

ANALYTICAL REPORT

Job Number: 580-32803-1

Job Description: Jeld-Wen Surface Sediment

For:

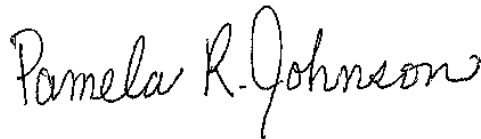

Anchor QEA LLC

720 Olive Way

Suite 1900

Seattle, WA 98101

Attention: Cindy Fields

Approved for release.

Niki Masters

TestAmerica Tacoma is a part of TestAmerica Laboratories, Inc.

This report is issued solely for the use of the person or company to whom it is addressed. Any use, copying or disclosure other than by the intended recipient is unauthorized. If you have received this report in error, please notify the sender immediately at 253-922-2310 and destroy this report immediately.

This report shall not be reproduced except in full, without prior express written approval by the laboratory. The results relate only to the item(s) tested and the sample(s) as received by the laboratory.

The results included in this report have been reviewed for compliance with the laboratory QA/QC plan and meet all requirements of NELAC. All data have been found to be compliant with laboratory protocol, with the exception of any items noted in the case narrative.

CASE NARRATIVE

Client: Anchor QEA LLC
Project: Jeld-Wen Surface Sediment
Report Number: 580-32803-1

This case narrative is in the form of an exception report, where only the anomalies related to this report, method specific performance and/or QA/QC issues are discussed. If there are no issues to report, this narrative will include a statement that documents that there are no relevant data issues.

It should be noted that samples with elevated Reporting Limits (RLs) resulting from a dilution may not be able to satisfy customer reporting limits in some cases. Such increases in the RLs are an unavoidable but acceptable consequence of sample dilution that enables quantification of target analytes within the calibration range of the instrument or that reduces the interferences thereby enabling the quantification of target analytes.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 05/08/2012; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at the time of receipt was 2.60 C, 2.60 C, 3.80 C, 5.60 C, 12.70 C and 15.80 C.

Two of the six coolers were received at the laboratory outside the required temperature criteria: 12.7°C and 15.8°C.

Samples JW-EA01-COMP-1205 (580-32803-46), JW-EA09-SS37-1205 (580-32803-47), JW-EA09-SS34-1205 (580-32803-48), JW-EA09-SS38-1205 (580-32803-49), JW-EA09-SS36-1205 (580-32803-50), JW-EA09-SS33-1205 (580-32803-51), JW-EA09-SS35-1205 (580-32803-52), & JW-RB-1205 (580-32803-54) were in the cooler with a temperature of 12.7°C.

Samples JW-EA02-Comp-1205 (580-32803-36), JW-EA04-SS13-1205 (580-32803-37), JW-EA04-SS16-1205 (580-32803-38), JW-EA04-SS14-1205 (580-32803-39), JW-EA04-SS15-1205 (580-32803-40), JW-EA04-Comp-1205 (580-32803-41), JW-EA01-SS03-1205 (580-32803-42), JW-EA01-SS04-1205 (580-32803-43), JW-EA01-SS01-1205 (580-32803-44), JW-EA01-SS02-1205 (580-32803-45) and JW-EA09-Comp-1205 (580-32803-53) were in the cooler with a temperature of 15.8°C.

The container label for the following sample JW-EA10-SS42-1205 (580-32803-20) did not match the information listed on the Chain-of-Custody (COC). The container labels list the ID as JW-EA10-SS42-1205. The Chain-of-Custody (COC) lists JW-EA10-SS43-1205. The sampling times match. The sample was logged in per container labels because the previous sample (580-32803-19) has the ID ...SS43.

Note: All samples which require thermal preservation are considered acceptable if the arrival temperature is within 2C of the required temperature or method specified range. For samples with a specified temperature of 4C, samples with a temperature ranging from just above freezing temperature of water to 6C shall be acceptable. Samples that are hand delivered immediately following collection may not meet these criteria, however they will be deemed acceptable according to NELAC standards, if there is evidence that the chilling process has begun, such as arrival on ice, etc.

POLYCYCLIC AROMATIC HYDROCARBONS (PAHS)

Samples JW-EA58-COMP-120507 (580-32803-7), JW-EA08-COMP-120507 (580-32803-10), JW-EA10-COMP-120507 (580-32803-21), JW-EA01-COMP-120507 (580-32803-46) and JW-EA09-COMP-120507 (580-32803-53) were analyzed for polycyclic aromatic hydrocarbons (PAHs) in accordance with EPA SW-846 Method 8270C SIM. The samples were prepared on 05/18/2012 and analyzed on 05/25/2012.

No difficulties were encountered during the PAH analyses.

All quality control parameters were within the acceptance limits.

SEMIVOLATILE ORGANIC COMPOUNDS - SELECTED ION MODE (SIM)

Samples JW-RB-120507 (580-32803-54) and JW-FB-120507 (580-32803-55) were analyzed for Semivolatile organic compounds - Selected Ion Mode (SIM) in accordance with EPA SW-846 Method 8270C SIM. The samples were prepared on 05/11/2012 and analyzed on 05/23/2012.

No difficulties were encountered during the SVOC SIM analyses.

All quality control parameters were within the acceptance limits.

PUGET SOUND ESTUARY PROGRAM TOTAL ORGANIC CARBON

Samples JW-EA58-COMP-120507 (580-32803-7), JW-EA08-COMP-120507 (580-32803-10), JW-EA06-COMP-120507 (580-32803-15), JW-EA10-SS39-120507 (580-32803-16), JW-EA10-SS41-120507 (580-32803-17), JW-EA10-SS40-120507 (580-32803-18), JW-EA10-SS43-120507 (580-32803-19), JW-EA10-SS42-120507 (580-32803-20), JW-EA10-COMP-120507 (580-32803-21), JW-EA07-COMP-120507 (580-32803-26), JW-EA03-COMP-120507 (580-32803-30), JW-EA02-COMP-120507 (580-32803-36), JW-EA04-COMP-120507 (580-32803-41), JW-EA01-SS03-120507 (580-32803-42), JW-EA01-SS04-120507 (580-32803-43), JW-EA01-SS01-120507 (580-32803-44), JW-EA01-SS02-120507 (580-32803-45), JW-EA01-COMP-120507 (580-32803-46) and JW-EA09-COMP-120507 (580-32803-53) were analyzed for Puget Sound Estuary Program total organic carbon in accordance with EPA SW-846 Method 9060, modified to meet the Puget Sound Estuary Program requirements. The samples were analyzed on 06/08/2012.

Due to high sample volume, not all samples could be run within hold. Samples were frozen to extend their hold time and run when instrument capacity was available.

No difficulties were encountered during the PSEP TOC analyses.

All quality control parameters were within the acceptance limits.

PERCENT SOLIDS

Samples JW-EA58-COMP-120507 (580-32803-7), JW-EA08-COMP-120507 (580-32803-10), JW-EA06-COMP-120507 (580-32803-15), JW-EA10-SS39-120507 (580-32803-16), JW-EA10-SS41-120507 (580-32803-17), JW-EA10-SS40-120507 (580-32803-18), JW-EA10-SS43-120507 (580-32803-19), JW-EA10-SS42-120507 (580-32803-20), JW-EA10-COMP-120507 (580-32803-21), JW-EA07-COMP-120507 (580-32803-26), JW-EA03-COMP-120507 (580-32803-30), JW-EA02-COMP-120507 (580-32803-36), JW-EA04-COMP-120507 (580-32803-41), JW-EA01-SS03-120507 (580-32803-42), JW-EA01-SS04-120507 (580-32803-43), JW-EA01-SS01-120507 (580-32803-44), JW-EA01-SS02-120507 (580-32803-45), JW-EA01-COMP-120507 (580-32803-46) and JW-EA09-COMP-120507 (580-32803-53) were analyzed for percent solids in accordance with ASTM D2216. The samples were analyzed on 05/15/2012, 05/21/2012 and 05/22/2012.

No difficulties were encountered during the % solids analyses.

All quality control parameters were within the acceptance limits.

GRAIN SIZE

Samples JW-EA58-COMP-120507 (580-32803-7), JW-EA08-COMP-120507 (580-32803-10), JW-EA06-COMP-120507 (580-32803-15), JW-EA10-SS39-120507 (580-32803-16), JW-EA10-SS41-120507 (580-32803-17), JW-EA10-SS40-120507 (580-32803-18), JW-EA10-SS43-120507 (580-32803-19), JW-EA10-SS42-120507 (580-32803-20), JW-EA10-COMP-120507 (580-32803-21), JW-EA07-COMP-120507 (580-32803-26), JW-EA03-COMP-120507 (580-32803-30), JW-EA02-COMP-120507 (580-32803-36), JW-EA04-COMP-120507 (580-32803-41), JW-EA01-SS03-120507 (580-32803-42), JW-EA01-SS04-120507 (580-32803-43), JW-EA01-SS01-120507 (580-32803-44), JW-EA01-SS02-120507 (580-32803-45), JW-EA01-COMP-120507 (580-32803-46) and JW-EA09-COMP-120507 (580-32803-53) were analyzed for grain size in accordance with D422. The samples were analyzed on 06/07/2012 and 06/08/2012.

No difficulties were encountered during the grain size analyses.

All quality control parameters were within the acceptance limits.

Creator: Blankinship, Tom

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	False	two coolers out of temp
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	False	ID of sample -20
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A	No analysis requiring residual chlorine check assigned.

CASE NARRATIVE

Client: Anchor QEA LLC
Project: Jeld-Wen Surface Sediment
Report Number: 580-32803-2

This case narrative is in the form of an exception report, where only the anomalies related to this report, method specific performance and/or QA/QC issues are discussed. If there are no issues to report, this narrative will include a statement that documents that there are no relevant data issues.

It should be noted that samples with elevated Reporting Limits (RLs) resulting from a dilution may not be able to satisfy customer reporting limits in some cases. Such increases in the RLs are an unavoidable but acceptable consequence of sample dilution that enables quantification of target analytes within the calibration range of the instrument or that reduces the interferences thereby enabling the quantification of target analytes.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 05/08/2012; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was C.

Note: All samples which require thermal preservation are considered acceptable if the arrival temperature is within 2C of the required temperature or method specified range. For samples with a specified temperature of 4C, samples with a temperature ranging from just above freezing temperature of water to 6C shall be acceptable. Samples that are hand delivered immediately following collection may not meet these criteria, however they will be deemed acceptable according to NELAC standards, if there is evidence that the chilling process has begun, such as arrival on ice, etc.

PUGET SOUND ESTUARY PROGRAM TOTAL ORGANIC CARBON

Samples JW-EA08-SS29-120507 (580-32803-5), JW-EA08-SS30-120507 (580-32803-6), JW-EA08-SS31-120507 (580-32803-8), JW-EA08-SS32-120507 (580-32803-9), JW-EA06-SS22-120507 (580-32803-11), JW-EA06-SS21-120507 (580-32803-12), JW-EA06-SS23-120507 (580-32803-13), JW-EA06-SS24-120507 (580-32803-14), JW-EA07-SS28-120507 (580-32803-22), JW-EA07-SS25-120507 (580-32803-23), JW-EA07-SS27-120507 (580-32803-24), JW-EA07-SS26-120507 (580-32803-25), JW-EA02-SS05-120507 (580-32803-32), JW-EA02-SS06-120507 (580-32803-33), JW-EA04-SS13-120507 (580-32803-37), JW-EA04-SS16-120507 (580-32803-38), JW-EA04-SS14-120507 (580-32803-39), JW-EA04-SS15-120507 (580-32803-40), JW-EA09-SS37-120507 (580-32803-47), JW-EA09-SS34-120507 (580-32803-48), JW-EA09-SS38-120507 (580-32803-49), JW-EA09-SS36-120507 (580-32803-50), JW-EA09-SS33-120507 (580-32803-51) and JW-EA09-SS35-120507 (580-32803-52) were analyzed for Puget Sound Estuary Program total organic carbon in accordance with EPA SW-846 Method 9060, modified to meet the Puget Sound Estuary Program requirements. The samples were analyzed on 11/07/2012.

Analysis of the following samples JW-EA09-SS38-120507 (580-32803-49), JW-EA09-SS36-120507 (580-32803-50), JW-EA09-SS33-120507 (580-32803-51) and JW-EA09-SS35-120507 (580-32803-52) was not performed outside of the analytical holding time. The samples were placed in a freezer after the original analysis was performed. The samples were not removed from the unit until 11/5/2012. The samples were reanalyzed on 11/7/2012 and thus meet the criteria established by the method that states that samples must be reanalyzed within six months after being removed from a freezer unit.

Analysis of the following samples JW-EA08-SS29-120507 (580-32803-5), JW-EA08-SS30-120507 (580-32803-6), JW-EA08-SS31-120507 (580-32803-8), JW-EA08-SS32-120507 (580-32803-9), JW-EA06-SS22-120507 (580-32803-11), JW-EA06-SS21-120507 (580-32803-12), JW-EA06-SS23-120507 (580-32803-13), JW-EA06-SS24-120507 (580-32803-14), JW-EA07-SS28-120507 (580-32803-22), JW-EA07-SS25-120507 (580-32803-23), JW-EA07-SS27-120507 (580-32803-24), JW-EA07-SS26-120507 (580-32803-25), JW-EA02-SS05-120507 (580-32803-32), JW-EA02-SS06-120507 (580-32803-33), JW-EA04-SS13-120507 (580-32803-37), JW-EA04-SS16-120507 (580-32803-38), JW-EA04-SS14-120507 (580-32803-39), JW-EA04-SS15-120507 (580-32803-40), JW-EA09-SS37-120507 (580-32803-47), JW-EA09-SS34-120507 (580-32803-48) was not performed outside of the analytical holding time. The samples were placed in a freezer after the original analysis was performed. The samples were not removed from the unit until 11/5/2012. The samples were reanalyzed on 11/7/2012 and thus meet the criteria established by the method that states that samples must be reanalyzed within six months after being removed from a freezer unit.

No difficulties were encountered during the PSEP TOC analyses.

All quality control parameters were within the acceptance limits.

REAGENT TRACEABILITY SUMMARY

Lab Name: TestAmerica Seattle Job No.: 580-32803-2

SDG No.: _____

Reagent ID	Exp Date	Prep Date	Dilutant Used	Reagent Final Volume	Parent Reagent		Analyte	Concentration
					Reagent ID	Volume Added		
CaCO3_00003	06/02/17		ACROS, Lot A0311356		(Purchased Reagent)		Total Organic Carbon	120000 g
TOCS_LCS_00003	02/29/16		ERA, Lot D078-542		(Purchased Reagent)		Total Organic Carbon	2850 mg/Kg

Certification Summary

Client: Anchor QEA LLC
Project/Site: Jeld-Wen Surface Sediment

TestAmerica Job ID: 580-32803-2

Laboratory	Authority	Program	EPA Region	Certification ID
TestAmerica Seattle	Alaska (UST)	State Program	10	UST-022
TestAmerica Seattle	California	NELAC	9	1115CA
TestAmerica Seattle	L-A-B	DoD ELAP		L2236
TestAmerica Seattle	L-A-B	ISO/IEC 17025		L2236
TestAmerica Seattle	Montana (UST)	State Program	8	N/A
TestAmerica Seattle	Oregon	NELAC	10	WA100007
TestAmerica Seattle	USDA	Federal		P330-11-00222
TestAmerica Seattle	Washington	State Program	10	C553

Accreditation may not be offered or required for all methods and analytes reported in this package Please contact your project manager for the laboratory's current list of certified methods and analytes.

List Source: TestAmerica Seattle

List Number: 1

Creator: Blankinship, Tom

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	False	two coolers out of temp
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	False	ID of sample -20
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A	No analysis requiring residual chlorine check assigned.

TestAmerica Tacoma is a part of TestAmerica Laboratories, Inc.

This report is issued solely for the use of the person or company to whom it is addressed. Any use, copying or disclosure other than by the intended recipient is unauthorized. If you have received this report in error, please notify the sender immediately at 253-922-2310 and destroy this report immediately.

This report shall not be reproduced except in full, without prior express written approval by the laboratory. The results relate only to the item(s) tested and the sample(s) as received by the laboratory.

The results included in this report have been reviewed for compliance with the laboratory QA/QC plan and meet all requirements of NELAC. All data have been found to be compliant with laboratory protocol, with the exception of any items noted in the case narrative.

CASE NARRATIVE

Client: Anchor QEA LLC
Project: Jeld-Wen Surface Sediment
Report Number: 580-32803-3

This case narrative is in the form of an exception report, where only the anomalies related to this report, method specific performance and/or QA/QC issues are discussed. If there are no issues to report, this narrative will include a statement that documents that there are no relevant data issues.

It should be noted that samples with elevated Reporting Limits (RLs) resulting from a dilution may not be able to satisfy customer reporting limits in some cases. Such increases in the RLs are an unavoidable but acceptable consequence of sample dilution that enables quantification of target analytes within the calibration range of the instrument or that reduces the interferences thereby enabling the quantification of target analytes.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 05/08/2012; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 2.6° C, 2.6° C, 3.8° C, 5.6° C, 12.7° C and 15.8° C.

Except:

Two of the six coolers were received at the laboratory outside the required temperature criteria . 12.7°C and 15.8°C.

The following samples JW-EA03-SS12-120507 (580-32803-27), JW-EA03-SS11-120507 (580-32803-29) and JW-EA02-SS07-120507 (580-32803-34) were analyzed for TOC and TS per client request via email on 04/30/13 10:45am.

Note: All samples which require thermal preservation are considered acceptable if the arrival temperature is within 2C of the required temperature or method specified range. For samples with a specified temperature of 4C, samples with a temperature ranging from just above freezing temperature of water to 6C shall be acceptable. Samples that are hand delivered immediately following collection may not meet these criteria, however they will be deemed acceptable according to NELAC standards, if there is evidence that the chilling process has begun, such as arrival on ice, etc.

PUGET SOUND ESTUARY PROGRAM TOTAL ORGANIC CARBON

Samples JW-EA03-SS12-120507 (580-32803-27), JW-EA03-SS11-120507 (580-32803-29) and JW-EA02-SS07-120507 (580-32803-34) were analyzed for Puget Sound Estuary Program total organic carbon in accordance with EPA SW-846 Method 9060, modified to meet the Puget Sound Estuary Program requirements. The samples were analyzed on 05/07/2013.

Samples were kept frozen until request for analysis, as such the hold time flags were not necessary and were removed by the analyst.

No other difficulties were encountered during the PSEP TOC analyses.

All quality control parameters were within the acceptance limits.

PERCENT SOLIDS

Samples JW-EA03-SS12-120507 (580-32803-27), JW-EA03-SS11-120507 (580-32803-29) and JW-EA02-SS07-120507 (580-32803-34) were analyzed for percent solids in accordance with ASTM D2216. The samples were analyzed on 05/09/2013.

No difficulties were encountered during the % solids analyses.

All quality control parameters were within the acceptance limits.

Certification

Parameter	Total Concentration ¹ (mg/kg)	Certified Value ² (mg/kg)	Uncertainty ³	QC PALs™ ⁴ (mg/kg)	PT PALs™ ⁵ (mg/kg)
ammonia as N	783	655	6.7%	332 - 977	355 - 955
total kjeldahl nitrogen	1250	1160	14.0%	666 - 1660	626 - 1700
total organic carbon	2850	2820	4.4%	1430 - 4220	794 - 4850
total phosphorus	855	799	6.3%	438 - 1160	180 - 1420

Revised 9-20-12
PALs ID: 979727 AJM

1. The **Total Concentrations** are equal to the digestable background concentrations in the blank soil matrix (determined internally by ERA using applicable methods), plus the amount of each analyte spiked onto the soil.

2. The **Certified Values** are equal to the mean recoveries for the parameters as determined in an interlaboratory round robin study. The certified values are based on an "as received" basis, assuming a 100% solids content.

3. The stated **Uncertainty** is the total propagated uncertainty at the 95% confidence interval. The uncertainty is based on the preparation and internal analytical verification of the product by ERA using applicable methods, multiplied by a coverage factor which is equal to the student t factor at a 95% confidence interval at n-1 degrees of freedom.

4. The **QC Performance Acceptance Limits (QC PALs™)** are based on actual historical data collected in ERA's Proficiency Testing program. The **QC PALs™** reflect any inherent biases in the methods used to establish the limits and closely approximate a 95% confidence interval of the performance that experienced laboratories should achieve using accepted environmental methods. Use the **QC PALs™** to realistically evaluate your performance against your peers.

5. The **PT Performance Acceptance Limits (PT PALs™)** are calculated using the regression equations and fixed acceptance criteria specified in the NELAC proficiency testing requirements. Use the **PT PALs™** when analyzing this QC standard alongside USEPA and NELAC compliant PT standards. Please note that many PT study acceptance limits are concentration dependent (some non-linearly) and, therefore, the acceptance limits of this QC standard and any PT standard may differ relative to their difference in concentrations.

6. This standard **expires 2/2016**. The certified values are monitored and purchasers will be notified of any significant changes resulting in recertification or withdrawal of this certified reference material during the period of validity of this certificate.

If you have any questions or need technical assistance, please call ERA technical assistance at 1-800-372-0122 or email to info@eraqc.com.

Login Sample Receipt Checklist

Client: Anchor QEA LLC

Job Number: 580-32803-3

Login Number: 32803
List Number: 1
Creator: Blankinship, Tom

List Source: TestAmerica Seattle

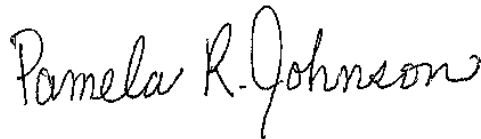

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	False	two coolers out of temp
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	False	ID of sample -20
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A	No analysis requiring residual chlorine check assigned.

ANALYTICAL REPORT

TestAmerica Tacoma is a part of TestAmerica Laboratories, Inc.

This report is issued solely for the use of the person or company to whom it is addressed. Any use, copying or disclosure other than by the intended recipient is unauthorized. If you have received this report in error, please notify the sender immediately at 253-922-2310 and destroy this report immediately.

This report shall not be reproduced except in full, without prior express written approval by the laboratory. The results relate only to the item(s) tested and the sample(s) as received by the laboratory.

The results included in this report have been reviewed for compliance with the laboratory QA/QC plan and meet all requirements of NELAC. All data have been found to be compliant with laboratory protocol, with the exception of any items noted in the case narrative.

CASE NARRATIVE

Client: Anchor QEA LLC
Project: Jeld-Wen Surface Sediment
Report Number: 580-32844-1

This case narrative is in the form of an exception report, where only the anomalies related to this report, method specific performance and/or QA/QC issues are discussed. If there are no issues to report, this narrative will include a statement that documents that there are no relevant data issues.

It should be noted that samples with elevated Reporting Limits (RLs) resulting from a dilution may not be able to satisfy customer reporting limits in some cases. Such increases in the RLs are an unavoidable but acceptable consequence of sample dilution that enables quantification of target analytes within the calibration range of the instrument or that reduces the interferences thereby enabling the quantification of target analytes.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 05/09/2012; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 3.1° C, 4.8° C, 5.8° C and 5.9° C.

Note: All samples which require thermal preservation are considered acceptable if the arrival temperature is within 2C of the required temperature or method specified range. For samples with a specified temperature of 4C, samples with a temperature ranging from just above freezing temperature of water to 6C shall be acceptable. Samples that are hand delivered immediately following collection may not meet these criteria, however they will be deemed acceptable according to NELAC standards, if there is evidence that the chilling process has begun, such as arrival on ice, etc.

POLYCYCLIC AROMATIC HYDROCARBONS (PAHS)

Samples JW-UR-COMP-120508 (580-32844-5), JW-DR-COMP-120508 (580-32844-10) and JW-RG-COMP-120508 (580-32844-15) were analyzed for polycyclic aromatic hydrocarbons (PAHs) in accordance with EPA SW-846 Method 8270C SIM. The samples were prepared on 05/18/2012 and analyzed on 05/25/2012.

No difficulties were encountered during the PAH analyses.

All quality control parameters were within the acceptance limits.

PUGET SOUND ESTUARY PROGRAM TOTAL ORGANIC CARBON

Samples JW-UR-COMP-120508 (580-32844-5), JW-DR-COMP-120508 (580-32844-10) and JW-RG-COMP-120508 (580-32844-15) were analyzed for Puget Sound Estuary Program total organic carbon in accordance with EPA SW-846 Method 9060, modified to meet the Puget Sound Estuary Program requirements. The samples were analyzed on 06/11/2012.

Due to high sample volume, not all samples could be run within hold. Samples were frozen to extend their hold time and run when instrument capacity was available.

No other difficulties were encountered during the PSEP TOC analyses.

All other quality control parameters were within the acceptance limits.

PERCENT SOLIDS

Samples JW-UR-COMP-120508 (580-32844-5), JW-DR-COMP-120508 (580-32844-10) and JW-RG-COMP-120508 (580-32844-15) were analyzed for percent solids in accordance with ASTM D2216. The samples were analyzed on 05/21/2012.

No difficulties were encountered during the % solids analyses.

All quality control parameters were within the acceptance limits.

GRAIN SIZE

Samples JW-UR-COMP-120508 (580-32844-5), JW-DR-COMP-120508 (580-32844-10) and JW-RG-COMP-120508 (580-32844-15) were analyzed for grain size in accordance with D422. The samples were analyzed on 06/08/2012.

No difficulties were encountered during the grain size analyses.

All quality control parameters were within the acceptance limits.

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	N/A	Not present
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	False	Sample splitting required for subcontract purposes.
Residual Chlorine Checked.	N/A	No analysis requiring residual chlorine check assigned.

This report is issued solely for the use of the person or company to whom it is addressed. Any use, copying or disclosure other than by the intended recipient is unauthorized. If you have received this report in error, please notify the sender immediately at 253-922-2310 and destroy this report immediately.

This report shall not be reproduced except in full, without prior express written approval by the laboratory. The results relate only to the item(s) tested and the sample(s) as received by the laboratory.

The results included in this report have been reviewed for compliance with the laboratory QA/QC plan and meet all requirements of NELAC. All data have been found to be compliant with laboratory protocol, with the exception of any items noted in the case narrative.

CASE NARRATIVE

Client: Anchor QEA LLC
Project: Jeld-Wen Surface Sediment
Report Number: 580-32847-1

This case narrative is in the form of an exception report, where only the anomalies related to this report, method specific performance and/or QA/QC issues are discussed. If there are no issues to report, this narrative will include a statement that documents that there are no relevant data issues.

It should be noted that samples with elevated Reporting Limits (RLs) resulting from a dilution may not be able to satisfy customer reporting limits in some cases. Such increases in the RLs are an unavoidable but acceptable consequence of sample dilution that enables quantification of target analytes within the calibration range of the instrument or that reduces the interferences thereby enabling the quantification of target analytes.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 05/10/2012; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 1.9 C.

Note: All samples which require thermal preservation are considered acceptable if the arrival temperature is within 2C of the required temperature or method specified range. For samples with a specified temperature of 4C, samples with a temperature ranging from just above freezing temperature of water to 6C shall be acceptable. Samples that are hand delivered immediately following collection may not meet these criteria, however they will be deemed acceptable according to NELAC standards, if there is evidence that the chilling process has begun, such as arrival on ice, etc.

PUGET SOUND ESTUARY PROGRAM TOTAL ORGANIC CARBON

Sample JW-EA05-COMP-120509 (580-32847-5) was analyzed for Puget Sound Estuary Program total organic carbon in accordance with EPA SW-846 Method 9060, modified to meet the Puget Sound Estuary Program requirements. The samples were analyzed on 06/11/2012.

Due to high sample volume, not all samples could be run within hold. The sample was frozen to extend the hold time and ran when instrument capacity was available.

No other difficulties were encountered during the PSEP TOC analysis.

All other quality control parameters were within the acceptance limits.

PERCENT SOLIDS

Sample JW-EA05-COMP-120509 (580-32847-5) was analyzed for percent solids in accordance with ASTM D2216. The samples were analyzed on 05/22/2012.

No difficulties were encountered during the % solids analysis.

All quality control parameters were within the acceptance limits.

GRAIN SIZE

Sample JW-EA05-COMP-120509 (580-32847-5) was analyzed for grain size in accordance with D422. The samples were analyzed on 06/08/2012.

No difficulties were encountered during the grain size analysis.

All quality control parameters were within the acceptance limits.

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	N/A	Not present
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	False	Sample splitting required for subcontract purposes.
Residual Chlorine Checked.	N/A	No analysis requiring residual chlorine check assigned.

Subject: Certificate of Results

Dear Delaney

Attached to this narrative are the analytical results you requested on the sample submitted for the determination of polychlorinated biphenyl congeners. The insert below summarizes the relevant information pertaining to your project. In particular, QC annotations bring to your attention specific analytical observations and assessments made during the sample handling and data interpretation phases. Results reported relate only to the items tested.

Project Information Summary	When applicable, see QC Annotations for details
Client Project Name	Jeld_Wen Surface Sediments
AP Project #	A4367
Analytical Protocol	EPA 1668B
No. Samples Submitted	n/a
No. Samples Analyzed	2 Waters (this project number)
No. Laboratory Method Blanks	1
No. OPRs / Batch CS3	1
No. Outstanding Samples	0
Date Received	11-May-2012
Condition Received	good
Temperature upon Receipt (C)	3
Extraction within Holding Time	yes
Analysis within Holding Time	yes
Data meet QA/QC Requirements	yes
Exceptions	see QA/QC Annotations
Analytical Difficulties	none

ANALYTICAL PERSPECTIVES IS NOW PART OF SGS, THE WORLD'S LEADING INSPECTION, VERIFICATION, TESTING AND CERTIFICATION COMPANY.

**QC Annotations:**

1. See Appendix A & B for data qualifier, data attribute, and lab identifier information.
2. In the OPR the recovery of PCB-205 is slightly below the lower limit (78.3% vs 79% lower limit). Two labeled standards (PCB-77 and PCB-81) are slightly above the OPR established limits for 1668B. In all cases, variances are within the calibration (CS3) variances established for the method.

SGS-Analytical Perspectives remains committed to serving you in the most effective manner. Should you have any questions or need additional information and technical support, please do not hesitate to contact us.

The management and staff of SGS-Analytical Perspectives welcome customer feedback, both positive and negative, as we continually improve our services. Please visit our web site at www.ultratrace.com and click on the 'Leave Your Feedback Here!' link on the Home Page. Thank you for choosing SGS-Analytical Perspectives.

Sincerely,

A handwritten signature in black ink that reads "Todd Vilen". The signature is written in a cursive style.

Todd Vilen
Project Scientist

APPENDIX A: DATA QUALIFIERS / DATA ATTRIBUTES

*	The reported concentration exceeds the calibration range (upper point of the calibration curve). ¹
>	Indicates high recoveries. Shown with the numeric value at the top of the range. ¹
B	The analyte is found in the method blank, at a level that is $\leq 10x$ the sample concentration.
C	Two or more congeners co-elute. In EDDs C denotes the lowest IUPAC congener in a co-elution group and additional co-eluters for the group are shown with the number of the lowest IUPAC co-eluter.
E	The reported concentration exceeds the calibration range (upper point of the calibration curve).
EMPC	Represents an Estimated Maximum Possible Concentration. EMPC's arise in cases where the signal/noise ratio is not sufficient for peak identification (the determined ion-abundance ratio is outside the allowed theoretical range), where there is a co-eluting interference, or where a single ion is utilized for quantitation due to PFK interference.
ETH	Indicates the presence of a diphenyl ether that appears to interfere with the quantitation of a furan. The reported concentration is the maximum.
H/h	If the standard recovery is below the method or SOP specified value "H" is assigned. If the obtained value is less than half the specified value "h" is assigned. ¹
J	Indicates that an analyte has a concentration below the reporting limit (lowest point of the calibration curve).
ND	Indicates a non-detect.
NR	Indicates a value that is not reportable.
PR	Due to interference, the associated congener is poorly resolved.
QI	Indicates the presence of a quantitative interference.
Ra	The new ratio – [Ra] -- for 2,3,7,8-TCDD following the ³⁷ Cl ₄ -2,3,7,8-TCDD correction is shown between squared brackets in the DL column. ¹
SI	Denotes "Single Ion Mode" and is utilized for PCBs where the secondary ion trace has a significantly elevated noise level due to background PFK. Responses for such peaks are calculated using an EMPC approach based solely on the primary ion area(s) and may be considered estimates. ¹
U	The analyte was not detected. The estimated detection limit (EDL) may be reported for this analyte.
V	The labeled standard recovery was found to be outside of the method control limits.
X	Indicates results reported from reinjection, refractionation, or repeat analyses.

APPENDIX B: LAB ID IDENTIFIERS

AR	Indicates use of the archived portion of the sample extract.
CU	Indicates a sample that required additional clean-up prior to MS injection/processing.
D	Indicates a dilution of the sample extract. The number that follows the "D" indicates the dilution factor.
DE	Indicates a dilution performed with the addition of ES (extraction standard) solution.
DUP	Designation for a duplicate sample.
MS	Designation for a matrix spike.
MSD	Designation for a matrix spike duplicate.
RJ	Indicates a reinjection of the sample extract.
S	Indicates a sample split. The number that follows the "S" indicates the split factor.

¹Denotes data qualifiers/attributes whose use will be phased out over time

Subject: Certificate of Results

Dear Delaney

Attached to this narrative are the analytical results you requested on the sample submitted for the determination of polychlorinated biphenyl congeners . The insert below summarizes the relevant information pertaining to your project. In particular, QC annotations bring to your attention specific analytical observations and assessments made during the sample handling and data interpretation phases. Results reported relate only to the items tested.

Project Information Summary	When applicable, see QC Annotations for details
Client Project Name	Jeld_Wen Surface Sediments
AP Project #	A4369
Analytical Protocol	EPA 1668B
No. Samples Submitted	n/a
No. Samples Analyzed	5 Tissues (this project number)
No. Laboratory Method Blanks	1
No. OPRs / Batch CS3	1
No. Outstanding Samples	0
Date Received	05 11 2012, 5/18/2012
Condition Received	good
Temperature upon Receipt (C)	3.5, 6
Extraction within Holding Time	yes
Analysis within Holding Time	yes
Data meet QA/QC Requirements	yes
Exceptions	none
Analytical Difficulties	none

ANALYTICAL PERSPECTIVES IS NOW PART OF SGS, THE WORLD'S LEADING INSPECTION, VERIFICATION, TESTING AND CERTIFICATION COMPANY.

**QC Annotations:**

1. See Appendix A & B for data qualifier, data attribute, and lab identifier information.

SGS-Analytical Perspectives remains committed to serving you in the most effective manner. Should you have any questions or need additional information and technical support, please do not hesitate to contact us.

The management and staff of SGS-Analytical Perspectives welcome customer feedback, both positive and negative, as we continually improve our services. Please visit our web site at www.ultratrace.com and click on the 'Leave Your Feedback Here!' link on the Home Page. Thank you for choosing SGS-Analytical Perspectives.

Sincerely,

A handwritten signature in black ink that reads "Todd Vilen". The signature is written in a cursive style.

Todd Vilen
Project Scientist

APPENDIX A: DATA QUALIFIERS / DATA ATTRIBUTES	
*	The reported concentration exceeds the calibration range (upper point of the calibration curve). ¹
>	Indicates high recoveries. Shown with the numeric value at the top of the range. ¹
B	The analyte is found in the method blank, at a level that is $\leq 10x$ the sample concentration.
C	Two or more congeners co-elute. In EDDs C denotes the lowest IUPAC congener in a co-elution group and additional co-eluters for the group are shown with the number of the lowest IUPAC co-eluter.
E	The reported concentration exceeds the calibration range (upper point of the calibration curve).
EMPC	Represents an Estimated Maximum Possible Concentration. EMPC's arise in cases where the signal/noise ratio is not sufficient for peak identification (the determined ion-abundance ratio is outside the allowed theoretical range), where there is a co-eluting interference, or where a single ion is utilized for quantitation due to PFK interference.
ETH	Indicates the presence of a diphenyl ether that appears to interfere with the quantitation of a furan. The reported concentration is the maximum.
H/h	If the standard recovery is below the method or SOP specified value "H" is assigned. If the obtained value is less than half the specified value "h" is assigned. ¹
J	Indicates that an analyte has a concentration below the reporting limit (lowest point of the calibration curve).
ND	Indicates a non-detect.
NR	Indicates a value that is not reportable.
PR	Due to interference, the associated congener is poorly resolved.
QI	Indicates the presence of a quantitative interference.
Ra	The new ratio – [Ra] -- for 2,3,7,8-TCDD following the ³⁷ Cl ₄ -2,3,7,8-TCDD correction is shown between squared brackets in the DL column. ¹
SI	Denotes "Single Ion Mode" and is utilized for PCBs where the secondary ion trace has a significantly elevated noise level due to background PFK. Responses for such peaks are calculated using an EMPC approach based solely on the primary ion area(s) and may be considered estimates. ¹
U	The analyte was not detected. The estimated detection limit (EDL) may be reported for this analyte.
V	The labeled standard recovery was found to be outside of the method control limits.
X	Indicates results reported from reinjection, refractionation, or repeat analyses.
APPENDIX B: LAB ID IDENTIFIERS	
AR	Indicates use of the archived portion of the sample extract.
CU	Indicates a sample that required additional clean-up prior to MS injection/processing.
D	Indicates a dilution of the sample extract. The number that follows the "D" indicates the dilution factor.
DE	Indicates a dilution performed with the addition of ES (extraction standard) solution.
DUP	Designation for a duplicate sample.
MS	Designation for a matrix spike.
MSD	Designation for a matrix spike duplicate.
RJ	Indicates a reinjection of the sample extract.
S	Indicates a sample split. The number that follows the "S" indicates the split factor.

¹Denotes data qualifiers/attributes whose use will be phased out over time
