Re: Requirements for Reporting Environmental Conditions at LUST Contaminated Sites

Dear Mr. Brown:

The Department of Ecology (Ecology) has received a report that petroleum contamination related to an underground storage tank (UST) system has been discovered at the following location: Safeway #1436, 7201 Portland Avenue East, Tacoma, Pierce County, Washington (Ecology site ID ~~12609~~). The reporting of petroleum contamination from UST systems to Ecology is required by the Model Toxics Control Act cleanup regulation, Chapter 173-340 Washington Administrative Code (WAC). 8697

The documents enclosed with this letter outline the remaining requirements with which you must comply in order to be in compliance with Chapter 173-340 WAC. Enclosed are a copy of WAC 173-340-450, Releases from Underground Storage Tanks, and a summary of reporting and sampling requirements for your use. The Toxics Cleanup Program also has a document entitled Guidance for Remediation of Petroleum Contaminated Soils. The document goes into greater detail and is available upon request.

Please direct all reports and questions about this site to me. I may be reached at (360)-407-6263. The address is: Department of Ecology, P.O. Box 47775, Olympia, Washington 98504-7775.

Sincerely,

Carol A. Johnston, R.G.
