (Unidentified Uses)

OES did not observe evidence of hazardous substance or petroleum products containers at the Subject Property that were not in connection with identified uses.

Copyright 2009 OES

5.2.3 Unidentified Substances Containers

OES did not observe evidence of unidentified substances containers at the Subject Property.

5.3 Waste Generation, Storage, and Disposal

Non-regulated solid waste generated at the Subject Property is placed in two solid waste dumpsters, located on the southeastern portion of the Subject Property. Solid waste is collected daily (Monday through Friday) by the City of Redmond municipal trash service. No evidence of improper solid waste management or the improper disposal of hazardous substances or petroleum products was observed at the time of reconnaissance.

5.4 Underground Storage Tanks (USTs) & Aboveground Storage Tanks (ASTs)

5.4.1 Existing Storage Tanks

Based upon site reconnaissance, interviews, and a review of state and local records, OES identified no evidence of existing USTs or ASTs located at the Subject Property.

5.4.2 Former Storage Tanks

Based upon site reconnaissance, interviews, and a review of state and local records, OES identified no evidence of former USTs or ASTs located at the Subject Property.

5.5 Oil-Containing Equipment and Polychlorinated Biphenyls (PCBs)

Polychlorinated biphenyls (PCBs) are a chemical component of many dielectric fluids, heat transfer fluids, hydraulic fluids, lubricating oils, paints, or coatings manufactured prior to July 2, 1979. Equipment that may potentially contain PCBs includes electrical equipment such as transformers or capacitors or hydraulically operated equipment, such as elevators, compaction equipment, or manufacturing equipment. The manufacture and distribution in commerce of PCBs was banned for use in 1979 by the United States Congress, which enacted the Toxic Substance and Control Act (TSCA). In accordance with *US Code of Federal Regulations Title 40 - Protection of Environment, Chapter I - Environmental Protection Agency, Subchapter R - Toxic Substance Control Act (TSCA), Part 761 - Polychlorinated Biphenyls (PCBs) Manufacturing, Processing, Distribution in Commerce, and Use Prohibitions*, the owner of a transformer or other PCB-containing equipment is responsible for equipment maintenance and remediation in the event of a leak or release.

Copyright 2009 OES

OES observed a pad-mounted electrical transformer at the Subject Property. The pad-mounted electrical transformer was located on the southwest corner of the Subject Property. The transformer appeared to be in good condition, and no staining or other evidence of a release of dielectric fluid was observed in the vicinity of the transformer unit. The transformer unit is owned and operated by the regional electrical utility provider, PSE. The transformer was installed at the time of construction in 1990 and based upon the date of installation is not considered to be PCB-containing. In the event of a release of dielectric fluid from one of its transformers, the utility company typically conducts regulatory response actions and cleanup.

5.6 Additional Site Conditions

The ground surface outside the building is relatively flat, with a gentle slope to the southeast. Stormwater runoff from the asphalt-paved parking areas adjacent to the building discharges to catch basins located throughout the property. The catch basins are associated with the municipal stormwater sewer system, operated by the City of Redmond. No odors or staining was observed within the vicinity of the stormwater catch basins.

Copyright 2009 OES

6.0 INTERVIEWS

The following persons were interviewed to obtain information regarding recognized environmental conditions in connection with the property. Additionally, a Pre-Survey Questionnaire was forwarded to the designated Subject Property contact. The Pre-Survey Questionnaire has been completed and returned to our offices. The information requested in the Pre-Survey Questionnaire is intended to assist in gathering information that may be material to identifying recognized environmental conditions in connection with the Subject Property. The Pre-Survey Questionnaire and any accompanying documentation are presented in Appendix C.

INTERVIEWS			
Contact / Affiliation	Date of Communication	Years Associated with Subject Property	Telephone No.
Ms. Barbara Gordon Financial Center Manager	11/30/2009	1	(425) 602-2789

Kim Smith, City of Redmond Planning	11/20/2009	N/A	(425) 556-2463

Pertinent information from the interviews is presented in applicable sections of this report. .

Copyright 2009 OES

7.0 CONDITIONS OUTSIDE THE SCOPE OF ASTM PRACTICE E 1527-05

The following sections address environmental issues or conditions at the Subject Property that parties may wish to assess in connection with commercial real estate that are outside the scope of ASTM Practice E 1527-05 (non-scope considerations).

7.1 Asbestos-Containing Material (ACM)

Asbestos is a term used to describe a group of six naturally occurring crystalline fiber minerals. Asbestos has excellent thermal stability, a high degree of tensile strength, and has been used extensively in the textile, insulation, and building industries, particularly as a component in fireproofing, decorative coatings, insulation materials, and as reinforcement for plaster binders in building products. Asbestos-containing building materials are generally classified as friable or non-friable. Friable materials are those which can be crumbled, pulverized, or reduced to powder by hand pressure, or by normal use or maintenance can be expected to emit asbestos fibers into the air. Non-friable ACM is a potential concern if it is damaged by maintenance work, demolition, or other activities, at which time it may be considered friable.

Based upon the date of construction and in accordance with the scope of work for this assessment, OES did not conduct a survey for the presence of ACM.

7.2 Radon

Radon is a naturally-occurring, colorless and odorless radioactive gas that is generated primarily in granitic rocks. The United States Surgeon General has published information that radon is a cause of lung cancer. Radon usually enters a building through openings in the foundation, and therefore is a potential health concern to residents of the lowest level of a building with inadequate ventilation.

The EPA Map of Radon Zones indicates that King County is located within a Zone 3 radon area. Zone 3 is defined as an area that has a low potential for radon gas, with a predicted average indoor radon screening level less than 2.0 picoCuries per liter (pCi/L). The EPA recommended Action Level for radon is 4.0 pCi/L.

Based upon the non-residential nature of the Subject Property and in accordance with the scope of work for this assessment, OES did not conduct a limited short-term radon screening at the Subject Property.

Copyright 2009 OES

7.3 Lead-Based Paint (LBP)

Use of lead in household paint was banned by the U.S. Environmental Protection Agency (EPA) effective January 1, 1978. The EPA and the U.S. Department of Housing and Urban Development (HUD) consider lead-based paint as containing a lead concentration equal to or greater than 1.0 milligram per square centimeter (mg/cm^2) or 0.5% lead by weight, as defined by Title X of the 1992 Housing and Community Development Act.

Based on the non-residential use of the existing building and in accordance with the scope of work of this assessment, a lead-based paint (LBP) survey was not conducted at the Subject Property.

7.4 Lead in Drinking Water

Lead has historically been used in pipes, solder, and brass fixtures used in water distribution systems and building plumbing systems. In 1986, EPA banned the use of lead at concentrations exceeding 0.2% lead in solder and 8% lead in other plumbing materials. Lead in drinking water results primarily from corrosion of lead containing materials in service lines or from corrosion of lead containing materials in building plumbing systems such as lead solder, brass, bronze, and other lead containing alloys. The EPA Action Level for lead in public drinking water supplies is 0.015 parts per million (ppm) or 0.015 milligrams per liter (mg/L).

Municipal water service is provided to the Subject Property by the City of Redmond. Based upon review of the 2008 Drinking Water Supply and Water Quality Report, the municipal water supply meets all current criteria established by the Safe Drinking Water Act (SDWA) and local municipal drinking water standards, including those for lead. Based upon the existing municipal water service and in accordance with the scope of work for this assessment, OES did not conduct lead-in-drinking water sampling at the Subject Property.

Copyright 2009 OES

8.0 FINDINGS AND OPINIONS

OES has performed this Phase I ESA of the Subject Property in conformance with the scope and limitations of ASTM Standard E 1527-05. Any exceptions to, or deletions from, this practice are described in Section 1.0 of this report. This assessment has identified no evidence of *recognized environmental conditions (RECs)* in connection with the Subject Property.

9.0 RECOMMENDATIONS

Based upon the findings of this investigation, no further action is recommended.

Copyright 2009 OES

Golder Associates

November 10, 2017

Project No. 1403741-707

Amanda Balzer, Environmental Geologist
City of Redmond
Public Works Department
Mail Stop: 2NPW
PO Box 97010
Redmond, WA 98073

RE: SUMMER 2017 GROUNDWATER MONITORING EVENT CITY OF REDMOND WELLHEAD PROTECTION PROGRAM

Dear Ms. Balzer:

Golder Associates Inc. (Golder) completed the summer 2017 semi-annual groundwater monitoring for the City of Redmond (City) between July 28 and August 4, 2017. This letter report presents the results of the summer 2017 groundwater monitoring event, which was conducted as part of the City's Wellhead Protection Program. This report summarizes results including a groundwater potentiometric surface map; hydrographs for wells fitted with pressure transducers; and tables listing well construction details, water levels, and chemical analytical data.

Groundwater samples were collected from 30 wells during the sampling event. Samples were collected in accordance with the City's Sampling and Analysis Plan[1] (SAP) and the summer 2017 sampling requirements (analytes and locations) provided by the City. Monitoring well locations are shown in Figure 1. Construction details for the City-owned monitoring wells are summarized in Table 1.

1.0 SAMPLING PROTOCOL

Groundwater sampling was conducted in accordance with the SAP, and included the following activities:

- Measurement of static water elevations at monitoring wells.
  - Static water levels were measured prior to sampling at each well sampled, and
  - Static water levels were measured by the City and Golder at 90 wells during a synoptic sampling event on July 27, 2017 (all measurements are included in Table 5 of this report)
- Download of data from pressure transducers installed in select monitoring wells.
- Use of dedicated tubing connected to a portable, stainless steel bladder pump or a peristaltic pump (if groundwater elevation allowed):
  - Groundwater was purged using low-flow sampling techniques
  - Pumping rates ranged between approximately 120 and 350 milliliters (mL) per minute
- Measurement and recording of field parameters, including pH, specific conductance, temperature, dissolved oxygen, oxidation-reduction potential (ORP/EH), and turbidity approximately every 5 minutes during purging until parameters were stable. Parameters

were considered stable when three consecutive readings of pH, temperature, and conductivity were within 5 percent (no percentage change threshold is listed in the SAP).

- The purging process was considered complete once the field parameters stabilized. Samples were collected directly from the dedicated sample tubing.
- Collection of all purge water in appropriate containers for characterization prior to disposal.
- Collection of representative and quality assurance / quality control (QA/QC) samples in appropriate containers.
- Analyses of groundwater for one or more of the following according to the summer 2017 sampling requirements requested by the City:
  - Total Metals by Environmental Protection Agency (EPA) Method 200.8/6010C
  - Alkalinity and bicarbonate by Standard Method (SM) 2320B
  - Chloride by SM 4500-CL
  - Fluoride by SM 4500-F C
  - Nitrate (as Nitrogen) by EPA Method 353.2
  - Sulfate by American Society for Testing and Materials (ASTM) Method D516-07
  - Total Dissolved Solids (TDS) by SM 2540C
  - Volatile Organic Compounds (VOCs) by EPA Method 8260C
  - Semi Volatile Organic Compounds (SVOCs) by EPA Method 8270D
  - Northwest Total Petroleum Hydrocarbons – Hydrocarbon Identification Scan by NWTPH-HCID
  - Perfluorooctane Sulfonate (PFOS) and Perfluorooctanoic Acid (PFOA) with preparation by EPA 537M
  - Pharmaceuticals and Personal Care Products (PPCP) by EPA 1694
  - Fecal/Total Coliforms and E.coli by SM 9222B/CALC or SM 9222D
  - Total Organic Carbon (TOC) by SM 5310B
  - Glyphosate and AMPA by modified EPA Method 547

Water levels, field-measured water-quality parameters, and laboratory chemical data for the 30 wells that were sampled are listed in Tables 2 and 3. Water quality standards for groundwater (Washington Administrative Code [WAC] Chapter 173-200) (Department of Ecology Criteria) and drinking water (WAC Chapter 246-290) (Department of Health Maximum Contaminant Levels [MCLs]) along with practical quantitation limits (PQL) are summarized in Table 4 and are compared to the groundwater analytical results. Water levels from the City's synoptic groundwater level sampling event on July 27, 2017 are listed in Table 5. Table 6 provides details on the pressure transducers that are installed in the City's wells.

2.0 SUMMER 2017 SEMI-ANNUAL GROUNDWATER SAMPLING RESULTS

Following sample collection, all bottles were sealed, labeled, and placed in an iced cooler until delivery to the laboratory. All groundwater samples were transported under chain-of-custody procedures to Onsite Environmental Laboratories (Onsite), in Redmond, Washington, for analysis. Upon receipt of laboratory data reports, Golder performed a data validation review in accordance with EPA's National Functional

Guidelines[2,3]. Appendix A presents the laboratory analytical reports for all analyses, and Appendix B presents the Data Validation Memorandum.

In general, groundwater geochemical field data from the summer 2017 monitoring event were similar to data collected in the winter 2017 and both 2016 events (when comparing the wells that were sampled during both events). A summary of the results from the summer 2017 event are summarized in the sections below.

2.1 Field Parameters

- The average groundwater temperature during the summer 2017 was 13.7 degrees Celsius (°C) which is lower than the summer 2016 event average temperature of 14.2°C. The winter 2017 monitoring event was 12.1°C.
- The electrical conductivity observed in all 30 monitoring wells was below the drinking water secondary MCL of 0.7 mS/cm (millisiemens per centimeter).
- Groundwater pH values were less than the lower-end Ecology criterion for pH (6.5 standard units) at 28 of the 30 wells sampled. The average pH values for the summer 2017 was 6.26 which is similar to the average pH for the winter 2017 event. The average pH for both 2017 sampling events are less than the average pH value of 6.43 for the summer 2016 event, and the winter 2016 event average pH of 6.47.
- The average ORP/EH measurements were higher in the summer 2017 event (97 millivolts [mV]) than the ORP/EH measurements collected in the summer 2016 event (40 mV). The average summer 2017 ORP/EH measurements are lower than the winter 2017 event (170 mV) and the winter 2016 event (229 mV). The variability associated with the field measurement of ORP/EH is likely due to changes in groundwater chemistry during the different seasons.

2.2 Metals and Inorganics

- Total arsenic was detected in groundwater samples from four monitoring wells (MW012, MW014, MW022, and MW023). Samples from MW012, MW014, and MW022 exceed water quality criterion of 5 micrograms per liter (µg/L).
  - The arsenic concentrations from samples collected at MW012, MW014, and MW022 exceed the MCL of 10 µg/L.
  - Arsenic has been previously detected in these wells and the summer 2017 concentrations fall within the range of concentrations measured since winter 2016, except at MW014 where summer 2017 concentration was 15 µg/L (next highest concentration was 13 µg/L in winter 2017).
- Total iron was detected at concentrations greater than the Ecology criterion and the MCL of 300 µg/L in groundwater samples in nine monitoring wells, including a maximum value of 49,000 µg/L in the sample from MW022. Iron has ranged between 47,000 and 51,000 µg/L at MW022 since winter 2016.
- Total manganese was detected at concentrations greater than the Ecology criterion and MCL of 50 µg/L in groundwater samples in eight monitoring wells, including a peak value of 3,600 µg/L in the sample from MW022. Manganese has ranged from 3,100 to 3,700 µg/L in MW022 since winter 2016.
- Locations where arsenic was detected also generally had elevated detections of manganese, iron, bicarbonate, and TDS.

[2] United States Environmental Protection Agency (EPA). 2014a. National Functional Guidelines for Superfund Organic Methods Data Review. OSWER 9355.0-132. EPA-540-R-014-002. Washington, D.C. August.

[3] EPA 2014b. National Functional Guidelines for Inorganic Superfund Data Review. OSWER 9355.0-131. EPA-540-R-013-001. Washington, D.C. August.

2.3 Total Petroleum Hydrocarbons

- Gasoline range and diesel range hydrocarbons were not detected in the four wells sampled for Total Petroleum Hydrocarbons (TPH).
- In summer 2016 lube oil was detected in MW022 (0.46 mg/L). Samples collected from MW022 in summer 2017, winter 2017, winter 2016, and summer 2015 events were non-detect for lube oil.

2.4 Tetrachloroethene

- Tetrachloroethene (also known as perchloroethene [PCE]) was detected in groundwater in six monitoring wells at concentrations ranging from 0.36 to 1.9 µg/L. PCE concentrations were greater than the State groundwater quality criterion of 0.8 µg/L in four monitoring wells (MW003, MW031, MW036, and MW062). None of the detected concentrations exceeded the MCL or the MTCA Method A cleanup level of 5 µg/L.
- The average detected PCE concentration from groundwater samples obtained near the intersection of NE 85th Street and 161st Avenue NE (wells MW003, MW004, MW006, MW031, MW033, and MW036) during summer 2017 was 1.12 µg/L. The monitoring wells from this area sampled in winter 2017 had an average PCE concentration of 0.96 µg/L. The average PCE concentration from wells sampled in this area during summer 2016 was 1.4 µg/L.
- The PCE concentrations from groundwater samples obtained near the intersection of Bear Creek Parkway and Redmond Way (MW062, MW392, and MW393) in summer 2017 was consistent with previous events. The average concentrations ranged between 0.9 and 1.0 µg/L in summer and winter 2016. In winter 2017, MW392 did not have a PCE detection and MW062 had a concentration of 1.8 µg/L. In summer 2017, MW062 and MW322 had PCE concentrations of 1.5 µg/L and 0.36 µg/L, respectively.
- The PCE concentration at MW322 was 0.36 µg/L, summer 2017 was the first PCE analysis at this well since Golder began conducting the sampling in winter 2016.

2.5 Other VOCs

In addition to Tetrachloroethene, the following VOC's (Table 3) were also detected at concentrations above reporting limits:

- Acetone was detected in MW003 (6.2 µg/L), MW014 (9.0 µg/L), MW024 (8.0 µg/L), and MW371 (7.9 µg/L) above the laboratory reporting limit of 5.0 µg/L. Acetone detections have not previously been reported in these wells. There is no MCL for acetone and all concentrations are significantly less than the MTCA B non-cancer level of 7,200 µg/L. Further investigation may be warranted if acetone is present in these wells during future sampling events.
- Chloroform was detected in MW062 (0.33 µg/L) and MW322 (0.22 µg/L) slightly above the laboratory reporting limit of 0.2 µg/L but below the water quality criterion of 7.0 µg/L.

2.6 SVOCs

No SVOCs were detected in concentrations above reporting limits in the wells submitted for SVOC, PAH, or low-level 1,4 Dioxane.

2.7 Additional/Emerging Contaminants

- PFOS was detected in 12 of the 13 wells sampled, with detections ranging from 5.6 to 19 nanograms per liter (ng/L). The concentrations are below the United States Environmental Protection Agency's (EPA) Drinking Water Health Advisory value of 70 ng/L.

- PFOA was detected in all 13 wells, with detections ranging from 2.1 to 12 ng/L. The concentrations are below the EPA's Drinking Water Health Advisory value of 70 ng/L.
- PPCP samples were collected in seven wells (MW017, MW061, MW331, MW337, MW341, MW356, and MW391). Atrazine was detected in three wells with detections ranging from 0.98 to 2.2 ng/L. These concentrations are well below the MTCA Method B value of 380 ng/L and the MCL of 3000 ng/L.
- Caffeine was detected in two wells. MW341 has a caffeine concentration of 3.0 ng/L and MW371 has a caffeine concentration of 2.7 ng/L.
- Sulfamethoxazole was detected in two wells MW331 and MW337. MW331 has a concentration of 1.3 ng/L. MW337 has a Sulfamethoxazole concentration of 6.7 ng/L which is greater than the winter 2017 concentration of 1.3 ng/L, and the summer concentration of 2.1 ng/L.
- Oxybenzone was detected in MW341 (22 ng/L). Oxybenzone has not been detected previously in MW341.
- Note: caffeine and oxybenzone were also detected in a field blank sample, see Section 4.0 for details.

2.8 Microbiological

Total coliform, fecal coliform and E. coli were detected above reporting limits in MW010 (11 colony forming units/100ml [CFU/100ml], 9 CFU/100ml, and 9 CFU/100ml, respectively). MW036 also had 2 CFU/100ml of total coliform. MW036 has not been sampled for total coliform, fecal coliform and E. coli since Golder began conducting the sampling in winter 2016.

3.0 GROUNDWATER ELEVATIONS

The City conducted a synoptic water level survey on July 27, 2017 collecting static water levels from 90 wells. The measurements are reported in Table 5. A potentiometric groundwater surface map is presented in Figure 1.

Two brands of data loggers are deployed in select monitoring wells: *INW* and *In Situ*. The *In Situ* loggers have vented cables and do not require barometric compensation. The *INW* loggers are unvented and require barometric compensation. Barometric data is available from a barometric sensor installed in MW089 and from a King County weather station near Marymoor Park in Redmond. Barometric sensor data from the King County weather station were used for the time period before the MW089 sensor was installed (May 2016). Monitoring wells with pressure transducers are detailed in Table 6. The pressure transducer data are provided as an electronic data deliverable (EDD) that accompanies this report.

Four hydrographs (Figures 2A through 2D) are presented by geographic region: East, Northwest, West-Central, West hydrographs. The hydrographs are plotted from 2014 or 2015 up to the date the loggers were downloaded (July and August 2017). Elevations are referenced from the manual water levels collected at the time of data downloads. Manual water levels from the July 2017 gauging event are also plotted on the hydrographs.

The hydrographs show that groundwater elevations vary seasonally in response to precipitation, maximum groundwater elevations are typically observed during winter months and then decline through the summer and early fall. Groundwater elevations in the select wells shown on Figures 2A to 2D were generally not below typical summer conditions in most wells during summer 2017. However, Table 1 shows that 32 wells recorded record low groundwater elevations during the July 27 synoptic survey. This is attributed to the drier than normal precipitation totals in summer 2017.

Construction dewatering projects may have also affected groundwater elevations in some areas- most notably in the West-Central portion of Redmond shown on Figure 2C. In particular, groundwater levels in MW008 and MW331 were lower than normal in summer 2017 and then increased slightly (2 ft or less) in

mid-July, a period without precipitation. This response is most likely attributed to construction dewatering activities in the vicinity of these wells that were ongoing during winter 2017 and ended in spring/summer 2017. Three construction dewatering projects of note are:

- Triangle project at NE 79th St and 166th Ave NE is immediately south of MW008 and was actively dewatering from 10/6/16 through 7/10/17 with approximate flow rates between 1400 and 3800 gpm.
- Station House Lofts project at NE 80th St and 166th Ave NE is adjacent to the north of the Triangle project and was dewatering from February 17, 2017 through May 30, 2017 with approximate flow rates between 1200 and 2300 gpm.
- The Ravello project at NE 80th St and 162nd Ave NE is located to the west of the Triangle and Station House projects and was dewatering from February 24, 2017 through April 28, 2017 with approximate flow rates between 300 and 1200 gpm.

4.0 DATA QUALITY ASSURANCE / VALIDATION

A data validation review was performed on all laboratory data. The full validation results are presented in detail in Appendix B. In general, the data were acceptable, with only two qualifications:

- Chloride results for MW022 and the field duplicate sample collected at MW022 were qualified as estimated (J) when the field duplicate precision was outside QC criteria.

The field blank sample collected on August 7, 2017 contained small concentrations of PPCP constituents: caffeine, DEET and oxybenzone. These detections did not result in qualified sample results because none of the other samples collected on that date had detectable concentrations of these constituents.

5.0 SUMMARY

The summer 2017 sampling event consisted of collecting groundwater samples from 30 wells between July 28 and August 7, 2017. During the summer 2017 sampling event, notes were made of the well and transducer conditions. In general, the wells are in good condition. Repairs, transducer cleaning, and equipment replacement were performed during the field effort.

All analytical data, field parameter, water elevation, and transducer data have been summarized in the appropriate EQuIS tables for upload to the City's EQuIS database and are provided with this technical memorandum.

Thank you for the opportunity to provide groundwater sampling services for the City. We look forward to providing more services to you in the future.

If you have any questions or require any additional information, please contact Jay Pietraszek at (425) 883-0777.

Notes:

1. This table is not an all-inclusive list of monitoring stations within the City of Redmond. It lists the City-owned stations that are currently (Winter 2017) accessible for monitoring as part of the Wellhead Protection Program.
2. All locations are monitoring wells given unique reference numbers by the City of Redmond.
3. Coordinates (X,Y) and elevations updated based on June 2016 survey by Dowl KHM for the following wells: MW052, MW012, MW013, MW007, MW006, MW391, MW033, MW003, and MW009.
4. Stickup refers to the vertical distance from ground surface (GS) to the top of the PVC well casing (TOC). Positive values indicate that the TOC is above GS. Negative values indicate that it is beneath GS.
5. Installed equipment may include a bladder or peristaltic pump for groundwater sampling ("pump") and/or a sensor/data logger for water level, temperature and/or conductivity monitoring ("sensor"). Sensor depths are based on the depth at the time of removal to facilitate data download. Sensors are replaced after download at approximately the same depth; however, minor changes in depth (up to several inches) may occur during replacement. Exact sensor depths will be confirmed at the time of the next data download
6. There are five different combinations of methods to access the monitoring casings: (1) "standard" refers to the use of standard 9/16-inch hex-bolts to secure the well monument, and a compression cap using the City's standard PVC H-Key to secure the well casing; (2) "padlock" refers to the use of the City's keyed padlock to secure an above-grade well monument, and a compression cap using the City's standard PVC H-Key to secure the well casing; (3) "padlock only" is the same as "padlock" except that the well casing is covered with a slip cap; (4) "hex- pin" is the same as "standard" except that Allen-type bolts with a security pin are used to secure the well monument; (5) "hex-pin only" is the same as "hex-pin" except that the well casing is covered with a slip cap.
7. The measured range of groundwater levels in the available historical record for each well is indicated by the high (shallowest) and low (deepest) values (excludes pressure sensor measurements). Values shaded green and in bold represent new historical high/low measurements recorded during the Summer 2017 monitoring.
8. Sensors were pulled from MW014 and MW391 for repair in Summer 2017

Abbreviations

GS	ground surface
TOC	top of the monitoring well casing
--	no data/not applicable

Abbreviations:

5	Bolded result exceeds Screening Level (SL)
-	Not measured or not available
°C	Degrees Celsius
feet BGS	Feet below ground surface
feet BTOC	Feet below measuring point (top of casing)
MCL	Maximum Containment Level
mg/L	Milligrams per liter
mS/cm	Millisiemens per centimeter
mV	Milli-Volts
NTU	Nephelometric Turbidity Unit
TOC	Top of casing inside PVC well
U	Analyte not detected above the reporting limit shown
µg/L	Micrograms per liter

Notes:

1. Chemical analyses conducted by OnSite Environmental of Redmond, Washington.
2. The first six digits of the monitoring well identification have been omitted.
3. Groundwater levels are presented as the depth beneath the top of the PVC well casing (TOC) and the depth below ground surface (BGS).
4. Field-measured parameters include temperature (T), conductivity (Cond.), pH, dissolved oxygen (DO), oxidation-reduction potential (EH/ORP) and turbidity.
5. Target Analyte List (TAL) of total metals analyzed by EPA Methods 200.8/6010C . Selected wells were analyzed only for the TAL metals short list which excludes Sb, Be, Se, Ag, and Tl. The Trip Blank samples were not analyzed for TAL total metals.
6. Groundwater sample WGMW01220170804FD is a field duplicate from well MW012; Groundwater sample WGMW02220170728FD is a field duplicate from well MW022
7. Groundwater Quality Criteria (Criteria) used by the Washington State Department of Ecology are based on Chapter 173-200 Washington Administrative Code (WAC).
8. Maximum Contaminant Levels (MCLs) used by the Washington State Department of Health are based on Chapter 246-290 WAC and EPA's "National Primary Drinking Water Regulations," dated May 2009.
9. Field Blank was collected by pumping lab-prepared DI into sample bottles.
10. Model Toxics Control Act (MTCA) Method A value for Washington.

Table 3: Summer 2017 Chemical Analytical Data[1]

Abbreviations:

5	Bolded result exceeds Screening Level (SL)
-	Not measured or not available
CFU	Colony Forming Units
EPA	Environmental Protection Agency
HCID	Hydrocarbon Identification Scan
J+	Estimated value, high bias.
MCL	Maximum Contaminant Level
mg/L	Milligrams per liter
mL	Milliliter
MPN	Most Probably Number
N	Nitrogen
NWTPH	Northwest Total Petroleum Hydrocarbons
PPCP	Pharmaceuticals and Personal Care Products
SIM PAH	Selective Ion Monitoring Polycyclic Aromatic Hydrocarbons
SVOC	Semi-Volatile Organic Compounds
U	Analyte not detected above the reporting limit shown
VOC	Volatile Organic Compounds
µg/L	Micrograms per liter

Notes:

1. Chemical analyses conducted by OnSite Environmental of Redmond, Washington, Am Test Inc. of Kirkland, Washington, ALS of Kelso, Washington, and Pacific Agricultural Laboratory of Sherwood, Oregon
2. The first six digits of the monitoring well identification shown in Table 1 have been omitted.
3. Only the detected analytes are listed for VOCs, SVOCs, and CECs. Refer to the laboratory reports for a complete list of analytes and detection limits.
4. Tetrachloroethene (CAS No. 127-18-4) is also known as Tetrachloroethylene and Perchloroethene (PCE).
5. Bicarbonate analyzed by standard method (SM) 2320B. Chloride analyzed by SM 4500-CL. Fluoride analyzed by SM 4500-FC. Nitrate analyzed by EPA Method 353.2. Sulfate analyzed by Method ASTM D516-07, Total Dissolved Solids analyzed by SM 2540C. Phosphorous analyzed by EPA Method 365.1.
6. Glyphosate and AMPA area analyzed by EPA Method 547
7. Total Coliforms analyzed by SM 9222B. Fecal Coliforms and E. coli analyzed by SM 9222 Calculation.
8. Units are CFU/100 mL.
9. Groundwater sample WGMW01220170804FD is a field duplicate from well MW012; Groundwater sample WGMW02220170728FD is a field duplicate from well MW022
10. Field Blank was collected by pumping lab-prepared DI into sample bottles using new tubing.
11. Groundwater Quality Criteria (Criteria) used by the Washington State Department of Ecology are based on Chapter 173-200 Washington Administrative Code (WAC).
12. Maximum Contaminant Levels (MCLs) used by the Washington State Department of Health are based on Chapter 246-290 WAC and EPA's "National Primary Drinking Water Regulations," dated May 2009.
13. United States Environmental Protection Agency's (EPA) Drinking Water Health Advisory for PFOA and PFOS.
14. Model Toxics Control Act (MTCA) Method B value for Washington.

Golder Associates

Table 4: Water Quality Standards
Wellhead Protection Program - Redmond, Washington

Contaminant	Department of Ecology Criteria[1]	Department of Health MCLs[2]	PQL[3]
Primary Contaminants			
Antimony[4]	--	6 µg/L	5.6 µg/L
Arsenic[4]	5 µg/L[5]	10 µg/L	3.3 µg/L
Bacteria - E. Coli	--	1 CFU/100mL	1 CFU/100mL
Bacteria - Fecal Coliforms	--	1 CFU/100mL	1 CFU/100mL
Bacteria - Total Coliforms	1 CFU/100mL	1 CFU/100mL	1 CFU/100mL
Barium[4]	1000 µg/L	2000 µg/L	28 µg/L
Beryllium[4]	--	4 µg/L	**11 µg/L**
Cadmium[4]	10 µg/L	5 µg/L	4.4 µg/L
Chromium[4]	50 µg/L	100 µg/L	11 µg/L
Copper[4]	--	1300 µg/L	11 µg/L
Fluoride	4 mg/L	4 mg/L	0.02 mg/L
Lead[4]	50 µg/L	15 µg/L	1.1 µg/L
Nickel[4]	--	100 µg/L	22 µg/L
Nitrate (as N)	10 mg/L	10 mg/L	0.05 mg/L
Selenium[4]	10 µg/L	50 µg/L	5.6 µg/L
Silver[4]	50 µg/L	--	11 µg/L
Thallium[4]	--	2 µg/L	**5.6 µg/L**
Secondary Contaminants			
Chloride	250 mg/L	250 mg/L	2 mg/L
Copper[4]	1000 µg/L	--	11 µg/L
Fluoride	--	2 mg/L	0.02 mg/L
Iron[4]	300 µg/L	300 µg/L	56 µg/L
Manganese[4]	50 µ/L	50 µg/L	11 µg/L
pH	6.5 - 8.5 pH units	--	--
Silver[4]	--	100 µg/L	11 µg/L
Specific Conductivity	--	0.7 mS/cm	--
Sulfate	250 mg/L	250 mg/L	5 mg/L
Total Dissolved Solids	500 mg/L	500 mg/L	13 mg/L
Zinc[4]	5000 µg/L	5000 µg/L	28 µg/L
Contaminants of Emerging Concern			
Perfluorooctane Sulfonate (PFOS)	200 ng/L[6]	--	5.0 ng/L

Table 4: Water Quality Standards
Wellhead Protection Program - Redmond, Washington

Contaminant	Department of Ecology Criteria[1]	Department of Health MCLs[2]	PQL[3]
Atrazine	380 ng/L[7]	3000 ng/L	0.95 ng/L
Carcinogenic/Primary Contaminants	**Carcinogenic**	**Primary**	
Arsenic[4]	0.05 µg/L	10 µg/L	**3.3 µg/L**
Tetrachloroethylene (PCE)	0.8 µg/L	5 µg/L	0.20 µg/L

Notes:

1. Groundwater Quality Criteria (Criteria) used by the Washington State Department of Ecology are based on Chapter 173-200 Washington Administrative Code (WAC).

2. Maximum Contaminant Levels (MCLs) used by the Washington State Department of Health are based on Chapter 246-290 WAC.

3. Practical quantitation limit (PQL) reported by the laboratory. pH and Specific Conductivity were measured in the field.

4. Metals are measured as total metals.

5. Model Toxics Control Act (MTCA) Method A value for Washington. This value is considered the background value for Arsenic.

6. United States Environmental Protection Agency's (EPA) Office of Water Provisional Health Advisory (PHA) value.

7. Model Toxics Control Act (MTCA) Method B value for Washington.

PQLs that are greater than their respective Criteria and/or MCLs are **bolded**.

Abbreviations:
mg/L - milligrams per liter
µg/L - micrograms per liter
ng/L - nanograms per liter
mS/cm - milliSiemens per centimeter
CFU/100mL - colony forming units per 100 milliliters
– - not applicable

Table 5: Summary of Groundwater Levels Obtained on July 27, 2017
Wellhead Protection Program - Redmond, Washington

Notes:

1. This table is not an all-inclusive list of monitoring stations within the City of Redmond. It lists the City-owned stations that are currently (Summer 2017) accessible for monitoring as part of the Wellhead Protection Program.
2. The first six digits of the monitoring well identification have been omitted.
3. Groundwater levels are presented as the depth beneath the top of the PVC well casing (TOC) and the depth below ground surface (BGS). Bolded values for depth BGS are estimated.
4. MW048 depth to water was not measured because the well was inaccessible.
5. MW110 was dry
6. Privately-owned wells that are not a part of the City of Redmond's network of wells, no survey elevation data are available.
7. King County wells that are not a part of the City of Redmond's network of wells, no survey elevation data are available.
8. Well MW371 replaces well MW329, well MW393 replaces MW344, well MW394 replaces MW351

-- - not measured/not applicable

Notes:

1. All of the sensors have built-in data loggers. The In-Situ pressure sensors (Level TROLL 500) have a 15 pounds per square inch (psi) range and are attached to vented cables. Vented cables include a desiccant chamber containing a blue indicator silica gel that should prevent moisture from condensing inside the vent cable. If the desiccant turns pink, it should be replaced when data are being downloaded. The INW sensors (CT2X) have a 30 psi range, are unvented and also measure conductivity. The INW pressure sensor used to monitor barometric pressure (PT2X-BV) has a 15 psi range and is unvented.

2. The first six digits of the monitoring well identification have been omitted (except for the barometric pressure station).
3. The next data downloads are expected during the next round of groundwater sampling/monitoring (Winter 2018), select wells may be downloaded earlier.

4. While attempting to calibrate the sensor at MW339 (serial number 126250) on 02/19/11, it was determined that the sensor was damaged and unrepairable. This sensor is now inoperable and has been removed from MW339.

5. The barometric pressure sensor was originally kept at GeoEngineers Redmond Office. A new sensor (unvented INW transducer) was hung in the upper part of MW089, installed on May 25, 2016.
6. The INW sensor from MW014 was sent INW for repair and reinstalled in May 2016.
7. Golder was instructed to remove the INW sensors from MW333 and MW393. These sensors were faulty and had limited battery life.
8. Could not communicate with sensors in MW032 or MW337 during August 2016 sampling event. Analysis and communication with InSitu indicates that the MW337 battery is expired. Batteries cannot be replaced in InSitu sensors.
9. Could not communicate with sensors in MW014 or MW391 during summer 2017 sampling event. Sensors pulled from wells for evaluation, status pending.
Recent specification modifications are **bolded.**

APPENDIX A
LABORATORY ANALYTICAL RESULTS
(PROVIDED ON USB)

APPENDIX B
DATA VALIDATION MEMORANDUM

Data Usability Summary Report
City of Redmond, Wellhead Protection Program
July 2017 Sampling
Redmond, Washington

This Data Usability Summary Report (DUSR) presents the findings of the data quality assessment (DQA) performed on the analyses of groundwater samples collected from July 28 through August 7, 2017 in the City of Redmond monitoring well network located in the City of Redmond, Washington (Site). Samples submitted to the laboratory in the sample delivery groups (SDGs) indicated in Table 1 were reviewed in this DUSR to identify quality issues which could affect the use of the sample data for decision making purposes.

The groundwater samples were submitted to Onsite Environmental Inc. Laboratories, of Redmond, Washington to perform requested analyses. Select samples were subcontracted to AM Test Inc. of Kirkland, Washington; ALS Environmental of Kelso, Washington; and Pacific Agricultural Laboratory of Sherwood, Oregon. Information regarding the sample point identifications, analytical parameters, quality control (QC) samples, sampling dates, and laboratory SDG designations are summarized in Table 1. Samples were analyzed utilizing one or more of the following method guidelines:

- Total Metals by Environmental Protection Agency (EPA) Method 200.8 and SW-846 6010C
- Total Organic Carbon by Standard Method (SM) 5310B
- Alkalinity by SM 2320B
- Bicarbonate by SM 2320B
- Chloride by SM 4500-Cl
- Fluoride by SM 4500-F
- Nitrate (as Nitrogen) by EPA Method 353.2
- Sulfate by American Society for Testing and Materials (ASTM) Method D516-07
- Total Dissolved Solids (TDS) by SM 2540C
- Fecal/Total Coliforms and E.coli by SM 9222/CALC, SM 9222B, or SM 9222D
- Northwest Total Petroleum Hydrocarbons – Hydrocarbon Identification Scan by NWTPH-HCID
- Volatile Organic Compounds (VOCs) by EPA Method SW-846 8260C
- Semi Volatile Organic Compounds (SVOCs) by EPA Method SW-846 8270D
- 1,4-Dioxane by EPA Method SW-846 8270D Selective Ion Monitoring (SIM)
- Perfluorooctane Sulfonate (PFOS) and Perfluorooctanoic Acid (PFOA) by PFC/537
- Pharmaceuticals and Personal Care Products (PPCP) by EPA 1694
- Polycyclic Aromatic Hydrocarbons (PAHs) by EPA Method SW-846 8270D and SW-846 8270D SIM
- Aminomethylphosphonic acid (AMPA) and Glyphosate by EPA 547

In addition to the thirty-two (32) primary groundwater samples, two (2) field duplicate samples, one (1) field blank, and eight (8) trip blanks were collected and analyzed for QC purposes.

The data quality assessment was performed in accordance with the Sampling and Analysis Plan (SAP)[1] and the City of Redmond 2017 Sampling Matrix, United Stated Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) National Functional Guidelines for Inorganic Superfund Data Review (January 2017) and National Functional Guidelines for Organic Superfund Data Review (January 2017). Where there was a discrepancy between the QC criteria in the Guidelines and the QC criteria established in the analytic methodology, method-specific criteria, the SAP, or professional judgment was used.

In general, chemical results for the samples collected at the Site were qualified on the basis of laboratory preservation, hold times, blank contamination, outlying precision or accuracy parameters, or on the basis of professional judgment. The following definition provides a brief explanation of the qualifier which may have been assigned to data during the data validation process.

J The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.

In cases where the laboratory qualifier was also associated with a common qualifier (J or U), additional laboratory qualifiers (ex. Y) outside of the common qualifiers were removed.

The validation level for the data is Tier 2, and included the following:

- Data Package Completeness
- Verification of required deliverables
- Evaluation of field forms and field instrument calibrations (as provided)
- Evaluation of holding times and preservations
- Laboratory narrative evaluation
- Evaluation and qualification of QC elements for: Surrogates, Matrix Spike, Laboratory Control samples, Laboratory Duplicates, Method Blanks, Field Blank, Trip Blank, and Field Duplicate evaluation as applicable.
- Evaluation of detection limits

Data review and validation was performed by an experienced quality assurance chemist independent of the analytical laboratory. Data qualifiers that were applied by the laboratory have been removed from the data summary report sheets, when applicable, and superseded by data validation qualifiers (Table 2).

[1] GeoEngineers. 2008. Sampling and Analysis Plan – Groundwater Monitoring Program – City of Redmond Wellhead Protection Program. Redmond, Washington. April 18.

In general, the data generated as part of the groundwater sampling event met the QC criteria established in the respective methods and the Inorganic and Organic Guidelines. The following bulleted items highlight qualifications to specific parameters and/or samples. Table 2 summarizes all qualifications applied to the data, with applicable qualifier codes. Certain samples may have been qualified for multiple DQA findings, as shown on Table 2.

- Chloride results for select primary and field duplicate samples were qualified as estimated (J) when the field duplicate precision was outside QC criteria.
- Laboratory Y qualifiers were removed. Continuing calibration verification data was not provided in the laboratory data packages, however the laboratory indicated the flag was applied in response to exceeding the drift criteria of 20%. Since the laboratory did not make mention of relative response factors below quality control minimums, no qualifications are applied to data based on drift criteria exceeding QC limits in a Tier 2 validation.

Based on the data validations and data quality assessment, the analytical data for samples collected at the Site were determined to be acceptable (including estimated data) for their intended use. The data completeness (i.e. the ratio of the amount of valid data obtained to the amount expected, including estimated (J) data) was 100%.

WATER WELL REPORT

Original & 1st copy – Ecology, 2nd copy – owner, 3rd copy – driller

Construction/Decommission *("x" in circle)*

☒ Construction

○ Decommission *ORIGINAL INSTALLATION Notice of Intent Number* _____

CURRENT

Notice of Intent No. D 300378

Unique Ecology Well ID Tag No. BAH 384

Water Right Permit No. _____

Property Owner Name Scott Hall

Well Street Address 8397 15th St.

City Redmond County King

Location SW 1/4-1/4 SE 1/4 Sec 02 Twn 25N R 05E (EWM or WWM) circle one

Lat/Long (s, t, r Still REQUIRED) Lat Deg _____ Lat Min/Sec _____ Long Deg _____ Long Min/Sec _____

Tax Parcel No. 7198900010

PROPOSED USE: ☐ Domestic ☐ Industrial ☐ Municipal ☒ DeWater ☐ Irrigation ☐ Test Well ☐ Other _____

TYPE OF WORK: Owner's number of well (if more than one) B

☒ New well ☐ Reconditioned *Method:* ☐ Dug ☐ Bored ☐ Driven ☐ Deepened ☐ Cable ☒ Rotary ☐ Jetted

DIMENSIONS: Diameter of well 30" inches, drilled 40" ft. Depth of completed well 40' ft.

CONSTRUCTION DETAILS

Casing Installed: ☐ Welded _____" Diam. from _____ ft. to _____ ft.

☒ Liner installed 12" Diam. from 0' ft. to 20' ft.

☐ Threaded _____" Diam. from _____ ft. to _____ ft.

Perforations: ☐ Yes ☒ No

Type of perforator used _____

SIZE of perfs _____ in. by _____ in. and no. of perfs _____ from _____ ft. to _____ ft.

Screens: ☒ Yes ☐ No ☐ K-Pac Location _____

Manufacturer's Name Western Well Screen

Type Sched 40 PVC Model No. _____

Diam. 12" Slot size .030 from 20' ft. to 40' ft

Diam. _____ Slot size _____ from _____ ft. to _____ ft.

Gravel/Filter packed: ☒ Yes ☐ No ☒ Size of gravel/sand 4x8

Materials placed from 40' ft. to 3' ft.

Surface Seal: ☒ Yes ☐ No To what depth? 3' ft.

Material used in seal 3/8" Bentonite Chips

Did any strata contain unusable water? ☐ Yes ☒ No

Type of water? _____ Depth of strata _____

Method of sealing strata off _____

PUMP: Manufacturer's Name _____

Type: _____ H.P. _____

WATER LEVELS: Land-surface elevation above mean sea level _____ ft.

Static level 7' ft. below top of well Date 9/28/12

Artesian pressure _____ lbs. per square inch Date _____

Artesian water is controlled by _____ (cap, valve, etc.)

WELL TESTS: Drawdown is amount water level is lowered below static level

Was a pump test made? ☐ Yes ☒ No If yes, by whom? _____

Yield: _____ gal./min. with _____ ft. drawdown after _____ hrs.

Yield: _____ gal./min. with _____ ft. drawdown after _____ hrs.

Yield: _____ gal./min. with _____ ft. drawdown after _____ hrs.

Recovery data (time taken as zero when pump turned off) (water level measured from well top to water level)

Time	Water Level	Time	Water Level	Time	Water Level

Date of test _____

Bailer test _____ gal./min. with _____ ft. drawdown after _____ hrs.

Airtest _____ gal./min. with stem set at _____ ft. for _____ hrs.

Artesian flow _____ g.p.m. Date _____

Temperature of water _____ Was a chemical analysis made? ☐ Yes ☒ No

CONSTRUCTION OR DECOMMISSION PROCEDURE

Formation: Describe by color, character, size of material and structure, and the kind and nature of the material in each stratum penetrated, with at least one entry for each change of information. (USE ADDITIONAL SHEETS IF NECESSARY.)

MATERIAL	FROM	TO
Brown Fill Dirt	0'	12'
Sandy Brown Silt (Water Bearing)	12'	33'
Brown Course Sands w/ small gravels	33'	40'

INSTRUCTIONS

Manifest errors, for the purpose of processing corrections to the November or June Boards of Equalization, will include any error that is clearly evident upon examination of any record upon which the assessment or tax roll is based.

Acceptable reasons will include: double assessments, incorrect characteristic data, posting errors, misapplication of procedures, application of erroneous factors, etc.

The error must be of the kind that the correction can be made by reference to the records and valuation methods applied to similarly situated property without the exercise of appraisal judgment. Errors in valuation involving appraiser judgment will not be considered manifest errors and will be subject to correction by the July Board of Equalization.

All request for manifest error correction will be clearly described and documented and will require division manager approval prior to processing.

Contact: Christy Wyborny

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Environmental Partners were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Search Results:

P.O.# NA
Project: 63807.0

Coordinates:

Latitude:	47.678152 47° 40' 41" North
Longitude:	-122.129434 -122° 7' 46" West
UTM Zone:	Zone 10 North
UTM X Meters:	565342.96
UTM Y Meters:	5280896.22
Elevation:	38.04' above sea level

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

Search Results:

Year	Scale	Details	Source

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

Certified Sanborn® Map Report

11/01/17

Site Name:

Two Commercial Properties
15801 and 15945 NE 85TH ST
Redmond, WA 98052
EDR Inquiry # 5093388.3

Client Name:

Environmental Partners
1180 NW Maple St Suite 310
Issaquah, WA 98027
Contact: Christy Wyborny

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Environmental Partners were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Certification # 5202-493B-AFEF

PO # NA

Project 63807.0

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

Sanborn® Library search results

Certification #: 5202-493B-AFEF

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ☑ Library of Congress
- ☑ University Publications of America
- ☑ EDR Private Collection

Limited Permission To Make Copies

Environmental Partners (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 07/11/2017 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 09/13/2017 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 09/13/2017 has revealed that there is 1 RCRA-CESQG site within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

WA CSCSL: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Ecology's Confirmed & Suspected Contaminated Sites List.

A review of the WA CSCSL list, as provided by EDR, and dated 10/17/2017 has revealed that there are 13 WA CSCSL sites within approximately 1 mile of the target property.

State and tribal Brownfields sites

WA BROWNFIELDS: A listing of brownfields sites included in the Confirmed & Suspected Sites Listing. Brownfields are abandoned, idle or underused commercial or industrial properties, where the expansion or redevelopment is hindered by real or perceived contamination. Brownfields vary in size, location, age, and past use -- they can be anything from a five-hundred acre automobile assembly plant to a small, abandoned corner gas station.

A review of the WA BROWNFIELDS list, as provided by EDR, and dated 01/18/2017 has revealed that there is 1 WA BROWNFIELDS site within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

WA CSCSL NFA: The data set contains information about sites previously on the Confirmed and Suspected Contaminated Sites list that have received a No Further Action (NFA) determination. Because it is necessary to maintain historical records of sites that have been investigated and cleaned up, sites are not deleted from the database when cleanup activities are completed. Instead a No Further Action code is entered based upon the type of NFA determination the site received.

A review of the WA CSCSL NFA list, as provided by EDR, and dated 10/17/2017 has revealed that there are 12 WA CSCSL NFA sites within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 09/13/2017 has revealed that there are 16 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

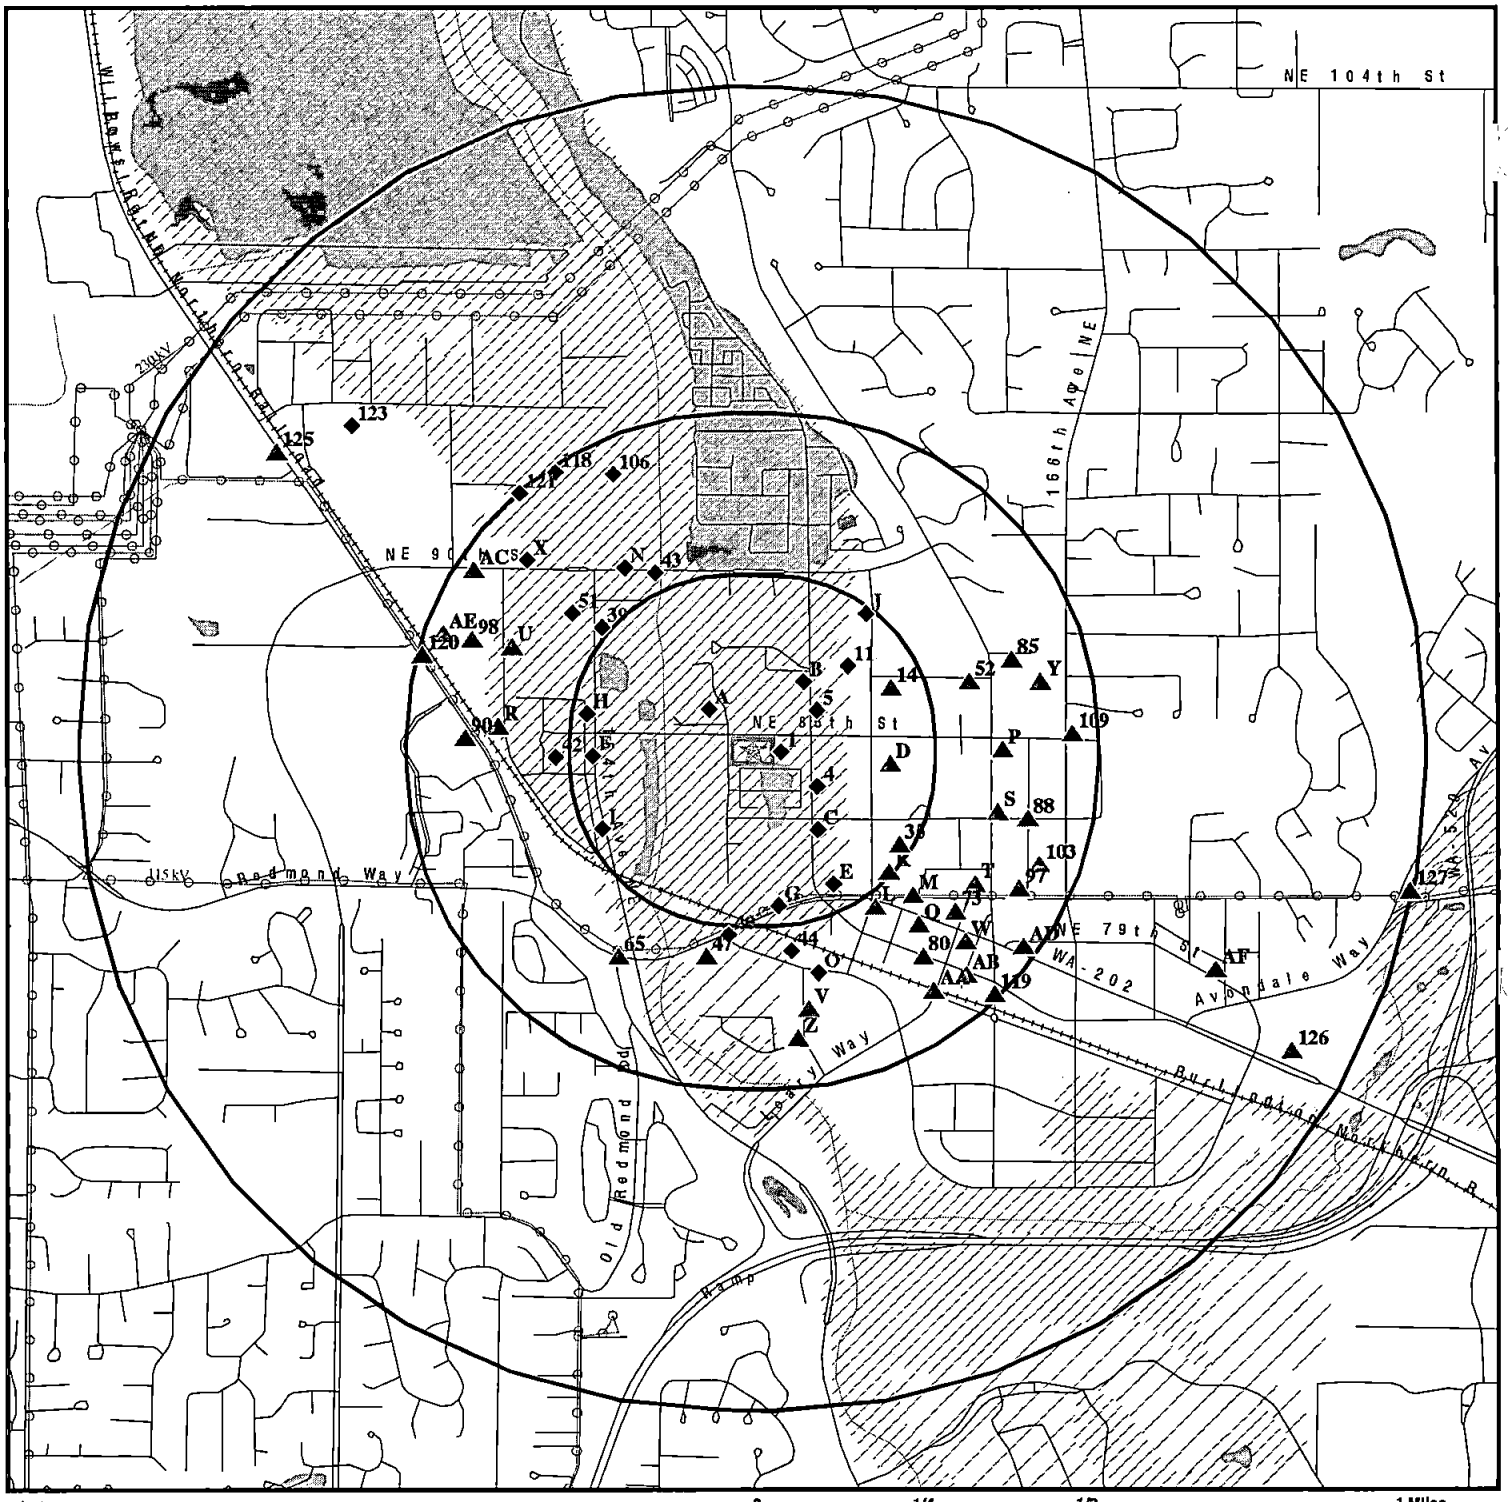
EXECUTIVE SUMMARY

Due to poor or inadequate address information, the following sites were not mapped. Count: 3 records.

Site Name	Database(s)
95 RIVERSIDE STREET	WA ICR
95 RIVERSIDE STREET (TWO REPORTS)	WA ICR
LAKE HILLS SEWAGE TREATMENT FACILI	WA ICR

OVERVIEW MAP - 5093388.2S



- Target Property
- Sites at elevations higher than or equal to the target property
- Sites at elevations lower than the target property
- Manufactured Gas Plants
- National Priority List Sites
- Dept. Defense Sites
- Indian Reservations BIA
- Power transmission lines
- 100-year flood zone
- 500-year flood zone
- National Wetland Inventory
- State Wetlands
- Upgradient Area

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110005301191

Environmental Interest/Information System
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

PROCYTE CORPORATION (Continued) **S109556263**

Data Year: 2009
Description: expired and discontinued cosmetic and skin care products
Mix: False
Reported Qty: 14000 LB
Kilo Qty: 6350.4001092268827
Density No: 0
Density Qty: Not reported

Shipments Sent:
Facility ID: 99996978
Data Year: 2009
Shipment sent data: 4/30/2009
Reported Qty: 14000 LB
Kilo Qty: 6350.40010922688

Waste Stream Comments:
Facility ID: 99996978
Data Year: 2009
Comments: The waste was a collection of outdated or expired cosmetic products and sunscreens. It was packaged in individual 1/2 to 8 oz bottles packed in case boxes then on pallets. There was one drum of expired cosmetic ingredients in a lab pak.

FINDS:

Registry ID: 110005354570

Environmental Interest/Information System
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

FINDS:

Registry ID: 110005342469

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110005357005

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

. Waste code: F003
. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Date form received by agency: 03/09/2010
Site name: ARGENT CHEMICAL LABORATORIES
Classification: Large Quantity Generator

. Waste code: D001
. Waste name: IGNITABLE WASTE

. Waste code: D002
. Waste name: CORROSIVE WASTE

. Waste code: F003

FINDS:

Registry ID: 110005349989

Environmental Interest/Information System
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110000549602

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are

KING & PRINCE SEAFOOD CORP (Continued) **1004613868**

transported off-site.

COMPLIANCE AND EMISSIONS REPORTING

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

HAZARDOUS WASTE BIENNIAL REPORTER

US EPA Risk Management Plan (RMP) database stores the risk management plans reported by companies that handle, manufacture, use, or store certain flammable or toxic substances, as required under section 112(r) of the Clean Air Act (CAA).

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Form Comm:	Our Maintenance Department servicing the facility (Fishking Processors Inc. & UniSea Inc.) uses a small amount of gear oil and compressor oil that is drained on a quarterly basis with a total of 200 gallons of a 90wt gear oil generated annually. This used oil is taken away by Emerald Services located at 7343 E. Marginal Way South Seattle WA 98108 We also use a solvent marketed by SafetyKleen that they replace once a year which is 30 gallons. This service is performed by SafetyKleen Distributors within the Seattle Region.

Form Comm:	Our Maintenance Department servicing the facility (Fishking Processors Inc. & UniSea Inc.) uses a small amount of gear oil and compressor oil that is drained on a quarterly basis with a total of 200 gallons of a 90wt gear oil generated annually. This used oil is taken away by Emerald Services located at 7343 E. Marginal Way South Seattle WA 98108 We also use a solvent marketed by SafetyKleen that they replace once a year which is 30 gallons. This service is performed by SafetyKleen Distributors within the Seattle Region.

FINDS:

Registry ID: 110005396393

Environmental Interest/Information System
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List
National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites
A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 05/30/2017
Date Data Arrived at EDR: 06/09/2017

Next Scheduled EDR Contact: 01/15/2018
Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens
Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 11/07/2016

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Data Release Frequency: Quarterly

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

State- and tribal - equivalent CERCLIS

CSCSL: Confirmed and Suspected Contaminated Sites List
State Hazardous Waste Sites. State hazardous waste site records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. Available information varies by state.

Date of Government Version: 10/17/2017

State and tribal Brownfields sites

BROWNFIELDS: Brownfields Sites Listing
A listing of brownfields sites included in the Confirmed & Suspected Sites Listing. Brownfields are abandoned, idle or underused commercial or industrial properties, where the expansion or redevelopment is hindered by real or perceived contamination. Brownfields vary in size, location, age, and past use -- they can be anything from a five-hundred acre automobile assembly plant to a small, abandoned corner gas station.

Date of Government Version: 01/18/2017
Date Data Arrived at EDR: 01/20/2017

Data Release Frequency: Varies

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

Date of Government Version: 12/31/2009

Data Release Frequency: Annually

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites
Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)
The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historic Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

COUNTY RECORDS

KING COUNTY:

Abandoned Landfill Study in King County

The King County Abandoned Landfill Survey was conducted from October through December 1984 by the Health Department's Environmental Health Division at the request of the King County Council. The primary objective of the survey was to determine if any public health problems existed at the predetermined 24 sites.

Date of Government Version: 04/30/1985

TACOMA/PIERCE COUNTY:

Closed Landfill Survey
Following numerous requests for information about closed dumpsites and landfills in Pierce County, the Tacoma-Pierce County Health Department decided to conduct a study on the matter. The aim of the study was to evaluate public health risks associated with the closed dumpsites and landfills, and to determine the need, if any, for further investigations of a more detailed nature. The sites represent all of the known dumpsites and landfills closed after 1950.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 07/30/2013
Date Data Arrived at EDR: 08/19/2013
Date Made Active in Reports: 10/03/2013

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

East Map:	6005215 REDMOND, WA
Version Date:	2014

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

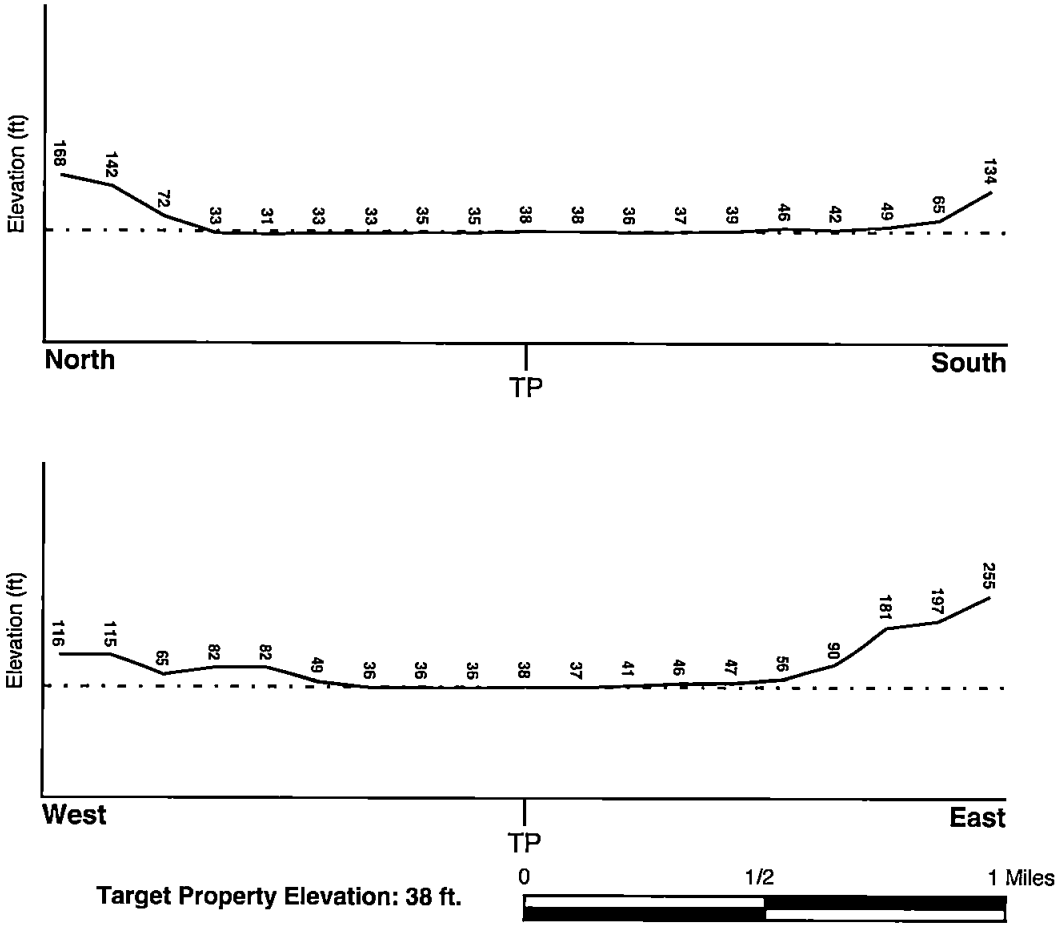
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General WNW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Target Property Elevation: 38 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
53033C0370F	FEMA Q3 Flood data

Additional Panels in search area:	FEMA Source Type

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
KIRKLAND	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1/2 - 1 Mile WNW
Site Name:	SCANDIA ENGINEERING
Site EPA ID Number:	WAD980738280
Groundwater Flow Direction:	NOT AVAILABLE
Inferred Depth to Water:	30 feet
Hydraulic Connection:	The uppermost ground water is situated in alluvial deposits of sand, gravel, peat, clay, and silt in undifferentiated beds.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information is inferred in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
12	1/2 - 1 Mile WNW	Not Reported
1G	1/2 - 1 Mile WNW	Not Reported

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Earlmont

Soil Surface Texture: silt loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Somewhat poorly drained

Hydric Status: All hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 76 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	9 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay. FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 14 Min: 4	Max: 5.5 Min: 5.1
2	9 inches	44 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 14 Min: 4	Max: 5 Min: 4.5
3	44 inches	59 inches	stratified muck to very fine sand	Not reported	Not reported	Max: 14 Min: 4	Max: 5 Min: 4.5

Soil Map ID: 2

Soil Component Name: Snohomish variant

Soil Surface Texture: silt loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Somewhat poorly drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 76 inches

Soil Layer Information

	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	18 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 4 Min: 1.4	Max: 6.5 Min: 5.6
2	18 inches	29 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 4 Min: 1.4	Max: 6.5 Min: 5.6
3	29 inches	59 inches	muck	A-8	Highly organic soils, Peat.	Max: 14 Min: 4	Max: 5 Min: 4.5

Soil Map ID: 3

Soil Component Name: Everett

Soil Surface Texture: gravelly sandy loam

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Somewhat excessively drained

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	16 inches	gravelly sandy loam	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 6.5 Min: 5.1
2	16 inches	31 inches	very gravelly sandy loam	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel	Max: 141 Min: 42	Max: 6.5 Min: 5.1
3	31 inches	59 inches	very gravelly coarse sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Gravels, Clean gravels, Poorly Graded Gravel. COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel.	Max: 705 Min: 141	Max: 6.5 Min: 5.6

Soil Map ID: 4

Soil Component Name: Water

Soil Surface Texture: gravelly sandy loam

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class:

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Ecology
Telephone: 360-407-6121

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Wells
Source: Department of Health
Telephone: 360-236-3148
Group A and B well locations.

Water Well Listing
Source: Public Utility District
Telephone: 206-779-7656
A listing of water well locations in Kitsap County.

OTHER STATE DATABASE INFORMATION

Oil and Gas Well Listing
Source: Department of Natural Resources
Telephone: 360-902-1450
Locations that represent oil and gas test well sites in Washington State from 1890 to present.

RADON

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities
Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater
Source: Department of Commerce, National Oceanic and Atmospheric Administration

Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary faultlines, prepared in 1975 by the United State Geological Survey

Classification:	Conditionally Exempt Small Quantity Generator
. Waste code:	D001
. Waste name:	IGNITABLE WASTE
Violation Status:	No violations found

FINDS: Other Ascertainable Records

Registry ID: 110005301191

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

The FINDS: database contains 0 additional records for this site. Please contact your EDR Account Executive for more information.

Site name:	DOLLAR SAVER CLEANER CLUB
Classification:	Not a generator, verified
Violation Status:	No violations found

FINDS: Other Ascertainable Records

Registry ID:	110005333175

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

The FINDS: database contains 0 additional records for this site. Please contact your EDR Account Executive for more information.

Brett Carp
Senior Environmental Scientist

CREDENTIALS

- B.S., Forest Resources, University of Washington, Seattle, Washington
- M.B.A., University of Washington

PROFESSIONAL CERTIFICATIONS

HAZWOPER, HAZWOPER Supervisor

PROFESSIONAL AFFILIATIONS

- Ecological Society of America

AREAS OF EXPERTISE

- Expert witness and litigation support
- Regulatory interaction and negotiations
- Contaminant fate and transport modeling
- Groundwater monitoring
- Soil sampling
- Site investigation and remediation within the MTCA process
- Vapor intrusion assessments and indoor air monitoring
- Terrestrial Ecological Evaluations
- Underground storage tank decommissioning, investigations, and remediation
- Dry cleaner site characterization and remediation
- Phase I Environmental Site Assessment
- Phase II Environmental Site Assessment
- Property transaction screening
- Risk assessment and cleanup level calculations

EXPERIENCE SUMMARY

Sixteen years of experience as a Project Manager, Technical Lead, and Task Manager for environmental investigations and remedial activities. Experienced in due diligence, site characterization and remediation for contaminants in air, soil, and groundwater; implementation and evaluation of remediation technologies; hazardous waste characterization and disposal; and conflict resolution negotiations with property owners, concerned citizen activist groups, and regulatory authorities.

KEY PROJECTS

Project Manager and Technical Lead for remedial investigation and feasibility study (RI/FS) of retail gasoline station property portfolio spanning Washington, Oregon, and Idaho. Principal duties include direction of characterization and remediation of soil and groundwater releases, and oversight of regulatory interaction.

Project Manager and Technical Lead for site characterization and remediation of 100+ year old pulp and paper manufacturing facility. Contaminates including petroleum compounds, metals, and volatile organic compounds in soil and groundwater. Principal duties include characterization of impacted media, negotiations with state regulators and municipal authorities.

Project Manager and Technical Lead for environmental assessment, characterization, and remediation of a former commercial agricultural equipment sales facility in Yakima, Washington. Principal tasks include historical research, characterization and remediation of organochlorine pesticides in soil and groundwater, and regulatory negotiation for risk-based closure.

Project Manager for the closure of multiple abandoned USTs and remediation of petroleum contaminated soil at a former retail gasoline station in Seattle, Washington during redevelopment as a carwash facility. Principal tasks included remedial excavation of petroleum-contaminated soil and post-excavation groundwater monitoring.

Project Manager for environmental due diligence. Completed approximately 250 Phase I Environmental Site Assessments throughout the continental United States. Principal tasks included state and federal database research, on-site environmental assessments, targeted collection of potentially contaminated media, and preparation of environmental documentation.

Re: Groundwater Sampling Letter Report
Redmond II
15801 and 15945 Northeast 85th Street
Redmond, Washington

EPI Project Number: 63807.1

Dear Mr. Yoon:

Environmental Partners, Inc. (EPI) is pleased to submit this letter report presenting the results of the groundwater sampling conducted at the property located at 15801 and 15945 Northeast 85th Street in Redmond, King County, Washington (subject property). Figure 1 presents the general location of the subject property. The groundwater sampling was completed at the request of Mill Creek Residential Trust (MCRT) in support of pre-purchase due diligence.

BACKGROUND

EPI performed a Phase I Environmental Site Assessment (ESA) for the subject property dated December 12, 2017. This assessment revealed no evidence of recognized environmental conditions (RECs) in connection with the subject property.

During the Phase I ESA, EPI identified one business environmental risk (BER) in connection with the property while reviewing the City of Redmond's *Summer 2017 Groundwater Monitoring Event City of Redmond Wellhead Protection Program* Report (2017 Redmond Wellhead Report), dated November 10, 2017 and prepared by Golder Associates. During the summer 2017 groundwater sampling event, low-level concentrations of tetrachloroethene (PCE) were detected in groundwater samples collected from monitoring wells located at the intersection of Northeast 85th Street and 161st Avenue Northeast, approximately 0.2 mile east of the subject property. The report does not identify the source of the PCE; however, low-level concentrations of PCE in groundwater is a known regional issue for the City of Redmond. Because the detected concentrations do not exceed the Model Toxics Control Act (MTCA) Method A Cleanup Level of 5 µg/L, the presence of PCE detected in groundwater proximate to the subject property is not considered a REC. However, low concentrations of PCE in groundwater may represent an additional redevelopment cost for dewatering and, therefore, is considered a BER.

Based on the findings of the Phase I ESA, EPI conducted groundwater sampling to evaluate the BER in connection with the subject property.

OBJECTIVES AND METHODOLOGY

The general objective of the groundwater sampling was to verify conditions summarized in the 2017 Redmond Wellhead Report. The specific tasks associated with this effort are documented below.

Groundwater Sampling

On December 15, 2017, EPI sampled monitoring wells B-1, B-2, and B-4 located on the subject property. The well locations are shown on Figure 2.

Prior to sampling, each well was purged using a peristaltic pump and following low-flow, low-impact well purging techniques. New downhole polyethylene tubing and a peristaltic pump were used to obtain all groundwater samples. Purge water was tested approximately every 3 to 5 minutes for stabilization of the key field parameters: temperature, pH, specific conductance, dissolved oxygen (DO), oxidation-reduction potential (ORP), and turbidity. Groundwater samples were collected into appropriate pre-labeled containers upon attainment of field parameter stabilization criteria. Purge water was stored in a sealed 5-gallon bucket pending disposal.

Sample Analysis

Groundwater samples were collected and submitted for PCE analysis using U.S. Environmental Protection Agency (EPA) Method 8260. Samples were preserved with hydrochloric acid and immediately following collection were placed in a cooler with ice to maintain an internal temperature of 4°C or less, pending submittal to the analytical laboratory. The samples were delivered to Friedman & Bruya, Inc. in Seattle, Washington, under standard chain-of-custody procedures. The Chain-of-Custody form is included in Attachment A.

FINDINGS

Subsurface Conditions

Prior to groundwater sampling, EPI measured the depth to water at each of the monitoring wells with an electronic water level meter. To ensure reproducibility and consistency of the depth-to-water data, all measurements were taken from the north side of the top surface of the PVC well casing. Groundwater was encountered at depths between 8.0 feet below ground surface (bgs) and 8.88 feet bgs prior to sampling.

The subject property is situated on a relatively flat land surface with a slight topographic gradient to the northwest. Based on a review of available information, including the 2017 Redmond Wellhead Report, the groundwater flow direction is west, toward the Sammamish River.

Analytical Results

A total of three groundwater samples were submitted for analysis. Sample locations and analytical results are summarized on Figure 2. The final laboratory analytical report is provided in Attachment A.

The analytical results indicate that PCE was not detected at a concentration exceeding the detection limit of the analytical method used in any of the groundwater samples.

CONCLUSIONS

The following conclusions are supported by the findings of the groundwater sampling conducted at the subject property:

- Based on the analytical results and field screening performed, groundwater at the subject property does not appear to be adversely impacted from the regional PCE groundwater issues within the City of Redmond. This BER is resolved.

- Due to the City of Redmond regional PCE issues in the vicinity of the subject property, caution should be taken if dewatering is part of the redevelopment plan. Impacted groundwater from the City of Redmond regional PCE plume could be drawn to the subject property during redevelopment that may require special permitting and monitoring associated with dewatering activities.

DISCLAIMER

As applicable and available within the project schedule and budget, EPI has completed the agreed scope of services, employing professional standards applicable in the industry today. EPI assumes no risk for existing conditions on the subject property.

To the extent that these services have required judgment, there can be no assurance that fully definitive or desired results were obtained, or if any results were obtained, that they were supportive of any given course of action. The services have included the application of judgment to scientific principles; to that extent, certain results of this work have been based on subjective interpretation. We make no warranties, express or implied including, without limitation, warranties as to merchantability or fitness for a particular purpose. The information provided in this letter report is not to be construed as legal advice.

This letter report was prepared solely for MCRT and its affiliates, partners, and lenders and the contents herein may not be used or relied upon by any other person without the express written consent and authorization of EPI. By accepting this report, the user agrees that any use or reliance it places on this report shall be limited to the terms and conditions of the contract under which this document was generated, the qualifications and limitations stated in the report, and with the acknowledgement that the actual site conditions may change with time and that hidden conditions not discoverable within the scope of this assessment may exist at the subject property.

If you have any questions or comments, please do not hesitate to contact me at (425) 395-0010.

Sincerely,

Eric Koltes, L.G.
Senior Geologist

RE: Redmond II 63807, F&BI 712254

Dear Mr Koltes:

Included are the results from the testing of material submitted on December 15, 2017 from the Redmond II 63807, F&BI 712254 project. There are 7 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

Analysis For Volatile Compounds By EPA Method 8260C

Client Sample ID:	B-2:GW	Client:	Environmental Partners
Date Received:	12/15/17	Project:	Redmond II 63807, F&BI 712254
Date Extracted:	12/18/17	Lab ID:	712254-01
Date Analyzed:	12/18/17	Data File:	121812.D
Matrix:	Water	Instrument:	GCMS4
Units:	ug/L (ppb)	Operator:	JS

Surrogates:	% Recovery:	Lower Limit:	Upper Limit:
1,2-Dichloroethane-d4	101	57	121
Toluene-d8	101	63	127
4-Bromofluorobenzene	101	60	133

Compounds:	Concentration ug/L (ppb)
Tetrachloroethene	<1

Analysis For Volatile Compounds By EPA Method 8260C

Client Sample ID:	B-1:GW	Client:	Environmental Partners
Date Received:	12/15/17	Project:	Redmond II 63807, F&BI 712254
Date Extracted:	12/18/17	Lab ID:	712254-02
Date Analyzed:	12/18/17	Data File:	121813.D
Matrix:	Water	Instrument:	GCMS4
Units:	ug/L (ppb)	Operator:	JS

Surrogates:	% Recovery:	Lower Limit:	Upper Limit:
1,2-Dichloroethane-d4	100	57	121
Toluene-d8	100	63	127
4-Bromofluorobenzene	101	60	133

Compounds:	Concentration ug/L (ppb)
Tetrachloroethene	<1

Project: Redmond II 63807, F&BI 712254

QUALITY ASSURANCE RESULTS FOR THE ANALYSIS OF WATER SAMPLES FOR VOLATILES BY EPA METHOD 8260C

Laboratory Code: 712277-01 (Matrix Spike)

Analyte	Reporting Units	Spike Level	Sample Result	Percent Recovery MS	Acceptance Criteria
Tetrachloroethene	ug/L (ppb)	50	2.7	94	10-226

Laboratory Code: Laboratory Control Sample

Analyte	Reporting Units	Spike Level	Percent Recovery LCS	Percent Recovery LCSD	Acceptance Criteria	RPD (Limit 20)
Tetrachloroethene	ug/L (ppb)	50	97	95	76-121	2

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The compound is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht – The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits. Compounds in the sample matrix interfered with the quantitation of the analyte.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.
