GROUNDFATER OR SURFACE WATER SAMPLE COLLECTION FORM

Name: Smith Kern
 Number: Phase 2a

Date of Collection: 6/6/17
 Field Personnel: P. Osterhout

Site ID: FS-22 (A)

Well Type: emp well Secure: Yes No 1/A Well Condition/Damage Description: 2" PVC Temporary

Depth of water (from top of well casing): ~4' @ 1400
 After 5 minutes of purging (from top of casing): 4.00'
 Begin purge (time): 1419
 End purge (time): 1515
 Gallons purged: 3 gallons
 Purge water disposal method: drum

One Casing Volume (gal): _____
 Well Casing Type/Diameter/Screened Interval: 2" PVC / 4-6'

Diameter	O.D.	I.D.	Volume (Gal/Linear Ft.)	Weight of Water (Lbs/Linear Ft.)
1 1/4"	1.660"	1.380"	0.08	0.64
2"	2.375"	2.067"	0.17	1.45
3"	3.500"	3.068"	0.38	3.2

Sampling Data

Sample No: FS-22-GW-4-6 Location and Depth: 6'
 Date Collected (mo/dy/yr): 6/6/17 Time Collected: 1450 AM PM Weather: Sunny 80°
 Type: Ground Water Surface Water Other: _____ Sample: Filtered Unfiltered Other: Diss. metals filtered
 Sample Collected with: Bailer Pump Other: _____ Type: Resistaflic
 Water Quality Instrument Data Collected with: Type: Horiba U-22 Horiba U-50 Other: _____
 Sample Decon Procedure: Sample collected with (circle one): decontaminated all tubing disposable and/or dedicated silicon and poly tubing Other: _____
 Sample Description (Color, Turbidity, Odor, Other): Brownish/turbid, no obvious odor

Sample Analyses

TPH-D (HCl) Chlor / Fluor Pest, herb, nitrate, nitrite, ammonia (unpres) COD / TOC (H2SO4) Orthophos (FILTER) Diss. Metals (HNO3)
 TPH-G (HCl) BTEX (HCl) Total Metals (HNO3) TKN/Phos (N2SO4) VOCs (HCl)

Additional Information

Types of Sample Containers:	Quantity:	Duplicate Sample Numbers:	Comments:
500 mL glass amber	2	FS-22-GW-0-2	Temp well drilled 0-7' bgs, cave in to 6', set screen 4-6', filled casing w/ silica sand. Left drill casing in hole @ 4.5' bgs. Pulled screen/riser and backfilled w/ bentonite slurry
250 mL poly	2	@ 1435	
250 mL poly w/ H2SO4	2		
250 mL poly w/ HNO3	4		
40 mL VOA w/ HCl	6		
1 L glass amber	4

Project Name: Smith Ken

Date of Collection: 6/7/17

Project Number: Phase 2a

Field Personnel: P. Osterhout

Purge Data

Well ID: FS-39 Secure: Yes No

Well Condition/Damage Description: Temporary

Depth Sounder decontaminated Prior to Placement in Well: Yes No

One Casing Volume (gal): _____

Depth of water (from top of well casing): ~~4.5~~ 3.66

Well Casing Type/Diameter/Screened Interval: 2" PVC 4.5'-7'

After 5 minutes of purging (from top of casing): 3.66

Begin purge (time): 0930

End purge (time): _____

Gallons purged: _____

Purge water disposal method: drum

Volume of Schedule 40 PVC Pipe				
Diameter	O.D.	I.D.	Volume (Gal/Linear Ft.)	Weight of Water (Lbs/Linear Ft.)
1 1/4"	1.660"	1.380"	0.08	0.64
2"	2.375"	2.067"	0.17	1.45
3"	3.500"	3.068"	0.38	3.2
4"	4.500"	4.026"	0.66	5.51
6"	6.625"	6.065"	1.5	12.5

Time	Depth to Water	Vol. Purged	pH	DO <u>mg/l</u>	Conductivity <u>ms/cm</u>	Turbidity <u>NTU</u>	Temp <u>°C</u>	ORP <u>mV</u>	Comments
<u>1000</u>	<u>3.65'</u>	<u>2.5 gal</u>	<u>7.67</u>	<u>0.87</u>	<u>0.528</u>	<u>124</u>	<u>14.88</u>	<u>-172</u>

Sampling Data

Sample No: FS-39-GW-4.5-7'

Location and Depth: ~6.5ft bgn

Date Collected (mo/dy/yr): 6/7/17

Time Collected: 1020

AM PM Weather: Sunny ~80°F

Type: Ground Water Surface Water Other: _____

Sample: Filtered Unfiltered Other: _____

Sample Collected with: Bailer Pump Other: _____

Type: peristaltic

Water Quality Instrument Data Collected with: Type: Horiba U-22 Horiba U-50 Other: _____

Sample Decon Procedure: Sample collected with (circle one): decontaminated all tubing disposable and/or dedicated silicon and poly tubing Other: _____

Sample Description (Color, Turbidity, Odor, Other): _____

Sample Analyses

TPH-D (HCl) Chlor / Fluor (unpres) COD / TOC (H2SO4) Orthophos (FILTER) Diss. Metals (HNO3)
 TPH-G (HCl) BTEX (HCl) Total Metals (HNO3) TKN/Phos (N2SO4) VOCs (HCl)
Atrazine Nitrate

Additional Information

Types of Sample Containers:	Quantity:	Duplicate Sample Numbers:	Comments:
<u>1L glass Amber</u>	<u>1</u>	<u>None</u>	<u>Top of casing ~0.25 inches above gs.</u>
<u>250 mL poly</u>	<u>1</u>		<u>Hach Field kit for nitrate: No detection</u>

Signature: P. Osterhout

Date: 6/7/17

GROUNDWATER OR SURFACE WATER SAMPLE COLLECTION FORM

Project Name: Smith Kern

Date of Collection: 10/7/17

Project Number: Phase 2a

Field Personnel: P. Osterhout

Purge Data

Well ID: FS-40 Secure: Yes No

Well Condition/Damage Description: Temporary

Issue:

X	BTEX was run by 8021B
X	This request appears redundant, as BTEX is already in the extended VOC list
X	This sample only has Napthalene plus cPAHs - not the full PAH list reported for the other samples
X	No full list results for VOCs for these samples

Resolution:

Okay
Okay
Okay
Lab did run extended for MW-11-1.5-2 & MW-11-7.5-8 and will send results. MW-11-9-10 was marked by lab by accident, not to be analyzed for full list.

**Table F.2
Professional Judgment Discussion for Validations Performed by Floyd | Snider**

1. Describe QC exceedances that resulted in qualification. These should be discussed in the report. Include test method, analytes, QC Identifier, QC results and control limits, associated sample Ids (if not clear from previous page) and any other information to be included in the report.
2. Describe QC exceedances that did not result in qualification and whether to discuss them in the report. Include test method, analytes, QC Identifier, QC results and control limits, other QC results impacting professional judgement decision, associated sample results, if pertinent, and any other information that contributed to qualification decisions.
3. Also include overall comments such as cross-method comparisons or overall assessment.

Discussion
Phase 1 (2016)
FB608046 - 8021B/NWTPH-Gx - Holding Time - The laboratory advised that analysis of sample MW-12-7-8 was requested outside of holding time and has been flagged as such for this analysis. All results were non-detect. It is with professional judgment that they be flagged "J" as estimated due to analysis outside of holding time, with a final qualifier of "UJ". See Qualifier list for details.
FB608046 - 8260C Direct Sparge - Holding Time - The laboratory advised that analysis of sample MW-12-7-8 was requested outside of holding time and has been flagged as such for this analysis. All results were non-detect. It is with professional judgment that they be flagged "J" as estimated due to analysis outside of holding time, with a final qualifier of "UJ". See Qualifier list for details.
FB608046 - 8260C Direct Sparge - Internal Standards - The laboratory flagged multiple analytes in samples MW-12-1.5-2, MW-12-5-6, "J" to indicate internal standard recoveries exceeded control limits due to the presence of sample matrix interferences. This qualifier will be retained, please see Qualifier list for the specific analytes for each sample that are qualified.
FB608046 - 8260C Direct Sparge - Surrogates - The 4-bromofluorobenzene surrogate recovery for sample MW-12-1.5-2 was 159% "J" and outside the laboratory control limits of 50-150%. Results are already flagged "J" due to internal standard issues, it is with professional judgment that no additional qualifiers are needed based on this surrogate recovery information.
FB608046 & FB608112 - 8260C Direct Sparge - Sample/Sample Duplicate RPD - The Sample/Sample Duplicate run on MW-12-5-6 for o-Xylene was 47% and outside the laboratory control limits of ±20%. The results were flagged "a J" by the laboratory to indicate that the analyte was detected at a level less than x5 the reporting limit and the RPD results may not provide reliable information on the variability of the analysis, and the internal standard associated with the analyte is out of control limits. The o-Xylene result for sample MW-12-5-6 is already flagged "J" as estimated due to the internal standards issue, and both the LCS/LCSD and MS/MSD RPDs were inside control limits providing sufficient variability information for the analysis. It is with professional judgment that no results need additional qualification based on this RPD information.
FB608046 - NWTPH-Dx - Holding Time - The laboratory advised that analysis of sample MW-12-7-8 was requested outside of holding time and has been flagged as such for this analysis. All results were non-detect. It is with professional judgment that they be flagged "J" as estimated due to analysis outside of holding time with a final qualifier of "UJ". See Qualifier list for details.
FB608046 - NWTPH-Dx - Chromatograms - The laboratory reviewed the chromatograms for samples with detected concentrations in the Diesel and Oil Ranges. The laboratory noted that for samples MW-12-0-0.5, MW-12-1.5-2, and MW-12-5-6 the chromatograms showed the presence of a high boiling product such as a lubrication or waste oil and peaks indicative of a low level low to medium product are also present. They flagged the diesel results "x" to indicate they did not have an adequate match to the fuel standards used for quantification. Review of the chromatograms concurs with the laboratory observations. The detected Oil Range results will be flagged "MG" for good match with no final qualifier for report tables and DB entry, the Diesel range results will be flagged "MP" for poor match with a final qualifier of "JM" for report tables and DB entry. See Qualifier list for details.
FB608046 - NWTPH-Dx - Chroms (cont') - The laboratory noted that for sample SB-1-0.5-1 the chromatograms showed the presence of a high boiling product such as lubrication oil, as well as multiple individual peaks eluting from 2 to 3 minutes. A pattern of peaks indicating the presence of a diesel fuel was not seen in the sample and the detected Diesel Range concentration was flagged "x" by the laboratory. Review of the chromatograms concurs with the laboratory observations. The detected Oil Range results will be flagged "MG" for good match with no final qualifier for report tables and DB entry, the Diesel range results will be flagged "MP" for poor match with a final qualifier of "JM" for report tables and DB entry. See Qualifier list for details.
FB608046 - NWTPH-Dx - Chroms (cont') - The laboratory noted that for sample SB-2-0.5-1 that a pattern of peaks indicating the presence of a diesel fuel was not seen in the sample and the detected Diesel Range concentration was flagged "x" by the laboratory. Review of the chromatograms concurs with the laboratory observations. The Diesel range results will be flagged "MP" for poor match with a final qualifier of "JM" for report tables and DB entry. See Qualifier list for details.
FB608046 - NWTPH-Dx - Chroms (con't) - Two samples, MW-11-0-0.5 and MW-11-7.5-8, had detected concentrations in the diesel range that were not mentioned by the laboratory in their chromatogram review. The detected concentration in MW-11-0-0.5 did not provide an adequate match to the fuel standard used for quantification and will be flagged "MP" for poor match with a final qualifier of "JM" for report tables and DB entry. The detected concentration in MW-11-7.5-8 did provide an adequate match to the standard and will be flagged "MG" for good match with no final qualifier for report tables and DB entry. See Qualifier list for details.
FB608046 - 8270D SIM - Holding Time - The laboratory advised that analysis of sample MW-12-7-8 was requested outside of holding time and has been flagged as such for this analysis. Pyrene and Chrysene results were detected, all remaining analytes were non-detect. It is with professional judgment that all results be flagged "J" as estimated due to analysis outside of holding time, non detect results will have a final qualifier of "UJ". See Qualifier list for details.
FB608046 - 8270D SIM - Surrogates - The recovery of the Benzo(a)anthracene-d12 surrogate in sample MW-12-1.5-2 was 205% and outside the laboratory control limits of 25-165% high. The laboratory noted that the recovery was from a x50 dilution and may not be meaningful. It is with professional judgment that no results be qualified on this surrogate recovery information.
FB608046 - 8270D - Surrogates - The recovery of the 2-Fluorophenol and 2,4,6-Tribromophenol surrogates in sample MW-12-1.5-2 were 45% & 25 % and outside the laboratory control limits of 46-115% & 35-141% low. The laboratory noted that the recovery was from a x250 dilution and may not be meaningful. It is with professional judgment that no results be qualified on this surrogate recovery information.

**Table F.2
Professional Judgment Discussion for Validations Performed by Floyd | Snider**

Discussion
Phase 1 (2016) (cont.)
FB608046 & FB608112 - 8270D - LCS & LCSD Recoveries - The laboratory noted that for several analytes the LCS and/or LCSD recoveries were outside of laboratory control limits high. As all results for analytes with high recoveries in the field samples were non detect the data was considered acceptable by the laboratory. Per USEPA Guidelines, if the LCS recoveries are outside control limits high, only detected results are qualified, therefore it is with professional judgment that no results be qualified based on the LCS/LCSD recovery information.
FB608046 - 200.8 - Internal Standards - The laboratory noted that several of the internal standards were outside of control limits due to matrix effects, the impacted samples were diluted and reanalyzed. The concentrations flagged "J" due to internal standards will be marked "DNR" in favor of the non-qualified concentrations. For analytes that did not have internal standard issues the more conservative concentration between the original and dilution will be kept with the other result being marked "DNR". If both results are non-detect the lowest reporting limit will be retained as the reported result, with the other being marked "DNR". See qualifier list for details.
FB608046 - 1631E - MSD Recovery - The MSD recovery for sample MW-10-0-0.5 for Mercury was 131% and outside the laboratory control limits of 71-125% high. The MS/MSD performed on sample SB-1-7-8 was within laboratory control limits. Due to the non-homogenous nature of the soil matrix it is with professional judgment that only the result from sample MW-10-0-0.5 would be qualified based on this MS/MSD information. The sample result from MW-10-0-0.5 for Mercury was a non-detect, per USEPA guidelines only detected results are qualified for recoveries above the control limits, therefore it is with professional judgment that no data be qualified based on the MSD recovery information.
FB608046 - 8260C - MS/MSD Recoveries - The MS & MSD recoveries of Dichlorodifluoromethane in sample MW-13-1-2 were both 9% and outside laboratory control limits 10-56% low. This field sample was not analyzed by 8260C for the full list of analyte, only the BTEX analytes were reported. Due to the non-homogenous nature of soil samples, it is with professional judgment that no other results be qualified based on this MS/MSD information.
FB608112 - NWTPH-Gx - Surrogates - The laboratory noted that the surrogate recovery for sample SB-10-9-10 at x10 dilution was outside of control limits (recovery was 164%; control limits 50-150%) and compounds in the sample matrix interfered with the quantitation of the surrogate analyte. Per FS TPH Guidelines if the surrogate is outside control limits high detected concentrations are qualified "J" as estimated. See qualifier list for details.
FB608112 - NWTPH-Gx - Analyte Response - The laboratory noted that the reporting limit for Trip Blank 1 was raised due to carryover from a previous sample injection. There was insufficient sample for reanalysis, therefore the raised reporting limit data was reported.
FB608112 - NWTPH-Dx - Chromatograms - The laboratory reviewed the chromatograms for samples with detected concentrations in the Diesel and Oil Ranges. The laboratory noted that for samples SB-5-0.5-1, SB-6D-0-0.5, SB-6-0-0.5, and SB-8-0.5-1 the chromatograms showed the presence of a medium to high boiling material, possibly indicative of organics. Silica gel cleanup would be useful in further characterizing the nature of the material present in the samples. A pattern of peaks indicating the presence of diesel fuel was not seen in the samples. They flagged the diesel results "x" to indicate they did not have an adequate match to the fuel standards used for quantification. Review of the chromatograms concurs with the laboratory observations. The detected Oil Range results will be flagged "MG" for good match with no final qualifier for report tables and DB entry, the Diesel range results will be flagged "MP" for poor match with a final qualifier of "JM" for report tables and DB entry. See Qualifier list for details.
FB608112 - NWTPH-Dx - Chroms (con't) - The laboratory noted that for samples SB-9-0.5-1, SB-12-0.5-1, SB-16-0.5-1, and SB-16-3-4 the chromatograms showed a pattern of peaks indicating the presence of a low level of a high boiling point product such as a lubrication oil. A pattern of peaks indicating the presence of diesel fuel was not seen in the samples. They flagged the diesel results "x" to indicate they did not have an adequate match to the fuel standards used for quantification. Review of the chromatograms concurs with the laboratory observations. The detected Oil Range results will be flagged "MG" for good match with no final qualifier for report tables and DB entry, the Diesel range results will be flagged "MP" for poor match with a final qualifier of "JM" for report tables and DB entry. See Qualifier list for details.
FB608112 - NWTPH-Dx - Chroms (con't) - The laboratory noted that for samples SB-10-9-10 and SB-13-6-7 the chromatograms showed a pattern of peaks indicating a middle distillate product such as diesel fuel. A pattern of peaks indicating the presence of gasoline was not seen in the samples. Review of the chromatograms concurs with the laboratory observations. The detected Diesel range results will be flagged "MG" for good match with no final qualifier for report tables and DB entry, the Oil Range results for both samples were non-detects. See Qualifier list for details.
FB608112 - NWTPH-Dx - Chroms (con't) - Six samples were not specifically mentioned by the laboratory in their chromatogram review abstract. Samples SB-10-0.5-1 and SB-13-3-4 had detected results for Diesel range with no qualifications by the laboratory. Review of the chromatograms concurs with the laboratory observations. The detected Diesel range results will be flagged "MG" for good match with no final qualifier for report tables and DB entry, the Oil Range results for both samples were non-detects. See Qualifier list for details. Samples SB-11-0.5-1 and SB-16-9-10 had detected results for Diesel range that were qualified "x" by the laboratory. Review of the chromatograms concurs with the laboratory observations. The detected Diesel range results will be flagged "MP" for poor match with a final qualifier of "JM" for report tables and DB entry, the Oil Range results for both samples were non-detects. See Qualifier list for details. Sample SB-12-3-4 was non detect for Diesel and detect for Oil Range with no qualification by the laboratory. Review of the chromatograms concur with the laboratory observations. The detected diesel range results will be flagged "MG" for good match with no final qualifier for report tables or DB entry. See Qualifier list for details. Sample Culvert-1 had detected results for diesel range that were qualified "x" by the laboratory, and detected results for motor oil range with no qualification. Review of the chromatograms concur with the laboratory observations. The detected diesel range results will be flagged "MP" for poor match with a final qualifier of "JM" for report tables and DB entry, the motor oil results will be flagged "MG" for good match with no final qualifiers for report table or DB entry. See Qualifier list for details.
FB608112 - EPA 200.8 (water) - MS/MSD - The MS recovery for Copper was 149% and outside laboratory control limits 70-130% high. The MSD recovery was within control limits. The RPD was 58% and outside the laboratory control limits of ±20%. The MS/MSD recoveries and the RPD were flagged "b" by the lab to indicate the analyte was spiked at a level that was less than five times that present in the sample and the recoveries may not be meaningful. The MS/MSD was performed on a batch sample belonging to another client that had an original concentration of 608 ug/L and was spiked at 20 ug/L. As this was a sample belonging to another client and USEPA guidelines state that spike recovery limits do not apply when the sample concentration is ≥4x the spike added, it is with professional judgment that no results be qualified based on this MS/MSD & RPD information.

Table F.2
Professional Judgment Discussion for Validations Performed by Floyd|Snider

Discussion
Phase 1 (2016) (cont.)
FB608112 - 1631E (soil) - MS/MSD - The MS and MSD recoveries for Mercury for sample SB-3-2.5-3.5 were 129% and 131% and both outside laboratory control limits of 71-125% high indicating a potential high bias. The Mercury concentration in the field sample was non-detect. Additional MS/MSDs were performed on samples SB-7-4-5 and SB-14-4-5, all the results were within laboratory control limits. Due to the non-homogenous nature of the soil matrix it is with professional judgement that no sample results be qualified based on the MS/MSD recoveries.
FB608112 - 8260C Direct Sparge - Surrogates - The 4-Bromofluorobenzene surrogates for samples SB-10-9-10 (240%) and SB-13-6-7 (237%) were outside laboratory control limits 50-150% high. Only the BTEX compounds were reported for these samples, which are not target analytes of the 4-Bromofluorobenzene surrogate. It is with professional judgment that no results for this sample be qualified based on this surrogate recovery information.
FB608112 - 8270D - Analyte response - The laboratory flagged the detected concentration of Bis(2-ethylhexyl) phthalate "fc" to indicate it was a common laboratory and field contaminant. This information will be passed on to the technical staff, however it is not something that will results in a final qualifier for data tables and database entry - it is noted here for completeness.
August 2016 Quarterly Groundwater Sampling
FB608216 - 8260C - LCS/LCSD & RPD - The LCSD recovery for 1,1,2-Trichloroethane was 140% and outside of laboratory control limits 75-124% high. The LCS was within control limits leading to an LCS/LCSD of 30% which was outside laboratory control limits of ±20%. As all field sample results for this analyte were non-detect, it is with professional judgement that no results be qualified based on this LCSD and RPD information.
FB608216 - EPA 350.1 - MS Recoveries - The laboratory noted that some of the ammonia matrix spike results were above the acceptable limits and that all other QA/QC was within limits, therefore they are attributed to matrix interference. No actual limits were listed in the report, it is assumed that the 152% recovery for sample MW-08-081016 is the result being referred to. For now qualifying Ammonia results from MW-08-081016 "J" as estimated - will possibly revise upon receipt of EDD. As all other results are with 75-150% (which is a typical recovery range) it is with professional judgment that no other sample results be qualified based on this presumed MS recovery outside of range.
FB608216 - EPA 350.1 - Sample/Sample Duplicate RPD - The sample/sample duplicate RPD for Ammonia Nitrogen in sample MW-3-081116 was 33% and outside the control limits of ±20%. It is with professional judgment that the Ammonia result for this sample be qualified "J" as estimated based on this RPD. See Qualifier List for Details.
November 2016 Quarterly Groundwater Sampling
FB611197 - NWTPH-Dx - Chromatograms - The laboratory flagged the detected Diesel Range Results from samples MW-11-110916, MW-4-110916, MW-6-111016, and MW-1-111016, and the detected Oil Range Result from sample MW-4-111016 "x" to indicate they were not indicative of the standards used for quantitation. The laboratory review of the chromatograms showed a pattern of peaks indicative of polar organic compounds, and noted that silica gel cleanup would be useful in further characterizing the nature of the contamination present. All other results result for all other samples were non-detect.
February 2017 Quarterly Groundwater Sampling
FB702438 - 200.8 (Total) - MS/MSD - The laboratory noted that the MS/MSD recoveries for Zinc from sample 702438-11 (MW-07-022817) were outside laboratory control limits low and that the sample was spiked at a level that was less than five times that present in the sample and therefore the recoveries may not be meaningful. The original concentration of zinc in the sample was 249 ug/L with a spike of 50 ug/L. Per USEPA guidelines if the sample is spiked at <4x that of the original concentration the results shall be reported as unflagged regardless of the % recovery. Therefore it is with profession judgment that no Zinc results be qualified based on this MS/MSD recovery information.
FB702438 - NWTPH-Dx - Chromatograms - The laboratory flagged all detected diesel results as not matching the standard used for quantitation. A review of the chromatograms confirmed the laboratory's observation. Because a free product sample was used as the standard consistent with the method, the match to the standard is poor and the sample has been flagged during DV as a poor match (MPAD1). However, since the lab followed the method correctly and the poor match is due to the known physical process of dissolution into water, the result is deemed acceptable and not qualified (the final qualifier field is blank).
Phase 2A (2017)
FB706128 - 8021B - MS/MSD RPD - The MS/MSD RPD for Toluene was 33% and outside laboratory control limits. Per USEPA guidelines data is not qualified based on MS/MSD information alone. As the batch sample/sample duplicate was within laboratory control limits, demonstrating adequate precision for the method, and all field samples were non-detect for Toluene, it is with professional judgment that no results be qualified based on this MS/MSD RPD information.
FB706128 - 200.8 (total) - Internal standards - The laboratory noted that the internal standard failed the acceptance criteria for sample FS-22-GW-9-11 due to matrix interferences. The sample was diluted and reanalyzed, the most appropriate result per analyte will be retained with the other result being flagged DNR (see FS rules for selections between dilutions).
FB706128 - NWTPH-Dx (soil) - The laboratory flagged the detected results for samples FS-27-0.5-1, FS-27-3-4, FS-28-0.5-1, FS-28-3-4, and FS-28-5-5.5 "x" to indicate the sample chromatographic pattern does not resemble the fuel standard used for quantitation. A chromatogram review concurred with the laboratory observations and the "x" flag shall be retained as "JM" to indicate the poor chromatographic match. All remaining detected diesel and motor oil results showed adequate resemblance to the provided standard and shall be reported with no final qualifiers.
FB706128 - NWTPH-Dx (water) - The laboratory flagged all detected diesel samples "x" to indicate they sample chromatographic pattern does not resemble the fuel standard used for quantitation. As these are aqueous samples with a known physical process of dissolution into water will provide a poor match when compared to free product standards, it is with professional judgement that no results be qualified based on the laboratory notation.
FA1706091 - SM4500NH3G - MS Recovery - The laboratory noted that a batch MS sample from another client had a MS recovery outside control limits low that indicated a possible matrix effect and that the method was in control as indicated by the LCS. A MS/MSD was also run on a field sample for this SDG that came back within control limits. As the recovery outside of control limits was from a sample from another client it is with professional judgment that no results be qualified based on this information as the accuracy for the method has been confirmed through LCS and additional MS/MSD recoveries within control limits.

**Table F.2
Professional Judgment Discussion for Validations Performed by Floyd|Snider**

Discussion
Phase 2A (2017) (cont.)
FA1706091 - EPA 300.0 (soil) - MS/MSD - The laboratory noted that the original Nitrate (as N) concentration was too high in sample FS-27-3-4 for accurate MS/MSD spike recoveries. The original concentration was 327.9 mg/kg with a spike value of 17.2 mg/kg. Per USEPA guidelines if the original concentration is greater than 4x that of the spike value the results shall be reported unflagged even if recoveries are outside of control limits. It is with professional judgment that no results be qualified based on this MS/MSD recovery information.
FA1706091 - EPA 9060 - Sample/Sample Duplicate RPD - The laboratory noted that the sample/sample duplicate RPD for FS-19-1-5 was due to suspected sample inhomogeneity, and that the method is in control as indicated by the LCS. A batch/batch duplicate was also provided and was within laboratory control limits. It is with professional judgment that only the TOC result for sample FS-19-1-5 be flagged "J" based on this RPD information.
FA1706091 - EPA 9060 - MS/MSD Recoveries - The laboratory noted that the MS/MSD recoveries for FS-19-1-5 were outside laboratory control limits low and indicated a possible matrix effect. Per USEPA guidelines data is not qualified based on MS/MSD recoveries alone. As the LCS recovery and a batch MS recovery were within laboratory control limits providing adequate proof of accuracy for the method, it is with professional judgment that no additional results be qualified based on this MS/MSD recovery information, as sample FS-19-1-5 has already been qualified "J" for TOC based on sample/sample duplicate RPD results.
FB706174 - NWTPH-Dx - MS/MSD RPD - The laboratory noted that the sample was spiked at a level that was less than five times that present in the sample and that the recoveries may not be meaningful. The individual MS & MSD recoveries were within laboratory control limits. The RPD was 34% and outside laboratory control limits. Per USEPA guidelines data is not qualified based on MS/MSD information alone, as all other QA/QC objectives for this analysis were met it is with professional judgment that no results be qualified based on this RPD information.
FB706174 - 200.8 (Total) - Internal standards - The laboratory noted that the internal standard failed the acceptance criteria for sample FS-30-GW-13-15 due to matrix interferences. The sample was diluted and reanalyzed, the most appropriate result per analyte will be retained with the other result being flagged DNR (see FS rules for selections between dilutions).
August 2017 Quarterly Groundwater Sampling
FB708541 - EPA 200.8 (Dissolved) - The laboratory noted that the MS & MSD recoveries for manganese may not be meaningful as they were spiked at a level that was less than five times that present in the sample. The spike amount was 20 ug/L with an original concentration of 305 ug/L. Per USEPA guidelines if the original sample concentration is $\geq 4x$ the spike added, the data shall be reported unflagged even if the % recovered does not meet criteria. Therefore it is with professional judgement that no dissolved manganese results be qualified based on this MS/MSD recovery information.
FB708541 - EPA 200.8 (Total) - The laboratory noted that the MS & MSD recoveries for iron and manganese may not be meaningful as they were spiked at a level that was less than five times that present in the sample. The spike amount for iron was 100 ug/L with an original concentration of 2,730 ug/L, and the spike amount for manganese was 20 ug/L with an original concentration of 348 ug/L. Per USEPA guidelines if the original sample concentration is $\geq 4x$ the spike added, the data shall be reported unflagged even if the % recovered does not meet criteria. Therefore it is with professional judgement that no dissolved manganese results be qualified based on this MS/MSD recovery information.
FA1708387 - EPA 200.8 (Total) - The laboratory noted that the MS & MSD recoveries for Sodium were outside laboratory control limits high and may indicate a possible matrix effect. The spike amount was 5,000 ug/L with an original concentration of 144,000 ug/L. Per USEPA guidelines if the original sample concentration is $\geq 4x$ the spike added, the data shall be reported unflagged even if the % recovered does not meet criteria. Therefore it is with professional judgement that no dissolved manganese results be qualified based on this MS/MSD recovery information.
November 2017 Quarterly Groundwater Sampling
FB711448 - NWTPH-Dx - Chroms - Laboratory flagged all detected diesel range results "x" to indicate the chromatographic pattern does not resemble the fuel standard used for quantitation. Review of chromatograms concurs with lab note. Note will be retained as a chromatogram note for the results, no additional qualifiers will be added for data base entry and data table reporting.
FA1711431 - EPA 300.0 - Analyte Response - Laboratory noted that multiple samples were diluted due to high levels of non-target analytes.
March 2018 Quarterly Groundwater Sampling
FA1803047 - EPA 300.0 - Dilutions - The laboratory noted that several samples were diluted due to matrix and qualified "D". This qualifier is not retained as a final qualifier for data table reporting or database entry.
FA1803047 - EPA 300.0 - Analyte Response - The laboratory reported detected values between the method detection limit and reporting limit and qualified the results "J", this flag will be retained as the final qualifier "JQ" for data table reporting and database entry.
Phase 2B (2018) and June/July 2018 Quarterly Groundwater Sampling
FB806440 - NWTPH-Dx - Surrogate Recovery - The laboratory noted that the surrogate recovery for sample MW-7-062018 fell outside control limits due to compounds in the sample matrix interfering with the quantitation of the analyte. The DRO & ORO results were non detect, it is with professional judgment that no results be qualified based on this surrogate recovery information.
FB806440 - NWTPH-Dx - Chromatograms - Laboratory flagged all detected diesel range results "x" to indicate that the sample chromatographic pattern does not resemble the fuel standard used for quantitation. Review of chromatograms concurs. The flag will be retained as chromatogram note in the DB.
FB807069 - NWTPH-Dx - Chromatograms - All results were ND, chromatogram review not necessary.
FA1806252 & FA1807064 - EPA 300.0 - Analyte Response - Laboratory flagged concentrations reported between the RL & MDL "J", this flag will be retained as the final qualifier "JQ" for data table reporting and database entry.
FA1807064 - EPA 300.0 - Holding Times/Dilutions - The laboratory qualified the Nitrate (as N) results "H" for two samples (MW-16-070518 and MW-X-070518) that were re-analyzed for Nitrate (as N) outside of holding times due to the original analysis exceeding the linear working range of the detector. The original results have been flagged "DNR" and the "H" flag will be retained as the final qualifier "J" to indicate the concentration should be considered an estimate.

**Table F.2
Professional Judgment Discussion for Validations Performed by Floyd|Snider**

Discussion
Phase 2B (2018) and June/July 2018 Quarterly Groundwater Sampling (cont.)
FA1807064 - EPA 300.0 - Calibrations - The laboratory noted that the re-analysis of Nitrate (as N) in sample MW-X-070518 had a continuing calibration that did not meet established acceptance criteria and flagged the result "Q". This flag is being retained (along with the laboratory "H" qualifier also on this result) as the final qualifier "J" to indicate the concentration should be considered an estimate.
FA1806275 - EPA 300.0 - Holding Times/Dilutions - Sample MW-14-062118 was originally run at 50x dilution due to high levels of non-target analytes. It was then re-analyzed at a lower dilution (x2) and again at no dilution outside of holding time. The results from the two reanalysis were flagged "H" based on the hold times. The original 50x dilution and the 2x dilution will be flagged "DNR" in favor of the non-diluted analysis. The "H" flags will be retained as the final qualifier "J" to indicate the concentrations should be considered an estimate. Sample MW-05-062118 was originally run at a 50x dilution due to high levels of non-target analytes. It was then re-analyzed at a lower dilution (10x) outside of holding time. The results from the reanalysis were flagged "H" based on the hold times. The original 50x dilution will be flagged "DNR" in favor of the lower dilution analysis. The "H" flags will be retained as the final qualifier "J" to indicate the concentration should be considered an estimate.
March 2020 Groundwater Sampling
No internal data validation performed for this event. Refer to the EcoChem Data Validation Report included in Appendix F.

PROJECT NARRATIVE

Basis for the Data Validation

This report summarizes the results of data validation performed on soil and groundwater sample data and quality control (QC) sample data for the Smith Kem Site Remedial Investigation project. The data received summary level validation (EPA Stage 2B) and one set of soil samples received a full validation (EPA stage 4). The rinsate blank was validated at a compliance review level (EPA Stage 2A). A complete list of samples is provided in the **Sample Index**.

Pacific Agricultural Laboratory, Sherwood, Oregon performed the analyses. The analytical method and EcoChem project chemists are listed in the table below.

ANALYSIS	METHOD	PRIMARY REVIEW	SECONDARY REVIEW
Herbicides	EPA 8151A	A. Bodkin	C. Ransom
Pesticides	EPA 8081B Mod		
Pesticides	EPA 8141B Mod		
Herbicides and Pesticides	EPA 8270D Mod		
Pesticides	EPA 8321B Mod		
Glyphosate	Monsanto LC-FLD		

The data were reviewed using guidance and quality control criteria documented in the analytical methods; *Smith-Kem Site Remedial Investigation Work Plan* (Floyd | Snider, July 2016); and *National Functional Guidelines for Organic Data Review* (USEPA 2008). The laboratory methods are modified for residue scan analysis.

EcoChem's goal in assigning data assessment qualifiers is to assist in proper data interpretation. If values are estimated (J or UJ), data may be used for site evaluation and risk assessment purposes but reasons for data qualification should be taken into consideration when interpreting sample concentrations. If values are assigned an R or DNR, the data should not be used for any site evaluation purposes. If values have no data qualifier assigned, then the data meet the data quality objectives as stated in the documents and methods referenced above.

Data qualifier definitions, reason codes, and validation criteria are included as **Appendix A**. A Qualified Data Summary Table is included in **Appendix B**. Data Validation Worksheets will be kept on file at EcoChem, Inc. A qualified laboratory electronic data deliverable (EDD) is also submitted with this report.

DATA VALIDATION REPORT

Smith-Kem Site Remedial Investigation

Pesticides by Method SW8081B Mod

This report documents the review of analytical data from the analysis of groundwater samples and the associated laboratory and field quality control (QC) samples. Pacific Agricultural Laboratory, Sherwood, Oregon, analyzed the samples. Refer to the **Sample Index** for a complete list of samples.

SDG	NUMBER OF SAMPLES	VALIDATION LEVEL
P161666	15 Groundwater	EPA Stage 2B
P162574	15 Groundwater	EPA Stage 2B

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

Ten percent (10%) of the results in the laboratory EDD were verified by comparison to the laboratory data package.

TECHNICAL DATA VALIDATION

This report documents the review of analytical QC requirements as listed in the following table.

2	Sample Receipt, Preservation, and Holding Times	✓	Surrogate Compounds
2	Initial Calibration (ICAL)	1	Field Duplicates
2	Continuing Calibration (CCAL)	1	Target Analyte List
✓	Laboratory Blanks	1	Reporting Limits
1	Field Blanks	2	Compound Identification
1	Laboratory Control Samples (LCS/LCSD)	2	Reported Results
1	Matrix Spikes/Matrix Spike Duplicates (MS/MSD)		

✓ Stated method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.

1 Quality control results are discussed below, but no data were qualified.

2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Sample Receipt, Preservation, and Holding Times

SDG P161666: The temperature of the cooler upon receipt at the laboratory was greater than the upper control limit of 6°C, at 14°C. Data was judged to be not affected. No action was taken.

SDG P162574: The temperatures of the coolers upon receipt at the laboratory were greater than the upper control limit of 6°C (range of 7.7°C to 9.9°C). Data was judged to be not affected. No action was taken.

All samples were analyzed past the 40 day holding time. All results were estimated (J/UJ-1).

Initial Calibration

SDG P161666: The coefficient of determination (r^2) for several compounds were less than the control limit of 0.990. Positive results in the associated samples were estimated (J-5A).

SDG P162574: The coefficient of determination (r^2) for chlorpyrifos, endosulfan I, oxadiazon, and propiconazole were less than the control limit of 0.990. There were no positive results for these compounds in the associated samples. No action was required.

Continuing Calibration

SDG P161666: The Halogen4 CCAL standard was not analyzed. There were no positive results for the missing CCAL compounds. Reporting limits for the analytes below in all samples were estimated (UJ-5B).

Propachlor	Terbacil	Acetachlor	Folpet
Chlorobenzilate	Norflurazon	Captafol	

The percent difference (%D) value for flutalonil was outside the control limit, indicating a potential low bias. There were no positive results for flutalonil in the associated samples. Reporting limits were estimated (UJ-5BL).

For the CCALs bracketing Sample MW-04-081016, the %D values for several compounds were outside the control limit, indicating a potential high bias. Positive results for alpha-chlordane, p,p'-DDE, p,p'-DDT and dieldrin were estimated (J-5BH).

SDG P162574: The %D values for endosulfan I were outside the control limits in two CCALs, indicating a potential high bias. There were no positive results for these compounds in the associated samples. No action was required.

Field Blanks

No field blanks were collected.

Laboratory Control Samples

Only dieldrin, oxadiazon, and chlorpyrifos were spiked. All recoveries were acceptable.

Matrix Spike/Matrix Spike Duplicates

Only dieldrin, oxadiazon, and chlorpyrifos were spiked. All recoveries were acceptable.

Field Duplicates

The relative percent difference (RPD) control limit is 75% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than the RL.

SDG P161666: One set of field duplicates (MW-07-081016 & MW-07D-081016) was collected. Field precision was acceptable.

SDG P162574: One set of field duplicates (MW-5-110916 & MW-5D-110916) was collected. Field precision was acceptable.

Target Analyte List

There were no results reported for hexachlorocyclopentadiene.

Reporting Limits

Several reporting limits are greater than QAPP required reporting limits.

Compound Identification

SDG P161666: For Sample MW-04-081016, the results for DDT and DDE were estimated (J-14) based on the following modifications to the method.

- Breakdown for DDT (into DDE and DDD) was not checked during analysis. Positive results for these compounds were estimated (J-14).
- These compounds were not confirmed on a second GC column. Rather, the laboratory used the presence of the metabolites as a confirmation. The positive results were estimated (J-14).

Positive results for compounds other than DDT and DDE were also not confirmed on a second column. Positive results for single-peak compounds were estimated (J-14). Multi-peak compounds were confirmed using pattern recognition. No qualifiers were assigned.

Reported Results

SDG P161666: For Sample MW-04-081016, the laboratory incorrectly calculated the concentration of toxaphene (used 10X dilution factor instead of 1X). The laboratory resubmitted the results for this sample. The EDD was corrected.

OVERALL ASSESSMENT

As was determined by this evaluation, the laboratory followed a modified version of this analytical method. Accuracy was acceptable as demonstrated by the LCS/LCSD, MS/MSD, and surrogate %R values. Precision was also acceptable as demonstrated by the LCS/LCSD, MS/MSD, and field duplicate RPD values.

Data were estimated because of exceeded holding times and initial calibration outliers. Data were also estimated based on lack of a breakdown standard and second column confirmation.

All data, as qualified, are acceptable for use.

DATA VALIDATION REPORT

Smith-Kem Site Remedial Investigation

Pesticides by Method SW8081B Mod

This report documents the review of analytical data from the analysis of soil samples and the associated laboratory and field quality control (QC) samples. Pacific Agricultural Laboratory, Sherwood, Oregon, analyzed the samples. Refer to the **Sample Index** for a complete list of samples.

SDG	NUMBER OF SAMPLES	VALIDATION LEVEL
P161509	12 Soil 13 Soil	EPA Stage 4 EPA Stage 2B
P161579	45 Soil 1 Rinsate Blank	EPA Stage 2B EPA Stage 2A

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

Ten percent (10%) of the results in the laboratory EDD were verified by comparison to the laboratory data package.

TECHNICAL DATA VALIDATION

This report documents the review of analytical QC requirements as listed in the following table.

2	Sample Receipt, Preservation, and Holding Times	1	Surrogate Compounds
2	Initial Calibration (ICAL)	1	Field Duplicates
2	Continuing Calibration (CCAL)	✓	Target Analyte List
✓	Laboratory Blanks	1	Reporting Limits
1	Field Blanks	✓	Compound Identification
✓	Laboratory Control Samples (LCS)	2	Reported Results
1	Matrix Spikes/Matrix Spike Duplicates (MS/MSD)	1	Calculation Verification

✓ Stated method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.

1 Quality control results are discussed below, but no data were qualified.

2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Sample Receipt, Preservation, and Holding Times

SDG P161509: The temperature of the cooler upon receipt at the laboratory was greater than the upper control limit of 6°C, at 21°C. All results were estimated (J/UJ-1).

All samples were analyzed past the 40 day holding time. All results were estimated (J/UJ-1).

SDG P161579: The temperature of the cooler upon receipt at the laboratory was greater than the upper control limit of 6°C, at 10°C. Data was judged to be not significantly affected. No action was taken.

All samples were analyzed past the 40 day holding time. All results were estimated (J/UJ-1).

Initial Calibration

SDG P161509: The correlation coefficients (r) for several compounds were less than the control limit of 0.995. There were no positive results associated with the outliers. No action was required.

SDG P161579: The correlation coefficients (r) for several compounds were less than the control limit of 0.995. Positive results for dieldrin and pendimethalin in the associated samples were estimated (J-5A).

Continuing Calibration

SDG P161509: The percent difference (%D) values for several compounds were outside the control limit of 20%. In cases where the outlier indicated a potential high bias, associated positive results were estimated (J-5BH). In the cases where the outlier indicated a potential low bias, the associated positive results and reporting limits were estimated (J/UJ-5BL).

The following compounds were not included in the CCAL standard associated with Sample MW-10-1.5-2.5. There were no positive results for these compounds in the sample. Reporting limits were estimated (UJ-5B).

Propachlor	Terbacil	Acetachlor
Alachlor	Folpet	Chlorobenzilate
Norflurazon	Captafol	

SDG P161579: The %D values for several compounds were outside the control limit of 20%. In cases where the outlier indicated a potential high bias, associated positive results were estimated (J-5BH). In the cases where the outlier indicated a potential low bias, the associated positive results and reporting limits were estimated (J/UJ-5BL).

Field Blanks

SDG P161579: One rinsate blank, Rinsate 2, was submitted with this SDG. There were no positive results in the rinsate blank.

Laboratory Control Samples

Only dieldrin and oxadiazon were spiked.

Matrix Spike/Matrix Spike Duplicates

SDG P161509: Only dieldrin was spiked.

Two sets of matrix spike/matrix spike duplicates (MS/MSD) were performed using samples MW-13-1-2 and MW-D1-7-8. Recovery values were not reported because of matrix interferences. No action was taken.

SDG P161509: Only dieldrin and oxadiazon were spiked.

Three sets of MS/MSD analyses were performed:

- QC sample SB-4-7-8: The relative percent difference (RPD) values for dieldrin and oxadiazon were greater than the control limit. These analytes were not detected in the parent sample. No action was required. The percent recovery (%R) value for oxadiazon in the MS was less than the lower control limit. The MSD %R value was acceptable. No action was required.
- QC sample SB-11D-3-4: The laboratory was unable to calculate recovery values for oxadiazon because of matrix interferences. The %R values for dieldrin were acceptable. No action was taken.
- QC sample SB-15D-3-4: The %R values for oxadiazon were greater than the upper control. This compound was not detected in the parent sample. No action was required.

Surrogate Compounds

SDG P161509: For Sample MW-12-1.5-2, the surrogate percent recovery (%R) value was greater than the upper control limit indicating a potential high bias. There were no positive results in the sample. No action was required.

SDG P161579: For Sample SB-16-5-6, the surrogate %R value was greater than the upper control limit. There were no positive results in the sample. No action was required.

Field Duplicates

The RPD control limit is 75% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than 2x the RL. No data were qualified based solely on field duplicate RPD values; however, data users should take field precision into account when interpreting sample data.

SDG P161509: One set of field duplicates, MW-9-7-8 & MW-D1-1-7-8, was collected. Field precision was acceptable.

SDG P161579: Three sets of field duplicates were collected: SB-6-0-0.5 & SB-6D-0-0.5, SB-11-3-4 & SB-11D-3-4, and SB-15-3-4 & SB-15D-3-4.

For samples SB-15-3-4 & SB-15D-3-4, the difference between the sample and the replicate was greater than 2X the reporting limit for dieldrin.

Reporting Limits

SDG P161509: All samples were analyzed at 10x to 50x dilutions. All reporting limits are greater than QAPP required reporting limits.

SDG P161579: All samples were analyzed at 10x to 1000x dilutions. All reporting limits are greater than QAPP required reporting limits.

Reported Results

SDG P161509, P161579: The results for DDT, DDE, and DDD were estimated (J/UJ-14) based on the following modifications to the method.

- Breakdown for DDT (into DDE and DDD) was not checked during analysis. Positive results for these compounds were estimated (J-14).
- A sulfuric acid-cleaned aliquot was analyzed for DDT, DDE, and DDD. There was no accompanying acid-cleaned blank spike to demonstrate that these compounds were not affected by the clean-up process. Results for these compounds were estimated (J/UJ-14).
- These compounds were not confirmed on a second GC column. Rather, the laboratory used the presence of the metabolites as a confirmation. Estimate positive results (J-14).

Calculation Verification

SDG P161509: Results were verified by recalculation from the raw data. No calculation or transcription errors were found.

OVERALL ASSESSMENT

As was determined by this evaluation, the laboratory followed a modified version of the analytical method. With the exceptions noted above, accuracy was acceptable as demonstrated by the LCS, MS/MSD, and surrogate %R values and precision was acceptable as demonstrated by the MS/MSD and field duplicate RPD values.

Results were estimated because of a cooler temperature that was greater than 20°C, exceeded holding times, the lack of a breakdown standard or second column confirmation, and sulfuric acid cleanup.

All data, as qualified, are acceptable for use.

DATA VALIDATION REPORT

Smith-Kem Site Remedial Investigation

Pesticides by Method SW8141B Mod: GC-FPD

This report documents the review of analytical data from the analysis of groundwater samples and the associated laboratory and field quality control (QC) samples. Pacific Agricultural Laboratory, Sherwood, Oregon, analyzed the samples. Refer to the **Sample Index** for a complete list of samples.

SDG	NUMBER OF SAMPLES	VALIDATION LEVEL

P162574	15 Groundwater	EPA Stage 2B

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

Ten percent (10%) of the results in the laboratory EDD were verified by comparison to the laboratory data package.

TECHNICAL DATA VALIDATION

This report documents the review of analytical QC requirements as listed in the following table.

1	Sample Receipt, Preservation, and Holding Times	✓	Surrogate Compounds
✓	Initial Calibration (ICAL)	1	Field Duplicates
2	Continuing Calibration (CCAL)	1	Target Analyte List
✓	Laboratory Blanks	✓	Reporting Limits
1	Field Blanks	✓	Compound Identification
1	Laboratory Control Samples (LCS/LCSD)	✓	Reported Results
1	Matrix Spikes/Matrix Spike Duplicates (MS/MSD)		

✓ *Stated method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.*

1 *Quality control results are discussed below, but no data were qualified.*

2 *Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.*

Sample Receipt, Preservation, and Holding Times

SDG P161666: The cooler temperature was greater than the control limit of 6°C, at 14°C. Data was judged to be not significantly affected. No action was taken.

SDG P162574: The cooler temperatures were greater than the control limit of 6°C (range 7.7°C to 9.9°C). Data was judged to be not significantly affected. No action was taken.

Continuing Calibration

SDG P161666: The percent difference (%D) values for several compounds were outside the control limit of 20%, indicating a potential high bias. There were no positive results associated with the outliers. No action was required.

The following compounds were not included in the CCAL standard. There were no positive results for these compounds in the samples. Reporting limits were estimated (UJ-5B).

Dicrotophos	Malathion	Ethion
Dimethoate	Parathion-ethyl	Phosmet
Terbufos	Methidathion	EPN
Pirimiphos-methyl	Fenamiphos	

SDG P162574: The %D values for several compounds were outside the control limit of 20%, indicating a potential high bias. There were no positive results associated with the outliers. No action was required.

Field Blanks

No field blanks were collected.

Laboratory Control Samples

Only parathion methyl and diazinon were spiked.

SDG P161666: The LCSD percent recovery (%R) value for diazinon was greater than the upper control limit, at 136%. The LCS %R value was within the control limits. There were no positive results for diazinon in the associated samples. No action was taken.

Matrix Spike/Matrix Spike Duplicates

Only parathion methyl and diazinon were spiked.

Field Duplicates

The RPD control limit is 75% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than the RL.

SDG P161666: One set of field duplicates (MW-07-081016 & MW-07D-081016) was collected. Field precision was acceptable.

SDG P162574: One set of field duplicates (MW-5-110916 & MW-5D-110916) was collected. Field precision was acceptable.

Target Analyte List

The samples were not analyzed for fenchlorphos, naled, or glyphosate.

OVERALL ASSESSMENT

As was determined by this evaluation, the laboratory followed the specified analytical method. Accuracy was acceptable as demonstrated by the LCS/LCSD, MS/MSD, and surrogate %R values. Precision was also acceptable as demonstrated by the LCS/LCSD, MS/MSD, and field duplicate RPD values.

Reporting limits were estimated because of CCAL outliers.

All data, as qualified, are acceptable for use.

DATA VALIDATION REPORT
Smith-Kem Site Remedial Investigation
Pesticides by Method SW8141B Mod: GC-FPD

This report documents the review of analytical data from the analysis of soil samples and the associated laboratory and field quality control (QC) samples. Pacific Agricultural Laboratory, Sherwood, Oregon, analyzed the samples. Refer to the **Sample Index** for a complete list of samples.

SDG	NUMBER OF SAMPLES	VALIDATION LEVEL
P161509	12 Soil 13 Soil	EPA Stage 4 EPA Stage 2B
P161579	45 Soil 1 Rinsate Blank	EPA Stage 2B EPA Stage 2A

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

Ten percent (10%) of the results in the laboratory EDD were verified by comparison to the laboratory data package.

SDG P161579: For several samples, the fonofos analysis date was incorrect in the EDD and on the summary forms. The EDD was corrected to match the raw data in the PDF.

For Sample SB-15D-3-4, the analysis date, dilution factor and reporting limit were incorrect in the EDD and on the summary form. The EDD was corrected to match the raw data in the PDF.

TECHNICAL DATA VALIDATION

This report documents the review of analytical QC requirements as listed in the following table.

2	Sample Receipt, Preservation, and Holding Times	2	Surrogate Compounds
1	Initial Calibration (ICAL)	1	Field Duplicates
2	Continuing Calibration (CCAL)	1	Target Analyte List
✓	Laboratory Blanks	1	Reporting Limits
1	Field Blanks	✓	Compound Identification

1	Matrix Spikes/Matrix Spike Duplicates (MS/MSD)	1	Calibration Verification (full only)

✓ Stated method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.

1 Quality control results are discussed below, but no data were qualified.

2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Sample Receipt, Preservation, and Holding Times

SDG 161509: The temperature of the cooler upon receipt at the laboratory was greater than the upper control limit of 6°C, at 21°C. All results were estimated (J/UJ-1).

SDG 161579: The temperatures of the coolers upon receipt at the laboratory was greater than the upper control limit of 6°C, at an average of 10°C. Data was judged to be not significantly affected. No action was taken.

All samples were analyzed past the 40-day holding time. Results were estimated (J/UJ-1).

Initial Calibration

SDG 161579: For the ICAL analyzed on 11/23/2016, the correlation of determination (r^2) value for chlorpyrifos was greater than the control limit of 0.990. There were no positive results for this compound in the associated samples. No action was required.

Continuing Calibration

SDG 161509: The percent difference (%D) values for several compounds were outside the control limit of 20%, indicating a potential high bias. There were no positive results associated with the outliers. No action was required.

The following compounds were not included in the CCAL standard. There were no positive results for these compounds in the samples. Reporting limits were estimated (UJ-5B).

Dicrotophos	Malathion	Ethion
Dimethoate	Parathion-ethyl	Phosmet
Terbufos	Methidathion	EPN
Pirimiphos-methyl	Fenamiphos	

SDG 161579: The %D values for several compounds were outside the control limit of 20%. There were no positive results associated with the outliers. No action was required.

Field Blanks

SDG 161579: One rinsate blank, Rinsate-2, was submitted with this SDG. There were no positive results in the rinsate blank.

Laboratory Control Samples

Only chlorpyrifos, parathion methyl, and diazinon were spiked.

Matrix Spike/Matrix Spike Duplicates

Only chlorpyrifos, parathion methyl, and diazinon were spiked.

SDG P161579: Three sets of matrix spike/matrix spike duplicates (MS/MSD) were analyzed using samples SB-4-7-8, SB-9-0.5-1, and SB-11D-3-4. For SB-9-0.5-1 MS, the diazinon percent recovery

(%R) value could not be calculated because of matrix interference. All other %R values were acceptable.

Surrogates

SDG P161509: For Samples MW-12-1.5-2 and SB-1-0.5-1, the percent recovery (%R) values for the surrogate were greater than the upper control limit of 135%, indicating a potential high bias. There were no positive results in these samples. No action was required.

SDG P161579: For Sample Culvert-1, the %R value for the surrogate was greater than the upper control limit of 135%, indicating a potential high bias. There were no positive results in this sample. No action was required.

For Samples SB-3-2.5-3.5, SB-4-0.5-1, SB-8-4-5, and SB-15D-3-4, the %R values for the surrogate were less than the lower control limit of 65%, indicating a potential low bias. There were no positive results in these samples. Reporting limits were estimated (UJ-13L).

Field Duplicates

The RPD control limit is 75% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than 2x the RL.

SDG P161509: One set of field duplicates (MW-9-7-8 and MW-D1-1-7-8) was collected. Field precision was acceptable.

SDG P161579: Three sets of field duplicates (SB-11-3-4 & SB-11D-3-4, SB-15-3-4 & SB-15D-3-4, and SB-6-0-0.5 & SB-6D-0-0.5) were collected. Field precision was acceptable.

Target Analyte List

SDG P161509: The samples were not analyzed for glyphosate, fenchlorphos, or naled.

SDG P161579: The samples were not analyzed for fenchlorphos or naled. Glyphosate was analyzed by another method.

Reporting Limits

The QAPP required reporting limits were not met for several samples.

Reported Results

SDG P161579: For Sample SB-16-5-6, the positive result for chlorpyrifos was not confirmed on a second column. The result was estimated (J-14).

Calculation Verification

SDG P161509: Results were verified by recalculation from the raw data. No calculation or transcription errors were found.

OVERALL ASSESSMENT

As was determined by this evaluation, the laboratory followed the specified analytical method. Accuracy was acceptable as demonstrated by the LCS, MS/MSD, and surrogate %R values. Precision was also acceptable as demonstrated by the MS/MSD and field duplicate RPD values.

Results were estimated because of a cooler temperature that exceeded 20°C, exceeded holding times, surrogate %R outliers, and CCAL %D outliers. One result was estimated because it was not confirmed on a second column.

All data, as qualified, are acceptable for use.

DATA VALIDATION REPORT
Smith-Kem Site Remedial Investigation
Herbicides by Method SW8151A: GC-MS/MS

This report documents the review of analytical data from the analysis of groundwater samples and the associated laboratory quality control (QC) samples. Pacific Agricultural Laboratory, Sherwood, Oregon, analyzed the samples. Refer to the **Sample Index** for a complete list of samples.

SDG	NUMBER OF SAMPLES	VALIDATION LEVEL
P161666	15 Groundwater	EPA Stage 2B
P162574	15 Groundwater	EPA Stage 2B

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

Ten percent (10%) of the results in the laboratory EDD were verified by comparison to the laboratory data package.

TECHNICAL DATA VALIDATION

This report documents the review of analytical QC requirements as listed in the following table.

1	Sample Receipt, Preservation, and Holding Times	✓	Surrogate Compounds
✓	Initial Calibration (ICAL)	1	Field Duplicates
✓	Continuing Calibration (CCAL)	1	Target Analyte List
✓	Laboratory Blanks	1	Reporting Limits
1	Field Blanks	✓	Compound Identification
1	Laboratory Control Samples (LCS)	✓	Reported Results
✓	Matrix Spikes/Matrix Spike Duplicates (MS/MSD)		

✓ Stated method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.

1 Quality control results are discussed below, but no data were qualified.

2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Sample Receipt, Preservation, and Holding Times

SDG P161666: The cooler temperature was greater than the control limit of 6°C, at 14°C. Data was judged to be not significantly affected. No action was taken.

SDG P162574: The cooler temperatures were greater than the control limit of 6°C (range 7.7°C to 9.9°C). Data was judged to be not significantly affected. No action was taken.

Field Blanks

No field blanks were collected.

Laboratory Control Sample/Laboratory Control Sample Duplicates (LCS/LCSD)

SDG P162574: The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) relative percent difference (RPD) value for dinoseb was greater than the Work Plan specified control limit of 20%, at 22%. Dinoseb was not detected in the associated samples. No action was required.

Field Duplicates

The relative percent difference (RPD) control limit is 75% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than the RL.

SDG P161666: One set of field duplicates, MW-07-081016 & MW-07D-081016, were collected. Field precision was acceptable.

SDG P162574: One set of field duplicates, MW-5-110916 & MW-5D-110916, were collected. Field precision was acceptable.

Target Analyte List

The samples were not analyzed for dalapon.

Reporting Limits

The target reporting limit for pentachlorophenol was 0.08 µg/L. The laboratory reported a value of 0.16 µg/L.

OVERALL ASSESSMENT

As was determined by this evaluation, the laboratory followed the specified analytical method. Accuracy was acceptable as demonstrated by the LCS/LCSD, matrix spike/matrix spike duplicate (MS/MSD), and surrogate %R values. With the exception noted above, precision was acceptable as demonstrated by the LCS/LCSD, MS/MSD, and field duplicate RPD values.

No data were qualified for any reason. All data, as reported, are acceptable for use.

DATA VALIDATION REPORT
Smith-Kem Site Remedial Investigation
Herbicides by Method SW8151A: GC-MS/MS

This report documents the review of analytical data from the analysis of soil samples and the associated laboratory and field quality control (QC) samples. Pacific Agricultural Laboratory, Sherwood, Oregon, analyzed the samples. Refer to the **Sample Index** for a complete list of samples.

SDG	NUMBER OF SAMPLES	VALIDATION LEVEL
P161509	12 Soil 13 Soil	EPA Stage 4 EPA Stage 2B
P161579	45 Soil 1 Rinsate Blank	EPA Stage 2B EPA Stage 2A

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

Ten percent (10%) of the results in the laboratory EDD were verified by comparison to the laboratory data package.

TECHNICAL DATA VALIDATION

This report documents the review of analytical QC requirements as listed in the following table.

2	Sample Receipt, Preservation, and Holding Times	✓	Surrogate Compounds
1	Initial Calibration (ICAL)	1	Field Duplicates
✓	Continuing Calibration (CCAL)	✓	Target Analyte List
✓	Laboratory Blanks	✓	Reporting Limits
1	Field Blanks	✓	Compound Identification
2	Laboratory Control Samples (LCS)	✓	Reported Results
1	Matrix Spikes/Matrix Spike Duplicates (MS/MSD)	1	Calculation Verification

✓ Stated method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.

1 Quality control results are discussed below, but no data were qualified.

2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Sample Receipt, Preservation, and Holding Times

SDG P161509: The temperature of the cooler upon receipt at the laboratory was greater than the upper control limit of 6°C, at 21°C. All results were estimated (J/UJ-1).

SDG P161579: The temperature of the cooler upon receipt at the laboratory was greater than the upper control limit of 6°C, at 10°C. Data was judged to be not significantly affected. No action was taken.

Continuing Calibration

SDG P161509: The percent difference (%D) values for several compounds were outside the control limit of 20%, indicating a potential high bias. There were no positive results associated with the outliers. No action was required.

SDG P161579: The %D values for dinoseb were greater than the control limit of 20% in several CCALs. The positive result for dinoseb in Sample SB-13-0.5-1 was estimated (J-5BH).

Field Blanks

SDG P161579: One rinsate blank, Rinsate 2, was submitted with this SDG. There were no positive results in the rinsate blank.

Laboratory Control Samples

SDG P161509: For the LCS associated with batch 6081002, the percent recovery (%R) value for 2,4,5-T was greater than the upper control limit. Positive results for 2,4,5-T in Samples MW-12-0-0.5 and MW-12-1.5-2 were estimated (J-10H).

For the LCS associated with batch 6081106, the %R value for 2,4,5-T was greater than the upper control limit. There were no positive results for 2,4,5-T in the associated samples. No action was required.

SDG P161579: For the LCS extracted on 8/18/16, the %R values for 2,4,5-T and MCPA were greater than the upper control limit. Positive results for MCPA in the associated samples were estimated (J-10H). There were no positive results for 2,4,5-T. No action was required for this analyte.

Matrix Spike/Matrix Spike Duplicates

SDG P161509: For batch 6081002, matrix spike/matrix spike duplicate (MS/MSD) analyses were performed using Sample MW-13-1-2. The %R values for pentachlorophenol were less than the lower control limit for the MS and the SD. The result for pentachlorophenol in the parent sample was estimated (UJ-8L).

For batch 6081106, MS/MSD analyses were performed using Sample MW-D1-7-8. The %R values for 2,4,5-T were greater than the upper control limit. This analyte was not detected in the parent sample. No action was required.

SDG P161509:

Three sets of MS/MSD analyses were performed:

- Sample SB-4-7-8: The relative percent difference (RPD) value for dicamba was greater than the control limit. The positive result in the parent sample was estimated (J-9). The percent

recovery (%R) value for 2,4,5-T in the MS was greater than the upper control limit. The MSD %R value was acceptable. No action was required. The %R value for pentachlorophenol in the MSD was less than the lower control limit. The MS %R value was acceptable. No action was required.

- Sample SB-9-0.5-1: The RPD value for 2,4,5-T was greater than the control limit. The positive result in the parent sample was estimated (J-9).
- Sample SB-15D-3-4: The %R values for 2,4,5-T were greater than the upper control limit. This compound was not detected in the parent sample. No action was required.

Field Duplicates

The relative percent difference (RPD) control limit is 75% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than 2x the RL. No data were qualified based solely on field duplicate RPD values; however, data users should take field precision into account when interpreting sample data.

SDG P161509: One set of field duplicates (MW-9-7-8 and MW-D1-1-7-8) was collected. Field precision was acceptable.

SDG P161579: Three sets of field duplicates were submitted: SB-6-0-0.5 & SB-6D-0-0.5, SB-11-3-4 & SB-11D-3-4, and SB-15-3-4 & SB-15D-3-4.

For SB-11-3-4 & SB-11D-3-4, the difference between the sample and the replicate was greater than 2X the reporting limit for 2,4-D, MCPA, 2,4-DB, and 2,4,5-T. The RPD was greater than the control limit for 2,4,5-TP and dicamba.

For SB-15-3-4 & SB-15D-3-4, the difference between the sample and the replicate was greater than 2X the reporting limit for 2,4-D, MCPA, and dicamba.

Calculation Verification

SDG P161509: Results were verified by recalculation from the raw data. No calculation or transcription errors were found.

OVERALL ASSESSMENT

As was determined by this evaluation, the laboratory followed the specified analytical method. With the exceptions noted above, accuracy was acceptable as demonstrated by the LCS, MS/MSD, and surrogate %R values and precision was acceptable as demonstrated by the MS/MSD and field duplicate RPD values.

Results were estimated because of a cooler temperature that was greater than 20°C, CCAL %D outliers, LCS recovery outliers, and MS/MSD precision and accuracy outliers.

All data, as qualified, are acceptable for use.

DATA VALIDATION REPORT
Smith-Kem Site Remedial Investigation
Herbicides/Pesticides by Method SW8270D Mod: GC-MS/MS
Residue Screening

This report documents the review of analytical data from the analysis of groundwater samples and the associated laboratory and field quality control (QC) samples. Pacific Agricultural Laboratory, Sherwood, Oregon, analyzed the samples. Refer to the **Sample Index** for a complete list of samples.

SDG	NUMBER OF SAMPLES	VALIDATION LEVEL
P161666	15 Groundwater	EPA Stage 2B
P162574	15 Groundwater	EPA Stage 2B

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

Ten percent (10%) of the results in the laboratory EDD were verified by comparison to the laboratory data package.

TECHNICAL DATA VALIDATION

This report documents the review of analytical QC requirements as listed in the following table.

1	Sample Receipt, Preservation, and Holding Times	✓	Surrogate Compounds
✓	Initial Calibration (ICAL)	1	Field Duplicates
✓	Continuing Calibration (CCAL)	✓	Target Analyte List
✓	Laboratory Blanks	✓	Reporting Limits
1	Field Blanks	✓	Compound Identification
✓	Laboratory Control Samples (LCS)	✓	Reported Results
2	Matrix Spikes/Matrix Spike Duplicates (MS/MSD)		

✓ Stated method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.

1 Quality control results are discussed below, but no data were qualified.

2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Sample Receipt, Preservation, and Holding Times

SDG P161666: The cooler temperature was greater than the control limit of 6°C, at 14°C. Data was judged to be not significantly affected. No action was taken.

SDG P162574: The cooler temperatures were greater than the control limit of 6°C (range 7.7°C to 9.9°C). Data was judged to be not significantly affected. No action was taken.

Field Blanks

No field blanks were collected.

Laboratory Control Sample/Laboratory Control Sample Duplicates

Because this is a screening method, the lab did not spike for the full suite of analytes. Only atrazine, ethofumesate, and napropamide were spiked. All recoveries were acceptable.

Matrix Spike/Matrix Spike Duplicates

SDG P161666: Matrix spike/matrix spike duplicate (MS/MSD) analyses were performed using Sample MW-08-081016. The relative percent difference (RPD) value for atrazine was greater than control limit of 20%, at 26%. The positive result for atrazine in the parent sample was estimated (J-9).

Field Duplicates

The RPD control limit is 75% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than the RL.

SDG P161666: One set of field duplicates (MW-07-081016 & MW-07D-081016) was collected. Field precision was acceptable.

SDG P162574: One set of field duplicates (MW-5-110916 & MW-5D-110916) was collected. Field precision was acceptable.

OVERALL ASSESSMENT

As was determined by this evaluation, the laboratory followed their modified 8270 residue screening method. Accuracy was acceptable as demonstrated by the LCS/LCSD, MS/MSD, and surrogate %R values. With the exception noted previously, precision was acceptable as demonstrated by the LCS/LCSD, MS/MSD, and field duplicate RPD values.

One result was estimated because of an MS/MD RPD outlier.

All data, as qualified, are acceptable for use.

✓ *Stated method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.*

1 *Quality control results are discussed below, but no data were qualified.*

2 *Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.*

Sample Receipt, Preservation, and Holding Times

SDG P161509: The temperature of the cooler upon receipt at the laboratory was greater than the upper control limit of 6°C, at 21°C. All results were estimated (J/UJ-1).

SDG P161579: The temperature of the cooler upon receipt at the laboratory was greater than the upper control limit of 6°C, at 10°C. Data was judged to be not significantly affected. No action was taken.

Initial Calibration

SDG P161579: For the ICAL analyzed on 08/20/16, the coefficient of determination (r^2) was less than the control limit of 0.990 for atrazine. The positive results for atrazine in the associated samples were estimated (J-5A).

Continuing Calibration

SDG P161509: Three of the four continuing calibration standards had one or more percent difference (%D) outliers that indicated a potential high bias. There were no positive results in the associated samples; no action was taken. CCAL %D outliers for metribuzin represented a decrease in instrument response. Metribuzin results in the associated samples were estimated (UJ-5BL) to indicate a potential low bias.

SDG P161579: There were several percent difference (%D) values outside the $\pm 25\%$ control limits. For %D values less than -25% , positive results and reporting limits in the associated samples were estimated (J/UJ-5BL) to indicate a potential low bias. For %D values greater than $+25\%$, positive results were estimated (J-5BH) to indicate a potential high bias.

Field Blanks

SDG 161579: One rinsate blank, Rinsate-2, was submitted with this SDG. There were no positive results in the rinsate blank.

Laboratory Control Samples

Only atrazine, ethofumesate, and napropamide were spiked.

Matrix Spike/Matrix Spike Duplicates

Only atrazine, ethofumesate, and napropamide were spiked.

SDG P161579: Three sets of matrix spike/matrix spike duplicates (MS/MSD) were analyzed using samples SB-4-7-8, SB-9-0.5-1, and SB-11D-3-4.

For QC sample SB-9-0.5-1, the atrazine percent recovery (%R) and relative percent difference (RPD) values were greater than the control limits. The positive result in the parent sample was estimated (J-8H,9). The %R values for ethofumesate and napropamide were greater than the control limit. There were no positive results in the parent sample for these compounds. No action was required.

For QC sample SB-11D-3-4, the atrazine %R value was greater than the upper control limit for the MSD, but acceptable for the MS. No action was required.

Surrogate Compounds

SDG P161509: The surrogate %R values for Samples MW-14-0-0.5, MW-14-2-3, MW-9-0.5-1, MW-9-4-5, and MW-9-7-8 were greater than the upper control limit of 120%, indicating a potential high bias. Positive results for atrazine and simazine in Sample MW-9-4-5 were estimated (J-13H). There were no other positive results in these samples.

SDG P161579: The surrogate %R values for the following samples were greater than the upper control limit of 120%, indicating a potential high bias. Positive results were estimated (J-13H). No action was taken for non-detected results.

SB-5-0.5-1	SB-8-0.5-1	SB-11-3-4	SB-16-0.5-1
SB-6D-0-0.5	SB-9-0.5-1	SB-12-0.5-1	SB-16-3-4
SB-6-0-0.5	SB-9-3-4	SB-12-3-4	SB-16-5-6
SB-7-0.5-1	SB-10-0.5-1	SB-13-0.5-1	Culvert-1
SB-7-3-4	SB-11-0.5-1	SB-15-0.5-1	

Field Duplicates

The relative percent difference (RPD) control limit is 75% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than 2x the RL. No data were qualified based solely on field duplicate RPD values; however, data users should take field precision into account when interpreting sample data.

SDG P161509: One set of field duplicates, MW-9-7-8 and MW-D1-1-7-8, was collected. Field precision was acceptable.

SDG P161579: Three sets of field duplicates were collected: SB-11-3-4 & SB-11D-3-4, SB-15-3-4 & SB-15D-3-4, and SB-6-0-0.5 & SB-6D-0-0.5. For field duplicate set SB-11-3-4 & SB-11D-3-4, the difference values for ametryn and hexazinone were greater than the control limit.

Reporting Limits

The target reporting limit for metribuzin was 0.0067 mg/Kg. The laboratory reported a value of 0.013 mg/Kg.

Reported Results

SDG P161579: The laboratory E-flagged several results to indicate the reported result was estimated. These results were estimated (J-14).

Calculation Verification

SDG P161509: Results were verified by recalculation from the raw data. No calculation or transcription errors were found.

OVERALL ASSESSMENT

As was determined by this evaluation, the laboratory followed their modified 8270 residue screening method. With the exceptions noted previously, accuracy was acceptable as demonstrated by the LCS, MS/MSD, and surrogate %R values and precision was acceptable as demonstrated by the MS/MSD and field duplicate RPD values.

Results were estimated based on a cooler temp that was greater than 20°C, surrogate recovery outliers, CCAL %D outliers, and to reflect lab flags.

All data, as qualified, are acceptable for use.

DATA VALIDATION REPORT
Smith-Kem Site Remedial Investigation
Pesticides by Method SW8321B Mod: LC-MS/MS

This report documents the review of analytical data from the analysis of groundwater samples and the associated laboratory and field quality control (QC) samples. Pacific Agricultural Laboratory, Sherwood, Oregon, analyzed the samples. Refer to the **Sample Index** for a complete list of samples.

SDG	NUMBER OF SAMPLES	VALIDATION LEVEL
P161666	15 Groundwater	EPA Stage 2B
P162574	15 Groundwater	EPA Stage 2B

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

Ten percent (10%) of the results in the laboratory EDD were verified by comparison to the laboratory data package.

TECHNICAL DATA VALIDATION

This report documents the review of analytical QC requirements as listed in the following table.

1	Sample Receipt, Preservation, and Holding Times	✓	Surrogate Compounds
✓	Initial Calibration (ICAL)	1	Field Duplicates
1	Continuing Calibration (CCAL)	✓	Target Analyte List
✓	Laboratory Blanks	1	Reporting Limits
1	Field Blanks	✓	Compound Identification
1	Laboratory Control Samples (LCS/LCSD)	✓	Reported Results
2	Matrix Spikes/Matrix Spike Duplicates (MS/MSD)		

✓ Stated method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.

1 Quality control results are discussed below, but no data were qualified.

2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Sample Receipt, Preservation, and Holding Times

SDG P161666: The cooler temperature was greater than the control limit of 6°C at 14°C. Data was judged to be not significantly affected. No action was taken.

SDG P162574: The cooler temperatures were greater than the control limit of 6°C (range 7.7°C to 9.9°C). Data was judged to be not significantly affected. No action was taken.

Continuing Calibration

SDG P161666: The percent difference (%D) values for several compounds were greater than the control limit of 20% and indicated an increase in instrument response. There were no positive results associated with the outliers. No action was required.

Field Blanks

No field blanks were collected.

Laboratory Control Samples

Only diuron, fluometuron, and thiobencarb were spiked. All recoveries were acceptable.

Matrix Spike/Matrix Spike Duplicates

SDG P161666: Matrix spike/matrix spike duplicate (MS/MSD) analyses were performed on Sample MW-08-081016. The relative percent difference (RPD) value for diuron was greater than the control limit of 20%, at 26%. The positive result for diuron in the parent sample was estimated (J-9).

Field Duplicates

The RPD control limit is 75% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than the RL.

SDG P161666: One set of field duplicates (MW-07-081016 & MW-07D-081016) was collected. Field precision was acceptable.

SDG P162574: One set of field duplicates (MW-5-110916 & MW-5D-110916) was collected. Field precision was acceptable.

Reporting Limits

The reporting limit for propargite was greater than the QAPP required reporting limit.

OVERALL ASSESSMENT

As was determined by this evaluation, the laboratory followed the specified analytical method. Accuracy was acceptable as demonstrated by the LCS/LCSD, MS/MSD, and surrogate %R values. With the exception noted above, precision was also acceptable as demonstrated by the LCS/LCSD, MS/MSD, and field duplicate RPD values.

One result was estimated because of an MS/MSD precision outlier.

All data, as qualified, are acceptable for use.

1	Laboratory Control Samples (LCS)	✓	Reported Results
2	Matrix Spikes/Matrix Spike Duplicates (MS/MSD)	1	Calibration Verification

✓ Stated method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.

1 Quality control results are discussed below, but no data were qualified.

2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Sample Receipt, Preservation, and Holding Times

SDG 161509: The temperature of the cooler upon receipt at the laboratory was greater than the upper control limit of 6°C, at 21°C. All results were estimated (J/UJ-1).

SDG 161579: The temperatures of the coolers upon receipt at the laboratory was greater than the upper control limit of 6°C, at an average of 10°C. Data was judged to be not significantly affected. No action was taken.

Continuing Calibration

SDG P161579: There were several percent difference (%D) values greater than the upper control limit, indicating a potential high bias. There were no positive results associated with the outliers. No action was required.

Field Blanks

SDG 161579: One rinsate blank, Rinsate-2, was submitted with this SDG. There were no positive results in the rinsate blank.

Laboratory Control Samples

Only diuron, fluometuron, and thiobencarb were spiked.

SDG P161579: For the LCS extracted 08/17/16, the percent recovery (%R) value for thiobencarb was greater than the upper control limit, indicating a potential high bias. There were no positive results for thiobencarb in the associated samples. No action was required.

Matrix Spike/Matrix Spike Duplicates

Only diuron, fluometuron, and thiobencarb were spiked.

SDG P161579: Three sets of matrix spike/matrix spike duplicates (MS/MSD) were analyzed using Samples SB-4-7-8, SB-9-0.5-1, and SB-11D-3-4.

For QC sample SB-9-0.5-1, the %R values for thiobencarb were less than the lower control limit, indicating a potential low bias. This compound was not present in the parent sample. The reporting limit was estimated (UJ-8L).

Surrogate Compounds

SDG P161509: For Sample MW-12-1.5-2, the surrogate percent recovery (%R) value was less than the lower control limit. There were no positive results in this sample. Reporting limits were estimated (UJ-13L) to indicate a potential low bias.

Field Duplicates

The RPD control limit is 75% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than 2x the RL. No data were qualified based solely on field duplicate RPD values; however, data users should take field precision into account when interpreting sample data.

SDG P161509: One set of field duplicates, MW-9-7-8 and MW-D1-1-7-8, was collected. Field precision was acceptable.

SDG P161579: Three sets of field duplicates were collected: SB-11-3-4 & SB-11D-3-4, SB-15-3-4 & SB-15D-3-4, and SB-6-0-0.5 & SB-6D-0-0.5.

For field duplicate set SB-11-3-4 & SB-11D-3-4, the difference value for carbofuran was greater than the control limit.

For field duplicate set SB-15-3-4 & SB-15D-3-4, the RPD value for diuron was greater than the control limit.

Calculation Verification

SDG P161509: Results were verified by recalculation from the raw data. No calculation or transcription errors were found.

OVERALL ASSESSMENT

As was determined by this evaluation, the laboratory followed the specified analytical method. With the exceptions noted previously, accuracy was acceptable as demonstrated by the LCS, MS/MSD, and surrogate %R values and precision was acceptable as demonstrated by the MS/MSD and field duplicate RPD values.

Results were estimated because of surrogate and MS/MSD recovery outliers and based on a cooler temperature that was greater than 20°C.

All data, as qualified, are acceptable for use.

DATA VALIDATION REPORT
Smith-Kem Site Remedial Investigation
Glyphosate/AMPA by Method Monsanto: LC-FLD

This report documents the review of analytical data from the analysis of soil samples and the associated laboratory quality control (QC) samples. Pacific Agricultural Laboratory, Sherwood, Oregon, analyzed the samples. Refer to the **Sample Index** for a complete list of samples.

SDG	NUMBER OF SAMPLES	VALIDATION LEVEL
P161579	3 Soil	EPA Stage 4

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

Ten percent (10%) of the results in the laboratory EDD were verified by comparison to the laboratory data package.

TECHNICAL DATA VALIDATION

This report documents the review of analytical QC requirements as listed in the following table.

1	Sample Receipt, Preservation, and Holding Times	1	Surrogate Compounds
✓	Initial Calibration (ICAL)	1	Field Duplicates
✓	Continuing Calibration (CCAL)	✓	Target Analyte List
✓	Laboratory Blanks	✓	Reporting Limits
1	Field Blanks	✓	Compound Identification
✓	Laboratory Control Samples (LCS)	✓	Reported Results
1	Matrix Spikes/Matrix Spike Duplicates (MS/MSD)	1	Calculation Verification

✓ Stated method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.

1 Quality control results are discussed below, but no data were qualified.

2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Sample Receipt, Preservation, and Holding Times

The temperature of the cooler upon receipt at the laboratory was greater than the upper control limit of 6°C at 10°C. Data was judged to be unaffected. No action was taken.

Field Blanks

No field blanks were collected.

Matrix Spikes (MS)

Two batch QC matrix spike (MS) samples were analyzed with this SDG. The percent recovery (%R) values were within control limits. There were no precision analyses performed. Precision could not be evaluated.

Surrogate Compounds

Surrogates were not added to these samples.

Field Duplicates

Field duplicates were not collected.

Calculation Verification

Results were verified by recalculation from the raw data. No calculation or transcription errors were found.

OVERALL ASSESSMENT

As was determined by this evaluation, the laboratory followed the specified analytical method. Accuracy was acceptable as demonstrated by the laboratory control sample and MS recoveries. Precision could not be evaluated.

All data, as reported, are acceptable for use.

APPENDIX A

DATA QUALIFIER DEFINITIONS REASON CODES AND CRITERIA TABLES

DATA VALIDATION QUALIFIER CODES

Based on National Functional Guidelines

The following definitions provide brief explanations of the qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents the approximate concentration.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

The following is an EcoChem qualifier that may also be assigned during the data review process:

DNR	Do not report; a more appropriate result is reported from another analysis or dilution.
-----	---

DATA QUALIFIER REASON CODES

Group	Code	Reason for Qualification
Sample Handling	1	Improper Sample Handling or Sample Preservation (i.e., headspace, cooler temperature, pH, summa canister pressure); Exceeded Holding Times
Instrument Performance	24	Instrument Performance (i.e., tune, resolution, retention time window, endrin breakdown, lock-mass)
	5A	Initial Calibration (RF, %RSD, r^2)
	5B	Calibration Verification (CCV, CCAL; RF, %D, %R) Use bias flags (H,L) ¹ where appropriate
	5C	Initial Calibration Verification (ICV %D, %R) Use bias flags (H,L) ¹ where appropriate
Blank Contamination	6	Field Blank Contamination (Equipment Rinsate, Trip Blank, etc.)
	7	Lab Blank Contamination (i.e., method blank, instrument blank, etc.) Use low bias flag (L) ¹ for negative instrument blanks
Precision and Accuracy	8	Matrix Spike (MS and/or MSD) Recoveries Use bias flags (H,L) ¹ where appropriate
	9	Precision (all replicates: LCS/LCSD, MS/MSD, Lab Replicate, Field Replicate)
	10	Laboratory Control Sample Recoveries (a.k.a. Blank Spikes) Use bias flags (H,L) ¹ where appropriate
	12	Reference Material Use bias flags (H,L) ¹ where appropriate
	13	Surrogate Spike Recoveries (a.k.a. labeled compounds, recovery standards) Use bias flags (H,L) ¹ where appropriate
Interferences	16	ICP/ICP-MS Serial Dilution Percent Difference
	17	ICP/ICP-MS Interference Check Standard Recovery Use bias flags (H,L) ¹ where appropriate
	19	Internal Standard Performance (i.e., area, retention time, recovery)
	22	Elevated Detection Limit due to Interference (i.e., chemical and/or matrix)
	23	Bias from Matrix Interference (i.e. diphenyl ether, PCB/pesticides)
Identification and Quantitation	2	Chromatographic pattern in sample does not match pattern of calibration standard
	3	2 nd column confirmation (RPD or %D)
	4	Tentatively Identified Compound (TIC) (associated with NJ only)
	20	Calibration Range or Linear Range Exceeded
	25	Compound Identification (i.e., ion ratio, retention time, relative abundance, etc.)
Miscellaneous	11	A more appropriate result is reported (multiple reported analyses i.e., dilutions, re-extractions, etc. Associated with "R" and "DNR" only)
	14	Other (See DV report for details)
	26	Method QC information not provided

¹H = high bias indicated

L = low bias indicated

Pesticides by GC
(Based on Organic NFG 1999 & 2008 and SW-846 Method 8081B)

QC Element	Acceptance Criteria (NFG)	Source of Criteria	Action for Non-Conformance	Reason Code	Discussion and Comments
Sample Handling					
Cooler/Storage Temperature Preservation	4°C ± 2°C Tissue/sediments (may be frozen -20°C)	NFG ⁽²⁾ Method ⁽³⁾	J (pos)/UJ (ND) if greater than 6° C	1	Use Professional Judgment (PJ) to qualify for temperature outlier. Current SW846 criterion is ≤ 6° C ⁽³⁾
Holding Time	<i>Extraction Aqueous:</i> 7 days from collection <i>Extraction Solid:</i> 14 days from collection <i>Extraction Tissue/Sediment (frozen):</i> 1 year <i>Analysis (all matrices):</i> 40 days from extraction	NFG ⁽²⁾ Method ⁽³⁾	J (pos)/UJ (ND) if ext/analyzed > HT J (pos)/R (ND) if gross exceedance (> 2x HT)	1	Gross exceedance > 2x HT, as per NFG 1999
Instrument Performance					
Resolution Check	Beginning of ICAL sequence Within RTW and resolution > 60%	NFG ⁽²⁾	NJ (pos)/R (ND) results	14	CLP criterion; might not be submitted with SW846 data package
Retention Times	Surrogates: TCMX (± 0.05); DCB (± 0.10) Target analytes: within RTW	NFG ⁽²⁾ Method ⁽³⁾	NJ (pos)/R (ND) results for analytes with RT shifts	24	Use PJ based on examination of raw data
Breakdown	DDT Breakdown: ≤ 20% Endrin Breakdown: ≤ 20% Combined Breakdown: ≤ 30% Compounds within RTW	NFG ⁽²⁾ Method ⁽³⁾	If 4,4'-DDT is detected: J (pos) 4,4'-DDT, 4,4'-DDD and 4,4'-DDE If 4,4'-DDT is ND and either 4,4'-DDD or 4,4'-DDE are detected: R (ND) 4,4'-DDT, NJ (pos) DDD and DDE If Endrin is detected: J (pos) Endrin, Endrin Aldehyde and Endrin Ketone If Endrin is ND and either EA or EK are detected: R (ND) Endrin, NJ (pos) EA and EK	5A	Method 8081B breakdown criterion: ≤ 15%. For combined breakdown outliers, apply qualifiers considering the degree of individual breakdown.

Pesticides by GC
(Based on Organic NFG 1999 & 2008 and SW-846 Method 8081B)

QC Element	Acceptance Criteria (NFG)	Source of Criteria	Action for Non-Conformance	Reason Code	Discussion and Comments
Instrument Performance (continued)					
Initial Calibration	Single Component Compounds: RSD ≤ 20% alpha-BHC and delta-BHC: RSD ≤ 25% toxaphene and surrogates: RSD ≤ 30% or correlation coefficient (r-value) ≥ 0.995 OR Minimum 6-point with coefficient of determination (r ² -value) ≥ 0.99	NFG ⁽²⁾ Method ⁽⁴⁾	J (pos) if %RSD greater than control limit or r-value < 0.995 or r ² -value < 0.99	5A	Refer to TM-01 for additional information. Use bias flags (H,L) ⁽⁶⁾ where appropriate
Initial Calibration Verification (ICV)	No NFG criteria Project specific	Project QAPP	J (pos) if > UCL J (pos)/UJ (ND) if < LCL	5B	Use bias flags (H,L) ⁽⁶⁾ where appropriate
Continuing Calibration	%D ± 20% Analyzed prior to each 12 hour shift	Method ⁽³⁾	If > 20% (high bias): J (pos) If <20% (low bias): J (pos)/UJ (ND)	5B	Refer to TM-01 for additional information. Use bias flags (H,L) ⁽⁶⁾ where appropriate
Blank Contamination					
Method Blank (MB)	One per matrix per batch (of ≤ 20 samples) No detected compounds > RL	NFG ⁽¹⁾ Method ⁽³⁾	U (pos) if result is less than appropriate 5X action level.	7	Hierarchy of blank review: #1 - Review MB and IB, qualify as needed #2 - Review FB, qualify as needed Note: Actions as per NFG 1999 Note: IB not required by method
Field Blank (FB)	FB: frequency as per QAPP No detected compounds > RL	NFG ⁽¹⁾ Method ⁽³⁾	U (pos) if result is less than appropriate 5X action level.	6	
Instrument Blanks (IB)	Analyzed at the beginning and end of every 12 hour sequence No analyte > CRQL	NFG ⁽¹⁾	U (pos) if result is less than appropriate 5X action level.	7	

Pesticides by GC
(Based on Organic NFG 1999 & 2008 and SW-846 Method 8081B)

QC Element	Acceptance Criteria (NFG)	Source of Criteria	Action for Non-Conformance	Reason Code	Discussion and Comments
Precision and Accuracy					
MS/MSD (recovery)	One set per matrix per batch (of ≤ 20 samples) Method or project acceptance limits	NFG ⁽²⁾ Method ⁽³⁾	Qualify parent only unless other QC indicates systematic problems. J (pos) if both %R > upper control limit (UCL) J (pos)/UJ (ND) if both %R < lower control limit (LCL) J (pos)/R (ND) if both %R < 10%	8	No action if only one spike %R is outside criteria No action if native analyte conc. > 5x the amount spiked Use bias flags (H,L) ⁽⁶⁾ where appropriate
MS/MSD (RPD)	One set per matrix per batch (of ≤ 20 samples) Method or project acceptance limits	NFG ⁽²⁾ Method ⁽³⁾	Qualify parent only unless other QC indicates systematic problems. J (pos) if RPD > control limit	9	No action if parent is ND
LCS	One per lab batch (of ≤ 20 samples) Method or project acceptance limits	NFG ⁽²⁾	J (pos) if %R > UCL J (pos)/UJ (ND) if %R < LCL J (pos)/R (ND) if %R < 10%	10	Qualify all associated samples. Use bias flags (H,L) ⁽⁶⁾ where appropriate
LCS/LCSD (RPD)	if analyzed use MS/MSD RPD criteria	NFG ⁽²⁾	J (pos) assoc. compound in all samples	9	LCSD not required by method or NFG
Surrogates	TCMX and DCBP added to every sample %R = 30% - 150% or project limits	NFG ⁽²⁾ Method ⁽³⁾	J (pos) if either %R > UCL J (pos)/UJ (ND) if either %R < LCL J (pos)/R (ND) if either %R < 10%	13	If %R < 10% (dilution is a factor), use PJ Use bias flags (H,L) ⁽⁶⁾ where appropriate
Internal Standards (if used)	Acceptable Range: IS area = 50% to 200% of CCAL area RT within 30 seconds of CC RT	Method ⁽³⁾	J (pos) if area > 200% J (pos)/UJ (ND) if area < 50% J (pos)/R (ND) if area < 25% RT > 30 seconds, narrate	19	

Pesticides by GC
(Based on Organic NFG 1999 & 2008 and SW-846 Method 8081B)

QC Element	Acceptance Criteria (NFG)	Source of Criteria	Action for Non-Conformance	Reason Code	Discussion and Comments
Precision and Accuracy (continued)					
Field Duplicates	Solids: RPD < 50% or difference < 2X RL (for results < 5X RL) Aqueous: RPD < 35% or difference < 1X RL (for results < 5X RL)	EcoChem standard practice	J (pos)/UJ (ND) Qualify only parent and field duplicate samples	9	Use project limits if specified
Compound Identification/Quantification					
Quantitation/ Identification	Between two columns: RPD < 40% or %D < 25% Within Retention Time Windows on both columns.	NFG ⁽²⁾ Method ⁽³⁾	J (pos) if RPD = 40% - 60% (25% - 60% for %D) NJ (pos) if > 60% R (pos) if RTW criterion not met	3	See TM-08 for additional info
Calibration Range	On-column concentration < high calibration standard	NFG ⁽²⁾ Method ⁽³⁾	J (pos) if conc > high standard and sample was not diluted	20	
Dilutions Re-extractions and/or Reanalyses	Report only one result per analyte	Standard reporting policy	Use "DNR" to flag results that will not be reported.	11	TM-04 for additional info
Sample Clean-up					
GPC/Sulfur/ Florisil	GPC or Florisil cleanup standards 80% - 120%	NFG ⁽²⁾	J (pos) if %R > UCL J (pos)/UJ (ND) if %R < LCL J (pos)/R (ND) if %R < 10%	14	Cleanups are optional under SW846 Use bias flags (H,L) ⁽⁶⁾ where appropriate

³ Organochlorine Pesticides by Gas Chromatography USEPA Method SW846 8081B, Feb 2007, Rev. 2

⁴ SW846, Chapter 4, Organic Analytes

⁵ Determinative Chromatographic Separations, Method 8000C, March 2003, Rev.3

⁶ NFG 2013 suggests using "+ / -" to indicate bias; EcoChem has chosen "H" = high bias indicated; "L" = low bias indicated.

DATA VALIDATION CRITERIA

Semivolatile Organic Compounds by Gas Chromatography-Mass Spectroscopy (GC-MS)
 (Based on NFG 1999 & 2008 and SW-846 Method 8270D)

QC Element	Acceptance Criteria	Source of Criteria	Action for Non-Conformance	Reason Code	Discussion and Comments
Sample Handling					
Cooler/Storage Temperature Preservation	4°C±2°C sediment/tissues may require storage at -20°C	NFG ⁽¹⁾ Method ⁽³⁾	If required by project: J (pos)/UJ (ND) if greater than 6° C	1	Use PJ for temp outliers; see TM20 Current SW846 criterion is ≤ 6° C ⁽³⁾
Holding Time	Extraction Aqueous: 7 days from collection Extraction Solid: 14 days from collection Analysis (all matrices): 40 days from extraction Holding time may be extended to 1 year for frozen sediments/tissues	NFG ⁽¹⁾ Method ⁽³⁾	J (pos)/UJ (ND) if HT exceeded J (pos)/R (ND) if gross exceedance (> 2x HT)	1	Gross exceedance = > 2x HT, as per 1999 NFG
Instrument Performance					
Tuning	DFTPP Beginning of each 12 hour period Use method or project acceptance criteria	NFG ⁽¹⁾ Method ⁽³⁾	R (pos/ND) all analytes in all samples associated with the tune	24	
Initial Calibration Sensitivity	RRF ≥ 0.05 except: RRF ≥ 0.01 poor responders *	NFG ⁽¹⁾ Method ⁽³⁾	Use PJ to qualify J (pos)/UJ (ND)	5A	TM-06 EcoChem Policy for the Evaluation and Qualification of GCMS Instrument Performance PJ - no action if response is stable (ICAL RSD and CCAL %D acceptable)
Initial Calibration Stability	Minimum 5 standards %RSD ≤ 20.0% except: %RSD ≤ 40.0% poor responders * or co-efficient of determination (r ²) > 0.99	NFG ⁽¹⁾ Method ⁽³⁾	J (pos) if %RSD > limit or r ² value < 0.99	5A	
Initial Calibration Verification Check	Prepared from second source; analyze after each ICAL Percent recovery limits = 70-130%	Method ⁽³⁾	J (pos) %R > UCL J (pos)/UJ (ND) %R < LCL	5A (H,L) ⁴	QAPP may have overriding accuracy limits.

DATA VALIDATION CRITERIA

Semivolatile Organic Compounds by Gas Chromatography-Mass Spectroscopy (GC-MS)
 (Based on NFG 1999 & 2008 and SW-846 Method 8270D)

QC Element	Acceptance Criteria	Source of Criteria	Action for Non-Conformance	Reason Code	Discussion and Comments
Instrument Performance (continued)					
Continuing Calibration Sensitivity	RRF \geq 0.05 except: RRF \geq 0.01 poor responders *	NFG ⁽¹⁾ Method ⁽³⁾	Use PJ to qualify J (pos)/UJ (ND)	5B	see ICAL RRF guidance
Continuing Calibration Stability	Prior to sample analysis and every 12 hours %D \leq 25% except: %D \leq 40.0% poor responders *	NFG ⁽¹⁾ Method ⁽³⁾	J (pos) - %D > control limit (high bias) J (pos)/UJ (ND) - %D < -control limit (low bias)	5B (H,L) ⁴	
Blank Contamination					
Method Blank (MB)	MB: One per matrix per batch of (of \leq 20 samples) No detected compounds > MDL	NFG ⁽²⁾ Method ⁽³⁾	U(pos) if result is < 5X or 10X action level	7	10X action level applies to phthalates only. 5X for all other target analytes Hierarchy of blank review: #1 - Review MB, qualify as needed #2 - Review FB , qualify as needed Note: Actions as per 1999 NFG
	No TICs present		R (pos) TICs using 10X rule	7	
Field Blank (FB)	No detected compounds > MDL	NFG ⁽²⁾ Method ⁽³⁾	U (pos) if result is < 5X or 10X action level	6	
Precision and Accuracy					
LCS/LCSD (recovery)	One per matrix per batch (of \leq 20 samples) LCSD not required by NFG or method Use method acceptance criteria/laboratory limits	Method ⁽³⁾	J (pos) if %R > UCL J (pos)/UJ (ND) if %R < LCL J (pos)/R (ND)%R < 10%	10 (H,L) ⁴	No action if only one spike %R is outside criteria when LCSD is analyzed, unless one recovery is <10%. QAPP may have overriding accuracy limits. Qualify all associated samples.
LCS/LCSD (RPD)	If LCSD analyzed RPD < lab limits	Method ⁽³⁾	J (pos)	9	Qualify all associated samples. QAPP may have overriding precision limits.

DATA VALIDATION CRITERIA

Semivolatile Organic Compounds by Gas Chromatography-Mass Spectroscopy (GC-MS)
 (Based on NFG 1999 & 2008 and SW-846 Method 8270D)

QC Element	Acceptance Criteria	Source of Criteria	Action for Non-Conformance	Reason Code	Discussion and Comments
Precision and Accuracy (continued)					
Reference Material (RM, SRM, or CRM)	Result \pm 20% of the 95% confidence interval of the true value for analytes	EcoChem standard policy	J (pos)/UJ (ND) if < LCL J (pos) if > UCL	12 (H,L) ⁴	QAPP may have overriding accuracy limits. Some manufacturers have different RM control limits
MS/MSD (recovery)	One per matrix per batch (of \leq 20 samples) Use method acceptance criteria/laboratory limits	NFG ⁽¹⁾ Method ⁽³⁾	J (pos) %R > UCL J (pos)/UJ (ND) if both %R < LCL J (pos)/R (ND) if both %R < 10% J (pos)/UJ (ND) if one > UCL & one < LCL, with no bias	8 (H,L) ⁴	No action if only one spike %R is outside criteria. No action if parent concentration is >4x the amount spiked. Qualify parent sample only.
MS/MSD (RPD)	One per matrix per batch (of \leq 20 samples) Use method acceptance criteria/laboratory limits	NFG ⁽¹⁾ Method ⁽²⁾	J (pos) in parent sample if RPD > CL	9	Qualify parent sample only
Surrogates	Minimum of 3 acid & 3 base/neutral (B/N) compounds added to all samples Within method control limits	NFG ⁽¹⁾ Method ⁽³⁾	J (pos) if %R > UCL J (pos)/UJ (ND) if %R < LCL J (pos)/R (ND) if %R < 10%	13 (H,L) ⁴	Qualify all compounds in associated fraction. Do not qualify if only 1 acid and/or 1 B/N surrogate is out, unless <10%. If 1 surrogate outlier < 10% then J (pos)/R (ND)
Internal Standards	Added to all samples Acceptable Range: IS area 50% to 200% of CCAL area RT within 30 seconds of CC RT	NFG ⁽¹⁾ Method ⁽³⁾	J (pos) if > 200% J (pos)/UJ (ND) if < 50% J (pos)/R (ND) if < 25% if RT >30 seconds use PJ	19	Qualify compounds quantified using particular internal standard
Field Duplicates	Solids: RPD < 50% OR difference < 2X RL (for results < 5X RL) Aqueous: RPD < 35% OR difference < 1X RL (for results < 5X RL)	EcoChem standard policy	J (pos)/UJ (ND) Qualify only parent and field duplicate samples	9	Use project limits if specified

DATA VALIDATION CRITERIA

Semivolatile Organic Compounds by Gas Chromatography-Mass Spectroscopy (GC-MS)
 (Based on NFG 1999 & 2008 and SW-846 Method 8270D)

QC Element	Acceptance Criteria	Source of Criteria	Action for Non-Conformance	Reason Code	Discussion and Comments
Compound Identification and Quantitation and Calculation					
Retention times and relative ion intensities	RRT within 0.06 of standard RRT Ion relative intensity within 20% of standard All ions in std. at > 10% intensity must be present in sample	NFG ⁽¹⁾ Method ⁽³⁾	U (pos) if identification criteria not met	25	
TICs	Major ions (>10%) in reference must be present in sample; intensities agree within 20%; check identification	NFG ⁽¹⁾ Method ⁽³⁾	NJ the TIC unless: R (pos) common laboratory contaminants	4	
Calibration Range	Results greater than highest calibration standard	EcoChem standard policy	Qualify J (pos)	20	If result from dilution analysis is not reported.
Dilutions, Re-extractions and/or Reanalyses	Report only one result per analyte	EcoChem standard policy	Use "DNR" to flag results that will not be reported.	11	TM-04 EcoChem Policy for Rejection/Selection Process for Multiple Results

DATA VALIDATION REPORT

SMITH-KEM SITE REMEDIAL INVESTIGATION AUGUST 2017 GW MONITORING

Prepared for:

Floyd | Snider
601 Union Street, Suite 600
Seattle, WA 98101

Prepared by:

EcoChem, Inc.
500 Union Street, Suite 1010
Seattle, WA 98101

EcoChem Project: C15223-3

November 29, 2017

Approved for Release:

A handwritten signature in black ink, appearing to read "Christine Ransom". The signature is fluid and cursive, with a long horizontal stroke extending to the right.

Christine Ransom
Senior Project Chemist
EcoChem, Inc.

PROJECT NARRATIVE

Basis for the Data Validation

This report summarizes the results of data validation performed on groundwater and quality control (QC) sample data for the Smith-Kem Site Remedial Investigation August 2017 GW Monitoring. A complete list of samples is provided in the **Sample Index**.

Pacific Agricultural Laboratory, Sherwood, Oregon performed the analyses. The analytical method and EcoChem project chemists are listed in the table below.

ANALYSIS	METHOD	PRIMARY REVIEW	SECONDARY REVIEW
Herbicides	EPA 8151A	E. Clayton	C. Ransom
Pesticides	EPA 8081B Mod		
Pesticides	EPA 8141B Mod		
Herbicides and Pesticides	EPA 8270D Mod		
Pesticides	EPA 8321B Mod		

The data were reviewed using guidance and quality control criteria documented in the analytical methods; *Smith-Kem Site Remedial Investigation Work Plan* (Floyd | Snider, July 2016); and *National Functional Guidelines for Organic Data Review* (USEPA 2008). The laboratory methods are modified for residue scan analysis.

EcoChem's goal in assigning data assessment qualifiers is to assist in proper data interpretation. If values are estimated (J or UJ), data may be used for site evaluation and risk assessment purposes but reasons for data qualification should be taken into consideration when interpreting sample concentrations. If values are assigned an R or DNR, the data should not be used for any site evaluation purposes. If values have no data qualifier assigned, then the data meet the data quality objectives as stated in the documents and methods referenced above.

Data qualifier definitions, reason codes, and validation criteria are included as **Appendix A**. A Qualified Data Summary Table is included in **Appendix B**. Data Validation Worksheets will be kept on file at EcoChem, Inc. A qualified laboratory electronic data deliverable (EDD) is also submitted with this report.

DATA VALIDATION REPORT
Smith-Kem Site – August 2017 GW Monitoring
Pesticides by Method SW8081B Mod

This report documents the review of analytical data from the analysis of groundwater samples and the associated laboratory and field quality control (QC) samples. Pacific Agricultural Laboratory, Sherwood, Oregon, analyzed the samples. Refer to the **Sample Index** for a complete list of samples.

SDG	NUMBER OF SAMPLES	VALIDATION LEVEL
P171953	15 Groundwater	EPA Stage 2A

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

Ten percent (10%) of the results in the laboratory EDD were verified by comparison to the laboratory data package.

TECHNICAL DATA VALIDATION

This report documents the review of analytical QC requirements as listed in the following table.

1	Sample Receipt, Preservation, and Holding Times	1	Field Duplicates
✓	Laboratory Blanks	1	Target Analyte List
1	Field Blanks	1	Reporting Limits
1	Laboratory Control Samples (LCS/LCSD)	✓	Compound Identification
2	Matrix Spikes/Matrix Spike Duplicates (MS/MSD)	✓	Reported Results
1	Surrogate Compounds		

✓ Stated method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.

1 Quality control results are discussed below, but no data were qualified.

2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Sample Receipt, Preservation, and Holding Times

Some of the temperatures of the coolers upon receipt at the laboratory were greater than the upper control limit of 4°C, ranging from 8.4 to 19°. It was determined that data were not affected; no action was taken.

Field Blanks

No field blanks were submitted.

Laboratory Control Samples

Only dieldrin, oxadiazon, and chlorpyrifos were spiked. All recoveries were acceptable.

Matrix Spike/Matrix Spike Duplicates

Only dieldrin, oxadiazon, and chlorpyrifos were spiked.

The matrix spike/matrix spike duplicate (MS/MSD) samples were performed on Sample MW-04-082917. The MS percent recovery (%R) for oxadiazon was greater than the upper control limit, but was in control in the associated MSD sample; no qualification was required for a single outlier. The relative percent difference (RPD) value was also greater than the control limit. This analyte was not detected in the parent sample; no action was necessary. The %R values for dieldrin were less than the lower control limit; The result for this compound was estimated (J-8L) in the parent sample.

Surrogate Compounds

The surrogate compound, DCBP, was added to all samples. With the following exception, the surrogate recoveries were within the control limits of 70%-130% recovery:

The surrogate %R value in Sample MW-02-083017 was greater than the upper control limit. There were no target analytes detected in this sample; no data were qualified.

Field Duplicates

The relative percent difference (RPD) control limit is 75% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and duplicate must be less than the RL.

Samples MW-11-082917 and MW-X-082917 were identified as field duplicates. All acceptance criteria were met.

Target Analyte List

There were no results reported for hexachlorocyclopentadiene.

Reporting Limits

Several reporting limits were greater than QAPP required reporting limits due to required dilutions.

OVERALL ASSESSMENT

As was determined by this evaluation, the laboratory followed a modified version of this analytical method. With the exceptions noted above, accuracy was acceptable as demonstrated by the laboratory control sample/laboratory control sample duplicate (LCS/LCSD), MS/MSD, and surrogate %R values and precision was acceptable as demonstrated by the LCS/LCSD, MS/MSD, and field duplicate RPD values.

One result was estimated due MS/MSD %R outliers.

All data, as qualified, are acceptable for use.

DATA VALIDATION REPORT
Smith-Kem Site – August 2017 GW Monitoring
Pesticides by Method SW8321B Mod: LC-MS/MS

This report documents the review of analytical data from the analysis of groundwater samples and the associated laboratory and field quality control (QC) samples. Pacific Agricultural Laboratory, Sherwood, Oregon, analyzed the samples. Refer to the **Sample Index** for a complete list of samples.

SDG	NUMBER OF SAMPLES	VALIDATION LEVEL
P171953	15 Groundwater	EPA Stage 2A

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

Ten percent (10%) of the results in the laboratory EDD were verified by comparison to the laboratory data package.

TECHNICAL DATA VALIDATION

This report documents the review of analytical QC requirements as listed in the following table.

1	Sample Receipt, Preservation, and Holding Times	1	Field Duplicates
✓	Laboratory Blanks	✓	Target Analyte List
1	Field Blanks	1	Reporting Limits
1	Laboratory Control Samples (LCS/LCSD)	✓	Compound Identification
1	Matrix Spikes/Matrix Spike Duplicates (MS/MSD)	✓	Reported Results
✓	Surrogate Compounds		

✓ Stated method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.

1 Quality control results are discussed below, but no data were qualified.

2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Sample Receipt, Preservation, and Holding Times

Some of the temperatures of the coolers upon receipt at the laboratory were greater than the upper control limit of 4°C, ranging from 8.4 to 19°. It was determined that data were not affected; no action was taken.

Field Blanks

No field blanks were submitted.

Laboratory Control Samples

Only diuron, fluometuron, and thiobencarb were spiked. All recoveries were acceptable.

Matrix Spike/Matrix Spike Duplicates

Only diuron, fluometuron, and thiobencarb were spiked. All recoveries were acceptable.

Field Duplicates

The RPD control limit is 75% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the difference between the sample and duplicate must be less than the RL. No data were qualified based solely on field duplicate RPD values; however, data users should take field precision into account when interpreting sample data.

Samples MW-11-082917 and MW-X-082917 were identified as field duplicates. All acceptance criteria were met.

Reporting Limits

Several reporting limits are greater than QAPP required reporting limits due to required dilutions.

OVERALL ASSESSMENT

As was determined by this evaluation, the laboratory followed the specified analytical method. Accuracy was acceptable as demonstrated by the laboratory control sample/laboratory control sample duplicate (LCS/LCSD), matrix spike/matrix spike duplicate (MS/MSD), and surrogate %R values. Precision was also acceptable as demonstrated by the LCS/LCSD, MS/MSD, and field duplicate RPD values.

No data were qualified for any reason.

All data, as reported, are acceptable for use.

DATA VALIDATION REPORT
Smith-Kem Site – August 2017 GW Monitoring
Pesticides by Method SW8141B Mod: GC-FPD

This report documents the review of analytical data from the analysis of groundwater samples and the associated laboratory and field quality control (QC) samples. Pacific Agricultural Laboratory, Sherwood, Oregon, analyzed the samples. Refer to the **Sample Index** for a complete list of samples.

SDG	NUMBER OF SAMPLES	VALIDATION LEVEL

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

Ten percent (10%) of the results in the laboratory EDD were verified by comparison to the laboratory data package.

TECHNICAL DATA VALIDATION

This report documents the review of analytical QC requirements as listed in the following table.

1	Sample Receipt, Preservation, and Holding Times	1	Field Duplicates
✓	Laboratory Blanks	1	Target Analyte List
1	Field Blanks	✓	Reporting Limits
1	Laboratory Control Samples (LCS/LCSD)	✓	Compound Identification
1	Matrix Spikes/Matrix Spike Duplicates (MS/MSD)	✓	Reported Results
✓	Surrogate Compounds		

✓ Stated method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.

1 Quality control results are discussed below, but no data were qualified.

2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Sample Receipt, Preservation, and Holding Times

Some of the temperatures of the coolers upon receipt at the laboratory were greater than the upper control limit of 4°C, ranging from 8.4 to 19°. It was determined that data were not affected; no action was taken.

Field Blanks

No field blanks were submitted.

Laboratory Control Samples

Only parathion methyl and diazinon were spiked. All recoveries were acceptable.

Matrix Spike/Matrix Spike Duplicates

Only parathion methyl and diazinon were spiked. All recoveries were acceptable.

Field Duplicates

The relative percent difference (RPD) control limit is 75% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and duplicate must be less than the RL.

Samples MW-11-082917 and MW-X-082917 were identified as field duplicates. All acceptance criteria were met.

Target Analyte List

The samples were not analyzed for fenchlorphos, naled, or glyphosate.

OVERALL ASSESSMENT

As was determined by this evaluation, the laboratory followed the specified analytical method. Accuracy was acceptable as demonstrated by the laboratory control sample/laboratory control sample duplicate (LCS/LCSD), matrix spike/matrix spike duplicate (MS/MSD), and surrogate %R values. Precision was also acceptable as demonstrated by the LCS/LCSD, MS/MSD, and field duplicate RPD values.

No data were qualified for any reason.

All data, as reported, are acceptable for use.

DATA VALIDATION REPORT
Smith-Kem Site – August 2017 GW Monitoring
Herbicides/Pesticides by Method SW8270D Mod: GC-MS/MS

This report documents the review of analytical data from the analysis of groundwater samples and the associated laboratory and field quality control (QC) samples. Pacific Agricultural Laboratory, Sherwood, Oregon, analyzed the samples. Refer to the **Sample Index** for a complete list of samples.

SDG	NUMBER OF SAMPLES	VALIDATION LEVEL
P171953	15 Groundwater	EPA Stage 2A

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

Ten percent (10%) of the results in the laboratory EDD were verified by comparison to the laboratory data package.

TECHNICAL DATA VALIDATION

This report documents the review of analytical QC requirements as listed in the following table.

1	Sample Receipt, Preservation, and Holding Times	1	Field Duplicates
✓	Laboratory Blanks	✓	Target Analyte List
1	Field Blanks	1	Reporting Limits
1	Laboratory Control Samples (LCS)	✓	Compound Identification
2	Matrix Spikes/Matrix Spike Duplicates (MS/MSD)	✓	Reported Results
2	Surrogate Compounds		

✓ Stated method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.

1 Quality control results are discussed below, but no data were qualified.

2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Sample Receipt, Preservation, and Holding Times

Some of the temperatures of the coolers upon receipt at the laboratory were greater than the upper control limit of 4°C, ranging from 8.4 to 19°. It was determined that data were not affected; no action was taken.

Field Blanks

No field blanks were submitted.

Laboratory Control Sample/Laboratory Control Sample Duplicates

Because this is a screening method, the lab did not spike for the full suite of analytes. Only atrazine, ethofumesate, and napropamide were spiked. All recoveries were acceptable.

Matrix Spike/Matrix Spike Duplicates

Only atrazine, ethofumesate, and napropamide were spiked.

The matrix spike/matrix spike duplicate (MS/MSD) analyses were performed using Sample MW-04-82917. The MSD percent recovery (%R) value for napropamide was greater than the upper control limit, but was in control in the associated MS sample. No qualification was required for the single outlier. The MS/MSD %R values for atrazine were less than the lower control limit; the atrazine result in the parent sample was estimated (J-8L).

Surrogate Compounds

The surrogate compound DCBP was added to all samples. With the following exception, the surrogate recoveries were within the control limits of 70%-130% recovery:

The surrogate %R value in Sample MW-06-082917 was less than the lower control limit; all results for this sample were estimated (J/UJ-13L).

Field Duplicates

The RPD control limit is 75% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the difference between the sample and replicate must be less than the RL. No data were qualified based solely on field duplicate RPD values; however, data users should take field precision into account when interpreting sample data.

Samples MW-11-082917 and MW-X-082917 were identified as field duplicates. All acceptance criteria were met.

Reporting Limits

Several reporting limits are greater than QAPP required reporting limits due to required dilutions.

OVERALL ASSESSMENT

As was determined by this evaluation, the laboratory followed the modified 8270 residue screening method. With the exceptions noted above, accuracy was acceptable as demonstrated by the LCS/LCSD, MS/MSD, and surrogate %R values. Precision was acceptable as demonstrated by the LCS/LCSD, MS/MSD, and field duplicate RPD values.

Results were estimated due MS/MSD and surrogate %R outliers.

All data, as qualified, are acceptable for use.

Smith-Kem Site – August 2017 GW Monitoring
Herbicides by Method SW8151A: GC-MS/MS

This report documents the review of analytical data from the analysis of groundwater samples and the associated laboratory quality control (QC) samples. Pacific Agricultural Laboratory, Sherwood, Oregon, analyzed the samples. Refer to the **Sample Index** for a complete list of samples.

SDG	NUMBER OF SAMPLES	VALIDATION LEVEL
P171953	7 Groundwater	EPA Stage 2A

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

Ten percent (10%) of the results in the laboratory EDD were verified by comparison to the laboratory data package.

TECHNICAL DATA VALIDATION

This report documents the review of analytical QC requirements as listed in the following table.

1	Sample Receipt, Preservation, and Holding Times	1	Field Duplicates
✓	Laboratory Blanks	1	Target Analyte List
1	Field Blanks	1	Reporting Limits
2	Laboratory Control Samples (LCS/LCSD)	✓	Compound Identification
2	Matrix Spike/Matrix Spike Duplicates (MS/MSD)	✓	Reported Results
2	Surrogate Compounds		

✓ Stated method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.

1 Quality control results are discussed below, but no data were qualified.

2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Sample Receipt, Preservation, and Holding Times

Some of the temperatures of the coolers upon receipt at the laboratory were greater than the upper control limit of 4°C, ranging from 8.4 to 19°. It was determined that data were not affected; no action was taken.

Field Blanks

No field blanks were submitted.

Laboratory Control Samples

Laboratory control sample/laboratory control sample duplicates (LCS/LCSD) were analyzed at the required frequency of one per batch of 20 or fewer samples. When the %R values indicated a potential low bias, associated results were estimated (J/UJ-10L). Only associated positive results were estimated (J-10H) if the %R values indicated a potential high bias. No action was taken if only one of the LCS or LCSD recoveries were outside of the control limits. Precision was evaluated using the LCS/LCSD relative percent difference (RPD) values. Only positive results were qualified based on RPD outliers. Qualifiers for %R or were issued to all samples in the extraction batch.

For the LCS/LCSD associated with batch 7090502, the RPD values for dinoseb, MCPA, MCPP, pentachlorophenol, 2,4,5-TP, 2,4-D, and 2,4-DB were greater than the control limit of 20%. Associated detected results were estimated (J-9). The LCS percent recovery (%R) values for 2,4,5-T, 2,4,5-TP, 2,4-D, 2,4-DB, MCPA, and pentachlorophenol were greater than the upper control limit, but were in control in the associated LCSD; no qualification was required for the single outliers. The %R values for dinoseb were greater than the upper control limit of 130%. This analyte was not detected in the associated samples; no qualification was required.

Matrix Spike Sample/Matrix Spike Sample Duplicates

Matrix spike/matrix spike duplicate (MS/MSD) samples were analyzed at the appropriate frequency. When the MS/MSD %R values indicated a potential low bias, associated results were estimated (J/UJ-8L). Only the associated positive results were estimated (J-8H) if the %R values indicated a potential high bias. No action is taken unless both the MS and MSD %R values are outside the control limits. Precision is evaluated using the RPD values calculated between the MS and MSD results. Associated positive results were estimated (J-9) if the RPD value was greater than the control limit. Qualifiers were only issued to the parent sample.

The MS/MSD analyses were performed using Sample MW-04-082917. The MSD %R value for 2,4,5-T was greater than the upper control limit, but was in control in the associated MS; no qualification was required for the single outlier. The %R values for 2,4-D and dinoseb were greater than the upper control limit. Dinoseb was not detected in the parent sample. The positive result for 2,4-D was estimated (J-8H).

Surrogate Compounds

The surrogate compound, DCPAA, was added to all samples. With the following exception, the surrogate recoveries were within the control limits of 70%-130%.

The DCPAA surrogate %R values for Samples MW-09-083017 and MW-12-083017 were less than the lower control limit. All results for these samples were estimated (J/UJ-13L).

Field Duplicates

The RPD control limit is 75% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the difference between the sample and replicate must be less than the RL. No data were qualified based solely on field duplicate RPD values; however, data users should take field precision into account when interpreting sample data.

Samples MW-11-082917 and MW-X-082917 were identified as field duplicates. All acceptance criteria were met.

Target Analyte List

The samples were not analyzed for dalapon.

Reporting Limits

The target reporting limit for pentachlorophenol was 0.08 µg/L. The laboratory reported a value of 0.16 µg/L.

Several reporting limits are greater than QAPP required reporting limits due to required dilutions.

OVERALL ASSESSMENT

As was determined by this evaluation, the laboratory followed the specified analytical method. With the exceptions noted above, accuracy was acceptable as demonstrated by the LCS/LCSD, MS/MSD, and surrogate %R values and precision was acceptable as demonstrated by the LCS/LCSD, MS/MSD, and field duplicate RPD values.

Results were estimated based on LCS/LCSD RPD, surrogate %R, and MS/MSD %R outliers.

All data, as qualified, are acceptable for use.

APPENDIX A

DATA QUALIFIER DEFINITIONS

REASON CODES

AND CRITERIA TABLES

DATA VALIDATION QUALIFIER CODES

Based on National Functional Guidelines

The following definitions provide brief explanations of the qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents the approximate concentration.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

The following is an EcoChem qualifier that may also be assigned during the data review process:

DNR	Do not report; a more appropriate result is reported from another analysis or dilution.
-----	---

DATA QUALIFIER REASON CODES

Group	Code	Reason for Qualification
Sample Handling	1	Improper Sample Handling or Sample Preservation (i.e., headspace, cooler temperature, pH, summa canister pressure); Exceeded Holding Times
Instrument Performance	24	Instrument Performance (i.e., tune, resolution, retention time window, endrin breakdown, lock-mass)
	5A	Initial Calibration (RF, %RSD, r^2)
	5B	Calibration Verification (CCV, CCAL; RF, %D, %R) Use bias flags (H,L) ¹ where appropriate
	5C	Initial Calibration Verification (ICV %D, %R) Use bias flags (H,L) ¹ where appropriate
Blank Contamination	6	Field Blank Contamination (Equipment Rinsate, Trip Blank, etc.)
	7	Lab Blank Contamination (i.e., method blank, instrument blank, etc.) Use low bias flag (L) ¹ for negative instrument blanks
Precision and Accuracy	8	Matrix Spike (MS and/or MSD) Recoveries Use bias flags (H,L) ¹ where appropriate
	9	Precision (all replicates: LCS/LCSD, MS/MSD, Lab Replicate, Field Replicate)
	10	Laboratory Control Sample Recoveries (a.k.a. Blank Spikes) Use bias flags (H,L) ¹ where appropriate
	12	Reference Material Use bias flags (H,L) ¹ where appropriate
	13	Surrogate Spike Recoveries (a.k.a. labeled compounds, recovery standards) Use bias flags (H,L) ¹ where appropriate
Interferences	16	ICP/ICP-MS Serial Dilution Percent Difference
	17	ICP/ICP-MS Interference Check Standard Recovery Use bias flags (H,L) ¹ where appropriate
	19	Internal Standard Performance (i.e., area, retention time, recovery)
	22	Elevated Detection Limit due to Interference (i.e., chemical and/or matrix)
	23	Bias from Matrix Interference (i.e. diphenyl ether, PCB/pesticides)
Identification and Quantitation	2	Chromatographic pattern in sample does not match pattern of calibration standard
	3	2 nd column confirmation (RPD or %D)
	4	Tentatively Identified Compound (TIC) (associated with NJ only)
	20	Calibration Range or Linear Range Exceeded
	25	Compound Identification (i.e., ion ratio, retention time, relative abundance, etc.)
Miscellaneous	11	A more appropriate result is reported (multiple reported analyses i.e., dilutions, re-extractions, etc. Associated with "R" and "DNR" only)
	14	Other (See DV report for details)
	26	Method QC information not provided

¹H = high bias indicated

L = low bias indicated

Pesticides by GC
(Based on Organic NFG 1999 & 2008 and SW-846 Method 8081B)

QC Element	Acceptance Criteria (NFG)	Source of Criteria	Action for Non-Conformance	Reason Code	Discussion and Comments
Sample Handling					
Cooler/Storage Temperature Preservation	4°C ± 2°C Tissue/sediments (may be frozen -20°C)	NFG ⁽²⁾ Method ⁽³⁾	J (pos)/UJ (ND) if greater than 6° C	1	Use Professional Judgment (PJ) to qualify for temperature outlier. Current SW846 criterion is ≤ 6° C ⁽³⁾

Holding Time	Extraction Aqueous: 7 days from collection Extraction Solid: 14 days from collection Analysis (all matrices): 40 days from extraction Holding time may be extended to 1 year for frozen sediments/tissues	NFG ⁽¹⁾ Method ⁽³⁾	J (pos)/UJ (ND) if HT exceeded J (pos)/R (ND) if gross exceedance (> 2x HT)	1	Gross exceedance = > 2x HT, as per 1999 NFG
Instrument Performance					
Tuning	DFTPP Beginning of each 12 hour period Use method or project acceptance criteria	NFG ⁽¹⁾ Method ⁽³⁾	R (pos/ND) all analytes in all samples associated with the tune	24	
Initial Calibration Sensitivity	RRF ≥ 0.05 except: RRF ≥ 0.01 poor responders *	NFG ⁽¹⁾ Method ⁽³⁾	Use PJ to qualify J (pos)/UJ (ND)	5A	TM-06 EcoChem Policy for the Evaluation and Qualification of GCMS Instrument Performance PJ - no action if response is stable (ICAL RSD and CCAL %D acceptable)
Initial Calibration Stability	Minimum 5 standards %RSD ≤ 20.0% except: %RSD ≤ 40.0% poor responders * or co-efficient of determination (r ²) > 0.99	NFG ⁽¹⁾ Method ⁽³⁾	J (pos) if %RSD > limit or r ² value < 0.99	5A	
Initial Calibration Verification Check	Prepared from second source; analyze after each ICAL Percent recovery limits = 70-130%	Method ⁽³⁾	J (pos) %R > UCL J (pos)/UJ (ND) %R < LCL	5A (H,L) ⁴	QAPP may have overriding accuracy limits.

DATA VALIDATION CRITERIA

Table: NFG-SVOC-GCMS
 Revision No.: 8
 Last Rev. Date: 01/29/2015
 Page: 2 of 4

Semivolatile Organic Compounds by Gas Chromatography-Mass Spectroscopy (GC-MS)
 (Based on NFG 1999 & 2008 and SW-846 Method 8270D)

QC Element	Acceptance Criteria	Source of Criteria	Action for Non-Conformance	Reason Code	Discussion and Comments
Instrument Performance (continued)					
Continuing Calibration Sensitivity	RRF \geq 0.05 except: RRF \geq 0.01 poor responders *	NFG ⁽¹⁾ Method ⁽³⁾	Use PJ to qualify J (pos)/UJ (ND)	5B	see ICAL RRF guidance
Continuing Calibration Stability	Prior to sample analysis and every 12 hours %D \leq 25% except: %D \leq 40.0% poor responders *	NFG ⁽¹⁾ Method ⁽³⁾	J (pos) - %D > control limit (high bias) J (pos)/UJ (ND) - %D < -control limit (low bias)	5B (H,L) ⁴	
Blank Contamination					
Method Blank (MB)	MB: One per matrix per batch of (of \leq 20 samples) No detected compounds > MDL	NFG ⁽²⁾ Method ⁽³⁾	U(pos) if result is < 5X or 10X action level	7	10X action level applies to phthalates only. 5X for all other target analytes Hierarchy of blank review: #1 - Review MB, qualify as needed #2 - Review FB , qualify as needed Note: Actions as per 1999 NFG
	No TICs present		R (pos) TICs using 10X rule	7	
Field Blank (FB)	No detected compounds > MDL	NFG ⁽²⁾ Method ⁽³⁾	U (pos) if result is < 5X or 10X action level	6	
Precision and Accuracy					
LCS/LCSD (recovery)	One per matrix per batch (of \leq 20 samples) LCSD not required by NFG or method Use method acceptance criteria/laboratory limits	Method ⁽³⁾	J (pos) if %R > UCL J (pos)/UJ (ND) if %R < LCL J (pos)/R (ND)%R < 10%	10 (H,L) ⁴	No action if only one spike %R is outside criteria when LCSD is analyzed, unless one recovery is <10%. QAPP may have overriding accuracy limits. Qualify all associated samples.
LCS/LCSD (RPD)	If LCSD analyzed RPD < lab limits	Method ⁽³⁾	J (pos)	9	Qualify all associated samples. QAPP may have overriding precision limits.

DATA VALIDATION CRITERIA

Semivolatile Organic Compounds by Gas Chromatography-Mass Spectroscopy (GC-MS)
 (Based on NFG 1999 & 2008 and SW-846 Method 8270D)

QC Element	Acceptance Criteria	Source of Criteria	Action for Non-Conformance	Reason Code	Discussion and Comments
Precision and Accuracy (continued)					
Reference Material (RM, SRM, or CRM)	Result \pm 20% of the 95% confidence interval of the true value for analytes	EcoChem standard policy	J (pos)/UJ (ND) if < LCL J (pos) if > UCL	12 (H,L) ⁴	QAPP may have overriding accuracy limits. Some manufacturers have different RM control limits
MS/MSD (recovery)	One per matrix per batch (of \leq 20 samples) Use method acceptance criteria/laboratory limits	NFG ⁽¹⁾ Method ⁽³⁾	J (pos) %R > UCL J (pos)/UJ (ND) if both %R < LCL J (pos)/R (ND) if both %R < 10% J (pos)/UJ (ND) if one > UCL & one < LCL, with no bias	8 (H,L) ⁴	No action if only one spike %R is outside criteria. No action if parent concentration is >4x the amount spiked. Qualify parent sample only.
MS/MSD (RPD)	One per matrix per batch (of \leq 20 samples) Use method acceptance criteria/laboratory limits	NFG ⁽¹⁾ Method ⁽²⁾	J (pos) in parent sample if RPD > CL	9	Qualify parent sample only
Surrogates	Minimum of 3 acid & 3 base/neutral (B/N) compounds added to all samples Within method control limits	NFG ⁽¹⁾ Method ⁽³⁾	J (pos) if %R > UCL J (pos)/UJ (ND) if %R < LCL J (pos)/R (ND) if %R < 10%	13 (H,L) ⁴	Qualify all compounds in associated fraction. Do not qualify if only 1 acid and/or 1 B/N surrogate is out, unless <10%. If 1 surrogate outlier < 10% then J (pos)/R (ND)
Internal Standards	Added to all samples Acceptable Range: IS area 50% to 200% of CCAL area RT within 30 seconds of CC RT	NFG ⁽¹⁾ Method ⁽³⁾	J (pos) if > 200% J (pos)/UJ (ND) if < 50% J (pos)/R (ND) if < 25% if RT >30 seconds use PJ	19	Qualify compounds quantified using particular internal standard
Field Duplicates	Solids: RPD < 50% OR difference < 2X RL (for results < 5X RL) Aqueous: RPD < 35% OR difference < 1X RL (for results < 5X RL)	EcoChem standard policy	J (pos)/UJ (ND) Qualify only parent and field duplicate samples	9	Use project limits if specified

DATA VALIDATION CRITERIA

Semivolatile Organic Compounds by Gas Chromatography-Mass Spectroscopy (GC-MS)
 (Based on NFG 1999 & 2008 and SW-846 Method 8270D)

QC Element	Acceptance Criteria	Source of Criteria	Action for Non-Conformance	Reason Code	Discussion and Comments
Compound Identification and Quantitation and Calculation					
Retention times and relative ion intensities	RRT within 0.06 of standard RRT Ion relative intensity within 20% of standard All ions in std. at > 10% intensity must be present in sample	NFG ⁽¹⁾ Method ⁽³⁾	U (pos) if identification criteria not met	25	
TICs	Major ions (>10%) in reference must be present in sample; intensities agree within 20%; check identification	NFG ⁽¹⁾ Method ⁽³⁾	NJ the TIC unless: R (pos) common laboratory contaminants	4	
Calibration Range	Results greater than highest calibration standard	EcoChem standard policy	Qualify J (pos)	20	If result from dilution analysis is not reported.
Dilutions, Re-extractions and/or Reanalyses	Report only one result per analyte	EcoChem standard policy	Use "DNR" to flag results that will not be reported.	11	TM-04 EcoChem Policy for Rejection/Selection Process for Multiple Results

¹ National Functional Guidelines for Organic Data Review, June, 2008

(pos): Positive Result(s)

² National Functional Guidelines for Organic Data Review, October, 1999

(ND): Non-detects

³ Method SW846 8270D Semivolatile Organic Compounds by Gas Chromatography/Mass Spectrometry (GC/MS), Revision 4, February 2007.

⁴ NFG 2013 suggests using "+ / -" to indicate bias; EcoChem has chosen "H" = high bias indicated; "L" = low bias indicated.

* "Poor responder" compounds: acetophenone, atrazine, benzaldehyde, 1,1'-biphenyl, bis(2-ethylhexyl)phthalate, butylbenzylphthalate, caprolactam, carbazole, 4-chloroaniline, diethylphthalate, di-n-butylphthalate, 3-3'-dichlorobenzidine, dimethylphthalate, 2,4-dinitrophenol, 4,6-dinitro-2-methylphenol, di-n-octylphthalate, hexachlorobutadiene, hexachlorocyclopentadiene, 2-nitroaniline, 3-nitroaniline, 4-nitroaniline, 4-nitrophenol, N-nitrosodiphenylamine, 2,2'-oxybis-(1-chloropropane), 1,2,4,5-tetrachlorobenzene use a 0.010 RRF criterion.

Chlorinated Herbicides by GC, SW-846 Method 8151A

QC Element	Acceptance Criteria	Source of Criteria	Action for Non-Conformance	Reason Code	Discussion and Comments
Sample Handling					
Cooler/Storage Temperature Preservation	4°C±2°C Protected from light	NFG ⁽¹⁾ Method ⁽²⁾	J(pos)/UJ(ND) if > 6 deg. C (EcoChem PJ)	1	Use Professional Judgment (PJ) to qualify for temperature outlier.
Holding Time	Extraction Aqueous: 7 days from collection Extraction Solid: 14 days from collection Analysis (all matrices): 40 days from extraction	NFG ⁽¹⁾ Method ⁽²⁾	J(pos)/UJ(ND) if HT exceeded J(pos)/R(ND) if gross exceedance(> 2X HT)	1	Use PJ to qualify for holding time outlier. Gross exceedance = > 2X HT, as per 1999 NFG
Instrument Performance					
Retention Times	Target compounds: Within RTW established by the laboratory.	NFG ⁽¹⁾ Method ⁽²⁾	NJ(pos)/R(ND) results for analytes with RT shifts	5B	Analyte RRT should be within ± 0.06 RRT units of the standard RRT (opening CCAL or midpoint ICAL standard). For full DV, use PJ based on examination of raw data.
Initial Calibration	5 standard minimum. Calibration may be internal or external. RSD ≤20%	NFG ⁽¹⁾ Method ⁽²⁾	J (pos) if > UCL J (pos)/UJ (ND) if < LCL OR r-value ≥ 0.99	5A	TM-01 for additional information EcoChem Policy for the Evaluation of GC & HPLC Initial and Continuing Calibration using Method-Specific Control Limits. Calibration from methyl ester compounds (that have not undergone hydrolysis and esterification) will need MW correction.
Continuing Calibration (Prior to each 12 hour shift or bracketing for external standard calibration)	%D ± 20%	NFG ⁽¹⁾ Method ⁽²⁾	If > 20% (high bias): J (pos) If <20% (low bias: J (pos)/UJ (ND)	5A (H,L) ³	TM-01 for additional information EcoChem Policy for the Evaluation of GC & HPLC Initial and Continuing Calibration using Method-Specific Control Limits
Blank Contamination					
Method Blank (MB)	MB: One per matrix per batch of (of ≤ 20 samples) No detected compounds > RL	NFG ⁽¹⁾ Method ⁽²⁾	U(pos) if result is less than appropriate 5X action level.	7	Hierarchy of blank review: #1 - Review MB, qualify as needed #2 - Review FB , qualify as needed No common lab contaminants for Herbicide analyses
Field Blank (FB)	FB: frequency as per QAPP No detected compounds > RL	NFG ⁽¹⁾ Method ⁽²⁾	U(pos) if result is less than appropriate 5X action level.	6	

Chlorinated Herbicides by GC, SW-846 Method 8151A

QC Element	Acceptance Criteria	Source of Criteria	Action for Non-Conformance	Reason Code	Discussion and Comments
Precision and Accuracy					
MS/MSD (recovery)	One set per matrix per batch (of ≤ 20 samples) Method acceptance criteria or project limits	NFG ⁽¹⁾ Method ⁽²⁾	Qualify parent only unless other QC indicates systematic problems J (pos) if both %R > upper control limit (UCL) J (pos)/UJ (ND) if both %R < lower control limit (LCL) J (pos)/R (ND) if both %R < 10%	8 (H,L) ³	A sample duplicate may be run in place of the MSD. No action if only one spike %R is outside criteria. No action if parent concentration is >4x the amount spiked. Qualify parent sample only.
MS/MSD or duplicate (RPD)	One set per matrix per batch (of ≤ 20 samples) Method acceptance criteria or project limits	NFG ⁽¹⁾ Method ⁽²⁾	Qualify parent only unless other QC indicates systematic problems. J(pos) if RPD > control limit	9	No action if parent is ND.
LCS	One per lab batch (of ≤ 20 samples) Method acceptance criteria or project limits	NFG ⁽¹⁾ Method ⁽²⁾	Qualify all associated samples J(pos) if %R > UCL - high bias J(pos)/UJ(ND) if both %R < LCL - low bias J(pos)/R(ND) if both %R < 10% - very low bias J(pos)/UJ(ND) if one > UCL & one < LCL, with no bias PJ if only one %R outlier	10 (H,L) ³	No action if only one spike %R is outside criteria, when LCSD is analyzed. Qualify all associated samples.
LCS/LCSD (RPD)	One set per lab batch (of ≤ 20 samples) Method acceptance criteria or project limits	NFG ⁽¹⁾ Method ⁽²⁾	J(pos) assoc. compound in all samples	9	
Surrogates	2,4-Dichlorophenylacetic acid (DCAA) added to every sample Method acceptance criteria or project limits	NFG ⁽¹⁾ Method ⁽²⁾	J (pos) if either %R > UCL J (pos)/UJ (ND) if either %R < LCL J (pos)/R (ND) if either %R < 10%	13 (H,L) ³	If %R < 10% (sample dilution is a factor), use PJ
Internal Standards (if used)	Acceptable Range: IS area 50% to 200% of CCAL area RT within 30 seconds of CC RT	Method ⁽²⁾	J (pos) if > 200% J (pos)/UJ (ND) if < 50% J (pos)/R (ND) if < 25% if RT > 30 seconds use PJ	19	Suggested internal standards: 4,4'-dibromooctafluorobiphenyl (DBOB) or 1,4-dichlorobenzene.
Field Duplicates	Solids: RPD < 50% OR difference < 2X RL (for results < 5X RL) Aqueous: RPD < 35% OR difference < 1X RL (for results < 5X RL)		J(pos)/UJ(ND) Qualify only field duplicate samples	9	

Chlorinated Herbicides by GC, SW-846 Method 8151A

QC Element	Acceptance Criteria	Source of Criteria	Action for Non-Conformance	Reason Code	Discussion and Comments
Compound Identification					
Quantitation/ Identification	Between two columns: RPD < 40% or %D < 25% Within Retention Time Windows on both columns. Alternatively GC/MS may be used for confirmation.	NFG ⁽¹⁾ Method ⁽²⁾	J (pos) if RPD = 40% - 60% (25% - 60% for %D) NJ (pos) if > 60%R (pos) if RTW criterion not met	3 25 (false pos)	See TM-08 for additional info.
Calibration Range	Results exceed the upper calibration range	EcoChem standard policy	J (pos) if conc > high standard and sample was not diluted	20	
Calculation Check	Check 10% of field & QC sample results	EcoChem standard policy	Contact laboratory for resolution and/or corrective action	na	Full data validation only.
Electronic Data Deliverable (EDD)					
Verification of EDD to hardcopy data	EcoChem verify @ 10% unless problems noted; then increase level up to 100% for next several packages.	EcoChem standard policy	Depending on scope of problem, correct at EcoChem (minor issues) to resubmittal by laboratory (major issues).	na	EcoChem Project Manager and/or Database Administrator will work with lab to provide long-term corrective action.
Dilutions, Re-extractions and/or Reanalyses	Report only one result per analyte	EcoChem standard policy	Use "DNR" to flag results that will not be reported.	11	TM-04 Rev. 1 EcoChem Policy for for additional info.

PROJECT NARRATIVE

Basis for the Data Validation

This report summarizes the results of data validation performed on soil and groundwater sample data and quality control (QC) sample data for the Smith Kem Site Remedial Investigation Phase 2 sampligt. A complete list of samples is provided in the **Sample Index**.

Pacific Agricultural Laboratory, Sherwood, Oregon performed the analyses. The analytical method and EcoChem project chemists are listed in the table below.

ANALYSIS	METHOD	PRIMARY REVIEW	SECONDARY REVIEW
Herbicides	EPA 8151A	E. Clayton	C. Frans/C. Ransom
Pesticides	EPA 8081B Mod		
Pesticides	EPA 8141B Mod		
Herbicides and Pesticides	EPA 8270D Mod		
Pesticides	EPA 8321B Mod		

The data were reviewed using guidance and quality control criteria documented in the analytical methods; *Smith-Kem Site Remedial Investigation Work Plan* (Floyd | Snider, July 2016); and *National Functional Guidelines for Organic Data Review* (USEPA 2008). The laboratory methods are modified for residue scan analysis.

EcoChem's goal in assigning data assessment qualifiers is to assist in proper data interpretation. If values are estimated (J or UJ), data may be used for site evaluation and risk assessment purposes but reasons for data qualification should be taken into consideration when interpreting sample concentrations. If values are assigned an R or DNR, the data should not be used for any site evaluation purposes. If values have no data qualifier assigned, then the data meet the data quality objectives as stated in the documents and methods referenced above.

Data qualifier definitions, reason codes, and validation criteria are included as **Appendix A**. A Qualified Data Summary Table is included in **Appendix B**. Data Validation Worksheets will be kept on file at EcoChem, Inc. A qualified laboratory electronic data deliverable (EDD) is also submitted with this report.

DATA VALIDATION REPORT

Smith-Kem Site - Remedial Investigation Phase 2

Pesticides by Method SW8081B Mod

This report documents the review of analytical data from the analysis of groundwater samples and the associated laboratory and field quality control (QC) samples. Pacific Agricultural Laboratory, Sherwood, Oregon, analyzed the samples. Refer to the **Sample Index** for a complete list of samples.

SDG	NUMBER OF SAMPLES	VALIDATION LEVEL
P170216	15 Groundwater	EPA Stage 2A
P170600	15 Groundwater	EPA Stage 2A
P170743	9 Groundwater, 1 Rinsate Blank	EPA Stage 2A

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

SDGs P170216, P170600: The laboratory report was missing the chain-of-custody, sample receipt, and case narrative. The laboratory was contacted and the laboratory submitted the missing documentation.

EDD TO HARDCOPY VERIFICATION

Ten percent (10%) of the results in the laboratory EDD were verified by comparison to the laboratory data package.

TECHNICAL DATA VALIDATION

This report documents the review of analytical QC requirements as listed in the following table.

2	Sample Receipt, Preservation, and Holding Times	1	Field Duplicates
✓	Laboratory Blanks	1	Target Analyte List
1	Field Blanks	1	Reporting Limits
1	Laboratory Control Samples (LCS/LCSD)	✓	Compound Identification
2	Matrix Spikes/Matrix Spike Duplicates (MS/MSD)	✓	Reported Results
2	Surrogate Compounds		

✓ Stated method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.

1 Quality control results are discussed below, but no data were qualified.

2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Sample Receipt, Preservation, and Holding Times

SDG P170600: The temperatures of the coolers upon receipt at the laboratory were greater than the upper control limit of 6°C, at 21.7 and 23.2°C. All results were estimated (J/UJ-1).

SDG P170743: Some of the temperatures of the coolers upon receipt at the laboratory were greater than the upper control limit of 4°C, ranging from 6.8 to 15°C. It was determined that data were not affected; no action was taken.

Field Blanks

SDG P170743: One field blank, Rinsate-1, was submitted. No target analytes were detected.

Laboratory Control Samples

Only dieldrin, oxadiazon, and chlorpyrifos were spiked. All recoveries were acceptable.

Matrix Spike/Matrix Spike Duplicates

Only dieldrin, oxadiazon, and chlorpyrifos were spiked.

SDG P170600: The matrix spike/matrix spike duplicate (MS/MSD) samples were performed on Sample MW-04-051717. The MSD percent recovery (%R) values for chlorpyrifos and oxadiazon were greater than the upper control limit, but was in control in the associated MS sample; no qualification was required for a single outlier. The %R values for dieldrin were less than the lower control limit; results for this compound were estimated (J-8L). The relative percent difference (RPD) values were greater than the control limit for chlorpyrifos and oxadiazon. These analytes were not detected in the parent sample; no data were qualified.

SDG P170743: The MS/MSD samples were performed on Sample FS-22-GW-9-11. The MSD %R value for oxadiazon was greater than the upper control limit, but was in control in the associated MS sample. No qualification was required for a single outlier.

Surrogate Compounds

The surrogate compound, DCBP, was added to all samples. With the following exceptions, the surrogate recoveries were within the control limits of 70%-130% recovery:

SDG	SAMPLE ID	SURROGATE %R	POTENTIAL BIAS	ACTION
P170216	MW-04-022717	51	Low	J/UJ-13L
	MW-01X-022717	65	Low	J/UJ-13L
P170743	FS-37-GW-9-14	38	Low	UJ-13L
	FS-30-GW-13-15	46	Low	UJ-13L

Field Duplicates

The relative percent difference (RPD) control limit is 75% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and duplicate must be less than the RL.

SDG P170216: Samples MW-01-022717 & MW-01X-022717 were identified as field duplicates. All acceptance criteria were met.

SDG P170600: Samples MW-11-051717 & MW-11X-051717 were identified as field duplicates. All acceptance criteria were met.

SDG P170743: Samples FS-22-GW-0-2 and FS-22-GW-4-6 were identified as field duplicates. All acceptance criteria were met.

Target Analyte List

There were no results reported for hexachlorocyclopentadiene.

Reporting Limits

Several reporting limits are greater than QAPP required reporting limits due to required dilutions.

OVERALL ASSESSMENT

As was determined by this evaluation, the laboratory followed a modified version of this analytical method. With the exceptions noted above, accuracy was acceptable as demonstrated by the LCS/LCSD, MS/MSD, and surrogate %R values. Precision was also acceptable as demonstrated by the LCS/LCSD, MS/MSD, and field duplicate RPD values.

Results were estimated due sample receipt temperature outliers, surrogate% outliers, and MS/MSD %R outliers.

All data, as qualified, are acceptable for use.

DATA VALIDATION REPORT

Smith-Kem Site - Remedial Investigation Phase 2 Pesticides by Method SW8321B Mod: LC-MS/MS

This report documents the review of analytical data from the analysis of groundwater samples and the associated laboratory and field quality control (QC) samples. Pacific Agricultural Laboratory, Sherwood, Oregon, analyzed the samples. Refer to the **Sample Index** for a complete list of samples.

SDG	NUMBER OF SAMPLES	VALIDATION LEVEL
P170216	15 Groundwater	EPA Stage 2A
P170600	15 Groundwater	EPA Stage 2A
P170743	9 Groundwater & 1 Rinsate Blank	EPA Stage 2A

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

SDGs P170216, P170600: The laboratory report was missing the chain-of-custody, sample receipt, and case narrative. The laboratory was contacted and the laboratory submitted the missing documentation.

EDD TO HARDCOPY VERIFICATION

Ten percent (10%) of the results in the laboratory EDD were verified by comparison to the laboratory data package.

TECHNICAL DATA VALIDATION

This report documents the review of analytical QC requirements as listed in the following table.

2	Sample Receipt, Preservation, and Holding Times	1	Field Duplicates
✓	Laboratory Blanks	✓	Target Analyte List
1	Field Blanks	1	Reporting Limits
1	Laboratory Control Samples (LCS/LCSD)	✓	Compound Identification

2	Surrogate Compounds		

✓ Stated method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.

1 Quality control results are discussed below, but no data were qualified.

2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Sample Receipt, Preservation, and Holding Times

SDG P170600: The temperatures of the coolers upon receipt at the laboratory were greater than the upper control limit of 6°C, at 21.7 and 23.2°C. All results were estimated (J/UJ-1).

SDG P170743: Some of the temperatures of the coolers upon receipt at the laboratory were greater than the upper control limit of 4°C, ranging from 6.8 to 15°C. It was determined that data were not affected; no action was taken.

Field Blanks

SDG P170743: One field blank, Rinsate-1, was submitted. No target analytes were detected.

Laboratory Control Samples

Only diuron, fluometuron, and thiobencarb were spiked. All recoveries were acceptable.

SDG P170600: The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) relative percent difference (RPD) value for thiobencarb was greater than the control limit. This analyte was not detected in the associated samples; no data were qualified.

Matrix Spike/Matrix Spike Duplicates

Only diuron, fluometuron, and thiobencarb were spiked.

SDG P170600: The matrix spike/matrix spike duplicate (MS/MSD) samples were performed using Sample MW-04-051717. The MS percent recovery (%R) values for fluometuron and thiobencarb were less than the lower control limit, but were in control in the associated MSD sample. No qualification was required for the single outliers. The RPD values were greater than the control limit for fluometuron and thiobencarb. These analytes were not detected in the parent sample; no data were qualified.

Surrogate Compounds

SDG P170216: The surrogate recovery for Sample MW-07-022817 was greater than the upper control limit of 130%, indicating a potential high bias. The detected results in this sample were estimated (J-13H).

Field Duplicates

The RPD control limit is 75% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the difference between the sample and duplicate must be less than the RL.

SDG P170216: Samples MW-01-022717 and MW-01X-022717 were identified as field duplicates. All acceptance criteria were met.

SDG P170600: Samples MW-11-051717 & MW-11X-051717 were identified as field duplicates. All acceptance criteria were met.

SDG P170743: Samples FS-22-GW-0-2 and FS-22-GW-4-6 were identified as field duplicates. All acceptance criteria were met.

Reporting Limits

Several reporting limits are greater than QAPP required reporting limits due to required dilutions.

OVERALL ASSESSMENT

As was determined by this evaluation, the laboratory followed the specified analytical method. With the exceptions noted above, accuracy was acceptable as demonstrated by the LCS/LCSD, MS/MSD, and surrogate %R values and precision was acceptable as demonstrated by the LCS/LCSD, MS/MSD, and field duplicate RPD values.

Data were estimated due sample receipt temperature outliers and surrogate %R outliers.

All data, as qualified, are acceptable for use.

DATA VALIDATION REPORT
Smith-Kem Site - Remedial Investigation Phase 2
Pesticides by Method SW8141B Mod: GC-FPD

This report documents the review of analytical data from the analysis of groundwater samples and the associated laboratory and field quality control (QC) samples. Pacific Agricultural Laboratory, Sherwood, Oregon, analyzed the samples. Refer to the **Sample Index** for a complete list of samples.

2	Surrogate Compounds		

✓ Stated method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.

1 Quality control results are discussed below, but no data were qualified.

2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Sample Receipt, Preservation, and Holding Times

SDG P170600: The temperatures of the coolers upon receipt at the laboratory were greater than the upper control limit of 6°C, at 21.7 and 23.2°C. All results were estimated (J/UJ-1).

SDG P170743: Some of the temperatures of the coolers upon receipt at the laboratory were greater than the upper control limit of 4°C, ranging from 6.8 to 15°C. After further evaluation, it was determined that data were not affected; no action was taken.

Field Blanks

SDG P170743: One field blank, Rinsate-1, was submitted. No target analytes were detected.

Laboratory Control Samples

Only parathion methyl and diazinon were spiked. All recoveries were acceptable.

Matrix Spike/Matrix Spike Duplicates

Only parathion methyl and diazinon were spiked.

SDG P170600: The matrix spike/matrix spike duplicate (MS/MSD) samples were performed on Sample MW-04-051717. The MS percent recovery (%R) values for parathion methyl and diazinon were less than the lower control limit, but were in control in the associated MSD sample. No qualification was required for the single outliers. The relative percent difference (RPD) values were greater than the control limit for parathion methyl and diazinon. These analytes were not detected in the parent sample; no data were qualified.

Surrogate Compounds

The surrogate compound, DCPAA, was added to all samples. With the following exceptions, the surrogate recoveries were within the control limits of 70%-130% recovery:

SDG	SAMPLE ID	SURROGATE %R	BIAS	QUALIFIER

	FS-40-GW-4.5-7	57	Low	J/UJ-13L
	FS-37-GW-9-14	57	Low	J/UJ-13L
	Rinsate-1	59	Low	J/UJ-13L
	FS-30-GW-13-15	63	Low	J/UJ-13L
	FS-30-GW-5-7	60	Low	J/UJ-13L

Field Duplicates

The RPD control limit is 75% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than the RL.

SDG P170216: Samples MW-01-022717 & MW-01X-022717 were identified as field duplicates. All acceptance criteria were met.

SDG P170600: Samples MW-11-051717 & MW-11X-051717 were identified as field duplicates. All acceptance criteria were met.

SDG P170743: Samples FS-22-GW-0-2 and FS-22-GW-4-6 were identified as field duplicates. All acceptance criteria were met.

Target Analyte List

The samples were not analyzed for fenchlorphos, naled, or glyphosate.

OVERALL ASSESSMENT

As was determined by this evaluation, the laboratory followed the specified analytical method. With the exceptions noted above, accuracy was acceptable as demonstrated by the LCS/LCSD, MS/MSD, and surrogate %R values. Precision was also acceptable as demonstrated by the LCS/LCSD, MS/MSD, and field duplicate RPD values.

Data were estimated due sample receipt temperature outliers and surrogate %R outliers.

All data, as qualified, are acceptable for use.

DATA VALIDATION REPORT

Smith-Kem Site Remedial Investigation Phase 2

Pesticides by Method SW8081B Mod

This report documents the review of analytical data from the analysis of soil samples and the associated laboratory and field quality control (QC) samples. Pacific Agricultural Laboratory, Sherwood, Oregon, analyzed the samples. Refer to the **Sample Index** for a complete list of samples.

SDG	NUMBER OF SAMPLES	VALIDATION LEVEL
P170743	37 Soil	EPA Stage 2A
P170771	25 Soil	EPA Stage 2A

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

Ten percent (10%) of the results in the laboratory EDD were verified by comparison to the laboratory data package.

TECHNICAL DATA VALIDATION

This report documents the review of analytical QC requirements as listed in the following table.

1	Sample Receipt, Preservation, and Holding Times	1	Field Duplicates
✓	Laboratory Blanks	✓	Target Analyte List
1	Field Blanks	1	Reporting Limits
✓	Laboratory Control Samples (LCS)	✓	Compound Identification
✓	Matrix Spikes/Matrix Spike Duplicates (MS/MSD)	✓	Reported Results
1	Surrogate Compounds		

✓ Stated method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.

1 Quality control results are discussed below, but no data were qualified.

2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Sample Receipt, Preservation, and Holding Times

SDG P170743: The temperature of one of the coolers upon receipt at the laboratory was greater than the upper control limit of 6°C, at 15°C. It was determined that data were not affected; no action was taken.

SDG P170771: The temperature of the cooler upon receipt at the laboratory was greater than the upper control limit of 6°C, at 6.9°C. It was determined that data were not affected; no action was taken.

Field Blanks

SDG P170743: One field blank, Rinsate-1, was submitted. No target analytes were detected.

Surrogate Compounds

The surrogate compound, decachlorobiphenyl (DCBP), was added to all samples. With the following exception, the surrogate recoveries were within the control limits of 70%-130% recovery:

SDG P170743: For Sample FS-17-2.5-3.5, the surrogate %R value was greater than the upper control limit indicating a potential high bias. No positive results were detected; no qualification was required.

Field Duplicates

The RPD control limit is 75% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than 2x the RL. No data were qualified based solely on field duplicate RPD values; however, data users should take field precision into account when interpreting sample data.

SDG P170743: Two sets of field duplicates were submitted: FS-X1-3-4 & FS-20-3-4 and FS2X-2-3 & FS18-2-3. All field precision criteria were met.

SDG P170771: Three sets of field duplicates were submitted: FS-X3-2-3 & FS-31-2-3, FS-X4-0.5-1 & FS-35-0.5-1, and FS-X5-2-3 & FS-32-2-3. For samples FS-X5-2-3 & FS-32-2-3, the RPD value for p,p'-DDE exceeded the control limit.

Reporting Limits

The reporting limits were elevated due to required dilutions.

OVERALL ASSESSMENT

As was determined by this evaluation, the laboratory followed a modified version of the analytical method. With the exceptions noted above, accuracy was acceptable as demonstrated by the LCS, MS/MSD, and surrogate %R values and precision was acceptable as demonstrated by the MS/MSD and field duplicate RPD values.

Results were estimated because of LCS and MS/MSD recovery outliers.

All data, as qualified, are acceptable for use.

DATA VALIDATION REPORT
Smith-Kem Site - Remedial Investigation Phase 2
Herbicides/Pesticides by Method SW8270D Mod: GC-MS/MS

This report documents the review of analytical data from the analysis of groundwater samples and the associated laboratory and field quality control (QC) samples. Pacific Agricultural Laboratory, Sherwood, Oregon, analyzed the samples. Refer to the **Sample Index** for a complete list of samples.

SDG	NUMBER OF SAMPLES	VALIDATION LEVEL
P170216	15 Groundwater	EPA Stage 2A
P170600	15 Groundwater	EPA Stage 2A
P170743	9 Groundwater, 1 Rinsate Blank	EPA Stage 2A

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

SDGs P170216, P170600: The laboratory report was missing the chain-of-custody, sample receipt, and case narrative. The laboratory was contacted and the laboratory submitted the missing documentation.

EDD TO HARDCOPY VERIFICATION

Ten percent (10%) of the results in the laboratory EDD were verified by comparison to the laboratory data package.

TECHNICAL DATA VALIDATION

This report documents the review of analytical QC requirements as listed in the following table.

2	Sample Receipt, Preservation, and Holding Times	1	Field Duplicates
✓	Laboratory Blanks	✓	Target Analyte List
1	Field Blanks	1	Reporting Limits
1	Laboratory Control Samples (LCS)	✓	Compound Identification
1	Matrix Spikes/Matrix Spike Duplicates (MS/MSD)	✓	Reported Results
2	Surrogate Compounds		

✓ Stated method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.

1 Quality control results are discussed below, but no data were qualified.

2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Sample Receipt, Preservation, and Holding Times

SDG P170600: The temperatures of the coolers upon receipt at the laboratory were greater than the upper control limit of 6°C, at 21.7 and 23.2°C. All results were estimated (J/UJ-1).

SDG P170743: Some of the temperatures of the coolers upon receipt at the laboratory were greater than the upper control limit of 4°C, ranging from 6.8 to 15°C. It was determined that data were not affected; no action was taken.

Field Blanks

SDG P170743: One field blank, Rinsate-1, was submitted. No target analytes were detected.

Laboratory Control Sample/Laboratory Control Sample Duplicates

Because this is a screening method, the lab did not spike for the full suite of analytes. Only atrazine, ethofumesate, and napropamide were spiked. All recoveries were acceptable.

Matrix Spike/Matrix Spike Duplicates

Only atrazine, ethofumesate, and napropamide were spiked.

SDG P170600: The matrix spike/matrix spike duplicate (MS/MSD) analyses were performed using Sample MW-04-051717. The MS percent recovery (%R) values for napropamide and ethofumesate were less than the lower control limit, but were in control in the associated MSD sample. No qualification was required for the single outliers. The relative percent difference (RPD) values were greater than the control limit for napropamide and ethofumesate. These analytes were not detected in the parent sample; no data were qualified.

SDG P170743: The MS/MSD analyses were performed using Sample FS-22-GW-9-11. The MSD %R value for napropamide was greater than the upper control limit, but was in control in the associated MS sample. No qualification was required for a single outlier.

Surrogate Compounds

The surrogate compound DCBP was added to all samples. With the following exceptions, the surrogate recoveries were within the control limits of 70%-130% recovery:

SDG	SAMPLE ID	SURROGATE %R	BIAS	QUALIFIERS
P170216	MW-04-022717	58	Low	J/UJ-13L
P170600	MW-04-051717	48	Low	J/UJ-13L
	MW-13-051817	41	Low	J/UJ-13L
P170743	FS-22-GW-9-11	66	Low	J/UJ-13L
	FS-38-GW-4.5-7	65	Low	J/UJ-13L
	FS-37-GW-9-14	34	Low	J/UJ-13L
	FS-30-GW-13-15	45	Low	UJ-13L

Field Duplicates

The RPD control limit is 75% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the difference between the sample and replicate must be less than the RL. No data were qualified based solely on field duplicate RPD values; however, data users should take field precision into account when interpreting sample data.

SDG P170216: Samples MW-01-022717 & MW-01X-022717 were identified as field duplicates. The difference for atrazine exceeded the control limit.

SDG P170600: Samples MW-11-051717 & MW-11X-051717 were identified as field duplicates. All acceptance criteria were met.

SDG P170743: Samples FS-22-GW-0-2 and FS-22-GW-4-6 were identified as field duplicates. All acceptance criteria were met.

Reporting Limits

Several reporting limits are greater than QAPP required reporting limits due to required dilutions.

OVERALL ASSESSMENT

As was determined by this evaluation, the laboratory followed the modified 8270 residue screening method. With the exceptions noted above, accuracy was acceptable as demonstrated by the LCS/LCSD, MS/MSD, and surrogate %R values. Precision was acceptable as demonstrated by the LCS/LCSD, MS/MSD, and field duplicate RPD values.

Results were estimated due sample receipt temperature outliers and surrogate %R outliers.

All data, as qualified, are acceptable for use.

DATA VALIDATION REPORT
Smith-Kem Site - Remedial Investigation Phase 2

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

Ten percent (10%) of the results in the laboratory EDD were verified by comparison to the laboratory data package.

TECHNICAL DATA VALIDATION

This report documents the review of analytical QC requirements as listed in the following table.

1	Sample Receipt, Preservation, and Holding Times	1	Field Duplicates
✓	Laboratory Blanks	✓	Target Analyte List
1	Field Blanks	1	Reporting Limits
2	Laboratory Control Samples (LCS)	✓	Compound Identification
2	Matrix Spikes/Matrix Spike Duplicates (MS/MSD)	✓	Reported Results
1	Surrogate Compounds		

✓ Stated method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.

1 Quality control results are discussed below, but no data were qualified.

2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Sample Receipt, Preservation, and Holding Times

SDG P170743: The temperature of one of the coolers upon receipt at the laboratory was greater than the upper control limit of 4°C, at 15°C. Based on the stability pesticide compounds, it is EcoChem’s professional judgement that the reported results were not affected; no qualification was required.

SDG P170771: The temperature of the cooler upon receipt at the laboratory was greater than the upper control limit of 4°C, ranging from 6.8 to 6.9°C. Based on the stability pesticide compounds, it is EcoChem's professional judgement that the reported results were not affected; no qualification was required.

Field Blanks

SDG P170743: One field blank, Rinsate-1, was submitted. No target analytes were detected.

Laboratory Control Samples

Laboratory control samples (LCS) were analyzed at the required frequency of one per batch of 20 or fewer samples. When the LCS %R value indicated a potential low bias, associated results were estimated (J/UJ-10L). Only associated positive results were estimated (J-10H) where the %R values indicated a potential high bias. Qualifiers were issued to all samples in the extraction batch.

SDG P170743: For the LCS associated with batch 7061410, the methoxychlor %R value was less than the lower control limit. The methoxychlor results in the associated samples were estimated (UJ-10L).

Matrix Spike/Matrix Spike Duplicates

Matrix spike/matrix spike duplicate (MS/MSD) samples were analyzed at the appropriate frequency. When the MS/MSD %R values indicated a potential low bias, results in the parent sample were estimated (J/UJ-8L). Only positive results were estimated (J-8H) if the %R values indicate a potential high bias. No action is taken unless both the MS and MSD %R values are outside the control limits. Precision is evaluated using the RPD values calculated between the MS and MSD results. Positive results are estimated (J-9) if the RPD value is greater than the control limit. Qualifiers are only assigned to the parent sample.

SDG P170743: Three sets of matrix spike/matrix spike duplicates (MS/MSD) were analyzed using samples FS-28-5-5.5, FS-20-3-4, and FS-17-2.5-3.5.

For QC sample FS-20-3-4, the %R values for p-p'-DDD and p-p'-DDE were greater than the upper control limits. The positive results in the parent sample were estimated (J-8H).

For QC sample FS-17-2.5-3.5, the %R values for p-p'-DDD and endosulfan sulfate were greater than the upper control limits. These analytes were not detected in the parent sample; no qualification was required.

Surrogate Compounds

The surrogate compound, decachlorobiphenyl (DCBP), was added to all samples. With the following exception, the surrogate recoveries were within the control limits of 70%-130%:

SDG P170743: The surrogate %R value for Sample FS-17-2.5-3.5 was greater than the upper control limit, indicating a potential high bias. No target analytes were detected in this sample; no qualification was required.

Field Duplicates

The relative percent difference (RPD) control limit is 75% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than 2x the RL. No data were qualified based solely on field duplicate RPD values; however, data users should take field precision into account when interpreting sample data.

SDG P170743: Two sets of field duplicates were submitted: FS-X1-3-4 & FS-20-3-4 and FS2X-2-3 & FS18-2-3. All field precision criteria were met.

SDG P170771: Three sets of field duplicates were submitted: FS-X3-2-3 & FS-31-2-3, FS-X4-0.5-1 & FS-35-0.5-1, and FS-X5-2-3 & FS-32-2-3. For samples FS-X5-2-3 & FS-32-2-3, the RPD value for p,p'-DDE exceeded the control limit.

Reporting Limits

The reporting limits for several compounds were elevated due to required dilutions.

OVERALL ASSESSMENT

As was determined by this evaluation, the laboratory followed the specified method. With the exceptions noted previously, accuracy was acceptable as demonstrated by the LCS, MS/MSD, and surrogate %R values and precision was acceptable as demonstrated by the MS/MSD and field duplicate RPD values.

Results were estimated based on LCS and MS/MSD recovery outliers.

All data, as qualified, are acceptable for use.

DATA VALIDATION REPORT

Smith-Kem Site - Remedial Investigation Phase 2

Herbicides by Method SW8151A: GC-MS/MS

This report documents the review of analytical data from the analysis of groundwater samples and the associated laboratory quality control (QC) samples. Pacific Agricultural Laboratory, Sherwood, Oregon, analyzed the samples. Refer to the **Sample Index** for a complete list of samples.

SDG	NUMBER OF SAMPLES	VALIDATION LEVEL
P170216	10 Groundwater	EPA Stage 2A
P170600	15 Groundwater	EPA Stage 2A
P170743	10 Groundwater & 1 Rinsate Blank	EPA Stage 2A

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

SDGs P170216, P170600: The laboratory reports were missing the chain-of-custody, sample receipt, and case narrative. The laboratory was contacted and the laboratory submitted the missing documentation.

EDD TO HARDCOPY VERIFICATION

Ten percent (10%) of the results in the laboratory EDD were verified by comparison to the laboratory data package.

TECHNICAL DATA VALIDATION

This report documents the review of analytical QC requirements as listed in the following table.

2	Sample Receipt, Preservation, and Holding Times	1	Field Duplicates
✓	Laboratory Blanks	1	Target Analyte List
1	Field Blanks	1	Reporting Limits
2	Laboratory Control Samples (LCS/LCSD)	✓	Compound Identification
2	Matrix Spike/Matrix Spike Duplicates (MS/MSD)	✓	Reported Results
2	Surrogate Compounds		

✓ Stated method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.

1 Quality control results are discussed below, but no data were qualified.

2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Sample Receipt, Preservation, and Holding Times

SDG P170600: The temperatures of the coolers upon receipt at the laboratory were greater than the upper control limit of 6°C, at 21.7 and 23.2°C. All results were estimated (J/UJ-1).

SDG P170743: Some of the temperatures of the coolers upon receipt at the laboratory were greater than the upper control limit of 4°C, ranging from 6.8 to 15°C. It was determined that data were not affected; no action was taken.

Field Blanks

SDG P170743: One field blank, Rinsate-1, was submitted. No target analytes were detected.

Laboratory Control Samples

Laboratory control sample/laboratory control sample duplicates (LCS/LCSD) were analyzed at the required frequency of one per batch of 20 or fewer samples. When the %R values indicated a potential low bias, associated results were estimated (J/UJ-10L). Only associated positive results were estimated (J-10H) if the %R values indicated a potential high bias. No action was taken if only one of the LCs or LCSD recoveries were outside of the control limits. Precision was evaluated using the LCS/LCSD relative percent difference (RPD) values. Only positive results were qualified based on RPD outliers. Qualifiers for %R or were issued to all samples in the extraction batch.

SDG P170743: For the LCS/LCSD associated with batch 7061210, the RPD values for 2,4,5-T and MCPA were greater than the control limit of 20%. These analytes were not detected in the associated samples; no action was required. The LCSD percent recovery (%R) values for 2,4,5-TP and MCPP were less than the lower control limit, but were in control in the associated LCS; no qualification was required for the single outliers. The %R values for 2,4,5-T, 2,4-D, Dinoseb, MCPA, and pentachlorophenol were less than the lower control limit of 70%; the associated sample results were estimated (J/UJ-10L).

Matrix Spike Sample/Matrix Spike Sample Duplicates

Matrix spike/matrix spike duplicate (MS/MSD) samples were analyzed at the appropriate frequency. When the MS/MSD %R values indicated a potential low bias, associated results were estimated (J/UJ-8L). Only the associated positive results were estimated (J-8H) if the %R values indicated a potential high bias. No action is taken unless both the MS and MSD %R values are outside the control limits. Precision is evaluated using the RPD values calculated between the MS and MSD results. Associated positive results were estimated (J-9) if the RPD value was greater than the control limit. Qualifiers were only issued to the parent sample.

SDG P170216: The MS/MSD analyses were performed using Sample MW-07-022817. The MSD %R values for 2,4,5-TP, MCPP, and pentachlorophenol were less than the lower control limit, but were in control in the associated MS sample. No qualification was required for the single outliers. The RPD values for 2,4,5-T, dinoseb, MCPP, pentachlorophenol, and 2,4-DB were greater than the control limit. These analytes were not detected in the parent sample; no qualification was required.

SDG P170743: The MS/MSD samples were performed using Sample FS-22-GW-9-11. The MS %R values for 2,4-D, 2,4-DB, Dicamba, MCPA, and MCPP were less than the lower control limit, but were in control in the associated MSD sample. No qualification was required for a single outlier. The %R values for Dinoseb and pentachlorophenol were less than the lower control limit; associated sample results were estimated (J/UJ-8L).

Surrogate Compounds

The surrogate compound, DCPAA, was added to all samples. With the following exception, the surrogate recoveries were within the control limits of 70%-130%.

SDG P170743: The DCPAA surrogate %R value for Sample FS-30-GW-13-15 was less than the lower control limit. All results for this sample were estimated (J/UJ-13L).

Field Duplicates

The RPD control limit is 75% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the difference between the sample and replicate must be less than the RL. No data were qualified based solely on field duplicate RPD values; however, data users should take field precision into account when interpreting sample data.

SDG P170216: Samples MW-01-022717 and MW-01X-022717 were identified as field duplicates. The difference value for 2,4-D was greater than the reporting limit.

SDG P170600: Samples MW-11-051717 and MW-11X-051717 were identified as field duplicates. All acceptance criteria were met.

SDG P170743: Samples FS-22-GW-0-2 and FS-GW-22-4-6 were identified as field duplicates. The RPD value for dicamba was greater than the control limit.

Target Analyte List

The samples were not analyzed for dalapon.

Reporting Limits

The target reporting limit for pentachlorophenol was 0.08 µg/L. The laboratory reported a value of 0.16 µg/L.

Several reporting limits are greater than QAPP required reporting limits due to required dilutions.

OVERALL ASSESSMENT

As was determined by this evaluation, the laboratory followed the specified analytical method. With the exceptions noted above, accuracy was acceptable as demonstrated by the LCS/LCSD, MS/MSD, and surrogate %R values and precision was acceptable as demonstrated by the LCS/LCSD, MS/MSD, and field duplicate RPD values.

Results were estimated based on sample receipt temperature outliers and LCS/LCSD, surrogate, and MS/MSD recovery outliers.

All data, as qualified, are acceptable for use.

DATA VALIDATION REPORT
Smith-Kem Site - Remedial Investigation Phase 2
Herbicides by Method SW8151A: GC-MS/MS

This report documents the review of analytical data from the analysis of soil samples and the associated laboratory and field quality control (QC) samples. Pacific Agricultural Laboratory, Sherwood, Oregon, analyzed the samples. Refer to the **Sample Index** for a complete list of samples.

SDG	NUMBER OF SAMPLES	VALIDATION LEVEL
P170743	37 Soil	EPA Stage 2A
P170771	25 Soil	EPA Stage 2A

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

Ten percent (10%) of the results in the laboratory EDD were verified by comparison to the laboratory data package.

TECHNICAL DATA VALIDATION

This report documents the review of analytical QC requirements as listed in the following table.

1	Sample Receipt, Preservation, and Holding Times	1	Field Duplicates
✓	Laboratory Blanks	✓	Target Analyte List
1	Field Blanks	1	Reporting Limits
2	Laboratory Control Samples (LCS)	2	Compound Identification
2	Matrix Spikes/Matrix Spike Duplicates (MS/MSD)	✓	Reported Results
2	Surrogate Compounds		

✓ Stated method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.

1 Quality control results are discussed below, but no data were qualified.

2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Sample Receipt, Preservation, and Holding Times

SDG P170743: The temperature of one of the coolers upon receipt at the laboratory was greater than the upper control limit of 6°C, at 15°C. It was determined that data were not affected; no action was taken.

SDG P170771: The temperature of the cooler upon receipt at the laboratory was greater than the upper control limit of 6°C, at 6.9°C. It was determined that data were not affected; no action was taken.

Field Blanks

SDG P170743: One field blank, Rinsate-1, was submitted. No target analytes were detected in this blank.

Laboratory Control Samples

Laboratory control samples (LCS) were analyzed at the required frequency of one per batch of 20 or fewer samples. For percent recovery (%R) values less than the lower control limit, associated results were estimated (J/UJ-10L) to indicate a potential low bias. For %R values greater than the upper control limit, associated positive results were estimated (J-10H) to indicate a potential high bias. Qualifiers were issued to all samples in the extraction batch.

SDG P170743: For the LCS associated with batch 7061901, the %R value for 2,4,5-T was greater than the upper control limit. This analyte was not detected in the associated samples; no qualification was required. The %R values for 2,4,5-TP, 2,4-DB, dicamba, MCPP, and pentachlorophenol were less than the lower control limit. All associated sample results were estimated (J/UJ-10L).

SDG P170771: For the LCS associated with batch 7062006, the %R values for dinoseb and pentachlorophenol were less than the lower control limit. All associated sample results were estimated (J/UJ-10L).

For the LCS associated with batch 7062103, the %R values for 2,4,5-T, 2,4-D, 2,4-DB, and MCPA were greater than the upper control limit. All associated positive results were estimated (J-10H).

Matrix Spike/Matrix Spike Duplicates

Matrix spike/matrix spike duplicate (MS/MSD) samples were analyzed at the appropriate frequency. When the MS/MSD %R values indicated a potential low bias, results in the parent sample were estimated (J/UJ-8L). Only positive results were estimated (J-8H) if the %R values indicate a potential high bias. No action is taken unless both the MS and MSD %R values are outside the control limits. Precision is evaluated using the RPD values calculated between the MS and MSD results. Positive results are estimated (J-9) if the RPD value is greater than the control limit. Qualifiers are only assigned to the parent sample.

SDG P170743: For batch 7061409, MS/MSD analyses were performed using Sample FS-27-0.5-1. The %R values for pentachlorophenol, 2,4-D, and MCPA were less than the lower control limit; associated sample results were estimated (J/UJ-8L).

For batch 7061503, MS/MSD analyses were performed using Sample FS-20-3-4. The %R values for 2,4,5-TP, 2,4-DB, pentachlorophenol, and dinoseb were less than the lower control limit; associated sample results were estimated (UJ-8L). The RPD value for dinoseb was greater than the control limit, however, no positive result was detected in the parent sample; no qualification was required.

For batch 7061901, MS/MSD analyses were performed using Sample FS-17-2.5-3.5. The %R values for 2,4,5-T were greater than the upper control limit. This analyte was not detected in the parent sample; no qualification was required. The %R values for pentachlorophenol were less than the lower control limit; associated sample results were estimated (UJ-8L).

SDG P170771: For batch 7062006, MS/MSD analyses were performed using Sample FS-25-6-7. The %R values for 2,4,5-T and 2,4-D were greater than the upper control limit. These analytes were not detected in the parent samples. No action was required.

The RPD value for dicamba was greater than the control limit, but it was not detected in the parent sample; no qualification was required.

For batch 7062103, MS/MSD analyses were performed using Sample FS-32-2-3. The %R values for pentachlorophenol were less than the lower control limit. The pentachlorophenol result in the parent sample and was estimated (UJ-8L).

Surrogate Compounds

The surrogate compound, DCPAA, was added to all samples. The recoveries for the following samples were less than the lower control limit of 70%. All results for these samples were qualified.

SDG	SAMPLE ID	SURROGATE %R	POTENTIAL BIAS	ACTION
P170743	FS-19-6-7	68	Low	UJ-13L
	FS-X1-3-4	60	Low	UJ-13L

Field Duplicates

The RPD control limit is 75% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the difference between the sample and duplicate must be less than 2x the RL. No data were qualified based solely on field duplicate RPD values; however, data users should take field precision into account when interpreting sample data.

SDG P170743: Two sets of field duplicates were submitted: FS-X1-3-4 & FS-20-3-4 and FS2X-2-3 & FS18-2-3. All field precision criteria were met.

SDG P170771: Three sets of field duplicates were submitted: FS-X3-2-3 & FS-31-2-3, FS-X4-0.5-1 & FS-35-0.5-1, and FS-X5-2-3 & FS-32-2-3. All field precision criteria were met.

Reporting Limits

The reporting limits for several compounds were elevated due to required dilutions.

Compound Identification

SDG P170743: The laboratory tentatively identified 2,4-DB in several samples due to matrix interferences. The detected 2,4-DB results in these samples were estimated (J-23).

OVERALL ASSESSMENT

As was determined by this evaluation, the laboratory followed the specified analytical method. With the exceptions noted above, accuracy was acceptable as demonstrated by the LCS, MS/MSD, and surrogate %R values and precision was acceptable as demonstrated by the MS/MSD and field duplicate RPD values.

Results were estimated because of LCS, MS/MSD, and surrogate recovery outliers as well as matrix interferences.

All data, as qualified, are acceptable for use.

APPENDIX A

DATA QUALIFIER DEFINITIONS REASON CODES AND CRITERIA TABLES

DATA VALIDATION QUALIFIER CODES

Based on National Functional Guidelines

The following definitions provide brief explanations of the qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents the approximate concentration.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

The following is an EcoChem qualifier that may also be assigned during the data review process:

DNR	Do not report; a more appropriate result is reported from another analysis or dilution.
-----	---

DATA QUALIFIER REASON CODES

Group	Code	Reason for Qualification
Sample Handling	1	Improper Sample Handling or Sample Preservation (i.e., headspace, cooler temperature, pH, summa canister pressure); Exceeded Holding Times
Instrument Performance	24	Instrument Performance (i.e., tune, resolution, retention time window, endrin breakdown, lock-mass)
	5A	Initial Calibration (RF, %RSD, r^2)
	5B	Calibration Verification (CCV, CCAL; RF, %D, %R) Use bias flags (H,L) ¹ where appropriate
	5C	Initial Calibration Verification (ICV %D, %R) Use bias flags (H,L) ¹ where appropriate
Blank Contamination	6	Field Blank Contamination (Equipment Rinsate, Trip Blank, etc.)
	7	Lab Blank Contamination (i.e., method blank, instrument blank, etc.) Use low bias flag (L) ¹ for negative instrument blanks
Precision and Accuracy	8	Matrix Spike (MS and/or MSD) Recoveries Use bias flags (H,L) ¹ where appropriate
	9	Precision (all replicates: LCS/LCSD, MS/MSD, Lab Replicate, Field Replicate)
	10	Laboratory Control Sample Recoveries (a.k.a. Blank Spikes) Use bias flags (H,L) ¹ where appropriate
	12	Reference Material Use bias flags (H,L) ¹ where appropriate
	13	Surrogate Spike Recoveries (a.k.a. labeled compounds, recovery standards) Use bias flags (H,L) ¹ where appropriate
Interferences	16	ICP/ICP-MS Serial Dilution Percent Difference
	17	ICP/ICP-MS Interference Check Standard Recovery Use bias flags (H,L) ¹ where appropriate
	19	Internal Standard Performance (i.e., area, retention time, recovery)
	22	Elevated Detection Limit due to Interference (i.e., chemical and/or matrix)
	23	Bias from Matrix Interference (i.e. diphenyl ether, PCB/pesticides)
Identification and Quantitation	2	Chromatographic pattern in sample does not match pattern of calibration standard
	3	2 nd column confirmation (RPD or %D)
	4	Tentatively Identified Compound (TIC) (associated with NJ only)
	20	Calibration Range or Linear Range Exceeded
	25	Compound Identification (i.e., ion ratio, retention time, relative abundance, etc.)
Miscellaneous	11	A more appropriate result is reported (multiple reported analyses i.e., dilutions, re-extractions, etc. Associated with "R" and "DNR" only)
	14	Other (See DV report for details)
	26	Method QC information not provided

¹H = high bias indicated

L = low bias indicated

Pesticides by GC
(Based on Organic NFG 1999 & 2008 and SW-846 Method 8081B)

QC Element	Acceptance Criteria (NFG)	Source of Criteria	Action for Non-Conformance	Reason Code	Discussion and Comments
Sample Handling					
Cooler/Storage Temperature Preservation	4°C ± 2°C Tissue/sediments (may be frozen -20°C)	NFG ⁽²⁾ Method ⁽³⁾	J (pos)/UJ (ND) if greater than 6° C	1	Use Professional Judgment (PJ) to qualify for temperature outlier. Current SW846 criterion is ≤ 6° C ⁽³⁾
Holding Time	<i>Extraction Aqueous:</i> 7 days from collection <i>Extraction Solid:</i> 14 days from collection <i>Extraction Tissue/Sediment (frozen):</i> 1 year <i>Analysis (all matrices):</i> 40 days from extraction	NFG ⁽²⁾ Method ⁽³⁾	J (pos)/UJ (ND) if ext/analyzed > HT J (pos)/R (ND) if gross exceedance (> 2x HT)	1	Gross exceedance > 2x HT, as per NFG 1999
Instrument Performance					
Resolution Check	Beginning of ICAL sequence Within RTW and resolution > 60%	NFG ⁽²⁾	NJ (pos)/R (ND) results	14	CLP criterion; might not be submitted with SW846 data package
Retention Times	Surrogates: TCMX (± 0.05); DCB (± 0.10) Target analytes: within RTW	NFG ⁽²⁾ Method ⁽³⁾	NJ (pos)/R (ND) results for analytes with RT shifts	24	Use PJ based on examination of raw data
Breakdown	DDT Breakdown: ≤ 20% Endrin Breakdown: ≤ 20% Combined Breakdown: ≤ 30% Compounds within RTW	NFG ⁽²⁾ Method ⁽³⁾	If 4,4'-DDT is detected: J (pos) 4,4'-DDT, 4,4'-DDD and 4,4'-DDE If 4,4'-DDT is ND and either 4,4'-DDD or 4,4'-DDE are detected: R (ND) 4,4'-DDT, NJ (pos) DDD and DDE If Endrin is detected: J (pos) Endrin, Endrin Aldehyde and Endrin Ketone If Endrin is ND and either EA or EK are detected: R (ND) Endrin, NJ (pos) EA and EK	5A	Method 8081B breakdown criterion: ≤ 15%. For combined breakdown outliers, apply qualifiers considering the degree of individual breakdown.

Pesticides by GC
(Based on Organic NFG 1999 & 2008 and SW-846 Method 8081B)

QC Element	Acceptance Criteria (NFG)	Source of Criteria	Action for Non-Conformance	Reason Code	Discussion and Comments
Instrument Performance (continued)					
Initial Calibration	Single Component Compounds: RSD ≤ 20% alpha-BHC and delta-BHC: RSD ≤ 25% toxaphene and surrogates: RSD ≤ 30% or correlation coefficient (r-value) ≥ 0.995 OR Minimum 6-point with coefficient of determination (r ² -value) ≥ 0.99	NFG ⁽²⁾ Method ⁽⁴⁾	J (pos) if %RSD greater than control limit or r-value < 0.995 or r ² -value < 0.99	5A	Refer to TM-01 for additional information. Use bias flags (H,L) ⁽⁶⁾ where appropriate
Initial Calibration Verification (ICV)	No NFG criteria Project specific	Project QAPP	J (pos) if > UCL J (pos)/UJ (ND) if < LCL	5B	Use bias flags (H,L) ⁽⁶⁾ where appropriate
Continuing Calibration	%D ± 20% Analyzed prior to each 12 hour shift	Method ⁽³⁾	If > 20% (high bias): J (pos) If <20% (low bias: J (pos)/UJ (ND)	5B	Refer to TM-01 for additional information. Use bias flags (H,L) ⁽⁶⁾ where appropriate
Blank Contamination					
Method Blank (MB)	One per matrix per batch (of ≤ 20 samples) No detected compounds > RL	NFG ⁽¹⁾ Method ⁽³⁾	U (pos) if result is less than appropriate 5X action level.	7	Hierarchy of blank review: #1 - Review MB and IB, qualify as needed #2 - Review FB , qualify as needed Note: Actions as per NFG 1999 Note: IB not required by method
Field Blank (FB)	FB: frequency as per QAPP No detected compounds > RL	NFG ⁽¹⁾ Method ⁽³⁾	U (pos) if result is less than appropriate 5X action level.	6	
Instrument Blanks (IB)	Analyzed at the beginning and end of every 12 hour sequence No analyte > CRQL	NFG ⁽¹⁾	U (pos) if result is less than appropriate 5X action level.	7	

Pesticides by GC
(Based on Organic NFG 1999 & 2008 and SW-846 Method 8081B)

QC Element	Acceptance Criteria (NFG)	Source of Criteria	Action for Non-Conformance	Reason Code	Discussion and Comments
Precision and Accuracy					
MS/MSD (recovery)	One set per matrix per batch (of ≤ 20 samples) Method or project acceptance limits	NFG ⁽²⁾ Method ⁽³⁾	Qualify parent only unless other QC indicates systematic problems. J (pos) if both %R > upper control limit (UCL) J (pos)/UJ (ND) if both %R < lower control limit (LCL) J (pos)/R (ND) if both %R < 10%	8	No action if only one spike %R is outside criteria No action if native analyte conc. > 5x the amount spiked Use bias flags (H,L) ⁽⁶⁾ where appropriate
MS/MSD (RPD)	One set per matrix per batch (of ≤ 20 samples) Method or project acceptance limits	NFG ⁽²⁾ Method ⁽³⁾	Qualify parent only unless other QC indicates systematic problems. J (pos) if RPD > control limit	9	No action if parent is ND
LCS	One per lab batch (of ≤ 20 samples) Method or project acceptance limits	NFG ⁽²⁾	J (pos) if %R > UCL J (pos)/UJ (ND) if %R < LCL J (pos)/R (ND) if %R < 10%	10	Qualify all associated samples. Use bias flags (H,L) ⁽⁶⁾ where appropriate
LCS/LCSD (RPD)	if analyzed use MS/MSD RPD criteria	NFG ⁽²⁾	J (pos) assoc. compound in all samples	9	LCSD not required by method or NFG
Surrogates	TCMX and DCBP added to every sample %R = 30% - 150% or project limits	NFG ⁽²⁾ Method ⁽³⁾	J (pos) if either %R > UCL J (pos)/UJ (ND) if either %R < LCL J (pos)/R (ND) if either %R < 10%	13	If %R < 10% (dilution is a factor), use PJ Use bias flags (H,L) ⁽⁶⁾ where appropriate
Internal Standards (if used)	Acceptable Range: IS area = 50% to 200% of CCAL area RT within 30 seconds of CC RT	Method ⁽³⁾	J (pos) if area > 200% J (pos)/UJ (ND) if area < 50% J (pos)/R (ND) if area < 25% RT > 30 seconds, narrate	19	

Pesticides by GC
(Based on Organic NFG 1999 & 2008 and SW-846 Method 8081B)

QC Element	Acceptance Criteria (NFG)	Source of Criteria	Action for Non-Conformance	Reason Code	Discussion and Comments
Precision and Accuracy (continued)					
Field Duplicates	<p>Solids: RPD < 50% or difference < 2X RL (for results < 5X RL) Aqueous: RPD < 35% or difference < 1X RL (for results < 5X RL)</p>	EcoChem standard practice	J (pos)/UJ (ND) Qualify only parent and field duplicate samples	9	Use project limits if specified
Compound Identification/Quantification					
Quantitation/ Identification	Between two columns: RPD < 40% or %D < 25% Within Retention Time Windows on both columns.	NFG ⁽²⁾ Method ⁽³⁾	J (pos) if RPD = 40% - 60% (25% - 60% for %D) NJ (pos) if > 60% R (pos) if RTW criterion not met	3	See TM-08 for additional info
Calibration Range	On-column concentration < high calibration standard	NFG ⁽²⁾ Method ⁽³⁾	J (pos) if conc > high standard and sample was not diluted	20	
Dilutions Re-extractions and/or Reanalyses	Report only one result per analyte	Standard reporting policy	Use "DNR" to flag results that will not be reported.	11	TM-04 for additional info
Sample Clean-up					
GPC/Sulfur/ Florisil	GPC or Florisil cleanup standards 80% - 120%	NFG ⁽²⁾	J (pos) if %R > UCL J (pos)/UJ (ND) if %R < LCL J (pos)/R (ND) if %R < 10%	14	Cleanups are optional under SW846 Use bias flags (H,L) ⁽⁶⁾ where appropriate

³ Organochlorine Pesticides by Gas Chromatography USEPA Method SW846 8081B, Feb 2007, Rev. 2

⁴ SW846, Chapter 4, Organic Analytes

⁵ Determinative Chromatographic Separations, Method 8000C, March 2003, Rev.3

⁶ NFG 2013 suggests using "+ / -" to indicate bias; EcoChem has chosen "H" = high bias indicated; "L" = low bias indicated.

DATA VALIDATION CRITERIA

Semivolatile Organic Compounds by Gas Chromatography-Mass Spectroscopy (GC-MS)
 (Based on NFG 1999 & 2008 and SW-846 Method 8270D)

QC Element	Acceptance Criteria	Source of Criteria	Action for Non-Conformance	Reason Code	Discussion and Comments
Sample Handling					
Cooler/Storage Temperature Preservation	4°C±2°C sediment/tissues may require storage at -20°C	NFG ⁽¹⁾ Method ⁽³⁾	If required by project: J (pos)/UJ (ND) if greater than 6° C	1	Use PJ for temp outliers; see TM20 Current SW846 criterion is ≤ 6° C ⁽³⁾
Holding Time	Extraction Aqueous: 7 days from collection Extraction Solid: 14 days from collection Analysis (all matrices): 40 days from extraction Holding time may be extended to 1 year for frozen sediments/tissues	NFG ⁽¹⁾ Method ⁽³⁾	J (pos)/UJ (ND) if HT exceeded J (pos)/R (ND) if gross exceedance (> 2x HT)	1	Gross exceedance = > 2x HT, as per 1999 NFG
Instrument Performance					
Tuning	DFTPP Beginning of each 12 hour period Use method or project acceptance criteria	NFG ⁽¹⁾ Method ⁽³⁾	R (pos/ND) all analytes in all samples associated with the tune	24	
Initial Calibration Sensitivity	RRF ≥ 0.05 except: RRF ≥ 0.01 poor responders *	NFG ⁽¹⁾ Method ⁽³⁾	Use PJ to qualify J (pos)/UJ (ND)	5A	TM-06 EcoChem Policy for the Evaluation and Qualification of GCMS Instrument Performance PJ - no action if response is stable (ICAL RSD and CCAL %D acceptable)
Initial Calibration Stability	Minimum 5 standards %RSD ≤ 20.0% except: %RSD ≤ 40.0% poor responders * or co-efficient of determination (r ²) > 0.99	NFG ⁽¹⁾ Method ⁽³⁾	J (pos) if %RSD > limit or r ² value < 0.99	5A	
Initial Calibration Verification Check	Prepared from second source; analyze after each ICAL Percent recovery limits = 70-130%	Method ⁽³⁾	J (pos) %R > UCL J (pos)/UJ (ND) %R < LCL	5A (H,L) ⁴	QAPP may have overriding accuracy limits.

DATA VALIDATION CRITERIA

Semivolatile Organic Compounds by Gas Chromatography-Mass Spectroscopy (GC-MS)
 (Based on NFG 1999 & 2008 and SW-846 Method 8270D)

QC Element	Acceptance Criteria	Source of Criteria	Action for Non-Conformance	Reason Code	Discussion and Comments
Instrument Performance (continued)					
Continuing Calibration Sensitivity	RRF \geq 0.05 except: RRF \geq 0.01 poor responders *	NFG ⁽¹⁾ Method ⁽³⁾	Use PJ to qualify J (pos)/UJ (ND)	5B	see ICAL RRF guidance
Continuing Calibration Stability	Prior to sample analysis and every 12 hours %D \leq 25% except: %D \leq 40.0% poor responders *	NFG ⁽¹⁾ Method ⁽³⁾	J (pos) - %D > control limit (high bias) J (pos)/UJ (ND) - %D < -control limit (low bias)	5B (H,L) ⁴	
Blank Contamination					
Method Blank (MB)	MB: One per matrix per batch of (of \leq 20 samples) No detected compounds > MDL	NFG ⁽²⁾ Method ⁽³⁾	U(pos) if result is < 5X or 10X action level	7	10X action level applies to phthalates only. 5X for all other target analytes Hierarchy of blank review: #1 - Review MB, qualify as needed #2 - Review FB , qualify as needed Note: Actions as per 1999 NFG
	No TICs present		R (pos) TICs using 10X rule	7	
Field Blank (FB)	No detected compounds > MDL	NFG ⁽²⁾ Method ⁽³⁾	U (pos) if result is < 5X or 10X action level	6	
Precision and Accuracy					
LCS/LCSD (recovery)	One per matrix per batch (of \leq 20 samples) LCSD not required by NFG or method Use method acceptance criteria/laboratory limits	Method ⁽³⁾	J (pos) if %R > UCL J (pos)/UJ (ND) if %R < LCL J (pos)/R (ND)%R < 10%	10 (H,L) ⁴	No action if only one spike %R is outside criteria when LCSD is analyzed, unless one recovery is <10%. QAPP may have overriding accuracy limits. Qualify all associated samples.
LCS/LCSD (RPD)	If LCSD analyzed RPD < lab limits	Method ⁽³⁾	J (pos)	9	Qualify all associated samples. QAPP may have overriding precision limits.

DATA VALIDATION CRITERIA

Semivolatile Organic Compounds by Gas Chromatography-Mass Spectroscopy (GC-MS)
 (Based on NFG 1999 & 2008 and SW-846 Method 8270D)

QC Element	Acceptance Criteria	Source of Criteria	Action for Non-Conformance	Reason Code	Discussion and Comments
Precision and Accuracy (continued)					
Reference Material (RM, SRM, or CRM)	Result \pm 20% of the 95% confidence interval of the true value for analytes	EcoChem standard policy	J (pos)/UJ (ND) if < LCL J (pos) if > UCL	12 (H,L) ⁴	QAPP may have overriding accuracy limits. Some manufacturers have different RM control limits
MS/MSD (recovery)	One per matrix per batch (of \leq 20 samples) Use method acceptance criteria/laboratory limits	NFG ⁽¹⁾ Method ⁽³⁾	J (pos) %R > UCL J (pos)/UJ (ND) if both %R < LCL J (pos)/R (ND) if both %R < 10% J (pos)/UJ (ND) if one > UCL & one < LCL, with no bias	8 (H,L) ⁴	No action if only one spike %R is outside criteria. No action if parent concentration is >4x the amount spiked. Qualify parent sample only.
MS/MSD (RPD)	One per matrix per batch (of \leq 20 samples) Use method acceptance criteria/laboratory limits	NFG ⁽¹⁾ Method ⁽²⁾	J (pos) in parent sample if RPD > CL	9	Qualify parent sample only
Surrogates	Minimum of 3 acid & 3 base/neutral (B/N) compounds added to all samples Within method control limits	NFG ⁽¹⁾ Method ⁽³⁾	J (pos) if %R > UCL J (pos)/UJ (ND) if %R < LCL J (pos)/R (ND) if %R < 10%	13 (H,L) ⁴	Qualify all compounds in associated fraction. Do not qualify if only 1 acid and/or 1 B/N surrogate is out, unless <10%. If 1 surrogate outlier < 10% then J (pos)/R (ND)
Internal Standards	Added to all samples Acceptable Range: IS area 50% to 200% of CCAL area RT within 30 seconds of CC RT	NFG ⁽¹⁾ Method ⁽³⁾	J (pos) if > 200% J (pos)/UJ (ND) if < 50% J (pos)/R (ND) if < 25% if RT >30 seconds use PJ	19	Qualify compounds quantified using particular internal standard
Field Duplicates	Solids: RPD < 50% OR difference < 2X RL (for results < 5X RL) Aqueous: RPD < 35% OR difference < 1X RL (for results < 5X RL)	EcoChem standard policy	J (pos)/UJ (ND) Qualify only parent and field duplicate samples	9	Use project limits if specified

DATA VALIDATION CRITERIA

Semivolatile Organic Compounds by Gas Chromatography-Mass Spectroscopy (GC-MS)
 (Based on NFG 1999 & 2008 and SW-846 Method 8270D)

QC Element	Acceptance Criteria	Source of Criteria	Action for Non-Conformance	Reason Code	Discussion and Comments
Compound Identification and Quantitation and Calculation					
Retention times and relative ion intensities	RRT within 0.06 of standard RRT Ion relative intensity within 20% of standard All ions in std. at > 10% intensity must be present in sample	NFG ⁽¹⁾ Method ⁽³⁾	U (pos) if identification criteria not met	25	
TICs	Major ions (>10%) in reference must be present in sample; intensities agree within 20%; check identification	NFG ⁽¹⁾ Method ⁽³⁾	NJ the TIC unless: R (pos) common laboratory contaminants	4	
Calibration Range	Results greater than highest calibration standard	EcoChem standard policy	Qualify J (pos)	20	If result from dilution analysis is not reported.
Dilutions, Re-extractions and/or Reanalyses	Report only one result per analyte	EcoChem standard policy	Use "DNR" to flag results that will not be reported.	11	TM-04 EcoChem Policy for Rejection/Selection Process for Multiple Results

PROJECT NARRATIVE

Basis for the Data Validation

This report summarizes the results of data validation performed on groundwater and quality control (QC) sample data for the Smith-Kem Site Remedial Investigation Phase 4. A complete list of samples is provided in the **Sample Index**.

Pacific Agricultural Laboratory, Sherwood, Oregon performed the analyses. The analytical method and EcoChem project chemists are listed in the table below.

ANALYSIS	METHOD	PRIMARY REVIEW	SECONDARY REVIEW
Herbicides	EPA 8151A	E. Clayton	C. Ransom
Pesticides	EPA 8081B Mod		
Herbicides and Pesticides	EPA 8270D Mod		

The data were reviewed using guidance and quality control criteria documented in the analytical methods; *Smith-Kem Site Remedial Investigation Work Plan* (Floyd | Snider, July 2016); and *National Functional Guidelines for Organic Data Review* (USEPA 2008). The laboratory methods are modified for residue scan analysis.

EcoChem's goal in assigning data assessment qualifiers is to assist in proper data interpretation. If values are estimated (J or UJ), data may be used for site evaluation and risk assessment purposes but reasons for data qualification should be taken into consideration when interpreting sample concentrations. If values are assigned an R or DNR, the data should not be used for any site evaluation purposes. If values have no data qualifier assigned, then the data meet the data quality objectives as stated in the documents and methods referenced above.

Data qualifier definitions, reason codes, and validation criteria are included as **Appendix A**. A Qualified Data Summary Table is included in **Appendix B**. Data Validation Worksheets will be kept on file at EcoChem, Inc. A qualified laboratory electronic data deliverable (EDD) is also submitted with this report.

DATA VALIDATION REPORT
Smith-Kem Site – March 2018 GW Monitoring
Pesticides by Method SW8081B Mod

This report documents the review of analytical data from the analysis of groundwater samples and the associated laboratory and field quality control (QC) samples. Pacific Agricultural Laboratory, Sherwood, Oregon, analyzed the samples. Refer to the **Sample Index** for a complete list of samples.

SDG	NUMBER OF SAMPLES	VALIDATION LEVEL
P180299	15 Groundwater	EPA Stage 2A

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

Ten percent (10%) of the results in the laboratory EDD were verified by comparison to the laboratory data package.

TECHNICAL DATA VALIDATION

This report documents the review of analytical QC requirements as listed in the following table.

1	Sample Receipt, Preservation, and Holding Times	✓	Surrogate Compounds
✓	Laboratory Blanks	1	Field Duplicates
1	Field Blanks	✓	Target Analyte List
1	Laboratory Control Samples (LCS/LCSD)	✓	Reporting Limits
1	Matrix Spikes/Matrix Spike Duplicates (MS/MSD)	✓	Reported Results

✓ Stated method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.

1 Quality control results are discussed below, but no data were qualified.

2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Sample Receipt, Preservation, and Holding Times

Some of the temperatures of the coolers upon receipt at the laboratory were greater than the upper control limit of 6°C, the highest at 6.7°C. The data were not affected; no action was taken.

Field Blanks

No field blanks were submitted.

Laboratory Control Samples

Only dieldrin, oxadiazon, and chlorpyrifos were spiked. All recoveries were acceptable.

Matrix Spike/Matrix Spike Duplicates

Only dieldrin, oxadiazon, and chlorpyrifos were spiked. All recoveries were acceptable.

Field Duplicates

The relative percent difference (RPD) control limit is 75% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the difference between the sample and duplicate must be less than the RL.

Samples MW-14-030518 and MW-X-030518 were identified as field duplicates. All acceptance criteria were met.

OVERALL ASSESSMENT

As was determined by this evaluation, the laboratory followed a modified version of this analytical method. Accuracy was acceptable as demonstrated by the laboratory control sample/laboratory control sample duplicate (LCS/LCSD), matrix spike/matrix spike duplicate (MS/MSD), and surrogate %R values and precision was acceptable as demonstrated by the LCS/LCSD, MS/MSD, and field duplicate RPD values.

No results were qualified for any reason. All data, as reported, are acceptable for use.

DATA VALIDATION REPORT
Smith-Kem Site – March 2018 GW Monitoring
Herbicides/Pesticides by Method SW8270D Mod: GC-MS/MS

This report documents the review of analytical data from the analysis of groundwater samples and the associated laboratory and field quality control (QC) samples. Pacific Agricultural Laboratory, Sherwood, Oregon, analyzed the samples. Refer to the **Sample Index** for a complete list of samples.

SDG	NUMBER OF SAMPLES	VALIDATION LEVEL
P180299	15 Groundwater	EPA Stage 2A

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

Ten percent (10%) of the results in the laboratory EDD were verified by comparison to the laboratory data package.

TECHNICAL DATA VALIDATION

This report documents the review of analytical QC requirements as listed in the following table.

1	Sample Receipt, Preservation, and Holding Times	✓	Surrogate Compounds
✓	Laboratory Blanks	1	Field Duplicates
1	Field Blanks	✓	Target Analyte List
1	Laboratory Control Samples (LCS/LCSD)	1	Reporting Limits
2	Matrix Spikes/Matrix Spike Duplicates (MS/MSD)	2	Reported Results

✓ *Stated method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.*

1 *Quality control results are discussed below, but no data were qualified.*

2 *Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.*

Sample Receipt, Preservation, and Holding Times

Some of the temperatures of the coolers upon receipt at the laboratory were greater than the upper control limit of 6°C, the highest at 6.7°C. The data were not affected; no action was taken.

Field Blanks

No field blanks were submitted.

Laboratory Control Samples

Because this is a screening method, the lab did not spike for the full suite of analytes. Only atrazine, ethofumesate, and napropamide were spiked. All recoveries were acceptable.

Matrix Spike/Matrix Spike Duplicates

Only atrazine, ethofumesate, and napropamide were spiked.

The matrix spike/matrix spike duplicate (MS/MSD) samples were performed on Sample MW-01-030518. The relative percent difference (RPD) value for atrazine was greater than the control limit. The result for this compound was estimated (J-9) in the parent sample.

Field Duplicates

The RPD control limit is 75% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the difference between the sample and duplicate must be less than the RL.

Samples MW-14-030518 and MW-X-030518 were identified as field duplicates. All acceptance criteria were met.

Reporting Limits

Several reporting limits are greater than QAPP required reporting limits due to required dilutions.

Reported Results

The p,p'-DDT result for Sample MW-04-030518 was flagged by the laboratory as having been tentatively identified due to matrix interference. The p,p'-DDT result was estimated (J-23).

OVERALL ASSESSMENT

As was determined by this evaluation, the laboratory followed the modified 8270 residue screening method. With the exception noted above, accuracy was acceptable as demonstrated by the laboratory control sample/laboratory control sample duplicate (LCS/LCSD), MS/MSD, and surrogate %R values and precision was acceptable as demonstrated by the LCS/LCSD, MS/MSD, and field duplicate RPD values.

Results were estimated due a MS/MSD RPD outlier and matrix interference.

All data, as qualified, are acceptable for use.

DATA VALIDATION REPORT
Smith-Kem Site – March 2018 GW Monitoring
Herbicides by Method SW8151A: GC-MS/MS

This report documents the review of analytical data from the analysis of groundwater samples and the associated laboratory quality control (QC) samples. Pacific Agricultural Laboratory, Sherwood, Oregon, analyzed the samples. Refer to the **Sample Index** for a complete list of samples.

SDG	NUMBER OF SAMPLES	VALIDATION LEVEL
P180299	15 Groundwater	EPA Stage 2A

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

Ten percent (10%) of the results in the laboratory EDD were verified by comparison to the laboratory data package.

TECHNICAL DATA VALIDATION

This report documents the review of analytical QC requirements as listed in the following table.

1	Sample Receipt, Preservation, and Holding Times	✓	Surrogate Compounds
✓	Laboratory Blanks	1	Field Duplicates
1	Field Blanks	✓	Target Analyte List
✓	Laboratory Control Samples (LCS/LCSD)	1	Reporting Limits
2	Matrix Spike/Matrix Spike Duplicates (MS/MSD)	2	Reported Results

✓ Stated method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.

1 Quality control results are discussed below, but no data were qualified.

2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Sample Receipt, Preservation, and Holding Times

Some of the temperatures of the coolers upon receipt at the laboratory were greater than the upper control limit of 6°C, the highest at 6.7°C. The data were not affected; no action was taken.

Field Blanks

No field blanks were submitted.

Matrix Spike Sample/Matrix Spike Sample Duplicates

Matrix spike/matrix spike duplicate (MS/MSD) samples were analyzed at the appropriate frequency. When the MS/MSD %R values indicated a potential low bias, associated results were estimated

(J/UJ-8L). Only the associated positive results were estimated (J-8H) if the %R values indicated a potential high bias. No action is taken unless both the MS and MSD %R values are outside the control limits. Precision is evaluated using the RPD values calculated between the MS and MSD results. Associated positive results were estimated (J-9) if the RPD value was greater than the control limit. Qualifiers were only issued to the parent sample.

The MS/MSD analyses were performed using Sample MW-01-030518. The %R values for dicamba were less than the lower control limit. The positive result for dicamba in the parent sample was estimated (J-8L).

Field Duplicates

The RPD control limit is 75% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the difference between the sample and replicate must be less than the RL. No data were qualified based solely on field duplicate RPD values; however, data users should take field precision into account when interpreting sample data.

Samples MW-10-030518 and MW-X-030518 were identified as field duplicates. All acceptance criteria were met.

Reporting Limits

Several reporting limits are greater than QAPP required reporting limits due to required dilutions.

Reported Results

The MCPA result for Sample MW-04-030518 was flagged by the laboratory as having been tentatively identified due to matrix interference. The MCPA result was estimated (J-23).

OVERALL ASSESSMENT

As was determined by this evaluation, the laboratory followed the specified analytical method. With the exceptions noted above, accuracy was acceptable as demonstrated by the laboratory control sample/laboratory control sample duplicate (LCS/LCSD), MS/MSD, and surrogate %R values and precision was acceptable as demonstrated by the LCS/LCSD, MS/MSD, and field duplicate RPD values.

Results were estimated based on MS/MSD %R outliers and matrix interference.

All data, as qualified, are acceptable for use.

APPENDIX A

DATA QUALIFIER DEFINITIONS REASON CODES AND CRITERIA TABLES

DATA VALIDATION QUALIFIER CODES

Based on National Functional Guidelines

The following definitions provide brief explanations of the qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents the approximate concentration.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

The following is an EcoChem qualifier that may also be assigned during the data review process:

DNR	Do not report; a more appropriate result is reported from another analysis or dilution.
-----	---

DATA QUALIFIER REASON CODES

Group	Code	Reason for Qualification
Sample Handling	1	Improper Sample Handling or Sample Preservation (i.e., headspace, cooler temperature, pH, summa canister pressure); Exceeded Holding Times
Instrument Performance	24	Instrument Performance (i.e., tune, resolution, retention time window, endrin breakdown, lock-mass)
	5A	Initial Calibration (RF, %RSD, r^2)
	5B	Calibration Verification (CCV, CCAL; RF, %D, %R) Use bias flags (H,L) ¹ where appropriate
	5C	Initial Calibration Verification (ICV %D, %R) Use bias flags (H,L) ¹ where appropriate
Blank Contamination	6	Field Blank Contamination (Equipment Rinsate, Trip Blank, etc.)
	7	Lab Blank Contamination (i.e., method blank, instrument blank, etc.) Use low bias flag (L) ¹ for negative instrument blanks
Precision and Accuracy	8	Matrix Spike (MS and/or MSD) Recoveries Use bias flags (H,L) ¹ where appropriate
	9	Precision (all replicates: LCS/LCSD, MS/MSD, Lab Replicate, Field Replicate)
	10	Laboratory Control Sample Recoveries (a.k.a. Blank Spikes) Use bias flags (H,L) ¹ where appropriate
	12	Reference Material Use bias flags (H,L) ¹ where appropriate
	13	Surrogate Spike Recoveries (a.k.a. labeled compounds, recovery standards) Use bias flags (H,L) ¹ where appropriate
Interferences	16	ICP/ICP-MS Serial Dilution Percent Difference
	17	ICP/ICP-MS Interference Check Standard Recovery Use bias flags (H,L) ¹ where appropriate
	19	Internal Standard Performance (i.e., area, retention time, recovery)
	22	Elevated Detection Limit due to Interference (i.e., chemical and/or matrix)
	23	Bias from Matrix Interference (i.e. diphenyl ether, PCB/pesticides)
Identification and Quantitation	2	Chromatographic pattern in sample does not match pattern of calibration standard
	3	2 nd column confirmation (RPD or %D)
	4	Tentatively Identified Compound (TIC) (associated with NJ only)
	20	Calibration Range or Linear Range Exceeded
	25	Compound Identification (i.e., ion ratio, retention time, relative abundance, etc.)
Miscellaneous	11	A more appropriate result is reported (multiple reported analyses i.e., dilutions, re-extractions, etc. Associated with "R" and "DNR" only)
	14	Other (See DV report for details)
	26	Method QC information not provided

¹H = high bias indicated

L = low bias indicated

Pesticides by GC
(Based on Organic NFG 1999 & 2008 and SW-846 Method 8081B)

QC Element	Acceptance Criteria (NFG)	Source of Criteria	Action for Non-Conformance	Reason Code	Discussion and Comments
Sample Handling					
Cooler/Storage Temperature Preservation	4°C ± 2°C Tissue/sediments (may be frozen -20°C)	NFG ⁽²⁾ Method ⁽³⁾	J (pos)/UJ (ND) if greater than 6° C	1	Use Professional Judgment (PJ) to qualify for temperature outlier. Current SW846 criterion is ≤ 6° C ⁽³⁾
Holding Time	<i>Extraction Aqueous:</i> 7 days from collection <i>Extraction Solid:</i> 14 days from collection <i>Extraction Tissue/Sediment (frozen):</i> 1 year <i>Analysis (all matrices):</i> 40 days from extraction	NFG ⁽²⁾ Method ⁽³⁾	J (pos)/UJ (ND) if ext/analyzed > HT J (pos)/R (ND) if gross exceedance (> 2x HT)	1	Gross exceedance > 2x HT, as per NFG 1999
Instrument Performance					
Resolution Check	Beginning of ICAL sequence Within RTW and resolution > 60%	NFG ⁽²⁾	NJ (pos)/R (ND) results	14	CLP criterion; might not be submitted with SW846 data package
Retention Times	Surrogates: TCMX (± 0.05); DCB (± 0.10) Target analytes: within RTW	NFG ⁽²⁾ Method ⁽³⁾	NJ (pos)/R (ND) results for analytes with RT shifts	24	Use PJ based on examination of raw data
Breakdown	DDT Breakdown: ≤ 20% Endrin Breakdown: ≤ 20% Combined Breakdown: ≤ 30% Compounds within RTW	NFG ⁽²⁾ Method ⁽³⁾	If 4,4'-DDT is detected: J (pos) 4,4'-DDT, 4,4'-DDD and 4,4'-DDE If 4,4'-DDT is ND and either 4,4'-DDD or 4,4'-DDE are detected: R (ND) 4,4'-DDT, NJ (pos) DDD and DDE If Endrin is detected: J (pos) Endrin, Endrin Aldehyde and Endrin Ketone If Endrin is ND and either EA or EK are detected: R (ND) Endrin, NJ (pos) EA and EK	5A	Method 8081B breakdown criterion: ≤ 15%. For combined breakdown outliers, apply qualifiers considering the degree of individual breakdown.

Pesticides by GC
(Based on Organic NFG 1999 & 2008 and SW-846 Method 8081B)

QC Element	Acceptance Criteria (NFG)	Source of Criteria	Action for Non-Conformance	Reason Code	Discussion and Comments
Instrument Performance (continued)					
Initial Calibration	Single Component Compounds: RSD ≤ 20% alpha-BHC and delta-BHC: RSD ≤ 25% toxaphene and surrogates: RSD ≤ 30% or correlation coefficient (r-value) ≥ 0.995 OR Minimum 6-point with coefficient of determination (r ² -value) ≥ 0.99	NFG ⁽²⁾ Method ⁽⁴⁾	J (pos) if %RSD greater than control limit or r-value < 0.995 or r ² -value < 0.99	5A	Refer to TM-01 for additional information. Use bias flags (H,L) ⁽⁶⁾ where appropriate
Initial Calibration Verification (ICV)	No NFG criteria Project specific	Project QAPP	J (pos) if > UCL J (pos)/UJ (ND) if < LCL	5B	Use bias flags (H,L) ⁽⁶⁾ where appropriate
Continuing Calibration	%D ± 20% Analyzed prior to each 12 hour shift	Method ⁽³⁾	If > 20% (high bias): J (pos) If <20% (low bias): J (pos)/UJ (ND)	5B	Refer to TM-01 for additional information. Use bias flags (H,L) ⁽⁶⁾ where appropriate
Blank Contamination					
Method Blank (MB)	One per matrix per batch (of ≤ 20 samples) No detected compounds > RL	NFG ⁽¹⁾ Method ⁽³⁾	U (pos) if result is less than appropriate 5X action level.	7	Hierarchy of blank review: #1 - Review MB and IB, qualify as needed #2 - Review FB, qualify as needed Note: Actions as per NFG 1999 Note: IB not required by method
Field Blank (FB)	FB: frequency as per QAPP No detected compounds > RL	NFG ⁽¹⁾ Method ⁽³⁾	U (pos) if result is less than appropriate 5X action level.	6	
Instrument Blanks (IB)	Analyzed at the beginning and end of every 12 hour sequence No analyte > CRQL	NFG ⁽¹⁾	U (pos) if result is less than appropriate 5X action level.	7	

Pesticides by GC
(Based on Organic NFG 1999 & 2008 and SW-846 Method 8081B)

QC Element	Acceptance Criteria (NFG)	Source of Criteria	Action for Non-Conformance	Reason Code	Discussion and Comments
Precision and Accuracy					
MS/MSD (recovery)	One set per matrix per batch (of ≤ 20 samples) Method or project acceptance limits	NFG ⁽²⁾ Method ⁽³⁾	Qualify parent only unless other QC indicates systematic problems. J (pos) if both %R > upper control limit (UCL) J (pos)/UJ (ND) if both %R < lower control limit (LCL) J (pos)/R (ND) if both %R < 10%	8	No action if only one spike %R is outside criteria No action if native analyte conc. > 5x the amount spiked Use bias flags (H,L) ⁽⁶⁾ where appropriate
MS/MSD (RPD)	One set per matrix per batch (of ≤ 20 samples) Method or project acceptance limits	NFG ⁽²⁾ Method ⁽³⁾	Qualify parent only unless other QC indicates systematic problems. J (pos) if RPD > control limit	9	No action if parent is ND
LCS	One per lab batch (of ≤ 20 samples) Method or project acceptance limits	NFG ⁽²⁾	J (pos) if %R > UCL J (pos)/UJ (ND) if %R < LCL J (pos)/R (ND) if %R < 10%	10	Qualify all associated samples. Use bias flags (H,L) ⁽⁶⁾ where appropriate
LCS/LCSD (RPD)	if analyzed use MS/MSD RPD criteria	NFG ⁽²⁾	J (pos) assoc. compound in all samples	9	LCSD not required by method or NFG
Surrogates	TCMX and DCBP added to every sample %R = 30% - 150% or project limits	NFG ⁽²⁾ Method ⁽³⁾	J (pos) if either %R > UCL J (pos)/UJ (ND) if either %R < LCL J (pos)/R (ND) if either %R < 10%	13	If %R < 10% (dilution is a factor), use PJ Use bias flags (H,L) ⁽⁶⁾ where appropriate
Internal Standards (if used)	Acceptable Range: IS area = 50% to 200% of CCAL area RT within 30 seconds of CC RT	Method ⁽³⁾	J (pos) if area > 200% J (pos)/UJ (ND) if area < 50% J (pos)/R (ND) if area < 25% RT > 30 seconds, narrate	19	

Pesticides by GC
(Based on Organic NFG 1999 & 2008 and SW-846 Method 8081B)

QC Element	Acceptance Criteria (NFG)	Source of Criteria	Action for Non-Conformance	Reason Code	Discussion and Comments
Precision and Accuracy (continued)					
Field Duplicates	<p>Solids: RPD < 50% or difference < 2X RL (for results < 5X RL) Aqueous: RPD < 35% or difference < 1X RL (for results < 5X RL)</p>	EcoChem standard practice	J (pos)/UJ (ND) Qualify only parent and field duplicate samples	9	Use project limits if specified
Compound Identification/Quantification					
Quantitation/ Identification	Between two columns: RPD < 40% or %D < 25% Within Retention Time Windows on both columns.	NFG ⁽²⁾ Method ⁽³⁾	J (pos) if RPD = 40% - 60% (25% - 60% for %D) NJ (pos) if > 60% R (pos) if RTW criterion not met	3	See TM-08 for additional info
Calibration Range	On-column concentration < high calibration standard	NFG ⁽²⁾ Method ⁽³⁾	J (pos) if conc > high standard and sample was not diluted	20	
Dilutions Re-extractions and/or Reanalyses	Report only one result per analyte	Standard reporting policy	Use "DNR" to flag results that will not be reported.	11	TM-04 for additional info
Sample Clean-up					
GPC/Sulfur/ Florisil	GPC or Florisil cleanup standards 80% - 120%	NFG ⁽²⁾	J (pos) if %R > UCL J (pos)/UJ (ND) if %R < LCL J (pos)/R (ND) if %R < 10%	14	Cleanups are optional under SW846 Use bias flags (H,L) ⁽⁶⁾ where appropriate

¹ National Functional Guidelines for Organic Data Review, October 1999

² National Functional Guidelines for Organic Data Review, June, 2008

³ Organochlorine Pesticides by Gas Chromatography USEPA Method SW846 8081B, Feb 2007, Rev. 2

⁴ SW846, Chapter 4, Organic Analytes

⁵ Determinative Chromatographic Separations, Method 8000C, March 2003, Rev.3

⁶ NFG 2013 suggests using "+ / -" to indicate bias; EcoChem has chosen "H" = high bias indicated; "L" = low bias indicated.

DATA VALIDATION CRITERIA

Semivolatile Organic Compounds by Gas Chromatography-Mass Spectroscopy (GC-MS)
 (Based on NFG 1999 & 2008 and SW-846 Method 8270D)

QC Element	Acceptance Criteria	Source of Criteria	Action for Non-Conformance	Reason Code	Discussion and Comments
Sample Handling					
Cooler/Storage Temperature Preservation	4°C±2°C sediment/tissues may require storage at -20°C	NFG ⁽¹⁾ Method ⁽³⁾	If required by project: J (pos)/UJ (ND) if greater than 6° C	1	Use PJ for temp outliers; see TM20 Current SW846 criterion is ≤ 6° C ⁽³⁾
Holding Time	Extraction Aqueous: 7 days from collection Extraction Solid: 14 days from collection Analysis (all matrices): 40 days from extraction Holding time may be extended to 1 year for frozen sediments/tissues	NFG ⁽¹⁾ Method ⁽³⁾	J (pos)/UJ (ND) if HT exceeded J (pos)/R (ND) if gross exceedance (> 2x HT)	1	Gross exceedance = > 2x HT, as per 1999 NFG
Instrument Performance					
Tuning	DFTPP Beginning of each 12 hour period Use method or project acceptance criteria	NFG ⁽¹⁾ Method ⁽³⁾	R (pos/ND) all analytes in all samples associated with the tune	24	
Initial Calibration Sensitivity	RRF ≥ 0.05 except: RRF ≥ 0.01 poor responders *	NFG ⁽¹⁾ Method ⁽³⁾	Use PJ to qualify J (pos)/UJ (ND)	5A	TM-06 EcoChem Policy for the Evaluation and Qualification of GCMS Instrument Performance PJ - no action if response is stable (ICAL RSD and CCAL %D acceptable)
Initial Calibration Stability	Minimum 5 standards %RSD ≤ 20.0% except: %RSD ≤ 40.0% poor responders * or co-efficient of determination (r ²) > 0.99	NFG ⁽¹⁾ Method ⁽³⁾	J (pos) if %RSD > limit or r ² value < 0.99	5A	
Initial Calibration Verification Check	Prepared from second source; analyze after each ICAL Percent recovery limits = 70-130%	Method ⁽³⁾	J (pos) %R > UCL J (pos)/UJ (ND) %R < LCL	5A (H,L) ⁴	QAPP may have overriding accuracy limits.

DATA VALIDATION CRITERIA

Semivolatile Organic Compounds by Gas Chromatography-Mass Spectroscopy (GC-MS)
 (Based on NFG 1999 & 2008 and SW-846 Method 8270D)

QC Element	Acceptance Criteria	Source of Criteria	Action for Non-Conformance	Reason Code	Discussion and Comments
Instrument Performance (continued)					
Continuing Calibration Sensitivity	RRF \geq 0.05 except: RRF \geq 0.01 poor responders *	NFG ⁽¹⁾ Method ⁽³⁾	Use PJ to qualify J (pos)/UJ (ND)	5B	see ICAL RRF guidance
Continuing Calibration Stability	Prior to sample analysis and every 12 hours %D \leq 25% except: %D \leq 40.0% poor responders *	NFG ⁽¹⁾ Method ⁽³⁾	J (pos) - %D > control limit (high bias) J (pos)/UJ (ND) - %D < -control limit (low bias)	5B (H,L) ⁴	
Blank Contamination					
Method Blank (MB)	MB: One per matrix per batch of (of \leq 20 samples) No detected compounds > MDL	NFG ⁽²⁾ Method ⁽³⁾	U(pos) if result is < 5X or 10X action level	7	10X action level applies to phthalates only. 5X for all other target analytes Hierarchy of blank review: #1 - Review MB, qualify as needed #2 - Review FB , qualify as needed Note: Actions as per 1999 NFG
	No TICs present		R (pos) TICs using 10X rule	7	
Field Blank (FB)	No detected compounds > MDL	NFG ⁽²⁾ Method ⁽³⁾	U (pos) if result is < 5X or 10X action level	6	
Precision and Accuracy					
LCS/LCSD (recovery)	One per matrix per batch (of \leq 20 samples) LCSD not required by NFG or method Use method acceptance criteria/laboratory limits	Method ⁽³⁾	J (pos) if %R > UCL J (pos)/UJ (ND) if %R < LCL J (pos)/R (ND)%R < 10%	10 (H,L) ⁴	No action if only one spike %R is outside criteria when LCSD is analyzed, unless one recovery is <10%. QAPP may have overriding accuracy limits. Qualify all associated samples.
LCS/LCSD (RPD)	If LCSD analyzed RPD < lab limits	Method ⁽³⁾	J (pos)	9	Qualify all associated samples. QAPP may have overriding precision limits.

DATA VALIDATION CRITERIA

Semivolatile Organic Compounds by Gas Chromatography-Mass Spectroscopy (GC-MS)
 (Based on NFG 1999 & 2008 and SW-846 Method 8270D)

QC Element	Acceptance Criteria	Source of Criteria	Action for Non-Conformance	Reason Code	Discussion and Comments
Precision and Accuracy (continued)					
Reference Material (RM, SRM, or CRM)	Result \pm 20% of the 95% confidence interval of the true value for analytes	EcoChem standard policy	J (pos)/UJ (ND) if < LCL J (pos) if > UCL	12 (H,L) ⁴	QAPP may have overriding accuracy limits. Some manufacturers have different RM control limits
MS/MSD (recovery)	One per matrix per batch (of \leq 20 samples) Use method acceptance criteria/laboratory limits	NFG ⁽¹⁾ Method ⁽³⁾	J (pos) %R > UCL J (pos)/UJ (ND) if both %R < LCL J (pos)/R (ND) if both %R < 10% J (pos)/UJ (ND) if one > UCL & one < LCL, with no bias	8 (H,L) ⁴	No action if only one spike %R is outside criteria. No action if parent concentration is >4x the amount spiked. Qualify parent sample only.
MS/MSD (RPD)	One per matrix per batch (of \leq 20 samples) Use method acceptance criteria/laboratory limits	NFG ⁽¹⁾ Method ⁽²⁾	J (pos) in parent sample if RPD > CL	9	Qualify parent sample only
Surrogates	Minimum of 3 acid & 3 base/neutral (B/N) compounds added to all samples Within method control limits	NFG ⁽¹⁾ Method ⁽³⁾	J (pos) if %R > UCL J (pos)/UJ (ND) if %R < LCL J (pos)/R (ND) if %R < 10%	13 (H,L) ⁴	Qualify all compounds in associated fraction. Do not qualify if only 1 acid and/or 1 B/N surrogate is out, unless <10%. If 1 surrogate outlier < 10% then J (pos)/R (ND)
Internal Standards	Added to all samples Acceptable Range: IS area 50% to 200% of CCAL area RT within 30 seconds of CC RT	NFG ⁽¹⁾ Method ⁽³⁾	J (pos) if > 200% J (pos)/UJ (ND) if < 50% J (pos)/R (ND) if < 25% if RT >30 seconds use PJ	19	Qualify compounds quantified using particular internal standard
Field Duplicates	Solids: RPD < 50% OR difference < 2X RL (for results < 5X RL) Aqueous: RPD < 35% OR difference < 1X RL (for results < 5X RL)	EcoChem standard policy	J (pos)/UJ (ND) Qualify only parent and field duplicate samples	9	Use project limits if specified

DATA VALIDATION CRITERIA

Semivolatile Organic Compounds by Gas Chromatography-Mass Spectroscopy (GC-MS)
 (Based on NFG 1999 & 2008 and SW-846 Method 8270D)

QC Element	Acceptance Criteria	Source of Criteria	Action for Non-Conformance	Reason Code	Discussion and Comments
Compound Identification and Quantitation and Calculation					
Retention times and relative ion intensities	RRT within 0.06 of standard RRT Ion relative intensity within 20% of standard All ions in std. at > 10% intensity must be present in sample	NFG ⁽¹⁾ Method ⁽³⁾	U (pos) if identification criteria not met	25	
TICs	Major ions (>10%) in reference must be present in sample; intensities agree within 20%; check identification	NFG ⁽¹⁾ Method ⁽³⁾	NJ the TIC unless: R (pos) common laboratory contaminants	4	
Calibration Range	Results greater than highest calibration standard	EcoChem standard policy	Qualify J (pos)	20	If result from dilution analysis is not reported.
Dilutions, Re-extractions and/or Reanalyses	Report only one result per analyte	EcoChem standard policy	Use "DNR" to flag results that will not be reported.	11	TM-04 EcoChem Policy for Rejection/Selection Process for Multiple Results

¹ National Functional Guidelines for Organic Data Review, June, 2008

(pos): Positive Result(s)

² National Functional Guidelines for Organic Data Review, October, 1999

(ND): Non-detects

³ Method SW846 8270D Semivolatile Organic Compounds by Gas Chromatography/Mass Spectrometry (GC/MS), Revision 4, February 2007.

⁴ NFG 2013 suggests using "+ / -" to indicate bias; EcoChem has chosen "H" = high bias indicated; "L" = low bias indicated.

* "Poor responder" compounds: acetophenone, atrazine, benzaldehyde, 1,1'-biphenyl, bis(2-ethylhexyl)phthalate, butylbenzylphthalate, caprolactam, carbazole, 4-chloroaniline, diethylphthalate, di-n-butylphthalate, 3-3'-dichlorobenzidine, dimethylphthalate, 2,4-dinitrophenol, 4,6-dinitro-2-methylphenol, di-n-octylphthalate, hexachlorobutadiene, hexachlorocyclopentadiene, 2-nitroaniline, 3-nitroaniline, 4-nitroaniline, 4-nitrophenol, N-nitrosodiphenylamine, 2,2'-oxybis-(1-chloropropane), 1,2,4,5-tetrachlorobenzene use a 0.010 RRF criterion.

Chlorinated Herbicides by GC, SW-846 Method 8151A

QC Element	Acceptance Criteria	Source of Criteria	Action for Non-Conformance	Reason Code	Discussion and Comments
Sample Handling					
Cooler/Storage Temperature Preservation	4°C±2°C Protected from light	NFG ⁽¹⁾ Method ⁽²⁾	J(pos)/UJ(ND) if > 6 deg. C (EcoChem PJ)	1	Use Professional Judgment (PJ) to qualify for temperature outlier.
Holding Time	Extraction Aqueous: 7 days from collection Extraction Solid: 14 days from collection Analysis (all matrices): 40 days from extraction	NFG ⁽¹⁾ Method ⁽²⁾	J(pos)/UJ(ND) if HT exceeded J(pos)/R(ND) if gross exceedance(> 2X HT)	1	Use PJ to qualify for holding time outlier. Gross exceedance = > 2X HT, as per 1999 NFG
Instrument Performance					
Retention Times	Target compounds: Within RTW established by the laboratory.	NFG ⁽¹⁾ Method ⁽²⁾	NJ(pos)/R(ND) results for analytes with RT shifts	5B	Analyte RRT should be within ± 0.06 RRT units of the standard RRT (opening CCAL or midpoint ICAL standard). For full DV, use PJ based on examination of raw data.
Initial Calibration	5 standard minimum. Calibration may be internal or external. RSD ≤20%	NFG ⁽¹⁾ Method ⁽²⁾	J (pos) if > UCL J (pos)/UJ (ND) if < LCL OR r-value ≥ 0.99	5A	TM-01 for additional information EcoChem Policy for the Evaluation of GC & HPLC Initial and Continuing Calibration using Method-Specific Control Limits. Calibration from methyl ester compounds (that have not undergone hydrolysis and esterification) will need MW correction.
Continuing Calibration (Prior to each 12 hour shift or bracketing for external standard calibration)	%D ± 20%	NFG ⁽¹⁾ Method ⁽²⁾	If > 20% (high bias): J (pos) If <20% (low bias: J (pos)/UJ (ND)	5A (H,L) ³	TM-01 for additional information EcoChem Policy for the Evaluation of GC & HPLC Initial and Continuing Calibration using Method-Specific Control Limits
Blank Contamination					
Method Blank (MB)	MB: One per matrix per batch of (of ≤ 20 samples) No detected compounds > RL	NFG ⁽¹⁾ Method ⁽²⁾	U(pos) if result is less than appropriate 5X action level.	7	Hierarchy of blank review: #1 - Review MB, qualify as needed #2 - Review FB , qualify as needed No common lab contaminants for Herbicide analyses
Field Blank (FB)	FB: frequency as per QAPP No detected compounds > RL	NFG ⁽¹⁾ Method ⁽²⁾	U(pos) if result is less than appropriate 5X action level.	6	

Chlorinated Herbicides by GC, SW-846 Method 8151A

QC Element	Acceptance Criteria	Source of Criteria	Action for Non-Conformance	Reason Code	Discussion and Comments
Precision and Accuracy					
MS/MSD (recovery)	One set per matrix per batch (of ≤ 20 samples) Method acceptance criteria or project limits	NFG ⁽¹⁾ Method ⁽²⁾	Qualify parent only unless other QC indicates systematic problems J (pos) if both %R > upper control limit (UCL) J (pos)/UJ (ND) if both %R < lower control limit (LCL) J (pos)/R (ND) if both %R < 10%	8 (H,L) ³	A sample duplicate may be run in place of the MSD. No action if only one spike %R is outside criteria. No action if parent concentration is >4x the amount spiked. Qualify parent sample only.
MS/MSD or duplicate (RPD)	One set per matrix per batch (of ≤ 20 samples) Method acceptance criteria or project limits	NFG ⁽¹⁾ Method ⁽²⁾	Qualify parent only unless other QC indicates systematic problems. J(pos) if RPD > control limit	9	No action if parent is ND.
LCS	One per lab batch (of ≤ 20 samples) Method acceptance criteria or project limits	NFG ⁽¹⁾ Method ⁽²⁾	Qualify all associated samples J(pos) if %R > UCL - high bias J(pos)/UJ(ND) if both %R < LCL - low bias J(pos)/R(ND) if both %R < 10% - very low bias J(pos)/UJ(ND) if one > UCL & one < LCL, with no bias PJ if only one %R outlier	10 (H,L) ³	No action if only one spike %R is outside criteria, when LCSD is analyzed. Qualify all associated samples.
LCS/LCSD (RPD)	One set per lab batch (of ≤ 20 samples) Method acceptance criteria or project limits	NFG ⁽¹⁾ Method ⁽²⁾	J(pos) assoc. compound in all samples	9	
Surrogates	2,4-Dichlorophenylacetic acid (DCAA) added to every sample Method acceptance criteria or project limits	NFG ⁽¹⁾ Method ⁽²⁾	J (pos) if either %R > UCL J (pos)/UJ (ND) if either %R < LCL J (pos)/R (ND) if either %R < 10%	13 (H,L) ³	If %R < 10% (sample dilution is a factor), use PJ
Internal Standards (if used)	Acceptable Range: IS area 50% to 200% of CCAL area RT within 30 seconds of CC RT	Method ⁽²⁾	J (pos) if > 200% J (pos)/UJ (ND) if < 50% J (pos)/R (ND) if < 25% if RT > 30 seconds use PJ	19	Suggested internal standards: 4,4'-dibromooctafluorobiphenyl (DBOB) or 1,4-dichlorobenzene.

PROJECT NARRATIVE

Basis for the Data Validation

This report summarizes the results of data validation performed on groundwater, soil, and quality control (QC) sample data for the Smith-Kem Site Remedial Investigation Phase 4. A complete list of samples is provided in the **Sample Index**.

Pacific Agricultural Laboratory, Sherwood, Oregon and Analytical Resources in Tukwila, Washington performed the analyses. The analytical method and EcoChem project chemists are listed in the table below.

ANALYSIS	METHOD	PRIMARY REVIEW	SECONDARY REVIEW
Dioxin/Furans	EPA 1613	E. Clayton	C. Ransom
Pesticides	EPA 8081B Mod		
Herbicides and Pesticides	EPA 8270D Mod		
Herbicides	EPA 8151 Mod		

The data were reviewed using guidance and quality control criteria documented in the analytical methods; *Smith-Kem Site Remedial Investigation Work Plan* (Floyd | Snider, July 2016); and *National Functional Guidelines for Organic Data Review* (USEPA 2008). The laboratory methods are modified for residue scan analysis.

EcoChem's goal in assigning data assessment qualifiers is to assist in proper data interpretation. If values are estimated (J or UJ), data may be used for site evaluation and risk assessment purposes but reasons for data qualification should be taken into consideration when interpreting sample concentrations. If values are assigned an R or DNR, the data should not be used for any site evaluation purposes. If values have no data qualifier assigned, then the data meet the data quality objectives as stated in the documents and methods referenced above.

Data qualifier definitions, reason codes, and validation criteria are included as **Appendix A**. A Qualified Data Summary Table is included in **Appendix B**. Data Validation Worksheets will be kept on file at EcoChem, Inc. A qualified laboratory electronic data deliverable (EDD) is also submitted with this report.

DATA VALIDATION REPORT
Smith Kem – June 2018 GW Monitoring and Soil Sampling
Dioxin/Furan Compounds by Method 1613

This report documents the review of analytical data from the analysis of soil samples and the associated laboratory and field quality control (QC) samples. Samples were analyzed by Analytical Resources, Inc., Tukwila, Washington. Refer to the **SAMPLE INDEX** for a complete list of samples.

SDG	NUMBER OF SAMPLES	VALIDATION LEVEL
18D0139	2 Soil	EPA Stage 4
18D0297	1 Soil	EPA Stage 4
18F0343	3 Soil	EPA Stage 4
18G0195	1 Soil	EPA Stage 4
17F0202	2 Soil	EPA Stage 4

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

Sample results and related quality control data were received as an electronic data deliverable (EDD) and laboratory report. The EDD was verified against the laboratory report (10%). No errors were noted.

TECHNICAL DATA VALIDATION

The quality control (QC) requirements reviewed are summarized in the following table:

✓	Sample Receipt, Preservation, and Holding Times	✓	Laboratory Duplicates
✓	System Performance and Resolution Checks	✓	Ongoing Precision and Recovery (OPR)
✓	Initial Calibration (ICAL)	1	Field Duplicates
✓	Calibration Verification	✓	Target Analyte List
2	Blanks (Laboratory and Field)	✓	Reported Results
✓	Labeled Compounds	2	Compound Identification
1	Matrix Spike/Matrix Spike Duplicates (MS/MSD)	1	Calculation Verification

✓ *Stated method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.*

1 *Quality control results are discussed below, but no data were qualified.*

2 *Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.*

Blanks

In order to assess the impact of blank contamination on the reported sample results, action levels were established at five times the blank concentrations. If the concentrations in the associated field samples were less than the action levels, the results were qualified as not detected (U-7) at the reported concentrations.

The laboratory assigned an "EMPC" flag to an analyte result when a peak was detected but did not meet identification criteria. These values cannot be considered as positive identifications but are "estimated maximum possible concentrations". When a result in the method blank had an "EMPC" flag, the result was treated as not-detected at an elevated detection limit; therefore, no action level was established for these analytes. Blank qualifiers are not assigned to homolog groups.

Results for the following analytes were qualified as not-detected in one or more samples:

SDG	ANALYTE
18F0343	1,2,3,4,6,7,8-HpCDF (1 result), 1,2,3,4,6,7,8-HpCDD (1 result), OCDD (1 result)

No field blanks were submitted.

Matrix Spike/Matrix Spike Duplicates

Matrix spike/matrix spike duplicate analyses were not performed; they are not required by the method. Accuracy was evaluated using the labeled compound and ongoing precision and recovery (OPR) standard results. Precision was evaluated using the laboratory duplicate analyses. All acceptance criteria were met.

Field Duplicates

No field duplicates were submitted.

Compound Identification

The method requires the confirmation of 2,3,7,8-TCDF using an alternate GC column as the DB5 column that is typically used cannot fully separate 2,3,7,8-TCDF from closely eluting non-target TCDF isomers. The laboratory did not perform a second column confirmation; however, the laboratory uses an RTX-Dioxin2 column. This column provides adequate resolution of the TCDF isomers as indicated by the acceptable peak to valley ratios. Since the 2,3,7,8-TCDF resolution was acceptable, no action was necessary.

The laboratory assigned an "EMPC" flag to one or more analytes to indicate that the ion ratio criterion for positive identification was not met. Since the ion abundance ratio is the primary identification criterion for high resolution mass spectroscopy, an outlier indicates that the reported result may be a false positive. These "EMPC" flagged results were qualified as not detected (U-25) at the reported concentration. The laboratory also assigned "EMPC" flags to total homolog groups. In these cases, the result for the group was estimated (J-25).

Calculation Verification

Several results were verified by recalculation from the raw data. No calculation or transcription errors were found.

OVERALL ASSESSMENT

As determined by this evaluation, the laboratory followed the specified analytical method. Accuracy was acceptable as demonstrated by the labeled compound and OPR recoveries and precision was acceptable as demonstrated by the OPR and laboratory duplicate RPD values.

Detection limits were elevated based on ion ratio outliers and method blank contamination.

All data, as qualified, are acceptable for use.

DATA VALIDATION REPORT

Smith-Kem – June 2018 GW Monitoring and Soil Sampling Herbicides/Pesticides by Method SW8270D Mod: GC-MS/MS

This report documents the review of analytical data from the analysis of groundwater and soil samples and the associated laboratory and field quality control (QC) samples. Pacific Agricultural Laboratory, Sherwood, Oregon, analyzed the samples. Refer to the **Sample Index** for a complete list of samples.

SDG	NUMBER OF SAMPLES	VALIDATION LEVEL
P181220	11 Groundwater & 12 Soil	EPA Stage 2A
P181296	7 Soil	EPA Stage 2A
P172891	11 Groundwater	EPA Stage 2A

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

All SDG: The original chains-of-custody and sample login forms were missing from the lab report. The laboratory was contacted and submitted all missing documentation.

EDD TO HARDCOPY VERIFICATION

Ten percent (10%) of the results in the laboratory EDD were verified by comparison to the laboratory data package.

TECHNICAL DATA VALIDATION

This report documents the review of analytical QC requirements as listed in the following table.

1	Sample Receipt, Preservation, and Holding Times	2	Surrogate Compounds
✓	Laboratory Blanks	1	Field Duplicates
1	Field Blanks	✓	Target Analyte List
1	Laboratory Control Samples (LCS/LCSD)	1	Reporting Limits
2	Matrix Spikes/Matrix Spike Duplicates (MS/MSD)	✓	Reported Results

✓ Stated method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.

1 Quality control results are discussed below, but no data were qualified.

2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Sample Receipt, Preservation, and Holding Times

SDG P181296: The temperature of the cooler upon receipt at the laboratory was greater than the upper control limit of 6°C, at 12°C. The data were not affected; no action was taken.

SDG P172891: One of the cooler temperatures upon receipt at the laboratory was greater than the upper control limit of 6°C, at 8.4°C. The data were not affected; no action was taken.

Field Blanks

No field blanks were submitted.

Laboratory Control Samples

Because this is a screening method, the lab did not spike for the full suite of analytes. Only atrazine, ethofumesate, and napropamide were spiked. All recoveries were acceptable.

Matrix Spike/Matrix Spike Duplicates

Only atrazine, ethofumesate, and napropamide were spiked. With the following exception, the recoveries were acceptable.

SDG P181296: The matrix spike/matrix spike duplicate (MS/MSD) was performed using Sample FS-26-5-6. The MSD percent recovery (%R) for p-p'-DDT was greater than the upper control limit but was in control in the associated MS sample. No data were qualified for the single outlier.

SDG P172891: Sixteen compounds recovered less than the lower control limit in the MS samples, but were in control in the associated MSD sample; no data were qualified for a single outlier. The RPD values for all compounds were greater than the control limit, however, only atrazine and simazine were detected in the parent sample and were estimated (J-9).

Surrogate Compounds

The surrogate compound DCHB was added to all samples. With the following exceptions, the surrogate recoveries were within the laboratory control limits.

SDG P172891: The surrogate recoveries for samples MW-04-112817 and MW-01-112817 were less than the lower control limit; the results in these samples were estimated (J/UJ-13L).

Field Duplicates

The relative percent difference (RPD) control limit is 75% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the difference between the sample and duplicate must be less than the RL (waters) or 2x the RL (soils).

SDG P181220: Samples MW-6-062018 and MW-X-062018 were identified as field duplicates. All acceptance criteria were met.

SDG P181296: Samples FS-26-2.5-3.5 and FS-XX-2.5-3.5 were identified as field duplicates. All acceptance criteria were met.

SDG P172891: Samples MW-06-112817 and MW-X-112817 were identified as field duplicates. All acceptance criteria were met.

Reporting Limits

SDG P181220: Several reporting limits are greater than QAPP required reporting limits due to required dilutions.

OVERALL ASSESSMENT

As was determined by this evaluation, the laboratory followed the modified 8270 residue screening method. With the exceptions noted above, accuracy was acceptable as demonstrated by the laboratory control sample/laboratory control sample duplicate (LCS/LCSD), MS/MSD, and surrogate %R values and precision was acceptable as demonstrated by the LCS/LCSD, MS/MSD, and field duplicate RPD values.

Results were estimated due to surrogate recovery outliers and MS/MSD precision outliers.

All data, as qualified, are acceptable for use.

DATA VALIDATION REPORT

Smith-Kem – June 2018 GW Monitoring and Soil Sampling Pesticides by Method SW8081B Mod

This report documents the review of analytical data from the analysis of groundwater and soil samples and the associated laboratory and field quality control (QC) samples. Pacific Agricultural Laboratory, Sherwood, Oregon, analyzed the samples. Refer to the **Sample Index** for a complete list of samples.

SDG	NUMBER OF SAMPLES	VALIDATION LEVEL
P181220	11 Groundwater & 11 Soil	EPA Stage 2A
P181296	7 Soil	EPA Stage 2A
P172891	11 Groundwater	EPA Stage 2A

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

original chains-of-custody and sample login forms were missing from the lab report. The laboratory was contacted and submitted all missing documentation.

EDD TO HARDCOPY VERIFICATION

Ten percent (10%) of the results in the laboratory EDD were verified by comparison to the laboratory data package.

TECHNICAL DATA VALIDATION

This report documents the review of analytical QC requirements as listed in the following table.

1	Sample Receipt, Preservation, and Holding Times	✓	Surrogate Compounds
✓	Laboratory Blanks	1	Field Duplicates
1	Field Blanks	✓	Target Analyte List
1	Laboratory Control Samples (LCS/LCSD)	✓	Reporting Limits
1	Matrix Spikes/Matrix Spike Duplicates (MS/MSD)	✓	Reported Results

✓ Stated method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.

1 Quality control results are discussed below, but no data were qualified.

2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Sample Receipt, Preservation, and Holding Times

SDG P181296: The temperature of the cooler upon receipt at the laboratory was greater than the upper control limit of 6°C, at 12°C. The data were not affected; no action was taken.

SDG P172891: One of the cooler temperatures upon receipt at the laboratory was greater than the upper control limit of 6°C, at 8.4°C. The data were not affected; no action was taken.

Field Blanks

No field blanks were submitted.

Laboratory Control Samples

Only dieldrin, oxadiazon, and chlorpyrifos were spiked. All recoveries were acceptable.

Matrix Spike/Matrix Spike Duplicates

Only dieldrin, oxadiazon, and chlorpyrifos were spiked. All recoveries were acceptable.

Field Duplicates

The relative percent difference (RPD) control limit is 75% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the difference between the sample and duplicate must be less than the RL (waters) or 2x the RL (soils).

SDG P181220: Samples MW-6-062018 and MW-X-062018 were identified as field duplicates. All acceptance criteria were met.

SDG P181296: Samples FS-26-2.5-3.5 and FS-XX-2.5-3.5 were identified as field duplicates. All acceptance criteria were met.

SDG P172891: Samples MW-06-112817 and MW-X-112817 were identified as field duplicates. All acceptance criteria were met.

Reporting Limits

The toxaphene reporting limits are greater than QAPP required reporting limits.

OVERALL ASSESSMENT

As was determined by this evaluation, the laboratory followed a modified version of this analytical method. Accuracy was acceptable as demonstrated by the laboratory control sample/laboratory control sample duplicate (LCS/LCSD), matrix spike/matrix spike duplicate (MS/MSD), and surrogate %R values and precision was acceptable as demonstrated by the LCS/LCSD, MS/MSD, and field duplicate RPD values.

No results were qualified for any reason.

All data, as reported, are acceptable for use.

DATA VALIDATION REPORT

Smith-Kem – June 2018 GW Monitoring and Soil Sampling Herbicides by Method SW8151A: GC-MS/MS

This report documents the review of analytical data from the analysis of groundwater and soil samples and the associated laboratory quality control (QC) samples. Pacific Agricultural Laboratory, Sherwood, Oregon, analyzed the samples. Refer to the **Sample Index** for a complete list of samples.

SDG	NUMBER OF SAMPLES	VALIDATION LEVEL
P181220	11 Groundwater & 11 Soil	EPA Stage 2A
P181296	7 Soil	EPA Stage 2A
P172891	11 Groundwater	EPA Stage 2A

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

: The original chains-of-custody and sample login forms were missing from the lab report. The laboratory was contacted and submitted all missing documentation.

EDD TO HARDCOPY VERIFICATION

Ten percent (10%) of the results in the laboratory EDD were verified by comparison to the laboratory data package.

SDG P172891: The lab report and EDD were missing pentachlorophenol results for all field samples. The laboratory was contacted and provided a revised laboratory report and EDD.

TECHNICAL DATA VALIDATION

This report documents the review of analytical QC requirements as listed in the following table.

1	Sample Receipt, Preservation, and Holding Times	2	Surrogate Compounds
✓	Laboratory Blanks	1	Field Duplicates
1	Field Blanks	✓	Target Analyte List
2	Laboratory Control Samples (LCS/LCSD)	1	Reporting Limits
2	Matrix Spike/Matrix Spike Duplicates (MS/MSD)	2	Reported Results

✓ Stated method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.

1 Quality control results are discussed below, but no data were qualified.

2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Sample Receipt, Preservation, and Holding Times

SDG P181296: The temperature of the cooler upon receipt at the laboratory was greater than the upper control limit of 6°C, at 12°C. The data were not affected; no action was taken.

SDG P172891: One of the cooler temperatures upon receipt at the laboratory was greater than the upper control limit of 6°C, at 8.4°C. The data were not affected; no action was taken.

Field Blanks

No field blanks were submitted.

Laboratory Control Samples

Laboratory control sample/laboratory control sample duplicates (LCS/LCSD) were analyzed at the required frequency of one per batch of 20 or fewer samples. With the following exceptions, all spike recoveries were within the laboratory control limits.

SDG P181296: The LEC/LCSD percent recovery values (%R) for dicamba, dinoseb, and pentachlorophenol were less than the lower control limit; all associated sample results were estimated (J/UJ-10L) to indicate a potential low bias.

SDG P172891: The LC/LCSD relative percent difference (RPD) values for 2,4,5-T, MCPA, and 2,4,5-TP were greater than the control limit; all detected sample results were estimated (J-9).

Matrix Spike Sample/Matrix Spike Sample Duplicates

Matrix spike/matrix spike duplicate (MS/MSD) samples were analyzed at the appropriate frequency. When the MS/MSD %R values indicated a potential low bias, associated results were estimated (J/UJ-8L). Only the associated positive results were estimated (J-8H) if the %R values indicated a potential high bias. No action was taken unless both the MS and MSD %R values were outside the control limits. Precision was evaluated using the MS/MSD RPD values. Associated positive results were estimated (J-9) if the RPD value was greater than the control limit. Qualifiers were only issued to the parent sample.

SDG P181220: The MS/MSD for the soil analyses were performed using Sample MW-15-3-4. The MS recovery for 2,4-D was less than the lower control limit but was in control in the associated MSD sample; no data were qualified for a single outlier. The %R values for dinoseb and pentachlorophenol were less than the lower control limit. The results in the parent sample were estimated (UJ-8L).

SDG P181296: For the MS/MSD analyzed using Sample FS-26-5-6, the MS recovery for MCPA was greater than the upper control limit but was in control in the associated MSD sample; no data were qualified for a single outlier. The %R values for dinoseb, 2,4-DB, and pentachlorophenol were less than the lower control limit. The results in the parent sample were estimated (J/UJ-8L). The RPD value for dinoseb was greater than the control limit; the result in the parent sample was estimated (J-9).

For the MS/MSD analyzed using Sample FS-34-3-4, the MSD recoveries for MCPA and 2,4-D were less than the lower control limit but were in control in the associated MSD sample; no data were qualified for the single outliers. The %R values for dinoseb, MCPP, dicamba, and pentachlorophenol were less than the lower control limit. The results in the parent sample were estimated (UJ-8L).

SDG P172891: The MS/MSD analyses were performed using Sample MW-08-112817. The %R values for dicamba were less than the lower control limit; the result in the parent sample was estimated (J-8L). The RPD values for MCPA and MCPP were greater than the control limit; detected values in the parent sample were estimated (J-9).

Surrogate Compounds

The surrogate compound DCPAA was added to all samples. With the following exceptions, the surrogate recoveries were within the laboratory control limits.

SDG P181220: The surrogate recovery for sample MW-17-5-5.5 was greater than the upper control limit; the detected results were estimated (J-13H) to indicate a potential high bias.

SDG P172891: The surrogate recovery for sample MW-05-112817 was less than the lower control limit. There were no target analytes detected in this sample; results were estimated (UJ-13L).

Field Duplicates

The relative percent difference (RPD) control limit is 75% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the difference between the sample and duplicate must be less than the RL (waters) or 2x the RL (soils).

SDG P181220: Samples MW-6-062018 and MW-X-062018 were identified as field duplicates. All acceptance criteria were met.

SDG P181296: Samples FS-26-2.5-3.5 and FS-XX-2.5-3.5 were identified as field duplicates. All acceptance criteria were met.

SDG P172891: Samples MW-06-112817 and MW-X-112817 were identified as field duplicates. All acceptance criteria were met.

Reporting Limits

Several reporting limits are greater than QAPP required reporting limits due to required dilutions.

Reported Results

SDG P181220: The MCPA result for Sample MW-4-062018 was flagged by the laboratory as having been tentatively identified due to matrix interference. The MCPA result was estimated (J-23).

SDG P181296: The 2,4-DB result for Sample FS-26-5-6 was flagged by the laboratory as having been tentatively identified due to matrix interference. The MCPA result was estimated (J-23).

OVERALL ASSESSMENT

As was determined by this evaluation, the laboratory followed the specified analytical method. With the exceptions noted above, accuracy was acceptable as demonstrated by the LCS/LCSD, MS/MSD, and surrogate %R values and precision was acceptable as demonstrated by the LCS/LCSD, MS/MSD, and field duplicate RPD values.

Results were estimated based on: LCS/LCSD, MS/MSD, and surrogate %R outliers; MS/MSD and LCS/LCSD RPD outliers; and matrix interferences.

All data, as qualified, are acceptable for use.

APPENDIX A

DATA QUALIFIER DEFINITIONS

REASON CODES

AND CRITERIA TABLES

DATA VALIDATION QUALIFIER CODES

Based on National Functional Guidelines

The following definitions provide brief explanations of the qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents the approximate concentration.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

The following is an EcoChem qualifier that may also be assigned during the data review process:

DNR	Do not report; a more appropriate result is reported from another analysis or dilution.
-----	---

DATA QUALIFIER REASON CODES

Group	Code	Reason for Qualification
Sample Handling	1	Improper Sample Handling or Sample Preservation (i.e., headspace, cooler temperature, pH, summa canister pressure); Exceeded Holding Times
Instrument Performance	24	Instrument Performance (i.e., tune, resolution, retention time window, endrin breakdown, lock-mass)
	5A	Initial Calibration (RF, %RSD, r^2)
	5B	Calibration Verification (CCV, CCAL; RF, %D, %R) Use bias flags (H,L) ¹ where appropriate
	5C	Initial Calibration Verification (ICV %D, %R) Use bias flags (H,L) ¹ where appropriate
Blank Contamination	6	Field Blank Contamination (Equipment Rinsate, Trip Blank, etc.)
	7	Lab Blank Contamination (i.e., method blank, instrument blank, etc.) Use low bias flag (L) ¹ for negative instrument blanks
Precision and Accuracy	8	Matrix Spike (MS and/or MSD) Recoveries Use bias flags (H,L) ¹ where appropriate
	9	Precision (all replicates: LCS/LCSD, MS/MSD, Lab Replicate, Field Replicate)
	10	Laboratory Control Sample Recoveries (a.k.a. Blank Spikes) Use bias flags (H,L) ¹ where appropriate
	12	Reference Material Use bias flags (H,L) ¹ where appropriate
	13	Surrogate Spike Recoveries (a.k.a. labeled compounds, recovery standards) Use bias flags (H,L) ¹ where appropriate
Interferences	16	ICP/ICP-MS Serial Dilution Percent Difference
	17	ICP/ICP-MS Interference Check Standard Recovery Use bias flags (H,L) ¹ where appropriate
	19	Internal Standard Performance (i.e., area, retention time, recovery)
	22	Elevated Detection Limit due to Interference (i.e., chemical and/or matrix)
	23	Bias from Matrix Interference (i.e. diphenyl ether, PCB/pesticides)
Identification and Quantitation	2	Chromatographic pattern in sample does not match pattern of calibration standard
	3	2 nd column confirmation (RPD or %D)
	4	Tentatively Identified Compound (TIC) (associated with NJ only)
	20	Calibration Range or Linear Range Exceeded
	25	Compound Identification (i.e., ion ratio, retention time, relative abundance, etc.)
Miscellaneous	11	A more appropriate result is reported (multiple reported analyses i.e., dilutions, re-extractions, etc. Associated with "R" and "DNR" only)
	14	Other (See DV report for details)
	26	Method QC information not provided

¹H = high bias indicated

L = low bias indicated

Dioxin/Furan Analysis by HRMS
(Based on Dioxin NFG 2011 and Methods EPA 1613B and SW-846 8290)

QC Element	Acceptance Criteria	Source of Criteria	Action for Non-Conformance	Reason Code	Discussion and Comments
Sample Handling					
Cooler/Storage Temperature Preservation	Waters/Solids ≤ 6°C & in the dark Tissues < -10°C & in the dark Preservation Aqueous: If Cl ₂ is present Thiosulfate must be added and if pH > 9 it must be adjusted to 7 - 9	NFG ⁽¹⁾ Method ⁽²⁾	J(pos)/R(ND) if thiosulfate not added if Cl ₂ present; J(pos)/UJ(ND) if pH not adjusted J(pos)/UJ(ND) if temp > 20°C	1	EcoChem PJ, see TM-05
Holding Time	If properly stored, 1 year or: Extraction (all matrices): 30 days from collection Analysis (all matrices): 45 days from extraction	NFG ⁽¹⁾ Method ⁽²⁾	If not properly stored or HT exceedance: J(pos)/UJ(ND)	1	EcoChem PJ, see TM-05 Gross exceedance = > 1 year 2011 NFG Note: Under CWA, SDWA, and RCRA the HT for H ₂ O is 7 days.
Instrument Performance					
Mass Resolution (Tuning)	PFK (Perfluorokerosene) ≥10,000 resolving power at m/z 304.9824. Exact mass of m/z 380.9760 w/in 5 ppm of theoretical value (380.97410 to 380.97790) . Analyzed prior to ICAL and at the start and end of each 12 hr. shift.	NFG ⁽¹⁾ Method ⁽²⁾	R(pos/ND) all analytes in all samples associated with the tune	24	Notify PM
Windows Defining Mix	Peaks for first and last eluters must be within established retention time windows for each selector group (chlorination level)	NFG ⁽¹⁾ Method ⁽²⁾	If peaks are not completely within windows (clipped): If natives are ok, J(pos)/UJ(ND) homologs (Totals) If natives are affected, R all results for that selector group	24	Notify PM
Column Performance Mix	Both mixes must be analyzed before ICAL and CCAL Valley < 25% (valley = (x/y)*100%) where x = ht. of TCDD (or TCDF) & y = baseline to bottom of valley For all isomers eluting near the 2378-TCDD (TCDF) peak (TCDD only for 8290)	NFG ⁽¹⁾ Method ⁽²⁾	J(pos) if valley > 25%	24	EcoChem PJ, see TM-05, Rev. 2; Note: TCDF is evaluated only if second column confirmation is performed
Initial Calibration Sensitivity	S/N ratio > 10 for all native and labeled compounds in CS1 std.	NFG ⁽¹⁾ Method ⁽²⁾	If <10, elevate Det. Limit or R(ND)	5A	
Initial Calibration Selectivity	Ion Abundance ratios within QC limits (Table 8 of method 8290) (Table 9 of method 1613B)	NFG ⁽¹⁾ Method ⁽²⁾	If 2 or more ion ratios are out for one compound in ICAL, J(pos)	5A	EcoChem PJ, see TM-05, Rev. 2

Dioxin/Furan Analysis by HRMS
(Based on Dioxin NFG 2011 and Methods EPA 1613B and SW-846 8290)

QC Element	Acceptance Criteria	Source of Criteria	Action for Non-Conformance	Reason Code	Discussion and Comments
Instrument Performance (continued)					
Initial Calibration (Minimum 5 stds.) Stability	%RSD < 20% for native compounds %RSD < 30% for labeled compounds (%RSD < 35% for labeled compounds under 1613b)	NFG ⁽¹⁾ Method ⁽²⁾	J(pos) natives if %RSD > 20%	5A	EcoChem PJ, see TM-05, Rev. 2
	Absolute RT of ¹³ C ₁₂ -1234-TCDD >25 min on DB5 & >15 min on DB-225	NFG ⁽¹⁾ Method ⁽²⁾	Narrate, no action		
Continuing Calibration (Prior to each 12 hr. shift) Sensitivity	S/N ratio for CS3 standard > 10	NFG ⁽¹⁾ Method ⁽²⁾	If <10, elevate Det. Limit or R(ND)	5B	
Continuing Calibration (Prior to each 12 hr. shift) Selectivity	Ion Abundance ratios within QC limits (Table 8 of method 8290) (Table 9 of method 1613B)	NFG ⁽¹⁾ Method ⁽²⁾	For congener with ion ratio outlier, J(pos) natives in all samples associated with CCAL. No action for labeled congener ion ratio outliers.	25	EcoChem PJ, see TM-05
Continuing Calibration (Prior to each 12 hr. shift) Stability	%D +/-20% for native compounds %D +/-30% for labeled compounds (Must meet limits in Table 6, Method 1613B) If %D in the closing CCAL are within 25%/35%, the mean RF from the two CCAL may be used to calculate samples (Section 8.3.2.4 of 8290).	NFG ⁽¹⁾ Method ⁽²⁾	Labeled compounds: Narrate, no action. Native compounds: 1613: J(pos)/UJ(ND) if %D is outside Table 6 limits J(pos)/R(ND) if %D is +/-75% of Table 6 limits 8290: J(pos)/UJ(ND) if %D = 20% - 75% J(pos)/R(ND) if %D > 75%	5B (H,L) ³	
	Absolute RT of ¹³ C ₁₂ -1234-TCDD and ¹³ C ₁₂ -123789-HxCDD should be ± 15 seconds of ICAL RRT for all other compounds must meet criteria listed in Table 2 Method 1316.	NFG ⁽¹⁾ Method ⁽²⁾	Narrate, no action	5B	EcoChem PJ, see TM-05
Blank Contamination					
Method Blank (MB)	MB: One per matrix per batch of (of ≤ 20 samples) No detected compounds > RL	NFG ⁽¹⁾ Method ⁽²⁾	U(pos) if result is < 5X action level.	7	Hierarchy of blank review: #1 - Review MB, qualify as needed #2 - Review FB, qualify as needed
Field Blank (FB)	FB: frequency as per QAPP No detected compounds > RL		U(pos) if result is < 5X action level.	6	

Dioxin/Furan Analysis by HRMS
(Based on Dioxin NFG 2011 and Methods EPA 1613B and SW-846 8290)

QC Element	Acceptance Criteria	Source of Criteria	Action for Non-Conformance	Reason Code	Discussion and Comments
Precision and Accuracy					
MS/MSD (recovery)	MS/MSD not typically required for HRMS analyses. If lab analyzes MS/MSD then one set per matrix per batch (of ≤ 20 samples) Use most current laboratory control limits	EcoChem standard policy	J(pos) if both %R > UCL - high bias J(pos)/UJ(ND) if both %R < LCL - low bias J(pos)/R(ND) if both %R < 10% - very low bias J(pos)/UJ(ND) if one > UCL & one < LCL, with no bias PJ if only one %R outlier	8 (H,L) ³	No action if only one spike %R is outside criteria. No action if parent concentration is > 4x the amount spiked. Qualify parent sample only unless other QC indicates systematic problems.
MS/MSD (RPD)	MS/MSD not typically required for HRMS analyses. If lab analyzes MS/MSD then one set per matrix per batch (of ≤ 20 samples) Use most current laboratory control limits	EcoChem standard policy	J(pos) in parent sample if RPD > CL	9	Qualify parent sample only.
LCS (or OPR)	One per lab batch (of ≤ 20 samples) Use most current laboratory control limits or Limits from Table 6 of 1613B	NFG ⁽¹⁾ Method ⁽²⁾	J(pos) if %R > UCL - high bias J(pos)/UJ(ND) if %R < LCL - low bias J(pos)/R(ND) if %R < 10% - very low bias	10 (H,L) ³	No action if only one spike %R is outside criteria, when LCSD is analyzed. Qualify all associated samples.
LCS/LCSD (RPD)	LCSD not typically required for HRMS analyses. One set per matrix and batch of 20 samples RPD < 35%	Method ⁽²⁾ Ecochem standard policy	J(pos) assoc. compound in all samples if RPD > CL	9	Qualify all associated samples.
Lab Duplicate (RPD)	Lab Dup not typically required for HRMS analyses. One per lab batch (of ≤ 20 samples) Use most current laboratory control limits	EcoChem standard policy	J(pos)/UJ(ND) if RPD > CL	9	
Labeled Compounds (Internal Standards)	Added to all samples %R = 40% - 135% in all samples 8290 %R must meet limits in Table 7 Method 1613B	NFG ⁽¹⁾ Method ⁽²⁾	J(pos) if %R > UCL - high bias J(pos)/UJ(ND) if %R < LCL - low bias J(pos)/R(ND) if %R < 10% - very low bias	13 (H,L) ³	
Field Duplicates	Solids: RPD < 50% OR difference < 2X RL (for results < 5X RL) Aqueous: RPD < 35% OR difference < 1X RL (for results < 5X RL)	EcoChem standard policy	Narrate and qualify if required by project	9	Use professional judgment

**Dioxin/Furan Analysis by HRMS
(Based on Dioxin NFG 2011 and Methods EPA 1613B and SW-846 8290)**

QC Element	Acceptance Criteria	Source of Criteria	Action for Non-Conformance	Reason Code	Discussion and Comments
Compound ID and Calculation					
Quantitation/ Identification	All ions for each isomer must maximize within ± 2 seconds. S/N ratio >2.5 Ion ratios must meet criteria listed in Table 8 Method 8290, or Table 9 of 1613B; RRTs w/in limits in Table 2 of 1613B	NFG ⁽¹⁾ Method ⁽²⁾	Narrate in report; qualify if necessary NJ(pos) for retention time outliers. U(pos) for ion ratio outliers.	25	EcoChem PJ, see TM-05
EMPC (estimated maximum possible concentration)	If quantitation identification criteria are not met, laboratory should report an EMPC value.	NFG ⁽¹⁾ Method ⁽²⁾	If laboratory correctly reported an EMPC value, qualify the native compound U(pos) to indicate that the value is a detection limit and qualify total homolog groups J (pos)	25	Use professional judgment See TM-18
Interferences	Interferences from chlorodiphenyl ether compounds	NFG ⁽¹⁾ Method ⁽²⁾	J(pos)/UJ(ND) if present	23	See TM-16
	Lock masses must not deviate $\pm 20\%$ from values in Table 8 of 1613B	Method ⁽²⁾	J(pos)/UJ(ND) if present	24	See TM-17
Second Column Confirmation	All 2,3,7,8-TCDF hits must be confirmed on a DB-225 (or equiv) column. All QC criteria must also be met for the confirmation analysis.	NFG ⁽¹⁾ Method ⁽²⁾	Report the DB-225 value. If not performed use PJ.	3	DNR-11 DB5 result if both results from both columns are reported. EcoChem PJ, see TM-05
Calculation Check	Check 10% of field & QC sample results	EcoChem standard policy	Contact laboratory for resolution and/or corrective action	na	Full data validation only.
Electronic Data Deliverable (EDD)					
Verification of EDD to hardcopy data	EcoChem verify @ 10% unless problems noted; then increase level up to 100% for next several packages.		Depending on scope of problem, correct at EcoChem (minor issues) to resubmittal by laboratory (major issues).	na	EcoChem Project Manager and/or Database Administrator will work with lab to provide long-term corrective action.
Dilutions, Re-extractions and/or Reanalyses	Report only one result per analyte	Standard reporting policy	Use "DNR" to flag results that will not be reported.	11	

(pos) - positive (detected) results; (ND) - not detected results

³ NFG 2013 suggests using "+" / "-" to indicate bias; EcoChem has chosen "H" = high bias indicated; "L" = low bias indicated.

Pesticides by GC
(Based on Organic NFG 1999 & 2008 and SW-846 Method 8081B)

QC Element	Acceptance Criteria (NFG)	Source of Criteria	Action for Non-Conformance	Reason Code	Discussion and Comments
Sample Handling					
Cooler/Storage Temperature Preservation	4°C ± 2°C Tissue/sediments (may be frozen -20°C)	NFG ⁽²⁾ Method ⁽³⁾	J (pos)/UJ (ND) if greater than 6° C	1	Use Professional Judgment (PJ) to qualify for temperature outlier. Current SW846 criterion is ≤ 6° C ⁽³⁾
Holding Time	<i>Extraction Aqueous:</i> 7 days from collection <i>Extraction Solid:</i> 14 days from collection <i>Extraction Tissue/Sediment (frozen):</i> 1 year <i>Analysis (all matrices):</i> 40 days from extraction	NFG ⁽²⁾ Method ⁽³⁾	J (pos)/UJ (ND) if ext/analyzed > HT J (pos)/R (ND) if gross exceedance (> 2x HT)	1	Gross exceedance > 2x HT, as per NFG 1999
Instrument Performance					
Resolution Check	Beginning of ICAL sequence Within RTW and resolution > 60%	NFG ⁽²⁾	NJ (pos)/R (ND) results	14	CLP criterion; might not be submitted with SW846 data package
Retention Times	Surrogates: TCMX (± 0.05); DCB (± 0.10) Target analytes: within RTW	NFG ⁽²⁾ Method ⁽³⁾	NJ (pos)/R (ND) results for analytes with RT shifts	24	Use PJ based on examination of raw data
Breakdown	DDT Breakdown: ≤ 20% Endrin Breakdown: ≤ 20% Combined Breakdown: ≤ 30% Compounds within RTW	NFG ⁽²⁾ Method ⁽³⁾	If 4,4'-DDT is detected: J (pos) 4,4'-DDT, 4,4'-DDD and 4,4'-DDE If 4,4'-DDT is ND and either 4,4'-DDD or 4,4'-DDE are detected: R (ND) 4,4'-DDT, NJ (pos) DDD and DDE If Endrin is detected: J (pos) Endrin, Endrin Aldehyde and Endrin Ketone If Endrin is ND and either EA or EK are detected: R (ND) Endrin, NJ (pos) EA and EK	5A	Method 8081B breakdown criterion: ≤ 15%. For combined breakdown outliers, apply qualifiers considering the degree of individual breakdown.

Pesticides by GC
(Based on Organic NFG 1999 & 2008 and SW-846 Method 8081B)

QC Element	Acceptance Criteria (NFG)	Source of Criteria	Action for Non-Conformance	Reason Code	Discussion and Comments
Instrument Performance (continued)					
Initial Calibration	Single Component Compounds: RSD ≤ 20% alpha-BHC and delta-BHC: RSD ≤ 25% toxaphene and surrogates: RSD ≤ 30% or correlation coefficient (r-value) ≥ 0.995 OR Minimum 6-point with coefficient of determination (r ² -value) ≥ 0.99	NFG ⁽²⁾ Method ⁽⁴⁾	J (pos) if %RSD greater than control limit or r-value < 0.995 or r ² -value < 0.99	5A	Refer to TM-01 for additional information. Use bias flags (H,L) ⁽⁶⁾ where appropriate
Initial Calibration Verification (ICV)	No NFG criteria Project specific	Project QAPP	J (pos) if > UCL J (pos)/UJ (ND) if < LCL	5B	Use bias flags (H,L) ⁽⁶⁾ where appropriate
Continuing Calibration	%D ± 20% Analyzed prior to each 12 hour shift	Method ⁽³⁾	If > 20% (high bias): J (pos) If < 20% (low bias): J (pos)/UJ (ND)	5B	Refer to TM-01 for additional information. Use bias flags (H,L) ⁽⁶⁾ where appropriate
Blank Contamination					
Method Blank (MB)	One per matrix per batch (of ≤ 20 samples) No detected compounds > RL	NFG ⁽¹⁾ Method ⁽³⁾	U (pos) if result is less than appropriate 5X action level.	7	Hierarchy of blank review: #1 - Review MB and IB, qualify as needed #2 - Review FB, qualify as needed Note: Actions as per NFG 1999 Note: IB not required by method
Field Blank (FB)	FB: frequency as per QAPP No detected compounds > RL	NFG ⁽¹⁾ Method ⁽³⁾	U (pos) if result is less than appropriate 5X action level.	6	
Instrument Blanks (IB)	Analyzed at the beginning and end of every 12 hour sequence No analyte > CRQL	NFG ⁽¹⁾	U (pos) if result is less than appropriate 5X action level.	7

(Based on Organic NFG 1999 & 2008 and SW-846 Method 8081B)

QC Element	Acceptance Criteria (NFG)	Source of Criteria	Action for Non-Conformance	Reason Code	Discussion and Comments
Precision and Accuracy					
MS/MSD (recovery)	One set per matrix per batch (of ≤ 20 samples) Method or project acceptance limits	NFG ⁽²⁾ Method ⁽³⁾	Qualify parent only unless other QC indicates systematic problems. J (pos) if both %R > upper control limit (UCL) J (pos)/UJ (ND) if both %R < lower control limit (LCL) J (pos)/R (ND) if both %R < 10%	8	No action if only one spike %R is outside criteria No action if native analyte conc. > 5x the amount spiked Use bias flags (H,L) ⁽⁶⁾ where appropriate
MS/MSD (RPD)	One set per matrix per batch (of ≤ 20 samples) Method or project acceptance limits	NFG ⁽²⁾ Method ⁽³⁾	Qualify parent only unless other QC indicates systematic problems. J (pos) if RPD > control limit	9	No action if parent is ND
LCS	One per lab batch (of ≤ 20 samples) Method or project acceptance limits	NFG ⁽²⁾	J (pos) if %R > UCL J (pos)/UJ (ND) if %R < LCL J (pos)/R (ND) if %R < 10%	10	Qualify all associated samples. Use bias flags (H,L) ⁽⁶⁾ where appropriate
LCS/LCSD (RPD)	if analyzed use MS/MSD RPD criteria	NFG ⁽²⁾	J (pos) assoc. compound in all samples	9	LCSD not required by method or NFG
Surrogates	TCMX and DCBP added to every sample %R = 30% - 150% or project limits	NFG ⁽²⁾ Method ⁽³⁾	J (pos) if either %R > UCL J (pos)/UJ (ND) if either %R < LCL J (pos)/R (ND) if either %R < 10%	13	If %R < 10% (dilution is a factor), use PJ Use bias flags (H,L) ⁽⁶⁾ where appropriate
Internal Standards (if used)	Acceptable Range: IS area = 50% to 200% of CCAL area RT within 30 seconds of CC RT	Method ⁽³⁾	J (pos) if area > 200% J (pos)/UJ (ND) if area < 50% J (pos)/R (ND) if area < 25% RT > 30 seconds, narrate	19	

Pesticides by GC
(Based on Organic NFG 1999 & 2008 and SW-846 Method 8081B)

QC Element	Acceptance Criteria (NFG)	Source of Criteria	Action for Non-Conformance	Reason Code	Discussion and Comments
Precision and Accuracy (continued)					
Field Duplicates	Solids: RPD < 50% or difference < 2X RL (for results < 5X RL) Aqueous: RPD < 35% or difference < 1X RL (for results < 5X RL)	EcoChem standard practice	J (pos)/UJ (ND) Qualify only parent and field duplicate samples	9	Use project limits if specified
Compound Identification/Quantification					
Quantitation/ Identification	Between two columns: RPD < 40% or %D < 25% Within Retention Time Windows on both columns.	NFG ⁽²⁾ Method ⁽³⁾	J (pos) if RPD = 40% - 60% (25% - 60% for %D) NJ (pos) if > 60% R (pos) if RTW criterion not met	3	See TM-08 for additional info
Calibration Range	On-column concentration < high calibration standard	NFG ⁽²⁾ Method ⁽³⁾	J (pos) if conc > high standard and sample was not diluted	20	
Dilutions Re-extractions and/or Reanalyses	Report only one result per analyte	Standard reporting policy	Use "DNR" to flag results that will not be reported.	11	TM-04 for additional info
Sample Clean-up					
GPC/Sulfur/ Florisil	GPC or Florisil cleanup standards 80% - 120%	NFG ⁽²⁾	J (pos) if %R > UCL J (pos)/UJ (ND) if %R < LCL J (pos)/R (ND) if %R < 10%	14	Cleanups are optional under SW846 Use bias flags (H,L) ⁽⁶⁾ where appropriate

¹ National Functional Guidelines for Organic Data Review, October 1999

² National Functional Guidelines for Organic Data Review, June, 2008

³ Organochlorine Pesticides by Gas Chromatography USEPA Method SW846 8081B, Feb 2007, Rev. 2

⁴ SW846, Chapter 4, Organic Analytes

⁵ Determinative Chromatographic Separations, Method 8000C, March 2003, Rev.3

⁶ NFG 2013 suggests using "+ / -" to indicate bias; EcoChem has chosen "H" = high bias indicated; "L" = low bias indicated.

DATA VALIDATION CRITERIA

Semivolatile Organic Compounds by Gas Chromatography-Mass Spectroscopy (GC-MS)
 (Based on NFG 1999 & 2008 and SW-846 Method 8270D)

QC Element	Acceptance Criteria	Source of Criteria	Action for Non-Conformance	Reason Code	Discussion and Comments
Sample Handling					
Cooler/Storage Temperature Preservation	4°C±2°C sediment/tissues may require storage at -20°C	NFG ⁽¹⁾ Method ⁽³⁾	If required by project: J (pos)/UJ (ND) if greater than 6° C	1	Use PJ for temp outliers; see TM20 Current SW846 criterion is ≤ 6° C ⁽³⁾
Holding Time	Extraction Aqueous: 7 days from collection Extraction Solid: 14 days from collection Analysis (all matrices): 40 days from extraction Holding time may be extended to 1 year for frozen sediments/tissues	NFG ⁽¹⁾ Method ⁽³⁾	J (pos)/UJ (ND) if HT exceeded J (pos)/R (ND) if gross exceedance (> 2x HT)	1	Gross exceedance = > 2x HT, as per 1999 NFG
Instrument Performance					
Tuning	DFTPP Beginning of each 12 hour period Use method or project acceptance criteria	NFG ⁽¹⁾ Method ⁽³⁾	R (pos/ND) all analytes in all samples associated with the tune	24	
Initial Calibration Sensitivity	RRF ≥ 0.05 except: RRF ≥ 0.01 poor responders *	NFG ⁽¹⁾ Method ⁽³⁾	Use PJ to qualify J (pos)/UJ (ND)	5A	TM-06 EcoChem Policy for the Evaluation and Qualification of GCMS Instrument Performance PJ - no action if response is stable (ICAL RSD and CCAL %D acceptable)
Initial Calibration Stability	Minimum 5 standards %RSD ≤ 20.0% except: %RSD ≤ 40.0% poor responders * or co-efficient of determination (r ²) > 0.99	NFG ⁽¹⁾ Method ⁽³⁾	J (pos) if %RSD > limit or r ² value < 0.99	5A	
Initial Calibration Verification Check	Prepared from second source; analyze after each ICAL Percent recovery limits = 70-130%	Method ⁽³⁾	J (pos) %R > UCL J (pos)/UJ (ND) %R < LCL	5A (H,L) ⁴	QAPP may have overriding accuracy limits.

DATA VALIDATION CRITERIA

Semivolatile Organic Compounds by Gas Chromatography-Mass Spectroscopy (GC-MS)
 (Based on NFG 1999 & 2008 and SW-846 Method 8270D)

QC Element	Acceptance Criteria	Source of Criteria	Action for Non-Conformance	Reason Code	Discussion and Comments
Instrument Performance (continued)					
Continuing Calibration Sensitivity	RRF \geq 0.05 except: RRF \geq 0.01 poor responders *	NFG ⁽¹⁾ Method ⁽³⁾	Use PJ to qualify J (pos)/UJ (ND)	5B	see ICAL RRF guidance
Continuing Calibration Stability	Prior to sample analysis and every 12 hours %D \leq 25% except: %D \leq 40.0% poor responders *	NFG ⁽¹⁾ Method ⁽³⁾	J (pos) - %D > control limit (high bias) J (pos)/UJ (ND) - %D < -control limit (low bias)	5B (H,L) ⁴	
Blank Contamination					
Method Blank (MB)	MB: One per matrix per batch of (of \leq 20 samples) No detected compounds > MDL	NFG ⁽²⁾ Method ⁽³⁾	U(pos) if result is < 5X or 10X action level	7	10X action level applies to phthalates only. 5X for all other target analytes Hierarchy of blank review: #1 - Review MB, qualify as needed #2 - Review FB , qualify as needed Note: Actions as per 1999 NFG
	No TICs present		R (pos) TICs using 10X rule	7	
Field Blank (FB)	No detected compounds > MDL	NFG ⁽²⁾ Method ⁽³⁾	U (pos) if result is < 5X or 10X action level	6	
Precision and Accuracy					
LCS/LCSD (recovery)	One per matrix per batch (of \leq 20 samples) LCSD not required by NFG or method Use method acceptance criteria/laboratory limits	Method ⁽³⁾	J (pos) if %R > UCL J (pos)/UJ (ND) if %R < LCL J (pos)/R (ND)%R < 10%	10 (H,L) ⁴	No action if only one spike %R is outside criteria when LCSD is analyzed, unless one recovery is <10%. QAPP may have overriding accuracy limits. Qualify all associated samples.
LCS/LCSD (RPD)	If LCSD analyzed RPD < lab limits	Method ⁽³⁾	J (pos)	9	Qualify all associated samples. QAPP may have overriding precision limits.

DATA VALIDATION CRITERIA

Semivolatile Organic Compounds by Gas Chromatography-Mass Spectroscopy (GC-MS)
 (Based on NFG 1999 & 2008 and SW-846 Method 8270D)

QC Element	Acceptance Criteria	Source of Criteria	Action for Non-Conformance	Reason Code	Discussion and Comments
Precision and Accuracy (continued)					
Reference Material (RM, SRM, or CRM)	Result \pm 20% of the 95% confidence interval of the true value for analytes	EcoChem standard policy	J (pos)/UJ (ND) if < LCL J (pos) if > UCL	12 (H,L) ⁴	QAPP may have overriding accuracy limits. Some manufacturers have different RM control limits
MS/MSD (recovery)	One per matrix per batch (of \leq 20 samples) Use method acceptance criteria/laboratory limits	NFG ⁽¹⁾ Method ⁽³⁾	J (pos) %R > UCL J (pos)/UJ (ND) if both %R < LCL J (pos)/R (ND) if both %R < 10% J (pos)/UJ (ND) if one > UCL & one < LCL, with no bias	8 (H,L) ⁴	No action if only one spike %R is outside criteria. No action if parent concentration is >4x the amount spiked. Qualify parent sample only.
MS/MSD (RPD)	One per matrix per batch (of \leq 20 samples) Use method acceptance criteria/laboratory limits	NFG ⁽¹⁾ Method ⁽²⁾	J (pos) in parent sample if RPD > CL	9	Qualify parent sample only
Surrogates	Minimum of 3 acid & 3 base/neutral (B/N) compounds added to all samples Within method control limits	NFG ⁽¹⁾ Method ⁽³⁾	J (pos) if %R > UCL J (pos)/UJ (ND) if %R < LCL J (pos)/R (ND) if %R < 10%	13 (H,L) ⁴	Qualify all compounds in associated fraction. Do not qualify if only 1 acid and/or 1 B/N surrogate is out, unless <10%. If 1 surrogate outlier < 10% then J (pos)/R (ND)
Internal Standards	Added to all samples Acceptable Range: IS area 50% to 200% of CCAL area RT within 30 seconds of CC RT	NFG ⁽¹⁾ Method ⁽³⁾	J (pos) if > 200% J (pos)/UJ (ND) if < 50% J (pos)/R (ND) if < 25% if RT >30 seconds use PJ	19	Qualify compounds quantified using particular internal standard
Field Duplicates	Solids: RPD < 50% OR difference < 2X RL (for results < 5X RL) Aqueous: RPD < 35% OR difference < 1X RL (for results < 5X RL)	EcoChem standard policy	J (pos)/UJ (ND) Qualify only parent and field duplicate samples	9	Use project limits if specified

DATA VALIDATION CRITERIA

Semivolatile Organic Compounds by Gas Chromatography-Mass Spectroscopy (GC-MS)
 (Based on NFG 1999 & 2008 and SW-846 Method 8270D)

QC Element	Acceptance Criteria	Source of Criteria	Action for Non-Conformance	Reason Code	Discussion and Comments
Compound Identification and Quantitation and Calculation					
Retention times and relative ion intensities	RRT within 0.06 of standard RRT Ion relative intensity within 20% of standard All ions in std. at > 10% intensity must be present in sample	NFG ⁽¹⁾ Method ⁽³⁾	U (pos) if identification criteria not met	25	
TICs	Major ions (>10%) in reference must be present in sample; intensities agree within 20%; check identification	NFG ⁽¹⁾ Method ⁽³⁾	NJ the TIC unless: R (pos) common laboratory contaminants	4	
Calibration Range	Results greater than highest calibration standard	EcoChem standard policy	Qualify J (pos)	20	If result from dilution analysis is not reported.
Dilutions, Re-extractions and/or Reanalyses	Report only one result per analyte	EcoChem standard policy	Use "DNR" to flag results that will not be reported.	11	TM-04 EcoChem Policy for Rejection/Selection Process for Multiple Results

(ND): Non-detects

³ Method SW846 8270D Semivolatile Organic Compounds by Gas Chromatography/Mass Spectrometry (GC/MS), Revision 4, February 2007.

⁴ NFG 2013 suggests using "+ / -" to indicate bias; EcoChem has chosen "H" = high bias indicated; "L" = low bias indicated.

* "Poor responder" compounds: acetophenone, atrazine, benzaldehyde, 1,1'-biphenyl, bis(2-ethylhexyl)phthalate, butylbenzylphthalate, caprolactam, carbazole, 4-chloroaniline, diethylphthalate, di-n-butylphthalate, 3-3'-dichlorobenzidine, dimethylphthalate, 2,4-dinitrophenol, 4,6-dinitro-2-methylphenol, di-n-octylphthalate, hexachlorobutadiene, hexachlorocyclopentadiene, 2-nitroaniline, 3-nitroaniline, 4-nitroaniline, 4-nitrophenol, N-nitrosodiphenylamine, 2,2'-oxybis-(1-chloropropane), 1,2,4,5-tetrachlorobenzene use a 0.010 RRF criterion.

Chlorinated Herbicides by GC, SW-846 Method 8151A

QC Element	Acceptance Criteria	Source of Criteria	Action for Non-Conformance	Reason Code	Discussion and Comments
Sample Handling					
Cooler/Storage Temperature Preservation	4°C±2°C Protected from light	NFG ⁽¹⁾ Method ⁽²⁾	J(pos)/UJ(ND) if > 6 deg. C (EcoChem PJ)	1	Use Professional Judgment (PJ) to qualify for temperature outlier.
Holding Time	Extraction Aqueous: 7 days from collection Extraction Solid: 14 days from collection Analysis (all matrices): 40 days from extraction	NFG ⁽¹⁾ Method ⁽²⁾	J(pos)/UJ(ND) if HT exceeded J(pos)/R(ND) if gross exceedance(> 2X HT)	1	Use PJ to qualify for holding time outlier. Gross exceedance = > 2X HT, as per 1999 NFG
Instrument Performance					
Retention Times	Target compounds: Within RTW established by the laboratory.	NFG ⁽¹⁾ Method ⁽²⁾	NJ(pos)/R(ND) results for analytes with RT shifts	5B	Analyte RRT should be within ± 0.06 RRT units of the standard RRT (opening CCAL or midpoint ICAL standard). For full DV, use PJ based on examination of raw data.
Initial Calibration	5 standard minimum. Calibration may be internal or external. RSD ≤20%	NFG ⁽¹⁾ Method ⁽²⁾	J (pos) if > UCL J (pos)/UJ (ND) if < LCL OR r-value ≥ 0.99	5A	TM-01 for additional information EcoChem Policy for the Evaluation of GC & HPLC Initial and Continuing Calibration using Method-Specific Control Limits. Calibration from methyl ester compounds (that have not undergone hydrolysis and esterification) will need MW correction.
Continuing Calibration (Prior to each 12 hour shift or bracketing for external standard calibration)	%D ± 20%	NFG ⁽¹⁾ Method ⁽²⁾	If > 20% (high bias): J (pos) If <20% (low bias: J (pos)/UJ (ND)	5A (H,L) ³	TM-01 for additional information EcoChem Policy for the Evaluation of GC & HPLC Initial and Continuing Calibration using Method-Specific Control Limits
Blank Contamination					
Method Blank (MB)	MB: One per matrix per batch of (of ≤ 20 samples) No detected compounds > RL	NFG ⁽¹⁾ Method ⁽²⁾	U(pos) if result is less than appropriate 5X action level.	7	Hierarchy of blank review: #1 - Review MB, qualify as needed #2 - Review FB , qualify as needed No common lab contaminants for Herbicide analyses
Field Blank (FB)	FB: frequency as per QAPP No detected compounds > RL	NFG ⁽¹⁾ Method ⁽²⁾	U(pos) if result is less than appropriate 5X action level.	6	

Chlorinated Herbicides by GC, SW-846 Method 8151A

QC Element	Acceptance Criteria	Source of Criteria	Action for Non-Conformance	Reason Code	Discussion and Comments
Precision and Accuracy					
MS/MSD (recovery)	One set per matrix per batch (of ≤ 20 samples) Method acceptance criteria or project limits	NFG ⁽¹⁾ Method ⁽²⁾	Qualify parent only unless other QC indicates systematic problems J (pos) if both %R > upper control limit (UCL) J (pos)/UJ (ND) if both %R < lower control limit (LCL) J (pos)/R (ND) if both %R < 10%	8 (H,L) ³	A sample duplicate may be run in place of the MSD. No action if only one spike %R is outside criteria. No action if parent concentration is >4x the amount spiked. Qualify parent sample only.
MS/MSD or duplicate (RPD)	One set per matrix per batch (of ≤ 20 samples) Method acceptance criteria or project limits	NFG ⁽¹⁾ Method ⁽²⁾	Qualify parent only unless other QC indicates systematic problems. J(pos) if RPD > control limit	9	No action if parent is ND.
LCS	One per lab batch (of ≤ 20 samples) Method acceptance criteria or project limits	NFG ⁽¹⁾ Method ⁽²⁾	Qualify all associated samples J(pos) if %R > UCL - high bias J(pos)/UJ(ND) if both %R < LCL - low bias J(pos)/R(ND) if both %R < 10% - very low bias J(pos)/UJ(ND) if one > UCL & one < LCL, with no bias PJ if only one %R outlier	10 (H,L) ³	No action if only one spike %R is outside criteria, when LCSD is analyzed. Qualify all associated samples.
LCS/LCSD (RPD)	One set per lab batch (of ≤ 20 samples) Method acceptance criteria or project limits	NFG ⁽¹⁾ Method ⁽²⁾	J(pos) assoc. compound in all samples	9	
Surrogates	2,4-Dichlorophenylacetic acid (DCAA) added to every sample Method acceptance criteria or project limits	NFG ⁽¹⁾ Method ⁽²⁾	J (pos) if either %R > UCL J (pos)/UJ (ND) if either %R < LCL J (pos)/R (ND) if either %R < 10%	13 (H,L) ³	If %R < 10% (sample dilution is a factor), use PJ
Internal Standards (if used)	Acceptable Range: IS area 50% to 200% of CCAL area RT within 30 seconds of CC RT	Method ⁽²⁾	J (pos) if > 200% J (pos)/UJ (ND) if < 50% J (pos)/R (ND) if < 25% if RT > 30 seconds use PJ	19	Suggested internal standards: 4,4'-dibromooctafluorobiphenyl (DBOB) or 1,4-dichlorobenzene.
Field Duplicates	Solids: RPD < 50% OR difference < 2X RL (for results < 5X RL) Aqueous: RPD < 35% OR difference < 1X RL (for results < 5X RL)		J(pos)/UJ(ND) Qualify only field duplicate samples	9	

Chlorinated Herbicides by GC, SW-846 Method 8151A

QC Element	Acceptance Criteria	Source of Criteria	Action for Non-Conformance	Reason Code	Discussion and Comments
Compound Identification					
Quantitation/ Identification	Between two columns: RPD < 40% or %D < 25% Within Retention Time Windows on both columns. Alternatively GC/MS may be used for confirmation.	NFG ⁽¹⁾ Method ⁽²⁾	J (pos) if RPD = 40% - 60% (25% - 60% for %D) NJ (pos) if > 60%R (pos) if RTW criterion not met	3 25 (false pos)	See TM-08 for additional info.
Calibration Range	Results exceed the upper calibration range	EcoChem standard policy	J (pos) if conc > high standard and sample was not diluted	20	
Calculation Check	Check 10% of field & QC sample results	EcoChem standard policy	Contact laboratory for resolution and/or corrective action	na	Full data validation only.
Electronic Data Deliverable (EDD)					
Verification of EDD to hardcopy data	EcoChem verify @ 10% unless problems noted; then increase level up to 100% for next several packages.	EcoChem standard policy	Depending on scope of problem, correct at EcoChem (minor issues) to resubmittal by laboratory (major issues).	na	EcoChem Project Manager and/or Database Administrator will work with lab to provide long-term corrective action.
Dilutions, Re-extractions and/or Reanalyses	Report only one result per analyte	EcoChem standard policy	Use "DNR" to flag results that will not be reported.	11	TM-04 Rev. 1 EcoChem Policy for for additional info.

PROJECT NARRATIVE

Basis for the Data Validation

This report summarizes the results of data validation performed on groundwater and quality control (QC) sample data for the Smith-Kem Site Remedial Investigation Groundwater Monitoring project. A complete list of samples is provided in the **Sample Index**.

ALS Environmental, Kelso, Washington performed the analyses. The analytical method and EcoChem project chemists are listed in the table below.

ANALYSIS	METHOD	PRIMARY REVIEW	SECONDARY REVIEW
Low Level Pesticides	EPA 8081B Mod	E. Clayton	C. Ransom

The data were reviewed using guidance and quality control criteria documented in the analytical methods; *Smith-Kem Site Remedial Investigation Work Plan* (Floyd|Snider, July 2016); *Smith-Kem Site Remedial Investigation 2019 Work Plan Addendum* (Floyd|Snider, October 2019); and *National Functional Guidelines for Organic Data Review* (USEPA 2017).

EcoChem's goal in assigning data assessment qualifiers is to assist in proper data interpretation. If values are estimated (J or UJ), data may be used for site evaluation and risk assessment purposes but reasons for data qualification should be taken into consideration when interpreting sample concentrations. If values are assigned an R or DNR, the data should not be used for any site evaluation purposes. If values have no data qualifier assigned, then the data meet the data quality objectives as stated in the documents and methods referenced above.

Data qualifier definitions, reason codes, and validation criteria are included as **Appendix A**. A Qualified Data Summary Table is included in **Appendix B**. Data Validation Worksheets will be kept on file at EcoChem, Inc. A qualified laboratory electronic data deliverable (EDD) is also submitted with this report.

DATA VALIDATION REPORT
Smith-Kem Site – Spring 2020 GW Monitoring
Pesticides by Method SW8081B

This report documents the review of analytical data from the analysis of groundwater samples and the associated laboratory and field quality control (QC) samples. ALS Environmental, Kelso, Washington, analyzed the samples. Refer to the **Sample Index** for a complete list of samples.

SDG	NUMBER OF SAMPLES	VALIDATION LEVEL
K2002652	21 Groundwater	EPA Stage 4

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

The extraction batch quality control summaries were missing results for heptachlor. The laboratory was contacted and submitted revised summary forms.

The following results exceeded the calibration range in the original 1X analysis. The summary forms did not have "E" flags. The lab was contacted and submitted revised summary forms.

Sample ID	Lab ID	Analyte	Result	Added Lab Flag
MW-4-032520	K2002652-002	Toxaphene	4000	E
MW-104-032520	K2002652-003	Toxaphene	4000	E
MW-6-032520	K2002652-008	Chlordane	1400	E
MW-6-032520	K2002652-008	Toxaphene	8000	EP

EDD TO HARDCOPY VERIFICATION

Ten percent (10%) of the results in the laboratory EDD were verified by comparison to the laboratory data package. The following errors were noted:

The heptachlor results for the extraction batch quality control samples were missing from the EDD. The laboratory was contacted and submitted a revised excel file.

In the case of the results noted above, the EDD contained the results from the 1X analysis. These analytes should be reported from the 20X dilution. Results were added to the EDD during validation.

Sample ID	Lab ID	Analyte	EDD Result (1x)	New Result (20X)
MW-4-032520	K2002652-002	Toxaphene	4000	4900
MW-104-032520	K2002652-003	Toxaphene	4000	4600
MW-6-032520	K2002652-008	Chlordane	1400	1700
MW-6-032520	K2002652-008	Toxaphene	8000	9600

TECHNICAL DATA VALIDATION

This report documents the review of analytical QC requirements as listed in the following table.

✓	Sample Receipt, Preservation, and Holding Times	1	Field Duplicates
✓	Laboratory Blanks	✓	Target Analyte List
1	Field Blanks	2	Compound Identification
1	Laboratory Control Samples (LCS/LCSD)	1	Reporting Limits
✓	Matrix Spikes/Matrix Spike Duplicates (MS/MSD)	2	Reported Results
✓	Surrogate Compounds	1	Calculation Verification
✓	Internal Standards		

✓ Stated method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.

1 Quality control results are discussed below, but no data were qualified.

2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Field Blanks

No field blanks were submitted.

Laboratory Control Samples

The recovery for toxaphene in laboratory control sample duplicate (LCSD) KQ2004497-04 was greater than the upper control limit. The recovery for the associated laboratory control sample (LCS) was in control; no data were qualified based on the single outlier.

Field Duplicates

Samples MW-4-032520 and MW-104-032520 were submitted as field duplicates. For results >5x the reporting limit (RL), the relative percent difference (RPD) values were less than the control limit of 35%. For results less than 5x the RL, the difference between the sample and duplicate results were less than the RL. Field precision was acceptable.

Compound Identification

Samples were analyzed on a primary column, , and a confirmation column, . The results from the two analytical columns were compared for agreement. An elevated RPD value may indicate the presence of an interference. When the RPD value was greater than 40% but less than 60% the reported value was estimated (J-3). If the RPD value was greater than 60%, the result was qualified as a tentative identification (NJ-3). Confirmation outliers are listed below.

SAMPLE ID	AROCLOR	RPD	QUALIFIER
MW-4-032520	aldrin	78%	NJ-3
	heptachlor	70%	NJ-3
MW-104-032520	aldrin	68%	NJ-3
	beta-BHC	51%	J-3
	heptachlor	59%	J-3
MW-6-032520	beta-BHC	55%	J-3
	heptachlor epoxide	80%	NJ-3
	toxaphene	55%	J-3

SAMPLE ID	AROCLOR	RPD	QUALIFIER
MW-1-032520	alpha-BHC	60%	NJ-3
	beta-BHC	44%	J-3
	heptachlor epoxide	71%	NJ-3
MW-14-032620	chlordane	43%	J-3
	heptachlor epoxide	68%	NJ-3
	toxaphene	48%	J-3

Reporting Limits

Several samples required dilution due to high concentrations of 1 or more target analytes. Reporting limits were elevated accordingly.

Reported Result

For cases where a sample was analyzed at more than one dilution, the laboratory merged results in the EDD in order to only report one analyte per sample. The following results were reported for the 1X analysis in the EDD. These results were flagged as do-not-report (DNR-11) in favor of the results from the 20X dilution.

Sample ID	Lab ID	Analyte	EDD Result (1x)	Lab Flag	DV Qual
MW-4-032520	K2002652-002	Toxaphene	4000	E	DNR-11
MW-104-032520	K2002652-003	Toxaphene	4000	E	DNR-11
MW-6-032520	K2002652-008	Chlordane	1400	E	DNR-11
MW-6-032520	K2002652-008	Toxaphene	8000	EP	DNR-11

Calculation Verification

Several results were verified by recalculation from the raw data. No calculation or transcription errors were noted.

OVERALL ASSESSMENT

As was determined by this evaluation, the laboratory followed the specified analytical method. With the exception noted above, accuracy was acceptable as demonstrated by the LCS/LCSD, matrix spike/matrix spike duplicate (MS/MSD), and surrogate %R values and precision was acceptable as demonstrated by the LCS/LCSD, MS/MSD, and field duplicate RPD values.

Results were estimated due to confirmation column precision outliers. Data were flagged as do-not-report (DNR) to indicate which result should not be used from multiple reported analyses. A usable result remains for all analytes in all samples; completeness was not affected.

Data flagged DNR should not be used. All other data, as qualified, are acceptable for use.

APPENDIX A

DATA QUALIFIER DEFINITIONS REASON CODES AND CRITERIA TABLES

DATA VALIDATION QUALIFIER CODES **Based on National Functional Guidelines**

The following definitions provide brief explanations of the qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents the approximate concentration.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

The following is an EcoChem qualifier that may also be assigned during the data review process:

DNR	Do not report; a more appropriate result is reported from another analysis or dilution.
-----	---

DATA QUALIFIER REASON CODES

Group	Code	Reason for Qualification
Sample Handling	1	Improper Sample Handling or Sample Preservation (i.e., headspace, cooler temperature, pH, summa canister pressure); Exceeded Holding Times
Instrument Performance	24	Instrument Performance (i.e., tune, resolution, retention time window, endrin breakdown, lock-mass)
	5A	Initial Calibration (RF, %RSD, r^2)
	5B	Calibration Verification (CCV, CCAL; RF, %D, %R) Use bias flags (H,L) ¹ where appropriate
	5C	Initial Calibration Verification (ICV %D, %R) Use bias flags (H,L) ¹ where appropriate
Blank Contamination	6	Field Blank Contamination (Equipment Rinsate, Trip Blank, etc.)
	7	Lab Blank Contamination (i.e., method blank, instrument blank, etc.) Use low bias flag (L) ¹ for negative instrument blanks
Precision and Accuracy	8	Matrix Spike (MS and/or MSD) Recoveries Use bias flags (H,L) ¹ where appropriate
	9	Precision (all replicates: LCS/LCSD, MS/MSD, Lab Replicate, Field Replicate)
	10	Laboratory Control Sample Recoveries (a.k.a. Blank Spikes) Use bias flags (H,L) ¹ where appropriate
	12	Reference Material Use bias flags (H,L) ¹ where appropriate
	13	Surrogate Spike Recoveries (a.k.a. labeled compounds, recovery standards) Use bias flags (H,L) ¹ where appropriate
Interferences	16	ICP/ICP-MS Serial Dilution Percent Difference
	17	ICP/ICP-MS Interference Check Standard Recovery Use bias flags (H,L) ¹ where appropriate
	19	Internal Standard Performance (i.e., area, retention time, recovery)
	22	Elevated Detection Limit due to Interference (i.e., chemical and/or matrix)
	23	Bias from Matrix Interference (i.e. diphenyl ether, PCB/pesticides)
Identification and Quantitation	2	Chromatographic pattern in sample does not match pattern of calibration standard
	3	2 nd column confirmation (RPD or %D)
	4	Tentatively Identified Compound (TIC) (associated with NJ only)
	20	Calibration Range or Linear Range Exceeded
	25	Compound Identification (i.e., ion ratio, retention time, relative abundance, etc.)
Miscellaneous	11	A more appropriate result is reported (multiple reported analyses i.e., dilutions, re-extractions, etc. Associated with "R" and "DNR" only)
	14	Other (See DV report for details)
	26	Method QC information not provided

¹H = high bias indicated

L = low bias indicated

Pesticides by GC
(Based on Organic NFG 1999 & 2008 and SW-846 Method 8081B)

QC Element	Acceptance Criteria (NFG)	Source of Criteria	Action for Non-Conformance	Reason Code	Discussion and Comments
Sample Handling					
Cooler/Storage Temperature Preservation	4°C ± 2°C Tissue/sediments (may be frozen -20°C)	NFG ⁽²⁾ Method ⁽³⁾	J (pos)/UJ (ND) if greater than 6° C	1	Use Professional Judgment (PJ) to qualify for temperature outlier. Current SW846 criterion is ≤ 6° C ⁽³⁾
Holding Time	<i>Extraction Aqueous:</i> 7 days from collection <i>Extraction Solid:</i> 14 days from collection <i>Extraction Tissue/Sediment (frozen):</i> 1 year <i>Analysis (all matrices):</i> 40 days from extraction	NFG ⁽²⁾ Method ⁽³⁾	J (pos)/UJ (ND) if ext/analyzed > HT J (pos)/R (ND) if gross exceedance (> 2x HT)	1	Gross exceedance > 2x HT, as per NFG 1999
Instrument Performance					
Resolution Check	Beginning of ICAL sequence Within RTW and resolution > 60%	NFG ⁽²⁾	NJ (pos)/R (ND) results	14	CLP criterion; might not be submitted with SW846 data package
Retention Times	Surrogates: TCMX (± 0.05); DCB (± 0.10) Target analytes: within RTW	NFG ⁽²⁾ Method ⁽³⁾	NJ (pos)/R (ND) results for analytes with RT shifts	24	Use PJ based on examination of raw data
Breakdown	DDT Breakdown: ≤ 20% Endrin Breakdown: ≤ 20% Combined Breakdown: ≤ 30% Compounds within RTW	NFG ⁽²⁾ Method ⁽³⁾	If 4,4'-DDT is detected: J (pos) 4,4'-DDT, 4,4'-DDD and 4,4'-DDE If 4,4'-DDT is ND and either 4,4'-DDD or 4,4'-DDE are detected: R (ND) 4,4'-DDT, NJ (pos) DDD and DDE If Endrin is detected: J (pos) Endrin, Endrin Aldehyde and Endrin Ketone If Endrin is ND and either EA or EK are detected: R (ND) Endrin, NJ (pos) EA and EK	5A	Method 8081B breakdown criterion: ≤ 15%. For combined breakdown outliers, apply qualifiers considering the degree of individual breakdown.

Pesticides by GC
(Based on Organic NFG 1999 & 2008 and SW-846 Method 8081B)

QC Element	Acceptance Criteria (NFG)	Source of Criteria	Action for Non-Conformance	Reason Code	Discussion and Comments
Instrument Performance (continued)					
Initial Calibration	Single Component Compounds: RSD ≤ 20% alpha-BHC and delta-BHC: RSD ≤ 25% toxaphene and surrogates: RSD ≤ 30% or correlation coefficient (r-value) ≥ 0.995 OR Minimum 6-point with coefficient of determination (r ² -value) ≥ 0.99	NFG ⁽²⁾ Method ⁽⁴⁾	J (pos) if %RSD greater than control limit or r-value < 0.995 or r ² -value < 0.99	5A	Refer to TM-01 for additional information. Use bias flags (H,L) ⁽⁶⁾ where appropriate
Initial Calibration Verification (ICV)	No NFG criteria Project specific	Project QAPP	J (pos) if > UCL J (pos)/UJ (ND) if < LCL	5B	Use bias flags (H,L) ⁽⁶⁾ where appropriate
Continuing Calibration	%D ± 20% Analyzed prior to each 12 hour shift	Method ⁽³⁾	If > 20% (high bias): J (pos) If <20% (low bias: J (pos)/UJ (ND)	5B	Refer to TM-01 for additional information. Use bias flags (H,L) ⁽⁶⁾ where appropriate
Blank Contamination					
Method Blank (MB)	One per matrix per batch (of ≤ 20 samples) No detected compounds > RL	NFG ⁽¹⁾ Method ⁽³⁾	U (pos) if result is less than appropriate 5X action level.	7	Hierarchy of blank review: #1 - Review MB and IB, qualify as needed #2 - Review FB , qualify as needed Note: Actions as per NFG 1999 Note: IB not required by method
Field Blank (FB)	FB: frequency as per QAPP No detected compounds > RL	NFG ⁽¹⁾ Method ⁽³⁾	U (pos) if result is less than appropriate 5X action level.	6	
Instrument Blanks (IB)	Analyzed at the beginning and end of every 12 hour sequence No analyte > CRQL	NFG ⁽¹⁾	U (pos) if result is less than appropriate 5X action level.	7	

Pesticides by GC
(Based on Organic NFG 1999 & 2008 and SW-846 Method 8081B)

QC Element	Acceptance Criteria (NFG)	Source of Criteria	Action for Non-Conformance	Reason Code	Discussion and Comments
Precision and Accuracy					
MS/MSD (recovery)	One set per matrix per batch (of ≤ 20 samples) Method or project acceptance limits	NFG ⁽²⁾ Method ⁽³⁾	Qualify parent only unless other QC indicates systematic problems. J (pos) if both %R > upper control limit (UCL) J (pos)/UJ (ND) if both %R < lower control limit (LCL) J (pos)/R (ND) if both %R < 10%	8	No action if only one spike %R is outside criteria No action if native analyte conc. > 5x the amount spiked Use bias flags (H,L) ⁽⁶⁾ where appropriate
MS/MSD (RPD)	One set per matrix per batch (of ≤ 20 samples) Method or project acceptance limits	NFG ⁽²⁾ Method ⁽³⁾	Qualify parent only unless other QC indicates systematic problems. J (pos) if RPD > control limit	9	No action if parent is ND
LCS	One per lab batch (of ≤ 20 samples) Method or project acceptance limits	NFG ⁽²⁾	J (pos) if %R > UCL J (pos)/UJ (ND) if %R < LCL J (pos)/R (ND) if %R < 10%	10	Qualify all associated samples. Use bias flags (H,L) ⁽⁶⁾ where appropriate
LCS/LCSD (RPD)	if analyzed use MS/MSD RPD criteria	NFG ⁽²⁾	J (pos) assoc. compound in all samples	9	LCSD not required by method or NFG

Total Dioxin/Furan TEQ ⁽¹⁾	--	ng/kg	--		18.3		23.1		53.4		1.05		0.141		3.38		30.6		92.4		8.28

Notes:

- 1 Calculation of Total Dioxin/Furan TEQ concentration is performed using the 2005 World Health Organization TEFs as presented in Table 708-1 of WAC 173-340-900.
- 2 Calculation is performed using detected concentrations plus one-half the detection limit for analytes that were not detected.

Abbreviations:

- bgs Below ground surface
- CAS Chemical Abstracts Service
- ng/kg nanogram per kilogram
- TEF Toxic equivalent factor
- TEQ Toxic equivalent
- TTEC Total Toxicity Equivalence Concentration

Qualifiers:

- U Analyte was not detected at the given reporting limit.
- J Result given is considered an estimate.

Notes:

- 1 Groundwater preliminary CULs were developed for any chemical that was either (a) detected in groundwater, or (b) retained as a potential COPC in the Ecology-approved Groundwater Elimination Memo. Soil-to-protect groundwater criteria are only calculated for chemicals with groundwater preliminary CULs.
- 2 This table includes only those chemicals that were analyzed for in soil. Chemicals that were not analyzed in soil are not considered potential soil COPCs at the site.
- 3 Chemical parameters, including the K_d, K_{oc}, and H_{cc} were sourced from Ecology's CLARC workbook, last updated in August 2020.
- 4 For organics, the final K_d is the K_{oc} value from CLARC multiplied by the site-specific f_{oc} value of 0.011 developed on the focFormula tab. For metals, the final K_d is the same as the CLARC table value.
- 5 Criteria protective of preliminary CULs for groundwater were calculated using the variable three-phase equilibrium partitioning model according to WAC 173-340-747(5)(b)(i) using Equation 747-1. Default MTCA input parameters for saturated soil were used, with the exception of f_{oc}.
- 6 Criteria developed for Total Chromium and for Chromium(III) were considered when determining the relevant criteria for chromium. There is no reason to suspect the presence of Chromium(VI) on-site.
- 7 Xylenes are typically analyzed and reported by laboratories as m,p-Xylene and o-Xylene; these values are summed and reported as Total Xylenes. Criteria and partitioning data developed for Total Xylenes was selected for use in this
- 8 Criteria and partitioning data were not developed for Endosulfan I or Endosulfan II in CLARC. Criteria and partitioning data developed for Endosulfan (CAS 115-29-7) were used as a surrogate.
- 9 Criteria and partitioning data were not developed for chlordane-alpha in CLARC; criteria and partitioning data developed for Chlordane (CAS 12789-03-6) were used as a surrogate.

Attachment G.1 Depth-Weighted Receptor Adjustment

To evaluate whether contaminant concentrations in soil are protective of ecological receptors, contaminant distribution at a site can be assessed using established practices to determine a depth-weighted average concentration relevant to ecological receptors. This evaluation relies on generally low number of exceedances of Terrestrial Ecological Evaluation (TEE) criteria and contamination that decreases with depth for most chemicals exceeding the TEE criteria. Refer to Section 6.2.1.1 of the Remedial Investigation/Feasibility Study for additional discussion of depth-weighted receptor adjustments for the Smith-Kem Ellensburg, Inc., property. The depth intervals recommended at each sampling location, along with their adjustment factors, are as follows:

Sample Depth (inches bgs)	Sample Depth (feet bgs)	Depth-Weighted Adjustment Factor
0 to 6 (including duff layer)	0 to 0.5	0.3
6 to 12	0.5 to 1	0.55
12 to 24	1 to 2	0.1
24 to 36	2 to 3	0.05

Abbreviation:
bgs Below ground surface

The depth-weighted average concentration is then calculated for each depth using Equation 1.

Equation 1 Depth-Weighted Receptor Adjustment

$$C_{ea} = (C_{c(1)} \times P_{r(1)}) + (C_{c(2)} \times P_{r(2)}) + (C_{c(i)} \times P_{r(i)})$$

Where:

- C_{ea} = Exposure adjusted contaminant concentration
- $C_{c(1)}$ = Soil contaminant concentration at sample depth 1 (i.e., 0 to 6 inches bgs)
- $C_{c(1)}$ = Soil contaminant concentration at sample depth 1
- $P_{r(1)}$ = Proportion of receptor found at sample depth 1 (i.e., 0 to 6 inches bgs)
- $P_{r(i)}$ = Proportion of receptor found at sample depth (i)

P_r refers to the depth-weighted adjustment factor at depth 1, depth 2, and so forth.

The exposure-adjusted contaminant concentration can be calculated for any chemical from a sample location using the formula provided above. This calculation can also be performed across an area by calculating the average concentration within each sample depth interval and

multiplying the average concentrations by the appropriate P_r factor. An example of this calculation is provided using site-wide alpha-chlordane data. Concentrations of alpha-chlordane from individual samples collected from 0 to 36 inches bgs ranged from nondetect at a reporting limit of 0.0067 milligrams per kilogram (mg/kg) to a detected concentration of 9.9 mg/kg. Refer to Table E.1 in Appendix E for soil sample analytical data.

1. Depth 1 (0 to 6 inches bgs)
 - A. The average soil contaminant concentration at depth 1 is 1.6 mg/kg.
 - B. The depth-weighted receptor adjustment is 0.3.
 - C. The adjusted alpha-chlordane concentration at depth 1 is 0.48 mg/kg.
2. Depth 2 (6 to 12 inches bgs)
 - A. The average soil contaminant concentration at depth 2 is 0.91 mg/kg.
 - B. The depth-weighted receptor adjustment is 0.55.
 - C. The adjusted alpha-chlordane concentration at depth 2 is 0.50 mg/kg.
3. Depth 3 (12 to 24 inches bgs)
 - A. The average soil contaminant concentration at depth 3 is 0.18 mg/kg.
 - B. The depth-weighted receptor adjustment is 0.1.
 - C. The adjusted alpha-chlordane concentration at depth 3 is 0.02 mg/kg.
4. Depth 4 (24 to 36 inches bgs)
 - A. The average soil contaminant concentration at sample depth 4 is 0.19 mg/kg.
 - B. The depth-weighted receptor adjustment is 0.05.
 - C. The adjusted alpha-chlordane concentration at depth 1 is 0.01 mg/kg.
5. Add the four adjusted sample depth concentrations for a depth-weighted receptor exposure adjustment total.

The resulting depth-weighted exposure adjustment concentration for alpha-chlordane at the Site is 1.0 mg/kg, which meets the TEE criterion of 1.0 mg/kg.

1.0 Introduction

This appendix evaluates whether reporting limits associated with nondetect results for the Smith-Kem Ellensburg, Inc. (Smith-Kem) Site Remedial Investigation (RI) dataset meet RI data collection requirements. These requirements include collection of data sufficient to identify chemicals of concern (COCs) for the site and to define the nature and extent of contamination for each COC at the site. This appendix includes evaluation of nondetect data for analytes falling into the following categories:

- Chemicals that were analyzed during RI sampling, that had elevated reporting limits relative to risk-based target cleanup levels (CULs)¹ developed for the site; and
- Chemicals that were retained as soil COCs based on detected results but that have reporting limits elevated relative to laboratory PQLs.

1.1 DATA QUALITY OBJECTIVES

Specific objectives of the data quality evaluation in this appendix are listed below.

- Describe how the analytical methods used during the RI sampling comply with provisions for analytical procedures specified in Washington Administrative Code (WAC) 173-340-830.
- Describe why specialized sample analysis techniques were implemented to improve analytical sensitivity per WAC 173-340-707(3)(b).
- Demonstrate that the reporting limits associated with nondetect results in soil or groundwater are sufficient to eliminate analytes that were not detected (or detected at low frequency and magnitude relative to preliminary CULs) from further consideration as chemicals of potential concern (COPCs).
- Demonstrate that in instances where a chemical with a proposed CUL that is based on the PQL is retained as a soil COC, the nature and extent of contamination can be appropriately characterized using detected results; that is, nondetect results at the PQL are considered in compliance with the proposed CUL per WAC 173-340-707(2).

1.2 DOCUMENT ORGANIZATION

The remainder of this appendix is organized into the following sections:

- **Section 2.0—Definitions and Project Context.** This section provides information about the development and implementation of the analytical methods and analyte schedule and summarizes the issues affecting analytical sensitivity for the RI dataset. The terms used in this appendix are defined, including a description of the difference

¹ The risk-based target CUL is equivalent to the preliminary CUL prior to upward adjustment to the practical quantitation limit (PQL).

between the laboratory PQL and reporting limit. It describes how the PQL is used in RIs, site characterization, development of CULs, and evaluating compliance with CULs.

The analytical schema employed to characterize the site during the multiphase RI sampling effort is also described, including efforts to improve analytical sensitivity between the various phases of work. Notably, improvement in analytical sensitivity was achieved between the first and second phases (Phase 1 and Phase 2, respectively) of sampling following Washington State Department of Ecology (Ecology)-approved reductions in the analytical schedule between Phase 1 and Phase 2. Further improvements in analytical sensitivity were achieved in the March 2020 groundwater sampling event, which was required by Ecology under WAC 173-340-707(3)(b).

This section identifies analytes with laboratory PQLs greater than soil and groundwater preliminary CULs in Phase 2 data.

- **Section 3.0—Use of Nondetect Phase 2 Groundwater Results in Site Characterization.** This section describes how the compliance result is determined for legacy pesticides in groundwater. Additionally, this section evaluates the suitability of Phase 2 analytical methods by comparing the laboratory-achieved PQLs to the proposed CULs; March 2020 groundwater results; and PQLs accepted by U.S. Environmental Protection Agency (USEPA) and Ecology for regulation of drinking water and surface water discharges, respectively. This comparison is performed to determine whether it is appropriate to base compliance on a limited amount of data collected with high-resolution laboratory analysis methods.
- **Section 4.0—Use of Nondetect Soil Results in Site Characterization.** This section describes the use of nondetect results with elevated reporting limits relative to the proposed CULs developed in the RI. It concludes reporting limits are sufficiently sensitive to identify soil COCs and define the nature and extent of contamination in soil; areas where additional sample collection may be necessary do not represent a data gap relative to off-property contamination.
- **Section 5.0—Summary and Conclusion.** This section summarizes the results of the evaluation in the previous sections relative to the objectives identified in Section 1.1.
- **Section 6.0—References.** This section includes reference information for documents cited in this appendix.

2.0 Definitions and Project Context

2.1 DESCRIPTION OF SITE PRACTICES AFFECTING DATA ANALYSIS

Ongoing industrial operations at the Smith-Kem property (Property) include fertilizer distribution and handling of nitrogen- and ammonia-rich products. Materials that spill onto the ground can cause elevated concentrations of nitrogen and ammonia to be present in soil and groundwater. Additionally, lignin sulfonate was utilized as a dust suppressant in unpaved areas of the Property. Lignin sulfonate is naturally derived from trees and does not pose a risk to human health or the environment; however, it introduces high levels of sulfur into the environment. Elevated concentrations of either sulfur and nitrogen, or both, can cause matrix interference issues that cause reporting limits to be elevated relative to the PQL. Prior to completion of Phase 1 of the RI sampling, the extent to which the presence of sulfur would impact soil and groundwater analysis was unclear.

2.2 DEFINITION AND USE OF LABORATORY DETECTION LIMITS

The lowest concentration that an analytical instrument can detect is defined as the method detection limit (MDL), which is the lowest concentration that can be reported with 99% confidence that the measured concentration in the sample is distinguishable from the concentration in the method blank (i.e., greater than zero). The MDL is determined under ideal conditions via analysis of a prepared sample for a target analyte in a medium that does not interfere with the analytical instrument.

The PQL is defined in WAC 173-340-200 as “the lowest concentration that can be reliably measured within specified limits of precision, accuracy, representativeness, completeness, and comparability during routine laboratory operating conditions, using department approved methods.” In other words, PQLs are the lowest reasonable concentration that an accredited laboratory can be expected to achieve for a particular analyte using the selected method when performing routine sample analysis. As a rule of thumb, the PQL is expected to be between 3 to 10 times greater than the MDL. Detections greater than the MDL but less than the PQL indicate that the contaminant is present, but at a concentration that cannot be quantified within acceptable quality assurance (QA) or quality control (QC) limits. When reporting analytical results, some laboratories provide estimated concentrations when the analyte is detected at a concentration greater than the MDL but less than the PQL; other laboratories report specific concentrations only for those results detected at concentrations greater than the PQL. Reporting results as nondetect at concentrations less than the PQL is consistent with how USEPA-approved methods under 40 CFR 136 and other federal regulations specify nondetect results should be reported.

Laboratory PQLs for particular analytes vary somewhat depending on specific instrument calibration, measurement technique, sample volume, and other factors, although the effect of this variation is typically small. However, matrix interference and the amount of contamination present exercise a greater degree of influence on PQL variation. As an example of the effect of

matrix interference on the reporting limit, the typical PQL for benzene using SW-846 Method 8260B is 5 micrograms per kilogram ($\mu\text{g}/\text{kg}$) for soils and sediments with low-level contamination, which is within the range of 5 to 10 times the MDL. But the method indicates that PQLs are 125 times the MDL for high-concentration soils, and 500 times the MDL for non-water-miscible waste. These multipliers are related to the dilution factors necessary to perform analysis of samples with high concentrations of contamination. Such variability is not unexpected and is a function of the nature of PQLs.

The reporting limit is the limit of quantitation reported by the laboratory for a specific sample. It can be thought of as a sample-specific PQL, as opposed to the PQL that can be achieved for a generic sample analyzed under routine conditions. The reporting limit takes into account site- and sample-specific factors, including sample dilution and degree of matrix interference present in the sample. In this appendix, the use of the term reporting limit refers to the actual limits of quantitation achieved in samples collected and analyzed within the study area. The use of the term PQL (or laboratory PQL) refers to the PQL the laboratory is capable of achieving in a typical sample.

2.3 ADJUSTMENT OF THE CUL TO THE PQL

There are guidelines for the use of the PQL in risk assessment. For example, WAC 173-340-707 allows for use of a PQL as a CUL in situations where the PQL is greater than both natural background and the target risk-based CUL for a particular analyte. Agencies use laboratory surveys to determine when a PQL should be used as a CUL for a particular analyte. To conduct a laboratory survey, an agency compares several laboratory PQLs following analyses of prepared samples of the same analyte under the same method. The agency can then identify an appropriate PQL for use as a CUL that can be achieved by multiple laboratories.

One limitation of the laboratory survey approach is that it does not reflect site-specific factors like matrix interference that can severely affect the ability of the laboratory to achieve the selected PQL at a particular site. In these cases, Ecology has approved use of a site-specific reporting limit-based PQL (e.g., Section 4.3.1 of *B&L Woodwaste Site Final Cleanup Action Plan*; Ecology 2008). This approach reflects consideration of matrix interference issues associated with the site.

Both approaches require periodic evaluation to determine whether lower PQL-based CULs can be achieved as a result of improvements in analytical methods. To ensure the protectiveness of site remedies, Ecology is also authorized to require the use of specialized sample analysis techniques to improve the PQL for the hazardous substances at a site under WAC 173-340-707(3)(b).

2.4 SITE CHARACTERIZATION APPROACH

The following sections describe the development and implementation of the analytical methods and analyte schedule used to collect soil and groundwater data for use in the RI.

2.4.1 Selection of the Analytical Laboratory for RI Sample Analysis

Pacific Agricultural Laboratory (PAL) was selected to perform analysis of samples for pesticides and herbicides for the RI and to ensure that the RI analytical procedures complied with WAC 173-340-830. PAL is a laboratory based in Sherwood, Oregon, that specializes in pesticide and herbicide analysis, including low-level analysis. PAL is accredited by Ecology (C820) and Perry Johnson Laboratory Accreditation (PJLA; ISO/IEC 17025:2017; Attachment H.1) to perform environmental analysis of pesticides and herbicides by a variety of methods, including USEPA Method 8081. PAL was selected based on its ability to conduct low-level analysis for a wide variety of pesticides and herbicides, including both active-use and legacy pesticides.

This specialization and accreditation was particularly important for the site because a broad range of pesticides and herbicides were potentially handled throughout the operational history of the Property, but specific lists of formulations, trade names, and chemicals used were unknown or incomplete. Critically, some laboratories cannot conduct analysis for less common or more complex pesticides/herbicides because they do not maintain the necessary chemical standards. To ensure accuracy and precision, laboratories must have a corresponding chemical standard for every analyte they report. PAL is accredited and competent to analyze for the broadest possible range of chemical standards for legacy and current pesticides and herbicides. PAL is situated to more accurately analyze for a broader range of pesticides and herbicides than other laboratories in the region.

2.4.2 Phased Approach to Remedial Investigation and Characterization

Phase 1

PAL's Multi-Residue Pesticides Profile and Chlorinated Acid Herbicides Profile were selected to provide initial characterization of soil and groundwater at the Property during Phase 1 of the RI because analysis via these profiles would provide analytical results for more than 100 different pesticides and herbicides. Given the lack of specific information concerning pesticides and herbicides handled at the Property, this approach allowed the broadest possible analytical schedule, including analysis for pesticides and herbicides that were highly unlikely to be detected or ever been in use on site.

PAL provided laboratory PQLs and QA information for each of the pesticides and herbicides analyzed in the RI dataset. Soil and groundwater PQLs provided by PAL are listed in Table A.3 of Appendix A of the Ecology-approved RI Work Plan (Work Plan; Floyd|Snider 2016). The PQLs that PAL provided are the same as the detection limits listed in the PJLA supplement to the certificate of accreditation for each analyte given the methodology and medium (Attachment H.1).

PQLs that can be achieved using the Multi-Residue Pesticides Profile and Chlorinated Acid Herbicides Profile for certain analytes are elevated relative to laboratory PQLs that could be obtained by performing analysis for each analyte class individually, rather than as part of a profile. However, because the intent of Phase 1 was to confirm the presence or absence of particular analytes and analyte classes in soil and groundwater at the Property, this was a deliberate and Ecology-approved trade-off. The objective was to analyze for the largest possible list of analytes.

Following Phase 1 of the RI, the list of analytes of interest was narrowed for groundwater and soil in two Ecology-approved memoranda (Attachments C.1 and C.2 in Appendix C) as described in Section 4.1.3 of the Remedial Investigation/Feasibility Study (RI/FS). Six different classes of pesticides and herbicides were eliminated from further consideration as COPCs in soil and groundwater (i.e., organophosphate pesticides; triazine herbicides; phenylurea herbicides; carbamate pesticides; organophosphorus and organosulfur pesticides; and organonitrogen pesticides). Within these analyte classes, only five pesticides and herbicides had nondetect results with elevated Phase 1 reporting limits in groundwater relative to the groundwater preliminary CULs. Soil reporting limits were less than the soil screening levels developed in the Work Plan for all analytes from eliminated analyte classes. Elevated reporting limits generally did not exceed the groundwater screening levels by a factor greater than 2; thus, Phase 1 analytical sensitivity was appropriate to meet the goals of Phase 1 and eliminate these analytes from further consideration as COPCs, despite elevated reporting limits in some samples.

The decision to eliminate these chemicals was revisited as part of the development of preliminary CULs in spring 2020. None of the chemicals in these analyte classes met the criteria described in the PCUL and COPC Memo (Attachment C.4) to be identified as soil or groundwater COPCs.

Among chemicals that were identified as COPCs in the PCUL and COPC Memo, 16 chemicals had nondetect results with elevated reporting limits relative to the preliminary CULs in soil or water. These chemicals and their affected media are identified in Table H.1.

Table H.1
Chemicals with Elevated Phase 1 PQLs Relative to Risk-Based Target CULs

Analyte	CAS No.	Groundwater	Soil
HCH-alpha (a-BHC)	319-84-6	X	X
HCH-beta (b-BHC)	319-85-7	X	X
g-BHC (Lindane)	58-89-9	X	X
Aldrin	309-00-2	X	X
Dieldrin	60-57-1	X	X
Endrin	72-20-8		X
Heptachlor	76-44-8	X	X
Heptachlor Epoxide	1024-57-3	X	X
4,4'-DDD / Sum DDD	72-54-8	X	X
4,4'-DDE / Sum DDE	72-55-9	X	
4,4'-DDT / Sum DDT	50-29-3	X	
Total DDx	T_DDx (U=0)		X
Hexachlorobenzene	118-74-1	X	X
Toxaphene	8001-35-2	X	X
alpha-Chlordane	5103-71-9		X
Pentachlorophenol	87-86-5		X

- DDE Dichlorodiphenyldichloroethylene
- DDT Dichlorodiphenyltrichloroethane
- HCH Hexachlorocyclohexane
- Total DDx Calculated as the sum of DDD, DDE, and DDT

Phase 2

Organochlorine pesticides, chlorinated herbicides, and certain other chlorinated/halogenated pesticides were retained for further analysis in Phase 2. The analytical methods selected for use in Phase 2 were informed by Phase 1 data collection efforts with respect to both site-specific matrix interference issues and the range of concentrations detected in samples analyzed during Phase 1.

In particular, the Multi-Residue Pesticides and Chlorinated Acid Herbicides Profile used during Phase 1 included analysis of halogenated pesticides, including organochlorine pesticides, by USEPA

Method 8081B. The method literature for Method 8081B notes that the presence of sulfur interferes with the detection of certain organochlorine pesticides. To address this issue, PAL performed a sulfur cleanup step (using tetrabutylammonium sulfite) during Phase 2 analysis for organochlorine pesticides using Method 8081B. Additionally, analysis was performed using tandem quadrupole mass spectrometry to minimize the effects of sulfur interference. With these modifications, PAL achieved reporting limits equivalent to the PQL for organochlorine pesticides in groundwater. In soil, PAL achieved significantly lower Phase 2 reporting limits for organochlorine pesticides but did not achieve reporting limits equivalent to the PQL for all organochlorine pesticides in all samples.

Use of other methods, including USEPA Method 608.3, was considered for organochlorine pesticide analysis but was ultimately not selected after consideration of the following factors:

- Method 608.3 was not appropriate because its approved modifications do not include the tetrabutylammonium sulfite cleanup. Under approved modifications, one cleanup option is to use mercury, which has associated health and safety risks. The second option provided by Method 608.3 is to use elemental copper, which has limited effectiveness for the matrix interferences present at the Property and would have resulted in higher reporting limits than were achieved with Method 8081B.
- Groundwater concentrations of chlordane and dieldrin within the source area surrounding MW-4 during Phase 1 were outside of the recommended concentration ranges for analysis by Method 608.3. For example, Method 608.3 is applicable to dieldrin groundwater concentrations of up to 2 micrograms per liter ($\mu\text{g/L}$). During Phase 1, dieldrin concentrations were measured as high as 10 $\mu\text{g/L}$ from groundwater samples collected from well location MW-4. Therefore, performing analysis of groundwater samples with concentrations of target analytes outside the calibration range appropriate for the method would result in elevated PQLs and could result in data that do not meet the QA/QC objectives approved in the Work Plan.

Therefore, the analytical methods used during Phase 2 were the most appropriate and most sensitive analytical methods given the site-specific matrix interference issues and the expected range of concentrations at the Property. They meet sample analysis requirements under WAC 173-340-830(2)(d). Phase 2 analytical methods were specific to each of the retained analyte classes and were completed with appropriate cleanup steps to reduce matrix interference. This successfully reduced the minimum reporting limits in the soil and groundwater results to the PQLs listed in Table A.3 of the Work Plan. As noted in Table A.3 of the Work Plan, laboratory PQLs for 10 organochlorine pesticides and one chlorinated herbicide were still elevated relative to soil or groundwater screening levels presented in the Work Plan.

Relative to soil and groundwater preliminary CULs, only six chemicals had nondetect results with elevated reporting limits in Phase 2 samples in soil or groundwater. These chemicals are listed in Table H.2. Data collected during Phase 2 are sufficient to eliminate the remaining 10 chemicals with elevated Phase 1 reporting limits (Table H.1) from further consideration as COPCs.

**Table H.2
Chemicals with Elevated Phase 2 PQLs Relative to Risk-Based Target CULs**

HCH-alpha (a-BHC)	319-84-6	X	
HCH-beta (b-BHC)	319-85-7	X	X
Aldrin	309-00-2	X	X
Heptachlor Epoxide	1024-57-3	X	
Dieldrin	60-57-1	X	X
Toxaphene	8001-35-2	X	X

Note:

Bold/Red Chemical identified as a COC in soil or groundwater in the RI/FS based on detected results.

Abbreviations:

- BHC Benzene hexachloride
- CAS Chemical Abstracts Service
- HCH Hexachlorocyclohexane

As noted in Table H.2, certain chemicals with elevated PQLs were identified as COCs in soil or groundwater based on detected results. Data for detected analytes are evaluated in the RI/FS rather than in this appendix; however, nondetect results for chemicals retained as COCs are evaluated in this appendix to determine whether Phase 2 reporting limits for nondetect results are sufficient to delineate the nature and extent of contamination.

Evaluation of Analytical Methods and Implementation of Specialized Analytical Techniques

In accordance with WAC 173-340-707(3), in cases where PQLs exceed risk-based target CULs, Ecology may require (a) use of surrogate measures of hazardous substance contamination; (b) use or development of specialized sample collection or analysis techniques; or (c) continued monitoring.

Groundwater reporting limits for six legacy pesticides (alpha-BHC, beta-BHC, aldrin, dieldrin, heptachlor epoxide, and toxaphene) are greater than their risk-based target CULs.² Ecology required an evaluation to determine whether the use or development of specialized sample collection or analysis techniques at the site is warranted.

Table H.3 lists the median Phase 2 PAL PQL for beta-BHC, aldrin, dieldrin, and toxaphene and compares these PQLs to groundwater PQLs established by USEPA and Ecology for determining compliance with surface water and drinking water analysis requirements. As listed in Table H.3,

² beta-BHC, dieldrin, and toxaphene were identified as groundwater COCs in the RI/FS based on detected groundwater results collected during the RI sampling events. They are included in this analysis because nondetect data with elevated reporting limits are relevant to bound the nature and extent of contamination.

the median Phase 2 PQL achieved by PAL for toxaphene is elevated relative to the Ecology PQL and risk-based target CUL; all other PQLs are within the range of Ecology-accepted PQLs listed in the *Water Quality Program Permit Writer's Manual* (Ecology 2018).

Ecology, therefore, required completion of an additional sampling event to determine whether specialized analytical methods could lower the reporting limits for 10 legacy pesticides, such that groundwater preliminary CULs could be set equivalent to risk-based target CULs without requiring upward adjustment to the PQL. Floyd|Snider completed this groundwater sampling event in March 2020. During this event, all 20 monitoring wells were sampled using a low-level organochlorine pesticide analysis method. Analysis was completed by ALS Environmental (ALS) in Kelso, Washington.

Results of this event are summarized in Table H.4 and were presented to Ecology in the PCUL and COPC Memo (Attachment C.4). As summarized in Table H.4, PQLs achieved during this event are less than the risk-based target CUL for all 10 organochlorine pesticides analyzed. These data were used to set the preliminary CUL for these chemicals equivalent to the risk-based target CUL, as listed in RI/FS Table 5.1. March 2020 groundwater data were used to eliminate alpha-BHC and heptachlor epoxide from further consideration as site COPCs in the PCUL and COPC Memo (Attachment C.4).

The use of Phase 2 groundwater data to delineate the extent of groundwater contamination at the site for the remaining four legacy pesticides is further described in Section 3.0.

**Table H.3
Groundwater COCs with Elevated Phase 2 PQLs Relative to Groundwater Cleanup Levels (µg/L)**

Chemical	Risk-Based Target CUL ⁽¹⁾		USEPA PQL ⁽²⁾		Ecology PQL ⁽³⁾	Median Phase 2 PQL	Comment
	Value	Basis	MCL	PQL Range			
Analytes Detected in Groundwater During Remedial Investigation Sampling							
beta-BHC	0.049	MTCA Method B	NE	NE	0.05	0.06	Phase 2 PQL within range of Ecology PQL
Dieldrin	0.0055	MTCA Method B	NE	NE	0.05	0.06	Phase 2 PQL within range of Ecology PQL
Toxaphene	0.8	MCL adjusted to MTCA Method B	3	1.3–17	0.5	6	Phase 2 PQL is elevated relative to Ecology PQL
Analytes Not Detected in Groundwater During Remedial Investigation Sampling							
Aldrin	0.0026	MTCA Method B	NE	NE	0.05	0.06	Phase 2 PQL within range of Ecology PQL

Notes:

- 1 Groundwater CULs are developed in Section 5.2 of the RI/FS. Refer to RI/FS Table 5.1.
- 2 The federal MCL for toxaphene is equivalent to PQLs established by the USEPA. USEPA evaluated the PQLs in the 2016 *Chemical Contaminant Summaries for the Third Six-Year Review of Existing National Primary Drinking Water Regulations* (USEPA 2016). USEPA considered the range of MDLs achievable using USEPA-approved analytical methods for each analyte: USEPA calculated the PQL range by multiplying each MDL by a factor of 10.
- 3 PQLs are from Attachment 1-I of the *Water Quality Program Permit Writer's Manual* (Ecology 2018). These PQLs have been accepted by Ecology as suitable to determine that discharge is clean enough to meet discharge requirements under the CWA. Under the CWA, Ecology is required to establish discharge limits that protect the highest beneficial use of surface water, which for most surface waters includes drinking water use.

3.0 Use of Nondetect Phase 2 Groundwater Results in Site Characterization

One objective of this appendix is to evaluate the appropriateness of using nondetect results to conduct site characterization. The following section evaluates the magnitude of the PQL/reporting limit relative to risk-based target CULs, in order to determine whether achieving a lower PQL could result in significantly greater protectiveness.

A well is considered in compliance with the proposed CUL for a particular chemical if both of the following conditions are met:

- The groundwater compliance result meets the proposed CUL; and
- The maximum detected result at that well is less than 2 times the proposed CUL.

For legacy pesticides, the compliance result at each monitoring well is determined as follows:

- If the chemical was not detected at a particular location during RI sampling conducted between 2016 and 2018, the compliance result is equivalent to the March 2020 groundwater result.
- If the chemical was detected at a well during RI sampling, the compliance result is calculated as the average among all results³ collected during RI sampling, including both detect and nondetect results. Because Phase 1 groundwater results were not excluded from this calculation, this results in a conservative approximation of the true mean value at each well.

Compliance results are not calculated at temporary wells; at these locations, the maximum detected result (or minimum nondetect result, if the chemical was not detected) is used to determine if a location is in compliance with the proposed CUL.

This approach was approved by Ecology in the Data Gap Evaluation Memo (Attachment C.6) and was used to evaluate whether any additional groundwater data gaps remained following completion of the March 2020 groundwater sampling event. The sections that follow show that additional groundwater sampling using low-level analytical methods is not required to bound the extent of groundwater contamination for purposes of site characterization and remedy design in the RI/FS.

³ Sample duplicates were resolved prior to performing this calculation. If both results were detected, the maximum result was used in the compliance result calculation. If both results were nondetect, the minimum result was used to calculate the compliance result. If one result was detected and one result was nondetect, the detected result was used.

3.1 USE OF PHASE 2 PQLS

March 2020 results confirm that elevated nondetect results are considered in compliance with the proposed CULs for chemicals with elevated groundwater reporting limits. The discussion in this section provides the rationale for this conclusion.

3.1.1 Comparison of Phase 2 and March 2020 Groundwater Results

Groundwater sampling results measured during March 2020 are typically an order of magnitude less than the median Phase 2 groundwater PQL due to the greater degree of analytical sensitivity achieved using the low-level organochlorine pesticide method. To evaluate whether these results can be considered representative of actual groundwater concentrations in wells where all RI sampling results were nondetect, dieldrin, chlordane, and toxaphene data in wells MW-1, MW-4, and MW-6 were evaluated.

These three chemicals and locations were selected because each of these chemicals was routinely detected in groundwater at these wells during both RI and March 2020 sampling. This comparison allows known concentrations measured by both laboratories to be compared directly to determine whether results measured by ALS are comparable to results measured by PAL.

Box and whiskers plots comparing March 2020 data to data collected from other events for each of these three chemicals and wells are presented in Figure H.1. As shown in Figure H.1, March 2020 results are generally within the interquartile range, which contains the middle 50% of the data. Toxaphene results at MW-1 and MW-4 are an exception; data at these locations are skewed by a higher percentage of nondetect results during RI sampling events than was observed for the other chemicals and locations.

These results provide a high degree of confidence that concentrations measured in the March 2020 groundwater sampling event are representative of groundwater quality, despite elevated reporting limits in previous sampling events.

3.1.2 Comparison of Phase 2 Groundwater Reporting Limits to USEPA and Ecology PQLs

Phase 2 reporting limits are greater than the proposed CUL for four legacy pesticides that became COCs in groundwater. In accordance with WAC 173-340-707(2), Ecology can consider the proposed CUL to be met when the PQL for the particular chemical, medium, and analytical procedure is no greater than the PQL established by the USEPA. This section establishes that this condition is met for the legacy pesticides with elevated reporting limits in Phase 2 groundwater data.

If the Phase 2 reporting limits achieved at a particular well are less than or approximately equivalent to USEPA and Ecology PQLs, then a nondetect result is considered appropriately sensitive to determine that the result is not indicative of contaminated groundwater per WAC 173-340-707(2)(b). In other words, nondetect Phase 2 results are considered in compliance with

the proposed CUL. Additionally, it is appropriate to use the more sensitive analytical result measured in March 2020 as the numeric result used to illustrate compliance.

Chemicals with Laboratory PQLs That Are Appropriately Sensitive per Agency PQLs

The USEPA has not promulgated PQLs for aldrin, dieldrin, or beta-BHC. However, the median Phase 2 PQLs for these chemicals are within the range of Ecology PQLs, as summarized in Table H.3. These Ecology PQLs are used to demonstrate compliance with surface water quality requirements enforced by USEPA under the CWA. Ecology PQLs were developed for treated water, which represents a matrix subject to fewer interferences than would be expected of untreated groundwater. PQLs associated with analysis of untreated groundwater would be expected to be greater than those for a treated water sample regardless of analytical method.

The maximum Phase 2 reporting limit achieved for aldrin, dieldrin, and beta-BHC chemicals is 0.06 µg/L (RI/FS Table 5.3). This is within 20% of the Ecology PQL for these analytes (0.05 µg/L), which is within the margin of error for precision and accuracy QA criteria approved in the Work Plan.

Chemicals with Laboratory PQLs That Are Elevated Relative to Agency PQLs

Phase 2 toxaphene reporting limits are elevated relative to USEPA and Ecology PQLs established for determining compliance with drinking water and surface water standards, of 3 and 0.5 µg/L, respectively. However, the median Phase 2 PQL falls within the range of PQLs for USEPA-developed analytical methods reported in the most recent review (USEPA 2016). Indeed, the upper limit of the range of PQLs that can be achieved using methods developed by the USEPA for analysis of drinking water samples is 17 µg/L; this is significantly greater than the median Phase 2 PQL.

The wide range of PQLs that can be achieved using USEPA-approved methods reflect the inherent difficulty of low-level toxaphene analysis. Toxaphene is a complex mixture of at least 650 different chlorinated compounds. Quantitation is usually performed by selecting and calibrating the analytical equipment using the most abundant compounds and making adjustments to the extraction and calibration, which increases analytical costs. Such specialized laboratory analysis is possible when there are relatively few chemicals that require quantification in a particular sample.

Despite the low reporting limits achieved in the March 2020 groundwater sampling event, it is possible that spectral interference and matrix interference observed at the site associated with the presence of nitrogen and lignin sulfonate may still prevent the laboratory from reaching the USEPA and Ecology PQLs in particular samples analyzed during future sampling events.

This page intentionally left blank.

4.0 Use of Nondetect Soil Results in Site Characterization

The leaching CUL was adjusted upward to the PQL per WAC 173-340-740(5)(c) for three pesticides that became soil COCs: beta-BHC, aldrin, and dieldrin. PAL PQLs were presented in the Work Plan for these and other pesticides. The listed PQLs were not achieved in all samples for all chemicals, due to site-specific matrix and other interferences.

In spring 2020, Ecology evaluated the appropriateness of RI PQLs achieved by PAL relative to PQLs reported by Manchester Laboratory. Ecology determined that the PAL PQLs were appropriately sensitive and that specialized analytical and sample analysis methods were not required to achieve greater analytical sensitivity for these chemicals. Thus, soil preliminary CULs developed in the PCUL and COPC Memo (Attachment C.4) were adjusted upward to the PAL PQL for pesticides.

The PAL and ALS PQLs represent typical PQLs that laboratories can achieve; these PQLs may not be achievable in all samples due to site-specific conditions or interferences. Indeed, during Phase 1, many pesticide results were not detected with reporting limits that were elevated relative to the typical PQL reported by the laboratory. Nondetect results measured during Phase 1 with elevated reporting limits should not be assumed to exceed the proposed CUL and are ignored when determining the percentage of results that exceed soil CULs for the direct contact and leaching pathways in Table 6.5 and Table 6.6, respectively. Additionally, if groundwater demonstrates compliance for beta-BHC, aldrin, or dieldrin in a particular area of concern (AOC), then nondetect data are considered in compliance with the leaching CUL.

If groundwater data are not sufficient to empirically demonstrate compliance with the leaching CUL, Phase 2 results are considered. Most nondetect results measured during Phase 2 are equivalent to the laboratory's typical PQL. Therefore, these results are sufficient to bound the nature and extent of soil contamination.

Due to the phased nature of the investigation, using Phase 2 results to bound the nature and extent of contamination while ignoring nondetect Phase 1 results will result in an overestimate of the contaminated area at the site. In the RI/FS, vertical and lateral extent of contamination was inferred using conservative approximations of the observed rate of decline in sample concentrations with increasing depth and distance from the source. However, the depth of contamination in AOC 1 and AOC 5 was inferred, based in part on nondetect Phase 1 results measured at deeper depths in the source area. Additional sampling may be required during remedy design to limit the scope of the proposed remedy, while still maintaining its protectiveness. Any new data collected as part of remedy design should be analyzed using sample preparation and analysis steps consistent with those implemented during Phase 2, to ensure that appropriately sensitive data are collected to allow comparison with the appropriate site CULs. Such new data should replace older data collected during Phase 1, because the newer data are expected to be more representative of subsurface conditions.

Notably, areas where additional sample collection and analysis may refine the extent of contamination are all located within the Property boundary and, therefore, do not impact the scope of the remedy with respect to off-property remedial actions.

5.0 Summary and Conclusion

This appendix evaluated nondetect data to ensure that reporting limits are sufficiently sensitive to identify soil and groundwater COCs and characterize the nature and extent of contamination at the site. The evaluation performed in Section 3.0 (groundwater) and Section 4.0 (soil) determined that reporting limits are generally sufficient for comparing site data to the proposed CULs developed in the RI/FS, as summarized in more detail in the following sections.

5.1 GROUNDWATER

Improvements in analytical sensitivity between Phase 1 and Phase 2 enabled PAL to achieve reporting limits sufficiently sensitive to eliminate six chemicals from consideration as groundwater COPCs. Further improvements in analytical sensitivity achieved in the March 2020 groundwater sampling event resulted in the elimination of two additional chemicals from further consideration as groundwater COPCs.

For legacy pesticides that became groundwater COCs, Section 3.0 describes how nondetect data with elevated reporting limits should be used with respect to site characterization. This evaluation found that Phase 2 reporting limits are appropriate to use in characterization of the nature and extent of contamination in groundwater, when used in combination with the March 2020 groundwater results.

An important conclusion stemming from this evaluation is that nondetect results in groundwater can be used to identify groundwater that is not contaminated at levels of concern. In other words, if the compliance result is less than the proposed CUL, and the maximum detected result at a well is less than 2 times the proposed CUL, this well is considered in compliance with the CUL, even if reporting limits in Phase 1 and Phase 2 RI data are elevated relative to the proposed CUL. Additionally, such results in groundwater are sufficient to satisfy the first requirement of an empirical demonstration under WAC 173-340-747(9)(b)(i): that groundwater concentrations are in compliance with groundwater cleanup levels.

5.2 SOIL

Improvements in analytical sensitivity between Phase 1 and Phase 2 enabled PAL to achieve reporting limits sufficiently sensitive to eliminate 12 chemicals from consideration as soil COPCs.

Phase 1 nondetect results are often elevated to soil CULs for the direct contact and leaching pathways. In these cases, compliance can be determined either by performing an empirical demonstration of groundwater quality (if the basis of the CUL is the leaching pathway) or by using Phase 2 results to bound the nature and extent of soil contamination. In some cases—e.g., when Phase 2 data are geographically distant from Phase 1 data, or when Phase 1 data are being used to bound the maximum depth of contamination—it may be appropriate to collect additional data to refine the scope of the remedy. However, existing pesticide data are sufficient to bound the nature and extent of soil contamination, as concluded in the Data Gap Evaluation Memo (Attachment C.6).

Notes:

Blank cells are intentional.

BOLD/RED Chemical is a COC in groundwater.

BOLD/RED Result exceeds the proposed CUL.

1 All chemicals analyzed during the March 2020 groundwater sampling event are included in this table.

2 Proposed groundwater CULs are numerically equivalent to the preliminary CULs developed in Table 5.1 in the RI/FS.

3 Results are rounded to two significant figures. Field duplicate samples are counted as unique results.

Pacific Agricultural Laboratory

Certificate of Accreditation

DRAFT

PERRY JOHNSON LABORATORY ACCREDITATION, INC.

Certificate of Accreditation

Perry Johnson Laboratory Accreditation, Inc. has assessed the Laboratory of:

Pacific Agricultural Laboratory, LLC
21830 SW Alexander Lane, Sherwood, OR 97140

(Hereinafter called the Organization) and hereby declares that Organization is accredited in accordance with the recognized International Standard:

ISO/IEC 17025:2017
& Meets the Requirements of the AOAC International Guidelines for Laboratories Performing Microbiological and Chemical Analyses of Food and Pharmaceutical-2015 & APLAC TC 007 Guidelines for Food Testing Laboratories

This accreditation demonstrates technical competence for a defined scope and the operation of a laboratory quality management system
(as outlined by the joint ISO-ILAC-IAF Communiqué dated April 2017):

Chemical and Environmental Testing
(As detailed in the supplement)

Accreditation claims for such testing and/or calibration services shall only be made from addresses referenced within this certificate. This Accreditation is granted subject to the system rules governing the Accreditation referred to above, and the Organization hereby covenants with the Accreditation body's duty to observe and comply with the said rules.

For PJLA:

Tracy Szerszen
President/Operations Manager

Perry Johnson Laboratory
Accreditation, Inc. (PJLA)
755 W. Big Beaver, Suite 1325
Troy, Michigan 48084

Initial Accreditation Date:

January 7, 2013

Issue Date:

August 2, 2018

Expiration Date:

September 30, 2020

Accreditation No.

64422

Certificate No.:

L18-354

The validity of this certificate is maintained through ongoing assessments based on a continuous accreditation cycle. The validity of this certificate should be confirmed through the PJLA website: www.pjllabs.com

Certificate of Accreditation: Supplement

Pacific Agricultural Laboratory, LLC

21830 SW Alexander Lane, Sherwood, OR 97140
Contact Name: Stephen Thun Phone: 503-626-7943

Accreditation is granted to the facility to perform the following testing:

FIELD OF TEST	ITEMS, MATERIALS OR PRODUCTS TESTED	SPECIFIC TESTS OR PROPERTIES MEASURED	SPECIFICATION, STANDARD METHOD OR TECHNIQUE USED	RANGE (WHERE APPROPRIATE) AND DETECTION LIMIT
Chemical ^F	Food, Plant Tissue & Agricultural Commodities	Multi-Residue Pesticides QuEChERS	AOAC 2007.01 AM-601/ GC-MS/MS	D.L.= 0.01 mg/kg
Chemical ^F	Food, Plant Tissue & Agricultural Commodities	Multi-Residue Pesticides QuEChERS	AOAC 2007.01 AM-701/ LC-MS/MS	D.L.= 0.01 mg/kg
Chemical ^F	Food, Plant Tissue & Agricultural Commodities	Multi-Residue Pesticides JASBC	JASBC 69(3):121-126, 2011, AM-601/AM-605 GC-MS/MS	D.L.= 0.1 mg/kg
Chemical ^F	Food, Plant Tissue & Agricultural Commodities	Multi-Residue Pesticides JASBC	JASBC 69(3):121-126, 2011, AM-701/AM-705 LC-MS/MS	D.L.= 0.1 mg/kg
Chemical ^F	Food, Plant Tissue & Agricultural Commodities	Pesticide Residue EPTC MITC	AMVAC Method WRC 88-43, AM-601/ GC-MS/MS AM-404/ GC-FPD	D.L.= 0.01 mg/kg

Chemical ^F	Food, Plant Tissue & Agricultural Commodities	Pesticide Residue Imidazolinone Herbicides	BASF Reg Doc # 2010/1090461 AM-701/ LC-MS/MS	D.L.= 1 µg/kg
Chemical ^F	Food, Plant Tissue & Agricultural Commodities	Pesticide Residue Sulfonylurea Herbicides	DuPont Method AM-701/ LC-MS/MS	D.L.= 0.4 µg/kg
Chemical ^F	Food, Plant Tissue & Agricultural Commodities	Pesticide Residue Aminocyclopyrachlor	Modified Anal.Chem./Vol 81#2 Nanita AM-701/ LC-MS/MS	D.L.= 0.004 mg/kg
Chemical ^F	Food, Plant Tissue & Agricultural Commodities	Pesticide Residue Aminopyralid	Modified Dow Study ID #081126 AM-701/ LC-MS/MS	D.L.= 0.004 mg/kg
Chemical ^F	Food, Plant Tissue & Agricultural Commodities	Pesticide Residue Polar Pesticides QuPPE	EURL, Ver.8.1, 2015 AM-702/ LC-MS/MS	D.L.= 0.1 mg/kg
Chemical ^F	Food, Plant Tissue & Agricultural Commodities	Pesticide Residue Paraquat/Diquat	JAOAC Method, Vol. 76 #6 AM-702/ LC-MS/MS	D.L.= 0.03 mg/kg
Chemical ^F	Food, Plant Tissue & Agricultural Commodities	Pesticide Residue Maleic hydrazide	JOAFC, Vol. 29 1980 AM-502/ LC-DAD/FLD	D.L.= 0.2 mg/kg

Certificate of Accreditation: Supplement

Pacific Agricultural Laboratory, LLC

21830 SW Alexander Lane, Sherwood, OR 97140
Contact Name: Stephen Thun Phone: 503-626-7943

Accreditation is granted to the facility to perform the following testing:

FIELD OF TEST	ITEMS, MATERIALS OR PRODUCTS TESTED	SPECIFIC TESTS OR PROPERTIES MEASURED	SPECIFICATION, STANDARD METHOD OR TECHNIQUE USED	RANGE (WHERE APPROPRIATE) AND DETECTION LIMIT
Chemical ^F	Food, Plant Tissue & Agricultural Commodities	Potency	AOAC V98-6 AM-505/ LC-DAD	D.L. = 0.2 mg/kg
Chemical ^F	Food, Plant Tissue & Agricultural Commodities	Pesticide Residue Dithiocarbamates	JAOAC Method, Vol78, #5 AM-405/ GC-FPD	D.L. = 0.1 mg/kg
Environmental ^F	Aqueous Solid	Multi-Residue Pesticides	EPA 8081B, AM-403/ GC-ECD	D.L. = 0.06 µg/L D.L. = 0.006 7 mg/kg
Environmental ^F	Aqueous Solid	Multi-Residue Pesticides	EPA 8270D/ EPA 8151A AM-604/ GC-MS/MS	D.L. = 0.06 µg/L D.L. = 0.006 7 mg/kg
Environmental ^F	Aqueous Solid	Multi-Residue Pesticides	EPA 8321B, AM-704/ LC-MS/MS	D.L. = 0.06 µg/L D.L. = 0.006 7 mg/kg
Environmental ^F	Aqueous Solid	Multi-Residue Pesticides	EPA 8141A, AM-404/ GC-FPD	D.L. = 0.06 µg/L D.L. = 0.017 mg/kg

1. The presence of a superscript F means that the laboratory performs testing of the indicated parameter at its fixed location. Example: Outside Micrometer ^F would mean that the laboratory performs this testing at its fixed location.

Smith-Kem Site
Remedial Investigation/Feasibility Study

Appendix I
Cost Estimate

DRAFT

**Table I.1
Alternative Summary**

Alternative	Restoration Time Frame (years)	Construction Cost	Long-Term Monitoring	Other Professional Services	Cost
Alternative 1	20-25	\$1,304,000	\$345,400	\$370,000	\$2,508,000
Alternative 2	15	\$1,057,000	\$266,900	\$392,000	\$2,099,000
Alternative 3	10	\$1,158,000	\$188,400	\$394,000	\$2,137,000
Alternative 4	5	\$1,992,000	\$109,900	\$530,000	\$3,209,000

Abbreviations:

- AOC Area of concern
- CUL Cleanup level
- REL Remediation level

**Table I.2
Alternative 1**

Smith-Kem Remediation						
Task #	Task List	Quantity	Unit	Unit Rate	Total	Notes
Site Prep and Environmental Controls						
	Mobilization	1	LS	\$ 79,000	\$ 79,000	7% of site work
	Survey	2	Day	\$ 750	\$ 1,500	
	TESC and Pollution Prevention	1	LS	\$ 50,000	\$ 50,000	
Excavation within AOCs						
	Excavate and Stockpile/Load Soil	820	CY	\$ 15	\$ 12,300	
	Load, Transport & Dispose Subtitle D	1,394	Ton	\$ 65	\$ 90,610	1.7 tons/CY conversion
	Backfill and Compact	78	Ton	\$ 30	\$ 2,340	1.7 ton/cy
Cap Placement						
	Excavate (Outside AOCs)	990	CY	\$ 15	\$ 14,850	
	Load, Transport & Dispose Subtitle D (Outside AOCs)	1,683	Ton	\$ 65	\$ 109,395	1.7 tons/CY conversion
	Place CSBC	2,333	Ton	\$ 30	\$ 70,000	9" CSBC, 1.75 tons/CY conversion, cost from PBS
	Place Asphalt	48,000	SF	\$ 2.36	\$ 113,280	4.5" Asphalt, cost from PBS
Stormwater System Equipment						
	Conveyance System	1	LS	\$ 287,300	\$ 287,300	PBS Estimate
	Structural Excavation Class B Incl. Haul (conveyance structures)	1,618	CY	\$ 55	\$ 88,990	PBS Estimate, added in 10% contractor MU
	Gravel Backfill for Trench	1,346	CY	\$ 77	\$ 103,642	PBS Estimate, added in 10% contractor MU
	Load, Transport & Dispose Subtitle D	2,751	Ton	\$ 65	\$ 178,789	PBS Estimate, 1.7 ton/cy
	1 Day of Startup Assistance and Operator Training	1	Day	\$ 1,500	\$ 1,500	PBS Estimate

Direct Costs	\$ 1,203,496
Ellensburg Sales Tax @ 8.3%	\$ 99,890
Total	\$ 1,304,000

Professional Services						
Task #	Task List	Quantity	Unit	Unit Rate	Total	Notes
	Engineering Design				\$ 100,000	Project experience
	Ecology Review Costs				\$ 20,000	Project experience
	Construction Reporting				\$ 60,000	Project experience
	Institutional Controls Development and Implementation				\$ 30,000	Project experience
	Permitting				\$ 20,000	Project experience
	Construction Oversight	12	Week	\$ 11,000	\$ 132,000	Weekly cost based on one field engineer, including travel time, and PM @ 10 hr/wk
	Well Decommissioning and Installation	1	Each	\$ 8,000	\$ 8,000	Project experience
	Long-Term Monitoring (Semiannual for 2 years, Annual for 18 y	22	Event	\$ 15,700	\$ 345,400	Project experience
	Cap Inspection and Maintenance	20	Year	\$ 3,500	\$ 70,000	Project experience

Base Total	\$ 2,089,400
20% Contingency	\$ 417,880
Total	\$ 2,508,000

Andy;

Regarding your request for information pertaining to comments #15 and #40 of the Ecology comments on agency review draft, Smith-Kem Site Remedial Investigation/Feasibility Study, dated June 2021, we are providing information below. However, it appears that Ecology may be asking more for Floyd-Snider to support their claim of ongoing operations contributing to contamination than for information regarding how those operations are being handled. As we have maintained from the outset, current operations are not responsible for the contamination. Having said that, the information mentioned at the outset is provided below.

Loading, unloading, and handling of dry fertilizer materials takes place over concrete surfaces. In the event of an accidental spill (which is quite rare), clean-up takes place immediately and the product is handled in a manner suitable for the situation. This is typically done through a crop application process following the intended use of the product. Small amounts may be disposed of through standard solid waste processes as well. The incidental spills mentioned would generally be quite minimal and unlikely to contribute to a measurable level of

contamination. In the event the amount would exceed that minimal level it would be picked up and dealt with as mentioned above or consumed in the facility's standard blending and application process.

Liquid fertilizer is stored in secondary containment meeting the requirements set forth by Washington State Department of Agriculture. This secondary containment has been upgraded at our expense since The McGregor Company has assumed operations at the Ellensburg site. Transfer operations take place on a concrete operational area containment pad which has also been upgraded to meet WSDA requirements at TMC expense since assuming operations at the site.

This upgraded operational area containment also serves as the loading area for any on-site fuel transfers. On-site fuel storage has been decreased and fuel transfers limited since TMC began operations at the site.

Additionally, this curbed concrete operational area containment is used to meet the requirements for the bulk transfer of Roundup PowerMax. Essentially all liquid product transfers take place on this area so in the event of a spill, capture and clean up would be a contained and straightforward process which would allow the product to be used for its intended purpose or disposed of appropriately. The only negative to this operational area containment pad is the monitoring well which is placed in it, and which of course penetrates through the concrete itself. This well was in place when TMC assumed operations and it has been clearly stated that TMC is not allowed to change anything which would affect the well and its use.

The only "bulk" crop protection product handled on site is Roundup PowerMax which is stored inside in its own secondary containment structure. TMC has also upgraded this secondary containment to bring it in to compliance since assuming operations at the site.

We assume this information makes it quite clear as to why we have been adamant from the beginning that TMC has not, is not and will not be contributing to contamination of the site. We trust that you will do all in your power to assist in communicating this to Ecology.

Additionally, in the event of an accidental spill not covered in the information already provided, TMC has a written process that is followed for notifications,

both internal and external i.e., any appropriate agencies, which would be followed. In addition to the necessary notifications the plan triggers the clean-up procedures which would be used to mitigate the event. We are well prepared to deal with these unforeseen events but prefer to take the steps outlined above to prevent them from happening in the first place.

We hope this information satisfies your request and will look forward to seeing your response to Ecology's other 38 comments as well.

Regards,

A handwritten signature in black ink, appearing to read 'Ian McGregor', with a long horizontal flourish extending to the right.
