U: Undetected at or above MDL
J: Analyte detected above MDL, but below MRL
B: Hit above MRL also found in Method Blank
E: Analyte concentration above high point of ICAL
N: Presumptive evidence of compound

D: Result from dilution
m: Manual integration performed
d: Compound manually deleted
NR: Analyte not reported from this analysis

*: Result fails acceptance criteria
#: Acceptance criteria not applicable
?: Insufficient information to determine acceptance
e: Result >= MRL, but MRL less than low point of ICAL

Prep Amount: 200 mL
 Prep Final Amount: 1.00 mL

Dilution: 1
 Basis Factor: 100.00

U: Undetected at or above MDL
 J: Analyte detected above MDL, but below MRL
 B: Hit above MRL also found in Method Blank
 E: Analyte concentration above high point of ICAL
 N: Presumptive evidence of compound

D: Result from dilution
 m: Manual integration performed
 d: Compound manually deleted
 NR: Analyte not reported from this analysis

*: Result fails acceptance criteria
 #: Acceptance criteria not applicable
 ?: Insufficient information to determine acceptance
 e: Result >= MRL, but MRL less than low point of ICAL
 c: check for co-elution

Printed: 4/22/20 12:43

U: Undetected at or above MDL
J: Analyte detected above MDL, but below MRL
B: Hit above MRL also found in Method Blank
E: Analyte concentration above high point of ICAL
N: Presumptive evidence of compound

D: Result from dilution
m: Manual integration performed
d: Compound manually deleted
NR: Analyte not reported from this analysis

*: Result fails acceptance criteria
#: Acceptance criteria not applicable
?: Insufficient information to determine acceptance
e: Result >= MRL, but MRL less than low point of ICAL
c: check for co-elution

Printed: 4/22/20 12:43

U: Undetected at or above MDL
J: Analyte detected above MDL, but below MRL
B: Hit above MRL also found in Method Blank
E: Analyte concentration above high point of ICAL
N: Presumptive evidence of compound

D: Result from dilution
m: Manual integration performed
d: Compound manually deleted
NR: Analyte not reported from this analysis

*: Result fails acceptance criteria
#: Acceptance criteria not applicable
?: Insufficient information to determine acceptance
e: Result >= MRL, but MRL less than low point of ICAL
c: check for co-elution

Printed: 4/22/20 12:43

Prep Amount: 200 mL
 Prep Final Amount: 1.00 mL

Dilution: 1
 Basis Factor: 100.00

U: Undetected at or above MDL
 J: Analyte detected above MDL, but below MRL
 B: Hit above MRL also found in Method Blank
 E: Analyte concentration above high point of ICAL
 N: Presumptive evidence of compound

D: Result from dilution
 m: Manual integration performed
 d: Compound manually deleted
 NR: Analyte not reported from this analysis

*: Result fails acceptance criteria
 #: Acceptance criteria not applicable
 ?: Insufficient information to determine acceptance
 e: Result >= MRL, but MRL less than low point of ICAL
 c: check for co-elution

U: Undetected at or above MDL
J: Analyte detected above MDL, but below MRL
B: Hit above MRL also found in Method Blank
E: Analyte concentration above high point of ICAL
N: Presumptive evidence of compound

D: Result from dilution
m: Manual integration performed
d: Compound manually deleted
NR: Analyte not reported from this analysis

*: Result fails acceptance criteria
#: Acceptance criteria not applicable
?: Insufficient information to determine acceptance
e: Result >= MRL, but MRL less than low point of ICAL
c: check for co-elution

Prep Amount: 200 mL
 Prep Final Amount: 1.00 mL

Dilution: 1
 Basis Factor: 100.00

U: Undetected at or above MDL
 J: Analyte detected above MDL, but below MRL
 B: Hit above MRL also found in Method Blank
 E: Analyte concentration above high point of ICAL
 N: Presumptive evidence of compound

D: Result from dilution
 m: Manual integration performed
 d: Compound manually deleted
 NR: Analyte not reported from this analysis

*: Result fails acceptance criteria
 #: Acceptance criteria not applicable
 ?: Insufficient information to determine acceptance
 e: Result >= MRL, but MRL less than low point of ICAL
 c: check for co-elution

Printed: 4/22/20 12:43

U: Undetected at or above MDL
J: Analyte detected above MDL, but below MRL
B: Hit above MRL also found in Method Blank
E: Analyte concentration above high point of ICAL
N: Presumptive evidence of compound

D: Result from dilution
m: Manual integration performed
d: Compound manually deleted
NR: Analyte not reported from this analysis

*: Result fails acceptance criteria
#: Acceptance criteria not applicable
?: Insufficient information to determine acceptance
e: Result >= MRL, but MRL less than low point of ICAL
c: check for co-elution

U: Undetected at or above MDL
J: Analyte detected above MDL, but below MRL
B: Hit above MRL also found in Method Blank
E: Analyte concentration above high point of ICAL
N: Presumptive evidence of compound

D: Result from dilution
m: Manual integration performed
d: Compound manually deleted
NR: Analyte not reported from this analysis

*: Result fails acceptance criteria
#: Acceptance criteria not applicable
?: Insufficient information to determine acceptance
e: Result >= MRL, but MRL less than low point of ICAL
c: check for co-elution

Printed: 4/22/20 12:43

U: Undetected at or above MDL
J: Analyte detected above MDL, but below MRL
B: Hit above MRL also found in Method Blank
E: Analyte concentration above high point of ICAL
N: Presumptive evidence of compound

D: Result from dilution
m: Manual integration performed
d: Compound manually deleted
NR: Analyte not reported from this analysis

*: Result fails acceptance criteria
#: Acceptance criteria not applicable

U: Undetected at or above MDL
J: Analyte detected above MDL, but below MRL
B: Hit above MRL also found in Method Blank
E: Analyte concentration above high point of ICAL
N: Presumptive evidence of compound

D: Result from dilution
m: Manual integration performed
d: Compound manually deleted
NR: Analyte not reported from this analysis

*: Result fails acceptance criteria
#: Acceptance criteria not applicable
?: Insufficient information to determine acceptance
e: Result >= MRL, but MRL less than low point of ICAL
c: check for co-elution

Toxaphene {6}	0.00	15.43	0	93988	0.000	298.104	0	1490		

Prep Amount: 200 mL
 Prep Final Amount: 1.00 mL

Dilution: 1
 Basis Factor: 100.00

U: Undetected at or above MDL
 J: Analyte detected above MDL, but below MRL
 B: Hit above MRL also found in Method Blank
 E: Analyte concentration above high point of ICAL
 N: Presumptive evidence of compound

D: Result from dilution
 m: Manual integration performed
 d: Compound manually deleted
 NR: Analyte not reported from this analysis

*: Result fails acceptance criteria
 #: Acceptance criteria not applicable
 ?: Insufficient information to determine acceptance
 e: Result >= MRL, but MRL less than low point of ICAL
 c: check for co-elution

Printed: 4/24/20 20:10

U: Undetected at or above MDL
 J: Analyte detected above MDL, but below MRL
 B: Hit above MRL also found in Method Blank
 E: Analyte concentration above high point of ICAL
 N: Presumptive evidence of compound

D: Result from dilution
 m: Manual integration performed
 d: Compound manually deleted
 NR: Analyte not reported from this analysis

*: Result fails acceptance criteria
 #: Acceptance criteria not applicable
 ?: Insufficient information to determine acceptance
 e: Result >= MRL, but MRL less than low point of ICAL
 c: check for co-elution

U: Undetected at or above MDL
J: Analyte detected above MDL, but below MRL
B: Hit above MRL also found in Method Blank
E: Analyte concentration above high point of ICAL
N: Presumptive evidence of compound

D: Result from dilution
m: Manual integration performed
d: Compound manually deleted
NR: Analyte not reported from this analysis

*: Result fails acceptance criteria
#: Acceptance criteria not applicable
?: Insufficient information to determine acceptance
e: Result >= MRL, but MRL less than low point of ICAL
c: check for co-elution

Title: Low Level Organochlorine Pesticides by GC	Calibration ID: KC2000190
	Report List ID: 21312

Internal Standard Compounds

Parameter Name	RT 1	RT 2	Resp 1	Resp 2	Solution Conc 1	Solution Conc 2
1-Bromo-2-nitrobenzene	6.20	5.49	1211930	5318899	100.000	100.000

Surrogate Compounds

Parameter Name	RT 1	RT 2	Resp 1	Resp 2	Solution Conc 1	Solution Conc 2	% Rec 1	% Rec 2	Rpt?
Decachlorobiphenyl	18.67	17.07	40422	142115	1.874	1.657			Y
Tetrachloro-m-xylene	8.97	7.27	32067	114702	1.825	1.740			Y

Target Compounds

Parameter Name	RT 1	RT 2	Resp 1	Resp 2	Solution Conc 1	Solution Conc 2	Final Conc 1	Final Conc 2	Rpt?
Endosulfan I	13.58	12.19	34381	121791	1.845	1.701	1.85	1.70	Y
Endosulfan II	14.81	13.55	33395	114663	1.806	1.707	1.81	1.71	Y
Endosulfan Sulfate	15.47	14.24	36462	118634	1.935	1.791	1.94	1.79	Y

Prep Amount: 100 mL **Dilution:** 1
Prep Final Amount: 5.00 mL **Basis Factor:** 100.00

U: Undetected at or above MDL
J: Analyte detected above MDL, but below MRL
B: Hit above MRL also found in Method Blank
E: Analyte concentration above high point of ICAL
N: Presumptive evidence of compound

D: Result from dilution
m: Manual integration performed
d: Compound manually deleted
NR: Analyte not reported from this analysis

*: Result fails acceptance criteria
#: Acceptance criteria not applicable
?: Insufficient information to determine acceptance
e: Result >= MRL, but MRL less than low point of ICAL
c: check for co-elution

U: Undetected at or above MDL
 J: Analyte detected above MDL, but below MRL
 B: Hit above MRL also found in Method Blank
 E: Analyte concentration above high point of ICAL
 N: Presumptive evidence of compound

D: Result from dilution
 m: Manual integration performed
 d: Compound manually deleted
 NR: Analyte not reported from this analysis

*: Result fails acceptance criteria
 #: Acceptance criteria not applicable
 ?: Insufficient information to determine acceptance
 e: Result >= MRL, but MRL less than low point of ICAL
 c: check for co-elution

U: Undetected at or above MDL
J: Analyte detected above MDL, but below MRL
B: Hit above MRL also found in Method Blank
E: Analyte concentration above high point of ICAL
N: Presumptive evidence of compound

D: Result from dilution
m: Manual integration performed
d: Compound manually deleted
NR: Analyte not reported from this analysis

*: Result fails acceptance criteria
#: Acceptance criteria not applicable
?: Insufficient information to determine acceptance
e: Result >= MRL, but MRL less than low point of ICAL
c: check for co-elution

Prep Amount: 2 g
Prep Final Amount: 10.00 mL

Dilution: 1
Basis Factor: 100.00

U: Undetected at or above MDL
J: Analyte detected above MDL, but below MRL
B: Hit above MRL also found in Method Blank
E: Analyte concentration above high point of ICAL
N: Presumptive evidence of compound

D: Result from dilution
m: Manual integration performed
d: Compound manually deleted
NR: Analyte not reported from this analysis

*: Result fails acceptance criteria
#: Acceptance criteria not applicable
?: Insufficient information to determine acceptance
e: Result >= MRL, but MRL less than low point of ICAL
c: check for co-elution

ALS-Columbia Kelso
Initial Calibration Checklist GC

Method: 8081B 16274
ICAL ID or Date: LC2000190 4-6-20
Instrument: GC 23

Primary Secondary

- | | | | | |
|-------------------------------------|-------------------------------------|---|-----|----|
| <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> | Was new ICAL saved with a unique ID? | Yes | No |
| <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> | Was ICAL performed continuously (i.e. not interrupted by maintenance event)? | Yes | No |
| <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> | Are all analytes in blank < 1/2 MRL? | Yes | No |
| <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> | Does ICAL contain minimum number of concentrations? | Yes | No |
| <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> | For each analyte, no internal levels skipped? | Yes | No |
| <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> | Retention times updated using a midpoint of the calibration? Secondary reviewer double check peak IDs. | | |
| <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> | Calibration files quantitated with new method? | Yes | No |
| <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> | Check integrations. Primary reviewer must check all integrations electronically. Secondary reviewer will check low point and high point electronically. | | |
| <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> | ICAL files added to calibration table? | Yes | No |
| <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> | The average RF or COD meets method criteria for all analytes? | Yes | No |
| <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> | ICV quantitated against new ICAL? | Yes | No |
| <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> | ICV meet method criteria? | Yes | No |
| <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> | Linked in Stealth to appropriate method? An appropriate method will be one that contains all analytes that were analyzed. | | |
| <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> | All calibration reports included? ICAL SUMMARY, ICAL DETAILED, ICV SUMMARY. | | |
| <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> | Enviroquant responses match those in Stealth. <i>LIMS</i> | Yes | No |
| <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> | All quant reports and manual integrations initialed by primary? | Yes | No |

Data packet should be in the following order: Sequence log, Calibration Review, Stealth ICAL reports, and quant reports.

Primary: LM
Secondary:

Initial Calibration - Detailed Report

Calibration ID:	CAL16274	Instrument ID:	GC23
Method ID:	MJ1647	Column Name:	DB XLB
		Calibration Fit:	AverageRF

Parameter Name	#	RF	#	RF	#	RF	#	RF	#	RF	#	RF	Mean RF	%RSD
trans-Nonachlor													1.684	11.1
Mirex													1.394	14.2
Hexachloroethane													2.412	11.1
Hexachlorobutadiene													1.998	7.4
Perthane													0.048	10.3

RSD Not Applicable. Compound being quantitated from curve. Included in Average RF summary for Average %RSD calculation.

PROJECT NARRATIVE

Basis for the Data Validation

This report summarizes the results of data validation performed on groundwater and quality control (QC) sample data for the Smith-Kem Site Remedial Investigation Groundwater Monitoring project. A complete list of samples is provided in the **Sample Index**.

ALS Environmental, Kelso, Washington performed the analyses. The analytical method and EcoChem project chemists are listed in the table below.

ANALYSIS	METHOD	PRIMARY REVIEW	SECONDARY REVIEW
Low Level Pesticides	EPA 8081B Mod	E. Clayton	C. Ransom

The data were reviewed using guidance and quality control criteria documented in the analytical methods; *Smith-Kem Site Remedial Investigation Work Plan* (Floyd|Snider, July 2016); *Smith-Kem Site Remedial Investigation 2019 Work Plan Addendum* (Floyd|Snider, October 2019); and *National Functional Guidelines for Organic Data Review* (USEPA 2017).

EcoChem's goal in assigning data assessment qualifiers is to assist in proper data interpretation. If values are estimated (J or UJ), data may be used for site evaluation and risk assessment purposes but reasons for data qualification should be taken into consideration when interpreting sample concentrations. If values are assigned an R or DNR, the data should not be used for any site evaluation purposes. If values have no data qualifier assigned, then the data meet the data quality objectives as stated in the documents and methods referenced above.

Data qualifier definitions, reason codes, and validation criteria are included as **Appendix A**. A Qualified Data Summary Table is included in **Appendix B**. Data Validation Worksheets will be kept on file at EcoChem, Inc. A qualified laboratory electronic data deliverable (EDD) is also submitted with this report.

DATA VALIDATION REPORT
Smith-Kem Site – Spring 2020 GW Monitoring
Pesticides by Method SW8081B

This report documents the review of analytical data from the analysis of groundwater samples and the associated laboratory and field quality control (QC) samples. ALS Environmental, Kelso, Washington, analyzed the samples. Refer to the **Sample Index** for a complete list of samples.

SDG	NUMBER OF SAMPLES	VALIDATION LEVEL
K2002652	21 Groundwater	EPA Stage 4

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

The extraction batch quality control summaries were missing results for heptachlor. The laboratory was contacted and submitted revised summary forms.

The following results exceeded the calibration range in the original 1X analysis. The summary forms did not have "E" flags. The lab was contacted and submitted revised summary forms.

Sample ID	Lab ID	Analyte	Result	Added Lab Flag
MW-4-032520	K2002652-002	Toxaphene	4000	E
MW-104-032520	K2002652-003	Toxaphene	4000	E
MW-6-032520	K2002652-008	Chlordane	1400	E
MW-6-032520	K2002652-008	Toxaphene	8000	EP

EDD TO HARDCOPY VERIFICATION

Ten percent (10%) of the results in the laboratory EDD were verified by comparison to the laboratory data package. The following errors were noted:

The heptachlor results for the extraction batch quality control samples were missing from the EDD. The laboratory was contacted and submitted a revised excel file.

In the case of the results noted above, the EDD contained the results from the 1X analysis. These analytes should be reported from the 20X dilution. Results were added to the EDD during validation.

Sample ID	Lab ID	Analyte	EDD Result (1x)	New Result (20X)
MW-4-032520	K2002652-002	Toxaphene	4000	4900
MW-104-032520	K2002652-003	Toxaphene	4000	4600
MW-6-032520	K2002652-008	Chlordane	1400	1700
MW-6-032520	K2002652-008	Toxaphene	8000	9600

TECHNICAL DATA VALIDATION

This report documents the review of analytical QC requirements as listed in the following table.

✓	Sample Receipt, Preservation, and Holding Times	1	Field Duplicates
✓	Laboratory Blanks	✓	Target Analyte List
1	Field Blanks	2	Compound Identification
1	Laboratory Control Samples (LCS/LCSD)	1	Reporting Limits
✓	Matrix Spikes/Matrix Spike Duplicates (MS/MSD)	2	Reported Results
✓	Surrogate Compounds	1	Calculation Verification
✓	Internal Standards		

✓ Stated method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.

1 Quality control results are discussed below, but no data were qualified.

2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Field Blanks

No field blanks were submitted.

Laboratory Control Samples

The recovery for toxaphene in laboratory control sample duplicate (LCSD) KQ2004497-04 was greater than the upper control limit. The recovery for the associated laboratory control sample (LCS) was in control; no data were qualified based on the single outlier.

Field Duplicates

Samples MW-4-032520 and MW-104-032520 were submitted as field duplicates. For results >5x the reporting limit (RL), the relative percent difference (RPD) values were less than the control limit of 35%. For results less than 5x the RL, the difference between the sample and duplicate results were less than the RL. Field precision was acceptable.

Compound Identification

Samples were analyzed on a primary column, , and a confirmation column, . The results from the two analytical columns were compared for agreement. An elevated RPD value may indicate the presence of an interference. When the RPD value was greater than 40% but less than 60% the reported value was estimated (J-3). If the RPD value was greater than 60%, the result was qualified as a tentative identification (NJ-3). Confirmation outliers are listed below.

SAMPLE ID	AROCLOR	RPD	QUALIFIER
MW-4-032520	aldrin	78%	NJ-3
	heptachlor	70%	NJ-3
MW-104-032520	aldrin	68%	NJ-3
	beta-BHC	51%	J-3
	heptachlor	59%	J-3
MW-6-032520	beta-BHC	55%	J-3
	heptachlor epoxide	80%	NJ-3
	toxaphene	55%	J-3

SAMPLE ID	AROCLOR	RPD	QUALIFIER
MW-1-032520	alpha-BHC	60%	NJ-3
	beta-BHC	44%	J-3
	heptachlor epoxide	71%	NJ-3
MW-14-032620	chlordane	43%	J-3
	heptachlor epoxide	68%	NJ-3
	toxaphene	48%	J-3

Reporting Limits

Several samples required dilution due to high concentrations of 1 or more target analytes. Reporting limits were elevated accordingly.

Reported Result

For cases where a sample was analyzed at more than one dilution, the laboratory merged results in the EDD in order to only report one analyte per sample. The following results were reported for the 1X analysis in the EDD. These results were flagged as do-not-report (DNR-11) in favor of the results from the 20X dilution.

Sample ID	Lab ID	Analyte	EDD Result (1x)	Lab Flag	DV Qual
MW-4-032520	K2002652-002	Toxaphene	4000	E	DNR-11
MW-104-032520	K2002652-003	Toxaphene	4000	E	DNR-11
MW-6-032520	K2002652-008	Chlordane	1400	E	DNR-11
MW-6-032520	K2002652-008	Toxaphene	8000	EP	DNR-11

Calculation Verification

Several results were verified by recalculation from the raw data. No calculation or transcription errors were noted.

OVERALL ASSESSMENT

As was determined by this evaluation, the laboratory followed the specified analytical method. With the exception noted above, accuracy was acceptable as demonstrated by the LCS/LCSD, matrix spike/matrix spike duplicate (MS/MSD), and surrogate %R values and precision was acceptable as demonstrated by the LCS/LCSD, MS/MSD, and field duplicate RPD values.

Results were estimated due to confirmation column precision outliers. Data were flagged as do-not-report (DNR) to indicate which result should not be used from multiple reported analyses. A usable result remains for all analytes in all samples; completeness was not affected.

Data flagged DNR should not be used. All other data, as qualified, are acceptable for use.

APPENDIX A

DATA QUALIFIER DEFINITIONS

REASON CODES

AND CRITERIA TABLES

DATA VALIDATION QUALIFIER CODES **Based on National Functional Guidelines**

The following definitions provide brief explanations of the qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents the approximate concentration.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

The following is an EcoChem qualifier that may also be assigned during the data review process:

DNR	Do not report; a more appropriate result is reported from another analysis or dilution.
-----	---

DATA QUALIFIER REASON CODES

Group	Code	Reason for Qualification
Sample Handling	1	Improper Sample Handling or Sample Preservation (i.e., headspace, cooler temperature, pH, summa canister pressure); Exceeded Holding Times
Instrument Performance	24	Instrument Performance (i.e., tune, resolution, retention time window, endrin breakdown, lock-mass)
	5A	Initial Calibration (RF, %RSD, r^2)
	5B	Calibration Verification (CCV, CCAL; RF, %D, %R) Use bias flags (H,L) ¹ where appropriate
	5C	Initial Calibration Verification (ICV %D, %R) Use bias flags (H,L) ¹ where appropriate
Blank Contamination	6	Field Blank Contamination (Equipment Rinsate, Trip Blank, etc.)
	7	Lab Blank Contamination (i.e., method blank, instrument blank, etc.) Use low bias flag (L) ¹ for negative instrument blanks
Precision and Accuracy	8	Matrix Spike (MS and/or MSD) Recoveries Use bias flags (H,L) ¹ where appropriate
	9	Precision (all replicates: LCS/LCSD, MS/MSD, Lab Replicate, Field Replicate)
	10	Laboratory Control Sample Recoveries (a.k.a. Blank Spikes) Use bias flags (H,L) ¹ where appropriate
	12	Reference Material Use bias flags (H,L) ¹ where appropriate
	13	Surrogate Spike Recoveries (a.k.a. labeled compounds, recovery standards) Use bias flags (H,L) ¹ where appropriate
Interferences	16	ICP/ICP-MS Serial Dilution Percent Difference
	17	ICP/ICP-MS Interference Check Standard Recovery Use bias flags (H,L) ¹ where appropriate
	19	Internal Standard Performance (i.e., area, retention time, recovery)
	22	Elevated Detection Limit due to Interference (i.e., chemical and/or matrix)
	23	Bias from Matrix Interference (i.e. diphenyl ether, PCB/pesticides)
Identification and Quantitation	2	Chromatographic pattern in sample does not match pattern of calibration standard
	3	2 nd column confirmation (RPD or %D)
	4	Tentatively Identified Compound (TIC) (associated with NJ only)
	20	Calibration Range or Linear Range Exceeded
	25	Compound Identification (i.e., ion ratio, retention time, relative abundance, etc.)
Miscellaneous	11	A more appropriate result is reported (multiple reported analyses i.e., dilutions, re-extractions, etc. Associated with "R" and "DNR" only)
	14	Other (See DV report for details)
	26	Method QC information not provided

¹H = high bias indicated

L = low bias indicated

Pesticides by GC
(Based on Organic NFG 1999 & 2008 and SW-846 Method 8081B)

QC Element	Acceptance Criteria (NFG)	Source of Criteria	Action for Non-Conformance	Reason Code	Discussion and Comments
Sample Handling					
Cooler/Storage Temperature Preservation	4°C ± 2°C Tissue/sediments (may be frozen -20°C)	NFG ⁽²⁾ Method ⁽³⁾	J (pos)/UJ (ND) if greater than 6° C	1	Use Professional Judgment (PJ) to qualify for temperature outlier. Current SW846 criterion is ≤ 6° C ⁽³⁾
Holding Time	<i>Extraction Aqueous:</i> 7 days from collection <i>Extraction Solid:</i> 14 days from collection <i>Extraction Tissue/Sediment (frozen):</i> 1 year <i>Analysis (all matrices):</i> 40 days from extraction	NFG ⁽²⁾ Method ⁽³⁾	J (pos)/UJ (ND) if ext/analyzed > HT J (pos)/R (ND) if gross exceedance (> 2x HT)	1	Gross exceedance > 2x HT, as per NFG 1999
Instrument Performance					
Resolution Check	Beginning of ICAL sequence Within RTW and resolution > 60%	NFG ⁽²⁾	NJ (pos)/R (ND) results	14	CLP criterion; might not be submitted with SW846 data package
Retention Times	Surrogates: TCMX (± 0.05); DCB (± 0.10) Target analytes: within RTW	NFG ⁽²⁾ Method ⁽³⁾	NJ (pos)/R (ND) results for analytes with RT shifts	24	Use PJ based on examination of raw data
Breakdown	DDT Breakdown: ≤ 20% Endrin Breakdown: ≤ 20% Combined Breakdown: ≤ 30% Compounds within RTW	NFG ⁽²⁾ Method ⁽³⁾	If 4,4'-DDT is detected: J (pos) 4,4'-DDT, 4,4'-DDD and 4,4'-DDE If 4,4'-DDT is ND and either 4,4'-DDD or 4,4'-DDE are detected: R (ND) 4,4'-DDT, NJ (pos) DDD and DDE If Endrin is detected: J (pos) Endrin, Endrin Aldehyde and Endrin Ketone If Endrin is ND and either EA or EK are detected: R (ND) Endrin, NJ (pos) EA and EK	5A	Method 8081B breakdown criterion: ≤ 15%. For combined breakdown outliers, apply qualifiers considering the degree of individual breakdown.

Pesticides by GC
(Based on Organic NFG 1999 & 2008 and SW-846 Method 8081B)

QC Element	Acceptance Criteria (NFG)	Source of Criteria	Action for Non-Conformance	Reason Code	Discussion and Comments
Instrument Performance (continued)					
Initial Calibration	Single Component Compounds: RSD ≤ 20% alpha-BHC and delta-BHC: RSD ≤ 25% toxaphene and surrogates: RSD ≤ 30% or correlation coefficient (r-value) ≥ 0.995 OR Minimum 6-point with coefficient of determination (r ² -value) ≥ 0.99	NFG ⁽²⁾ Method ⁽⁴⁾	J (pos) if %RSD greater than control limit or r-value < 0.995 or r ² -value < 0.99	5A	Refer to TM-01 for additional information. Use bias flags (H,L) ⁽⁶⁾ where appropriate
Initial Calibration Verification (ICV)	No NFG criteria Project specific	Project QAPP	J (pos) if > UCL J (pos)/UJ (ND) if < LCL	5B	Use bias flags (H,L) ⁽⁶⁾ where appropriate
Continuing Calibration	%D ± 20% Analyzed prior to each 12 hour shift	Method ⁽³⁾	If > 20% (high bias): J (pos) If < 20% (low bias): J (pos)/UJ (ND)	5B	Refer to TM-01 for additional information. Use bias flags (H,L) ⁽⁶⁾ where appropriate
Blank Contamination					
Method Blank (MB)	One per matrix per batch (of ≤ 20 samples) No detected compounds > RL	NFG ⁽¹⁾ Method ⁽³⁾	U (pos) if result is less than appropriate 5X action level.	7	Hierarchy of blank review: #1 - Review MB and IB, qualify as needed #2 - Review FB, qualify as needed Note: Actions as per NFG 1999 Note: IB not required by method
Field Blank (FB)	FB: frequency as per QAPP No detected compounds > RL	NFG ⁽¹⁾ Method ⁽³⁾	U (pos) if result is less than appropriate 5X action level.	6	
Instrument Blanks (IB)	Analyzed at the beginning and end of every 12 hour sequence No analyte > CRQL	NFG ⁽¹⁾	U (pos) if result is less than appropriate 5X action level.	7	

Pesticides by GC
(Based on Organic NFG 1999 & 2008 and SW-846 Method 8081B)

QC Element	Acceptance Criteria (NFG)	Source of Criteria	Action for Non-Conformance	Reason Code	Discussion and Comments
Precision and Accuracy					
MS/MSD (recovery)	One set per matrix per batch (of ≤ 20 samples) Method or project acceptance limits	NFG ⁽²⁾ Method ⁽³⁾	Qualify parent only unless other QC indicates systematic problems. J (pos) if both %R > upper control limit (UCL) J (pos)/UJ (ND) if both %R < lower control limit (LCL) J (pos)/R (ND) if both %R < 10%	8	No action if only one spike %R is outside criteria No action if native analyte conc. > 5x the amount spiked Use bias flags (H,L) ⁽⁶⁾ where appropriate
MS/MSD (RPD)	One set per matrix per batch (of ≤ 20 samples) Method or project acceptance limits	NFG ⁽²⁾ Method ⁽³⁾	Qualify parent only unless other QC indicates systematic problems. J (pos) if RPD > control limit	9	No action if parent is ND
LCS	One per lab batch (of ≤ 20 samples) Method or project acceptance limits	NFG ⁽²⁾	J (pos) if %R > UCL J (pos)/UJ (ND) if %R < LCL J (pos)/R (ND) if %R < 10%	10	Qualify all associated samples. Use bias flags (H,L) ⁽⁶⁾ where appropriate
LCS/LCSD (RPD)	if analyzed use MS/MSD RPD criteria	NFG ⁽²⁾	J (pos) assoc. compound in all samples	9	LCSD not required by method or NFG
Surrogates	TCMX and DCBP added to every sample %R = 30% - 150% or project limits	NFG ⁽²⁾ Method ⁽³⁾	J (pos) if either %R > UCL J (pos)/UJ (ND) if either %R < LCL J (pos)/R (ND) if either %R < 10%	13	If %R < 10% (dilution is a factor), use PJ Use bias flags (H,L) ⁽⁶⁾ where appropriate
Internal Standards (if used)	Acceptable Range: IS area = 50% to 200% of CCAL area RT within 30 seconds of CC RT	Method ⁽³⁾	J (pos) if area > 200% J (pos)/UJ (ND) if area < 50% J (pos)/R (ND) if area < 25% RT > 30 seconds, narrate	19	

Pesticides by GC
(Based on Organic NFG 1999 & 2008 and SW-846 Method 8081B)

QC Element	Acceptance Criteria (NFG)	Source of Criteria	Action for Non-Conformance	Reason Code	Discussion and Comments
Precision and Accuracy (continued)					
Field Duplicates	<p>Solids: RPD < 50% or difference < 2X RL (for results < 5X RL) Aqueous: RPD < 35% or difference < 1X RL (for results < 5X RL)</p>	EcoChem standard practice	J (pos)/UJ (ND) Qualify only parent and field duplicate samples	9	Use project limits if specified
Compound Identification/Quantification					
Quantitation/ Identification	Between two columns: RPD < 40% or %D < 25% Within Retention Time Windows on both columns.	NFG ⁽²⁾ Method ⁽³⁾	J (pos) if RPD = 40% - 60% (25% - 60% for %D) NJ (pos) if > 60% R (pos) if RTW criterion not met	3	See TM-08 for additional info
Calibration Range	On-column concentration < high calibration standard	NFG ⁽²⁾ Method ⁽³⁾	J (pos) if conc > high standard and sample was not diluted	20	
Dilutions Re-extractions and/or Reanalyses	Report only one result per analyte	Standard reporting policy	Use "DNR" to flag results that will not be reported.	11	TM-04 for additional info
Sample Clean-up					
GPC/Sulfur/ Florisil	GPC or Florisil cleanup standards 80% - 120%	NFG ⁽²⁾	J (pos) if %R > UCL J (pos)/UJ (ND) if %R < LCL J (pos)/R (ND) if %R < 10%	14	Cleanups are optional under SW846 Use bias flags (H,L) ⁽⁶⁾ where appropriate

Dear Ms Murray:

Included is the amended report from the testing of material submitted on August 3, 2016 from the FP-Smith Kem, F&BI 608046 project. A description of the the material detected in samples MW-12-1.5-2 and MW-11-7.5-8 was added to the case narrative.

We appreciate this opportunity to be of service to you and hope you will call if you should have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Dear Ms Murray:

Included are the results from the testing of material submitted on August 3, 2016 from the FP-Smith Kem, F&BI 608046 project. There are 142 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you should have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

608046 -33	SB-2-7-8
608046 -34	Trip Blank

FRIEDMAN & BRUYA, INC.

ENVIRONMENTAL CHEMISTS

CASE NARRATIVE (continued)

Samples MW-13-1-2, MW-12-1.5-2, MW-14-0-0.5, MW-9-4-5, SB-1-2-3, MW-10-1.5-2.5, MW-11-1.5-2, and SB-2-2.5-3.5 were sent to Amtest for nitrate and nitrite analyses. The report is enclosed.

An 8260C Direct Sparge internal standard recovery for sample MW-12-1.5-2 exceeded control limits due to the presence of sample matrix interferences. The data were qualified accordingly.

Several 200.8 internal standards were outside of control limits due to matrix effects. The samples were diluted and reanalyzed.

The 8270D LCS and LCSD percent recoveries exceeded control limits for several analytes. The analytes were not detected, therefore the data were considered acceptable.

Sample MW-12-7-8 was requested outside of holding time. The data were qualified accordingly.

All other quality control requirements were acceptable.

Review of the NWTPH-Dx chromatogram for sample MW-12-1.5-2 showed the presence of a high boiling product such as a lubrication or waste oil. A low concentration of peaks indicative of a medium boiling product are also present. A pattern of peaks indicating gasoline was not seen in the sample.

Review of the NWTPH-Dx chromatograms for sample MW-11-7.5-8 showed the presence of a medium boiling product such as a heating oil. A pattern of peaks indicating gasoline was not seen in the sample.

Review of the NWTPH-Dx chromatograms for sample SB-1-0.5-1 showed the presence of a high boiling product such as a lubrication oil, as well as a multiple individual peaks eluting from 2 to 3 minutes. A pattern of peaks indicating the presence of diesel fuel was not seen in the samples.

Review of the NWTPH-Dx chromatograms for sample SB-2-0.5-1 showed the presence of a high boiling product such as a lubrication oil. A pattern of peaks indicating the presence of diesel fuel was not seen in the samples.

ENVIRONMENTAL CHEMISTS

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The compound is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht - The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits. Compounds in the sample matrix interfered with the quantitation of the analyte.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

Attention: MICHAEL ERDAHL

Dear MICHAEL ERDAHL:

Enclosed please find the analytical data for your project.

The following is a cross correlation of client and laboratory identifications for your convenience.

CLIENT ID	MATRIX	AMTEST ID	TEST
MW-13-1-2	Soil	16-A020614	NUT
MW-12-1.5-2	Soil	16-A020615	NUT
MW-14-0-0.5	Soil	16-A020616	NUT
MW-9-4-5	Soil	16-A020617	NUT
SB-1-2-3	Soil	16-A020618	NUT
MW-10-1.5-2.5	Soil	16-A020619	NUT
MW-11-1.5-2	Soil	16-A020620	NUT
SB-2-2.5-3.5	Soil	16-A020621	NUT

Your samples were received on Thursday, August 4, 2016. At the time of receipt, the samples were logged in and properly maintained prior to the subsequent analysis.

The analytical procedures used at AmTest are well documented and are typically derived from the protocols of the EPA, USDA, FDA or the Army Corps of Engineers.

Following the analytical data you will find the Quality Control (QC) results.

Please note that the detection limits that are listed in the body of the report refer to the Practical Quantitation Limits (PQL's), as opposed to the Method Detection Limits (MDL's).

If you should have any questions pertaining to the data package, please feel free to contact me.

Sincerely,

Aaron W. Young
Laboratory Manager

Erin Murray, Project Manager
Floyd-Snider
Two Union Square, Suite 600
601 Union St
Seattle, WA 98101

Dear Ms Murray:

Included are the results from the testing of material submitted on August 5, 2016 from the FP-Smith Kem T 4000, F&BI 608112 project. There are 171 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you should have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

608112 -51	SB-14-5-6
608112 -52	SB-14-7.5-8.5
608112 -53	SB-15-0.5-1
608112 -54	SB-15D-3-4
608112 -55	SB-15-3-4
608112 -56	SB-15-4-5
608112 -57	SB-15-8-9
608112 -58	SB-16-0.5-1
608112 -59	SB-16-3-4
608112 -60	SB-16-5-6
608112 -61	SB-16-9-10
608112 -62	SB-16-14-15
608112 -63	Rinsate-1
608112 -64	Trip Blank 1
608112 -65	Trip Blank 2
608112 -66	Trip Blank 3
608112 -67	Trip Blank 4
608112 -68	Culvert-1

Samples SB-3-0.5-1, SB-3-2.5-3.5, SB-3-5.5-6.5, SB-4-3-4, SB-6-2-3, SB-7-3-4, SB-8-3-4, SB-9-3-4, SB-10-2-3, SB-10-9-10, SB-12-3-4, SB-13-3-4, SB-14-4-5, SB-15D-3-4, SB-15-3-4, SB-16-3-4, and Culvert-1 were sent to Amtest for nitrate and nitrite analyses. The report is enclosed.

The NWTPH-Gx concentration for Trip Blank 1 was raised due to carryover from a previous sample injection. There was insufficient sample for reanalysis, therefore the data were reported.

CASE NARRATIVE (continued)

The 8270D LCS and LCSD percent recoveries exceeded control limits for several analytes. The analytes were not detected, therefore the data were considered acceptable.

All other quality control requirements were acceptable.

Review of the NWTPH-Dx chromatograms for samples SB-5-0.5-1, SB-6D-0-0.5, SB-6-0-0.5, and SB-8-0.5-1 showed the presence of a medium to high boiling material, possibly indicative of organics. Silica gel cleanup would be useful in further characterizing the nature of the material present in the samples. A pattern of peaks indicating the presence of diesel fuel was not seen in the samples.

Review of the NWTPH-Dx chromatograms for samples SB-9-0.5-1, SB12-0.5-1, SB16-0.5-1 and SB-16-3-4 showed a pattern of peaks indicating the presence of a low level of a high boiling product such as a lubrication oil. A pattern of peaks indicating the presence of diesel fuel was not seen in the samples.

Review of the NWTPH-Dx chromatograms for samples SB-10-9-10 and SB13-6-7 showed a pattern of peaks indicating a middle distillate product such as diesel fuel. A pattern of peaks indicating the presence of gasoline was not seen in the samples.

Date of Report: 08/19/16
Date Received: 08/05/16
Project: FP-Smith Kem T 4000, F&BI 608112
Date Extracted: 08/08/16
Date Analyzed: 08/08/16 and 08/09/16

**RESULTS FROM THE ANALYSIS OF SOIL SAMPLES
FOR TOTAL PETROLEUM HYDROCARBONS AS
DIESEL AND MOTOR OIL
USING METHOD NWTPH-Dx**

Results Reported on a Dry Weight Basis
Results Reported as mg/kg (ppm)

<u>Sample ID</u> Laboratory ID	<u>Diesel Range</u> (C ₁₀ -C ₂₅)	<u>Motor Oil Range</u> (C ₂₅ -C ₃₆)	<u>Surrogate</u> (% Recovery) (Limit 56-165)

Di-n-octyl phthalate	mg/kg (ppm)	0.33	111	116	58-120	4

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The compound is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht - The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits. Compounds in the sample matrix interfered with the quantitation of the analyte.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

Dear MICHAEL ERDAHL:

Enclosed please find the analytical data for your 608112 project.

The following is a cross correlation of client and laboratory identifications for your convenience.

CLIENT ID	MATRIX	AMTEST ID	TEST
SB-3-0.5-1	Soil	16-A021095	NUT
SB-3-2.5-3.5	Soil	16-A021096	NUT
SB-3-5.5-6.5	Soil	16-A021097	NUT
SB-4-3-4	Soil	16-A021098	NUT
SB-6-2-3	Soil	16-A021099	NUT
SB-7-3-4	Soil	16-A021100	NUT
SB-8-3-4	Soil	16-A021101	NUT
SB-9-3-4	Soil	16-A021102	NUT
SB-10-2-3	Soil	16-A021103	NUT
SB-10-9-10	Soil	16-A021104	NUT
SB-12-3-4	Soil	16-A021105	NUT
SB-13-3-4	Soil	16-A021106	NUT
SB-14-4-5	Soil	16-A021107	NUT
SB-15D-3-4	Soil	16-A021108	NUT
SB-15-3-4	Soil	16-A021109	NUT
SB-16-3-4	Soil	16-A021110	NUT
CULVERT-1	Soil	16-A021111	NUT

Your samples were received on Monday, August 8, 2016. At the time of receipt, the samples were logged in and properly maintained prior to the subsequent analysis.

The analytical procedures used at AmTest are well documented and are typically derived from the protocols of the EPA, USDA, FDA or the Army Corps of Engineers.

Following the analytical data you will find the Quality Control (QC) results.

Please note that the detection limits that are listed in the body of the report refer to the Practical Quantitation Limits (PQL's), as opposed to the Method Detection Limits (MDL's).

Vapor Intrusion Assessment
at the Smith-Kem Site

DRAFT

Memorandum

To: John Mefford, Washington State Department of Ecology
From: Gabe Cisneros and Pamela Osterhout, Floyd|Snider
Date: February 24, 2021
Project No: Smith-Kem
Re: **Vapor Intrusion Assessment at the Smith-Kem Site**
200 S. Railroad Ave., Ellensburg, Washington

This memorandum presents the results of a vapor intrusion (VI) assessment completed for the Smith-Kem Ellensburg, Inc. (Smith-Kem) property (Property) located at 200 S. Railroad Avenue in Ellensburg, Washington. Sampling was completed in accordance with the Washington State Department of Ecology (Ecology)-approved sampling plan (Floyd|Snider 2019). The sampling plan was prepared in response to an Ecology letter sent to Floyd|Snider on November 19, 2018, requesting that the VI assessment occur in the next 4 months (i.e., by mid-March 2019) to further evaluate the potential VI risk in the office building (Ecology 2018a).

BACKGROUND

The Property is a commercial agricultural product distribution facility with three existing buildings on the property, one of which is an office building. The office building is approximately 1,500 square feet and is attached to a storage garage area; however, these buildings are separated by an exterior wall and have independent foundations. The storage garage area has a slab-on-grade concrete foundation, and the office building is raised approximately 3 feet above the ground with an accessible crawl space. The storage garage area is on top of and adjacent to petroleum-impacted soils. Soil samples collected from borings within and south of the storage garage area contain concentrations of diesel-range total petroleum hydrocarbons (TPH) up to 4,700 milligrams per kilogram between 0 and 7 feet below ground surface. There are no other buildings that would require further VI assessment related to TPH based on building use and the lateral inclusion zone of 100 feet from the potential source.

An initial VI assessment was completed during the remedial investigation (RI) and is documented in a memorandum submitted to the Ecology on September 17, 2018 (Floyd|Snider 2018). The initial assessment concluded that there was no immediate VI risk due to elevated concentrations of petroleum in shallow soils; however, the office building located in the middle of the Property may require further VI assessment.

SAMPLING APPROACH

The sampling activities were completed in accordance with U.S. Environmental Protection Agency's (USEPA's) *OSWER Technical Guide for Assessing and Mitigating the Vapor Intrusion Pathway from Subsurface Vapor Sources to Indoor Air* (USEPA 2015); the Tier II assessment outlined in Ecology's *Guidance for Evaluating Soil Vapor Intrusion in Washington State: Investigation and Remedial Action* (Ecology 2018b), and Ecology's Implementation Memorandum No. 18 (Ecology 2018c). Sampling was performed per the approved sampling plan and Floyd|Snider's standard guideline for VI, which includes performing a building survey and taking note of other potential vapor sources, such as cleaning products, air fresheners, and cigarette smoke. To assess VI risk in the office building, vapor samples were collected over an 8-hour period from the office space indoor air, upwind ambient air from outside the office building, and air from the crawl space beneath the office building.

FIELD ACTIVITIES

Vapor sampling activities occurred on April 16, 2019. Prior to sampling, the weather was considered when scheduling to avoid sampling during a period of extreme atmospheric pressure changes or within 24 hours of a rain event that produces 0.5 inches of precipitation or more. No precipitation occurred during the sampling or the previous day. There were no extreme pressure changes with a recorded range between 27.8 and 28.1 inches Hg (Attachment 1).

Three air samples were collected in 6-liter SUMMA canisters over an 8-hour period during normal working hours to replicate worker exposure conditions during a full workday at the Property. The SUMMA canisters were set up with flow regulators to allow continuous collection of air to be sampled over an 8-hour period. One SUMMA canister was placed outside and upwind near the northwest corner of the office building approximately 3 feet above the ground surface in a location protected from the elements (i.e., wind, precipitation) to measure ambient air conditions. Wind direction was to the southeast during the sampling event. The outdoor ambient air SUMMA canister was set up first to allow ambient air sample collection prior to the collection of the other samples, approximately 35 minutes before sampling indoor air. This provides a more accurate assessment of the building's air exchange rate, which is generally in the range of 0.25 to 1.0 hour for outdoor air to enter indoor air. A second SUMMA canister was placed near the center of the office building at 4 feet above the floor level to collect an indoor air sample representative of the breathing zone. A third SUMMA canister was placed in the crawl space beneath the office building near utility conduits entering the office floor and away from perimeter vents. All efforts were made to eliminate other sources of vapor-producing chemicals, such as air fresheners, within the office space prior to sampling. If such items were present, they were noted in the building survey form, which are included in Attachment 2. Select photographs are included in Attachment 3.

Air samples were sent to Friedman & Bruya, Inc., in Seattle, Washington, and analyzed for the following:

- Air-phase petroleum hydrocarbons (APH) by Method MA-APH
- Benzene, toluene, ethylbenzene, and xylenes (BTEX) and naphthalene by USEPA Method TO-15

Soil vapor results are presented in Table 1. Laboratory analytical reports are included in Attachment 4. Indoor air results are corrected for ambient contributions per Section 3.2 in Ecology's VI guidance (Ecology 2018b).

SUMMARY OF RESULTS AND INDOOR AIR CLEANUP LEVELS

For the purposes of this VI assessment, the indoor air screening criteria were developed using modified Model Toxics Control Act (MTCA) Method B (commercial) values. The office building investigated for this VI assessment is not used for residential purposes but for commercial purposes where the most highly exposed receptors are workers. Using the default MTCA Method B indoor air cleanup levels (CULs) would be overly conservative. For example, in WAC 173-340-750, Equation 750-1 uses an average body weight of 16 kilograms (kg; representing a child), whereas the receptors of concern at this site are adults with an average weight closer to 70 kg. In addition, the amount of time exposed to contaminated air is a fraction of the default values. Therefore, inputs were changed in Equations 750-1 and 750-2 to determine site-specific indoor air criteria for BTEX and naphthalene that better reflect exposure levels to adult workers at the Property.

For air-phase petroleum hydrocarbons, a site-specific MTCA Method B CUL was calculated for indoor air using the calculations provided in Attachment B of Ecology's Implementation Memorandum No. 18 (Ecology 2018c). Site-specific indoor air CULs for BTEX and naphthalene were calculated using equations 750-1 and 750-2 of Ecology's VI guidance and were based on unrestricted land use with respect to estimating the actual risks to human receptors using these buildings. Site-specific MTCA Method B CUL calculations are presented in Attachment 5.

Vapor concentrations are compared to CULs presented in the updated Table 1 of Ecology's guidance for VI assessment (Ecology 2018b), to the updated January 2020 MTCA Method B sub-slab soil gas screening levels listed in Ecology's Cleanup Levels and Risk Calculation master data table, and to the modified site-specific MTCA Method B CULs for commercial workers.

After correcting indoor air results for ambient contributions, laboratory analytical data show that TPH was detected in the indoor air sample at a concentration of 328 micrograms per cubic meter ($\mu\text{g}/\text{m}^3$), which is less than the site-specific total TPH CUL of 713 $\mu\text{g}/\text{m}^3$ for indoor air. Benzene was detected in the ambient air sample at a concentration of 0.32 $\mu\text{g}/\text{m}^3$ and an indoor air concentration of 0.45 $\mu\text{g}/\text{m}^3$, with a corrected concentration of 0.13 $\mu\text{g}/\text{m}^3$. The corrected benzene concentration is less than both the site-specific MTCA Method B CUL and residential MTCA Method B CUL. Naphthalene was detected in the indoor air sample at a concentration of

0.27 $\mu\text{g}/\text{m}^3$, which exceeds the modified site-specific Method B CUL of 0.22 $\mu\text{g}/\text{m}^3$ but is still within the range of potential background concentrations of 0.19 to 1.7 $\mu\text{g}/\text{m}^3$ (Ecology 2018c). Toluene, ethylbenzene, and total xylenes were detected at concentrations less than both the site-specific MTCA Method B CULs and residential MTCA Method B CULs.

Vapor results for the crawl space sample show that only toluene was detected at a concentration greater than the reporting limit, but at a concentration that was less than the MTCA Method B CUL for indoor air.

CONCLUSIONS

The results of this sampling effort indicate that indoor air results for total TPH and BTEX concentrations are less than site-specific MTCA Method B CULs. Naphthalene slightly exceeded the site-specific MTCA Method B CUL, but the detected concentration was within background concentrations. Additionally, vapor results from the crawl space sample did not detect naphthalene at concentrations exceeding the reporting limit, which indicates that the naphthalene detection is likely not correlated with diesel-range TPH impacts and are instead due to background conditions in the office environment. Photographs 2 and 3 in Attachment 3 show the indoor air SUMMA canister immediately adjacent to a copy machine. Office devices, such as copiers, can release volatile organic compounds, such as naphthalene, partly generated by toners and inks, as well as particles of paper (Kowalska et al. 2014).

The sampling data obtained in 2019, in conjunction with the conclusion with the previous VI assessments conducted at the Site, indicate that VI does not pose a significant risk to building occupants and does not require active mitigation. The RI Report will be revised to reflect the findings of this supplemental VI assessment.

Notes:

All CULs and results presented in this table are rounded to two significant figures.

-- Not established.

italics The laboratory detection limit exceeds the MTCA Method B CUL.

BOLD The concentration exceeds the applicable MTCA Method B CUL.

RED/BOLD The concentration exceeds the applicable MTCA Method C CUL.

1 MTCA Method C CULs from Ecology's CLARC master data table except where noted; the most conservative value between cancer and noncancer is shown.

2 A site-specific MTCA Method B CUL was calculated using site indoor air sample data in accordance with Ecology's Implementation Memorandum No. 18 (Ecology 2018c) Attachment B and using standard default exposure factors and input parameters for Equation 750-2 as defined in MTCA under WAC 173-340-750. Calculation was performed using default commercial (i.e., most conservative) parameters and one-half the reporting limit for nondetect values. Refer to Attachment 5 for calculation and input parameter details.

3 Background concentrations acquired from Ecology's Implementation Memorandum No. 18 (Ecology 2018c).

~~7/5/2018~~

FP-Smith Kern

P.O.

0740 P.O. on site for air sampling.

0752 Setup ambient air sample at NW corner of office (forecast from NOAA shows predominant wind blowing from NW to SE). PID = 0.0. ~3 ft off ground. (28 in Hg)

NOAA weather: 42°F wind is calm, visibility >10 miles, partly cloudy (overnight showers), barometric pressure = 29.90 inches 28.06 inches (P.O.)

No mechanical work being done today.

0822 Placed indoor air sampler near center of office at ~4 ft above floor near filing system - around corner from front door to minimize gusts from opening door. Office staff removed aerosol cans and Scentsy (melted wax) yesterday. No smokers work on site. PID = 0.0. (29 in Hg)

- Walked around with PID → all 0.0 readings.

0836 Placed crawl space sampler near conduit/plumbing that comes up into the office building under in crawl space - dirt/gravel floor. (dusty) (27 in Hg)

45

4/16/2019

FP-Smith Kern

P.O.

- office has "perfume-like" odor, but no obvious source of VOCs

0925 Checked regulators - all appear to be working properly

Cloud cover has burned off, sunny 45°F

0930. P.O. off site.

Note: The Summa used for the air crawl space had 27 in Hg at time of sampling, however it had 28.5 in Seattle yesterday. All Summa's pressures dropped by ~1.5 in Hg due to elevation change between Seattle and Ellensburg, so leakage is not likely.

Rite in the Rain

4/16/2019

FP. Smith Kern

P.O.

11:55 Back on site to check on Summa
Canisters.

- weather: partly cloudy

temp: 56°F

barometric pressure: 28.11

wind: Calm N

- pressure on AA + 1A samples ~ 20 in Hg.

Did not check on crawl space sampler

because so much dust - don't want

to kick up dust and affect samples/

equipment.

12:15 off-site.

14:30 on-site

- weather at 1353: overcast, No rain

Dear Ms Osterhout:

Included are the amended results from the testing of material submitted on April 17, 2019 from the FP-Smith-Kem, F&BI 904300 project. The receipt vacuum units were amended in the case narrative.

We appreciate this opportunity to be of service to you and hope you will call if you should have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Dear Ms Osterhout:

Included are the results from the testing of material submitted on April 17, 2019 from the FP-Smith-Kem, F&BI 904300 project. There are 12 pages included in this report.

We appreciate this opportunity to be of service to you and hope you will call if you should have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

CASE NARRATIVE

This case narrative encompasses samples received on April 17, 2019 by Friedman & Bruya, Inc. from the Floyd-Snider FP-Smith-Kem, F&BI 904300 project. Samples were logged in under the laboratory ID's listed below.

<u>Laboratory ID</u>	<u>Floyd-Snider</u>	<u>Receipt Vacuum ("Hg)</u>
904300 -01	AA-041619	- 9.0"
904300 -02	IA-041619	- 7.5"
904300 -03	CS-041619	- 5.0"

All quality control requirements were acceptable.

FRIEDMAN & BRUYA, INC.

Data Qualifiers & Definitions

- a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.
- b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.
- ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.
- c - The presence of the analyte may be due to carryover from previous sample injections.
- cf - The sample was centrifuged prior to analysis.
- d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.
- dv - Insufficient sample volume was available to achieve normal reporting limits.
- f - The sample was laboratory filtered prior to analysis.
- fb - The analyte was detected in the method blank.
- fc - The analyte is a common laboratory and field contaminant.
- hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.
- hs - Headspace was present in the container used for analysis.
- ht - The analysis was performed outside the method or client-specified holding time requirement.
- ip - Recovery fell outside of control limits due to sample matrix effects.
- j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.
- J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.
- jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.
- js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.
- lc - The presence of the analyte is likely due to laboratory contamination.
- L - The reported concentration was generated from a library search.
- nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.
- pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.
- ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.
- vo - The value reported fell outside the control limits established for this analyte.
- x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

Smith-Kem Site
Remedial Investigation/Feasibility Study

Appendix C
Floyd | Snider Memoranda

Attachment C.6
Review of Site COPC Data to Identify Data
Gaps to be Addressed in the Remedial
Investigation Report

DRAFT

Memorandum

To: John Mefford, Washington State Department of Ecology

Copies: Arthur Buchan and Mary Monahan, Washington State Department of Ecology
Jeff Gaarder, GHD
Andrea Wing, Shell Oil Products US

From: Emily Jones, PE, Floyd|Snider

Date: November 6, 2020

Project No: PKG-SmithKem

Re: **Review of Site COPC Data to Identify Data Gaps to be Addressed in the Remedial Investigation Report**

This memorandum describes the process that took place in summer 2020 to identify and address potential data gaps for chemicals of potential concern (COPCs) at the Smith-Kem Site (Site) relative to preliminary cleanup levels (PCULs) and leaching cleanup levels (CULs) for soil and groundwater. PCULs were developed in spring and summer 2020 under direction from the Washington State Department of Ecology (Ecology), as described in the Floyd|Snider memorandum *Development of PCULs and Identification of COPCs for Evaluation in the Remedial Investigation Report* (PCUL and COPC Memo; Floyd|Snider 2020).

The results of this data gap evaluation will facilitate a revised discussion of the nature and extent of contamination at the Site using these revised COPCs and PCULs. This memorandum describes Site data gaps and how they will be addressed in the revised Ecology Draft Remedial Investigation (RI), which will be incorporated into a combined Ecology Draft RI/Feasibility Study (FS).

1.0 DATA GAP EVALUATION

In summer 2020, under direction from Ecology, Floyd|Snider assisted in evaluating data gaps for the Site in a series of meetings with Floyd|Snider, Shell Oil Products US, and Ecology attendees. Groundwater data gaps were evaluated in meetings that took place on May 4 and June 8, 2020. Soil data gaps were evaluated in meetings that took place on June 8 and August 24, 2020. Table 1 summarizes groundwater PCULs, COPCs, and the results of the data gap evaluation for groundwater, including information about the location and depth of contamination near property boundaries and the overall frequency of exceedance information for each COPC relative to its PCUL. Table 2 provides the same information for soil. Soil and groundwater sampling locations included in the data gap evaluation are shown on Figure 1. More information on the data gap evaluation process is provided in the following sections.

1.1.1 Groundwater

Groundwater data gaps were evaluated relative to the PCULs presented in Table 1. The data gap evaluation for 10 organochlorine pesticides included results from the Phase 2 groundwater sampling events as well as an evaluation of groundwater data collected in March 2020. COPC status and nature and extent of contamination for these chemicals were determined using the March 2020 data, supplemented by any detected results from Phase 2 groundwater sampling events collected to support the Remedial Investigation. Phase 2 groundwater data were used to evaluate data gaps for the remaining COPCs in groundwater. The results of the data gap evaluation are summarized for each COPC in Table 1.

In groundwater, contamination is vertically and laterally bounded within the property boundary for all COPCs, except as listed below.

- Dieldrin and toxaphene both have a small halo of contamination that extends off-property in the vicinity of monitoring well MW-4. When coupled with groundwater flow direction, which flows to the southwest, and chemical properties for these COPCs, the decline in concentrations between MW-4 and off-property well MW-16 is sufficient to show that contamination is laterally bounded.
- Nitrate samples collected from temporary well FS-30 indicate that contamination in the southwest corner of the property is greater in the deeper (15 feet below ground surface [bgs]) groundwater sample than in the shallow (7 feet bgs) groundwater sample. These results indicate that nitrate contamination may extend deeper than 15 feet bgs in this area of the property.

Ecology and Floyd|Snider agreed that no additional sampling was required to fill these data gaps and that Floyd|Snider could proceed with updating its discussion of groundwater PCULs, COPCs, and nature and extent of contamination in the RI. In addition, based on Ecology input, the RI will contain specific arsenic and nitrate analysis and discussion, as summarized in Table 1.

1.1.2 Soil

Soil data gaps were evaluated relative to the PCULs presented in Table 2. For chemicals where the previously described groundwater data demonstrate compliance for the leaching pathway, the soil PCUL was adjusted to remove the leaching pathway criterion such that only criteria protective of direct contact exposure were considered. For the remaining chemicals, data gaps were evaluated relative to the leaching pathway and, if widespread exceedances of the leaching pathway were present, relative to direct contact exposure criteria. The results of this evaluation are summarized for each COPC in Table 1.

In soil, contamination is vertically and laterally bounded within the property boundary for all COPCs, except as listed below.

- Dieldrin. Existing samples do not vertically bound the depth of contamination relative to residential criteria (0.063 milligrams per kilogram [mg/kg]). Contamination is

assumed to be present throughout the point of compliance (0 to 15 feet bgs). Dieldrin results exceed residential criteria at one off-property location (Surface-1 in the southeastern sampling extent) with a low magnitude of exceedance (less than 2 times the PCUL). The location between the southwestern property boundary and this sample (FS-34) is clean, indicating that Surface-1 represents localized contamination, possibly related to the culvert daylighting here and/or a low spot that collects runoff.

- Toxaphene. Toxaphene results exceed residential criteria (0.91 mg/kg) at one off-property soil sample location (MW-17, on the BNSF property) with a low magnitude of exceedance (1.25 times the PCUL). This sample result represents the eastern limit of contamination and is sufficient to show contamination is laterally bounded.
- Dioxins/furans. Contamination is assumed to be limited within surface soil but is not laterally bounded in the southeast corner of the property relative to residential criteria (13 nanograms per kilogram). The extent of off-site contamination is a data gap that will be filled prior to selection and design of the final remedy and may be achieved with additional sampling prior to submittal of the Engineering Design Report.

Groundwater data provide an empirical demonstration that soil contamination that exceeds leaching criteria is laterally bounded within the property boundary: Groundwater wells along the western, southwestern, and southern property boundaries are in compliance with groundwater PCULs. A hotspot of contamination exists for many COPCs in both soil and groundwater in the vicinity of MW-4. The FS may evaluate a Remedial Action Level for soil contamination contributing to groundwater exceedances at MW-4.

Ecology and Floyd|Snider agreed that no additional sampling was required to fill these data gaps prior to revision of the RI and that Floyd|Snider could proceed with updating the RI's discussion of soil PCULs, COPCs, and nature and extent of contamination. For select COPCs, Table 2 summarizes specific agreements that will be incorporated into the revised Draft RI/FS.

Table 1
Data Gap Evaluation Summary for Groundwater COPCs Relative to PCULs

Chemical	Final PCUL (µg/L)	Maximum Detected Result (Maximum Detected Well Result) (µg/L) ⁽¹⁾	Percent of Detected Results That Exceed	Groundwater COPC?	Floyd Snider and Ecology Data Gap Evaluation		Action Items
					Summary	Supporting Information	
Chemicals Identified as COPCs and Pending COPCs							
Metals							
Arsenic	5.0	23 / (14)	1.7%	Yes	No data gaps: Contamination is vertically and laterally bounded.	Contamination is bounded within property. The single elevated sample at MW-4 could be a sampling artifact related to redox conditions or variation in background; there was elevated turbidity in the sample that exceeds.	In the RI, Floyd Snider will evaluate possible causes for elevated arsenic in the sample with elevated results, including discussion of dissolved versus total arsenic results, as appropriate.
Miscellaneous Substances							
Nitrate	10,000	210,000	57%	Yes	Data gap with respect to depth of contamination within property boundary; contamination is laterally bounded.	Contamination is greatest at MW-4 and extends off-property near MW-4, at MW-16. Release in this area is shallow/more recent and results collected after January 1, 2016, show improvement relative to historical results. Plume is bounded. A second, older source exists in southwestern portion of property, which is bounded laterally by wells MW-18, MW-19, and MW-20. Depth may not be bounded based on results that increase with depth at temporary well FS-30. However, collection of deeper data is not required for completion of the Remedial Investigation report or Feasibility Study.	The Feasibility Study will evaluate paving as an alternative to address ongoing nitrate/nitrite source control; trends in data collected from wells screened at depths up to 15 feet bgs will be evaluated to determine if groundwater quality is improving or if additional action needs to be taken as part of remedy design.
Nitrite	1,000	6,800	8.2%	Yes	No data gaps: Contamination is vertically and laterally bounded.	Contamination is bounded within property.	None.
Organochlorine Pesticides							
HCH-alpha (a-BHC)	0.014	Not Detected in Groundwater	NA	No	No data gaps: Not a COPC.	No exceedances in March 2020 data; max result meets PCUL.	None.
HCH-beta (b-BHC)	0.049	0.087	3.2%	Yes	No data gaps: Contamination is vertically and laterally bounded.	No exceedances in March 2020 data; max result meets PCUL. Contamination at MW-4 is bounded.	None.
Aldrin	0.0026	0.0059	NA	Yes	No data gaps: Contamination is vertically and laterally bounded.	Results at MW-4 exceed the PCUL. All other results meet PCUL. Contamination is bounded within property.	None.
Heptachlor epoxide	0.048	Not Detected in Groundwater	NA	No	No data gaps: Not a COPC.	No exceedances in March 2020 data; max result meets PCUL.	None.
Chlordane	2.0	22	2.4%	Yes	No data gaps: Contamination is vertically and laterally bounded.	Detected exceedances at MW-4 in PAL dataset; no exceedances in March 2020 data. Plume is bounded to the southeast by results at MW-12, MW-2, and MW-10.	None.
Dieldrin	0.0055	10	24%	Yes	No data gaps: Contamination is vertically and laterally bounded.	Results exceed at MW-4 with a halo of contamination at MW-16. Contamination extends to the southwest property boundary (MW-14) but is bounded by MW-18, MW-19, and MW-20.	None.

Diesel-Range TPH	500	24,000 / (1,000)	8.2%	Yes	No data gaps: Contamination is vertically and laterally bounded.	Contamination is bounded within property.	None.
Oil-Range TPH	500	24,000 / (1,100)	2.1%	Yes			

Notes:

All analytical results are reported to two significant figures.

RED/BOLD Chemical retained as COPC.

PCUL includes state and federal MCLs, MTCA Method B, and MTCA Method A groundwater criteria.

¹ The value in plain text includes all groundwater results, including data from test pits and temporary well screens at soil boring locations, which are typically used for field screening purposes. These data should not be considered representative of site conditions. Nearby proximate groundwater well data collected over the course of multiple events demonstrate that these results meet the definition of an outlier, as described in Ecology statistical guidance (Ecology 1992). In areas without a nearby well, groundwater samples collected from collocated soil borings indicate that historical data collected from test pits are not representative of groundwater quality.

Data Gap Evaluation Summary for Soil COPCs Relative to Leaching and Direct Contact PCULs

Chemical	Contact PCUL If Groundwater Demonstrates Compliance (mg/kg) ⁽¹⁾	Considers Pathways	Max Detection in Soil (mg/kg)	Percent of Detected Results That Exceed	Is It a Soil COPC?	Floyd Snider and Ecology Data Gap Evaluation		Action Items
						Summary	Supporting Information	
Chemicals Identified as COPCs and Pending COPCs								
Metals								
Lead	220	Direct Contact	990	3.6%	Yes	No data gaps: Contamination is vertically and laterally bounded.	Contamination limited to the upper 2 feet; contamination bounded within property boundary.	None.
Zinc	270	Direct Contact	470	6.7%	Yes	No data gaps: Contamination is vertically and laterally bounded.	Contamination limited to the upper 2 feet; contamination bounded within property boundary. Samples in two areas exceed near property line (FS-05 and FS-06; and FS-12), with exceedance factors of 1.0 and 1.2 times the PCUL.	None.
Organochlorine Pesticides								
Heptachlor	0.22	Direct Contact	0.43	1.3%	Yes	No data gaps: Contamination is vertically and laterally bounded.	Low-level contamination is present in the top 4 feet of soil. Contamination is bounded within the property.	None.
Total DDx	1.0	TEE Direct Contact	25	9.3%	Yes	No data gaps: Contamination is vertically and laterally bounded.	Contamination is present in the top 4 feet of soil and is bounded within the property.	The RI will contain text describing site-specific lines of evidence used to confirm that current levels of Total DDx in soil are protective of terrestrial exposure and do not cause a decrease in habitat quality using a weight of evidence approach.
4,4'-DDD / Sum DDD ⁽²⁾	2.4	HH Direct Contact	3.2	0.66%	Yes	No data gaps: Contamination is vertically and laterally bounded.	Contamination is present in the top 4 feet of soil and is bounded within the property.	None.
HCH-alpha (a-BHC)	0.16	Direct Contact	0.017	None	No	No data gaps: Contamination is vertically and laterally bounded.	Groundwater demonstrates compliance (all March 2020 groundwater results meet the PCUL); no exceedances of soil direct contact PCUL.	None.
Organochlorine Pesticides (cont.)								
HCH-beta (b-BHC)	0.0067	Direct Contact, Leaching	0.052	6.0%	Yes	No data gaps: Contamination is vertically and laterally bounded.	Contamination is bounded laterally within the property boundary and vertically to the top 4 feet of soil. Along the southwestern property boundary, one location (FS-29) has a detected low-level exceedance (1.8 times the PCUL). Along the eastern property boundary near BNSF, a cluster of results in the top 4 feet of soil exceeds the PCUL at locations FS-27, FS-28, and FS-42. Exceedance factors at these locations range between 1 and 7.8. Samples collected on BNSF property and at FS-34, FS-35, and MW-13 meet the soil PCUL. A hotspot exists near MW-4, where contamination is present in soil and groundwater. Elsewhere, groundwater results collocated with soil results (e.g., FS-22 and MW-11) meet the groundwater CUL, providing empirical demonstration that current soil concentrations do not cause groundwater impacts except at the MW-4 hotspot.	The FS may evaluate a RAL for soil contamination contributing to groundwater exceedances at MW-4.
Aldrin	0.0067	Direct Contact, Leaching	20	8.6%	Yes	No data gaps: Contamination is vertically and laterally bounded.	Contamination is bounded laterally within the property boundary and vertically to the top 4 feet of soil. Along the southwestern property boundary, one location (FS-29) has a detected low-level exceedance (1.1 times the PCUL). Contamination along the eastern property boundary near BNSF exceeds the PCUL with exceedance factors between 3.2 and 4.4 at locations FS-27 and FS-28. Samples collected on BNSF property and at FS-34, FS-35, and MW-13 meet the soil PCUL. A hotspot exists near MW-4, where contamination is present in soil and groundwater. Elsewhere, groundwater results collocated with soil results with similar magnitude exceedances (e.g. MW-1, MW-11, and MW-3) meet the groundwater CUL, providing empirical demonstration that current soil concentrations do not cause groundwater impacts except at the MW-4 hotspot.	
Chlordane	1.0	Direct Contact, Leaching	84	12%	Yes	No data gaps: Contamination is vertically and laterally bounded.	Contamination is bounded laterally within the property boundary and vertically to the top 4 feet of soil. Samples along the eastern property boundary near BNSF (FS-27 and FS-28) and along the southwestern property boundary (FS-12 and FS-29) exceeds the PCUL with exceedance factors between 4.6 and 13. Samples collected on BNSF property and at FS-34, FS-35, and MW-13 meet the soil PCUL. A hotspot exists near MW-4. Elsewhere, groundwater results collocated with soil results with similar magnitude exceedances (FS-22, MW-11, and MW-3) or collected from wells downgradient of elevated soil results (e.g., MW-14, MW-18, MW-19) meet the CUL, providing empirical demonstration that current soil concentrations do not cause groundwater impacts except at the MW-4 hotspot. Downgradient groundwater well results outside the western and southwestern property boundary empirically demonstrate groundwater quality and are sufficient to bound soil contamination within the property, despite soil sample results that exceed the PCUL along the western property boundary.

Table 2
Data Gap Evaluation Summary for Soil COPCs Relative to Leaching and Direct Contact PCULs

Chemical	Contact PCUL If Groundwater Demonstrates Compliance (mg/kg) ⁽¹⁾	Considers Pathways	Max Detection in Soil (mg/kg)	Percent of Detected Results That Exceed	Is It a Soil COPC?	Floyd Snider and Ecology Data Gap Evaluation		Action Items
						Summary	Supporting Information	
Chemicals Identified as COPCs and Pending COPCs								
Organochlorine Pesticides								
Dieldrin	0.0067	Direct Contact, Leaching	46	46%	Yes	Data gap relative to depth of contamination. Contamination is laterally bounded.	Contamination is present across the site. Existing samples may not be sufficient to vertically bound the depth of contamination. Soil results across the site, including near the eastern and western property boundaries, exceed the leaching PCUL with maximum exceedance factors of more than 100. Soil samples in the southeastern corner of the property (FS-34) meet the CUL and are sufficient to bound contamination along the eastern/southern property boundary extent. Groundwater wells along the western property line and downgradient of the property boundary are sufficient to empirically demonstrate that groundwater contamination does not extend off-site, and soil contamination is bounded to within the property. Relative to residential criteria (0.063 mg/kg), contamination is appropriately bounded. The only off-property exceedance (Surface-1 in the southeastern sampling extent) exceeds the soil PCUL by a factor of less than 2. The location between the southwestern property boundary and this sample (FS-34) meets the CUL, indicating that any contamination between here and this location would be low level and this is a localized area of contamination, possibly related to a ground surface depression or the culvert daylighting here.	The FS may evaluate a RAL for soil contamination contributing to on-property groundwater exceedances. The FS will consider alternatives ranging from evaluating capping and institutional controls to widespread excavation down to 15 feet (standard point of compliance for the human health pathway) relative to the residential criteria to eliminate risk from the direct contact pathway. The FS will contain the disproportionate cost/cost-benefit analysis to determine the preferred alternative.
4,4'-DDE / Sum DDE	0.25	HH Direct Contact, Leaching	5.4	7.9%	Yes	No data gaps: Contamination is vertically and laterally bounded.	Contamination is present in the top 4 feet of soil and is bounded within the property. A soil hotspot exists in samples collected near MW-4, where groundwater also exceeds the PCUL. Sampled locations along the western property boundary meet the CUL except for FS-29 and FS-12 near the southwestern property boundary. The maximum results at these locations are less than 1.6 times the PCUL. One sample at location FS-27 along the eastern property boundary near the BNSF loading area has an exceedance factor of 2.2 without a sample further east to bound contamination. All other samples representing the eastern-most sampling extent meet the PCUL. All other groundwater results meet the PCUL, providing empirical demonstration that soil contamination is bounded within the property.	The FS may evaluate a RAL for soil contamination contributing to groundwater exceedances at MW-4.
4,4'-DDT / Sum DDT	2.9	HH Direct Contact, Leaching	20	1.4%	Yes	No data gaps: Contamination is vertically and laterally bounded.	Contamination is present in the top 4 feet of soil and is bounded within the property. Soil and groundwater contamination is present only in the vicinity of MW-4.	None.
Toxaphene	0.84	Direct Contact, Leaching	120	18%	Yes	No data gaps: Contamination is vertically and laterally bounded.	Contamination is bounded, generally within the property boundary and limited to the top 4 feet of soil. At two locations, the deepest sample does not meet the PCUL; however, contamination depth is inferred to be less than 6-7 feet bgs at these locations: Concentrations in the 4-5 feet bgs interval are an order of magnitude less than more shallow soil results in each sample and are <2.5 times the PCUL. A hotspot exists near MW-4. Soil results at other locations, including near the eastern and western property boundaries, exceed the leaching PCUL with maximum exceedance factors of up to approximately 80. Collocated/proximate downgradient groundwater results along the property boundary (MW-11, MW-13, MW-17, and FS-30) meet the CUL. These groundwater results provide empirical demonstration that soil contamination is bounded within the property for the leaching pathway. Relative to residential criteria (0.91 mg/kg), results exceed at one off-site soil sample location (MW-17) with a low magnitude of exceedance (1.25 times the PCUL). This sample result represents the eastern limit of contamination; no additional samples are needed to delineate the site.	The FS may evaluate a RAL for soil contamination contributing to groundwater exceedances at MW-4. The FS will consider alternatives ranging from evaluate capping and institutional controls to widespread excavation to a clean surface relative to the residential criteria to eliminate risk from the direct contact pathway. The FS will contain the disproportionate cost/cost-benefit analysis to determine the preferred alternative.
Other Chlorinated/Halogenated Pesticides								
Atrazine	4.3	Direct Contact ⁽³⁾	710	0.66%	Yes	No data gaps: Contamination is vertically and laterally bounded.	Contamination limited to the upper 4 feet; contamination bounded within property boundary.	None.
Chlordane-alpha	1.0	Direct Contact, Leaching	9.9	5.6%	Yes			
Simazine	8.3	Direct Contact ⁽³⁾	110	0.66%	Yes			

Table 2
Data Gap Evaluation Summary for Soil COPCs Relative to Leaching and Direct Contact PCULs

Chemical	Contact PCUL If Groundwater Demonstrates Compliance (mg/kg) ⁽¹⁾	Considers Pathways	Max Detection in Soil (mg/kg)	Percent of Detected Results That Exceed	Is It a Soil COPC?	Floyd Snider and Ecology Data Gap Evaluation		Action Items	
						Summary	Supporting Information		
Chemicals Identified as COPCs and Pending COPCs									
Total Petroleum Hydrocarbons (TPH)									
Other Chemicals (cont.)	Total Diesel- and Oil-Range TPH	460	Direct Contact ⁽³⁾	21,000	25%	Yes	No data gaps: Contamination is vertically and laterally bounded.	Contamination present across the site, generally near buildings and fuel pad at depths up to 9 feet bgs. Along eastern/western property boundary, shallow samples exceed at concentrations between 2 and 2.5 times the PCUL at three locations: Culvert, FS-01, and FS-12. Vertical depth is bounded throughout the site, except near BNSF loading area along the eastern property boundary where contamination is present at depths of 10 feet bgs at locations FS-10 and MW-5. This is deeper than the biologically active zone.	The RI will contain text describing rationale supporting the determination that contamination is bounded along property lines based on the following lines of evidence: - There is no reason to suspect TPH contamination is present outside of the western property boundary based on what is known about the nature of current and historical activities; - The road is a permanent physical barrier; site activities did not take place on or west of the road; - No indications of the presence of TPH were observed outside of the western property boundary when performing off-property permanent and temporary well installation.
	Dioxins								
	Dioxins	0.00000300	Direct Contact ⁽³⁾	0.0000924	78%	Yes	Data gap exists relative to TEE criteria adjusted for PQL, and relative to residential criteria (13 ng/kg): Results exceed both criteria along southern property boundary, south of FS-44.	Contamination is present in the southeast corner of the site. The greatest dioxin/furan concentration (0.92 mg/kg) was measured in FS-44. Based on current and historical activities at the property, contamination is expected to be limited to surface soil. The ecological exposure pathway at the site is unlikely to be active based on physical properties of site soil and ground surface that make the site unsuitable for terrestrial life; current levels of dioxins/furans in soil are not contributing to loss in habitat quality. A data gap remains relative to residential criteria.	Relative to the TEE pathway, the RI will contain text describing site-specific lines of evidence used to confirm that current levels of dioxins in soil are protective of terrestrial exposure and do not cause a decrease in habitat quality using a weight of evidence approach. Relative to residential criteria, the extent of off-site contamination is a data gap that must be filled prior to selection and design of the final remedy. This may be achieved with additional sampling prior to submittal of the Engineering Design Report.

Notes:

Criteria and results are rounded to two significant figures, with the exception of dioxin criteria and results. Dioxin criteria and results are rounded to three significant figures.

RED/BOLD Chemical retained as COPC.

Soil PCUL has been adjusted to the PQL.

Soil PCUL includes TEE, HH, and leaching pathway as appropriate for the chemical.

Soil PCUL includes only direct contact criteria; the leaching pathway is not active.

1 If groundwater meets the CUL (i.e., chemical is not a groundwater COPC), the PCUL presented in this table is the most conservative soil direct contact criterion for that chemical. This "direct contact PCUL" was used to determine exceedance information and COPC status.

2 Total DDx (calculated as the sum of DDD, DDE, and DDT) is compared to the TEE criteria for total DDx. Individual totals for DDT and its derivatives are compared to HH direct contact criteria and leaching criteria, as appropriate.

3 No three-phase leaching pathway criteria.

Sampling Data

Sample No: MW-01-081016

Location and Depth: _____

Date Collected (mo/dy/yr): 8/10/16

Time Collected: 1735

AM PM Weather: Sunny 95°

Type: Ground Water Surface Water Other: _____

Sample: Filtered Unfiltered Other: _____

Sample Collected with: Bailer Pump Other: _____

Type: peristaltic pump

Water Quality Instrument Data Collected with: Type: Horiba U-22 Horiba U-50 Other: _____

Sample Decon Procedure: Sample collected with (circle one): decontaminated all tubing; disposable and/or dedicated silicon and poly tubing Other: _____

Sample Description (Color, Turbidity, Odor, Other): Slightly tinged yellow; musty but no petroleum hydrocarbon odor.

Sample Analyses

TPH-D (HCl) Chlor / Fluor (unpres) COD / TOC (H2SO4) Orthophos (FILTER) Diss. Metals (HNO3)
 TPH-G (HCl) BTEX (HCl) Total Metals (HNO3) TKN/Phos (N2SO4) VOCs (HCl)

Sampling Data

Sample No: MW-08-081016 Location and Depth: _____

Date Collected (mo/dy/yr): 8/10/16 Time Collected: 1240 AM PM Weather: Sunny 85°

Type: Ground Water Surface Water Other: _____ Sample: Filtered Unfiltered Other: _____

Sample Collected with: Bailor Pump Other: _____ Type: peristaltic

Water Quality Instrument Data Collected with: Type: Horiba U-22 Horiba U-50 Other: _____

Sample Decon Procedure: Sample collected with (circle one): decontaminated all tubing; disposable and/or dedicated silicon and poly tubing Other: _____

Sample Description (Color, Turbidity, Odor, Other): clear; no odor no sheen Tinged & slightly yellow

Sample Analyses

- TPH-D (HCl) Chlor / Fluor (unpres) COD / TOC (H2SO4) Orthophos (FILTER) Diss. Metals (HNO3)
 TPH-G (HCl) BTEX (HCl) Total Metals (HNO3) TKN/Phos (N2SO4) VOCs (HCl)

Additional Information

Types of Sample Containers:	Quantity:	Duplicate Sample Numbers:	Comments:
6 @ - 500 mL			
3 - 250 mL Amber			
6 @ - 1L Amber	X2		ms/msd
10 @ - Vials

Sample No: MW-1-111016 Location and Depth: MW-1, 8'

Date Collected (mo/dy/yr): 11/10/16 Time Collected: 0838 AM PM Weather: foggy ~40°F

Type: Ground Water Surface Water Other: _____ Sample: Filtered Unfiltered Other: see below

Sample Collected with: Bailer Pump Other: _____ Type: peristaltic

Water Quality Instrument Data Collected with: Type: Horiba U-22 Horiba U-50 Other: _____

Sample Decon Procedure: Sample collected with (circle one): decontaminated all tubing; disposable and/or dedicated silicon and poly tubing Other: _____

Sample Description (Color, Turbidity, Odor, Other): slightly turbid, no odor

Sample Analyses

TPH-D (HCl) Chlor / Fluor (unpres) ammonia (H2SO4) nitrate/nitrite Orthophos (FILTER) pest/herb Diss. Metals (HNO3)
 TPH-G (HCl) BTEX (HCl) Total Metals (HNO3) TKN/Phos (N2SO4) VOCs (HCl)

Additional Information

Types of Sample Containers:	Quantity:	Duplicate Sample Numbers:	Comments:
1L Amber glass	2	N/A	Field filtered one 250 ml poly w/ HNO3. Water became cloudy in tubing after adding filter (0.45µm)
500 mL Amber glass	1		
250 mL poly	1		
250 mL poly w/ H2SO4	1		
250 mL poly w/ HNO3	2		
40 mL glass VOA w/ HCl	3

Sampling Data

Sample No: MW-02-022817 Location and Depth: MW-2

Date Collected (mo/dy/yr): 02/28/2017 Time Collected: 0927 AM PM Weather: partly cloudy, 20°F

Type: Ground Water Surface Water Other: _____ Sample: Filtered Unfiltered Other: _____

Sample Collected with: Bailor Pump Other: _____ Type: alexis peristaltic

Water Quality Instrument Data Collected with: Type: Horiba U-22 Horiba U-50 Other: YSI Pro DSS

Sample Decon Procedure: Sample collected with (circle one): decontaminated all tubing; disposable and/or dedicated silicon and poly tubing Other: _____

Sample Description (Color, Turbidity, Odor, Other): clear, no odor

Sample Analyses

TPH-D (HCl) Chlor / Fluor (unpres) COD / TOC (H2SO4) Orthophos (FILTER) Diss. Metals (HNO3)
 + pesticides, herbicides, nitrate, nitrite, Ammonia
 TPH-G (HCl) BTEX (HCl) Total Metals (HNO3) TKN/Phos (N2SO4) VOCs (HCl)

Additional Information

Types of Sample Containers:	Quantity:	Duplicate Sample Numbers:	Comments:
500 mL glass amber	1	None	YSI calibrated 2/23. Attempted to calibrate on 2/28 but calibration fluid frozen. All parameters appear accurate except low NTU's.
1 L glass amber	2		
250 mL poly w/ H2SO4	1		
250 mL poly w/ HNO3	1		
250 mL poly	1		
40 mL VOA w/ HCl	4		

Signature: [Handwritten Signature]

Date: 2/28/17

Sample Description (Color, Turbidity, Odor, Other): _____

Sample Analyses

TPH-D (HCl) Chlor / Fluor (unpres) COD / TOC (H2SO4) Orthophos (FILTER) Diss. Metals (HNO3)
 TPH-G (HCl) BTEX (HCl) Total Metals (HNO3) TKN/Phos (N2SO4) VOCs (HCl)
ammonia, nitrate, nitrite, p/h

Additional Information

Types of Sample Containers:	Quantity:	Duplicate Sample Numbers:	Comments:
1L Amber	2	None	Total depth = 13.24
500 mL amber	1		
250 mL poly	1		
500 + 250 mL poly w/ HNO3	2		
250 mL poly w/ H2SO4	1		
40 mL VOA w/ HCl	3

Sampling Data

Sample No: MW-18-07 Location and Depth: MW-18

Date Collected (mo/dy/yr): 7/5/18 Time Collected: 1217 AM PM Weather: Sunny 80°

Type: Ground Water Surface Water Other: _____ Sample: Filtered Unfiltered Other: _____

Sample Collected with: Bailor Pump Other: _____ Type: Peristaltic

Water Quality Instrument Data Collected with: Type: Horiba U-22 Horiba U-50 Other: _____

Sample Decon Procedure: Sample collected with (circle one): decontaminated all tubing; disposable and/or dedicated silicon and poly tubing Other: _____

Sample Description (Color, Turbidity, Odor, Other): Clean; No odor

Sample Analyses

TPH-D (HCl) Chlor / Fluor (unpres) COD / TOC (H2SO4) Orthophos (FILTER) Diss. Metals (HNO3)
 TPH-G (HCl) BTEX (HCl) Total Metals (HNO3) TKN/Phos (N2SO4) VOCs (HCl)

Additional Information

Types of Sample Containers:	Quantity:	Duplicate Sample Numbers:	Comments:
1 Liter Amber	1		No preservation BKZ-671
750ml Poly	1		

Signature: [Signature] Date: 7/5/18

GROUNDWATER OR SURFACE WATER SAMPLE COLLECTION FORM

Project Name: FP-Smith Kern

Date of Collection: 7/5/2018

Project Number: _____

Field Personnel: P.O.

Purge Data

Well ID: MW-19 Secure: Yes No

Well Condition/Damage Description: good, new

BKZ 670

Depth Sounder decontaminated Prior to Placement in Well: Yes No

One Casing Volume (gal): 1.4 gal

Depth of water (from top of well casing): 4.08

Well Casing Type/Diameter/Screened Interval: 2" PVC / 3-13'

After 5 minutes of purging (from top of casing): _____

Begin purge (time): 12:06

End purge (time): 12:36

Gallons purged: 1 gal

Purge water disposal method: drum

Volume of Schedule 40 PVC Pipe				
Diameter	O.D.	I.D.	Volume (Gal/Linear Ft.)	Weight of Water (Lbs/Linear Ft.)
1 1/2"	1.660"	1.380"	0.08	0.64
2"	2.375"	2.067"	0.17	1.45
3"	3.500"	3.068"	0.38	3.2
4"	4.500"	4.026"	0.66	5.51
6"	6.625"	6.065"	1.5	12.5

Time	Depth to Water	Vol. Purged	pH	DO $\frac{mg}{L}$	Conductivity $\frac{mS}{cm}$	Turbidity NTU	Temp °C	ORP mV	Comments
12:11	4.09'	1L	7.11	1.42	0.248	6.1	14.7	40.8	
12:16	4.09'	2L	6.99	0.68	0.244	5.1	14.2	30.2
