Section Manager	Date

### COMMENTS

Two USTs (gas, diesel) were removed from this site in 1994. GW was encountered during the excavation. Approx 100 cy of overexcavated PCS was removed and stockpiled on site for remediation. TPH-d contamination (1470 ppm) was left in place along the east side of the excavation. This is now below MTCA Method A. Further excavation was not possible at the time due to the adjacent building. Water in the excavation was apparently contaminated with diesel. Three MWs were installed but not sampled. This site no longer has soil contamination, but GW should be monitored. In addition, the fate
