DEPTH (ft)	INTERVAL	TYPE	NAME	U.S.C.S.	GRAPHIC LOG	MATERIAL DESCRIPTION	PID (ppm)
0				AS	0.3	0 to 0.25 feet: ASPHALT.	
		GP	GP34-3 GP34 -GW*	GM		0.25 to 3 feet: GRAVEL with SILT (GM): dark brown, fine to coarse gravel, some fines, trace fine sand, moist, no odor.	0.9
					3.0 ▽		
				SP		3 to 7 feet: SAND (SP): dark brown, fine to coarse sand, few fines, trace fine gravel, trace organics (wood pieces), moist to wet, no odor.	
5		GP	GP34-8*		7.0		1.1
				SM	8.0	7 to 8 feet: SILTY SAND (SM): dark brown, fine to coarse sand, some fines, moist, no odor.	
				SP		8 to 10.5 feet: SAND with GRAVEL (SP): dark brown, fine to coarse sand, some fine gravel, trace fines, wet, slight hydrocarbon-like odor.	
10		GP	NS		10.5		0.8
				ML		10.5 to 12 feet: SILT (ML): dark brown, trace fine sand, few organics (wood pieces), moist, no odor.	
					12.0		

Boring completed at 12 feet.

Temporary well was installed with screen at depths from approximately 7 to 12 feet below ground surface.

REMARKS

* = Soil and groundwater sample was submitted for laboratory analysis.
PID = photoionization detector readings in parts per million (ppm).
GP = Soil samples were collected with Geoprobe by using a 4-foot long, 1.5-inch diameter closed-piston sampling device with new acetate liners.
NS = No sample collected.

WELL COMPLETION DETAILS:

0.0 to 1.0 feet: Concrete.
1.0 to 2.5 feet: Hydrated bentonite chips.
2.5 to 13.0 feet: 10x20 silica sand pack.

REMARKS

Boring continued to 40.0 feet bgs. (description included in boring log for MW-11B)
Monitoring well installed adjacent to Geoprobe boring with a hollow stem auger. Lithology descriptions based on Geoprobe borings.
NT = Not tested
PID = Photoionization detector readings in parts per million (ppm).
Geoprobe = Soil samples collected as a continuous core within a 5-foot acetate liner.
* = Soil sample consisted of composite sample fronm 0-12 feet bgs.

APPENDIX G

QUARTERLY GROUNDWATER MONITORING SUMMARY

Description: Provides analytical summary tables for quarterly groundwater monitoring events conducted between 2015 to 2020 including groundwater elevation measurements, example groundwater flow contours, and laboratory results.

Table AG-1: Groundwater Elevations
Quarterly Groundwater Monitoring Summary Tables

Monitoring Well (TOC Elevation)	Date	Depth to Water (Feet Below TOC)	Groundwater Elevation (Feet Above MSL)
MW-1 (12.55[A])	9/9/2015	6.11	6.33
	12/11/2015	2.14	10.30
	10/6/2016	6.38	6.06
	1/30/2017	4.35	8.09
	4/25/2017	4.07	8.37
	6/28/2017	5.11	7.33
	10/23/2017	5.72	6.72
	1/15/2018	3.15	9.29
	4/10/2018	3.21	9.34
	7/9/2018	5.61	6.94
	10/24/2018	5.84	6.71
	1/17/2019	3.73	8.82
	4/15/2019	4.30	8.25
	7/30/2019	6.03	6.52

Notes

Top of Casing (TOC) elevations surveyed by W&H Pacific in November 2006 and Signature Surveying & Mapping in October 2015 and July 2019

A - MW-1 casing re-surveyed by Signature Surveying & Mapping in April 2018 and May 2019. Revised elevation is presented in column 1 and used to calculate groundwater elevation beginning with April 2018 event.

Notes
Bold indicates detected at or above the practical quantitation limit (PQL)
<2.0 indicates not detected above the laboratory PQL of 2.0 micrograms per liter (µg/L)
A - Total Petroleum Hydrocarbons (TPH) per NWTPH-Gx and NWTPH-Dx methodologies

Laboratory Qualifiers
J - The identification of the analyte is acceptable; the reported value is an estimate.

Notes
Bold indicates detected at or above the practical quantitation limit (PQL)
<2.0 indicates not detected above the laboratory PQL of 2.0 micrograms per liter (µg/L)
A - Carcinogenic Polynuclear Aromatic Hydrocarbons (cPAHs) EPA 8270-SIM Method (8270-LL method beginning with July 2019)
B - Toxic equivalent quotient (TEQ) values using a value of 0 for non-detect results (U=0) or using a value of 1/2 detection limit for non-detect results (U=1/2)

Laboratory Qualifiers
B - The same analyte is found in the associated blank.
J - The identification of the analyte is acceptable; the reported value is an estimate.

Notes:
-- indicates Not Sampled or Not Analyzed for specific constituent
BOLD = Analytes detected at or above the practical quantitation limit (PQL)
<50 indicates not detected above the laboratory PQL of 50 µg/L (micrograms per Liter)
A - Select Volatile Organic Compounds (VOCs) per EPA Method 8260C
B - Monitoring Well MW-3 was not located during September 2015 sampling event

Laboratory Qualifiers
J - (EPA) - Estimated value below the lowest calibration point. Confidence correlates with concentration.
J0 - Calibration verification outside of acceptance limits. Result is estimated.

Notes
Bold indicates detected at or above the practical quantitation limit (PQL)
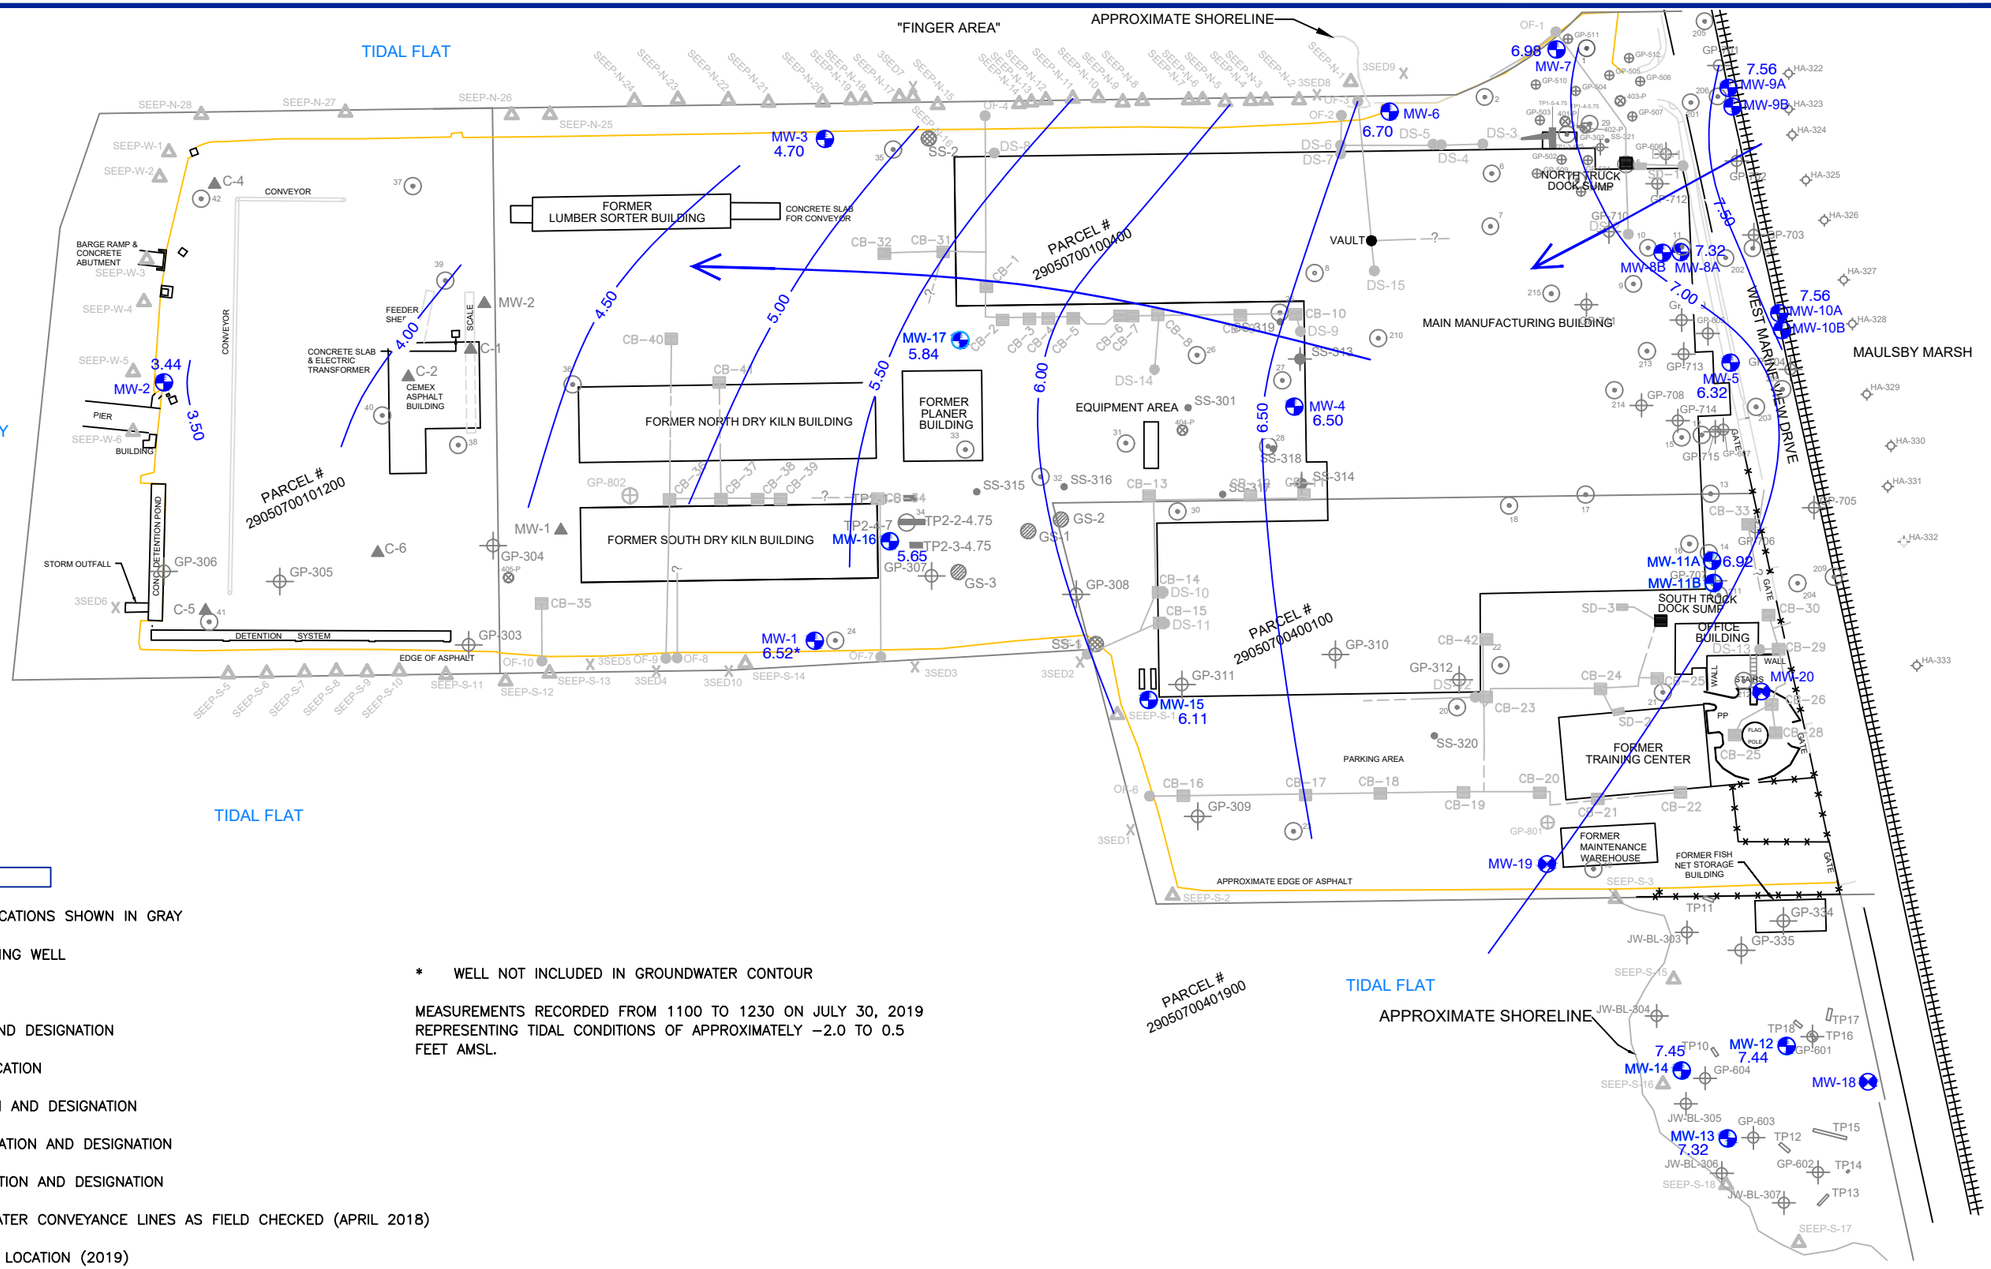
<2.0 indicates not detected above the laboratory PQL of 2.0 micrograms per liter (µg/L)
A - Metals per EPA 6020B/7470A Methods
B - Chromium results and PCL are for Total Chromium
d - Analyzed for dissolved metals



Laboratory Qualifiers
B - The same analyte is found in the associated blank.
J - The identification of the analyte is acceptable; the reported value is an estimate.
J6 - The sample matrix interfered with the ability to make any accurate determination; spike value is low.
O1 - The analyte failed the method required serial dilution test and/or subsequent post-spike criteria. These failures indicate matrix interference.

Notes
Bold indicates detected at or above the practical quantitation limit (PQL)
<2.0 indicates not detected above the laboratory PQL of 2.0 micrograms per liter (µg/L)
Values in italics indicate presented value different than lab report following Level IV Data Validations
A - Dioxins and Furans per EPA 1613 Method
B - Toxic equivalent quotient (TEQ) values using a value of 0 for non-detect results (U=0) or using a value of 1/2 detection limit for non-detect results (U=1/2)

Laboratory Qualifiers
EMPC - Represents an Estimated Maximum Possible Concentration. EMPC's arise in cases where the signal/noise ratio is not sufficient for peak identification (the determined io-abundance ratio is outside the allowed theoretical range), or where thise is a co-eluting interference
J - Indicates that the analyte has a concentration below the reporting limit (lowest point of calibration curve)
B - The analyte was found in the method blank, at a concentration that was at least 10% of the concentration of the sample.

TIDAL FLAT

LEGEND

OTHER FORMER RI SAMPLING LOCATIONS SHOWN IN GRAY

MW-1 — EXISTING MONITORING WELL

SCE INVESTIGATION AREAS:

SEEP-N-3 — SEEP LOCATION AND DESIGNATION

SEEP-N-2 — SEEP SAMPLE LOCATION

OF-1 — OUTFALL LOCATION AND DESIGNATION

CB—1 — CATCH BASIN LOCATION AND DESIGNATION

DS-1 — DOWNSPOUT LOCATION AND DESIGNATION

EXISTING STORMWATER CONVEYANCE LINES AS FIELD CHECKED (APRIL 2018)

MW-11 — MONITORING WELL LOCATION (2019)

#.# — GROUNDWATER ELEVATION (FEET ABOVE MEAN SEA LEVEL)

ESTIMATED GROUNDWATER CONTOUR

ESTIMATED GROUNDWATER FLOW DIRECTION

* WELL NOT INCLUDED IN GROUNDWATER CONTOUR

MEASUREMENTS RECORDED FROM 1100 TO 1230 ON JULY 30, 2019 REPRESENTING TIDAL CONDITIONS OF APPROXIMATELY −2.0 TO 0.5 FEET AMSL.

NOTES

THE BUILDINGS, SURFACE UTILITIES, EDGE OF PAVEMENT, AND APPROXIMATE SHORELINE SHOWN ON THIS MAP ARE BASED ON A 2006 SURVEY PERFORMED BY WH PACIFIC.

Table H-1
Surface Sediment Results

Notes:
Total LPAH represents the sum of naphthalene, acenaphthylene, acenaphthene, fluorene, phenanthrene, and anthracene.
Total HPAH represents the sum of fluoranthene, pyrene, benz(a)anthracene, chrysene, benzo(b,j,k)fluoranthenes, benzo(a)pyrene, indeno(1,2,3,-c,d)pyrene, dibenzo(a,h)anthracene, and benzo(g,h,i)perylene.
TOC in range (0.5% - 3.5%)
Detected concentration is greater than SMS_Marine_SCO_SCUMII screening level
Detected concentration is greater than SMS_Marine_CSL_SCUMII screening level
TOC out of range
Detected concentration is greater than AET_Marine_SCO_SCUMII screening level
Detected concentration is greater than AET_Marine_CSL_SCUMII screening level
Bold = detected result
µg/kg = micrograms per kilogram dry weight
CAEPA = California Environmental Protection Agency
cm = centimeter
cPAH = carcinogenic polycyclic aromatic hydrocarbon
CSL = cleanup screening level
FD = field duplicate sample
HPAH = high-molecular-weight polycyclic aromatic hydrocarbon
J = estimated value
LPAH = low-molecular-weight polycyclic aromatic hydrocarbon
mg/kg = milligrams per kilogram dry weight
N = normal environmental sample
ng/kg = nanograms per kilogram dry weight
OC = organic carbon
PCB = polychlorinated biphenyl
pct = percent
SCO = sediment cleanup objective
SE = sediment
SMS = Sediment Management Standards
TEQ = toxicity equivalency factor
TOC = total organic carbon
U = compound analyzed but not detected above detection limit
UJ = compound analyzed but not detected above estimated detection limit

Subsurface Sediment Results

Notes:
Total LPAH represents the sum of naphthalene, acenaphthylene, acenaphthene, fluorene, phenanthrene, and anthracene.
Total HPAH represents the sum of fluoranthene, pyrene, benz(a)anthracene, chrysene, benzo(b,j,k)fluoranthenes, benzo(a)pyrene, indeno(1,2,3,-c,d)pyrene, dibenzo(a,h)anthracene, and benzo(g,h,i)perylene.
Total LPAH represents the sum of naphthalene, acenaphthylene, acenaphthene, fluorene, phenanthrene, and anthracene.
Total HPAH represents the sum of fluoranthene, pyrene, benz(a)anthracene, chrysene, benzo(b,j,k)fluoranthenes, benzo(a)pyrene, indeno(1,2,3,-c,d)pyrene, dibenzo(a,h)anthracene, and benzo(g,h,i)perylene.
TOC in range (0.5% - 3.5%)
Detected concentration is greater than SMS_Marine_SCO_SCUMII screening level
Detected concentration is greater than SMS_Marine_CSL_SCUMII screening level
TOC out of range
Detected concentration is greater than AET_Marine_SCO_SCUMII screening level
Detected concentration is greater than AET_Marine_CSL_SCUMII screening level
Bold = detected result
µg/kg = micrograms per kilogram dry weight
-- = not applicable
cPAH = carcinogenic polycyclic aromatic hydrocarbon
CAEPA = California Environmental Protection Agency
FD = field duplicate sample
ft = foot
HPAH = high-molecular-weight polycyclic aromatic hydrocarbon
J = estimated value
LPAH = low-molecular-weight polycyclic aromatic hydrocarbon
mg/kg = milligram per kilogram dry weight
N = normal environmental sample
ng/kg = nanogram per kilogram dry weight
OC = organic carbon
PCB = polychlorinated biphenyl
pct = percent
SE = sediment
TEQ = toxicity equivalency factor
TOC = total organic carbon
U = compound analyzed but not detected above detection limit
UJ = compound analyzed but not detected above estimated detection limit

Table H-3
Summary of Core Sieving Wood Fragment Results

H-3a - Geochronology Subsurface Core GC-1

Matrix	Interval (cm)	% Wood	% Shell	Description of Material Retained on 200-Sieve
Sandy Silt*	0 to 2	2		Trace small bark fragments up to 0.125 inch x 0.25 inch, trace short orange wood fibers
	2 to 4	2	<5	Contains small clam, small bark fragments up to 0.125 inch x 0.25 inch, substantial fine sand retained
	4 to 6	5		3 small bark fragments up to 0.5 inch x 0.125 inch, trace red wood splinters
	6 to 8	5		2 large bark fragments up to 1 inch x 0.5 inch, contains small reddish wood splinters
	8 to 10	10		4 bark fragments up to 0.5 inch x 0.25 inch, contains trace reddish wood splinters
	10 to 12	10		5 bark fragments up to 1 inch x 0.25 inch, contains trace reddish wood splinters, wood, and bark fragments
	12 to 14	10		1 bark fragment 1.5 inches x 1 inch, 1 wood splinter 1 inch x 0.33 inch, contains small wood and bark fragments and fibers
	14 to 16	15		1 bark fragment 1 inch x 0.5 inch, contains small bark fragments up to 0.5 inch x 0.125 inch
	16 to 18	20		1 to 2-inch yellow wood splinter, contains small bark fragments up to 0.5 inch x 0.125 inch
	18 to 20	5		Contains small bark fragments up to 0.125 inch x 0.25 inch, trace yellow wood splinters
	20 to 22	5		Contains small bark fragments up to 0.125 inch x 0.25 inch, trace yellow wood splinters
	22 to 24	2		Contains trace bark fragments and fibers
Sand with Silt	24 to 26	5		3 bark fragments up to 0.5 inch x 0.25 inch, contains small bark fragments and fibers
	26 to 28	2		Contains trace bark fibers
	28 to end of core	0		No wood or bark

H-3b - Geochronology Subsurface Core GC-2

Matrix	Interval (cm)	% Wood	% Shell	Description of Material Retained on 200-Sieve
Sandy Silt*	0 to 2	10		Contains small bark slivers up to 2.5 inches x 0.125 inch, 4 small wood and bark fragments, trace brownish orange wood fibers
	2 to 4	5	<5	2 small wood fragments up to 0.125 inch x 0.25 inch
	4 to 6	2	<5	1 large bark fragment 1.5 inches x 0.5 inch, contains orange wood fibers
	6 to 8	5		3 small bark fragments up to 0.125 inch x 0.25 inch, 5 splintered wood fragments up to 1.5 inches x 0.25 inch
	8 to 10	10		8 large bark fragments up to 1.5 inch x 0.5 inch, 1 splintered wood fragment 1.5 inches x 0.25 inch, trace organic fibers
	10 to 12	15		6 large bark fragments up to 1.5 inches x 0.5 inch
	12 to 14	10		Contains large and small bark fragments up to 1.5 inch x 0.5 inch
	14 to 16	5		1 large bark fragment 1 inch x 1 inch, contains wood splinters up to 0.5 inch and small bark fragments
	16 to 18	10		Contains large and small bark fragments up to 1 inch x 0.25 inch, small wood fragments and fibers
	18 to 20	5		Contains small bark fragments up to 0.125 inch x 0.25 inch, trace bark fibers and brownish orange fibers
	20 to 22	5		Contains shredded reddish bark fragments
	22 to 30	5		Contains small bark and shredded reddish bark fragments up to 0.125 inch x 0.25 inch; trace bark fibers and brownish orange fibers
	30 to 32	15		Contains large and small bark fragments up to 1.5 inches x 1 inch
Sand with Silt	32 to 34	10		Contains small bark fragments up to 0.125 inch x 0.25 inch, substantial fine sand retained
	34 to 36	2		Contains bark and woody fibers, substantial fine sand retained
	36 to 38	10		Contains large and small bark fragments up to 1.5 inches x 0.5 inch
	38 to 40	2		Contains trace bark fragments
	40 to 42	0		No bark or wood fragments
	42 to end of core	0		No wood or bark

Notes:

cm = centimeter

*The nearshore tidal lands adjacent to the southern extent of the Former Nord Door Facility are a homogenous sandy SILT sediment matrix. The mean surficial sediment grain size results (gravel 3%, sand 35%, and silt and clay 63%) collected from the southern extent of the site (EA-06, EA-07, EA-08, EA-09, and EA-10) were considered when determining the total percentage of wood observed.

Re: In Situ Measurement of Freely Dissolved Polychlorinated Biphenyls in Seep Porewater and Groundwater by Solid-Phase Microextraction, Former E.A. Nord Door, Inc. Facility

Introduction

This document presents the results of in situ solid-phase microextraction (SPME) sampling to determine the freely dissolved concentrations of polychlorinated biphenyls (PCBs) in seep porewater and groundwater at the former E.A. Nord, Inc., door facility (through its successor, JELD-WEN, Inc.). The site is located at 300 West Marine View Drive, Everett, Washington, 98201.

The SPME method is a continuous sampling process, providing time-averaged concentrations of PCBs at sampling locations during the deployment period. In this study, stainless-steel sampling devices loading SPME fibers are deployed at the seep locations and monitoring wells for approximately 28 days.

Methods

Selection of Performance Reference Compounds

In circumstances where the deployment conditions vary between sampling locations and events, differences in the PCB uptake rates to SPME fiber are estimated using the performance reference compound (PRC) approach. PRCs are isotope-labeled versions of target analytes that do not occur naturally. PRCs were added to quality assurance/quality control (QA/QC) and field-deployed SPME fibers during fabrication. During deployment, PRCs diffuse out of the SPME fibers as target PCBs diffuse into the SPME fibers. The isotropic exchange kinetics is generally assumed for the PRC method. Based on the assumption, the depletion rates of PRCs during deployment reflect the uptake rates of target analytes. By measuring the amounts of PRC losses during field deployment, the PCB uptake rates can be estimated. In this study, six different ^{13}C-labeled PCBs (i.e., ^{13}C-PCB-008, ^{13}C-PCB-031, ^{13}C-PCB-060, ^{13}C-PCB-85, ^{13}C-PCB-128, and ^{13}C-PCB-182) were obtained from Cambridge Isotope Inc. (Tewksbury, Massachusetts).

SPME Sampler Preparation

The SPME fiber was obtained from Polymicro Technologies Inc. (Phoenix, Arizona; Part No. 1068020213). This SPME fiber consists of an inert glass core (1,000-micron [µm] diameter) coated with 35 µm of polydimethylsiloxane (PDMS). Figure 1a shows a photograph of the SPME fiber. Prior to use, SPME fibers were sequentially soaked in high-performance liquid chromatography (HPLC)-grade n-hexane, methanol, and water in a glass tube on a shaker table to remove any potential contaminants that may interfere with subsequent analysis. Clean SPME fibers were then soaked in a methanol and water (70:30) mixture spiked with the six different ^{13}C-labeled PRCs and allowed to equilibrate for 14 days on a shaker table. Subsequently, all SPME fibers were removed from the PRC spiking solution and rinsed with HPLC-grade water to remove residual methanol.

Five of the PRC-spiked SPME samples (approximately 70 centimeters [cm] each) were immediately sent to the analytical laboratory to measure the initial PRC concentrations for QA/QC (i.e., the PRC-loaded SPME reproducibility standards). Due to the delay of the groundwater sampling in monitoring wells MW-13 and MW-14, one additional PRC-spiked SPME sample was sent later to assess the loss of the PRCs during storage in a refrigerator at 4°C.

In Situ SPME Sampling

For seep porewater sampling, custom-designed push-point samplers that can hold two 12-inch-long SPME fibers were purchased from MHE Products (East Tawas, Michigan). The push-point sampler consists of two parts: 1) a 15-inch-long stainless-steel guard-rod with a 12-inch SPME fiber holding section; and 2) a protective outer sleeve with 0.025-inch slits at a 1-cm spacing to allow equilibration of the SPME fiber with seep porewater (Figure 1b).

For groundwater sampling, the SPME sampler assemblies were prepared by assembling a stainless metal plate, perforated stainless-steel tube, and Teflon plug (Figure 1c). The groundwater SPME sampler assemblies consisted of two approximately 15-inch SPME fibers.

The SPME sampler assemblies were deployed in the field for 28 days from September 27 to October 25, 2019, and for 28 days from October 30 to November 25, 2019, for seep porewater and groundwater, respectively. After retrieval, PRCs and target PCBs were extracted and quantified in the laboratory. By combining the measured loss of PRCs with equations describing diffusive transport, the uptake of target PCBs can be estimated (called “the fraction of equilibrium”), allowing a calculation of the freely dissolved concentration of the target PCBs as described below.

Analytical Program

The SPMEs were analyzed for PCBs using high-resolution gas chromatography/mass spectrometry (HR-GCMS) by SGS, Inc., in Wilmington, North Carolina (U.S. Environmental Protection Agency Method 1668C).

SPME Data Assessment

The following QA/QC samples were prepared to ensure SPME data quality: 1) a method blank; 2) an n-hexane rinsate of the SPME sampler assembly; 3) SPME fibers to determine initial PRC concentrations (i.e., PRC-loaded SPME reproducibility standards); and 4) a field blank.

The method blank was a 12-inch-long SPME fiber stored under an inert atmosphere at 4°C after cleaning by the solvents. The method blank accounts for contamination during the cleaning process. The n-hexane rinsate of the SPME sampler assembly was 60 milliliters of n-hexane rinsate prepared by thoroughly washing one complete SPME sampler assembly (the push-point sampler loaded with clean SPME fibers) with HPLC-grade n-hexane. This rinsate sample was used to evaluate interference and contamination incurred from the preparation of the SPME sampler assemblies. No notable PCB contamination was found in these QA/QC samples; the total PCB (TPCB) mass in the method blank and the hexane rinsate samples were 0.11 nanograms (ng) and 0.04 ng, respectively.

The PRC-loaded SPME reproducibility standards were also analyzed for target PCB congeners to assess contamination during the PRC spiking process. No notable PCB contamination was found in these QA/QC samples (0.03 to 0.05 ng). The field blank was concurrently prepared with field-deployed SPME fibers, transported to the field site, and set out on the work area of the sampling vessel to expose it to the atmosphere during retrieval. The field blank accounts for contamination incurred during exposure to air at the field site. The field blank was accidentally contacted with field soil and water; the TPCB mass in the field blank was slightly higher than the other QA/QC samples (0.51 ng).

Calculation of Freely Dissolved PCB Concentrations

Freely dissolved PCB concentration in seep porewater and groundwater (C_W) can be estimated using the PCB concentration measured on the SPME fiber after deployment (C_{PDMS}) divided by PDMS-water partition coefficients (K_{PDMS-w}) and the fraction of equilibrium achieved within the SPME fiber (f_e), as shown in Equation 1.

Equation 1

$$C_W = \frac{C_{PDMS}}{K_{PDMS-W} \times f_e}$$

where:

C_W	=	Concentration in porewater
C_{PDMS}	=	Concentration in PDMS polymer
K_{PDMS-W}	=	PDMS-water partitioning coefficient
f_e	=	Fraction of equilibrium

A regression of measured $K_{PDMS-water}$ values against published octanol-water partitioning coefficient (K_{ow}) values for many PCB congeners, as well as different but related (i.e., hydrophobic organics) chemicals, including polycyclic aromatic hydrocarbons (PAHs) and pesticides, was developed (Equation 2).[1] By incorporating these related hydrophobic organic chemicals, the final regression is more robust. Using this regression equation, the $K_{PDMS-water}$ value for each PCB congener was calculated based on the K_{ow} value of the congener used in this analysis.

Equation 2

$$\log K_{PDMS-water} = 0.903 \times \log K_{ow} - 0.159 \qquad (r^2 = 0.937)$$

where:

$K_{PDMS-water}$	=	PDMS-water partitioning coefficient of a compound
K_{ow}	=	Octanol-water partitioning coefficient of a compound

The fraction of equilibrium for each of the six PRCs was calculated for each SPME sample using the ratio of the final concentration of PRC (i.e., following deployment) to the initial concentration, as shown in Equation 3.

[1] Log K_{ow} values of PAHs were obtained from the U.S. Environmental Protection (EPA 2003). Log K_{ow} values of PCBs were taken from Hawker and Connell (1988) and were adjusted based on the K_{ow} values measured by De Bruijn et al. (1989) with a slow stirring method, which is generally considered a more reliable method for K_{ow} values (OECD 2006). Log $K_{PDMS-water}$ values for PCBs measured by Smedes et al. (2009) were used in this study because they were recommended by the passive sampling workshop sponsored by the Society of Environmental Toxicology and Chemistry (Ghosh et al. 2014). Log K_{ow} values of pesticides were obtained from De Bruijn et al. (1989), EPA (2012), and Simpson et al. (1995). Log $K_{PDMS-water}$ values for PAHs were obtained from Smedes et al. (2009). Log $K_{PDMS-water}$ values of pesticides were obtained from Zeng et al. (2005) and Xing et al. (2009).

Equation 3

$$f_{e,PRC} = 1 - \frac{C_{PRC,final}}{C_{PRC,init}}$$

where:

$f_{e,PRC}$	=	Fraction of equilibrium of a PRC
$C_{PRC,final}$	=	Final PRC concentration in SPME fiber of a PRC
$C_{PRC,init}$	=	Initial PRC concentration in SPME fiber of a PRC

Subsequently, the calculated fraction of equilibrium (f_e) values are incorporated into the external resistance diffusion model of Lampert et al. (2015), along with the $K_{PDMS\text{-}water}$ value for each PCB congener to estimate the f_e value for each target PCB congener.

Results

Uptake Kinetics of PCBs

As stated earlier, all field-deployed SPME fibers were spiked with six different ^{13}C-labeled PCB congeners. Low variability in initial PRC concentrations is a key step in accurately determining the fraction of equilibrium of target PCB congeners. Initial concentrations of the PRCs in the QC samples are shown in Figure 2. Overall, the initial PRC concentrations in the QC samples (n = 6) had low variability (the coefficient of variation ranged from 2.3% to 6.9%). The additional QC sample had a slightly higher concentration of ^{13}C-PCB-031 than the other QC samples, which resulted in higher variability of ^{13}C-PCB-031 (15.2%).

The values of f_e of the PRCs are shown as a function of their $K_{PDMS\text{-}W}$ values for all SPME samples in Figure 3. The f_e values of target PCBs present in the SPME fiber samples can be estimated using the f_e of the PRCs and the uptake kinetics model as described in Lampert et al. (2015). The predicted values of f_e of target PCBs in the SPME samples deployed at Seep-S-18 and MW-13 are shown in Figures 4a and 4b, respectively.

Freely Dissolved PCB Concentrations

The estimated freely dissolved TPCB concentrations in groundwater and seep porewater are shown in Figure 5 and included in Table 1. The highest TPCB concentration was observed at Seep-S-18 (59 ng/L). The second highest TPCB concentration was detected at Seep-S-16 (45 ng/L). The estimated TPCB porewater concentrations in groundwater were 4.7 and 1.8 ng/L at MW-13 and MW-14, respectively. The PCB concentrations at Seep-S-3A, Seep-S-3B, and Seep-S-17 were estimated to be very low (0.2 to 0.3 ng/L) compared to other sampling locations.

The compositional homolog profiles of freely dissolved PCBs in seep porewater and groundwater are presented in Figure 6. The 2-CBs, 3-CBs, 4-CBs, and 5-CBs were the dominant homolog groups, accounting for 3.9% to 27.2% (mean: 17.0%), 13.2% to 51.9% (mean: 31.4%), 19.3% to 41.2% (mean: 30.9%), and 3.5% to 30.2% (mean: 16.9%) of TPCBs, respectively. The homolog profiles are slightly different in each sample. It is noted that the ratio of the 3-CBs was higher at the two seep locations where elevated TPCB concentrations (Seep-S-16 and Seep-S-18) were observed.

Notes:

Bold: Detected result

J: estimated value

ng/L: nanogram per liter

PCB: polychlorinated biphenyl

SPME: solid-phase microextraction

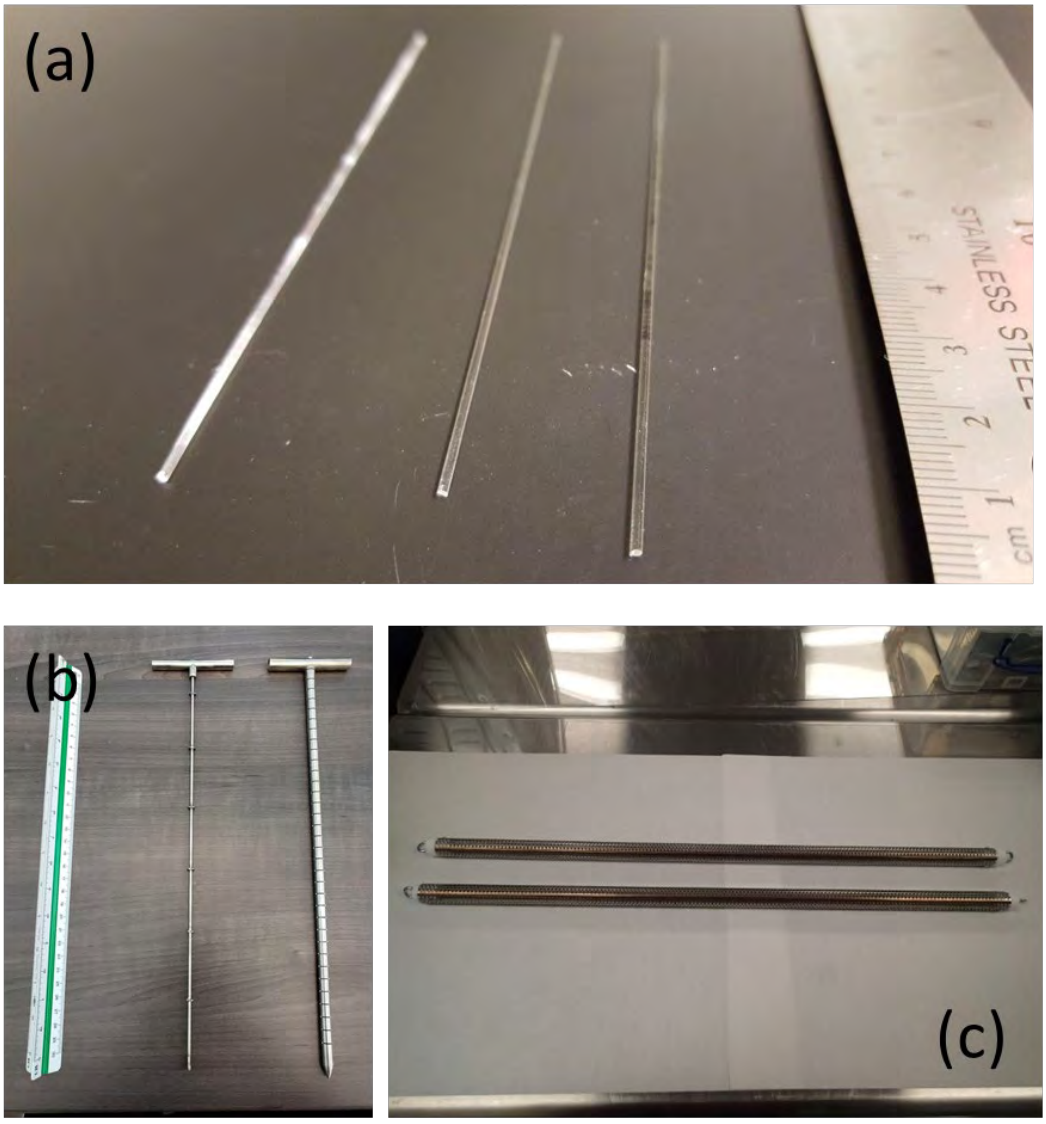
TEQ: toxic equivalents quotient

U: compound analyzed, but not detected above detection limit

UJ: compound analyzed, but not detected above estimated detection limit

Figures

Figure 1
Images of the SPME fiber (a), Stainless-Steel Push-Point Sampler for Seep Porewater Sampling (b), and Groundwater Sampler Assembly (c)



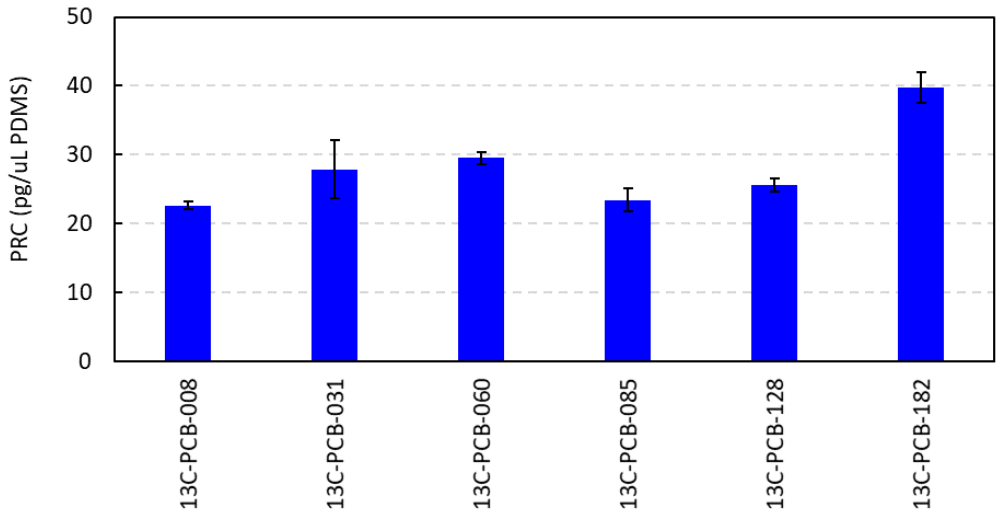


Figure 2
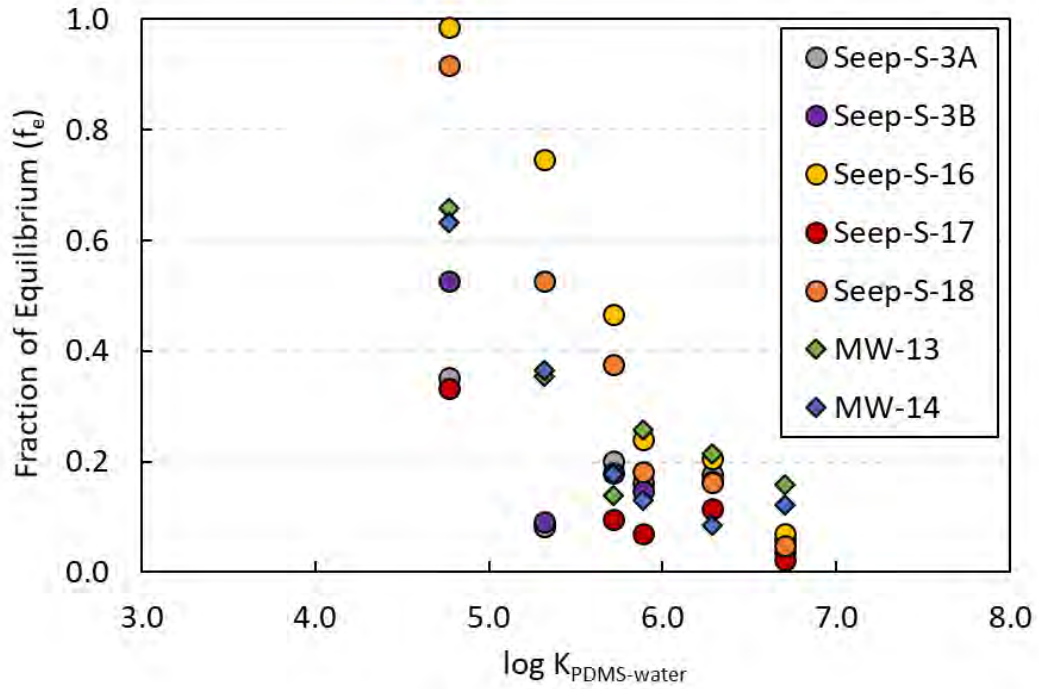
Initial Concentrations of PRCs in SPME QA/QC Samples

Note: Error bars denote +/- 1 standard deviation (n = 6)

Figure 3
Fraction of Equilibrium (f_e) of PRCs in All Deployed SPME Samplers



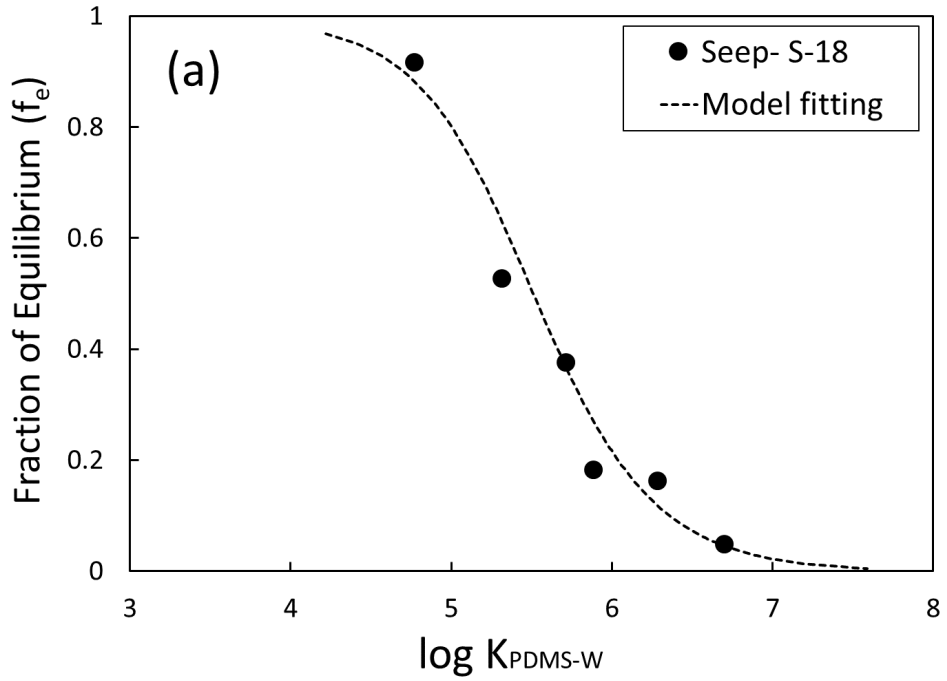


Figure 4
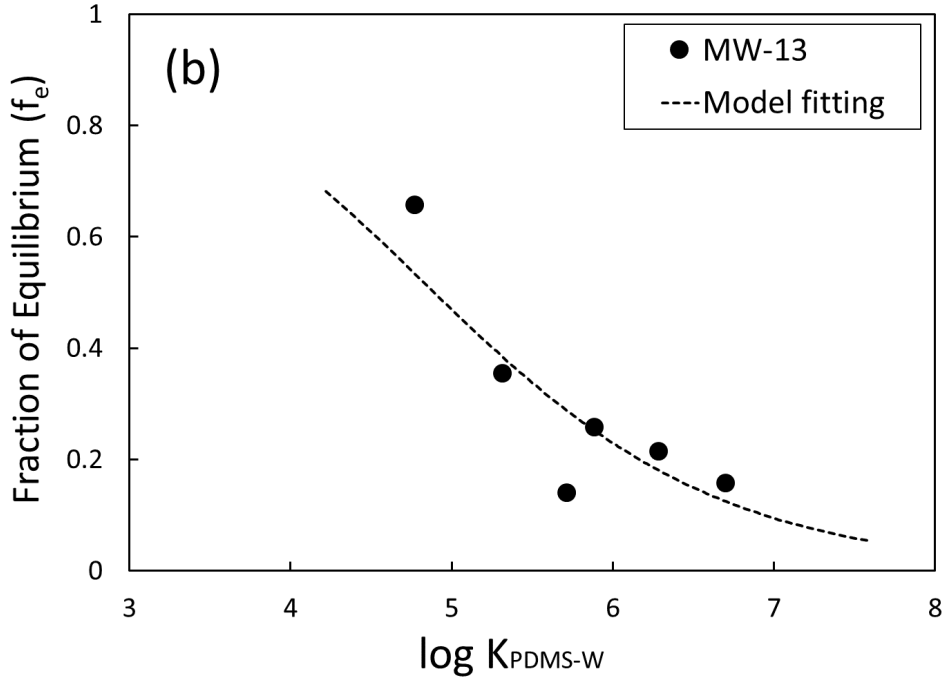
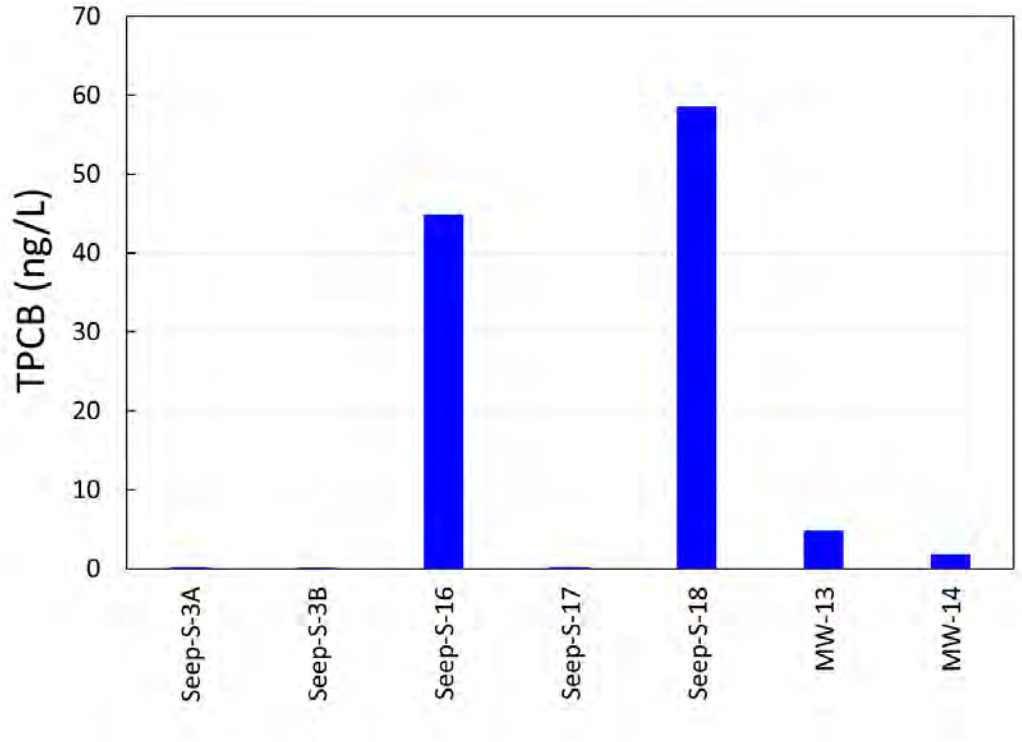
Predicted Fraction of Equilibrium Achieved for PCBs by the External Diffusion Model at Seep-S-18 (a) and MW-13 (b)





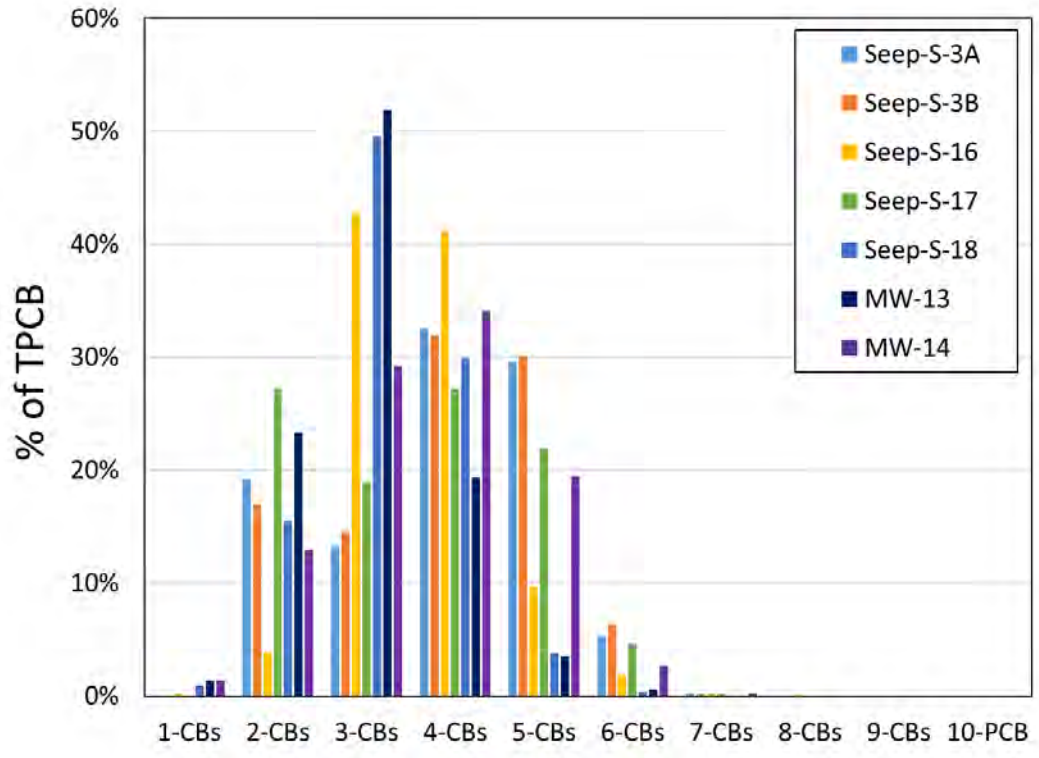


Figure 5
Estimated Freely Dissolved TPCB Concentrations in Seep Porewater and Groundwater

Note: Non-detects were handled as zero.

Figure 6
Homolog Profiles of Freely Dissolved PCBs in Seep Porewater and Groundwater

APPENDIX I

FIELD COLLECTION FORMS

Description: Provides the backup field documentation for the porewater, surface sediment, and subsurface sampling events.

9/27 Jeld Wen Site

0800 - AQ staff on site, coordinating with SLR Geo (Steven)

0900 *GPS not connecting to satellites, attempting to visually identify seeps
- given coordinates of seep S-16, awaiting others
S-16: 48.012341106l
-122.212377041

1030 - GPS began functioning properly, awaiting lat/long coordinates from GIS.

1115 - Recieved GPS coordinates for remaining seeps, begin placement of SPME samplers

1230 SPME Samples deployed, packing materials, AQ off site.

NOTE: Additional SPME sampler placed at location S-38 due to visual identification of nearby seep

Rite in the Rain.

10/25/2019

10/25 Site visit
SPME retrieval

0815 AQ (Sam, Nathan) onsite, greeted Ecology personnel

0845 Begin removal of SPME samplers under Ecology supervision:

Time	Sample (removed)
0845	S-3B, ~~S-3A~~ SG
0850	~~S-3B~~ S-3A
0855	S-16
0900	S-18
0930	S-17

1000 Sam offsite - return to AQ office to process samples

NOTE - it was determined that SPME samples placed in MW-13 and MW-14 were deployed in incorrect locations and will be redeployed at later date.

Rite in the Rain.

10/30 Jeld Wen SPME deploy

0840 - AQ on site (Sam, Lucas)
mob. equipment to MW-14

0850 Measure water depth in well
-18.5ft below Top of casing (TOC)

0920 Measure depth of well MW-14
- 25.4 feet below TOC

0925 SPME sampler placed at -24.3 feet
below top of casing (~1 ft above bottom)

0930 Move to MW-13

0935 water level measured at -20.5 feet
below TOC MW-13

1004 measure bottom of well
~ 26.8 feet bellow TOC

1005 Place SPME at -25.8 ft
below TOC.

1015 AQ off site

NOTE - TOC measured at +2 feet above
ground surface.

Note that the depths of deployment are recorded as the depth of the bottom of the SPME sample device.

Rite in the Rain

Surface Sediment Field Sample Record

Project Name: Jeld Wen **Project No:** 120909-01.01 **Station ID:** EA05-SS17

Sampling Crew: Kelee, Kara, JRP, Eric P., Andrew
Sample Date: 5-09-12 Sampling Method: Power Grab
Sampling Vessel:
Subcontractor(s): RSS Weather: Partially Cloudy
Station Coordinates: N / Lat.
E / Long.
Datum: NAD 83 / WGS 84 zone:

Sample ID:
Analysis: Metals / TBT / SVOCs / VOCs / PCBs / Pest Other:
TS / TVS / Grain Size / TOC / Ammonia / Sulfides Other:
(Circle Appropriate Analyses)

Grab Number: 1 Water Depth: ft. Grab Recovery: 10" cm Time: 10:00
Tide Level: ft. Sample Interval: 10 cm
Bioassay / Chemistry Depth MLLW: ft.

Sediment Type:	Sediment Color:	Density:	Sediment Odor:		Sheen:	Moisture:
cobble	D.O.	Very soft/Loose	none	H2S	none	Dry
gravel	gray	soft/loose	slight	Petroleum	trace	Damp
sand C M F	black	mod dense/stiff	moderate	other:	slight	Moist
silt clay	brown	dense/stiff	strong		moderate	Wet
organic matter	brown surface	very dense/stiff	overwhelming		heavy	

Comments: First grab was filled with wood. No sample material was extracted from this grab

Grab Number: 2 Water Depth: 12 ft. Grab Recovery: 10" cm Time: 10:10
Tide Level: ft. Sample Interval: 10 cm
Bioassay / Chemistry Depth MLLW: ft.

Sediment Type:	Sediment Color:	Density:	Sediment Odor:		Sheen:	Moisture:
cobble	D.O.	Very soft/Loose	(none)	H2S	(none)	Dry
gravel	(gray)	soft/loose	slight	Petroleum	trace	Damp
(sand) (C M F)	black	mod dense/stiff	moderate	other:	slight	Moist
silt clay	brown	(dense/stiff)	strong		moderate	(Wet)
(organic matter)	brown surface	very dense/stiff	overwhelming		heavy	

Comments: Sand with fine to coarse gravel, medium organic matter stuck within jaws of grab, shell pieces throughout, & some wood debri

Grab Number: Water Depth: ft. Grab Recovery: cm Time:
Tide Level: ft. Sample Interval: cm
Bioassay / Chemistry Depth MLLW: ft.

Sediment Type:	Sediment Color:	Density:	Sediment Odor:		Sheen:	Moisture:

Project: JELD WEN
Project No: 120909-01.01
Field Staff (in): CD / JP
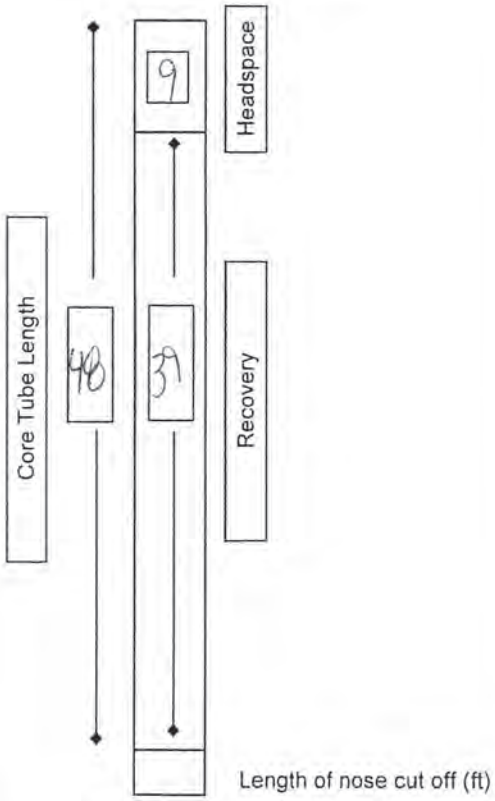
Contractor: /
Vertical Datum: /

Station ID: GC-7
Attempt No: 1 of 1
Date (mm/dd/yy): 09/19/13
Logged By:
Horizontal Datum:
Time (hhmm): 1030
Type of Core: (Piston) Shelby Vibro Other
Diameter of Core (inches): 3
Core Quality: (Good) Fair Poor Disturbed



Field Collection Coordinates:
Lat/Northing: 48.01184
Long/Easting: -122.21355

A. Water Depth (ft)
DTM Depth Sounder: / cm
DTM Lead Line:

B. Tide Measurements
Time (hhmm): / cm
Height (ft):

C. Mudline Elevation
(-A+B=C) / cm

Core Collection Recovery Details:
Core Accepted: (Yes) / No
Core Tube Length: 48 Units: (in) ft m cm)
Drive Penetration (A): ~~39~~ 39"
Headspace Measurement: 9"
Recovery Measurement (B): 33"
Recovery Percentage (B/A): 84.6 %
Total Length of Core To Process: 84 cm
Refusal Encountered? Yes (No)

Drive Notes: freefall, easy penetration, moderate penetration, hard penetration, refusal

Core Field Observations and Description: Sediment type, moisture, color, minor modifier, MAJOR modifier, other constituents, odor, sheen, layering, anoxic layer, debris, plant matter, shells, biota

Rinsate Blank Samples Collected Yes No

Sediment Description

Samples and Descriptions are in In-Situ Depths. Classification Scheme: USCS

SILTY SAND (SM). Wet, soft, olive gray with reddish brown mottling, 75% fine sand, 20% non-plastic fines, 5% shell and wood fragments.

Grades to moist, firm, olive gray with black mottling.

0.3ft bed of 75% wood fragments, 10% fine sand, 15% fines.

POORLY GRADED SAND (SP). Moist, olive gray, 95% fine sand, 5% fines, contains wood fragments.

Grades to 85% fine sand, 5% fines, 10% fine gravel.

POORLY GRADED GRAVEL WITH SAND (GP). Moist, olive gray, 75% fine to coarse gravel, 15% fine sand, 5% cobble, 5% fines.

POORLY GRADED SAND (SP). Moist, olive gray, 90% fine to medium sand, 5% fines, 5% fine to coarse gravel.

End of Core @13.5ft.
