July 2021

## Executive Summary

PIONEER Technologies Corporation (PIONEER) conducted a Phase I Environmental Site Assessment (ESA) of the property located at 2021 Boulevard Road SE, in Olympia, Thurston County, Washington, hereinafter referred to as “the Property,” in conformance with the scope and limitations of ASTM International (ASTM) Standard Practice E 1527-13 (Practice). Any exceptions to, or deletions from, this practice are described in Section 1.4 of this report. The general Property location is shown in Figure 1. Property features are shown on Figure 2.

The purpose of this Phase I ESA was to satisfy relevant All Appropriate Inquiry (AAI) requirements to qualify the Mr. Daniel Stusser (the User) for applicable landowner liability protections under the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA), as amended. One of the primary objectives was to identify recognized environmental conditions (RECs) in connection with the Property and assess their relative significance.

This Phase I ESA report is comprised of the following elements: 1) property description, 2) User-provided information, 3) records review, 4) site reconnaissance, 5) interviews, and 6) findings, opinions, and conclusions.

## Findings

Prior to 1941, the Property was vacant, partially wooded land. By 1949, a residence was constructed on the south-central portion of the Property. By 1956, three greenhouses and an office associated with Smith’s Greenhouse (a plant nursery) were built around the residence. In 1966, a fire destroyed the office and it was replaced with a retail store and outdoor sales area. By 1978, Smith’s Greenhouse business became Boulevard Nursery and continued operating as a nursery. The nursery operated into the mid-2000s at which time the Property became abandoned. Several iterations of building demolition and soil grading occurred between 2012 and 2017. By 2017, the Property consisted of vacant grass- and gravel-covered land with a soil berm along the western boundary. Soil sampling for pesticides occurred in 2009, 2020, and 2021. One soil sample collected adjacent to the soil berm in 2021 contained dieldrin, a pesticide, at concentrations exceeding Model Toxics Control Act (MTCA) Method A/B Cleanup Levels for Unrestricted Land Use.

## Conclusions

In the Environmental Professional’s<sup>1</sup> (EP’s) opinion, this assessment has identified one REC in connection with the Property:

- Concentrations of pesticides, specifically dieldrin, exceeding MTCA Method A/B Cleanup levels for Unrestricted Land Use have been reported adjacent to the soil berm on the western portion of the Property. Use of pesticides is typically associated with nurseries and pesticides tend to accumulate in shallow soil. The soil berm on the western portion of the Property was reportedly created in the mid-2010s by scraping the topsoil from the Property after demolition of the on-

---

<sup>1</sup> See Section 7.3 for additional information on the requirements of an EP.

site structures (see Sections 2.5, 3.2.3, 3.2.6, 3.4.2, 4.3.6, 5, and 6). In the EP's opinion, soil sampling is recommended to 1) delineate the known MTCA cleanup level exceedance in soil and 2) collect additional soil data from the berm itself to confirm no additional cleanup level exceedances are present.

Although not a REC, the EP also recommends completing a ground penetrating radar survey to confirm no buried heating oil underground storage tanks (USTs) are present on-site. Given the age of the former residence (constructed in the 1940s) and office (constructed in the 1950s and burned in 1966), a heating oil tank (aboveground storage tank [AST] or UST) may have been present. PIONEER reviewed readily available and reasonably ascertainable records in an attempt to identify the historical heating source of the residence and office on the Property. No records were identified that suggested the use of heating oil or the former presence of a heating oil AST/UST at the Property. However, due to ownership changes and the extent of time elapsed since construction and demolition, PIONEER did not identify a knowledgeable party to interview regarding the historical heating source.

The User acquiring the Property is the sole party responsible for complying with AAI requirements for Landowner Liability Protection (LLP) under CERCLA as an Innocent Purchaser, Bona Fide Prospective Purchaser, or Contiguous Property Owner, as applicable. The completion of a Phase I ESA, with statement by an EP that it is compliant with AAI and/or the ASTM E 1527-13 Practice, may not be sufficient to provide CERCLA LLP.

The EP identified two data gaps in connection with this Phase I ESA. The User has not yet completed a review of recorded land title records and the Thurston County Department of Environmental Health did not respond to our request for records. The EP identified no limiting conditions in connection with this Phase I ESA. In the EP's opinion, the aforementioned historical sources and interviews were sufficient to develop a Property history and determine the likelihood of RECs. Therefore, the data gaps did not affect the EP's ability to identify suspect RECs in connection with the Property.

The findings, opinions and conclusions presented above are intended to provide a summary of the pertinent findings of the Phase I ESA investigation. It should be noted that although this section is an integral part of the report, it should not be substituted in lieu of reading the entire report. The entire report must be read in order to fully understand the potential environmental concerns associated with the Property.

## SECTION 1: INTRODUCTION

PIONEER Technologies Corporation (PIONEER) conducted a Phase I Environmental Site Assessment (ESA) of the property located at 2021 Boulevard Road SE, in Olympia, Thurston County, Washington, hereinafter referred to as “the Property” (see Figure 1). The Phase I ESA was conducted according to the ASTM International (ASTM) Practice E 1527-13 (Practice).

At the time of the reconnaissance, the Property consisted of approximately 0.90 acres of vacant grass- and gravel-covered land. The Property was located in a residential area in the eastern portion of Olympia. Maps of the Property features were developed from the observations, field notes, photographs, and/or historical information collected during the conduct of this Phase I ESA (see Figure 2).

Mr. Mike Reid, on behalf of the City of Olympia, authorized the conduct of this Phase I ESA to identify and evaluate potential environmental concerns associated with the Property prior to the City of Olympia (the User) acquiring the Property. The City of Olympia retained PIONEER to conduct this Phase I ESA based on our approved task order. This Phase I ESA was funded by the City’s United States Environmental Protection Agency (USEPA) Brownfield Assessment Grant for Hazardous Substances.

### 1.1 Purpose

The purpose of this Phase I ESA was to support the User’s All Appropriate Inquiry (AAI) into environmental conditions of the Property, a component of the User’s effort to qualify for one of the landowner liability protections to Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) that are applicable to the planned acquisition of the Property.

Satisfying AAI is one component of the requirements for a Prospective Purchaser to qualify for the Bona Fide Prospective Purchaser, Contiguous Property Owner, or Innocent Landowner defense to CERCLA liability. For properties known to be contaminated with hazardous substances, or petroleum, the Prospective Purchaser also must comply with the continuing obligations defined in CERCLA to maintain the Landowner Liability Protection (LLP) to CERCLA.

One of the primary objectives was to identify Recognized Environmental Conditions (RECs) in connection with the Property and assess the relative significance of the identified REC(s). The Practice defines a REC as:

*...the presence or likely presence of any hazardous substances<sup>2</sup> or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions.*

---

<sup>2</sup> For the purposes of this Phase I ESA, a hazardous substance is a substance as defined in the ASTM Practice E 1527-13.

## 1.2 Detailed Scope of Services

This Phase I ESA was conducted in conformance with the ASTM International Standard Practice on Environmental Site Assessments for Commercial Real Estate designation E 1527-13, "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process." The following non-scope considerations were completed as part of this Phase I ESA as are described in Section 9:

- Visual survey for suspect asbestos containing materials (ACMs)
- Visual survey for suspect lead-based paint
- Evaluation of radon potential

## 1.3 Significant Assumptions

Pursuant to the Practice, PIONEER assumes information provided by all sources and parties (including the User), is accurate and complete except where obvious inconsistencies or inaccuracies were identified.

## 1.4 Limiting Conditions and Exceptions

No limiting conditions were noted and the Practice's scope of assessment was implemented without exceptions.

## 1.5 Special Terms and Conditions

No special terms or conditions were imposed on the conduct of this Phase I ESA.

## 1.6 Reliance

PIONEER has prepared this report to be used and relied upon solely and exclusively by Mr. Daniel Stusser (the User) and the City of Olympia, in accordance with terms and conditions agreed upon for the project. No other party may rely upon PIONEER's findings, opinions, conclusions, or reports unless PIONEER has agreed to such reliance in writing.

According to the Practice, the following components of a Phase I ESA must be conducted within 180 days of the date of acquisition or the date of the intended transaction:

- Interview(s) with owners, operators, and occupants
- Search for recorded environmental cleanup liens
- Review of federal, tribal, state, and local government records
- Visual inspections of the Property and adjoining sites
- Declaration by the EP responsible for the assessment

The review of regulatory records for the Property was completed on June 24, 2021, the earliest completion date of the required Phase I ESA components. This Phase I ESA report, therefore, is valid until December 11, 2021.

## SECTION 2: USER PROVIDED INFORMATION

As part of the ASTM Practice, the User has the responsibility to provide information described in the subsections below. Mr. Daniel Stusser, the User, provided information about the following issues through the completion of the User Questionnaire (see Appendix A).

### 2.1 Reason for the Phase I ESA

Mr. Stusser reported the reason for this Phase I ESA was to support the User's AAI into environmental conditions of the Property, a component of the User's effort to qualify for landowner liability protections applicable to the planned purchase of the Property.

### 2.2 Recorded Environmental Cleanup Liens and Activity and Use Limitations

Mr. Stusser reported that a review of recorded land title records on file with the Thurston County clerk for the Property has not yet been completed. This data gap is discussed in Section 7.2.

### 2.3 Specialized Knowledge and Experience

Mr. Stusser reported having no specialized knowledge or experience that would indicate, or create suspicion of, the presence of environmental contamination on the Property with the exception of the historical use of the Property as a commercial plant nursery from the 1950s through approximately 2006. Section 3 provides additional discussion on the historical use of the Property.

### 2.4 Relationship of Purchase Price to Value

Mr. Stusser reported that the purchase price reflected fair market value.

### 2.5 Commonly Known or Reasonably Ascertainable Information

Mr. Stusser reported that he has become aware of commonly known or reasonably ascertainable information indicating that the Property could be contaminated or that any past event could have resulted in environmental impact of the Property or adjoining sites. He stated that 1) previous reports indicate the presence of dichlorodiphenyltrichloroethane (DDT) and other chemicals and 2) the current or previous Property owner bulldozed the topsoil into a pile at the rear (western edge) of the Property. The presence of pesticides in soil is discussed further in Section 3.

### 2.6 Proceedings Involving the Property

Mr. Stusser, based on personal knowledge and experience related to the Property, reported no known pending, threatened, or past litigation, administrative proceedings, or violations of environmental laws and regulations related to hazardous substances or petroleum products in, on, or arising from the Property.

## SECTION 3: RECORDS REVIEW

This section describes the records reviewed as part of this Phase I ESA.

### 3.1 Environmental Record Sources

PIONEER retained Historical Information Gatherers (HIG), who contracted GeoSearch to query the state, federal, and tribal regulatory agency databases described in the Practice to identify regulated and/or environmentally impacted sites within the specified approximate minimum search distances. GeoSearch also queried other readily available regulatory agency databases. The queried databases, associated search radii, and dates the lists were updated are listed in the GeoSearch report (see Appendix B). The GeoSearch report also includes maps indicating the locations of these listed sites relative to the Property. PIONEER also queried the USEPA Envirofacts and Enforcement and Compliance History Online databases, the Washington Department of Ecology's (Ecology's) 'What's In My Neighborhood' webpage, and Ecology's Cleanup and Tank Search Database for available documents associated with the GeoSearch listings. A summary of sites of concern located in the vicinity of the Property are discussed below.

The Property is listed in the Confirmed and Suspected Contaminated Sites, Facility Registration System, Facility Site Database, Hazardous Site List, and Voluntary Cleanup Program (VCP) databases. The Ecology Facility/Site ID is 3749 and the Cleanup ID is 223. The VCP Project Number is XS0001. The listings are associated with a release of metals and pesticides to soils on the Property by the former Boulevard Nursery (see section 3.2.3 for details).

A total of 15 other sites appeared in the GeoSearch report within one mile of the Property. The listed sites do not appear to represent suspect RECs in connection with the Property. Presumed groundwater flow direction west-northwest towards Indian Creek and Budd Inlet (see Section 3.3.1 and 3.3.2), previous cleanup actions, the distance from the Property, and/or the type of listing limit the likelihood of migration onto the Property from the other listed sites.

### 3.2 Additional Environmental Record Sources

The following subsections describe additional environmental record sources associated with the Property.

#### 3.2.1 County Environmental Health Department

On June 25, 2021, PIONEER submitted a freedom of information act (FOIA) request to the Thurston County Environmental Health Department, requesting all available information pertaining to environmental complaints, concerns or general records associated with the Property and surrounding area, including information on septic systems and water wells, if any, located on the Property. As of the date of publication, no records have been provided; this data gap is further discussed in Section 7.2.

### **3.2.2 Local Fire Department**

PIONEER submitted a FOIA request to the City of Olympia on June 25, 2021 for all available records associated with the Property and surrounding area. Assistant Fire Chief/Fire Marshall Mike Buchanan stated that he has no knowledge of fires, spills, or other environmental issues associated with the Property.

### **3.2.3 State Agency for Environmental Quality and Past Environmental Reports**

PIONEER reviewed the following documents associated with the Property, which were either obtained from the online Ecology Document Repository or provided by Ecology in response to our June 28, 2021 telephone discussion with Mr. Frank Winslow, the Site Manager for the Property:

- Asbestos Disposal Environmental Site Assessments (ADESA). 2020. Remedial Investigation Report. The Former Boulevard Nursery Site. Cleanup Site ID: 223, Facility Site ID: 3749. 2021 Boulevard Road Southeast. Olympia, Washington. September.
- Ecology. 2009. Initial Investigation Field Report. ERTS Number: 614620. 2021 Boulevard Road SE. Olympia, Washington. April.
- Ecology. 2012. Site Hazard Assessment. Boulevard Nursery. 2021 Boulevard Road SE. August.
- Ecology. 2020. No Further Action Letter for Boulevard Nursery. 2021 Boulevard Road SE, Olympia. October.
- Ecology. 2021. Rescission of No Further Action Status for Boulevard Nursery. 2021 Boulevard Road SE, Olympia. June.
- Eisenhower & Carlson, PLLC. 2009. Notice of Possible Environmental Contamination. 2021 Boulevard Road Southeast. Olympia, Washington. June.
- Hemphill, Green & Associates (HGA). 2009. Limited Phase II Environmental Site Assessment: Boulevard Nursery, 2021 Boulevard Road SE Olympia, Washington 98501. June.

The above-referenced documents are summarized in the following paragraphs.

HGA completed a Phase I ESA for West Coast Bank in March 2009. The 2009 Phase I ESA identified the former use of the Property as a retail store and three greenhouses from the 1950s until approximately 2008. At the time the Phase I ESA was completed, the on-site buildings were abandoned and in disrepair. The buildings on the site were constructed in 1954 and potentially contained lead-based paint and asbestos-containing materials (Eisenhower and Carlson 2009).

HGA recommended abandoning a former septic system tank and soil sampling due to the historic greenhouse operations (Ecology 2009). In April 2009, HGA located and abandoned the concrete septic tank by vacuuming waste materials out and filling the tank with pea gravel. The septic tank was then covered with the same soil that was originally atop it (see Figure 3 for the location of the former septic tank). HGA also collected three soil samples from approximately one foot below ground surface (bgs); the three samples were collected from the south greenhouse, north greenhouse, and yard (see Figure 3). No staining or odors were observed. The soil samples were analyzed for the eight Resource Conservation and Recovery Act (RCRA) metals and pesticides. Concentrations of metals and pesticides detected in the soil samples were below the MTCA Method A/B Cleanup Levels for Unrestricted Land Use (HGA 2009).

Ecology reported that although the pesticides were detected below cleanup levels, the number of samples collected was not sufficient to define magnitude or extent of the pesticide impacts. Ecology and Thurston County recommended additional sampling occur (Ecology 2009).

Ecology also completed a Site Hazard Assessment in 2012, providing a final rank of '2' for the Property. Ecology reported no confirmed releases to soil, air, surface water, or groundwater (Ecology 2012).

In August 2020, ADESA completed additional soil characterization. ADESA collected four soil samples from approximately one foot bgs. The sample locations were selected based on the historical layout of the greenhouse structures formerly located on the Property and the locations of the soil samples collected by HGA in 2009 (see Figure 3). No evidence of a release was noted during ADESA's sampling. The four soil samples were analyzed for pesticides. Concentrations of pesticides detected in the soil samples were below MTCA Method A/B Cleanup Levels for Unrestricted Land Use. ADESA recommended no further action based on the lack of cleanup level exceedances in the seven soil samples collected from the Property. The detected pesticides were likely released at the site by the legal use/application of the pesticides as a routine part of the nursery operation from the 1950's until the pesticides were banned or partially banned in the USA (1972 for DDT, 1974 for dieldrin and 1988 for chlordane; ADESA 2020).

The Property owner enrolled the Property in the Expedited VCP in September 2020 and Ecology granted a No Further Action status to the Property in October 2020 (see Appendix C for a copy of the No Further Action Letter). Ecology concluded that "no further investigation is warranted with the respect to pesticides or metals in soil or groundwater" and that "no further remedial action is necessary to clean up contamination at the Site." Ecology stated that it has begun the process of removing the Property from the Hazardous Sites List and the Confirmed and Suspected Contaminated Sites databases (Ecology 2020).

In April 2021, a prospective purchaser (Westminster Presbyterian Church; the north-adjointing site owner), completed a limited Phase II ESA on the Property. Three soil samples were collected from a berm on the western portion of the Property (see Figure 3). The soil samples were analyzed for pesticides. One of the soil samples had a concentration of dieldrin at 0.289 milligrams per kilogram (mg/kg), exceeding the MTCA Method A/B Cleanup Level for Unrestricted Land Use of 0.063 mg/kg. As a result of the cleanup level exceedance, Ecology rescinded the No Further Action determination (Ecology 2021; see Appendix C for a copy of the No Further Action Rescission Letter).

Based on the reports and information presented above, the concentration of dieldrin in soil at concentrations exceeding the MTCA Method A/B Cleanup Level for Unrestricted Land Use represents a REC in connection with the Property.

### **3.2.4 Pollution Liability Insurance Agency**

The Pollution Liability Insurance Agency (PLIA) maintains a publicly accessible online database containing information related to current Petroleum Technical Assistance Program (PTAP) projects. PIONEER reviewed the online databases for information associated with the Property. No records were identified

for the Property. The PLIA 2017 Loan & Grant Program lists a significant amount of information and data that was collected on 41 sites across the state during the two years of that program. PIONEER reviewed the list for the Property; the Property was unlisted.

### **3.2.5 Environmental Liens**

No evidence of environmental liens or activity use limitations was identified in the GeoSearch radius search or in a search of online records. A review of title and judicial records for environmental liens and AULs was not requested by the User.

### **3.2.6 State Agency for Oil and Gas Wells**

GeoSearch queried oil and gas permits/wells in the vicinity of the Property. According to the GeoSearch GeoPlus Oil & Gas Report, no known oil and/or gas well permits were recorded within one mile of the Property.

Additionally, PIONEER reviewed the oil and gas well database maintained by the Washington State Department of Natural Resources, Division of Geology and Earth Resources. According to the database, no known oil and/or gas well permits were recorded within one mile of the Property.

## **3.3 Physical Setting Source(s)**

The following subsections describe the physical setting of the Property.

### **3.3.1 United States Geological Survey (USGS) – Current 7.5 Minute Topographic Map**

PIONEER reviewed USGS 7.5-minute series Topographic Maps of the Lacey and Tumwater Quadrangles, Washington, compiled in 2017. The Property is relatively flat at an elevation of approximately 200 feet above mean sea level. The surrounding topography slopes slightly southeast to northwest towards Indian Creek, which is located approximately 2,000 feet to the west-northwest of the Property. The headwaters of the Woodard Creek drainage system are located approximately 1,700 feet to the east. Unnamed lakes associated with the Woodard Creek drainage system are located approximately 1,300 feet to the southeast and 3,000 feet to the northeast, respectively. Moxlie Creek is located approximately 3,400 feet to the southwest. Chambers Lake is located approximately 4,800 feet to the east. No other bodies of water were depicted within a one-mile radius. Interstate 5 is located approximately 3,700 feet to the north.

### **3.3.2 Other Non-Practice Physical Setting Sources**

PIONEER reviewed the Physical Setting Report, provided by HIG, for the Property. According to the report, the Property contains soils of the type 'Yelm Fine Sandy Loam', with 0 to 3 percent slopes. Subsurface geology consists of Pleistocene age glacial drift deposits, which includes till, outwash, alluvium, and sorted and unsorted sand, gravel, silt, and clay (see Appendix B).

Based on review of a well log located approximately 300 feet south of the Property (2117 Boulevard Road SE), subsurface soil consists of brown silty sands to depths of at least 31 feet bgs and groundwater

is anticipated to be approximately 27 feet bgs. Presumed groundwater flow is to the west-northwest, towards Indian Creek and Budd Inlet (ADESA 2020).

### 3.4 Historical Use Information for the Property

PIONEER consulted historical record sources described in the following subsections to develop a history of the Property's previous uses to help identify the likelihood of past uses having led to RECs in connection with the Property. The information reviewed was from reasonably ascertainable standard sources, defined in the Practice as publicly available, obtainable from its source within reasonable time and cost constraints, and practicably reviewable.

Data failures encountered, as defined by the Practice, are described in the following discussions of the respective historical sources. The Practice requires review of only as many of the standard historical sources as are reasonably ascertainable and likely to be useful.

#### 3.4.1 Standard Historical Sources

The sources reviewed for this Phase I ESA are summarized below. A summary of findings from these reviews is presented in section 3.4.2.

- Aerial Photographs: PIONEER reviewed aerial photographs, obtained from HIG, dated 1941, 1956, 1957, 1968, 1980, 1982, 1990, 2006, 2009, 2013, 2015 and 2017 (see Appendix C). The scale of the aerial photographs did not allow discerning of individual features of the Property. PIONEER also reviewed aerial photographs, obtained from the Thurston County GeoData Property Map database, dated 1996, 2000, 2003, 2006, 2009, 2012, 2015, 2017, 2018, and 2019.
- Fire Insurance Maps: According to HIG, no Sanborn® Fire Insurance Maps of the Property area were available.
- Property Tax Files: PIONEER queried the Thurston County Auditor's webpage for all available records associated with the Property. The records were comprised of parcel summary sheets and parcel cards (see Appendix C).
- Recorded Land Title Records: PIONEER did not review land title records because information regarding the history of the Property was obtained from other historical sources identified herein. In addition, land title records typically provide information regarding ownership, but not use, of a property.
- USGS Topographic Maps: PIONEER reviewed the USGS 7.5 minute series Topographic Maps of the Olympia, Lacey, and Tumwater Quadrangles, Washington provided by HIG, dated 1937, 1949, 1959, 1968, 1973, 1981, 1994, 1997, 2011, 2014, and 2017 (see Appendix C).
- Local Street Directories: PIONEER reviewed City Directory Abstracts provided by HIG for the years 1958, 1963, 1968, 1973, 1978, 1982, 1987, 1993, 1998, 2003, 2008, 2013, and 2018 (see Appendix C). The Property address was not listed in until 1963.
- Plat Maps: PIONEER reviewed historical Plat Maps of the Property vicinity, obtained from HIG, dated 1854, 1864, 1865, and 1912 (see Appendix C). The scale of the maps did not allow identification of the specific Property boundaries.
- Zoning/Land Use Records: PIONEER reviewed a City of Olympia zoning map. According to the zoning map, the Property was zoned R-4-8, Residential 4-8 Units per Acre.

### 3.4.2 Historical Use Summary

A summary of historical usage of the Property, back to 1854, the date of earliest readily available records as described above, is presented in the following table:

Year/Period	Identified/Inferred Use	Source (Date)
1854 – 1941	The Property was vacant and partially wooded and possibly used intermittently for agriculture.	Plat Maps (1854-1912) Topographic Map (1937) Aerial Photograph (1941)
1949	One structure, likely a residence, was constructed on the south-central portion of the Property.	Topographic Map (1949)
1956 – 1966	By 1956, three greenhouses and an office were built around the residence. In 1966, a fire destroyed the office. The Property operated as Smith's Greenhouse (a plant nursery).	Topographic Maps (1959) Aerial Photograph (1956, 1957) Building Department (1966) City Directory (1963) Thurston County Auditor (2021)
1966 – 1973	The burned office was replaced by a retail store and outdoor sales area. The retail store was heated with natural gas. The three greenhouses and residence remained. The Property continued to operate as Smith's Greenhouse through at least 1973.	Building Department (1966) Aerial Photograph (1968) City Directories (1968, 1973) Topographic Maps (1968, 1973)
1978 – 2008	The use of the Property did not change, but the Property began operating as Boulevard Nursery prior to 1978 through approximately 2008. Jeffrey Nevin acquired the Property from Nevinland LLC in 2008.	City Directories (1978-2008) Aerial Photographs (1980-2006) Topographic Maps (1981-1997) Thurston County Auditor (2021)
2009 – 2017	By 2009, the outdoor sales area and greenhouse roofs were no longer present. The Property was vacant and in a state of disrepair. Brian Barlow acquired the Property from Jeffrey Nevin in 2013. The residence was demolished between 2012 and 2015 and the retail store was demolished between 2015 and 2017.	Aerial Photographs (2009-2017) Topographic Maps (2011-2017) City Directories (2013, 2018) Thurston County Auditor (2021)
2017 – 2021	By 2017, the Property consisted of vacant grass- and gravel-covered land.	Aerial Photographs (2018, 2019) Thurston County Auditor (2021)

The potential for environmental impact associated with historical use of pesticides at the former nursery represents a REC in connection with the Property.

Given the age of the former residence (constructed in the 1940s) and office (constructed in the 1950s and burned in 1966), a heating oil tank (aboveground storage tank [AST] or underground storage tank [UST]) may have been present. PIONEER reviewed readily available and reasonably ascertainable records in an attempt to identify the historical heating source of the residence and office on the Property. No records were identified that suggested the use of heating oil or the former presence of a heating oil AST/UST at the Property. However, due to ownership changes and the extent of time elapsed since construction and demolition, PIONEER did not identify a knowledgeable party to interview regarding the historical heating source. Additionally, no records were available indicating the removal or closure of a heating oil AST/UST.

### **3.4.3** *Historical Use Information about Surrounding Areas*

An attempt was made to assess the historical uses of specific proximate sites by reviewing records referenced in Section 3.4.1, as identified only to the extent that this information was revealed in the course of researching the Property itself.

No RECs on surrounding sites were identified using the historical sources referenced above.

## SECTION 4: SITE RECONNAISSANCE

A reconnaissance was conducted to identify evidence indicative of suspect RECs in connection with the Property. Descriptions of the current Property use and conditions, including the use, storage, and/or treatment of hazardous substances and/or petroleum products and the generation, storage/accumulation, and/or disposal of chemical, petroleum or other contaminated wastes are presented in the following sections.

### 4.1 Methodology and Limiting conditions

On June 29, 2021, Mr. Joel W. Hecker, the EP, conducted a reconnaissance to observe Property conditions and features; Mr. Hecker was unaccompanied. Photographs taken during the reconnaissance, which illustrate observed conditions and surrounding areas, are contained in Appendix D.

### 4.2 General Property Setting

At the time of the reconnaissance, the Property consisted of 0.90 acres of vacant land. The Property was located in a residential area in the eastern portion of Olympia.

### 4.3 Exterior Observations

The exterior portion of the Property consisted of vacant, grass- and gravel-covered land. Mr. Hecker observed no evidence of stained soils or pavements, or areas of stressed vegetation, septic systems or water supply/monitoring wells. No suspect RECs were identified unless indicated in the following subsections.

#### 4.3.1 Chemical Use and Storage

Mr. Hecker observed no use and/or storage of chemicals.

#### 4.3.2 USTs/ASTs

Mr. Hecker observed no evidence of USTs or ASTs.

#### 4.3.3 PCB-Containing Equipment

Mr. Hecker observed no evidence of PCB-containing equipment.

#### 4.3.4 Pits, Ponds, and Lagoons

Mr. Hecker observed no evidence of pits, ponds, or lagoons.

#### 4.3.5 Waste Generation, Treatment, Storage, and Disposal

Mr. Hecker observed no evidence of the generation, treatment, storage, or disposal of liquid or solid wastes.

### 4.3.6 Other Exterior Features

Mr. Hecker observed a raised berm of soil was along the western edge of the Property (see Figure 2). According to Mr. Stusser, the berm was created by scraping topsoil from the Property and pushing it to the western Property edge after all the former nursery structures were demolished. Soil within the berm may contain higher concentrations of pesticides associated with the former nursery given the material was nearest the surface at the time of pesticide applications. The potential for environmental impact to soil within the soil berm represents a REC in connection with the Property.

### 4.4 Interior Observations

No structures were present on the Property at the time of the reconnaissance.

### 4.5 Adjoining Sites Observations

Known current uses of adjoining sites are summarized in the following table:

Direction	Name Address	Activity
North	Westminster Presbyterian Church Community Garden 2003 Boulevard Road SE	Gardening
East	Residences 2016-2104 Boulevard Road SE	Residential
South	Residences 2101 Boulevard Road SE, 2106-2108 Myrtle Place SE	Residential
West	Residence 2002 Steele Street SE	Residential

Mr. Hecker observed the surrounding sites from public thoroughfares, where accessible, and walked the Property perimeter. No RECs associated with the adjoining sites were identified based on the reconnaissance.

### SECTION 5: INTERVIEWS

As part of the conduct of this Phase I ESA, PIONEER interviewed the following individuals other than the User of this report:

- Property owner: Mr. Brian Barlow
- Ecology Project Manager: Mr. Frank Winslow, Toxics Cleanup Program

An interview with the current Property owner's representative consisted of a verbal interview completed on July 7, 2021. Mr. Barlow reported that he previously demolished several structures on the property and graded surficial soil into a mound on the western edge of the Property. He stated that multiple iterations of soil sampling have occurred on the Property and that Ecology granted the Property a No Further Action status, which was rescinded based on a 2021 soil sample containing elevated concentrations of a pesticide (dieldrin). The environmental impact associated with historical use of pesticides at the former nursery represents a REC in connection with the Property.

PIONEER also interviewed Mr. Frank Winslow, Site Manager for Ecology's Toxics Cleanup Program. Mr. Winslow reported that the No Further Action status granted in 2020 was rescinded in 2021 due to a soil sample collected from the base of the soil mound on the Property's western portion exceeding the MTCA Method A/B Cleanup Level for Unrestricted Land Use for a pesticide called dieldrin. He stated that additional investigation would be needed to determine the extent of the cleanup level exceedance and a presumptive remedy would be a dig and haul removal of the contaminated soil. Mr. Winslow stated that he had no information suggesting that a heating oil UST was ever present on the Property. The dieldrin cleanup level exceedance in soil represents a REC in connection with the Property.

### SECTION 6: VAPOR ENCROACHMENT FROM THE SUBSURFACE

Vapors can encroach onto the Property and migrate into current or future Property structures as the result of a release of hazardous substances or petroleum products to the subsurface soil or groundwater at the Property or from releases to proximate sites located adjacent, hydraulically upgradient, or with preferential pathways to the Property. PIONEER considered the following factors when assessing the likelihood of vapor encroachment at the Property.<sup>3</sup>

- Current use of the Property and proximate sites via visual reconnaissance (see Section 4.0)
- Historic use of the Property and proximate sites via review of a regulatory database report (see Section 3.1) and historical sources (see Section 3.4)
- Physical setting of the Property and proximate sites (see Section 3.3)

Based on the evaluation of the above referenced criteria, no potential subsurface vapor encroachment sources were identified.

---

<sup>3</sup> Please note, this assessment does not constitute a vapor encroachment screening as defined in ASTM E2600-10.

## SECTION 7: EVALUATION

Opinions and conclusions, data gaps and limitations, and the signature of the EP are presented below.

### 7.1 Opinions, Recommendations, and Conclusions

PIONEER has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Standard Practice E 1527-13 of the property located at 2021 Boulevard Road SE, in Olympia, Thurston County, Washington, the Property. Any exceptions to, or deletions from, this Practice are described in Section 1.4 of this report. In the EP's opinion, this assessment has revealed no evidence of RECs in connection with the Property except for the following:

- Concentrations of pesticides, specifically dieldrin, exceeding MTCA Method A/B Cleanup levels for Unrestricted Land Use have been reported adjacent to the soil berm on the western portion of the Property. Use of pesticides is typically associated with nurseries and pesticides tend to accumulate in shallow soil. The soil berm on the western portion of the Property was reportedly created in the mid-2010s by scraping the topsoil from the Property after demolition of the on-site structures (see Sections 2.5, 3.2.3, 3.2.6, 3.4.2, 4.3.6, 5, and 6). In the EP's opinion, soil sampling is recommended to 1) delineate the known cleanup level exceedance in soil and 2) collect additional soil data from the berm itself to confirm no additional cleanup level exceedances are present.

Although not a REC, the EP also recommends completing a ground penetrating radar survey to confirm no buried heating oil USTs are present on-site. Given the age of the former residence (constructed in the 1940s) and office (constructed in the 1950s and burned in 1966), a heating oil tank AST or UST may have been present (see Section 3.4.2). PIONEER reviewed readily available and reasonably ascertainable records in an attempt to identify the historical heating source of the residence and office on the Property. No records were identified that suggested the use of heating oil or the former presence of a heating oil AST/UST at the Property. However, due to ownership changes and the extent of time elapsed since construction and demolition, PIONEER did not identify a knowledgeable party to interview regarding the historical heating source.

### 7.2 Data Gaps and Limiting Conditions

The EP identified two data gaps in connection with this Phase I ESA. The User has not yet completed a review of recorded land title records and the Thurston County Department of Environmental Health did not respond to our request for records. The EP identified no limiting conditions in connection with this Phase I ESA. In the EP's opinion, the aforementioned historical sources and interviews were sufficient to develop a Property history and determine the likelihood of RECs. Therefore, the data gaps did not affect the EP's ability to identify suspect RECs in connection with the Property.

### 7.3 Statement and Signature of Environmental Professional

The EP responsible for the conduct of this Phase I ESA was Joel W. Hecker, LG. His resume is attached in Appendix E. I declare that, to the best of my professional knowledge and belief, I meet the definition of EP as defined in §312.10 of 40 Code of Federal Regulations (CFR) 312. I have the specific qualifications

## Phase I Environmental Site Assessment

based on education, training, and experience to assess a property of the nature, history, and setting of the Property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR 312.

A handwritten signature in blue ink that reads 'Joel W. Hecker' is positioned above a horizontal line.

Joel W. Hecker, LG

Senior Scientist/Geologist

## SECTION 8: DEVIATIONS

No deviations occurred as part of this Phase I ESA.

### SECTION 9: NON-SCOPE SERVICES

This Phase I ESA addresses the following non-scope considerations:

- Visual survey for suspect asbestos containing materials (ACMs)
- Visual survey for suspect lead-based paint
- Evaluation of radon potential

#### 9.1 Asbestos Evaluation

Asbestos (a cancer-causing material) was commonly used as an acoustic insulator, thermal insulation, fire proofing and in other building materials such as ceiling and floor tiles, sprayed-on insulation, pipe wraps, mastics, wall board, mortar, and roofing materials until the late 1970s. Raw materials and finished goods inventories of ACMs were allowed to be utilized until depleted. However, ACMs are still imported into the U.S. and used in new building construction.

When ACMs are disturbed or the materials become damaged it becomes a hazard. The term ‘friable’ is used to describe asbestos that can be reduced to dust by hand pressure. ‘Non-friable’ means asbestos too hard to be reduced to dust by hand.

No structures are present on the Property; therefore, it is unlikely that ACMs are present.

#### 9.2 Lead-Based Paint Evaluation

Lead is a pliable, soft metal used in the construction of pipes, rods, and containers. Before 1978, lead was a common ingredient in paint because it added strength, shine and extended the life of the paint. In 1978 the USEPA banned the use of lead pigments in paints used on interior and exterior residential surfaces. Lead poisoning can result from children having access to, and ingestion (by chewing) of lead-based paint covered surfaces. Inhalation of dust produced by normal oxidation, or scraping/sand-blasting of the paint, which may contain significant amounts of lead, is also a health hazard. The USEPA action level for lead-based paint is 0.5% dry weight.

No structures are present on the Property; therefore, it is unlikely that lead-based paint is present.

#### 9.3 Radon

Radon is a colorless, tasteless radioactive gas with an EPA-specified action level of 4.0 picocuries per liter of air (pCi/L). Radon gas has a very short half-life of 3.8 days. The health risk potential of radon is associated with its rate of accumulation within confined areas, particularly confined areas near or in the ground, such as basements, where vapors can readily transfer to indoor air from the ground through foundation cracks or other pathways. Large, adequately ventilated rooms generally present limited risk for radon exposure.

The US EPA has prepared maps with radon zone designations for every county in every state in the US, and each zone represents average indoor radon concentrations within the respective county. A description of the three primary radon zones and their respective averages is presented below:

<u>ZONE</u>	<u>AVERAGE PREDICTED RADON LEVELS</u>	<u>POTENTIAL</u>
Zone 1	Above 4.0 pCi/L	Highest
Zone 2	Between 2.0 and 4.0 pCi//L	Moderate
Zone 3	Below 2.0 pCi/L Highest	Low

According to the US EPA, radon concentrations vary greatly from one property to the next. Therefore, the radon zone information presented in the table above is merely an indication of the average known concentration of radon within a given zone. Specific radon concentrations for any given site cannot be definitively determined in the absence of radon sampling and analysis.

According to regional radon information obtained from the USEPA, the Property is located within USEPA-designated Zone 3 for radon gas. Based on the low potential for radon at the Property, no further action regarding radon is recommended at this time.

## SECTION 11: DISCLAIMER

PIONEER's project team conducted this Phase I ESA to identify RECs in connection with the Property and to assess the relative significance of the identified RECs. The findings, opinions, conclusions, and recommendations presented in this report are based upon observations noted during the site visit, and information obtained during the performance of the scope of services on the dates indicated. In the process of obtaining the field and historical information in preparation of this report, procedures were followed that represent reasonable and accepted environmental practices and principles, in a manner consistent with that level of care and skill ordinarily exercised by members of these professions currently practicing under similar conditions. Records reviewed at various locations as identified within the text of this report, include only those records that were provided to PIONEER by the referenced department on the date indicated. As such, the records provided to PIONEER may not represent all records available at a given source. Appropriate Inquiry was made into the past uses of the Property consistent with good commercial or customary practice. As is typical with Phase I ESAs, PIONEER conducted no testing or subsurface evaluation for this assessment.

Due to unknown or latent conditions on the Property, or on adjacent or nearby properties, which may become evident in the future, PIONEER does not represent the Property is free of contamination or hazardous waste material. It should also be noted the Property conditions may change over time. Should additional surface, subsurface, chemical, or other data become available after the date of issue of this report, the findings, conclusions and recommendations contained in this report may have to be modified. PIONEER should be retained to review the new information and adjust our opinion and recommendations accordingly.

All reports, field data, field notes, laboratory test data, calculations, estimates and other documents prepared by PIONEER as instruments of service are the property of PIONEER. No parties other than those specifically identified in this report may rely upon PIONEER's opinions, conclusions or reports unless PIONEER has agreed to such reliance in writing. In any event, any reliance will be subject to the terms and conditions set forth in the contractual agreement under which this work was performed.

# PHASE I ENVIRONMENTAL ASSESSMENT -ALL APPROPRIATE INQUIRY

## USER QUESTIONNAIRE

In order to qualify for one of the Landowner Liability Protections (LLPs) offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the Brownfields Amendments to CERCLA), the User of a Phase I Environmental Site Assessment (ESA) must consider the issues discussed below as part of the User's All Appropriate Inquiry (AAI) to identify Recognized Environmental Conditions (RECs) associated with the Property. This information should be provided to the Environmental Professional conducting the Phase I ESA so that a complete report can be issued. The User may decide not to provide this information to the Environmental Professional; however, the absence of the information will be noted in the Phase I ESA report and may affect assessment conclusions. Under these circumstances, it will be the User's responsibility to determine if the Phase I ESA results, combined with results from the tasks described below, is sufficient to satisfy the requirements of All Appropriate Inquiry as defined by federal statute and regulation.

### Instructions:

1. Fill in all blanks.
2. Indicate "NA" (not applicable), if appropriate.
3. Attach additional pages with your signature if additional space is required.

Property Name: 2021 Boulevard Cooperative

Property Location: 2021 Boulevard Road SE, Olympia

County: Thurston State: WA

Questionnaire Completed By/Title: Daniel Stusser

Company/ Phone Number: 360-259-5000

On Behalf Of (if applicable): \_\_\_\_\_

Planned Date of Purchase/Lease (circle one): September 7, 2021

Time Period of Site Knowledge: March 2021 to current

### 1. REASON FOR PHASE I ESA

The User of the requested Phase I ESA must make the reason for the Phase I ESA known to the Environmental Professional. Otherwise, it must be assumed that the reason is to qualify for an LLP to CERCLA liability. Please indicate the reason for this Phase I ESA of the Property.

- Due diligence/liability protection for purchase of the Property
- Due diligence/liability protection for lease of the Property
- Mortgage loan or refinance
- Foreclosure
- Other; Explain: \_\_\_\_\_

### 2. RECORDED ENVIRONMENTAL CLEANUP LIENS AND ACTIVITY/USE LIMITATIONS

The User is responsible to ascertain, through personal knowledge and/or a review of reasonably ascertainable recorded land and judicial records, if any environmental liens have been filed on the Property and if any activity or use limitations (AULs) have been placed on the Property because of environmental impact. You may engage a title

company or other capable professional to undertake the review of reasonably ascertainable records on your behalf.

Have you conducted, or arranged to have conducted, a review of land title records in which recorded liens and activity/use restrictions would be revealed?

Yes  
 No

If yes, please specify who conducted the review: \_\_\_\_\_

If yes, please specify the types and locations of records reviewed: \_\_\_\_\_

Based on your personal knowledge and/or reviews of title records, are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state, or local law?

Yes  
 No

If yes, explain briefly: \_\_\_\_\_

Based on your personal knowledge and/or reviews of title records, are you aware of any activity and/or use limitations, such as engineering controls, land use restrictions, or institutional controls, that are in place at the property and/or have been filed or recorded in a registry under federal, tribal, state, or local law?

Yes  
 No

If yes, identify the land use limitations/restrictions: Property was formerly commercial, now is zoned for residential use, R-4-8 (4-8 units per acre)

### 3. SPECIALIZED KNOWLEDGE AND EXPERIENCE

Any specialized knowledge or experience of the User that could indicate, or create suspicion of, the presence environmental contamination on the Property must be considered as part of the AAI process. Specialized knowledge or experience includes familiarity with historic activities on the Property that could result in environmental impact, personal knowledge or experience that would indicate a risk of environmental impact associated with past Property uses, knowledge of the environmental history of the Property, and any other information that could indicate environmental impact or threat of environmental impact on the Property.

As the User of this environmental site assessment, do you have any specialized knowledge or experience related to the Property or adjoining properties?

Yes  
 No

If yes, explain briefly: The property was used as a commercial plant nursery from sometime in the 1950s through approximately 2006.

#### 4. RELATIONSHIP OF PURCHASE PRICE TO VALUE

Historically, environmentally contaminated properties often have been sold at prices below market value to entice buyers to acquire the property, contamination, and resultant liabilities; therefore, if a property's sale price is significantly below market value without any obvious impairments or reasons for the reduced price, the potential for environmental impact as a cause of the reduced price must be evaluated.

Does the purchase price being paid for this Property reflect the fair market value of the Property?

Yes  
 No

If there is a significant negative difference, can you identify the reason for the reduced price versus value? If "No" the Property may be assumed to be contaminated.

Yes  
 No

If yes, explain briefly: \_\_\_\_\_

#### 5. COMMONLY KNOWN OR REASONABLY ASCERTAINABLE INFORMATION

Have you become aware, through conversations, rumor, etc., of any commonly known or reasonably ascertainable information within the local community that would indicate the Property could be contaminated (e.g. types of past uses, presence of storage tanks, use of chemicals, environmental cleanups, etc.) or that any past event (e.g. fire, chemical spill, accident, etc.) could have resulted in environmental impact of the Property or adjoining properties.

Yes  
 No

If yes, explain briefly: Previous reports indicate presence of DDT and other chemicals.

Current or previous owner bulldozed the topsoil into a pile at the rear of the property.

#### 6. PROCEEDINGS INVOLVING THE PROPERTY

Do you, the User of this environmental site assessment, based on your knowledge and experience related to the property, have any knowledge of any of the following:

Pending, threatened, or past litigation related to hazardous substances or petroleum products in, on or arising from the Property?

Yes  
 No

If yes, explain briefly: \_\_\_\_\_

Pending, threatened, or past administrative proceedings related to hazardous substances or petroleum products in, on or arising from the Property?

Yes  
 No

If yes, explain briefly: "Proceedings"? There has been previous research done there.

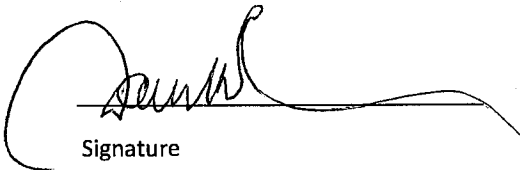

**6/28/21 -EP confirmed Mr. Stusser is not aware of proceedings. This should be a NO.**

Notices from any governmental entity regarding any possible violation of environmental laws or regulations or possible liability relating to hazardous substances or petroleum products in, on or arising from the Property?

Yes  
No

If yes, explain briefly: I am unaware of any notices from government agencies.

## **Unlocated Sites Summary**

*This list contains sites that could not be mapped due to limited or incomplete address information.*

*No Records Found*

## ***Environmental Records Definitions - FEDERAL***

**AIRSAFS** Aerometric Information Retrieval System / Air Facility Subsystem

VERSION DATE: 10/20/14

The United States Environmental Protection Agency (EPA) modified the Aerometric Information Retrieval System (AIRS) to a database that exclusively tracks the compliance of stationary sources of air pollution with EPA regulations: the Air Facility Subsystem (AFS). Since this change in 2001, the management of the AIRS/AFS database was assigned to EPA's Office of Enforcement and Compliance Assurance. Enforcement and Compliance History Online (ECHO) Clean Air Act data from AFS are frozen and reflect data as of October 17, 2014, the EPA retired this system for Clean Air Act stationary sources.

**ALTFUELS** Alternative Fueling Stations

VERSION DATE: 10/28/20

Nationwide list of alternative fueling stations made available by the U.S. Department of Energy's Office of Energy Efficiency & Renewable Energy. Includes Bio-diesel stations, Ethanol (E85) stations, Liquefied Petroleum Gas (Propane) stations, Ethanol (E85) stations, Natural Gas stations, Hydrogen stations, and Electric Vehicle Supply Equipment (EVSE).

**BF** Brownfields Management System

VERSION DATE: 01/11/21

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. The United States Environmental Protection Agency maintains this database to track activities in the various brown field grant programs including grantee assessment, site cleanup and site redevelopment. This database includes tribal brownfield sites.

**BRS** Biennial Reporting System

VERSION DATE: 12/31/17

The United States Environmental Protection Agency (EPA), in cooperation with the States, biennially collects information regarding the generation, management, and final disposition of hazardous wastes regulated under the Resource Conservation and Recovery Act of 1976 (RCRA), as amended. The Biennial Report captures detailed data on the generation of hazardous waste from large quantity generators and data on waste management practices from treatment, storage and disposal facilities. Currently, the EPA states that data collected between 1991 and 1997 was originally a part of the defunct Biennial Reporting System and is now incorporated into the RCRAInfo data system.

**CDL** Clandestine Drug Laboratory Locations

VERSION DATE: 06/17/20

## ***Environmental Records Definitions - FEDERAL***

The U.S. Department of Justice ("the Department") provides this information as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments. The Department does not establish, implement, enforce, or certify compliance with clean-up or remediation standards for contaminated sites; the public should contact a state or local health department or environmental protection agency for that information.

**DNPL** Delisted National Priorities List

VERSION DATE: 04/26/21

This database includes sites from the United States Environmental Protection Agency's Final National Priorities List (NPL) where remedies have proven to be satisfactory or sites where the original analyses were inaccurate, and the site is no longer appropriate for inclusion on the NPL, and final publication in the Federal Register has occurred.

**DOCKETS** EPA Docket Data

VERSION DATE: 12/22/05

The United States Environmental Protection Agency Docket data lists Civil Case Defendants, filing dates as far back as 1971, laws broken including section, violations that occurred, pollutants involved, penalties assessed and superfund awards by facility and location. Please refer to ICIS database as source of current data.

**DOD** Department of Defense Sites

VERSION DATE: 12/01/14

This information originates from the National Atlas of the United States Federal Lands data, which includes lands owned or administered by the Federal government. Army DOD, Army Corps of Engineers DOD, Air Force DOD, Navy DOD and Marine DOD areas of 640 acres or more are included.

**EC** Federal Engineering Institutional Control Sites

VERSION DATE: 04/27/21

This database includes site locations where Engineering and/or Institutional Controls have been identified as part of a selected remedy for the site as defined by United States Environmental Protection Agency official remedy decision documents. The data displays remedy component information for Superfund decision documents issued in fiscal years 1982-2017, and it includes final and deleted NPL sites as well as sites with a Superfund Alternative Approach (SAA) agreement in place. The only sites included that are not on the NPL, proposed for NPL, or removed from proposed NPL, are those with an SAA Agreement in place. A site listing does not indicate that the institutional and engineering controls are currently in place nor will be in place once the remedy is complete; it only indicates that the decision to include either of them in the remedy is documented as of the completed date of the document. Institutional controls are actions, such as legal controls, that help minimize the

## ***Environmental Records Definitions - FEDERAL***

potential for human exposure to contamination by ensuring appropriate land or resource use. Engineering controls include caps, barriers, or other device engineering to prevent access, exposure, or continued migration of contamination.

**ECHOR10** Enforcement and Compliance History Information

VERSION DATE: 11/28/20

The U.S. Environmental Protection Agency's Enforcement and Compliance History Online (ECHO) database, provides compliance and enforcement information for facilities nationwide. This database includes facilities regulated as Clean Air Act stationary sources, Clean Water Act direct dischargers, Resource Conservation and Recovery Act hazardous waste handlers, Safe Drinking Water Act public water systems along with other data, such as Toxics Release Inventory releases.

**ERNSWA** Emergency Response Notification System

VERSION DATE: 03/28/21

This National Response Center database contains data on reported releases of oil, chemical, radiological, biological, and/or etiological discharges into the environment anywhere in the United States and its territories. The data comes from spill reports made to the U.S. Environmental Protection Agency, U.S. Coast Guard, the National Response Center and/or the U.S. Department of Transportation.

**FEMAUST** FEMA Owned Storage Tanks

VERSION DATE: 12/01/16

This is a listing of FEMA owned underground and aboveground storage tank sites. For security reasons, address information is not released to the public according to the U.S. Department of Homeland Security.

**FRSWA** Facility Registry System

VERSION DATE: 03/02/21

The United States Environmental Protection Agency's Office of Environmental Information (OEI) developed the Facility Registry System (FRS) as the centrally managed database that identifies facilities, sites or places subject to environmental regulations or of environmental interest. The Facility Registry System replaced the Facility Index System or FINDS database.

**FUDS** Formerly Used Defense Sites

VERSION DATE: 12/31/18

The Formerly Used Defense Sites (FUDS) inventory includes properties previously owned by or leased to the United States and under Secretary of Defense Jurisdiction, as well as Munitions Response Areas (MRAs). The remediation of these properties is the responsibility of the Department of Defense. This data is provided by the U.S. Army Corps of Engineers (USACE), the boundaries/polygon data are based on preliminary findings and not

## ***Environmental Records Definitions - FEDERAL***

all properties currently have polygon data available. **DISCLAIMER:** This data represents the results of data collection/processing for a specific USACE activity and is in no way to be considered comprehensive or to be used in any legal or official capacity as presented on this site. While the USACE has made a reasonable effort to insure the accuracy of the maps and associated data, it should be explicitly noted that USACE makes no warranty, representation or guaranty, either expressed or implied, as to the content, sequence, accuracy, timeliness or completeness of any of the data provided herein. For additional information on Formerly Used Defense Sites please contact the USACE Public Affairs Office at (202) 528-4285.

**FUSRAP** Formerly Utilized Sites Remedial Action Program

VERSION DATE: 03/04/17

The U.S. Department of Energy (DOE) established the Formerly Utilized Sites Remedial Action Program (FUSRAP) in 1974 to remediate sites where radioactive contamination remained from the Manhattan Project and early U.S. Atomic Energy Commission (AEC) operations. The DOE Office of Legacy Management (LM) established long-term surveillance and maintenance (LTS&M) requirements for remediated FUSRAP sites. DOE evaluates the final site conditions of a remediated site on the basis of risk for different future uses. DOE then confirms that LTS&M requirements will maintain protectiveness.

**HISTPST** Historical Gas Stations

VERSION DATE: NR

This historic directory of service stations is provided by the Cities Service Company. The directory includes Cities Service filling stations that were located throughout the United States in 1930.

**HMIRSR10** Hazardous Materials Incident Reporting System

VERSION DATE: 03/24/21

The HMIRS database contains unintentional hazardous materials release information reported to the U.S. Department of Transportation located in EPA Region 10. This region includes the following states: Alaska, Idaho, Oregon, Washington, and 271 Native Tribes.

**HWCD** Hazardous Waste Compliance Docket Facilities

VERSION DATE: 10/29/20

This list of the Federal Agency Hazardous Waste Compliance Docket Facilities is maintained by the United States Environmental Protection Agency (EPA). According to the EPA, Section 120(c) of CERCLA requires EPA to establish a listing, known as the Federal Facility Hazardous Waste Compliance Docket (Docket), of Federal facilities which are managing or have managed hazardous waste; or have had a release of hazardous waste. Thus, the Docket identifies all Federal facilities that must be evaluated to determine whether they pose a risk to human health and the environment and it makes this information available to the public. In order for the Docket to remain current and accurate it requires periodic updating.

## ***Environmental Records Definitions - FEDERAL***

**ICIS** Integrated Compliance Information System (formerly DOCKETS)

VERSION DATE: 09/19/20

ICIS is a case activity tracking and management system for civil, judicial, and administrative federal Environmental Protection Agency enforcement cases. ICIS contains information on federal administrative and federal judicial cases under the following environmental statutes: the Clean Air Act, the Clean Water Act, the Resource Conservation and Recovery Act, the Emergency Planning and Community Right-to-Know Act - Section 313, the Toxic Substances Control Act, the Federal Insecticide, Fungicide, and Rodenticide Act, the Comprehensive Environmental Response, Compensation, and Liability Act, the Safe Drinking Water Act, and the Marine Protection, Research, and Sanctuaries Act.

**ICISCLEANERS** Integrated Compliance Information System Drycleaners

VERSION DATE: 09/19/20

This is a listing of drycleaner facilities from the Integrated Compliance Information System (ICIS). The U.S. Environmental Protection Agency (EPA) tracks facilities that possess NAIC and SIC codes that classify businesses as drycleaner establishments. The following Primary SIC Codes are included in this data: 7211, 7212, 7213, 7215, 7216, 7217, 7218, and/or 7219; the following Primary NAICS Codes are included in this data: 812320, 812331, and/or 812332.

**ICISNPDES** Integrated Compliance Information System National Pollutant Discharge Elimination System

VERSION DATE: 04/26/20

Authorized by the Clean Water Act, the National Pollutant Discharge Elimination System (NPDES) permit program controls water pollution by regulating point sources that discharge pollutants into waters of the United States. This database is provided by the U.S. Environmental Protection Agency.

**LUCIS** Land Use Control Information System

VERSION DATE: 09/01/06

The LUCIS database is maintained by the U.S. Department of the Navy and contains information for former Base Realignment and Closure (BRAC) properties across the United States.

**MLTS** Material Licensing Tracking System

VERSION DATE: 06/29/17

MLTS is a list of approximately 8,100 sites which have or use radioactive materials subject to the United States Nuclear Regulatory Commission (NRC) licensing requirements. Disclaimer: Due to agency regulations and policies, this database contains applicant/licensee location information which may or may not be related to the physical location per MLTS site.

## Environmental Records Definitions - FEDERAL

**MRDS** Mineral Resource Data System

VERSION DATE: 03/15/16

MRDS (Mineral Resource Data System) is a collection of reports describing metallic and nonmetallic mineral resources throughout the world. Included are deposit name, location, commodity, deposit description, geologic characteristics, production, reserves, resources, and references. This database contains the records previously provided in the Mineral Resource Data System (MRDS) of USGS and the Mineral Availability System/Mineral Industry Locator System (MAS/MILS) originated in the U.S. Bureau of Mines, which is now part of USGS. The USGS has ceased systematic updates of the MRDS database with their focus more recently on deposits of critical minerals while providing a well-documented baseline of historical mine locations from USGS topographic maps. A few updates last occurred 2015 and early 2016 for select mine site area/s.

**MSHA** Mine Safety and Health Administration Master Index File

VERSION DATE: 08/07/20

The Mine dataset lists all Coal and Metal/Non-Metal mines under MSHA's jurisdiction since 1/1/1970. It includes such information as the current status of each mine (Active, Abandoned, NonProducing, etc.), the current owner and operating company, commodity codes and physical attributes of the mine. Mine ID is the unique key for this data. This information is provided by the United States Department of Labor - Mine Safety and Health Administration (MSHA).

**NLRRCRAC** No Longer Regulated RCRA Corrective Action Facilities

VERSION DATE: 03/22/21

This database includes RCRA Corrective Action facilities that are no longer regulated by the United States Environmental Protection Agency or do not meet other RCRA reporting requirements.

**NLRRCRAT** No Longer Regulated RCRA Non-CORRACTS TSD Facilities

VERSION DATE: 03/22/21

This database includes RCRA Non-Corrective Action TSD facilities that are no longer regulated by the United States Environmental Protection Agency or do not meet other RCRA reporting requirements. This listing includes facilities that formerly treated, stored or disposed of hazardous waste.

**NMS** Former Military Nike Missile Sites

VERSION DATE: 12/01/84

This information was taken from report DRXTH-AS-IA-83A016 (Historical Overview of the Nike Missile System, 12/1984) which was performed by Environmental Science and Engineering, Inc. for the U.S. Army Toxic and Hazardous Materials Agency Assessment Division. The Nike system was deployed between 1954 and the mid-1970's. Among the substances used or stored on Nike sites were liquid missile fuel (JP-4); starter fluids (UDKH, aniline, and furfuryl alcohol); oxidizer (IRFNA); hydrocarbons (motor oil, hydraulic fluid, diesel fuel, gasoline,

## ***Environmental Records Definitions - FEDERAL***

heating oil); solvents (carbon tetrachloride, trichloroethylene, trichloroethane, stoddard solvent); and battery electrolyte. The quantities of material a disposed of and procedures for disposal are not documented in published reports. Virtually all information concerning the potential for contamination at Nike sites is confined to personnel who were assigned to Nike sites. During deactivation most hardware was shipped to depot-level supply points. There were reportedly instances where excess materials were disposed of on or near the site itself at closure. There was reportedly no routine site decontamination.

**NPDES10** National Pollutant Discharge Elimination System

VERSION DATE: 04/01/07

Authorized by the Clean Water Act, the National Pollutant Discharge Elimination System (NPDES) permit program controls water pollution by regulating point sources that discharge pollutants into waters of the United States. The NPDES database was collected from the U.S. Environmental Protection Agency (EPA) from December 2002 through April 2007. Refer to the ICIS and/or ICIS-NPDES database as source of current data. This database includes permitted facilities located in EPA Region 10. This region includes the following states: Alaska, Idaho, Oregon, Washington, and 271 Native Tribes.

**NPL** National Priorities List

VERSION DATE: 04/26/21

This database includes United States Environmental Protection Agency (EPA) National Priorities List sites that fall under the EPA's Superfund program, established to fund the cleanup of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action.

**ODI** Open Dump Inventory

VERSION DATE: 06/01/85

The open dump inventory was published by the United States Environmental Protection Agency. An "open dump" is defined as a facility or site where solid waste is disposed of which is not a sanitary landfill which meets the criteria promulgated under section 4004 of the Solid Waste Disposal Act (42 U.S.C. 6944) and which is not a facility for disposal of hazardous waste. This inventory has not been updated since June 1985.

**PADS** PCB Activity Database System

VERSION DATE: 11/19/20

PADS Identifies generators, transporters, commercial storers and/or brokers and disposers of Polychlorinated Biphenyls (PCB) who are required to notify the U.S. Environmental Protection Agency of such activities.

**PCSR10** Permit Compliance System

VERSION DATE: 08/01/12

The historic Permit Compliance System tracked enforcement status and permit compliance of facilities controlled

## ***Environmental Records Definitions - FEDERAL***

by the National Pollutant Discharge Elimination System (NPDES) under the Clean Water Act. This database includes permitted facilities located in EPA Region 10 states: Alaska, Idaho, Oregon, Washington, and 271 Native Tribes. This system has since been modernized by United States Environmental Protection Agency and is now integrated into the Integrated Compliance Information System (ICIS). Please refer to the ICIS database as the current source for this data.

**PNPL** Proposed National Priorities List

VERSION DATE: 04/26/21

This database contains sites proposed to be included on the National Priorities List (NPL) in the Federal Register. The United States Environmental Protection Agency investigates these sites to determine if they may present long-term threats to public health or the environment.

**RCRAC** Resource Conservation & Recovery Act - Corrective Action Facilities

VERSION DATE: 03/22/21

The Resource Conservation and Recovery Act (RCRA) gives the U.S. Environmental Protection Agency (EPA) the authority to control hazardous waste from the "cradle-to-grave." This includes the generation, transportation, treatment, storage, and disposal of hazardous waste. RCRA also set forth a framework for the management of non-hazardous solid wastes. The 1986 amendments to RCRA enabled EPA to address environmental problems that could result from underground tanks storing petroleum and other hazardous substances. This listing refers to facilities with corrective action activity.

**RCRAGR10** Resource Conservation & Recovery Act - Generator

VERSION DATE: 03/22/21

The Resource Conservation and Recovery Act (RCRA) gives the U.S. Environmental Protection Agency (EPA) the authority to control hazardous waste from the "cradle-to-grave." This includes the generation, transportation, treatment, storage, and disposal of hazardous waste. RCRA also set forth a framework for the management of non-hazardous solid wastes. The 1986 amendments to RCRA enabled EPA to address environmental problems that could result from underground tanks storing petroleum and other hazardous substances. This listing refers to facilities currently generating hazardous waste. EPA Region 10 includes the following states: Alaska, Idaho, Oregon, Washington, and 271 Native Tribes.

**RCRANGR10** Resource Conservation & Recovery Act - Non-Generator

VERSION DATE: 03/22/21

The Resource Conservation and Recovery Act (RCRA) gives the U.S. Environmental Protection Agency (EPA) the authority to control hazardous waste from the "cradle-to-grave." This includes the generation, transportation, treatment, storage, and disposal of hazardous waste. RCRA also set forth a framework for the management of non-hazardous solid wastes. The 1986 amendments to RCRA enabled EPA to address environmental problems that could result from underground tanks storing petroleum and other hazardous substances. This listing refers to facilities classified as non-generators. Non-Generators do not presently generate hazardous waste. EPA

## ***Environmental Records Definitions - FEDERAL***

Region 10 includes the following states: Alaska, Idaho, Oregon, Washington, and 271 Native Tribes.

**RCRASC** RCRA Sites with Controls

VERSION DATE: 05/16/21

The Resource Conservation and Recovery Act (RCRA) gives the U.S. Environmental Protection Agency (EPA) the authority to control hazardous waste from the "cradle-to-grave." This includes the generation, transportation, treatment, storage, and disposal of hazardous waste. RCRA also set forth a framework for the management of non-hazardous solid wastes. The 1986 amendments to RCRA enabled EPA to address environmental problems that could result from underground tanks storing petroleum and other hazardous substances. This listing refers to facilities with institutional controls in place.

**RCRASUBC** Resource Conservation & Recovery Act - Subject to Corrective Action Facilities

VERSION DATE: 03/22/21

The Resource Conservation and Recovery Act (RCRA) gives the U.S. Environmental Protection Agency (EPA) the authority to control hazardous waste from the "cradle-to-grave." This includes the generation, transportation, treatment, storage, and disposal of hazardous waste. RCRA also set forth a framework for the management of non-hazardous solid wastes. The 1986 amendments to RCRA enabled EPA to address environmental problems that could result from underground tanks storing petroleum and other hazardous substances. This listing refers to facilities subject to corrective actions.

**RCRAT** Resource Conservation & Recovery Act - Non-CORRACTS Treatment, Storage & Disposal Facilities

VERSION DATE: 03/22/21

The Resource Conservation and Recovery Act (RCRA) gives the U.S. Environmental Protection Agency (EPA) the authority to control hazardous waste from the "cradle-to-grave." This includes the generation, transportation, treatment, storage, and disposal of hazardous waste. RCRA also set forth a framework for the management of non-hazardous solid wastes. The 1986 amendments to RCRA enabled EPA to address environmental problems that could result from underground tanks storing petroleum and other hazardous substances. This listing refers to facilities recognized as hazardous waste treatment, storage, and disposal sites (TSD).

**RODS** Record of Decision System

VERSION DATE: 09/21/20

These decision documents maintained by the United States Environmental Protection Agency describe the chosen remedy for NPL (Superfund) site remediation. They also include site history, site description, site characteristics, community participation, enforcement activities, past and present activities, contaminated media, the contaminants present, and scope and role of response action.

**SEMS** Superfund Enterprise Management System

VERSION DATE: 04/26/21

## ***Environmental Records Definitions - FEDERAL***

The U.S. Environmental Protection Agency's (EPA) Office of Solid Waste and Emergency Response, Office of Superfund Remediation and Technology Innovation (OSRTI), has implemented The Superfund Enterprise Management System (SEMS), formerly known as CERCLIS (Comprehensive Environmental Response, Compensation and Liability Information System) to track and report on clean-up and enforcement activities taking place at Superfund sites. SEMS represents a joint development and ongoing collaboration between Superfund's Remedial, Removal, Federal Facilities, Enforcement and Emergency Response programs.

**SEMSARCH** Superfund Enterprise Management System Archived Site Inventory

VERSION DATE: 04/26/21

The U.S. Environmental Protection Agency's (EPA) Superfund Enterprise Management System Archived Site Inventory (List 8R Archived) replaced the CERCLIS NFRAP reporting system in 2015. This listing reflects sites at which the EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program.

**SEMSLIENS** SEMS Lien on Property

VERSION DATE: 06/22/20

The U.S. Environmental Protection Agency's (EPA) Office of Solid Waste and Emergency Response, Office of Superfund Remediation and Technology Innovation (OSRTI), has implemented The Superfund Enterprise Management System (SEMS), formerly known as CERCLIS (Comprehensive Environmental Response, Compensation and Liability Information System) to track and report on clean-up and enforcement activities taking place at Superfund sites. SEMS represents a joint development and ongoing collaboration between Superfund's Remedial, Removal, Federal Facilities, Enforcement and Emergency Response programs. This is a listing of SEMS sites with a lien on the property.

**SFLIENS** CERCLIS Liens

VERSION DATE: 06/08/12

A Federal CERCLA ("Superfund") lien can exist by operation of law at any site or property at which United States Environmental Protection Agency has spent Superfund monies. These monies are spent to investigate and address releases and threatened releases of contamination. CERCLIS provides information as to the identity of these sites and properties. This database contains those CERCLIS sites where the Lien on Property action is complete. Please refer to the SEMSLIENS database as source of current data.

**SMCRA** Surface Mining Control and Reclamation Act Sites

VERSION DATE: 12/18/20

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by the Office of Surface Mining Reclamation and Enforcement (OSMRE) to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as information on the cost associated with the reclamation of those problems.

## ***Environmental Records Definitions - FEDERAL***

The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

### **SSEHRIPFAS**

SSEHRI PFAS Contamination Sites

VERSION DATE: 12/12/19

This PFAS Contamination Site Tracker database is compiled by the Social Science Environmental Health Research Institute (SSEHRI) at Northeastern University. According to the SSEHRI, the database records qualitative and quantitative data from each known site of PFAS contamination, including timeline of discovery, sources, levels, health impacts, community response, and government response. The goal of this database is to compile information and support public understanding of the rapidly unfolding issue of PFAS contamination. All data presented was extracted from government websites, news articles, or publicly available documents, and this is cited in the tracker. Disclaimer: The source conveys this database undergoes regular updates as new information becomes available, some sites may be missing and/or contain information that is incorrect or outdated, as well as their information represents all contamination sites SSEHRI is aware of, not all possible contamination sites. This data is not intended to be used for legal purposes. Limited location details are available with this data. Please access the following source link for the most current information:  
<https://pfasproject.com/pfas-contamination-site-tracker/>

### **SSTS**

Section Seven Tracking System

VERSION DATE: 08/04/20

The United States Environmental Protection Agency tracks information on pesticide establishments through the Section Seven Tracking System (SSTS). SSTS records the registration of new establishments and records pesticide production at each establishment. The Federal Insecticide, Fungicide and Rodenticide Act (FIFRA) requires that production of pesticides or devices be conducted in a registered pesticide-producing or device-producing establishment. "Production" includes formulation, packaging, repackaging, and relabeling. For this database, the Product Information is only available for establishments up through 2014 or prior years, product details are no longer released by the EPA within the current SSTS non-Confidential Business Information data.

### **TRI**

Toxics Release Inventory

VERSION DATE: 12/31/18

The Toxics Release Inventory, provided by the United States Environmental Protection Agency, includes data on toxic chemical releases and waste management activities from certain industries as well as federal and tribal facilities. This inventory contains information about the types and amounts of toxic chemicals that are released each year to the air, water, and land as well as information on the quantities of toxic chemicals sent to other facilities for further waste management.

### **TSCA**

Toxic Substance Control Act Inventory

VERSION DATE: 12/31/16

The Toxic Substances Control Act (TSCA) was enacted in 1976 to ensure that chemicals manufactured,

## ***Environmental Records Definitions - FEDERAL***

imported, processed, or distributed in commerce, or used or disposed of in the United States do not pose any unreasonable risks to human health or the environment. TSCA section 8(b) provides the United States Environmental Protection Agency (EPA) authority to "compile, keep current, and publish a list of each chemical substance that is manufactured or processed in the United States." This TSCA Chemical Substance Inventory contains non-confidential information on the production amount of toxic chemicals from each manufacturer and importer site. The EPA has collected Chemical Data Reporting (CDR) data since in 1986 (as Inventory Update Reporting). Collections occur approximately every four years and reporting requirements changed from collection to collection.

### **USUMTRCA**

Uranium Mill Tailings Radiation Control Act Sites

VERSION DATE: 03/04/17

The Legacy Management Office of the Department of Energy (DOE) manages radioactive and chemical waste, environmental contamination, and hazardous material at over 100 sites across the U.S. The L.M. Office manages this database of sites registered under the Uranium Mill Tailings Control Act (UMTRCA).

## **Environmental Records Definitions - STATE (WA)**

**AIRS** Air Permitted Facilities

VERSION DATE: 06/10/19

This list of air emissions inventory is a point source summary of individual inventories from facilities with air operating permits. This list is maintained by the Washington Department of Ecology.

**AST** Aboveground Storage Tanks

VERSION DATE: 08/31/17

Although the Washington Department of Ecology (DEC) does not regulate all aboveground storage tanks, this AST data was queried from an online DEC Spills Program mapper. The DEC's Spills Program does regulate ASTs over 10,000 gallons at Class I facilities. Other governmental entities also have regulatory jurisdiction depending on the situation. The Spills Program mapper notes the locations of facilities regulated by the Spills Program only; therefore, this data does not include all ASTs or all of those ASTs with a release. The DEC does not compile separate information on leaking ASTs or ASTs. There is no reliable way to obtain AST data, and to the knowledge of the DEC, there is no comprehensive source for that information in the State of Washington.

**BROWNFIELD** Brownfield Sites

VERSION DATE: 03/10/21

This list of brownfields is maintained by the Washington State Department of Ecology (DEC) Toxic Cleanup Program. In 2016 the DEC changed their information system to track only publicly funded Brownfields sites rather than all Brownfields sites. As a result, the number of sites reflected on the Brownfields report after 2016 dropped from previous reports. The Brownfields flag in the old CSCSL should have been removed at that time, however was mistakenly left in the reports until 4/1/2019.

**CLEANERS** Dry Cleaning Facilities

VERSION DATE: 05/04/21

This list of dry cleaning facilities, who registered with the Washington Department of Ecology (using the SIC code of 7211, 7212, 7213, 7215, 7216, 7217, 7218, and 7219) as part of the Facility/Site Database, is maintained by the Washington Department of Ecology.

**CSCSL** Confirmed and Suspected Contaminated Sites List

VERSION DATE: 05/24/21

This list is of Confirmed & Suspected Contaminated Sites List (CSCSL) is maintained by the Washington State Department of Ecology's Toxic Cleanup Program. The CSCSL contains information about sites that are undergoing cleanup and sites that are awaiting further investigation and/or cleanup. Sites on this list have received an Initial Investigation. Sites that have been ranked and are on the Hazardous Sites List are included in this data set. When sites receive a No Further Action determination, the Department of Ecology removes them from the list, however GeoSearch does not drop records.

## **Environmental Records Definitions - STATE (WA)**

**FSD** Facility/ Site Database

VERSION DATE: 10/16/20

The Facility/Site database is maintained by the Washington State Department of Ecology. This database includes regulated facilities and sites of environmental interest such as: State Cleanup sites, Federal Superfund sites, Hazardous Waste Generators, Solid Waste Facilities, Underground Storage Tanks, Dairies, and Enforcement.

**HSL** Hazardous Sites List

VERSION DATE: 05/24/21

The Hazardous Sites List is a subset of the Confirmed and Selected Contaminated Sites List Database. It includes sites which have been assessed and ranked using the Washington Ranking Method (WARM). This data is maintained by the Washington Department of Ecology.

**ICEC** Institutional / Engineering Controls Registry

VERSION DATE: 03/11/21

This list of environmental covenants is a compilation of the Environmental Covenants Registry and the Cleanup Site Details lists maintained by the Washington Department of Ecology. This registry is a list of sites that have residual contamination remaining on them after the cleanup has been completed. These sites have environmental covenants or deed restrictions limiting certain uses of the property.

**LFSWDS** Landfill and Solid Waste Disposal Sites

VERSION DATE: 06/03/21

The Washington State Department of Ecology maintains this list of solid waste facilities. Waste management in Washington relies on a working partnership between state and local governments and private sector businesses. County governments and local health departments develop solid waste regulations and management plans, while the Washington Solid Waste Management program supports these local governments with technical assistance and guidance. In Washington, most of the solid waste facilities are permitted by the local Jurisdictional Health Departments.

**LUST** Leaking Underground Storage Tanks

VERSION DATE: 03/11/21

New definition: This list of leaking underground storage tanks (LUST report) is provided by the Washington State Department of Ecology (DEC). The LUST report contains information on underground storage tank facilities that require cleanup and their cleanup history. As of 4/1/2019 the DEC updated their LUST database to include No Further Action LUST sites. The new database includes all LUST sites.

## Environmental Records Definitions - STATE (WA)

**NFA** No Further Action Sites

VERSION DATE: 01/06/21

The NFA database contains information about sites previously on the Confirmed and Suspected Contaminated Sites list that have received a No Further Action determination. This includes sites that received a No Further Action letter: During a Voluntary Cleanup Program (VCP) cleanup, where property owners independently clean up their sites but can ask for Ecology's help; During a non-VCP cleanup, such as when property owners independently clean up their sites outside the VCP, or when Ecology oversees the cleanup; During the Initial Investigation or Site Hazard Assessment stage, which are two steps in the formal cleanup process. This data is maintained by the Washington State Department of Ecology (DEC).

**PLIAPTAP** Petroleum Technical Assistance Program Sites

VERSION DATE: 05/02/21

This list of current Petroleum Technical Assistance Program (PTAP) projects is maintained by the Pollution Liability Insurance Agency (PLIA). According to the PLIA, PTAP expands the state's ability to respond to the high customer demand to clean up petroleum contaminated sites. Under the PTAP, the PLIA may provide informal site-specific technical consultations and issue written opinion letters to persons conducting independent remedial actions at qualifying petroleum cleanup sites. PLIA may provide these services under the authority of RCW 70.149.040(9) and the Model Toxics Control Act (MTCA), Chapter 70.105D RCW and Chapter 173-340 WAC. The program is available for customers who conduct cleanups of qualifying petroleum contaminated sites and wish to receive an opinion letter from the state. This program began in January of 2018.

**PLIAUSTRLG** Underground Storage Tank Revolving Loan and Grant Program Sites

VERSION DATE: 02/13/20

This list of Underground Storage Tank Revolving Loan and Grant Program sites is maintained by the Pollution Liability Insurance Agency (PLIA). According to the PLIA, this Program will assist UST owners or operators with the costs to install new infrastructure, retrofit existing infrastructure, close an underground storage tank, or clean up facilities contaminated by a petroleum release through the Revolving Loan and Grant Program, in partnership with the Washington State Department of Health (DOH). The PLIA will provide the oversight and technical assistance, while DOH operates the lending/repayment process. The enabling act for this Program was filed in the Office of the Secretary of State in April of 2016, became effective in July of 2016, and the initial award cycle for applications was 2016-2017.

**RECYCLERS** Recycling Facilities

VERSION DATE: 09/16/20

The Washington State Department of Ecology maintains this database of recycling opportunities available in Washington State.

## **Environmental Records Definitions - STATE (WA)**

### **SPILLS** Spills Listing

VERSION DATE: 03/03/21

This list of hazardous spills is extracted from the SPIIS (Spills Integrated Information System) database, which is maintained by the Washington Department of Ecology's Spill Prevention, Preparedness and Response Division. The Spills Program works to Prevent, Plan and Respond to spills of oil and hazardous materials in Washington. The Spills Program also inspects chemical storage and transport facilities, vessels and assists in the cleanup of contaminated sites that harm the environment. Anything that is phoned into Ecology that has spilled to the water/ground, from any source (car accidents, buildings/facilities, vessels, by a person, etc.) and needs to be cleaned up, is considered a Spill and is included in the SPIIS database.

### **SWTIRE** Solid Waste Tire Facilities

VERSION DATE: 06/09/20

The Washington State Department of Ecology maintains this database of waste tire recycling opportunities available in Washington State.

### **UICWELLS** Underground Injection Control Wells

VERSION DATE: 10/15/20

The Water Quality Program of the Washington State Department of Ecology (DEC) maintains this water quality permit database that includes Underground Injection Control (UIC) wells. According to the DEC, UIC wells are manmade structures used to discharge fluids into the subsurface. Examples are drywells, infiltration trenches with perforated pipe, and any structure deeper than the widest surface dimension. The majority of UIC wells in Washington are used to manage storm water and sanitary waste, return water to the ground, and help clean up contaminated sites. The potential for groundwater contamination from injection wells depends upon well construction and location; quality of the fluids injected; and the geographic and hydrologic settings in which the injection occurs.

### **UST** Underground Storage Tanks

VERSION DATE: 03/11/21

This list of regulated active and inactive underground storage tanks is maintained by the Washington Department of Ecology (DEC). The Regulated USTs, All Active & Inactive Facilities List shows all underground storage tanks (UST) at regulated facilities in Washington State. Active facilities are defined as those having at least one tank with Operational, Temporarily Closed, Deferred, or Red Tag status. As of 4/1/2019, the DEC updated the UST database which resulted in significant changes to the data we are able to collect. Please note that specific tank data is no longer provided as a downloadable list by the DEC. Most of this data can now be found through the DEC's online search database: <https://apps.ecology.wa.gov/tcpwebreporting/reports/ust/search>

## ***Environmental Records Definitions - STATE (WA)***

**VCP** Voluntary Cleanup Program Sites

VERSION DATE: 05/27/21

This list of voluntary cleanup program (VCP) sites is a compilation of databases maintained by the Washington State Department of Ecology Toxic Cleanup Program. Sites included in this data are current, past, and wait listed VCPs. Data is queried from the Confirmed & Suspected Contaminated Sites List (CSCSL). A Past VCP site has at least one Voluntary Cleanup Program project, any status except Application Rejected. A Current VCP site has at least one Voluntary Cleanup Program project with a status of Open, Waitlist-New, or Waitlist-Existing. Data is also extracted from the Voluntary Cleanup Program (VCP) Wait List (Existing), which shows a list of VCP projects already accepted into the VCP Program, where there is no VCP Site Manager available to work on the project. Lastly, data is also extracted from Voluntary Cleanup Program (VCP) Wait List (New) shows a list of VCP projects accepted into the VCP Program after the VCP Wait Lists were established, where there is no VCP Site Manager available to work on the project.

**WQPERMITS** Water Quality Permits

VERSION DATE: 10/28/20

The Water Quality Program of the Washington State Department of Ecology maintains this water quality permit database that includes information on water quality permits, inspections, enforcement actions, and discharge monitoring data. Both historic NPDES and State Waste Discharge permits are included in the database.

## ***Environmental Records Definitions - LOCAL***

**TACOMAPLUME**

Tacoma Smelter Plume

VERSION DATE: 04/01/18

This plume data is provided by the Department of Ecology for the State of Washington. The Tacoma Smelter site was formerly operated by the copper mining company Asarco, consequently leaving arsenic and lead contaminated soils present for miles around the prior stacks. The extent of the plume covers 1,000 square miles. Since 1993, the Department of Ecology and the U.S. Environmental Protection Agency has been cleaning up the Tacoma smelter areas. Those areas with arsenic levels over 230 parts per million qualified for soil work.

## ***Environmental Records Definitions - TRIBAL***

### **INDIANRES**

Indian Reservations

VERSION DATE: 09/27/17

This database is extracted from select geographic and cartographic information from the U.S. Census Bureau. The Bureau of Indian Affairs (BIA) within the U.S. Department of the Interior (DOI) provides the list of federally recognized tribes. The American Indian/Alaska Native/Native Hawaiian (AIANNH) Areas includes the following legal entities: federally recognized American Indian reservations and off-reservation trust land areas, state-recognized American Indian reservations, and Hawaiian home lands (HHLs). The boundaries for federally recognized American Indian reservations and off-reservation trust lands are as of January 2017. The boundaries for state-recognized American Indian reservations and for state designated tribal statistical areas were delineated by state governor-appointed liaisons for the 2010 Census through the State American Indian Reservation Program and Tribal Statistical Areas Program respectively.

### **LUSTR10**

Leaking Underground Storage Tanks On Tribal Lands

VERSION DATE: 11/12/20

This database, provided by the United States Environmental Protection Agency (EPA), contains leaking underground storage tanks on Tribal lands located in EPA Region 10. This region includes the following states: Alaska, Idaho, Oregon, Washington, and 271 Native Tribes.

### **ODINDIAN**

Open Dump Inventory on Tribal Lands

VERSION DATE: 11/08/06

This Indian Health Service database contains information about facilities and sites on tribal lands where solid waste is disposed of, which are not sanitary landfills or hazardous waste disposal facilities, and which meet the criteria promulgated under section 4004 of the Solid Waste Disposal Act (42 U.S.C. 6944).

### **USTR10**

Underground Storage Tanks On Tribal Lands

VERSION DATE: 11/12/20

This database, provided by the United States Environmental Protection Agency (EPA), contains underground storage tanks on Tribal lands located in EPA Region10. This region includes the following states: Alaska, Idaho, Oregon, Washington, and 271 Native Tribes.

# FEMA Report

## FEMA - Federal Emergency Management Agency

The National Flood Hazard Layer (NFHL) data used in this report is derived from the Federal Emergency Management Agency. The NFHL dataset is a compilation of effective Flood Insurance Rate Map (FIRM) databases (a collection of the digital data that are used in GIS systems for creating new Flood Insurance Rate Maps) and Letters of Map Change (Letters of Map Amendment and Letters of Map Revision only) that create a seamless GIS data layer for United States and its territories. The NFHL is updated as new study or LOMC data becomes effective. Note: Currently, not all areas have modernized FIRM database data available. As a result, users may need to refer to the effective Flood Insurance Rate Map for effective flood hazard information.

## FEMA Flood Zone Definitions within Search Radius

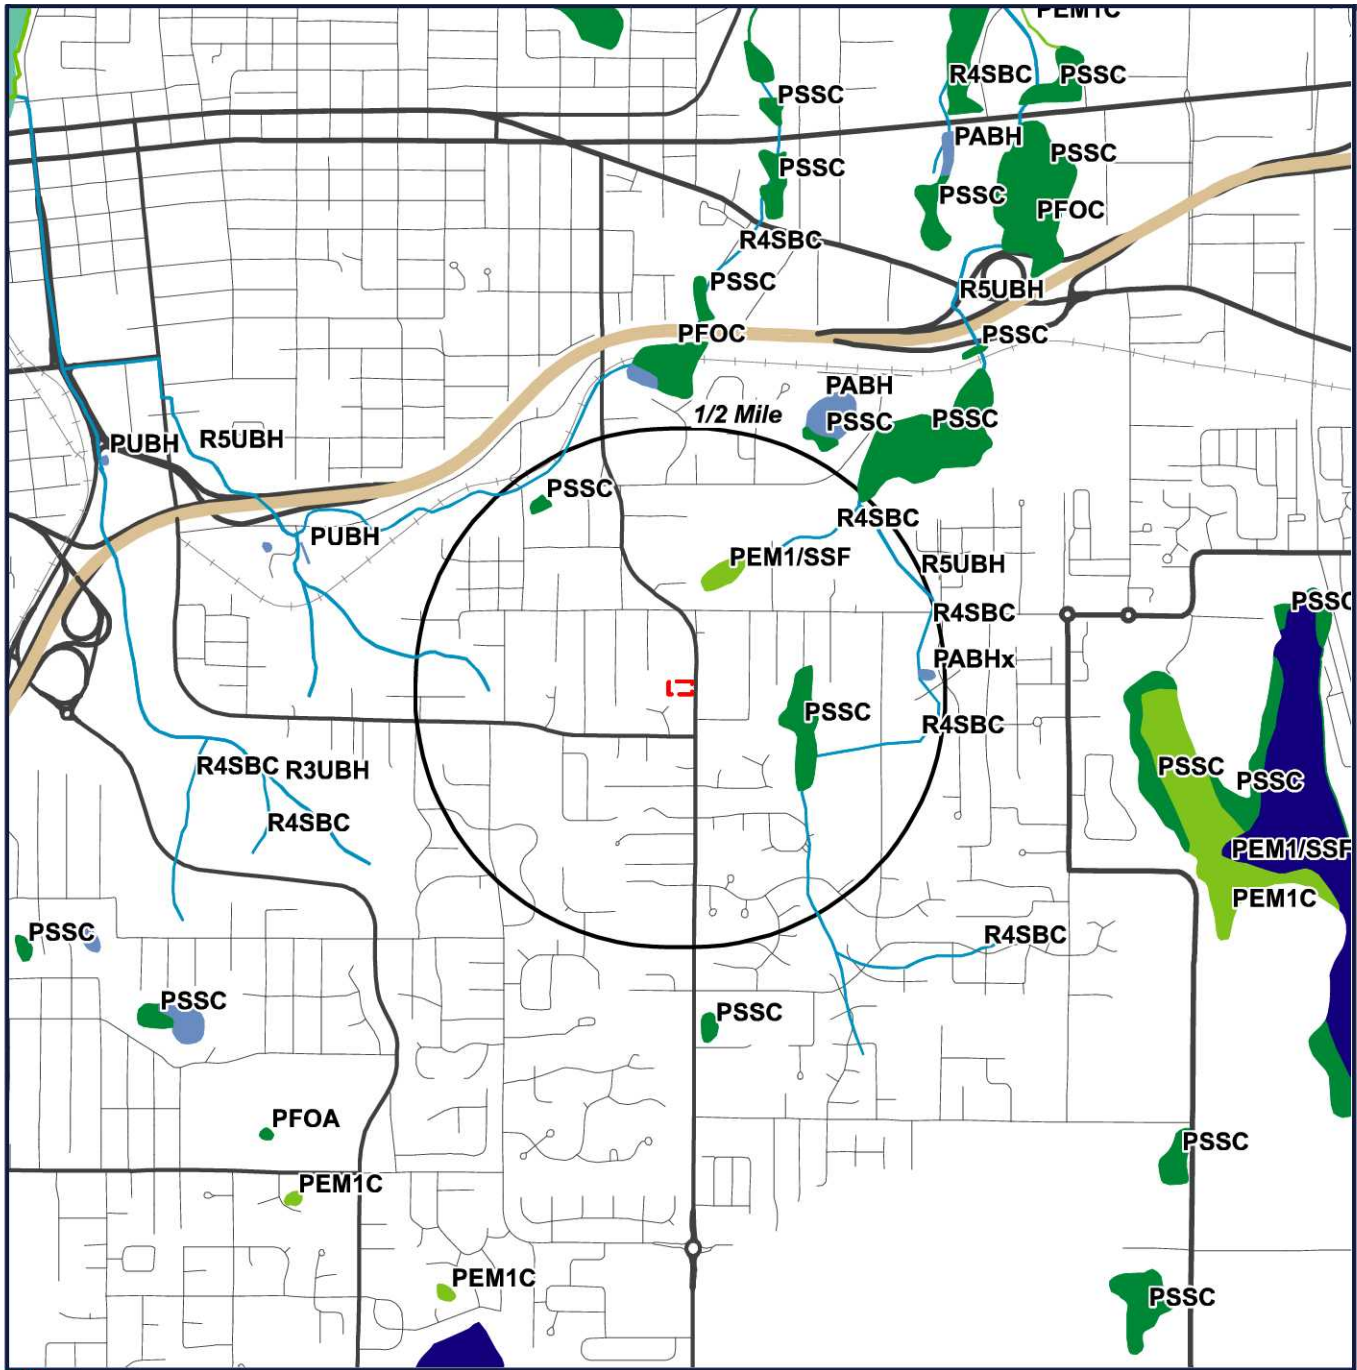

### Zone A

Areas subject to inundation by the 1-percent-annual-chance flood event. Because detailed hydraulic analyses have not been performed, no Base Flood Elevations (BFEs) or flood depths are shown.

### Zone X

An area that is determined to be outside the 100 and 500 year floodplains.

# NWI Report

## NWI - National Wetlands Inventory

The US NWI digital data bundle is a set of records of wetlands location and classification as defined by the U.S. Fish & Wildlife Service. This dataset is one of a series available in 7.5 minute by 7.5 minute blocks containing ground planimetric coordinates of wetlands point, line, and area features and wetlands attributes. When completed, the series will provide coverage for all of the contiguous United States, Hawaii, Alaska, and U.S. protectorates in the Pacific and Caribbean. The digital data as well as the hardcopy maps that were used as the source for the digital data are produced and distributed by the U.S. Fish & Wildlife Service's National Wetlands Inventory project. Currently, this data is only available in select counties throughout the United States.

## Soil Surveys

The soil data used in this report is obtained from the Natural Resources Conservation Service (NRCS). The NRCS is the primary federal agency that works with private landowners to help them conserve, maintain and improve their natural resources. The soil survey contains information that can be applied in managing farms and ranches; in selecting sites for roads, ponds, buildings and other structures; and in determining the suitability of tracts of land for farming, industry and recreation. This data is available in select counties throughout the United States.

## US GEOLOGY

THE GEOLOGY DATA USED IN THIS REPORT ORIGINATES FROM THE USGS. THE FIRST STAGE IN DEVELOPING STATE DATABASES FOR THE CONTERMINOUS UNITED STATES WAS TO ACQUIRE DIGITAL VERSIONS OF ALL EXISTING STATE GEOLOGIC MAPS. ALTHOUGH A SIGNIFICANT NUMBER OF DIGITAL STATE MAPS ALREADY EXISTED, A NUMBER OF STATES LACKED THEM. FOR THESE STATES NEW DIGITAL COMPILATIONS WERE PREPARED IN COOPERATION WITH STATE GEOLOGIC SURVEYS OR BY THE NSA (NATIONAL SURVEYS AND ANALYSIS) PROJECT. THESE NEW DIGITAL STATE GEOLOGIC MAPS AND DATABASES WERE CREATED BY DIGITIZING ALREADY EXISTING PRINTED MAPS, OR, IN A FEW CASES, BY MERGING EXISTING LARGER SCALE DIGITAL MAPS.

### GEOLOGY Definitions within Search Radius

GEOLOGY SYMBOL: **Qg1**

UNIT NAME: **Younger glacial drift**

UNIT AGE: **Pleistocene**

UNIT DESCRIPTION:

**Younger glacial drift, undivided. Till, outwash, and associated deposits; sorted and unsorted sand, gravel, silt, and clay.**

**Includes some alluvium.**

ADDITIONAL UNIT INFORMATION:

**Includes nonglacial sediments and peat beds locally. Example: Whidbey Formation in Central Puget Lowland; peat beds in Vashon Stade. Principally Wisconsin in age. Difficult to distinguish from Qg2 by lithology; distinction is in age difference only. Some stratigraphic units may occur in both units, regardless of age.**

ROCKTYPE/S: **till; outwash; alluvium; peat**

## Target Property Summary

### **Target Property Information**

2021 Boulevard Road SE

2021 Boulevard Road SE

Olympia, Washington

#### **Coordinates**

Area centroid (-122.86576, 47.0304089)

203 feet above sea level

#### **USGS Quadrangle**

Lacey, WA

### **Geographic Coverage Information**

**County/Parish:** Thurston (WA)

**ZipCode(s):**

Olympia WA: 98501

# Elevation Summary

Elevations are collected from the USGS 3D Elevation Program 1/3 arc-second (approximately 10 meters) layer hosted at the NGTOC. .

**Target Property Elevation: 203 ft.**

## **EQUAL/HIGHER ELEVATION**

Map ID#	Database Name	Elevation	Site Name	Address	Page #
<a href="#">1</a>	NWIS	203 ft.	18N/01W-19M03		<a href="#">30</a>
<a href="#">2</a>	NWIS	203 ft.	18N/02W-24J01		<a href="#">31</a>
<a href="#">23</a>	NWIS	204 ft.	18N/02W-25A02		<a href="#">105</a>
<a href="#">31</a>	NWIS	204 ft.	18N/01W-19L02		<a href="#">133</a>

## ***Environmental Records Definitions - FEDERAL***

### **NWIS**

United States Geological Survey National Water Information System

VERSION DATE: 01/02/20

The U.S. Geological Survey (USGS) National Water Information System (NWIS) includes water inventory data originating from all 50 states, plus border and territorial sites, including data from as early as 1899. This database includes selected site types limited to Groundwater Sites and Spring Sites from the 1.5 million plus sites within NWIS. Surface-Water, Atmospheric, and Other Site types are excluded. Disclaimer: Water Data for the Nation is the USGS public web interface to much of the data stored and managed within NWIS. It is not, however, configured to present all NWIS data and users may need to contact local Water Science Centers to obtain some information. NWIS data is updated on a regularly scheduled basis, and current condition data is generally updated upon receipt at local Water Science Centers.

## ***Environmental Records Definitions - STATE (WA)***

**WW**

Water Wells

VERSION DATE: 11/25/20

The Washington State Department of Ecology's Water Resource Program maintains this water well logs database "as is" without a warranty of any kind, either express or implied, including but not limited to the implied warranties of merchantability, fitness for a particular use, and/or non-infringement. This is a Point geodatabase with a record for each well log in Ecology's. Points are located by quarter quarter section centroid. Points contain all well log types including water wells, resource protection wells, and decommissioned wells.

Rainier, WA 98576

**Re: No Further Action at the following Site:**

- **Site Name:** Boulevard Nursery
- **Site Address:** 2021 Boulevard Rd SE, Olympia
- **Facility Site ID No.:** 3749
- **Cleanup Site ID No.:** 223
- **VCP Project No.:** XS0001

Dear Brian Barlow:

The Washington State Department of Ecology (Ecology) received your request for an opinion on your independent cleanup of the Boulevard Nursery site (Site). This letter provides our opinion. We are providing this opinion under the authority of the Model Toxics Control Act (MTCA), Chapter 70.105D RCW.

**Issue Presented and Opinion**

---

Is further remedial action necessary to clean up contamination at the Site?

**NO. Ecology has determined that no further remedial action is necessary to clean up contamination at the Site.**

This opinion is based on an analysis of whether the remedial action meets the substantive requirements of MTCA, Chapter 70.105D RCW, and its implementing regulations, Chapter 173-340 WAC (collectively “substantive requirements of MTCA”). The analysis is provided below.

## **Description of the Site**

---

This opinion applies only to the Site described below. The Site is defined by the nature and extent of contamination associated with the following release:

- Chlorinated pesticides (e.g. DDT and Dieldrin) into the Soil and potentially Groundwater.
- Metals (arsenic and lead) into the Soil and potentially Groundwater.

**Enclosure A** includes a detailed description and diagram of the Site, as currently known to Ecology. Please note a parcel of real property can be affected by multiple sites. At this time, we have no information that the parcel(s) associated with this Site are affected by other sites.

Ecology notes that the Site Hazard Assessment, conducted at the Site in 2012 listed site contaminants as DDT, Dieldrin, Arsenic, and Lead. However, the SHA stated:

*The metals and pesticides detected in soil did not exceed applicable cleanup levels defined by the Washington State Department of Ecology Model Toxics Control Act (MTCA). However, since only a screening level assessment was conducted, the limited number of soil samples did not fully characterize potential impacts to subsurface soil and groundwater at the site. Additional analysis would be required to fully assess the site in accordance with MTCA standards.*

Further investigations have verified the presence of chlorinated pesticides in soils, albeit below MTCA cleanup levels. After further review, and further discussed below, Ecology has concluded that no further investigation is warranted with respect to pesticides or metals in soil or groundwater. The Site is outside the boundary of the Tacoma Smelter Plume site.

The Site is located at 2021 Boulevard Rd SE, in Olympia WA and is located entirely within Thurston County Parcel Number 12824411300. The property consists of a vacant lot that was formerly a plant nursery. The property is surrounded by farm and residential properties. To the west and north is a small farm property, and to the south and east (across Boulevard Road) are residences.

## **Basis for the Opinion**

---

This opinion is based on the information contained in the following documents:

1. *Limited Phase II Environmental Site Assessment, Target Property: Boulevard Nursery.* Hemphill, Green and Associates LLC. June 10, 2009.
2. *Early Notice Letter Regarding Release of Hazardous Substances at the Boulevard Nursery.* Department of Ecology to Jeffrey Niven. January 13, 2010.

3. *Site Hazard Assessment Worksheet, Boulevard Nursery*. Thurston County Public Health & Social Services Department. August 28, 2012.
4. *Phase II Site Characterization Report, The Former Boulevard Nursery Site*. ADESA LLC. September 6, 2020.

A number of these documents are accessible in electronic form from the Site webpage <https://apps.ecology.wa.gov/gsp/Sitepage.aspx?csid=223>. The complete records are stored in the Central Files of the Headquarters Office of Ecology, for review by appointment only.

Visit our Public Records Request page <https://ecology.wa.gov/About-us/Accountability-transparency/Public-records-requests>, to submit a public records request or get more information about the process. If you require assistance with this process, you may contact the Public Records Officer at [publicrecordsofficer@ecy.wa.gov](mailto:publicrecordsofficer@ecy.wa.gov) or 360-407-6040.

This opinion is void if any of the information contained in those documents is materially false or misleading.

### **Analysis of the Cleanup**

---

Ecology has concluded that **no further remedial action** is necessary to clean up contamination at the Site.

That conclusion that no further remedial action is necessary is based on the following analysis:

#### **1. Characterization of the Site.**

Ecology has determined your characterization of the Site is sufficient to establish cleanup standards and select a cleanup action for the identified release. The Site is described above and in **Enclosure A**.

Three shallow soil samples were collected and analyzed in 2009 during a limited Phase II Environmental Site Assessment (ESA). The soil samples were analyzed for heavy metals and chlorinated pesticides. Five heavy metals were detected in the soil samples (As, Ba, Cr, Pb, and Hg) but at concentrations less than their respective cleanup levels.

Four pesticides (Dieldrin, DDT, DDD, and DDE) were also detected at concentrations less than MTCA cleanup levels. Dieldrin was the pesticide with the highest concentration relative to its cleanup level (detected in one sample at 0.038 mg/kg compared to the Method B (direct contact cancer) cleanup level of 0.063 mg/kg).

The limited Phase II concluded:

*“The pesticides detected in site soils were below applicable Washington State Model Toxic Control Act (MTCA) pesticide cleanup standards. However, only a screening level assessment was conducted, and the number of samples collected was not sufficient to define the magnitude or extent of the pesticide impacts. The fact that several pesticides... were detected is of concern considering the property could be redeveloped for residential use.”*

This conclusion was mirrored in the both Ecology’s Early Notice Letter (2010) and the Site Hazard Assessment (2012). Shallow soil sampling was conducted at an additional four locations in 2020. The soil samples were analyzed for chlorinated pesticides by EPA Method 8081. Five chlorinated pesticides (Dieldrin, DDT, DDD, DDE, gamma chlordane, and alpha chlordane) were detected in at least one soil sample. However, all of these detections were below Method B (direct contact, cancer) cleanup levels.

The highest concentration of a chlorinated pesticide detected (relative to its respective cleanup level) was 0.0536 mg/kg Dieldrin at location S-5, below the Method B cleanup level of 0.063 mg/kg.

No groundwater sampling has been conducted at the Site; however, no soil contamination has been found to suggest a groundwater concern. The water table is reported within the SHA to be at a depth of approximately 27 feet below ground surface (ft bgs). The detected chlorinated pesticides all have high distribution coefficients (Kd) and relatively low solubility such that migration to groundwater is unlikely.

## 2. Establishment of cleanup standards.

### Cleanup Levels

The following Method A Cleanup Levels for unrestricted land use and simplified Terrestrial Ecological Evaluation (TEE) soil concentrations have been used at the Site:

Contaminant	Maximum Concentration in Site Soils (mg/kg)	Statewide Background Concentration (mg/kg)	MTCA Cleanup Level (mg/kg)	Simplified TEE Concentration (Table 749-2) (mg/kg)
Arsenic	9.77	7	20 <sup>1</sup>	20
Barium	205	NA	16,000 <sup>2</sup>	1,250
Chromium	39.4	42	2000 <sup>1</sup>	42
Lead	145	17	250 <sup>1</sup>	220
Mercury	0.167	0.07	2 <sup>1</sup>	9

NA = Not available.

1 – Method A cleanup level.

2 – Method B (direct contact, non-cancer) cleanup level.

Contaminant	Maximum Concentration in Site Soils (mg/kg)	MTCA Cleanup Level (mg/kg)	Simplified TEE Concentration (Table 749-2) (mg/kg)
Dieldrin	0.0536	0.063 <sup>2</sup>	0.17
DDT	0.036	2.9 <sup>2</sup>	1.0 <sup>5</sup>
DDE	0.14	2.9 <sup>2</sup>	1.0 <sup>5</sup>
DDD	0.064	2.4 <sup>3</sup>	1.0 <sup>5</sup>
Alpha chlordane	0.0176	2.9 <sup>2,4</sup>	1.0 <sup>4</sup>
Gamma chlordane	0.0101	2.9 <sup>2,4</sup>	1.0 <sup>4</sup>

2 – Method B (direct contact cancer) cleanup level.

3 – Method B (direct contact non-cancer) cleanup level.

4 – Cleanup level/concentration for total chlordane.

5 – Concentration for total DDT + DDE + DDD.

Point of Compliance (POC): Standard, throughout the Site, for soil extending from the surface to 15 feet below ground surface (ft bgs) (direct contact pathway).

Terrestrial Ecological Evaluation (TEE): A TEE form was submitted to Ecology. The Simplified TEE was found to apply at the Site. None of the detected analytes exceeded the respective simplified TEE soil concentrations for unrestricted land use found in Table 749-2 of MTCA. Based on the Washington Department of Fish & Wildlife (WA DFW) priority habitat map (<https://geodataservices.wdfw.wa.gov/hp/phs/>), no priority habitats are located on or adjacent to the Property or the Site.

### 3. Cleanup.

No cleanup level exceedances have been found at the Site which would require further action. Per WAC 173-340-360(2), it is our professional judgment that no further action is required for this cleanup.

## **Listing of the Site**

---

Based on this opinion, Ecology will initiate the process of removing the Site from our lists of hazardous waste sites, including:

- Hazardous Sites List.
- Confirmed and Suspected Contaminated Sites List.

That process includes public notice and opportunity to comment. Based on the comments received, Ecology will either remove the Site from the applicable lists or withdraw this opinion.

## **Limitations of the Opinion**

---

### **1. Opinion does not settle liability with the state.**

Liable persons are strictly liable, jointly and severally, for all remedial action costs and for all natural resource damages resulting from the release or releases of hazardous substances at the Site. This opinion **does not**:

- Resolve or alter a person's liability to the state.
- Protect liable persons from contribution claims by third parties.

To settle liability with the state and obtain protection from contribution claims, a person must enter into a consent decree with Ecology under RCW 70.105D.040(4).

### **2. Opinion does not constitute a determination of substantial equivalence.**

To recover remedial action costs from other liable persons under MTCA, one must demonstrate that the action is the substantial equivalent of an Ecology-conducted or Ecology-supervised action. This opinion does not determine whether the action you performed is substantially equivalent. Courts make that determination. *See* RCW 70.105D.080 and WAC 173-340-545.

### **3. State is immune from liability.**

The state, Ecology, and its officers and employees are immune from all liability, and no cause of action of any nature may arise from any act or omission in providing this opinion. *See* RCW 70.105D.030(1)(i).

## **Termination of Agreement**

---

Thank you for cleaning up the Site under the Voluntary Cleanup Program (VCP). This opinion terminates the VCP Agreement governing this project (#XS0001).

For more information about the VCP and the cleanup process, please visit our web site: [www.  
https://ecology.wa.gov/Spills-Cleanup/Contamination-cleanup/Cleanup-process/Cleanup-  
options/Voluntary-cleanup-program](https://ecology.wa.gov/Spills-Cleanup/Contamination-cleanup/Cleanup-process/Cleanup-options/Voluntary-cleanup-program).

If you have any questions about this opinion or the termination of the Agreement, please contact me by phone at (509) 454-7835 or e-mail at [frank.winslow@ecy.wa.gov](mailto:frank.winslow@ecy.wa.gov).

Sincerely,

Frank P. Winslow, LHG  
Toxics Cleanup Program  
Central Regional Office

FPW: anf

Enclosures:        A – Site Description and Diagram

cc:        William Rutherford, ADESA

## **Enclosure A**

### **Site Description and Diagram**

## **Site and Property Description**

The subject property is a vacant lot at 2021 Boulevard Rd SE, in Olympia WA that was a former plant nursery. The Site, as defined in MTCA, is “...*any site or area where a hazardous substance, other than a consumer product in consumer use, has been deposited, stored, disposed of, or placed, or otherwise come to be located*”. The Site is located entirely within Thurston County Parcel Number 12824411300.

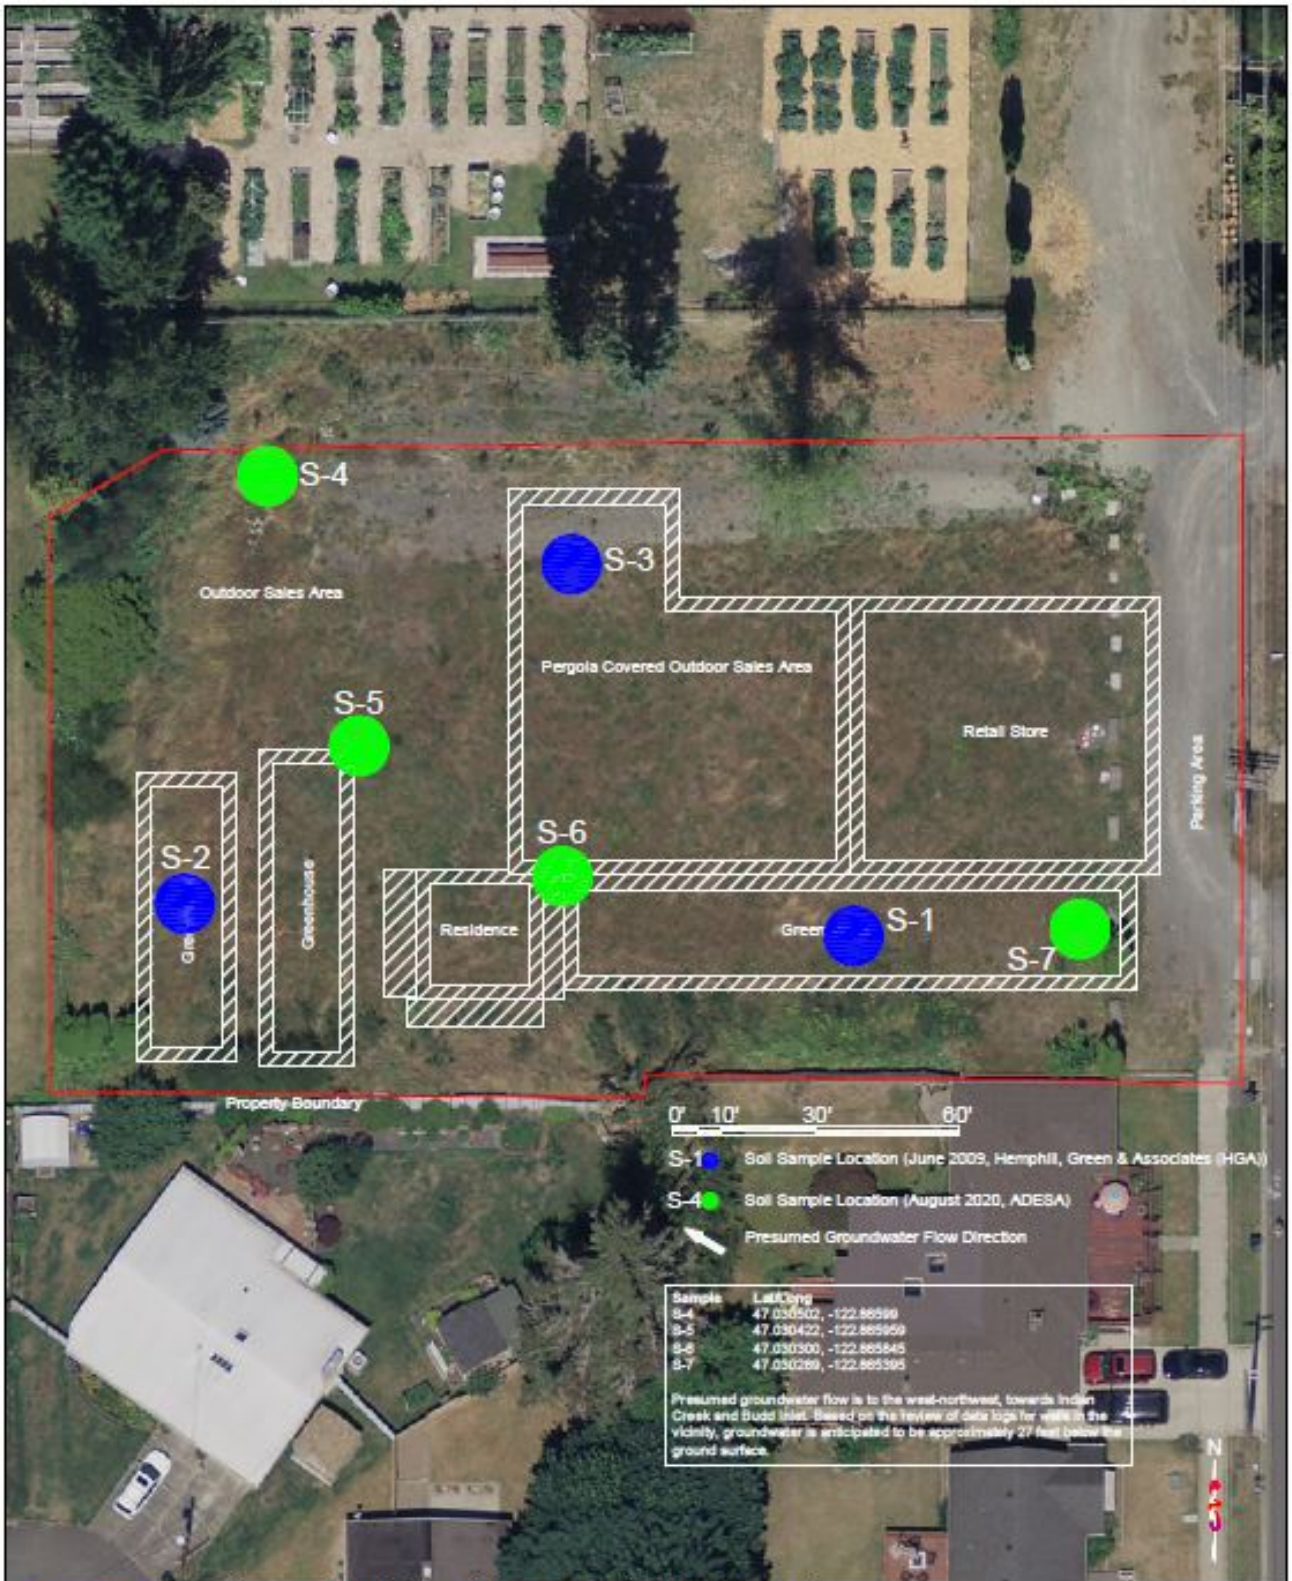

The property consists of a 0.9 acre vacant lot that was formerly a plant nursery. The property is surrounded by farm and residential properties. To the west and north is a small farm property, and to the south and east (across Boulevard Road) are residences. The Site is in an area of low topographic relief, roughly two miles southeast of downtown Olympia. Soils are reported to be sandy loam.

## **Sources and Extent of Soil Contamination**

As discussed above, heavy metals and chlorinated pesticides were detected in soils at the Site in 2009. Additional soil sampling for chlorinated pesticides were conducted in 2020. None of the analytes were detected above MTCA cleanup levels during either investigation. The chlorinated pesticides are believed to likely be attributable to historical pesticide applications, associated with the plant nursery, or potentially, pre-nursery activities at the property.

## **Groundwater**

No groundwater sampling has been conducted at the Site; however, no soil contamination has been found to suggest a groundwater contamination concern. The water table is reported within the SHA to be at a depth of approximately 27 feet below ground surface (ft bgs). The chlorinated pesticides all have high distribution coefficients (Kd) and low solubility such that migration to groundwater is unlikely.

[barlowauto@hotmail.com](mailto:barlowauto@hotmail.com)

**Re: Rescission of No Further Action (NFA) Status for the following Site:**

- **Site Name:** Boulevard Nursery
- **Site Address:** 2021 Boulevard Road SE, Olympia, WA 98501
- **Facility/Site ID:** 3749
- **Cleanup Site ID:** 223
- **VCP Project No.:** XS0001

Dear Brian Barlow:

The Department of Ecology (Ecology) issued a No Further Action (NFA) determination for the Boulevard Nursery site (Site) on October 30, 2020. Additional data was received by Ecology on May 3, 2021, including laboratory analytical data and a site plan map showing those additional soil sampling locations. The site plan map and a summary table presenting analytical results from soil samples collected on April 22, 2021, are provided in Enclosure A.

One of the soil samples collected on April 22, 2021 had a concentration of Dieldrin at 0.289 milligrams per kilogram (mg/kg). This Dieldrin concentration exceeds the Model Toxics Cleanup Act (MTCA) Method B cleanup level of 0.063 mg/kg. The soil samples were reportedly collected on or adjacent to a pile of soil near the rear of the property.

**Based on this information, Ecology rescinds the October 20, 2020 NFA determination under expedited Voluntary Cleanup Program (VCP) project XS0001. The effective date of the rescission is the date of this letter.**

## Next Steps

---

Ecology will update its records to reflect that Ecology has rescinded the NFA determination for this Site. The Site will be listed in future publications of the [Confirmed and Suspected Contaminated Sites List](#).<sup>1</sup>

If you have any questions about the rescission or next steps, please contact me at (360) 407-7226 or at [barry.rogowski@ecy.wa.gov](mailto:barry.rogowski@ecy.wa.gov).

Sincerely,

Barry Rogowski  
Section Manager  
Toxics Cleanup Program

## JOEL HECKER, LG

### SENIOR SCIENTIST/GEOLOGIST

---

#### Education

BS, Geology

University of Cincinnati, 2010

MS, Hydrogeology

Miami University, 2012

#### Years of Experience 8

#### Licenses

Licensed Geologist - Washington

Licensed Professional Geologist – Indiana

Professional Geologist – Kentucky

Registered Geologist –Oregon (lapsed)

Professional Geologist – North Carolina

Registered Professional Geologist – South Carolina

#### Certifications

OSHA HAZWOPER 40-Hour Certification

OSHA HAZWOPER Site Supervisor Certification

DOT HAZMAT Basic General Awareness Certification

American Red Cross First Aid, CPR, and AED Certified

---

#### PROFESSIONAL SUMMARY

Joel Hecker is a successful project manager with over eight years of experience planning and executing various types of field activities, working with clients, preparing reports and presentations, and utilizing groundwater models to answer complex site questions. He has performed human health risk assessments and is highly skilled at effectively communicating complex technical information to a variety of audiences. He has evaluated and interpreted site data to provide soil excavation volumes and detailed, innovative site maps that assist clients in the visualization of site conditions. Joel has completed over 200 Phase I and Phase II Environmental Site Assessments at a variety of commercial, industrial, and residential sites including active manufacturing buildings, gas stations, orchards, agricultural land, dry cleaners, steel mills, auto repair centers, and high-rise apartment buildings. He has also successfully written and managed over \$2 million in EPA grant funds for local communities.

#### TECHNICAL EXPERIENCE

##### Regulatory Experience

- Calculated site-specific screening levels and exposure pathways using analytical data collected in the field to provide recommendations to clients regarding future land use
- Conducted investigation and review of past sampling events to determine relevance to current studies and site conditions, providing clients with visual and written summary reports
- Prepared Independent Remedial Action reports for MTCA Voluntary Cleanup Program sites: collected defensible environmental data, performed data quality reviews, and compared data to site-specific and state and/or federal screening levels
- Performed all steps in the human health risk assessment process including planning and scoping, characterizing the site, determining constituents of concern, analyzing fate, transport, and exposure routes, assessing toxicity, and quantifying risk

# JOEL HECKER

## Data Management and Analysis

- Organized and formatted large datasets with spatial coordinates, report-specific sample data, and sample relationships to different types of environmental media to import into a site-specific analytical database
- Created detailed project-specific queries from business enterprise-level databases for use in specific data analysis tasks

## Field Operations, Health & Safety, and Site Investigation Experience

- Performed various types of environmental sampling, including personal and ambient air monitoring using high volume pumps and Summa canisters, conducted soil, sediment and surface water sampling for site remedial investigations, and constructed helium leak detection shroud systems for sub-slab soil gas sampling
- Performed various types of field activities, including determining excavation locations for sampling investigations, excavating, stockpiling, and containerizing contaminated soil, collecting and documenting soil, sediment, water, sub-slab soil gas and air samples, and using a hand held global positioning system unit to collect field coordinates
- Conducted research of various historical reports, tables, and figures for inclusion in a project’s comprehensive site chronology
- Developed project-specific safety analyses to anticipate site hazards and implement appropriate controls. Facilitated discussion between project managers, field leaders, contractors, and safety professionals to refine and improve safety procedures
- Provided long hours of primary field oversight during large-scale soil remediation projects at remote sites with multiple service contractors
- Certified HAZWOPER Supervisor for on-site field investigation/sampling in areas with unknown potentially hazardous substances, and with high concentrations of known hazardous substances

## RECENT PROJECT EXPERIENCE

<b>E.I. DuPont de Nemours &amp; Company</b>	<i>Various Sites in North and South Carolina</i>
<p>Mr. Hecker assisted with RCRA Facility Investigation (RFI) reports for several large manufacturing facilities in the southeast portion of the United State that have been undergoing corrective action for decades. Mr. Hecker was responsible for reviewing and interpreting historical reports, tables, and figures to create a comprehensive site chronology. He evaluated data and compiled statistics, completed risk assessments, and determined constituents of potential concern in soil, groundwater, surface water, and sediment. He also prepared tables and figures for the comprehensive RFI reports characterizing site data and recommended remedial alternatives.</p>	
<b>The Chemours Company FC LLC</b>	<i>Oakley, California</i>

Mr. Hecker was directly involved as a primary field member during the Soil and Sediment Corrective Measures Implementation Plan (CMIP) which required the excavation and removal of several thousand

## JOEL HECKER

cubic yards of soil. Mr. Hecker also served as the Chemours' Site Representative (CSR) presence for the project beginning in December 2018. Mr. Hecker provided field oversight during excavation and backfilling activities, remediation volume and distance-weighting analysis, sampling work plan creation, corrective measures communication, and summary report documentation.

---

### **Confidential Client**

*Rochester Hills, Michigan*

Mr. Hecker performed a hydrogeological evaluation using MODFLOW to determine variances to groundwater flow as a result of approximately 200 proposed rammed aggregate piers (RAPs) installed adjacent to an existing permeable reactive barrier. The proposed RAPs were intended to facilitate construction of a new mixed-use redevelopment atop an impacted groundwater plume. Mr. Hecker completed uncertainty and sensitivity analyses during the creation of the model. Once constructed, the model determined that the effect of the RAPs was minimal and did not significantly alter groundwater flow direction or velocity through the permeable reactive barrier. A peer review by AECOM agreed with the results.

---

### **Dayton STEM School**

*Dayton, Ohio*

Mr. Hecker coordinated multiple subcontractors for an independent voluntary cleanup action at a former vault containing impacted soil. He oversaw the removal and disposal of the impacted soil and subsequent backfilling with clean soil from an off-site source. Mr. Hecker also collected groundwater samples from existing wells and completed a summary report of the field and laboratory activities. He was responsible for preparing job-specific Project Safety Analyses, and utilizing hazard training to collect samples in hazardous conditions.

---

### **Spectrum Health**

*Kalamazoo, Michigan*

Mr. Hecker managed a \$700,000 1.5-acre remedial excavation at a school playground impacted with polynuclear aromatic hydrocarbons and buried 55-gallon drums. He used a risk-based evaluation to determine the extent of the remedial investigation, as well as the required depth of soil removal. Mr. Hecker oversaw a team of five contractors to complete the project, which resulted in an under-budget, on-time project allowing students to return to their playground at the beginning of the new school year.

---

### **SignMakers**

*Kirkland, Washington*

Mr. Hecker coordinated multiple subcontractors for an independent voluntary cleanup action at a former vault containing impacted soil. He oversaw the removal and disposal of the impacted soil and subsequent backfilling with clean soil from an off-site source. Mr. Hecker also collected groundwater samples from existing wells and completed a summary report of the field and laboratory activities. He

## JOEL HECKER

was responsible for preparing job-specific Project Safety Analyses, and utilizing hazard training to collect samples in hazardous conditions.

---

<b>The Port of Tacoma</b>	<i>Former Arkema Manufacturing Site / Tacoma, Washington</i>
---------------------------	--------------------------------------------------------------

Mr. Hecker collected over 150 X-Ray Fluorescence (XRF) samples to quantify levels of arsenic and lead in soil and conducted data analysis at the Former Arkema Manufacturing Site to support cleanup activities for the Port and a second consultant (Dalton, Olmsted, & Fugelvand).

---

<b>NorthPoint Development</b>	<i>Oakley, California</i>
-------------------------------	---------------------------

Mr. Hecker developed a conceptual data interpretation and contouring technique for use in displaying on-site soil gas and groundwater data to assist in determining the need for vapor mitigation systems in new warehouses proposed for a former manufacturing facility. He subsequently developed a Work Plan for the installation of soil gas probes and the collection of groundwater samples; the California Department of Toxic Substances approved the work plan. Following approval of the Work Plan, Mr. Hecker led the field sampling effort to determine whether vapor mitigation systems would be needed in the planned warehouses.
