COMMENTS

In April 1992, a Phase I and II was conducted around the degreaser pit located in bldg 40-53. Borings were advanced and soil samples were collected. The results identified VOCs and TPH in the soil above MTCA. GW was not encountered in the borings. A UST report was included in the file with handwritten notes that it is for tank EV-16. The report is actually for EV-32 (LUST 4349) and is an extra copy. Left in file, but made a note on report on actual tank id and LUST number.
