DESCRIPTION OF APPENDIX CONTENTS

Appendix A: Historical Sanborn Maps and Aerial Photos – provides documentation of historical site features including buildings, industrial operations, chronology of fill material placement to expand upland areas, and other information to inform potential sources of contamination.

Appendix B: Regulatory History and Prior Investigations – provides additional details on the regulatory history and previously completed site investigations.

Appendix C: Sea Level Rise / Climate Change Assessment – provides a site-specific evaluation of the effects of climate change and projected sea level rise that is used to inform the future environmental setting and potential climate change impacts on the evaluated remedial alternatives.

Appendix D: WDFW Figures – provides habitats and species maps used to inform the upland ecological understanding of the site, information regarding listed and candidate Endangered Species Act fish species in the project area, and a 2019 Critical Areas Report used to inform the marine ecological understanding of the site and allow for the avoidance, minimization, and mitigation of impacts related to future cleanup activities.

Appendix E: Maulsby March Sediment Results – provides a data report summarizing the results of the sediment sampling and characterization for Maulsby Marsh. It includes a summary of the field sampling collection performed, validated chemical analyses, and the salinity testing. This data is used to confirm that contaminants detected in the marsh sediments are not attributable to Site releases.

Appendix F: Upland Soil Borings and Test Pit Logs – provides field observations, soil lithology, and sample locations for upland test pit and drilling activities. Some of these boring logs were used to develop site cross sections and determine extents of remedial action areas.

Appendix G: Quarterly Groundwater Monitoring Summary – provides analytical summary tables for quarterly groundwater monitoring events conducted between 2015 to 2020 including groundwater elevation measurements, example groundwater flow contours, and laboratory results.

Appendix H: Data Tables and SPME Results (Tables 1 through 4; 1. surface, 2. sieving, 3. subsurface chem, 4. Tissue) – provides tabulated summaries of all marine data collected as part of the RI, and the SPME Results Memorandum.

Appendix I: Field Collection Forms – provides the backup field documentation for the porewater, surface sediment, and subsurface sampling events.

Appendix J: Data Quality Summary – provides a summary of the data quality objectives for samples collected under the Quality Assurance Project Plan (QAPP) Marine and Maulsby Marsh Sediment Characterization (Anchor QEA 2012) and Jeld-Wen Former Nord Door Site Sediment Second Quality Assurance Project Plan Addendum (QAPP Addendum; Anchor QEA 2013).

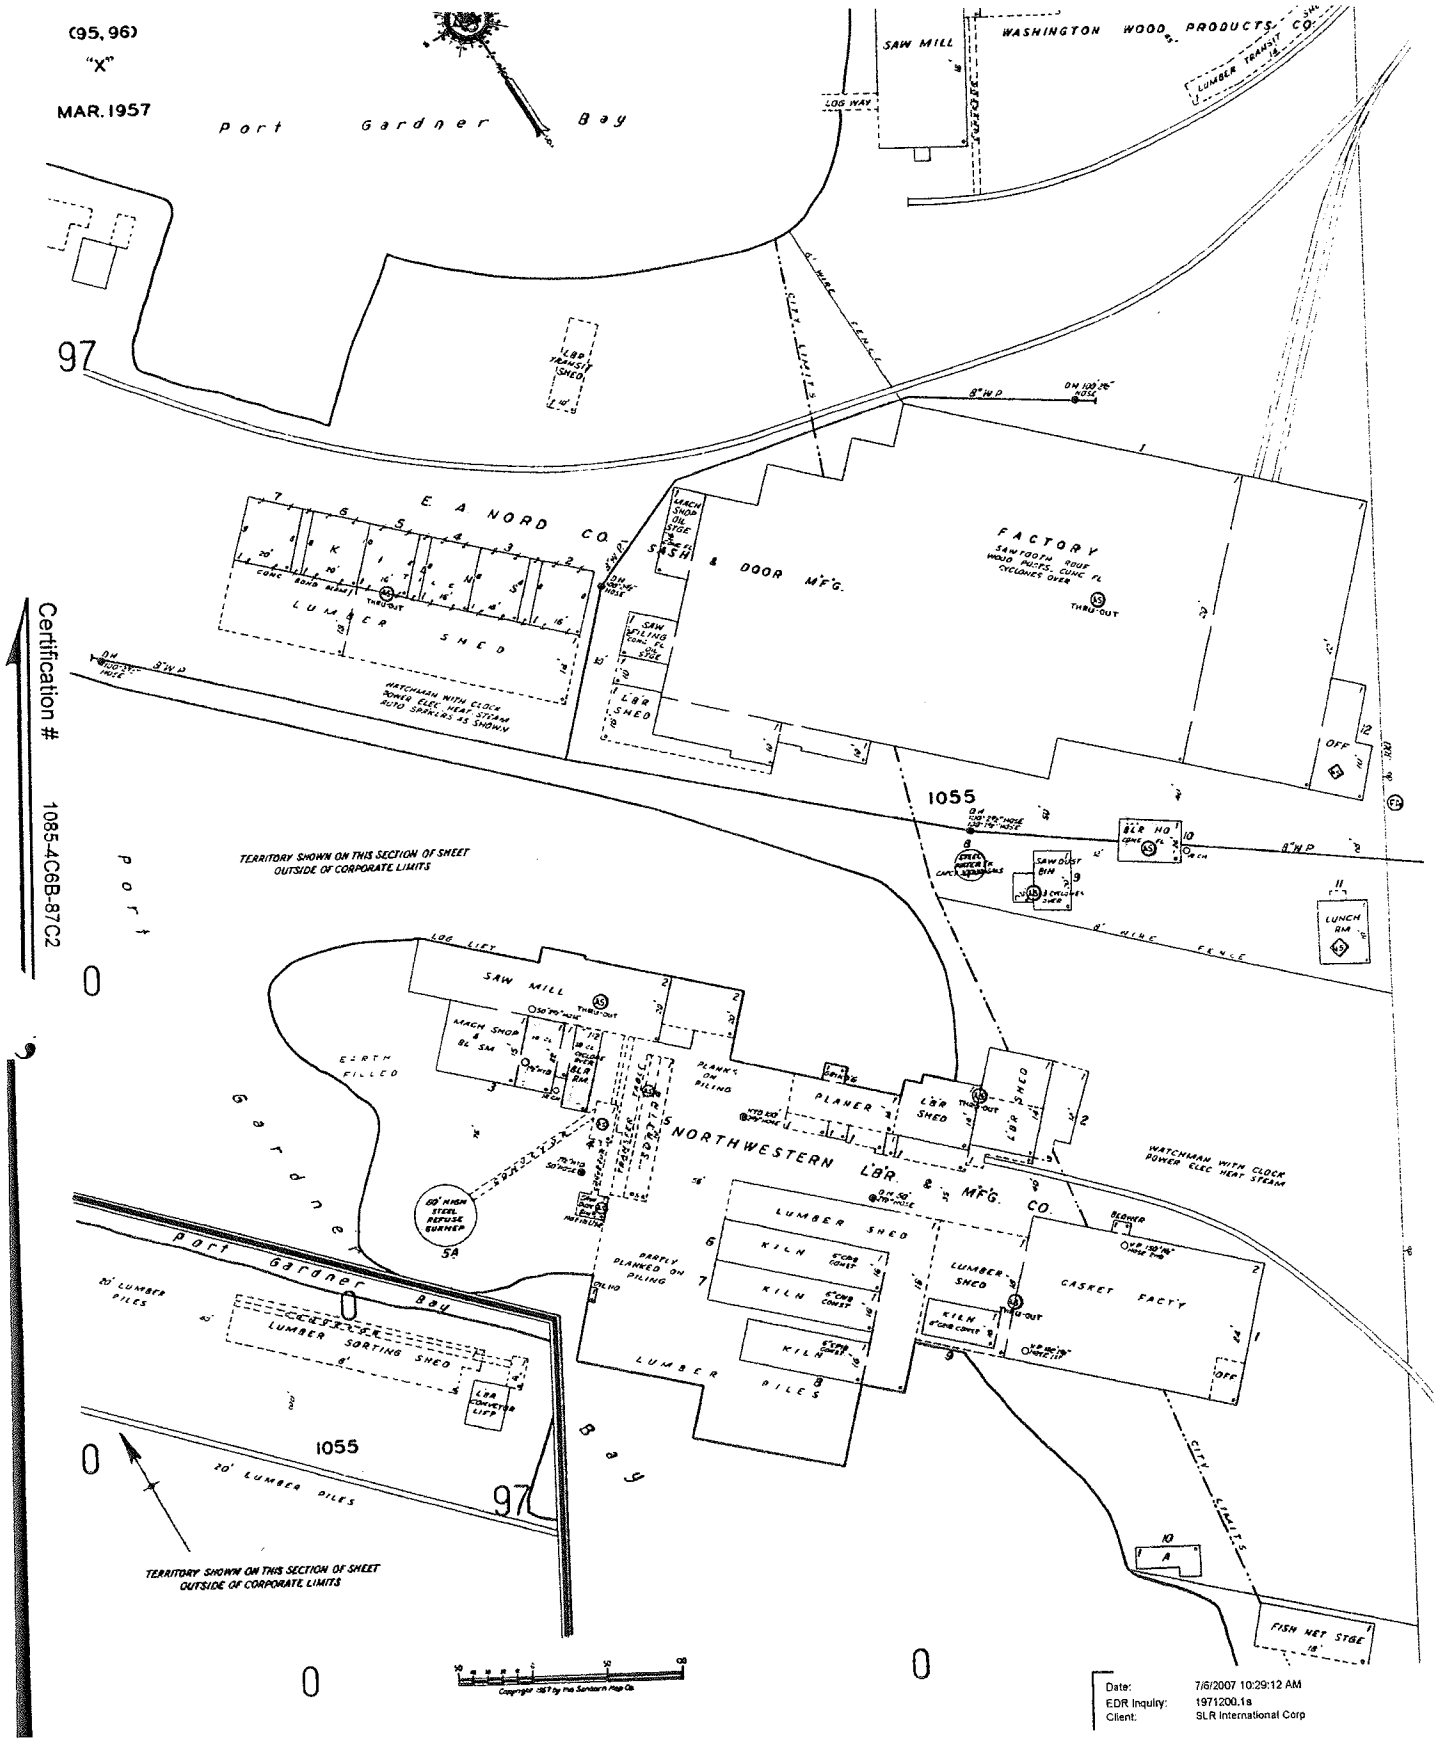
Appendix K: Human Health and Ecological Receptor Sediment Cleanup Objective and Cleanup Screening Level Development – presents the development of human health risk-based concentrations of bioaccumulative COCs used to inform the selection of the SCOs and CSLs.

This Appendix also describes the selection of bioaccumulative COCs, the assessment of potential ecological risk, the development of natural background and regional background COC concentrations, and the application of PQLs.

Appendix L: Calculation Summaries – contains calculations used as part of the RI/FS process including groundwater flow characteristics, PCL calculations for protection of sediment, and PQL calculation tables for applicable TEQ values.

Appendix M: Summary of Upland FS Costs – contains unit costs and assumptions and scope of work for upland remedial actions used to conduct the DCA.

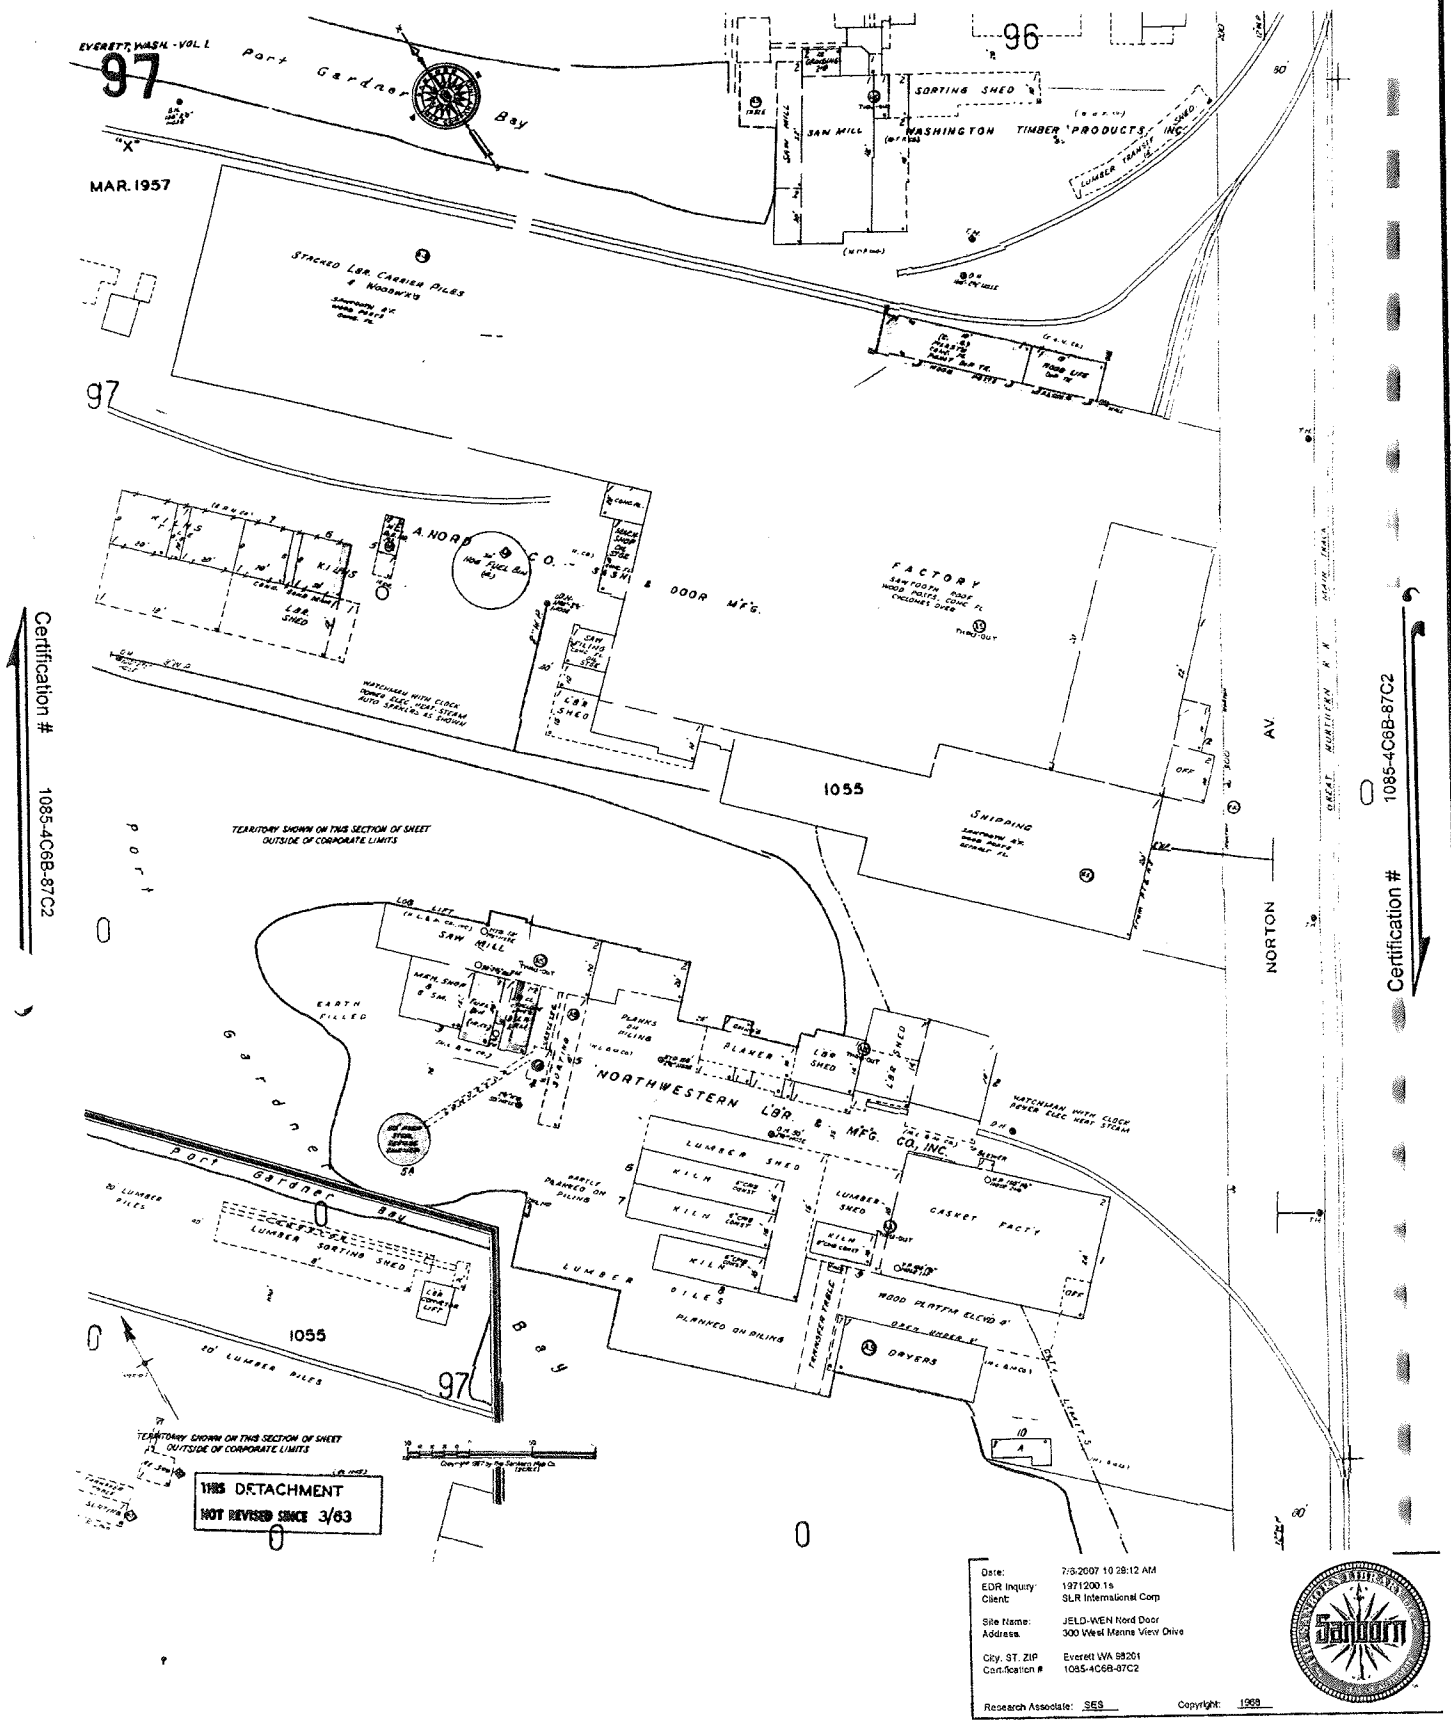
Appendix N: Summary of Marine FS Costs – contains a summary of the cost assumptions and the detailed cost estimates used to conduct the DCA.



Appendix O: Correspondence with Ecology - contains the Ecology comment documents and associated JELD-WEN comment response documents for the previously submitted draft versions of the RI/FS that used in the development of the final RI/FS document.

Appendix P: Upland Laboratory Reports – contains copies of laboratory reports and data validation reports for upland soil and groundwater investigations from 1992 to 2020, as available. Data from these lab reports were used to compile the upland analytical summary tables.

APPENDIX A



HISTORICAL SANBORN MAPS AND AERIAL PHOTOS

Description: Provides documentation of historical site features including buildings, industrial operations, chronology of fill material placement to expand upland areas, and other information to inform potential sources of contamination.

APPENDIX B

REGULATORY HISTORY AND PRIOR INVESTIGATIONS

Description: Provides additional details on the regulatory history and previously completed site investigations.

APPENDIX B

The following regulatory history was provided in the Final RI/FS Work Plan (SLR, 2008).

REGULATORY HISTORY AND PREVIOUS INVESTIGATIONS

Since 1989, several environmental assessment events have been completed at the Site to evaluate soil, sediment, and groundwater conditions. Activities associated with these investigations and their general findings, including regulatory compliance, are summarized in this Appendix. Where appropriate and available, the analytical results from soil and groundwater sampling have been included in the summary tables (Table 1 through Table 7). Refer to Figure 9 for the locations of site features (including the location of sources and potential sources) described in the paragraphs below.

June 27, 1989 Notice of Noncompliance issued by EPA – On June 27, 1989 the U.S. Environmental Protection Agency (EPA) conducted an inspection of the facility to determine whether activities at the facility were in compliance with EPA regulations governing polychlorinated biphenyls (PCBs). The EPA issued eight violations to the facility, which were as follows:

Violation 1: "An overhead electrical service pole where three out-of-service pole-mounted PCB capacitors were stored did not meet the requirements of a PCB storage for disposal area." The locations of these capacitors was not described in the letter, and no figures were included which depicted their location.

Violation 2 through 4: Three pole-mounted PCB capacitors, no model or serial numbers identified, were located in the parking lot south of the facility and west of the warehouse. Capacitors were not marked with the required PCB labels.

Violation 5 through 7: Three out of service pole-mounted PCB capacitors, no model or serial number identified, were located on the third pole west of the warehouse. Capacitors were not marked with the required PCB label.

Violation 8: The area where three out of service pole-mounted PCB capacitors were located, which were the subject of violations 5 through 7, was not marked with the PCB labels required for a storage area.

December 15, 1989 Ecology Environmental Report Tracking System Initial Report/Follow-up – The EPA stated they had "virtually closed the book" on this PCB issue. The capacitors had been removed from the Site and the EPA was awaiting the disposal certificates. The original Notice of Noncompliance was generated from a routine site inspection and was only a "bookkeeping" violation.

April 13, 1990 Drop-in Inspection by Ecology – In April 1990, Ecology conducted a Drop-In Inspection of the Nord Door facility. According to this inspection report, the Nord Door manufacturing process involved buying rough green wood (mostly Douglas-fir and

Western Hemlock), sorting, stacking, drying, planing, and cutting the lumber. They assembled and finished wooden doors, rails, posts, columns, and spindles and on occasion fabricated machinery. Hazardous substances identified on the Site included glues, boiler water treatment chemicals, acetone, filler compounds for wood, and parts cleaning chemicals. Hazardous substances produced included waste oil and grease rags. Other non-hazardous substances included waste wood and sawdust. Nord reportedly had "some" underground storage tanks (USTs) that had been filled. At the time of the inspection, the facility reported the presence of one UST containing gasoline (size not stated) and one 500-gallon UST containing thinner (toluene). The facility was aware of one spill from an aboveground storage tank (AST) containing diesel fuel, but did not know the date. The AST was reportedly located close to the northeast edge of the Site. A photograph of the area was included in the inspection report, which appears to depict the area located adjacent to the former 1,000-gallon diesel UST (see Figure 9). As is discussed in a June 1, 1990 letter from Ben-Fab to Ecology (summarized below), a copy of a spill report was later identified which indicated the release occurred in 1984. Sawdust was spread on the ground and in the water to absorb the spill. The spill was reported to the U.S. Coast Guard, who sent a representative to investigate. The Coast Guard informed the facility that the appropriate measures were taken to resolve the problem. A timer was subsequently installed on the fuel pump to shut the pump off when the designated amount of fuel had been pumped into the fuel tanks of the forklifts.

The following observations were documented in Ecology's site inspection report:

- A 10,000-gallon AST was located in the northeast corner of the Site which contained "Woodlife" preservative. The constituents of Woodlife were not known. The AST was surrounded by a 6 to 8 inch concrete berm. The containment area was reportedly never pumped out; liquid which collected within the berm was allowed to evaporate. At the time of the site visit there was standing water with a dark appearance in the berm.

- A soak-and-heat tank located adjacent to the northeast corner of the building had a 20 foot section of fire hose leading from the tank to the pavement, and presumably to the nearest storm drain catch basin. The contents and/or purpose of the soak-and-heat tank were not stated; however, later sampling conducted on the contents of the tank seem to indicate it contained only water.

- Ecology observed the area where the 500-gallon thinner (toluene) UST was located. The location of the former thinner (toluene) UST is depicted on Figure 9. The UST had reportedly not been used for 2 to 3 years. The area was impounding stormwater and the liquid had a slight sheen.

- Ecology observed the area of the reported diesel fuel spill, which was documented in a photograph included in the inspection report. The area was located on the northeastern portion of the Site, adjacent to a tidal flat of the Snohomish River, with no secondary containment. The area appeared to be located adjacent to the 1,000-gallon diesel UST. Stains and cracks were observed in the pavement.

- Drum storage and labeling was poor. Drums were observed on-site which had no cover, contained a black viscous material, and were overtopping with water and other substances. Many had missing bungs or did not have tops. There were used oil drums mixed in with resins and glue drums. Areas of poor drum storage included the primary storage area in the center of the facility and in the scrap metal pile at the southwest corner of the Site.
- The floor of the oil shed, located in the center of the facility, was sloped to drain to the yard. Sawdust was used to absorb oil spills and the sawdust was then disposed of in the garbage dumpster. There were oil stains on the floor surrounding every drip bucket.
- In the center of the facility was an area where machinery was pressure washed. The pressure wash water presumably drained to the storm sewer system.

May 14, 1990 Warning Letter from Ecology to Nord Door – In response to the issues identified in the April 1990 inspection, Ecology issued a Warning Letter to Nord Door. This letter proposed the following actions:

- Within 5 calendar days of receipt of Warning Letter, Nord would indicate in writing their intent to work voluntarily to eliminate sources of pollutants to both storm drain systems, and remediate soil and groundwater contamination.
- Within 15 calendar days Nord Company would submit to Ecology the following items:
    - Copies of all Material Safety Data Sheets (MSDS) sheets,
    - A plan and schedule for modifying the oil shed,
    - The facility's spill history,
    - Storm and sanitary system plans,
    - A plan and schedule for eliminating sources of pollutants to the storm drain system at both the heat and soak tank and the pressure wash area,
    - Historical site use information.
- Within 30 calendar days of receiving this letter, Nord Company would submit to Ecology the following items:
    - A plan and schedule for disposing of the liquid in the Woodlife tank, and dismantling the tank,
    - A proposal for taking care of the thinner (toluene) UST,
    - A plan and schedule for soil characterization in the vicinity of all USTs, and a proposed remediation schedule,
    - A plan and schedule for the containment of all stored drums,
    - Locations and uses for all USTs on the Site.

June 1, 1990 Letter from Ben-Fab (Nord Door) to Ecology – Letter response to items requested within 15 calendar days:

    - Copies of all MSDS sheets were provided with this response.

- The plan for modifying the oil shed included placing a 2 ½ inch high asphalt curb at the entrance which would be ramped at both sides. The perimeter of the existing walls would be sealed with a 4 inch high fiberglass ribbon and asphalt emulsion compound.
- A document was enclosed which summarized the events of the spill from the diesel tank (presumably the former 1,000-gallon diesel UST) which occurred in March 1984. According to the report, approximately 100-gallons of diesel fuel was spilled when a forklift drove off with the nozzle in the fuel pipe. Sawdust was used to absorb the fuel from the ground and water, which was then burned in the boiler. The U.S. Coast guard was notified of the incident and sent a representative to investigate. Nord was informed that they had taken appropriate measures to resolve the problem. A timer was installed on the fuel pump to shut the pump off when the designated amount of fuel had been pumped into the fuel tank of the forklift.
- The facility was in the process of contacting the City of Everett to determine the possibility of discharging the heat/soak and pressure wash run-offs to the city sanitary sewer system.
- A plan and schedule for eliminating sources of pollutants to the storm drain system at both the heat and soak tank and the pressure wash area.

August 20, 1990 Letter from Ben-Fab (Nord Door) to Ecology – Additional items had been completed in response to Ecology's May 14, 1990 letter, which included: modifications to the oil shed to provide secondary containment; storm and sanitary sewer system plans had been submitted to Ecology; discharges from the heat/soak tank and pressure wash areas had been sampled, with lab results still pending; quotes had been obtained for having the Woodlife AST cleaned and removed; the facility was making plans to remove all USTs and would conduct soil characterization at that time; the facility purchased and was using a drum storage container. While a list was still being compiled, the USTs reported to be present on-site included a 1,000-gallon diesel UST, 500-gallon gasoline UST, and a 500-gallon (approximately) thinner (toluene) UST (had been out of service for over 5 years).

September 2, 1990 Letter from Ben-Fab (Nord Door) to Ecology – This letter provided locations and uses of all USTs known to be present on the Property. Also included was a map providing the locations of the USTs. The locations of the former USTs are presented on Figure 9. The USTs on the Site were identified as follows:

- UST No. 1 – Active 1,000-gallon diesel UST installed in 1978, located on north-northeast portion of Site,
- UST No. 2 – Active 500-gallon gasoline UST installed in 1973, located northwest of main manufacturing building.

- USTs No. 3 and 4 – Inactive USTs installed in 1973 and closed in place in April 1987. Contents not reported. Located south-southwest of main manufacturing building. JELD-WEN maps identified the USTs to have contained gasoline.
- UST No 5 – Inactive 500-gallon thinner (toluene) UST installed in 1978 and out of use since approximately 1985. Located northeast of the main building.

September 18, 1990 Letter from Ben-Fab (Nord Door) to Ecology – This letter provides the findings of sampling which was conducted on the Site's wastewater streams (soak-and-heat tank, boiler blow down, condensate, glue room effluent, and equipment wash), and discussions with the City of Everett Water Department regarding the possible discharge of wastewater to the sanitary sewer. Water samples were collected from the soak tank, boiler blow down, boiler storm drain, condensate room, glue room, and compressor cooling water. Samples from the soak tank, boiler blow down, boiler storm drain, and glue room were analyzed for tannins and lignins, total organic carbon, total dissolved solids, oil and grease, and petroleum hydrocarbons. The sample methodology was not stated. The sample from the soak tank contained tannins and lignins (420 milligrams per liter [mg/L]) and total organic carbon (510 mg/L). The sample from the boiler blow down contained oil and grease (1,100 mg/L). The sample from the boiler storm drain contained oil and grease (490 mg/L). The sample from the glue room contained oil and grease (208 mg/L) and total petroleum hydrocarbons (340 mg/L).

Additionally, samples from the boiler blow down, boiler storm drain, condensate room, glue room, and compressor cooling water were analyzed for metals using EPA 6000/7000 series methods. The metals chromium, copper, lead, and zinc were identified in each of the samples. Additionally, cadmium was identified in the sample from the glue room; mercury was identified in the samples from the boiler blow down, glue room, and compressor cooling water; nickel was identified in the sample from the boiler blow down and glue room; and silver was identified in the samples from the boiler storm drain and glue room.

The city determined that based on the sampling results, the wastewater from the soak-and-heat tank, boiler blow down, and condensate could be discharged to the sanitary sewer after pH and temperature adjustment. The facility stated they were attempting to eliminate the glue room and equipment wash wastewater streams.

February 11, 1991 Letter from Sweet-Edwards/EMCON regarding UST Removal, Observations, and Soil Sampling – On November 14, 1990, Sweet/Edwards/EMCON, Inc. observed the removal of one 1,100-gallon diesel UST and one 500-gallon gasoline UST. The 1,100-gallon UST is depicted on Figure 9 as Tank 1, which is referenced in other documents as a 1,000-gallon diesel AST. The 500-gallon gasoline UST is depicted on Figure 9 as Tank 2. The USTs were excavated and removed by JELD-WEN employees. Soil samples were collected from the north, east, south, and west sidewalls and the base of the diesel UST excavation and analyzed for Total Petroleum Hydrocarbons (TPH-IR, EPA Method 418.1). TPH-IR concentrations in the north, east

and south sidewalls were identified at concentrations of 1,000 milligrams per kilogram (mg/Kg), 263 mg/Kg, and 296 mg/Kg, respectively. TPH-IR concentrations from the west wall, the base of the excavation, and the stockpile were less than 100 mg/Kg. The soil sample from the south sidewall was also analyzed for TPH as diesel (TPH-d, EPA Method 3550/8015 modified). A concentration of 160 mg/Kg of TPH-d was identified (compared to a concentration of 296 mg/Kg of TPH-IR in the same sample).

Samples collected from the sidewalls and base of the 500-gallon gasoline UST excavation were analyzed for benzene, toluene, ethylbenzene and total xylenes (BTEX, EPA Methods 5030/8020). BTEX was not detected above the laboratory practical quantitation limit (PQL) in the samples from the sidewalls or base of the excavation. Total BTEX concentrations up to 1.48 mg/Kg were identified in the soil stockpile. Analysis of TPH as gasoline (TPH-g, EPA Method 3550/8015 modified) in samples of stockpiled soil identified concentrations up to 104 mg/Kg. TPH-g was not detected above the laboratory PQL in the excavation sidewalls or base.

Based on this data, additional soil excavation was performed on the north wall of the diesel UST excavation to remove soil containing diesel-related petroleum hydrocarbons. Two samples were collected at the new limits of the excavation and analyzed for TPH-d. TPH-d concentrations were not detected above the laboratory PQL. No further excavation was conducted along the east and south walls of the excavation since TPH-d was not detected above the 200 mg/Kg action level listed under Chapter 173-340 WAC.

The report concluded that soils containing TPH-d were detected above the 200 mg/Kg recommended action level proposed under Ecology's Model Toxic Control Act (MTCA) Cleanup Regulations in samples collected from the north wall of the former diesel UST excavation. An additional 10 cubic yards of soil were subsequently removed. Samples collected at the limits of the new excavation contained TPH-d concentrations less than 200 mg/Kg. Soils containing TPH-g were identified in the soil stockpile but not in the gasoline UST excavation. These soils were reportedly "aerated" above ground by turning with a backhoe prior to being placed in the excavation as fill material. Soils removed from the diesel UST excavation north wall were reportedly being "landfarmed" on-site and would be evaluated for TPH-d at a future date. No further information was provided pertaining to the soil which was reportedly "landfarmed" on-site.

February 22, 1991 – Final Report: Penta Contaminated Water Clean-up and Discharge prepared by Nord Door – An out-of-service, 10,000-gallon Woodlife AST remained on the Site from the ownership prior to JELD-WEN's purchase. Rainwater had accumulated in the concrete containment berm of the AST and was found to contain up to 140 parts per million (ppm) of pentachlorophenol (PCP). A plan to perform carbon filtration of the water with subsequent discharge to the sanitary sewer system was approved by the City of Everett and Ecology. A discharge limit of 0.05 ppm of PCP was established. Several rounds of water filtration and discharge were undertaken between November 16, 1990 and February 8, 1991. Once the water was discharged, a private

contractor would be retained to clean and remove the 10,000-gallon AST, concrete berm, and portable AST used to contain the filtered water. A sample of the concrete would be collected to determine the levels of residual PCP. A final closure plan for the concrete berm would be established upon receipt of the results.

March 5, 1991 Letter from Ecology Regarding Closure of PCP Tank Containment Berm at Nord Door – Nord Door facility provided laboratory results from sampling soil and concrete associated with the former Woodlife AST. Concentrations of PCP in the soil were below the laboratory PQL (soil sample location not stated) and the concentration of PCP in the concrete was 0.5 ppm. Nord Door proposed closing the containment berm by knocking in the walls to a level below grade, pushing the rubble into the remaining berm, filling with clean backfill, and asphalting over the area. Ecology approved the proposed plan. The documents obtained by SLR do not indicate whether the containment berm was closed as proposed. However, based on SLR's site observations the containment berm wall was demolished and the area of the former containment berm has been covered by asphalt

March 18, 1991 Early Notice Letter from Ecology regarding Nord Door (Site #N-31-5035-000) – Under MTCA (Chapter 70.105D RCW), Ecology maintains a database of known or suspected contaminated sites. Based on available information and a site inspection on April 13, 1990, Ecology had added the Nord Door facility to the database. A copy of the site information sheet indicated the facility was listed due to confirmed impacts to soil with petroleum products, and suspected impacts to groundwater, surface water, and sediment with metals, PCBs, phenolic compounds, non-chlorinated solvents, and polynuclear aromatic hydrocarbons (PAHs).

June 1991 Site Hazard Summary Report for Nord Door prepared by Parametrix - The report summarized the results of a soil and groundwater assessment performed at the Site by SAIC/Parametrix on behalf of Ecology. The objective of the assessment was to conduct field screening and sampling to gather sufficient environmental data to assess the Site using the Washington Ranking Method (WARM) guidelines. The scope of work included the following:

- Collecting two surface soil samples from the area northwest of the main manufacturing building where barrels were previously stored (GS-1 and GS-2). Surface soil samples were analyzed for volatile organic compounds (VOCs, EPA Method 8240), TPH (EPA Method 8015), semivolatile organic compounds (SVOCs, EPA Method 8270), and Pesticides (EPA Method 8140);
- Collecting one surface soil sample from an asphalt eroded area northwest of the main building which was analyzed for VOCs (GS-3);
- Collecting two sediment samples from the storm drains on-site which were analyzed for VOCs, TPH, SVOCs, and Pesticides (SS-1 and SS-2). One sample was collected along the southwest Site border near the glue room stormwater

outfall and one was collected on the northeast portion of the Site near the boiler room stormwater outfall.

The sample locations are depicted on Figure 9. It should be noted that the sample descriptions did not include the collection of a water sample, and no water sample is discussed in the text of the report. However, the table which presents the analytical findings includes the results of sample EW, which appears to be a water sample. This sample is not discussed elsewhere in the report.

With the exception of very low concentrations of methylene chloride (also identified in method blank), chloroform identified in one water sample (sampling location not provided in report), and acetone, no contaminants were identified above the PQLs. The detected concentrations of methylene chloride, chloroform, and acetone did not exceed the MTCA Method A cleanup levels. These sampling results are included in the summary analytical tables (Tables 1 through 7).

August 21, 1991 Letter from Ecology to Nord Door – Ecology assessed the relative health and environmental risk associated with the facility and assigned a hazard ranking of 5 (with 1 being the highest risk and 5 being the lowest risk.).

October 24, 1991 Letter from Sweet-Edwards/EMCON, Inc. Regarding Removal of Thinner (Toluene) UST – On August 6, 1991 a 500-gallon thinner (toluene) UST was removed from the Site (identified on Figure 9 as Tank 5). Soil samples were collected from the four sidewalls and the base of the excavation, as well as from the stockpiled soil. The soil samples were analyzed for toluene (EPA Method 5030/8020) and TPH-g (EPA Method 5030/Modified 8015). Toluene was detected at concentrations of 9.4 mg/Kg and 14.6 mg/Kg in soil samples from the north sidewall and excavation base, respectively. TPH-g was identified at concentrations of 20 mg/Kg and 30 mg/Kg from samples collected from the north sidewall and excavation base, respectively. Analysis of a composite sample from the stockpiled soils identified a toluene concentration of 0.95 mg/Kg and a TPH-g concentration of 4 mg/Kg.

The report concluded that soil samples from the former thinner (toluene) UST excavation contained concentrations of toluene below the cleanup level of 40 mg/Kg for toluene and 100 mg/Kg for TPH-g presented in the MTCA Method A table.

February 11, 1994 Letter from Nord Door/JELD-WEN to Ecology – JELD-WEN was in the process of leasing a portion of the Site to Sterling Asphalt. A subsurface investigation was conducted by RZA Agra, Inc., a consultant for the prospective lessee. The investigation included the installation 5 soil borings (C1-S1, C2-S2, C4-S1, C5-S1, and C6-S1) and two monitoring wells (MW-1 and MW-2). Soil samples collected from each of the soil borings and the two monitoring well borings were analyzed for TPH-HCID, TPH-g, TPH-d, TPH by Washington State Method 418.1 modified (TPH-418.1), BTEX, lead, PCBs, and PAHs. Groundwater samples were analyzed for TPH-g and TPH-418.1.

The samples from the six soil borings were below PQLs for all TPH constituents, BTEX, PCBs, and PAHs. One of the borings (C6-S1) identified 17 ppm of lead, which was below the MTCA Method A Cleanup level of 250 ppm. The soil sample collected from the monitoring well boring MW-1 identified TPH-418.1 in soil at a concentration of 700 ppm. This concentration was above the MTCA Method A recommended cleanup level of 200 ppm.

In addition, the two groundwater samples identified concentrations of TPH-418.1 at 16 mg/L (MW-1) and 1.6 mg/L (MW-2), which exceeded the MTCA Method A recommended cleanup levels of 1 mg/L. The locations of MW-1 and MW-2 are depicted on Figure 9. These sampling results are included in the summary analytical tables (Tables 1 through 7). The approximate area of contamination (the two sampling locations) was by the reclaimed portion of the Port Gardner Bay tide lands where, years ago, loading of materials and moorage of boats occurred.

The Site was located on an area of historic fill in the Port Gardner Bay tide lands. The latest filling reportedly occurred in 1978. A historical review did not identify any process which would produce or cause petroleum contamination in the areas identified.

The report concluded that, based on the information available, it did not appear that this discovery was of major impact. The levels of TPH, though in excess of MTCA closure levels, should be protective of human health and the environment based on the occupancy and exposure.

May, September, and October 2006 and May 2007 Soil and Groundwater Sampling performed by SLR on behalf of JELD-WEN – In 2005, at the request of JELD-WEN, SLR conducted a review of historical documents pertaining to the now closed Nord Door facility and conducted a site walk in September 2005. Based on this information, several assessment groupings were identified which warranted further assessment. The areas warranting further investigation included fuel storage locations, Woodlife storage tank, dip tank, thinner (toluene) storage locations, and waste storage areas.

In May 2006 SLR conducted initial investigation work which included the collection of soil and groundwater samples from 42 locations focused on these initial assessment groups. Based on available information, contaminants initially identified as a potential concern at the Site were petroleum hydrocarbons, solvents, PCBs, PCP, and creosote. Sampling locations GP-1 to GP-42 are presented on Figure 9.

The May 2006 assessment identified several areas of environmental impact at the facility due to former operations. Identified impacts included: creosote from historical pole treating operations at the east side of the facility along West Marine View Drive, PAHs and petroleum hydrocarbons from historical fueling oil storage at the east side of the facility, toluene from solvent storage at the northeast corner of the facility, PCP from wood

treatment solution storage and usage at the northeast corner of the facility (appeared to be localized), and PAH and TPH from fill material placed at the Site (appeared to be wide-spread but relatively minor). Based on the findings of the May 2006 investigation, subsequent investigations were conducted in September and October 2006 to further evaluate the following data gaps: the potential for creosote and oil impacts to extend off-site to the east under West Marine View Drive; to gain an understanding of the groundwater flow direction and tidal influence at the Site; to gain an understanding of the extent of impacts at the fueling station as identified in assessment location GP-34; to evaluate whether the toluene impacts near the northeastern corner of the Site were limited in extent.

Additional assessment was conducted in September and October 2006 to address the data gaps. The results of the May and September assessment work was as follows:

- Creosote and fuel oil impacts along the eastern portion of the Site – Assessment work included Geoprobe borings near the middle and eastern side of West Marine View Drive (GP-201 through GP-215). Creosote and oil impacts to soil and groundwater extended under a portion of the former manufacturing building and West Marine View Drive. The extent of these impacts had not been fully delineated in an easterly direction.
- Installation of six groundwater monitoring wells – Five groundwater monitoring wells were installed at the Site in October 2006 (MW-1 through MW-5) and one additional well (MW-6) was installed in May 2007. The six wells were sampled for TPH-Dx, TPH-Gx, SVOCs, and VOCs. Groundwater monitoring wells MW-1 through MW-4 and MW-6 were below laboratory PQLs for all analytes. Groundwater monitoring well MW-5 identified benzene (9.46 micrograms per liter [µg/L]), naphthalene (11.1µg/L), toluene (4.12 µg/L), and xylene (1.05 µg/L). Benzene was identified above the MTCA Method A Cleanup Level for benzene in groundwater (5 µg/L). Concentrations of naphthalene, toluene, and xylene identified in groundwater were well below their respective MTCA Method A Cleanup Levels.
- Groundwater flow direction and tidal influences – Pressure transducers were placed in monitoring wells MW-1 through MW-5 well for a one-week period in October 2006. The monitoring well locations are shown on Figure 9, with MW-1 located along the southern edge of the Site, MW-2 near the western edge of the Site within the Rinker Materials facility, MW-3 near the northern edge of the Site, MW-4 near the boiler, and MW-5 near West Marine View Drive. The transducer data showed tidally-influenced groundwater at the Site, with a general groundwater flow direction from the eastern, center portion of the Site toward the west (MW-2) and north (MW-3). The observed water level in MW-1 was higher than the other four monitoring wells indicating an uncharacteristically high groundwater “mound” in that area, or an error in the measured elevation of the casing of this well.

- Fueling station impacts – In October 2006, test-pit excavations were completed at the Site near the former fueling station extending over the Geoprobe sampling location GP-34. This assessment was completed to further assess the extent of oil impacted soil in this area. The test pit excavation exposed an area containing wood debris (lumber and saw dust) along with other miscellaneous waste (asphalt pieces, bottles, scrap metal) to a depth of five to six feet below the surface. Soil sampling conducted at the edges of the test-pit excavation resulted in relatively low concentrations of oil in the soil, with some elevated PAH concentrations.
- Toluene impacts – In October 2006 test-pit excavations were installed near the former thinner (toluene) storage tank at the northeastern portion of the Site. The test-pits defined the extent of the toluene impacts to the shallow soil in this area.

Based on the findings of these investigations, a release report was submitted to Ecology via their on-line reporting system on September 19, 2006. The Site is listed under Ecology's website database as Ecology Identifier or facility number 2757.

APPENDIX C

SEA LEVEL RISE / CLIMATE CHANGE ASSESSMENT

Description: Provides a site-specific evaluation of the effects of climate change and projected sea level rise that is used to inform the future environmental setting and potential climate change impacts on the evaluated remedial alternatives.

Memorandum

March 29, 2021

To: Nathan Soccorsy, Anchor QEA. LLC

From: Sam Giannakous, Anchor QEA, LLC

Re: Sea Level Rise Considerations
Jeld-Wen/Nord Door Site, Everett, Washington

Introduction

For the purpose of the evaluating future environmental conditions, this memorandum evaluates the effect of global climate change relative to the Jeld-Wen/Nord Door Site (Site) in Everett, Washington. The effects of climate change have been assessed in accordance with Washington State Department of Ecology (Ecology) guidance. Relatively recent Everett-specific projections (Miller et al. 2018) and Federal Emergency Management Agency (FEMA) floodplain information were reviewed to determine Site-specific projections and evaluations to inform the future environmental setting and considerations relative to remediation.

Washington Department of Ecology Guidelines for a Site Vulnerability Assessment

A report prepared for the Washington Department of Ecology (Ecology) titled *Adaptation Strategies for Resilient Cleanup Remedies: A Guide for Cleanup Project Managers to Increase the Resilience of Toxic Cleanup Sites to the Impacts from Climate Change* (Asher et al. 2017) provides guidelines to assess the vulnerability of a project site to several risk factors related to climate change. The following are the site-specific risk scenarios detailed by Ecology, including a summary of sea level rise and severe storm assumptions.

Low-risk scenario. Cleanup sites to be remediated via full removal in the near future (1 to 2 years) with no long-term monitoring. This scenario considers a remedy with no further action. Future climate projections need not be addressed. For this scenario, 0.5 to 1 foot of sea level rise atop the mean higher high water (MHHW) elevation may need to be considered to account for flooding.

Short-term risk. Cleanup sites to be remediated within the next 10 years, including full removal, with or without post-construction monitoring or short-term natural attenuation. It may be appropriate to consider near-term climate projections (mid-century), 1 to 2 feet atop MHHW at a minimum. Current 100-year storm events will occur more frequently, becoming a 25-year storm. Extreme precipitation events will occur more frequently, with more frequent erosion likely in vulnerable areas.

Long-term or high risk. Remedial cleanup of sites involving contamination being left in place, long-term monitored natural recovery, cleanup levels taking more than 10 years to meet, or where

damage potential is high, even if there is a low probability of that event happening. A sea level rise at the high end of the projections assumed for the end of the century (4 to 6 feet) may be appropriate to consider, as well as inundation under both the base flood elevation and MHHW. These sites may need to consider that a 100-year storm event will occur at least every 10 years.

Site Assessment

In order to address the many uncertainties in climate projections, the remedy timeframe, consequences of a failed remedy, and adaptive management should be taken into consideration. Long term remedies will involve more uncertainty because they depend more heavily on long-term climate projections that are not as reliable. Failed remedies of higher risk sites, particularly those where contamination is left in place, can have more severe impacts resulting from inundation even if the probability of such inundation is lower. Lastly, repair cost and/or adaptive management should be considered in the case that climate change consideration proves to be underestimated or sea level rise were to accelerate. Each specified remedial alternative should be suited to handle this magnitude of sea level rise depending on the risk scenario to which it can be applied.

The eight remedial alternatives outlined as potential cleanup actions range from source control, to capping, to full or partial removal. Based on the eight remedial alternatives, the low-risk scenario does not apply to this site, and thus climate change and sea level rise considerations need to be addressed.

Short-term and long-term risk scenarios may both apply to the site depending on the remedial alternative selected. Each alternative should be carefully considered in determining which risk scenario to apply. Design should account for the potential impacts of climate change as detailed by Ecology.

Remedial alternatives that include some degree of contamination left in place (capping or partial removal) should be classified as long-term or high-risk scenarios and consider the appropriate climate change projections for high-risk sites.

Sea Level Rise Estimates

A report prepared for the Washington Coastal Resiliency Project (WCRP) in 2018 provided an updated assessment of projected sea level rise and the associated hazards for Washington state. The updated projections for sea level rise are more comprehensive than past estimates, taking into consideration recent research, land movement, and greenhouse gas emissions. Greenhouse gas emission projections depend on a variety of factors related to human behavior. Therefore, probabilistic projections for sea level rise have been made based on both low and high greenhouse gas scenarios.

Climate projections are made for two greenhouse gas emissions scenarios in this report: Representative Concentration Pathway (RCP) 4.5 and RCP 8.5. RCP 4.5 is a low estimate in which greenhouse gas estimates stabilize by mid-century and decrease thereafter. RCP 8.5 is a high scenario in which there is continued increase in greenhouse gasses until the end of the 21st century (Mauger 2015). Tables C-1 and C-2 present the probability of exceedance of sea level rise, in feet, for the RCP 4.5 and RCP 8.5 greenhouse gas scenarios. Highlighted rows indicated mid-century (50-year) and end of century projections (100-year). These projections were estimated for the coastal area in Snohomish County where the project site is located. Vertical land movement of -0.1 ± 0.2 foot per century is factored into these projections.

Source: WA Coastal Network; http://wacoastalnetwork.com/chrn/research/sea-level-rise/

Based on the low-level projections, by mid-century, it is likely the sea level will rise between 0.5 and 1 foot along the coastline in Everett, Washington. By the turn of the century and shortly thereafter, it is projected that sea level could increase up to 3 feet under the low greenhouse gas scenario.

Projections based on the RCP 8.5 high scenario suggest slightly more aggressive rates of sea level rise at the Jeld-Wen site. By middle to late century, the sea level could rise between 1 and 2 feet, and up to 5 feet after the turn of the century.

Source: WA Coastal Network; http://wacoastalnetwork.com/chrn/research/sea-level-rise/

Tidal datums recorded within the Port of Everett, just south of the Jeld-Wen site, are presented in Table C-3. LiDAR data taken for the Snohomish River Estuary provided elevation contours for the site. Based on the LiDAR elevation data, the majority of the Jeld-Wen site is at elevations ranging from 12 to 14 feet with select features up to elevation +17 feet MLLW.

Table C-3
Tidal Datums for NOAA Station 9447659 (Everett, WA)

Tide	Tide Level (feet MLLW)
Mean Higher High Water (MHHW)	11.09
Mean High Water (MHW)	10.21
Mean Tide Level (MTL)	6.51
Mean Sea Level (MSL)	6.48
Mean Low Water (MLW)	2.8
Mean Lower Low Water (MLLW)	0

Source: Center for Operational Oceanographic Products and Services; NOAA tides & Currents

Ecology guidance is to add feet of sea level rise to the MHHW datum to project potential inundation caused by high tides over the course of a day. The potential for mid-century sea level rise of 1 to 2 feet (RCP 8.5) results in a new MHHW elevation of up to 14 feet. Projections for sea level rise at the turn of the century of 5 feet would result in MHHW elevation over 16 feet. Figure C-1 highlights the inundation possible at the Jeld-Wen site resulting from this degree of sea level rise. Elevation contours of 13, 15, and 17 feet are highlighted to reflect 2, 4, and 6 feet of sea level rise.

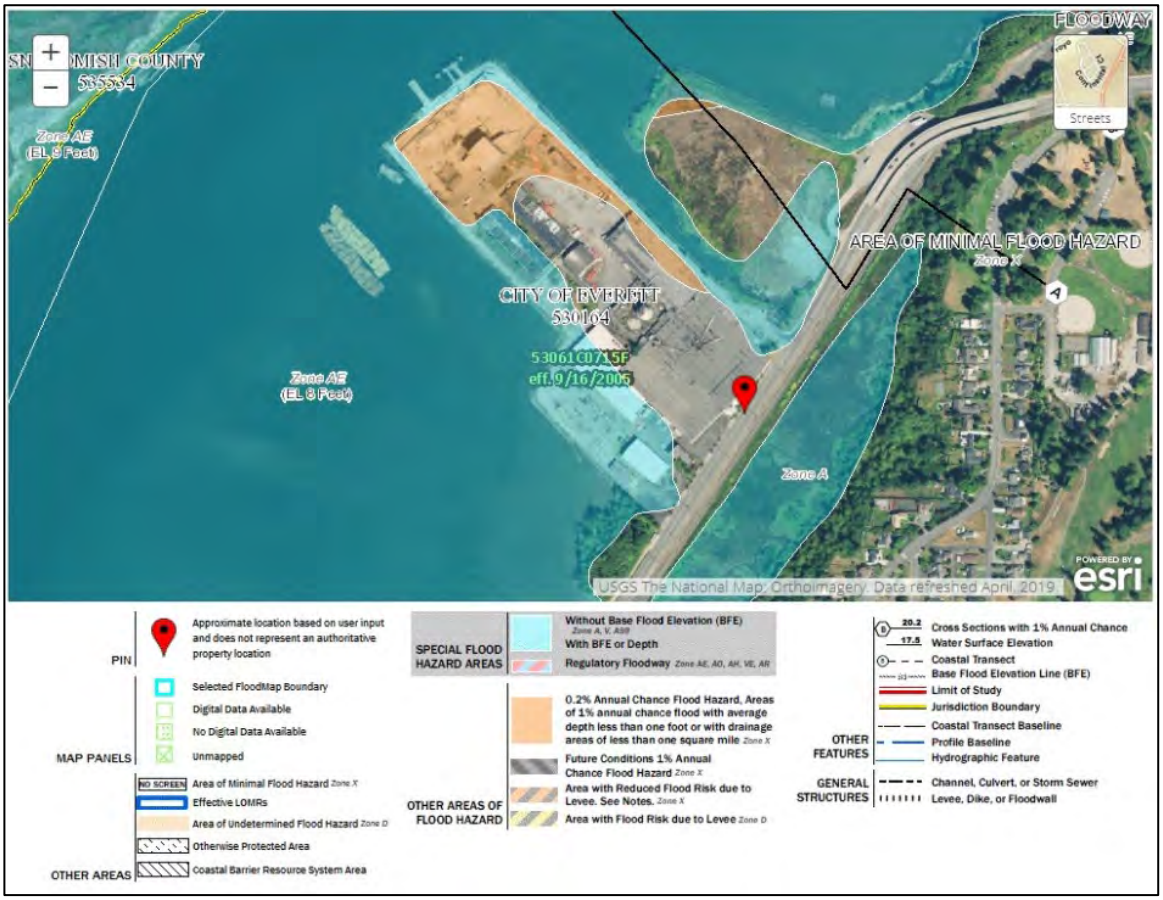

Figure C-1
Sea Level Rise
Jeld-Wen/Former Nord Door Facility

FEMA Flood Risk

The sea level rise estimates previously presented are not related to coastal flood risk assessments performed by FEMA (Miller et al. 2018). FEMA has created floodplain maps of visual inundation caused by a 100-year flood (also termed base flood elevation or BFE) as a risk assessment tool for insurance purposes. The current effective 100-year floodplain map is shown in Figure C-2.

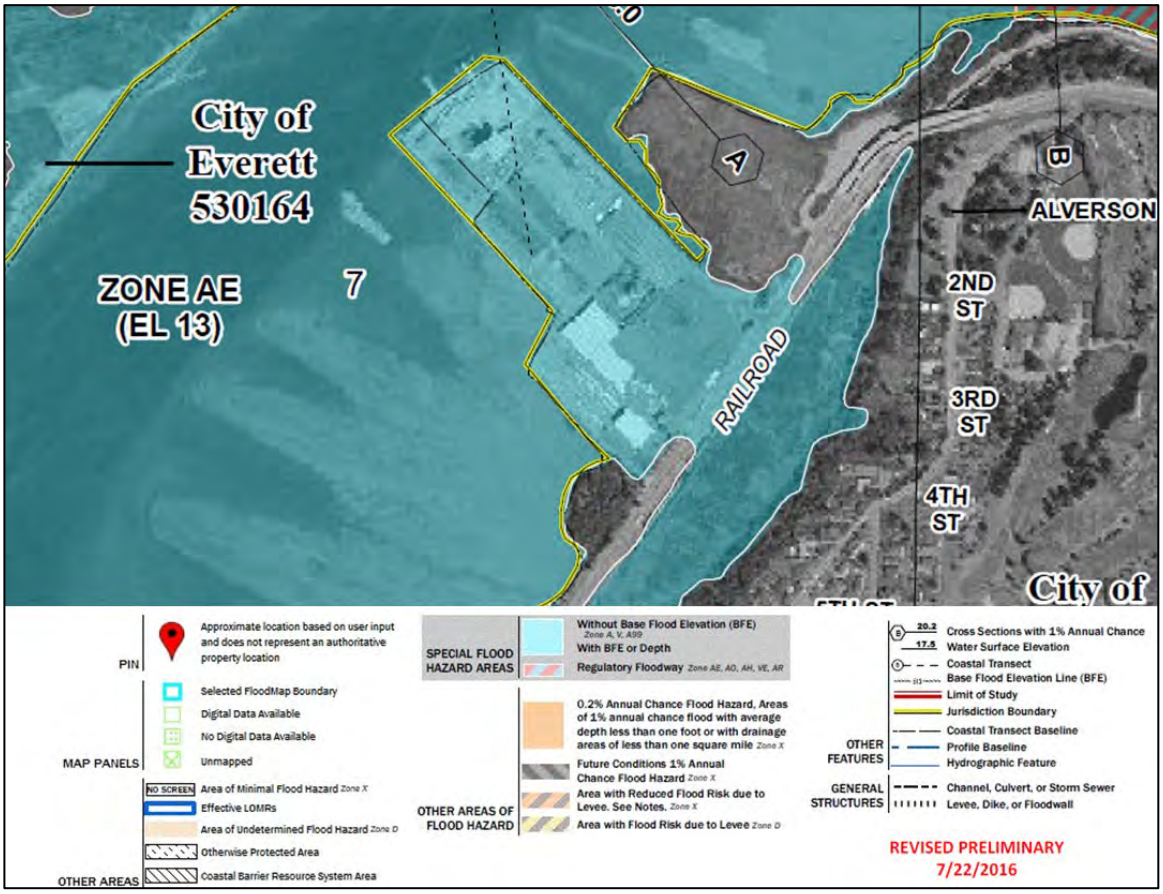

Figure C-2
Current Effective FEMA Floodplain Map

Source: FEMA Flood Map Service

Under the current effective BFE, most of the site is mapped as being inundated during a 100-year flood, with breaching of West Marine View Drive resulting in full inundation of the low-lying marshland landward of the Jeld-Wen site. FEMA's preliminary updated floodplain map is shown in Figure C-3. Although not yet approved, these preliminary data suggest that the site would be completely inundated under the future BFE.

Figure C-3
Preliminary FEMA Floodplain Map

Source: FEMA Flood Map Service

The impacts of the 100-year floodplain (the BFE), as the determination of the risk category for a project site, can result in the BFE becoming a 25-year or 10-year storm event. This level of inundation or impacts as severe as this level of inundation may occur on a more frequent time scale as a result of climate change.

PLEASE NOTE

This map and the accompanying reports are not for general distribution. Washington State Law (RCW 42.56.430(2)) exempts Sensitive Fish and Wildlife information from public inspection and copying.

Washington Department of Fish and Wildlife (WDFW) considers sensitive species and habitat locations displayed on this map and accompanying reports to be confidential. WDFW is the exclusive owner of the Sensitive Fish and Wildlife Information and locations shall in all respects be treated as proprietary information in accordance with all procedures reasonably necessary to protect WDFW's proprietary rights therein.

DISCLAIMER

This map and the accompanying reports only includle information that the Washington Department of Fish and Wildlife (WDFW) maintains in a central computer database. It is not an attempt to provide you with an official agency response as to the impacts of your project on fish and wildlife. This information only documents the location of fish and wildlife resources to the best of our knowledge. It is not a complete inventory and it is important to note that fish and wildlife resources may occur in areas not currently known to WDFW biologists, or in areas for which comprehensive surveys have not been conducted. Site specific surveys are frequently necessary to rule out the presence of priority resources.

Locations of mapped wildlife and habitat features are generally within a quarter mile of the locations displayed on this map. Locations of fish and wildlife resources are subject to variation caused by disturbance, changes in season and weather, and other factors. WDFW does not recommend using maps more than six months old and information should not be used for future projects.

For questions about how the information may apply to a specific project or site, contact the WDFW Regional Office for your region at:
http://wdfw.wa.gov/about/regions/index.html

MAP INFORMATION

This map is intended to help you determine if a Bald Eagle Management Plan (BEMP) is needed for your project. A BEMP is a habitat protection agreement between Washington Department of Fish and Wildlife (WDFW) and a landowner ensuring minimal impact on bald eagles and reasonable land use for the owner. For a list of bald eagle management contacts and a fact sheet that addresses frequently asked questions, visit the following WDFW web site at:
http://wdfw.wa.gov/wlm/diversty/soc/baldeagle/eagle_management.htm

PLEASE NOTE

All Fish and wildlife species are vulnerable to harm from human activities. By receiving information on this map, from the Washington Department of Fish and Wildlife (WDFW), you incur an obligation to use it in a way that does not cause undue harm to our public fish and wildlife resources.

DISCLAIMER

This map only includes information that WDFW maintains in a central computer database. It is not an attempt to provide you with an official agency response as to the impacts of your project on fish and wildlife. This information only documents the locations of fish and wildlife resources to the best of our knowledge. It is not a complete inventory and it is important to note that fish and wildlife resources may occur in areas not currently known to WDFW biologists, or in areas for which comprehensive surveys have not been conducted. Site specific surveys are frequently necessary to rule out the presence of priority resources.

This information is highly variable regarding source, some of it is based on field surveys while others are based on "best professional judgement" of the biologist involved. This information has been generalized for the release to the general public. For questions about how the information may apply to a specific project or site, contact the WDFW Regional Office for your region. Contact information available online at:

PLEASE NOTE

All Fish and wildlife species are vulnerable to harm from human activities. By receiving information on this map, from the Washington Department of Fish and Wildlife (WDFW), you incur an obligation to use it in a way that does not cause undue harm to our public fish and wildlife resources.

DISCLAIMER

This map only includes information that WDFW maintains in a central computer database. It is not an attempt to provide you with an official agency response as to the impacts of your project on fish and wildlife. This information only documents the locations of fish and wildlife resources to the best of our knowledge. It is not a complete inventory and it is important to note that fish and wildlife resources may occur in areas not currently known to WDFW biologists, or in areas for which comprehensive surveys have not been conducted. Site specific surveys are frequently necessary to rule out the presence of priority resources.

This information is highly variable regarding source, some of it is based on field surveys while others are based on "best professional judgement" of the biologist involved. This information has been generalized for the release to the general public. For questions about how the information may apply to a specific project or site, contact the WDFW Regional Office for your region. Contact information available online at:

1 Introduction

This Critical Areas Report (CAR) has been prepared for the former E.A. Nord, Inc., door facility site (through its successor, JELD-WEN, Inc.). The site is located in the city of Everett in Snohomish County, Washington, along the marine shoreline of Port Gardner Bay in Possession Sound (Figure 1).

In accordance with the requirements of Model Toxics Control Act (MTCA) Agreed Order Number DE 5095 (Order) between JELD-WEN, Inc. (JELD-WEN) and the Washington State Department of Ecology (Ecology), a draft Remedial Investigation/Feasibility Study (RI/FS) Report was prepared and submitted to Ecology in 2016 (Anchor QEA and SLR International Corporation 2016). Ecology provided comments on the RI/FS Report in a February 2019 letter (Ecology 2019a). The objective of the RI was to collect the data necessary to adequately characterize the site for the purpose of developing and evaluating cleanup action alternatives. The purpose of the FS was to develop and evaluate cleanup action alternatives to enable a cleanup action to be selected for the site.

This CAR has been prepared in response to the Ecology comment letter requesting information on critical areas at the site, including a delineation of the marine shoreline ordinary high water mark (OHWM), wetland delineations, and a description of wildlife and wildlife habitat characteristics. These characteristics include but are not limited to, existing marine, estuarine, and riparian vegetation communities; shoreline features and characteristics; and intertidal substrate and species composition. The study area for this investigation includes the developed portions of the site, the site shoreline, and tidal mudflats adjacent to the site (Figure 2).

Information collected for this CAR will be used to assess conditions in the study area, and to avoid, minimize and mitigate for impacts related to cleanup activities that will occur under the Order. The information will also be used to inform opportunities for restoration of site habitat. Potential impacts and mitigation associated with cleanup activities are not addressed in this CAR and will be evaluated during the design process.

Existing critical areas and associated regulated buffers are identified in this CAR as defined in Chapter 19.37 of the Everett Municipal Code (EMC; City of Everett 2019a). Anchor QEA ecologists conducted a review of the Critical Areas chapter of the EMC, gathered and reviewed existing information, and performed a site visit on July 1 and 3, 2019, to identify, assess, and delineate critical areas within the study area.

During the investigation, 14 estuarine wetlands were identified and delineated within the study area (Wetlands E1 through E14). As described in this CAR, most of the estuarine wetlands are small patches or groups of small patches of salt-tolerant vegetation near the marine OHWM, and 8 of the 14 wetlands are less than 100 square feet in total area. No freshwater wetlands or stream critical areas were identified within the study area. A delineation of the OHWM of the marine shoreline of

Port Gardner Bay in the study area was performed. The OHWM delineation also included a delineation of piles and derelict structures within the study area below the OHWM. Under EMC Chapter 19.37.190, the Port Gardner Bay shoreline is defined as a Fish and Wildlife Habitat Conservation Area (FWHCA) under the category of "habitats of primary association."

The following sections of this report describe the methods used in the field investigation and Anchor QEA's findings:

- A description of the study area is included in Section 2.
- Summaries of the findings of the wetland delineation are included in Section 3.
- The marine shoreline OHWM and the pile and derelict structures delineation is included in Section 4.
- Section 5 includes the habitat assessment and an Endangered Species Act (ESA) species and critical habitat assessment.

Photographs of features in the study area are presented in Appendix A. Wetland field data forms are in Appendix B, and the Ecology wetland rating forms are included in Appendix C.

1.1 Review of Existing Information

Anchor QEA ecologists reviewed the following sources of information to support field observations:

- Natural Resources Conservation Service (NRCS) Web Soil Survey (USDA 2019)
- U.S. Fish and Wildlife Service (USFWS) Wetlands Mapper for National Wetlands Inventory map information (USFWS 2019a)
- USFWS ESA status reviews and listing information (USFWS 2019b)
- National Marine Fisheries Service (NMFS) ESA status reviews and listing information (NMFS 2019)
- EMC (City of Everett 2019a)
- City of Everett critical areas maps (City of Everett 2019b)
- City of Everett Shoreline Master Program (SMP) (City of Everett 2016)
- Snohomish County critical areas maps (Snohomish County 2019)
- Washington Department of Fish and Wildlife (WDFW) Priority Habitats and Species (PHS) Maps (WDFW 2019a)
- WDFW SalmonScape website (WDFW 2019b)
- Comments on the "Marine" portion of the Final Draft Remedial Investigation/Feasibility Study for the Former E.A. Nord Door Site in Everett, Washington (Ecology 2019a)
- *Final Draft Remedial Investigation/Feasibility Study – Former E.A. Nord Door Site* (Anchor QEA and SLR International Corporation 2016)
- *Bay Wood Remediation Project Habitat Assessment Report* (Shannon & Wilson, Inc. 2019)
- Aerial photographs, Google Earth, July 2019

2 Study Area Description

The developed portion of the study area is the former Nord Door site, located in an industrially zoned area in the city of Everett, Snohomish County, Washington (Township 29 North, Range 5 East, Section 7; Figure 1). The site is an approximately 33-acre area located at 300 West Marine View Drive, on Possession Sound near the confluence of the Snohomish River and Port Gardner Bay. The site lies on an area of fill that extends into Port Gardner Bay with tidal mudflats located to the north, south, and west. Structures on the site include a variety of active and inactive buildings, warehouses, storage tanks, and machinery.

The west portion of the site is an active asphalt batch plant. The main structures in the asphalt batch plant include an approximately four-story asphalt building, feeder shed, and a conveyor system. In addition to the structures, surface features at the site include asphalt paved areas and unpaved gravel areas. Approximately 95% of the site is currently paved or gravel or covered by structures. The developed portions of the site include parcels 29050700101200, 29050700100400, 29050700400100, and 29050700400101. Parcel boundaries are shown in Figure 3.

The study area for this CAR includes the upland portion of the site and associated marine shoreline, adjacent tidal mudflat habitat, and marine shoreline and tidal mudflat habitat south of the site adjacent to West Marine View Drive. The tidal mudflats and shorelines in the study area include parcels 29050700100800, 29050700401900, 2905070040200, 29050700401100, and 29050700401200 (Figure 3).

An approximately 2-acre vegetated knoll is located at the southern end of the developed portion of the study area. The knoll area was created in the early to mid-1960s when approximately 12 to 20 feet of sandy fill dredge material containing visible shell fragments was placed over this portion of the study area (Anchor QEA and SLR International Corporation 2016). An aerial photograph of the study area and existing conditions are shown in Figure 2.

Vacant land owned by the City of Everett is located north of the study area. West Marine View Drive is located east of the study area, and BNSF Railway railroad tracks are located east of West Marine View Drive. A large freshwater emergent wetland system identified as Maulsby Swamp (referred to as Maulsby Marsh in the RI/FS) is located east of the railroad tracks. Residential property is located on the hillside to the east of Maulsby Swamp (Figure 2).

2.1 Topography

Overall, the topography of the site is relatively flat, with a maximum elevation of approximately 15 feet above mean sea level. Slopes are limited to the shoreline adjacent to Port Gardner Bay. Almost the entire shoreline within the study area is armored with riprap, large rocks, and large and

small pieces of concrete and asphalt. The OHWM of the Port Gardner Bay shoreline within the study area was delineated as part of the investigation, as described in Section 4.

2.2 Soils

The NRCS Web Soil Survey (USDA 2019) identifies two soil series in the location of the study area: urban land and fluvaquents tidal. Urban land is soil that has been modified by disturbance of the natural layers with additions of fill material several feet thick to accommodate large industrial and housing installations. Fluvaquents tidal are soils in tidal areas. NRCS mapped soils are shown in Figure 4.

2.3 Hydrology

The study area is located in Water Resource Inventory Area 7, Snohomish (Ecology 2019b). Hydrologic characteristics in the study area are influenced by regional groundwater, direct precipitation, surface water runoff, and tidal fluctuations of Port Gardner Bay. A stormwater catch basin is located at the west end of the site within the area of an active asphalt batch plant. Several surface water outfalls located within the developed portion of the study area drain to Port Gardner Bay (Figure 2).

The confluence of the Snohomish River and Port Gardner Bay is located north of the study area. City of Everett (2019b) and Snohomish County (2019) critical area maps, WDFW PHS data (WDFW 2019a), and SalmonScape data (WDFW 2019b) do not identify any freshwater surface stream channels to Port Gardner Bay within the study area. East of the study area, Snohomish County (2019) critical area maps, WDFW PHS data (WDFW 2019a), and SalmonScape data (WDFW 2019b) identify an unnamed stream associated with Maulsby Swamp that flows through a culvert beneath West Marine View Drive and empties into Port Gardner Bay within the study area. Approximately 90% of the culvert is buried beneath the surface below the OHWM within the upper intertidal zone.

2.4 Plant Communities

Approximately 95% of the developed portion of the study area is currently paved, gravel, or covered by structures. Vegetation within the developed portion of the study area is primarily limited to patches of grass and weedy herbaceous vegetation or nonnative invasive shrubs. Shoreline vegetation includes narrow patches of trees, shrubs, and grass and weedy herbaceous vegetation in areas above the OHWM. Patches of salt-tolerant vegetation are located on and at the base of the shoreline slopes. An approximately 2-acre vegetated knoll is located at the southern end of the developed portion of the study area (Figure 2). Plant communities and wildlife habitat are described in Section 5.

The USFWS Wetlands Mapper for National Wetlands Inventory Map Information (USFWS 2019a), City of Everett (2019b) and Snohomish County (2019) critical area maps, and WDFW PHS data

(WDFW 2019a) do not identify freshwater wetland habitat within the study area. Anchor QEA did not identify any freshwater wetlands in the study area during the field investigation.

The marine environment of Port Gardner Bay within and outside the study area is mapped as estuarine subtidal habitat unconsolidated bottom (E1UB) and estuarine intertidal habitat unconsolidated shore (E2UB) (Snohomish County 2019, USFWS 2019a, WDFW 2019a). Anchor QEA identified and delineated 14 estuarine wetlands within the study area (Wetlands E1 through E14) as described in Section 3. County critical area maps do not identify any "Snohomish County wetland inventory" wetlands within the study area, but they do identify "Remote Sensing-Based Wetland Model" wetlands in locations similar to the patches of estuarine wetlands described in Section 3 (Snohomish County 2019).

3 Wetland Delineation

On July 1 and 3, 2019, Anchor QEA ecologists performed a wetland delineation and wetland rating analysis of wetland habitat in the study area. Fourteen estuarine wetlands (EW1 through E14) were identified and delineated. As described in this section, the estuarine wetlands are small patches or groups of small patches of salt-tolerant vegetation near the OHWM boundary. Most of the wetlands total less than 100 square feet in area. A description and wetland rating of the estuarine wetlands is provided in this section based on data collected during the investigation. No freshwater wetland features were identified during the investigation.

3.1 Wetland Delineation Methods

As specified by the EMC Chapter 19.37.190 (City of Everett 2019a), the boundaries of the wetlands were delineated according to the methods defined in the U.S. Army Corps of Engineers (Corps) *Wetland Delineation Manual* (Environmental Laboratory 1987), the *Regional Supplement to the Corps of Engineers Wetland Delineation Manual: Western Mountains, Valleys, and Coast Region (Version 2.0)* (Corps 2010), and the Washington Department of Ecology *Washington State Wetland Identification and Delineation Manual* (Ecology 1997). Soil colors were classified by their numerical description, as identified on a Munsell Soil Color Chart (Munsell 1994). Wetland plant indicator status was obtained from the Corps National Wetland Plant List website (Corps 2019). Estuarine wetland boundary points were collected with a Trimble GeoExplorer 6000 Series GeoXH hand-held GPS.

Vegetation, soils, and hydrology information was collected at sample plots and recorded on field data forms from the *Regional Supplement to the Corps of Engineers Wetland Delineation Manual: Western Mountains, Valleys, and Coast Region* (Corps 2010). Sampling plot field data forms for Wetlands EW1 through EW14 are included in Appendix B.

Wetlands EW1 through EW14 were rated using the most current version of Ecology guidance in the *Washington State Wetland Rating System – Western Washington: 2014 Update* (Hruby 2014) and according to City of Everett wetland rating criteria in Chapter 19.37.090 of the EMC (City of Everett 2019a). Wetland rating forms are included in Appendix C.

As described in Section 3.1, due to the similar characteristics and ratings of the estuarine wetlands, sampling plot field data forms and Ecology wetland rating forms have been combined to describe the 14 estuarine wetlands rather than providing individual field data forms and Ecology rating forms for each wetland.

3.1 Wetland Delineation Results

The following subsections provide a description of the estuarine wetlands delineated within the study area. Wetlands within about 200 feet of the study area are also described based on existing information and visual observations from the study area during the investigation.

3.1.1 Estuarine Wetlands EW1 Through EW 14

Fourteen estuarine wetlands (EW1 through E14) were delineated within the study area (Figures 5 through 9). The estuarine wetlands are small patches or groups of small patches of salt-tolerant emergent vegetation near the OHWM boundary. Most of the estuarine wetlands include several small patches of vegetation a few feet apart that are less than 100 total square feet in area. Photographs of the estuarine wetlands are included in Appendix A. A summary of vegetation, soils, and hydrology data collected at the wetland sampling plots is presented in this section and in the field data forms in Appendix B.

Dominant estuarine wetland vegetation includes baltic rush (*Juncus balticus*), fleshy jaumea (*Jaumea carnosa*), pickleweed (*Salicornia virginica*), seacoast bulrush (*Schoenoplectus maritimus*), sea plantain (*Plantago maritima*), and silverweed (*Potentilla anserina*). Additional species include American threesquare (*Schoenoplectus americanus*), fat-hen saltbush (*Atriplex patula*), Puget Sound gumweed (*Grindelia integrifolia*), salt grass (*Distichilis spicata*), sea milkwort (*Lysimachia maritima*), and seaside arrowgrass (*Triglochin maritima*).

Most of the wetlands do not have any adjacent vegetated buffers due to their locations within or at the toe of slope of the armored shoreline. As described in Section 5, existing upland shoreline vegetation, when present, is limited to narrow bands of vegetation at the top of the armored shoreline slope several feet or more from the estuarine wetland vegetation. Only 2 of the 14 estuarine wetlands have adjacent vegetated buffers: Wetlands EW3 and EW4. These two wetlands are located at the southern end of the developed portion of the study area where there is a vegetated knoll (Figure 2). The dominant buffer vegetation of Wetlands EW3 and EW4 includes big-leaf maple (*Acer macrophylum*) and red alder (*Alnus rubra*) and the nonnative invasive species Himalayan blackberry (*Rubus armeniacus*), Japanese knotweed (*Polygonum cuspidatum*), and English ivy (*Hedera helix*).

Soils were consistent with beach substrate dominated by sand, gravel, and cobble material. Wetland vegetation was frequently growing amongst concrete, asphalt, and angular rocks. The substrate was not penetrable below a few inches in many of the estuarine wetlands. Due to the dominant presence of beach sand, gravel, and cobble substrate and armored shoreline material with little or no silt or clay, hydric soil characteristics were present in only two of the wetlands, Wetlands EW3 and EW4. These wetlands had very dark gray (10YR 3/1) to very dark grayish brown (10YR 3/2) sandy soils with

yellowish brown (10YR 5/4) redoximorphic features a few inches deep above sand and gravel material.

Upland soils primarily included fill material with little or no silt or clay associated with the armored shoreline inland of the estuarine wetlands. Soils in the Wetland EW3 and EW4 upland plots were dark yellowish brown (10YR 4/4) sandy loam with gravel.

Estuarine wetland hydrology is associated with tidal activity. Soil saturation was at the surface or within a few inches of the surface in most of the wetlands, and the depth to the water table fluctuated from near the surface to several inches deep based on the tide conditions when the sample plot data were collected. In the upland plots, there were no hydrologic indicators.

Due to the soil substrate conditions, the wetland determinations were based on the vegetation and hydrology indicators, as well as the locations at an elevation at or near the OHWM. Estuarine wetland vegetation, soil, and hydrology characteristics for the 14 wetlands are presented in Table 1. Photographs of the estuarine wetlands are included in Appendix A.

Table 1
Estuarine Wetland Characteristics

Wetland Name	Vegetation	Soils	Hydrology	Area (sf)	Notes
EW1	Fleshy jaumea, pickleweed, salt grass	Beach sand and gravel and angular rock	Saturated substrate; water table varies with tide fluctuations.	~60	Vegetation is in patches.
EW2	Fleshy jaumea, pickleweed, sea plantain, salt grass, silverweed	Beach sand and gravel and angular rock	Saturated substrate; water table varies with tide fluctuations.	~80	Vegetation is in patches.
EW3	Fleshy jaumea, pickleweed, Puget Sound gumweed, silverweed	Beach sand and gravel	Saturated substrate; water table varies with tide fluctuations.	~330	Located adjacent to vegetated knoll.
EW4	Baltic rush, fat-hen saltbush, seacoast bulrush, seaside arrowgrass, silverweed	Beach sand and gravel	Saturated substrate; water table varies with tide fluctuations.	~1,600	Vegetation is in patches. Located adjacent to vegetated knoll.
EW5	Baltic rush, fat-hen saltbush, seacoast bulrush, sea plantain, silverweed	Beach sand, gravel, and cobble and pieces of angular rock	Saturated substrate; water table varies with tide fluctuations.	~150	Vegetation is in patches and sparsely vegetated.

Wetland Name	Vegetation	Soils	Hydrology	Area (sf)	Notes
EW6	Baltic rush, fat-hen saltbush, fleshy jaumea, pickleweed, seacoast bulrush, sea plantain, silverweed	Beach sand, gravel, and cobble and pieces of asphalt and angular rock	Saturated substrate; water table varies with tide fluctuations.	~260	Vegetation is in patches.
EW7	Baltic rush, fleshy jaumea, silverweed	Beach sand, gravel, and cobble and pieces of asphalt and angular rock	Saturated substrate; water table varies with tide fluctuations.	~200	Vegetation is in patches and sparsely vegetated.
EW8	Baltic rush, fleshy jaumea, silverweed	Beach sand, gravel, and cobble and pieces of asphalt and angular rock	Saturated substrate; water table varies with tide fluctuations.	~50	Vegetation is in patches.
EW9	Baltic rush, silverweed	Beach sand, gravel, and cobble and pieces of asphalt and angular rock	Saturated substrate; water table varies with tide fluctuations.	~60	Vegetation is in patches.
EW10	Pickleweed, sea plantain	Beach sand, gravel, and cobble and pieces of asphalt, angular rock, and riprap	Saturated substrate; water table varies with tide fluctuations.	~10	Sparsely vegetated.
EW11	Sea plantain, silverweed	Beach sand, gravel, and cobble and pieces of angular rock and riprap	Saturated substrate; water table varies with tide fluctuations.	~30	Vegetation is in patches and sparsely vegetated.
EW12	Silverweed	Beach sand and gravel and pieces of angular rock and riprap	Saturated substrate; water table varies with tide fluctuations.	~20	Sparsely vegetated amongst armored shoreline material.
EW13	Silverweed	Beach silt, sand, and gravel and pieces of angular rock and riprap	Saturated substrate; water table varies with tide fluctuations.	~20	Sparsely vegetated amongst armored shoreline material.
EW14	Seacoast bulrush, silverweed	Beach sand and gravel and pieces of angular rock	Saturated; water table associated with tide activity.	~20	Sparsely vegetated amongst armored shoreline material

3.1.2 Wetlands Outside the Study Area

This subsection describes wetlands located within about 200 feet of the study area boundary. North of the study area wetlands are located along the shoreline of the vacant land owned by the City of Everett (Figures 2 and 3). Three wetlands are located along the south side of the vacant lot according to the *Bay Wood Remediation Project Habitat Assessment Report* (Shannon & Wilson, Inc. 2019).

These wetlands are identified as Wetlands A, B, and C. Wetlands A and B are identified as estuarine wetlands and Wetland C is identified as a palustrine emergent depressional wetland.

Wetland A is located along the shoreline and is described as including several patches of salt-tolerant vegetation including salt grass, tufted hairgrass (*Deschampsia cespitosa*), and an unidentified sedge species. Wetland B is located at the terminus of the inlet between the study area and the adjacent property behind a disintegrating wood bulkhead. Vegetation includes salt grass, tufted hairgrass, and creeping bentgrass (*Agrostis stolonifera*). Wetland B ends near the chain-link fence that serves as the property line boundary. Wetland B does not extend into the study area. Wetlands A and B were visible from the study area and match the descriptions in the report (Shannon & Wilson, Inc. 2019).

Wetland C is located east of Wetland B, inland of the shoreline, and was identified as a constructed ditch with reed canarygrass. Wetland C was not visible from the study area.

A large freshwater wetland system with tidal influence, identified as Maulsby Swamp, is located east of the study area on the east side of West Marine View Drive and the railroad tracks (Figure 2). Maulsby Swamp is identified as a palustrine emergent wetland system by the USFWS Wetlands Mapper for National Wetlands Inventory Map Information (USFWS 2019a). Maulsby Swamp is also identified on City of Everett (2019b) and Snohomish County (2019) critical area maps, and WDFW PHS data (WDFW 2019a). City of Everett critical areas maps and the SMP identify Maulsby Swamp as a significant biological area of local importance. The SMP designates Maulsby Swamp as aquatic conservancy (City of Everett 2016).

Dominant vegetation observed within Maulsby Swamp during the investigation included cattail (*Typha latifolia*), hardstem bulrush (*Schoenoplectus maritimus*), common duckweed (*Lemna minor*), and sedge and rush species that were not identifiable to the species level from a distance.

A culvert below West Marine View Drive and the railroad tracks connects Maulsby Swamp with the marine environment of Port Gardner Bay. Flow from the culvert empties into Port Gardner Bay within the study area (Figure 2). The culvert opening is below the OHWM in the upper intertidal area. and approximately 90% of the culvert is buried beneath the surface. Salt-tolerant emergent plant species similar to those present within the study area are also present within Maulsby Swamp near the culvert.

Snohomish County (2019) critical area maps, WDFW PHS data (WDFW 2019a), and SalmonScape data (WDFW 2019b) identify an unnamed stream associated with Maulsby Swamp and the culvert. The SMP identifies the culvert associated with Maulsby Swamp as an approximately 200-foot-long, 36-inch-diameter concrete culvert that is a restoration opportunity for fish barrier removal (City of Everett 2016). Fish use of Maulsby Swamp is described in Section 5.2.4.

3.2 Wetland Rating and Buffer Guidance

3.2.1 Wetland Rating

Under the EMC Chapter 19.37.090 (Everett 2019a), wetlands are rated and regulated according to the categories defined by Ecology's *Washington State Wetland Rating System – Western Washington: 2014 Update* (Hruby 2014). All 14 estuarine wetlands meet the criteria for a Category II estuarine wetland under Ecology's *Washington State Wetland Rating System*. This rating system does not score functions for estuarine wetlands. Instead, estuarine wetlands are assigned a Category I or Category II rating. Category I estuarine wetlands include wetlands within a National Wildlife Refuge, National Park, National Estuary Reserve, Natural Area Preserve, State Park or Educational, Environmental, or Scientific Reserve designated under WAC 332-30-151. Category I wetlands also include wetland units at least 1 acre in size that meet two of the following three conditions:

- The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing, and has less than 10% cover of non-native plant species).
- At least three quarters of the landward edge of the wetland has a 100-foot buffer of shrub, forest, or ungrazed or unmowed grassland.
- The wetland has at least two of the following features: tidal channels, depressions with open water, or contiguous freshwater wetlands.

Based on Ecology's rating criteria, the 14 estuarine wetlands identified in the study area do not meet two of the three conditions above and are therefore Category II estuarine wetlands.

The shoreline within the study area is a shoreline of the state. Under the SMP, all wetlands associated with shorelines of the state are identified as shorelands (City of Everett 2016).

3.2.2 Wetland Buffer Guidance

Required wetland buffers have been identified according to the current EMC (Everett 2019a). The EMC Chapter 19.37.110 identifies minimum protective buffer widths based on the wetland category and the Ecology habitat rating score, per the 2014 Ecology rating system. As described in Section 3.2.1, habitat scores are not applicable for estuarine wetlands. Accordingly, Wetlands EW1 through EW14 require a 150-foot buffer for a Category II estuarine wetland system.

The 2014 wetland rating forms for Wetlands EW1 through EW14 are included in Appendix C. Due to the similar characteristics and ratings of the estuarine wetlands, the Ecology wetland rating forms have been combined to describe the 14 estuarine wetlands rather than providing individual Ecology rating forms for each wetland. The wetland boundaries and protective buffers extending into the study area are shown in Figures 5 through 9. Table 2 lists the Ecology wetland ratings and classifications and the City of Everett buffer widths.

Table 2
Summary of Wetland Ratings, Classifications, and Buffer Widths

Wetland Name	Area (sf)	Hydrogeomorphic Classification	Ecology and City of Everett Rating	City of Everett Buffer Width (ft)
EW1	~60	Estuarine	II	150
EW2	~80	Estuarine	II	150
EW3	~330	Estuarine	II	150
EW4	~1,600	Estuarine	II	150
EW5	~150	Estuarine	II	150
EW6	~260	Estuarine	II	150
EW7	~200	Estuarine	II	150
EW8	~50	Estuarine	II	150
EW9	~60	Estuarine	II	150
EW10	~10	Estuarine	II	150
EW11	~30	Estuarine	II	150
EW12	~20	Estuarine	II	150
EW13	~20	Estuarine	II	150
EW14	~20	Estuarine	II	150

4 Ordinary High Water Mark Delineation

This section describes the delineation of the marine shoreline OHWM in the study area. No freshwater stream surface channels are located within the study area. As described in Section 3, a culvert connected to Maulsby Swamp flows into the upper intertidal area within the study area.

4.1 Methods

To document and describe the marine shoreline characteristics within the study area, Anchor QEA reviewed existing information (Section 1.1), performed an aerial photograph assessment, and conducted site visits on July 1 and 3, 2019. During the site visits, Anchor QEA ecologists documented general information regarding shoreline characteristics while walking through the study area.

A delineation of the OHWM of the marine shoreline of the site was performed on July 1 and 3, 2019. The OHWM delineation included the entire shoreline of the study area. Anchor QEA ecologists identified the marine OHWM boundary consistent with Chapter 90.58 of the Revised Code of Washington (RCW), Chapter 173-22 of the Washington Administrative Code (WAC), and Ecology's technical report, *Determining the Ordinary High Water Mark for Shoreline Management Act Compliance in Washington State* (Ecology 2016). WAC defines the OHWM as follows:

> "Ordinary high water line" means the mark on the shores of all waters that will be found by examining the bed and banks and ascertaining where the presence and action of waters are so common and usual and so long continued in ordinary years, as to mark upon the soil or vegetation a character distinct from that of the abutting upland: Provided, that in any area where the ordinary high water line cannot be found the ordinary high water line adjoining saltwater shall be the line of mean higher high water and the ordinary high water line adjoining freshwater shall be the elevation of the mean annual flood.

The following criteria clarify this mark on tidal waters (WAC 173-22-030, Definitions):

> (a) Tidal waters.
>
> (i) In high energy environments where the action of waves or currents is sufficient to prevent vegetation establishment below mean higher high tide, the ordinary high water mark is coincident with the line of vegetation. Where there is no vegetative cover for less than one hundred feet parallel to the shoreline, the ordinary high water mark is the average tidal elevation of the adjacent lines of vegetation. Where

the ordinary high water mark cannot be found, it is the elevation of mean higher high tide;

(ii) In low energy environments where the action of waves and currents is not sufficient to prevent vegetation establishment below mean higher high tide, the ordinary high water mark is coincident with the landward limit of salt tolerant vegetation. 'Salt tolerant vegetation' means vegetation which is tolerant of interstitial soil salinities greater than or equal to 0.5 parts per thousand

The marine shoreline of Port Gardner Bay within the study area is a high-energy environment.

The OHWM delineation also included a delineation of piles and derelict structures below the OHWM within the study area. The OHWM, pile, and derelict structure field data points were collected with a Trimble GeoExplorer 6000 Series GeoXH hand-held GPS.

4.2 OHWM Marine Shoreline

The marine OHWM delineation within the study area included a 5,840-foot reach of shoreline. The marine shoreline is armored with large and small pieces of concrete and asphalt, riprap and large rocks, and exposed rebar and pieces of metal. The only reach of shoreline that is not armored is a vegetated knoll located at the southern end of the developed portion of the study area (Figure 2). With the exception of the vegetated knoll, shoreline vegetation is absent or limited to narrow patches of trees and nonnative shrub, grass, and herbaceous vegetation growing on top of the shoreline above the OHWM. Shoreline vegetation is described in Section 5. The marine OHWM delineation results are shown in Figures 5 through 9. Existing conditions of the marine shoreline are shown in the photographs in Appendix A.

Under the SMP, the study area marine shoreline is identified as a shoreline of the state. Shorelands are defined as all lands extending landward 200 feet of the shoreline of the state OHWM. The SMP also identifies the area of Port Gardner Bay seaward of the extreme low tide as a shoreline of statewide significance. The aquatic area of the inlet north of the study area is designated as aquatic conservancy (City of Everett 2016).

As described in Section 3, 14 estuarine wetlands, Wetlands EW1 through EW 14, are located along the shoreline OHWM. The marine environment of Port Gardner Bay within and outside the study area is mapped as estuarine subtidal habitat unconsolidated bottom (E1UB) and estuarine intertidal habitat unconsolidated shore (E2UB) (Snohomish County 2019, USFWS 2019a, WDFW 2019a).

4.3 Piles and Derelict Structures

Several dozen derelict piles are located within and near the study area. Piles are located along the north and south shorelines of the developed portions of the study area. There are rows of piles perpendicular to the shoreline adjacent to West Marine View Drive that extend into the bay outside the study area boundary. Derelict structures observed within or near the study area below the OHWM, include an abandoned barge, a remnant barge structure, and a remnant wood bulkhead with piles. These features are shown in Figures 5 through 9 and the photographs in Appendix A.

5 Habitat Assessment

This section describes wildlife species and habitats in the study area, including terrestrial and aquatic habitats and plant communities. WDFW-documented species and priority habitats, and ESA-listed species and critical habitats, within and near the study area are also identified.

Per EMC Chapter 19.37.190 (City of Everett 2019a), Port Gardner Bay in the study area is classified as a FWHCA under the category of "habitats of primary association." Habitats of primary association are defined as critical component(s) of the habitats of federally or state-listed endangered, threatened, candidate, sensitive, and priority wildlife or plant species which, if altered, may reduce the likelihood that the species will maintain and reproduce over the long term. Habitats of primary association include, but are not limited to, winter ranges, migration ranges, breeding sites, nesting sites, regular large concentrations, communal roosts, roosting sites, staging areas, and priority habitats listed by WDFW.

5.1 Methods

The habitat assessment was performed based on the reporting requirements identified in Chapter 19.37.190 of the EMC (Everett 2019a). Anchor QEA performed an aerial photograph assessment, conducted site visits on July 1 and 3, 2019, and reviewed the WDFW, USFWS, and NMFS databases (Section 1.1) for information on state-protected species and priority habitats and federally listed species and critical habitats protected under the ESA that may occur in or near the study area. During the site visit, Anchor QEA ecologists documented general information regarding habitats and dominant plant species and communities while walking through the study area. The entire study area was accessible during the investigation. All wildlife species, tracks, and other signs observed during the site visit were documented. All observations were qualitative; no quantitative wildlife surveys were performed.

5.2 Habitat Assessment

The study area is located in an industrially zoned area in Possession Sound near the confluence of the Snohomish River and Port Gardner Bay. The developed portion of the study area lies on fill that extends into Port Gardner Bay, with tidal mudflats located to the north, south, and west. Structures in the developed portion of the study area are described in Section 2. Overall, approximately 95% of the developed portion of the study area is currently paved, gravel, or covered by structures. Figure 2 provides an aerial photograph of the study area and existing conditions.

5.2.1 Vegetation

Vegetation communities within the study area include the following five general categories:

- The developed portion of the study area, which includes the top of slope of the armored shoreline and some patches of vegetation inland of the slope
- The vegetated knoll at the southern end of the developed portion of the study area
- The shoreline along West Marine View Drive
- Patches of American dune grass (*Leymus mollis*) above the OHWM
- Estuarine wetlands

Estuarine wetland vegetation and habitat characteristics are described in Section 3. Photographs of vegetation within the study area are presented in Appendix A.

Trees in the developed portion of the study area are limited to a few areas at the top of the armored slope. Lombardy popular (*Populus nigra*) is the most common species, with a few domestic apple trees (*Malus domestica*) observed. Shrub vegetation is dominated by the nonnative invasive species Himalayan blackberry (*Rubus armeniacus*), butterfly bush (*Buddleja davidii*), and Scotch broom (*Cytisus scoparius*). These shrubs are also located inland of the armored slope in isolated patches growing in gravel or cracks in paved surfaces. Herbaceous vegetation includes grass and weedy species such as common velvet grass (*Holcus lanatus*), curly dock (*Rumex crispus*), Canadian thistle (*Cirsium arvense*), tall fescue (*Festuca arundinacea*), and yarrow (*Achillea millefolium*).

The vegetated knoll includes a variety of native and nonnative vegetation. Dominant native species include big-leaf maple, black cottonwood (*Populus trichocarpa*), paper birch (*Betula papyrifera*), red alder (*Alnus rubra*), Indian plum (*Oemleria cerasiformis*), Nootka rose (*Rosa nutkana*), oceanspray (*Holodiscus discolor*), and red elderberry (*Sambucus racemosa*). Dominant nonnative species include butterfly bush, Himalayan blackberry, Scotch broom, Japanese knotweed, English ivy, and orchard morning glory (*Convolvulvus arvensis*). There are several trails within the vegetated knoll, with debris and trash scattered throughout the area.

Vegetation along West Marine View Drive between the pavement and the shoreline is limited to a narrow strip of managed grass with ornamental hedges and shrubs and a few western white pine trees (*Pinus monticola*) at the top of the armored slope. Patches of American dune grass are located above the OHWM along West Marine View Drive and the southern shoreline of the developed portion of the study area. The American dune grass patches are small, less than 100 square feet in area. The American dune grass locations were surveyed as part of the investigation and are shown in Figures 5 through 9. Table 3 provides a list of all plant species observed during the investigation.

Table 3
Plant Communities and Species Observed in the Study Area

Scientific Name	Common Name
Trees	
Acer macrophylum	Big-leaf maple
Alnus rubra	Red alder
Betula papyrifera	Paper birch
Malus domestica	Domestic apple
Pinus monticola	Western white pine
Populus nigra	Lombardy popular
Populus trichocarpa	Black cottonwood
Prunus emarginata	Bitter cherry
Shrubs	
Cytisus scoparius	Scotch broom
Hedera helix	English ivy
Holodiscus discolor	Oceanspray
Ilex aquifolium	Holly
Lonicera involucrata	Twinberry
Mahonia aquifolium	Tall Oregon grape
Oemleria cerasiformis	Indian plum
Rosa nutkana	Nootka rose
Rubus armeniacus	Himalayan blackberry
Rubus parviflorus	Western thimbleberry
Sambucus racemosa	Red elderberry
Symphoricarpos albus	Snowberry
Grass, Ferns, and Herbaceous	
Achillea millefolium	Yarrow
Atriplex patula	Fat-hen saltbush
Cirsium arvense	Canadian thistle
Convolvulvus arvensis	Orchard morning glory
Distichlis spicata	Salt grass
Epilobium angustifolium	Fireweed
Equisetum arvense	Field horsetail
Festuca arundinacea	Tall fescue
Geranium robertianum	Stinky bob
Grindelia integrifolia	Puget Sound gumweed
Holcus lanatus	Common velvet grass
Hypericum perforatum	St. John's wort

Scientific Name	Common Name
Jaumea carnosa	Fleshy jaumea
Juncus balticus	Baltic rush
Leymus mollis	American dune grass
Lysimachia maritima	Sea milkwort
Pelvetiopsis limitata	Rockweed
Plantago maritima	Sea plantain
Potentilla anserina	Silverweed
Polygonum cuspidatum	Japanese knotweed
Polystichum munitum	Sword fern
Rumex crispus	Curly dock
Salicornia virginica	Pickleweed
Schoenoplectus americanus	American threesquare
Schoenoplectus maritimus	Seacoast bulrush
Scirpus acutus	Hardstem bulrush
Taraxacum officinale	Common dandelion
Triglochin maritima	Seaside arrowgrass

5.2.2 Terrestrial Wildlife Species

A variety of terrestrial wildlife species were observed during the investigation. All of the observed wildlife species were birds, with the exception of one mammal species, European rabbit (*Oryctolagus cuniculus*). Rabbits were observed four times within the developed portions of the study area.

The most common bird species included barn swallow (*Hirundo rustica*), crow (*Corvus brachyrhynchos*), glaucous-winged gull (*Larus glaucescens*), and ring-billed gull (*Pandion haliaetus*). Three osprey (*Pandion haliaetus*) nests were observed on piles outside the study area. Two of the three nests were occupied on both days of the investigation. The osprey nest locations are shown in Figure 5. No amphibian or reptile species, or tracks or other signs, were observed during the investigation. Table 4 provides a list of all terrestrial wildlife species observed during the investigation.

Table 4
Terrestrial Wildlife Species Observed in the Study Area

Scientific Name	Common Name	Notes
Mammals		
Oryctolagus cuniculus	European rabbit	Occasionally observed in developed areas.
Birds		
Anas platyrhynchos	Mallard	Occasionally observed in mudflat habitat.
Ardea herodias	Great blue heron	Occasionally observed in mudflat habitat.
Branta canadensis	Canada goose	Adults with young observed in intertidal habitat and broken egg shells were present amongst emergent vegetation.
Charadrius vociferous	Killdeer	Occasionally observed in developed gravel areas.
Columba livia	Rock dove	Frequently observed perched on structures.
Corvus brachyrhynchos	American crow	Frequently observed perched on trees and structures and flying over study area.
Hirundo rustica	Barn swallow	Frequently observed foraging over intertidal and subtidal habitat.
Larus delawarensis	Ring-billed gull	Frequently observed perched on piles and structures and mudflat habitat.
Larus glaucescens	Glaucous-winged gull	Frequently observed perched on piles and structures and mudflat habitat.
Larus occidentalis	Western gull	Frequently observed perched on piles and structures and mudflat habitat.
Pandion haliaetus	Osprey	Three active nests observed on piles.
Parus articapillus	Black-capped chickadee	Frequently observed in tree and shrub vegetation.
Passer domesticus	House sparrows	Frequently observed near structures.
Turdus migratorius	American robin	Frequently observed in trees and flying over study area.
Zenaida macroura	Mourning dove	Frequently observed perched on structures.

5.2.3 Aquatic Wildlife Species

Aquatic wildlife species observed within the study area were limited to barnacles on the armored shoreline material below the OHWM. The shoreline also lacked diverse shells and shell hash commonly found along Puget Sound shorelines, indicating a relative lack of shellfish diversity in the mudflat habitat. Clam siphon holes were common within the mudflat habitat. The SMP identifies the mudflat habitat on the south side of the study area as Maulsby Mudflat and as a restoration opportunity. As described in Section 3, the culvert associated with Maulsby Swamp is also identified

as a restoration opportunity for fish barrier removal (City of Everett 2016). Fish use in the study area and Port Gardner Bay is described in Section 5.2.4.

Clam surveys were performed in the mudflat habitat in 2013 as part of the RI/FS analysis (Anchor QEA and SLR International Corporation 2016). The clam surveys included areas of the mudflat habitat inside and seaward of the study area. Soft shell clam (*Mya arenaria*), an introduced species, was the only clam species observed during the clam surveys. The clams were typically collected within 10 to 12 inches of the surface, and siphon holes were often indicators of where clams were found. The dominant silt content of the mudflat habitat does not provide the sand and gravel substrate typically associated with Puget Sound native clam species.

5.2.4 Priority Species and Habitats

The WDFW PHS website (WDFW 2019a) does not identify any documented occurrences of any terrestrial species in the developed portions of the study area. The WDFW PHS website identifies the marine habitat within the study area as habitat for shorebird concentrations.

City of Everett critical area maps do not identify habitats of primary association for terrestrial species within the study area (City of Everett 2019b). Habitats of primary association outside the study area identified by City of Everett critical areas maps include the following:

- Bald eagle nest occurrences are located inland of the study area.
- Purple martin habitat is located north and south of the study area.
- Arctic tern nests are located south of the study area.
- Osprey nests are located in Port Gardner Bay west of the study area.
- Harbor seal and California sea lion haul outs are located south of the study area.
- Intertidal hard shell clam habitat is located west of the study area.
- Regular large concentrations of waterfowl are located west of the study area.

Fish species documented in Port Gardner Bay according to the WDFW PHS and SalmonScape websites (WDFW 2019a, 2019b) include fall Chinook salmon (*Oncorhynchus tshawytscha*), fall chum salmon (*O. keta*), pink salmon (*O. gorbuscha*), coho salmon (*O. kisutch*), and winter steelhead trout (*O. mykiss*). These fish species are also identified by the WDFW PHS and SalmonScape websites as occurring within Maulsby Swamp. Additional analysis of federally listed species and critical habitats protected under the ESA, as identified by USFWS and NMFS, is presented in Section 5.3.

Rearing coho and sockeye salmon (*Oncorhynchus nerka*) and the presence of summer/fall Chinook salmon, summer/winter steelhead, pink salmon, fall chum salmon, bull trout (*Salvelinus confluentus*), and residential coastal cutthroat (*O. clarkii clarkii*) are documented in the Snohomish River north of the study area (City of Everett 2016).

The SMP (City of Everett 2016) identifies the most abundant nonsalmonid species in the Snohomish River and Port Gardner Bay estuary to include juvenile starry flounder (*Platichthys stellatus*), peamouth chub (*Mylocheilus caurinus*), Pacific staghorn sculpin (*Leptocottus armatus*), and prickly sculpin (*Cottus asper*). Species also documented include three-spined stickleback (*Gasterosteus aculeatus*) and shiner perch (*Cymatogaster aggregata*). Less abundant species include candlefish *(Thaleichthys pacificus*), Pacific herring (*Clupea pallasi*), and pumpkinseed (*Lepomis gibbosus*).

In the marine habitat in Port Gardner Bay and Possession Sound, common species include starry flounder and English sole (*Parophrys vetulus*). Numerous other species, typically associated with estuarine habitats for at least part of their life history, are also found in Port Gardner Bay. These species include tadpole sculpin (*Enophrys bison*), striped seaperch (*Embiotoca lateralis*), Pacific tomcod (*Microgadus proximusin*), saddleback gunnel (*Pholis ornata*), sand sole (*Psettichthys melanostictus*), Pacific hake (*Merlucclus productus*), walleye pollock (*Theragra chalcogramma*), copper rockfish (*Sebastes caurinus*), spiny dogfish (*Squalus acanthias*), snake prickleback (*Lumpenus sagitta*), and bay goby (*Lepidogobius lepidus*).

The WDFW PHS website (WDFW 2019a) and City of Everett (2019b) critical area maps identify the marine habitat of Port Gardner Bay within the study area as habitat for Dungeness crab (*Cancer magister*). City of Everett critical area maps also identify the Dungeness crab habitat within the study area as a FWHCA under the category of habitats of primary association.

5.3 ESA-Listed Species and Critical Habitat Assessment

ESA-listed species and critical habitats under NMFS and USFWS jurisdiction in western Washington are referenced on the agencies' websites. The USFWS identifies ESA-listed species that occur or may occur within a specific location where a project is proposed (USFWS 2019b). The NMFS identifies ESA-listed species that occur or may occur within a broad geographic area, such as an evolutionarily significant unit (ESU) or a distinct population segment (DPS) rather than a project-specific location (NMFS 2019).

5.3.1 Federally Listed Species that May Occur in the Study Area

The July 2019 status of federally listed species and critical habitats protected under the ESA that occur or may occur within the study area is presented in Table 5.

As shown in Table 5, 10 ESA-listed species occur or may occur within the study area. Of these species, nine are aquatic (seven fish and two marine mammals) and one is terrestrial (bird). No ESA-listed plant or insect species are identified as potentially occurring within the study area. Designated critical habitat for 9 of the 10 species is present within Snohomish County. The following discussion provides an assessment of the potential presence of ESA-listed species and habitats within the study area.

Table 5
Federally Listed Species that May Occur in the Study Area, with their ESA and Critical Habitat Status

Species	Status	Agency	Critical Habitat
Salmonids			
Chinook salmon (*Oncorhynchus tshawytscha*)	Threatened (Puget Sound ESU)	NMFS	Designated
Chum salmon (*Oncorhynchus keta*)	Threatened (Hood Canal ESU)	NMFS	Designated (does not include study area)
Puget Sound steelhead trout (*Oncorhynchus mykiss)*	Threatened (Puget Sound ESU)	NMFS	Designated
Bull trout (*Salvelinus confluentus*)	Threatened (Puget Sound DPS)	USFWS	Designated Puget Sound
Rockfish			
Bocaccio (*Sebastes paucispinus)*	Endangered (Puget Sound/Georgia Basin DPS)	NMFS	Designated Puget Sound
Canary rockfish (*Sebastes pinniger)*	Threatened (Puget Sound/Georgia Basin DPS)	NMFS	Designated Puget Sound
Yelloweye rockfish *(Sebastes ruberrimus)*	Threatened (Puget Sound/Georgia Basin DPS)	NMFS	Designated Puget Sound
Marine Mammals			
Killer whale (*Orcinus orca*)	Endangered (Southern Resident DPS)	NMFS	Designated
Humpback whale (*Megapterus novaeangliae*)	Endangered	NMFS	None designated or proposed
Birds			
Marbled murrelet *(Brachyramphus marmoratus*)	Threatened	USFWS	Designated (does not include study area)

5.3.1.1 Aquatic Listed Species

All nine of the ESA-listed aquatic species identified in Table 5 are documented in Puget Sound and are known to occur or potentially occur in Possession Sound.

The fish species bocaccio, canary rockfish, and yelloweye rockfish are associated with deepwater habitats of Puget Sound and typically breed and forage near the ocean floor. Adults of these species are unlikely in inner Port Gardner Bay. Juveniles of these species do migrate in nearshore habitats and could potentially occur in the nearshore habitat of Port Gardner Bay in the vicinity of the study area.

Southern Resident killer whale sightings typically occur in the deepwater habitat of Puget Sound and may occur in outer Possession Sound, but they are unlikely to occur in the narrow waterway of Port

Gardner Bay in the vicinity of the study area. Areas with water less than 20 feet deep are not designated as critical habitat for killer whales. Offshore habitats of Possession Sound and Port Gardner Bay with water deeper than 20 feet meet the criteria for killer whale designated critical habitat.

Humpback whale sightings generally occur off the outer coast but do occur in Puget Sound. They are unlikely to occur in the narrow confines of the study area in the vicinity of Port Gardner Bay.

Of the nine ESA-listed aquatic species, only the following four species are likely to occur within Port Gardner Bay in the vicinity of the study area:

- Chinook salmon (Puget Sound ESU)
- Chum salmon (Hood Canal ESU)
- Steelhead trout (Puget Sound ESU)
- Bull trout (Coastal-Puget Sound DPS)

The marine habitat of Possession Sound and Port Gardner Bay is within designated critical habitat for Chinook salmon, steelhead, and bull trout.

5.3.1.2 Terrestrial Listed Species

Marbled murrelets forage in Puget Sound and could occur offshore of the study area in Possession Sound. In Snohomish County, designated critical habitat for marbled murrelet includes old-growth forest with specific tree stand characteristics.

5.3.2 Federally Listed Species that Do Not Occur in the Study Area

There are six ESA-listed or proposed species identified by the USFWS and NMFS as potentially occurring in the study area that do not occur in Possession Sound or the vicinity of the study area based on the species' life history and habitat requirements. These species are identified in Table 6.

Table 6
Federally Listed Species with Life History and Habitat Requirements that Do Not Occur in the Study Area, with their ESA and Critical Habitat Status

Species	Status	Agency	Critical Habitat
Fish			
Green sturgeon *(Acipenser medirostris)*	Threatened (Southern DPS)	NMFS	None in Puget Sound
Turtles			
Leatherback sea turtle (*Dermochelys coriacea*)	Endangered	NMFS	None designated or proposed in Washington state
Mammals			
Gray wolf (Canis *lupus*)	Proposed Endangered	USFWS	None designated or proposed
Wolverine (*Gulo gulo luscus*)	Proposed Threatened	USFWS	None designated or proposed
Birds			
Streaked horned lark (*Eremophila alpestris strigata)*	Threatened	USFWS	Designated (does not include study area)
Yellow-billed cuckoo (*Coccyzus americanus)*	Threatened	USFWS	Proposed (does not include study area)

As identified in Table 6, two ESA-listed aquatic species that could occur in Puget Sound are not likely to occur in the study area due to the location in Port Gardner Bay and the species' life history and habitat requirements. These include the southern DPS of green sturgeon and leatherback sea turtle. Observations of green sturgeon in Puget Sound are much less common compared to coastal Washington estuaries and bays and the Lower Columbia River estuary. Leatherback sea turtles primarily occur in outer coastal areas and are extremely rare in Puget Sound.

Potential habitat for the other four ESA-listed terrestrial species identified in Table 6 (gray wolf, wolverine, streaked horned lark, and yellow-billed cuckoo) is not located within miles of the study area and these species are not associated with areas of human activity.

6 Conclusions

Wildlife rely on vegetation for food, shelter, and cover from predators. Wildlife diversity is generally related to the structure and composition of plant species within vegetation communities. In general, vegetation communities that contain few species or vegetative layers (herbaceous, shrubs, or trees) support a low diversity of wildlife, whereas vegetation communities that are more complex and contain a wide variety of plant species and vegetative layers can support a greater diversity of wildlife. Forested and riparian areas with well-developed shrub layers are likely to support the greatest number of species and populations of wildlife.

Overall, the study area includes potential habitat for terrestrial wildlife species typical of industrial areas with marine shorelines. Potential wildlife habitat of the estuarine wetlands is limited due to the small size of the wetlands and their location along an armored shoreline. Wildlife use of the habitat in the study area likely includes a variety of native and nonnative wildlife species typical of populated, developed areas in Snohomish County and western Washington. Habitat surrounding the study area includes similar industrial properties and disturbed areas associated with residential and commercial development.

The marine habitat of Port Gardner Bay provides foraging habitat for waterfowl and other birds and aquatic species typically found in the marine and estuarine environments of Puget Sound. The mudflat habitat lacks sand and gravel substrate that would support a more diverse selection of shellfish and other invertebrate species.

While critical areas maps and databases identify very limited habitat and terrestrial wildlife species presence within the study area, the marine habitat in the study area is a FWHCA under the City of Everett category of habitats of primary association. A variety of wildlife species and habitats are identified in the surrounding aquatic and shoreline habitats of Possession Sound.

Even with the dominant presence of development in the study area and vicinity, Port Gardner Bay and the Snohomish River provide habitat that supports a wide variety of fish and other aquatic and terrestrial wildlife species for breeding, foraging, and resting.

The following is a summary of the regulatory results of the investigation:

- The 14 estuarine wetlands delineated within the study area are Category II wetlands according to Ecology and City of Everett guidelines.
- The shoreline within the study area is a shoreline of the state.
- All wetlands associated with shorelines of the state are identified as shorelands under the SMP.
- Shorelands are also defined as all lands extending landward 200 feet from the shoreline of the state OHWM.

- The marine habitat in the study area is a FWHCA under the category of habitats of primary association.
- Port Gardner Bay seaward of the extreme low tide is a shoreline of statewide significance under the SMP.
- The aquatic area of the inlet north of the study area is designated as aquatic conservancy under the SMP.
- Maulsby Swamp, located outside the study area, is designated as aquatic conservancy under the SMP.

Appendix B
Wetland Field Data Forms

WETLAND DETERMINATION DATA FORM – Western Mountains, Valleys, and Coast Region

Project Site: JELD-WENN City/County: Everett /Snohomish Sampling Date: July 3. 2019

Applicant/Owner: JELD-WENN State: WA Sampling Point: SP1W Wet EW1-EW2

Investigator(s): C. Douglas Section, Township, Range: S07 T29N R5E

Landform (hillslope, terrace, etc.): Beach Local relief (concave, convex, none): concave Slope (%): 0% to 5%

Subregion (LRR): A Lat: 47.23N Long: -122.59W Datum: _____

Soil Map Unit Name: Made Land NWI classification: None

Are climatic / hydrologic conditions on the site typical for this time of year? Yes ☒ No ☐ (If no, explain in Remarks.)

Are Vegetation ☐, Soil ☐, or Hydrology ☐, significantly disturbed? Are "Normal Circumstances" present? Yes ☒ No ☐

Are Vegetation ☐, Soil ☐, or Hydrology ☐, naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes ☒	No ☐	**Is the Sampled Area within a Wetland?**	**Yes ☒ No ☐**
Hydric Soil Present?	Yes ☒	No ☐		
Wetland Hydrology Present?	Yes ☒	No ☐		

Remarks: **Wetlands are estuarine systems located along an armored shoreline near the marine OHWM. Substrate is beach material, sand, gravel, cobble, and pieces of angular rock, concrete, and riprap. Wetlands are small patches of salt tolerant vegetation, typically less than 100 total square feet in area. Due to the similar characteristics and small sizes of the wetlands, the wetland rating forms represent two of the delineated wetlands (EW1 and EW2).**

VEGETATION – Use scientific names of plants

Tree Stratum (Plot size: 30 foot radius)	Absolute % Cover	Dominant Species?	Indicator Status

50% = _____, 20% = _____	_____	= Total Cover	
% Bare Ground in Herb Stratum 10			

Dominance Test Worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC:	3	(A)
Total Number of Dominant Species Across All Strata:	3	(B)
Percent of Dominant Species That Are OBL, FACW, or FAC:	100	(A/B)

Prevalence Index worksheet:

Total % Cover of:		Multiply by:	
OBL species	0	x1 =	0
FACW species	0	x2 =	0
FAC species	_____	x3 =	_____
FACU species	_____	x4 =	4
UPL species	0	x5 =	0
Column Totals:	_____ (A)		_____ (B)

Prevalence Index = B/A = _____

Hydrophytic Vegetation Indicators:

- ☐ 1 – Rapid Test for Hydrophytic Vegetation
- ☒ 2 - Dominance Test is >50%
- ☐ 3 - Prevalence Index is ≤3.0[1]
- ☐ 4 - Morphological Adaptations[1] (Provide supporting data in Remarks or on a separate sheet)
- ☐ 5 - Wetland Non-Vascular Plants[1]
- ☐ Problematic Hydrophytic Vegetation[1] (Explain)

[1]Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Hydrophytic Vegetation Present? **Yes ☒ No ☐**

Remarks: 100% dominant wetland vegetation per the Dominance Test. Salt tolerant wetland vegetation. Vegetation is in small patches. Wetlands EW1 and EW2 have similar species composition.

Project Site: Costacos Property

SOIL

Sampling Point: SP1W Wet EW1-EW2

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth	Matrix		Redox Features					
(inches)	Color (moist)	%	Color (moist)	%	Type[1]	Loc[2]	Texture	Remarks
0 to 18+	NA	NA	None	None	None	None	Sand	w/gravel and angular rock

[1]Type: C= Concentration, D=Depletion, RM=Reduced Matrix, CS=Covered or Coated Sand Grains. [2]Location: PL=Pore Lining, M=Matrix

Hydric Soil Indicators: (Applicable to all LRRs, unless otherwise noted.)

- ☐ Histosol (A1)
- ☐ Histic Epipedon (A2)
- ☐ Black Histic (A3)
- ☐ Hydrogen Sulfide (A4)
- ☐ Depleted Below Dark Surface (A11)
- ☐ Thick Dark Surface (A12)
- ☐ Sandy Mucky Mineral (S1)
- ☐ Sandy Gleyed Matrix (S4)
- ☐ Sandy Redox (S5)
- ☐ Stripped Matrix (S6)
- ☐ Loamy Mucky Mineral (F1) **(except MLRA 1)**
- ☐ Loamy Gleyed Matrix (F2)
- ☐ Depleted Matrix (F3)
- ☐ Redox Dark Surface (F6)
- ☐ Depleted Dark Surface (F7)
- ☐ Redox Depressions (F8)

Indicators for Problematic Hydric Soils[3]:

- ☐ 2 cm Muck (A10)
- ☐ Red Parent Material (TF2)
- ☐ Very Shallow Dark Surface (TF12)
- ☐ Other (Explain in Remarks)

[3]Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if present):

Type: Beach substrate

Depth (inches): Difficlut to dig below about 10 inches

Hydric Soils Present? **Yes** ☒ **No** ☐

Remarks: Sand and gravel beach substrate with pieces of armored shoreline material. Hydric soils based on location at and below the marine OHWM. Wetlands EW1 and EW2 have similar soil and substrate characteristics.

HYDROLOGY

Wetland Hydrology Indicators:

Primary Indicators (minimum of one required; check all that apply)

- ☐ Surface Water (A1)
- ☒ High Water Table (A2)
- ☒ Saturation (A3)
- ☒ Water Marks (B1)
- ☐ Sediment Deposits (B2)
- ☒ Drift Deposits (B3)
- ☐ Algal Mat or Crust (B4)
- ☐ Iron Deposits (B5)
- ☐ Surface Soil Cracks (B6)
- ☐ Inundation Visible on Aerial Imagery (B7)
- ☐ Sparsely Vegetated Concave Surface (B8)
- ☐ Water-Stained Leaves (B9) **(except MLRA 1, 2, 4A, and 4B)**
- ☐ Salt Crust (B11)
- ☒ Aquatic Invertebrates (B13)
- ☐ Hydrogen Sulfide Odor (C1)
- ☐ Oxidized Rhizospheres along Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soils (C6)
- ☐ Stunted or Stresses Plants (D1) **(LRR A)**
- ☐ Other (Explain in Remarks)

Secondary Indicators (2 or more required)

- ☐ Water-Stained Leaves (B9) **(MLRA 1, 2, 4A, and 4B)**
- ☐ Drainage Patterns (B10)
- ☐ Dry-Season Water Table (C2)
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Geomorphic Position (D2)
- ☐ Shallow Aquitard (D3)
- ☐ FAC-Neutral Test (D5)
- ☐ Raised Ant Mounds (D6) **(LRR A)**
- ☐ Frost-Heave Hummocks (D7)

Field Observations:

Surface Water Present?	Yes	☐	No	☒	Depth (inches):	
Water Table Present?	Yes	☒	No	☐	Depth (inches):	4
Saturation Present? (includes capillary fringe)	Yes	☒	No	☐	Depth (inches):	surface

Wetland Hydrology Present? **Yes** ☒ **No** ☐

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks: Hydrology associated with tidal activity. Water table fluctuates with tide condition at the time of the sample plot data collection. Wetlands located near marine OHWM. Wetlands EW1 and EW2 have similar hydrology characteristics.

WETLAND DETERMINATION DATA FORM – Western Mountains, Valleys, and Coast Region

Project Site: JELD-WENN City/County: Everett /Snohomish Sampling Date: July 3, 2019

Applicant/Owner: JELD-WENN State: WA Sampling Point: SP2U Wet EW1-EW2

Are climatic / hydrologic conditions on the site typical for this time of year? Yes ☒ No ☐ (If no, explain in Remarks.)

Are Vegetation ☐, Soil ☐, or Hydrology ☐, significantly disturbed? Are "Normal Circumstances" present? Yes ☒ No ☐

Are Vegetation ☐, Soil ☐, or Hydrology ☐, naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes ☒	No ☐	**Is the Sampled Area within a Wetland?**	**Yes ☒ No ☐**
Hydric Soil Present?	Yes ☒	No ☐		
Wetland Hydrology Present?	Yes ☒	No ☐		

Remarks: **Wetlands are estuarine systems located along an armored shoreline near the marine OHWM. Substrate is beach material, sand, gravel, cobble, and pieces of angular rock, concrete, and riprap. Wetlands are small patches of salt tolerant vegetation, typically less than 100 total square feet in area. Due to the similar characteristics and small sizes of the wetlands, the wetland rating forms represent two of the delineated wetlands (EW5 through EW9).**

Subregion (LRR): A Lat: 47.23N Long: -122.59W Datum: _____

Soil Map Unit Name: Urban Land NWI classification: None

Are climatic / hydrologic conditions on the site typical for this time of year? Yes ☒ No ☐ (If no, explain in Remarks.)

Are Vegetation ☐, Soil ☐, or Hydrology ☐, significantly disturbed? Are "Normal Circumstances" present? Yes ☒ No ☐

Are Vegetation ☐, Soil ☐, or Hydrology ☐, naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes ☐	No ☒	**Is the Sampled Area within a Wetland?**	**Yes ☐ No ☒**
Hydric Soil Present?	Yes ☒	No ☐		
Wetland Hydrology Present?	Yes ☐	No ☒		

Remarks: **Wetlands are estuarine systems located along an armored shoreline near the marine OHWM. Substrate is beach material, sand, gravel, cobble, and pieces of angular rock, concrete, and riprap. Wetlands are small patches of salt tolerant vegetation, typically less than 100 total square feet in area. Due to the similar characteristics and small sizes of the wetlands, the wetland rating forms represent two of the delineated wetlands (EW10 through EW14).**

VEGETATION – Use scientific names of plants

[1]Type: C= Concentration, D=Depletion, RM=Reduced Matrix, CS=Covered or Coated Sand Grains. [2]Location: PL=Pore Lining, M=Matrix

Hydric Soil Indicators: (Applicable to all LRRs, unless otherwise noted.)

- ☐ Histosol (A1)
- ☐ Histic Epipedon (A2)
- ☐ Black Histic (A3)
- ☐ Hydrogen Sulfide (A4)
- ☐ Depleted Below Dark Surface (A11)
- ☐ Thick Dark Surface (A12)
- ☐ Sandy Mucky Mineral (S1)
- ☐ Sandy Gleyed Matrix (S4)
- ☐ Sandy Redox (S5)
- ☐ Stripped Matrix (S6)
- ☐ Loamy Mucky Mineral (F1) **(except MLRA 1)**
- ☐ Loamy Gleyed Matrix (F2)
- ☐ Depleted Matrix (F3)
- ☐ Redox Dark Surface (F6)
- ☐ Depleted Dark Surface (F7)
- ☐ Redox Depressions (F8)

Indicators for Problematic Hydric Soils[3]:

- ☐ 2 cm Muck (A10)
- ☐ Red Parent Material (TF2)
- ☐ Very Shallow Dark Surface (TF12)
- ☐ Other (Explain in Remarks)

[3]Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if present):

Type: Armored slope substrate

Depth (inches): Difficlut to dig below about 6 inches

Hydric Soils Present? **Yes** ☐ **No** ☒

Remarks: Sand and gravel beach substrate with pieces of armored shoreline material with no silt or clay. Wetlands EW10 through EW14 have similar upland soil and substrate characteristics.

HYDROLOGY

Wetland Hydrology Indicators:

Primary Indicators (minimum of one required; check all that apply)

- ☐ Surface Water (A1)
- ☐ High Water Table (A2)
- ☐ Saturation (A3)
- ☐ Water Marks (B1)
- ☐ Sediment Deposits (B2)
- ☐ Drift Deposits (B3)
- ☐ Algal Mat or Crust (B4)
- ☐ Iron Deposits (B5)
- ☐ Surface Soil Cracks (B6)
- ☐ Inundation Visible on Aerial Imagery (B7)
- ☐ Sparsely Vegetated Concave Surface (B8)
- ☐ Water-Stained Leaves (B9) **(except MLRA 1, 2, 4A, and 4B)**
- ☐ Salt Crust (B11)
- ☐ Aquatic Invertebrates (B13)
- ☐ Hydrogen Sulfide Odor (C1)
- ☐ Oxidized Rhizospheres along Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soils (C6)
- ☐ Stunted or Stresses Plants (D1) **(LRR A)**
- ☐ Other (Explain in Remarks)

Secondary Indicators (2 or more required)

- ☐ Water-Stained Leaves (B9) **(MLRA 1, 2, 4A, and 4B)**
- ☐ Drainage Patterns (B10)
- ☐ Dry-Season Water Table (C2)
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Geomorphic Position (D2)
- ☐ Shallow Aquitard (D3)
- ☐ FAC-Neutral Test (D5)
- ☐ Raised Ant Mounds (D6) **(LRR A)**
- ☐ Frost-Heave Hummocks (D7)

Slope Wetlands

Map of:	To answer questions:	Figure #
Cowardin plant classes	H 1.1, H 1.4	
Hydroperiods	H 1.2	
Plant cover of **dense** trees, shrubs, and herbaceous plants	S 1.3	
Plant cover of **dense, rigid** trees, shrubs, and herbaceous plants (*can be added to figure above)*	S 4.1	
Boundary of 150 ft buffer (can be added to another figure)	S 2.1, S 5.1	
1 km Polygon: Area that extends 1 km from entire wetland edge - including polygons for accessible habitat and undisturbed habitat	H 2.1, H 2.2, H 2.3	
Screen capture of map of 303(d) listed waters in basin (from Ecology website)	S 3.1, S 3.2	
Screen capture of list of TMDLs for WRIA in which unit is found (from web)	S 3.3	

Wetland name or number EW1-EW14 _____

HGM Classification of Wetlands in Western Washington

For questions 1-7, the criteria described must apply to the entire unit being rated.

If the hydrologic criteria listed in each question do not apply to the entire unit being rated, you probably have a unit with multiple HGM classes. In this case, identify which hydrologic criteria in questions 1-7 apply, and go to Question 8.

1. Are the water levels in the entire unit usually controlled by tides except during floods?

○ NO – go to 2 ◉ **YES** – the wetland class is **Tidal Fringe** – go to 1.1

1.1 Is the salinity of the water during periods of annual low flow below 0.5 ppt (parts per thousand)?

◉ **NO – Saltwater Tidal Fringe (Estuarine)** ○ **YES – Freshwater Tidal Fringe**

*If your wetland can be classified as a Freshwater Tidal Fringe use the forms for **Riverine** wetlands. If it is Saltwater Tidal Fringe it is an **Estuarine** wetland and is not scored. This method **cannot** be used to score functions for estuarine wetlands.*

2. The entire wetland unit is flat and precipitation is the only source (>90%) of water to it. Groundwater and surface water runoff are NOT sources of water to the unit.

◉ NO – go to 3 ○ **YES** – The wetland class is **Flats**

*If your wetland can be classified as a Flats wetland, use the form for **Depressional** wetlands.*

3. Does the entire wetland unit **meet all** of the following criteria?
   ☐ The vegetated part of the wetland is on the shores of a body of permanent open water (without any plants on the surface at any time of the year) at least 20 ac (8 ha) in size;
   ☐ At least 30% of the open water area is deeper than 6.6 ft (2 m).

◉ NO – go to 4 ○ **YES –** The wetland class is **Lake Fringe** (Lacustrine Fringe)

4. Does the entire wetland unit **meet all** of the following criteria?
   ☐ The wetland is on a slope (*slope can be very gradual*),
   ☐ The water flows through the wetland in one direction (unidirectional) and usually comes from seeps. It may flow subsurface, as sheetflow, or in a swale without distinct banks,
   ☐ The water leaves the wetland **without being impounded**.

◉ NO – go to 5 ○ **YES –** The wetland class is **Slope**

NOTE: Surface water does not pond in these type of wetlands except occasionally in very small and shallow depressions or behind hummocks (depressions are usually <3 ft diameter and less than 1 ft deep).

5. Does the entire wetland unit **meet all** of the following criteria?
   ☐ The unit is in a valley, or stream channel, where it gets inundated by overbank flooding from that stream or river,
   ☐ The overbank flooding occurs at least once every 2 years.

Wetland name or number _____ EW1-EW14

◉ NO – go to 6 ○ **YES** – The wetland class is **Riverine**

NOTE: The Riverine unit can contain depressions that are filled with water when the river is not flooding

6. Is the entire wetland unit in a topographic depression in which water ponds, or is saturated to the surface, at some time during the year? *This means that any outlet, if present, is higher than the interior of the wetland.*

◉ NO – go to 7 ○ **YES** – The wetland class is **Depressional**

7. Is the entire wetland unit located in a very flat area with no obvious depression and no overbank flooding? The unit does not pond surface water more than a few inches. The unit seems to be maintained by high groundwater in the area. The wetland may be ditched, but has no obvious natural outlet.

◉ NO – go to 8 ○ **YES** – The wetland class is **Depressional**

8. Your wetland unit seems to be difficult to classify and probably contains several different HGM classes. For example, seeps at the base of a slope may grade into a riverine floodplain, or a small stream within a Depressional wetland has a zone of flooding along its sides. GO BACK AND IDENTIFY WHICH OF THE HYDROLOGIC REGIMES DESCRIBED IN QUESTIONS 1-7 APPLY TO DIFFERENT AREAS IN THE UNIT (make a rough sketch to help you decide). Use the following table to identify the appropriate class to use for the rating system if you have several HGM classes present within the wetland unit being scored.

   NOTE: Use this table only if the class that is recommended in the second column represents 10% or more of the total area of the wetland unit being rated. If the area of the HGM class listed in column 2 is less than 10% of the unit; classify the wetland using the class that represents more than 90% of the total area.

HGM classes within the wetland unit being rated	HGM class to use in rating
Slope + Riverine	Riverine
Slope + Depressional	Depressional
Slope + Lake Fringe	Lake Fringe
Depressional + Riverine along stream within boundary of depression	Depressional
Depressional + Lake Fringe	Depressional
Riverine + Lake Fringe	Riverine
Salt Water Tidal Fringe and any other class of freshwater wetland	Treat as ESTUARINE

*If you are still unable to determine which of the above criteria apply to your wetland, or if you have **more than 2 HGM classes** within a wetland boundary, classify the wetland as Depressional for the rating.*

Wetland name or number EW1-EW14 _____

WDFW Priority Habitats

Priority habitats listed by WDFW (see complete descriptions of WDFW priority habitats, and the counties in which they can be found, in: Washington Department of Fish and Wildlife. 2008. Priority Habitat and Species List. Olympia, Washington. 177 pp. http://wdfw.wa.gov/publications/00165/wdfw00165.pdf or access the list from here: http://wdfw.wa.gov/conservation/phs/list/)

Count how many of the following priority habitats are within 330 ft (100 m) of the wetland unit: ***NOTE:*** *This question is independent of the land use between the wetland unit and the priority habitat.*

— **Aspen Stands:** Pure or mixed stands of aspen greater than 1 ac (0.4 ha).

— **Biodiversity Areas and Corridors**: Areas of habitat that are relatively important to various species of native fish and wildlife (*full descriptions in WDFW PHS report*).

— **Herbaceous Balds:** Variable size patches of grass and forbs on shallow soils over bedrock.

— **Old-growth/Mature forests:** Old-growth west of Cascade crest – Stands of at least 2 tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/ac (20 trees/ha) > 32 in (81 cm) dbh or > 200 years of age. Mature forests – Stands with average diameters exceeding 21 in (53 cm) dbh; crown cover may be less than 100%; decay, decadence, numbers of snags, and quantity of large downed material is generally less than that found in old-growth; 80-200 years old west of the Cascade crest.

— **Oregon White Oak:** Woodland stands of pure oak or oak/conifer associations where canopy coverage of the oak component is important (*full descriptions in WDFW PHS report p. 158 – see web link above*).

— **Riparian**: The area adjacent to aquatic systems with flowing water that contains elements of both aquatic and terrestrial ecosystems which mutually influence each other.

— **Westside Prairies:** Herbaceous, non-forested plant communities that can either take the form of a dry prairie or a wet prairie (*full descriptions in WDFW PHS report p. 161 – see web link above*).

— **Instream:** The combination of physical, biological, and chemical processes and conditions that interact to provide functional life history requirements for instream fish and wildlife resources.

— **Nearshore**: Relatively undisturbed nearshore habitats. These include Coastal Nearshore, Open Coast Nearshore, and Puget Sound Nearshore. (*full descriptions of habitats and the definition of relatively undisturbed are in WDFW report – see web link on previous page).*

— **Caves:** A naturally occurring cavity, recess, void, or system of interconnected passages under the earth in soils, rock, ice, or other geological formations and is large enough to contain a human.

— **Cliffs:** Greater than 25 ft (7.6 m) high and occurring below 5000 ft elevation.

— **Talus:** Homogenous areas of rock rubble ranging in average size 0.5 - 6.5 ft (0.15 - 2.0 m), composed of basalt, andesite, and/or sedimentary rock, including riprap slides and mine tailings. May be associated with cliffs.

— **Snags and Logs:** Trees are considered snags if they are dead or dying and exhibit sufficient decay characteristics to enable cavity excavation/use by wildlife. Priority snags have a diameter at breast height of > 20 in (51 cm) in western Washington and are > 6.5 ft (2 m) in height. Priority logs are > 12 in (30 cm) in diameter at the largest end, and > 20 ft (6 m) long.

Note: All vegetated wetlands are by definition a priority habitat but are not included in this list because they are addressed elsewhere.

Wetland name or number _____ EW1-EW14

CATEGORIZATION BASED ON SPECIAL CHARACTERISTICS

Wetland Type *Check off any criteria that apply to the wetland. Circle the category when the appropriate criteria are met.*	**Category**
SC 1.0. Estuarine wetlands Does the wetland meet the following criteria for Estuarine wetlands? X The dominant water regime is tidal, X Vegetated, and X With a salinity greater than 0.5 ppt (●) Yes –Go to **SC 1.1** ( ) No= **Not an estuarine wetland**	
SC 1.1. Is the wetland within a National Wildlife Refuge, National Park, National Estuary Reserve, Natural Area Preserve, State Park or Educational, Environmental, or Scientific Reserve designated under WAC 332-30-151? ( ) Yes = **Category I** (●) No - Go to **SC 1.2**	( ) **Cat. I**
SC 1.2. Is the wetland unit at least 1 ac in size and meets at least two of the following three conditions? — The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing, and has less than 10% cover of non-native plant species. (If non-native species are *Spartina*, see page 25) — At least ¾ of the landward edge of the wetland has a 100 ft buffer of shrub, forest, or un-grazed or un-mowed grassland. — The wetland has at least two of the following features: tidal channels, depressions with open water, or contiguous freshwater wetlands. ( ) Yes = **Category I** (●) No = **Category II**	( ) **Cat. I** (●) **Cat. II**
SC 2.0. Wetlands of High Conservation Value (WHCV) SC 2.1. Has the WA Department of Natural Resources updated their website to include the list of Wetlands of High Conservation Value? ( ) Yes – Go to **SC 2.2** ( ) No – Go to **SC 2.3** SC 2.2. Is the wetland listed on the WDNR database as a Wetland of High Conservation Value? ( ) Yes = **Category I** ( ) No = **Not a WHCV** SC 2.3. Is the wetland in a Section/Township/Range that contains a Natural Heritage wetland? http://www1.dnr.wa.gov/nhp/refdesk/datasearch/wnhpwetlands.pdf ( ) Yes – **Contact WNHP/WDNR and go to SC 2.4** ( ) No = **Not a WHCV** SC 2.4. Has WDNR identified the wetland within the S/T/R as a Wetland of High Conservation Value and listed it on their website? ( ) Yes = **Category I** ( ) No = **Not a WHCV**	( ) **Cat. I**
SC 3.0. Bogs Does the wetland (or any part of the unit) meet both the criteria for soils and vegetation in bogs? *Use the key below.* ***If you answer YES you will still need to rate the wetland based on its functions.*** SC 3.1. Does an area within the wetland unit have organic soil horizons, either peats or mucks, that compose 16 in or more of the first 32 in of the soil profile? ( ) Yes – Go to **SC 3.3** ( ) No – Go to **SC 3.2** SC 3.2. Does an area within the wetland unit have organic soils, either peats or mucks, that are less than 16 in deep over bedrock, or an impermeable hardpan such as clay or volcanic ash, or that are floating on top of a lake or pond? ( ) Yes – Go to **SC 3.3** ( ) No = **Is not a bog** SC 3.3. Does an area with peats or mucks have more than 70% cover of mosses at ground level, AND at least a 30% cover of plant species listed in Table 4? ( ) Yes = **Is a Category I bog** ( ) No – Go to **SC 3.4** **NOTE:** If you are uncertain about the extent of mosses in the understory, you may substitute that criterion by measuring the pH of the water that seeps into a hole dug at least 16 in deep. If the pH is less than 5.0 and the plant species in Table 4 are present, the wetland is a bog. SC 3.4. Is an area with peats or mucks forested (> 30% cover) with Sitka spruce, subalpine fir, western red cedar, western hemlock, lodgepole pine, quaking aspen, Engelmann spruce, or western white pine, AND any of the species (or combination of species) listed in Table 4 provide more than 30% of the cover under the canopy? ( ) Yes = **Is a Category I bog** ( ) No = **Is not a bog**	( ) **Cat. I**

Wetland name or number _____ EW1-EW14

SC 4.0. Forested Wetlands Does the wetland have at least 1 contiguous acre of forest that meets one of these criteria for the WA Department of Fish and Wildlife's forests as priority habitats? ***If you answer YES you will still need to rate the wetland based on its functions.*** — **Old-growth forests** (west of Cascade crest): Stands of at least two tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/ac (20 trees/ha) that are at least 200 years of age OR have a diameter at breast height (dbh) of 32 in (81 cm) or more. — **Mature forests** (west of the Cascade Crest): Stands where the largest trees are 80- 200 years old OR the species that make up the canopy have an average diameter (dbh) exceeding 21 in (53 cm). ◯Yes = **Category I** ◯No = **Not a forested wetland for this section**	◯**Cat. I**
SC 5.0. Wetlands in Coastal Lagoons Does the wetland meet all of the following criteria of a wetland in a coastal lagoon? — The wetland lies in a depression adjacent to marine waters that is wholly or partially separated from marine waters by sandbanks, gravel banks, shingle, or, less frequently, rocks — The lagoon in which the wetland is located contains ponded water that is saline or brackish (> 0.5 ppt) during most of the year in at least a portion of the lagoon *(needs to be measured near the bottom)* ◯Yes – Go to **SC 5.1** ◯No = **Not a wetland in a coastal lagoon** SC 5.1. Does the wetland meet all of the following three conditions? — The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing), and has less than 20% cover of aggressive, opportunistic plant species (see list of species on p. 100). — At least ¾ of the landward edge of the wetland has a 100 ft buffer of shrub, forest, or un-grazed or un-mowed grassland. — The wetland is larger than $^{1}/_{10}$ ac (4350 ft^2) ◯Yes = **Category I** ◯No = **Category II**	◯**Cat. I** ◯**Cat. II**
SC 6.0. Interdunal Wetlands Is the wetland west of the 1889 line (also called the Western Boundary of Upland Ownership or WBUO)? ***If you answer yes you will still need to rate the wetland based on its habitat functions.*** In practical terms that means the following geographic areas: — Long Beach Peninsula: Lands west of SR 103 — Grayland-Westport: Lands west of SR 105 — Ocean Shores-Copalis: Lands west of SR 115 and SR 109 ◯Yes – Go to **SC 6.1** ◯No = **not an interdunal wetland for rating** SC 6.1. Is the wetland 1 ac or larger and scores an 8 or 9 for the habitat functions on the form (rates H,H,H or H,H,M for the three aspects of function)? ◯Yes = **Category I** ◯No – Go to **SC 6.2** SC 6.2. Is the wetland 1 ac or larger, or is it in a mosaic of wetlands that is 1 ac or larger? ◯Yes = **Category II** ◯No – Go to **SC 6.3** SC 6.3. Is the unit between 0.1 and 1 ac, or is it in a mosaic of wetlands that is between 0.1 and 1 ac? ◯Yes = **Category III** ◯No = **Category IV**	◯**Cat I** ◯**Cat. II** ◯**Cat. III** ◯**Cat. IV**
Category of wetland based on Special Characteristics If you answered No for all types, enter "Not Applicable" on Summary Form	II

APPENDIX E

MAULSBY MARSH SEDIMENT RESULTS

Description: Provides a data report summarizing the results of the sediment sampling and characterization for Maulsby Marsh. It includes a summary of the field sampling collection performed, validated chemical analyses, and the salinity testing. This data is used to confirm that contaminants detected in the marsh sediments are not attributable to Site releases.

1 Introduction

Maulsby Marsh is located immediately east of the JELD-WEN former Nord Door facility located at 300 West Marine View Drive, Everett, Washington, 98201 (JELD-WEN Site), on the other side of Marine View Drive and the Burlington Northern Santa Fe (BNSF) railroad tracks from the Site (Figure E-1). Evaluations of soil conditions adjacent to the marsh in the BNSF right-of-way are summarized in the main body of the 2020 Remedial Investigation/Feasibility Study (RI/FS) Report.

1.1 Overview of Sediment Characterization

As part of initial RI/FS activities at the JELD-WEN Site, sediment sampling in Maulsby Marsh was performed in 2012. Sampling locations are depicted in Figure E-2. Sediment samples were collected and analyzed in a tiered approach as described in the sampling and analysis plan (SAP) (Attachment 1 of the Quality Assurance Project Plan [QAPP]; Anchor QEA 2012). Chemical analyses included polycyclic aromatic hydrocarbons (PAHs), polychlorinated biphenyls (PCBs), total petroleum hydrocarbons (TPH; Dx [diesel range]), extractable petroleum hydrocarbons (EPH), metals, semivolatile organic compounds (SVOCs), organochlorine pesticides, and conventional sediment parameters as listed in the QAPP Tables 4 and 5 (Anchor QEA 2012). Tiered sample collection and analysis was performed as follows:

- Eighteen sediment samples were collected in May 2012 (Figure E-2).
- The nine surface sediment samples located closest to the BNSF railroad tracks (MS001 through MS009) were submitted to the laboratory for analysis of PCBs, pesticides, metals, SVOCs, TPH, and sediment conventional analyses including grain size, total solids, total organic carbon, ammonia, and total sulfides. Materials collected from the remaining sample locations were submitted to the laboratory as archive samples.
- A portion of each sample was archived for possible EPH testing. All TPH testing was initially conducted on the first tier of nine samples collected using Northwest TPH (NWTPH) methods. The four sediment samples with the highest NWTPH concentrations, (MS001, MS002, MS003, and MS006) were tested further for EPH to further characterize the nature of hydrocarbons in these samples.

Maulsby Marsh sediment sampling and analysis data were also uploaded to the Washington State Department of Ecology (Ecology) EIM system following validation.

This document provides a summary of results from the first tier of sediment characterization work and includes a summary of the field sampling collection performed, validated chemical analyses, and the salinity testing. The scope of the sampling and analysis effort is described in the SAP (Attachment 1 to the QAPP; Anchor QEA 2012). This document also contains the grab collection and

processing forms (Attachment E-1), summaries of the chemical analyses and the raw data from the chemical analyses (Attachment E-2), and results from the data validation (Attachment E-3).

Based on review of the data summarized below, chemicals detected in the marsh sediments were not attributable to releases from the JELD-WEN Site. Therefore, no additional analysis of this area was required for the RI/FS, and archived samples were disposed of in consultation with Ecology.

1.2 Maulsby Marsh Salinity Monitoring

Water quality monitoring to characterize the salinity levels was performed at three locations: 1) at the marsh inlet; 2) in the north portion of the marsh; and 3) in the south portion of the marsh. Sample locations were determined in the field and are shown in Figure E-2. Water quality measurements for salinity were collected during the outgoing tide, just after the beginning of the ebb on May 30, 2012, following procedures described in the SAP.

2 Sample Collection and Handling

This section summarizes sediment sampling and processing and salinity measurements in the Maulsby Marsh area. Sediment sampling and processing and salinity measurements were performed in accordance with the SAP (Anchor QEA 2012).

2.1 Sediment Grab Sample Collection and Processing

Surface sediment samples were collected and processed from 18 locations within the Maulsby Marsh area (Figure E-2). Samples were collected on May 15, 2012, and submitted for tiered analysis as described in Section 1.1. Target sample locations were located using a Differential Global Positioning System (DGPS). Sediment sampling locations are shown in Figure E-2; Table E-1 presents the coordinates for the sampling locations. Surface sediment samples were collected from the 0- to 10-centimeter (cm) sediment interval for chemical and physical testing using hand collection procedures where sediments were exposed and using an Ekman-type grab sampler at locations that were covered by water.

Sediments collected were placed into a decontaminated bowl and homogenized using a stainless-steel spoon until the sediment appeared uniform in color and texture. Samples for total sulfide analysis were collected prior to sample homogenization as described in the SAP. Homogenized sediment was placed into appropriate pre-labeled sample containers and immediately placed into a cooler equipped with ice for transport to the laboratory. Prior to processing, sediments collected were described on field log forms. Copies of the field log forms are presented in Attachment E-1.

2.2 Maulsby Marsh Salinity Monitoring

Salinity monitoring was performed following an average high tide event on May 15, 2013 at three stations, as described in Section 1.2. Monitoring locations were accessed on foot; monitoring locations were identified using DGPS. Monitoring locations are listed in Table E-2 and presented in Figure E-2. Measurements were collected using a YSI 556 multi-parameter probe to collect measurements of temperature, conductivity, pH, salinity, and dissolved oxygen at each location.

Salinity measurements were made at the inlet of Maulsby Marsh from the edge of a small pool with approximately 8 inches of water. Water depth at the northern and southern locations of the marsh was generally only 2 inches deep. Salinity measurements were made at mid-depth within the water column at each location. Water quality measurements were recorded twice for each location to confirm that readings had stabilized. An average value for each parameter is presented for each location in Table E-2. Field log forms for salinity measurements are included in Attachment E-1.

3 Chemical Analysis

All sediment samples collected for analysis were submitted to Analytical Resources, Inc. (ARI) in Tukwila, Washington, according to procedures specified in the QAPP. As described in Section 1.1, the samples collected for the first tier of chemical characterization were submitted for the analysis of PAHs, PCBs, TPH-Dx (diesel range), EPH, metals, SVOCs, organochlorine pesticides, and conventional sediment parameters. The four samples with the highest TPH results (MS001, MS002, MS003, and MS006) were triggered for the analysis of EPH to further distinguish the different hydrocarbons present in these samples. Sediment chemical results and screening against Sediment Management Standards freshwater criteria are summarized in Table E-3. Some conventional, metal, and semivolatile organic compounds exceed the criteria, but are not related to Site-related chemicals.

4 Data Quality Summary

A review of the validation reports indicated that the overall data quality of the chemistry data generated is acceptable for use in site characterization. Laboratory results and raw data are presented in Attachment E-2.

Detailed data quality objectives and quality assurance (QA) procedures are provided in the QAPP (Anchor QEA 2012). Laboratory data packages were validated by Laboratory Data Consultants, Inc. (LDC) in Carlsbad, California, following U.S. Environmental Protection Agency (EPA) National Functional Guidelines (EPA 1999, 2004, 2008) and using the data quality objectives described in the QAPP (Anchor QEA 2012). All data went through Stage 2B validation (EPA 2009). Any data qualifiers applied to the data during the final validation procedures have been incorporated into the final database for this project. Data qualifiers assigned as a result of the data validation and their definitions are shown on the analytical results tables. All data were considered useable as reported or as qualified, and no data were rejected. The data may have been qualified as estimated for a particular analysis or analyte based on method or technical criteria outlined in the QAPP or as stated in the functional guidelines (EPA 1999, 2004, 2008). Data qualified with a "J" indicate that the associated numerical value is the approximate concentration of the analyte. Data qualified with a "UJ" indicate the approximate Practical Quantitation Limit (PQL) below which the analyte was not detected. In some cases, PQLs were elevated due to variations in sample size, moisture content, method blank contamination, or dilutions required to quantitate target analytes or overcome matrix interference. Results detected between the PQL and the MDL or EDL were qualified "J" by the laboratory to indicate they are estimated. The LDC validation report is presented in Attachment E-3.

4.1 Maulsby Marsh Sediments

Maulsby Marsh sediment samples were collected on May 15, 2012. The analytical methods and laboratories, sample transport and custody, field quality control, and laboratory quality control are discussed below.

4.1.1 Analytical Methods and Laboratories

All analyses were conducted at ARI in Tukwila, Washington, which is Ecology and National Environmental Laboratory Accreditation Conference (NELAC) certified for the analyses conducted. ARI followed the methods outlined in QAPP Table E-4, with a few exceptions. These exceptions were either equivalent methods or more updated versions of methods current when the QAPP was written so data are not expected to be impacted.

4.1.2 Sample Transport and Holding Times

Samples were received at the laboratories in good condition and within the recommended temperature range of 0°C to 6°C. Samples were prepared and analyzed within hold times outlined in the QAPP (Anchor QEA 2012).

4.1.3 Field Quality Control

Field quality control samples consisted of homogenization duplicates, equipment rinsate blanks, and field blanks. Field quality control samples were collected at the required frequencies. Field quality control results are discussed in detail in the data validation reports.

Field duplicate samples were analyzed for the same parameters as the parent samples and no results were qualified based on field duplicate results. Field and rinsate blanks were analyzed for metals, TPH, pesticides, and PCB Aroclors. Results were below detection with the exceptions of the low-level detections of copper, dimethyl phthalate, and din-n-butyl phthalate in the field blank, and dimethyl phthalate in the rinse blank. Sample results are not expected to be impacted and no data were qualified based on field blank results.

4.1.4 Laboratory Quality Control

The validation report indicates the majority of the data results did not require qualification. Some data were qualified as estimated based on data quality objective or method exceedances. Some sample results were qualified as estimated due to calibration results outside of method control limits, or surrogate, matrix spike (MS) and/or matrix spike duplicate (MSD) recoveries, laboratory control sample (LCS), and/or laboratory control sample duplicate (LCSD) recoveries outside of the project-specified control limits. All data are usable as reported or as qualified.

Table E-3
Maulsby Marsh Surface Sediment Chemistry Results Summary

Notes:
Bold = Detected result
J = Estimated value
U = Compound analyzed, but not detected above detection limit
UJ = Compound analyzed, but not detected above estimated detection limit
µg = microgram
CPAH = carcinogenic polycyclic aromatic hydrocarbon
HPAH = high-molecular-weight polycyclic aromatic hydrocarbon
kg = kilogram
LPAH = low-molecular-weight polycyclic aromatic hydrocarbon
mg = milligram
ng = nanogram
OC = organic carbon
PAH = polycyclic aromatic hydrocarbon
PCB = polychlorinated biphenyl
pct = percent
TEQ = toxic equivalency quotient

Table E-4
Maulsby Marsh Freshwater Sediment Results

Notes:
Detected concentration is greater than freshwater SMS SCO
Detected concentration is greater than freshwater SMS CSL
Bold: Detected result
µg/kg: microgram per kilogram
CAEPA: California Environmental Protection Agency
cm: centimeter
cPAH: carcinogenic polycyclic aromatic hydrocarbon
CSL: cleanup screening level
FD: field duplicate
J: estimated value
mg/kg: milligram per kilogram
N: normal sample
PAH: polycyclic aromatic hydrocarbon
PCB: polychlorinated biphenyl
SCO: sediment cleanup objective
SE: sediment matrix
SMS: sediment management standard
TEQ: toxic equivalent level
U: Compound analyzed, but not detected above detection limit
UJ: Compound analyzed, but not detected above estimated detection limit

Surface Sediment Field Sample Record

MS-001

Project Name: Mailsby Marsh **Project No:** 120909-01.01 **Station ID:** 001

Sampling Crew: DG JP AT
Sample Date: 5/15/12 Sampling Method: [illegible] ekman
Sampling Vessel: —
Subcontractor(s): — Weather: Sunny
Station Coordinates: N / Lat.
E / Long.
Datum: NAD 83 / WGS 84 zone:

Sample ID: MS001-SS-120515
Analysis: Metals / TBT / SVOCs / VOCs / PCBs / Pest Other:
TS / TVS / Grain Size / TOC / Ammonia / Sulfides Other:
(Circle Appropriate Analyses)

Grab Number: 1 Water Depth: — ft. Grab Recovery: 10 cm Time: 1339
Tide Level: — ft. Sample Interval: 0-10 cm
Bioassay / (Chemistry) Depth MLLW: — ft.

Sediment Type:	Sediment Color:	Density:	Sediment Odor:		Sheen:	Moisture:
cobble	D.O.	(Very soft/Loose)	(none)	(H2S)	(none)	Dry
gravel	gray	soft/loose	slight	Petroleum	trace	Damp
sand C M F	black	mod dense/stiff	moderate	other:	slight	Moist
(silt clay)	(brown)	dense/stiff	strong		moderate	(Wet)
(organic matter)	brown surface	very dense/stiff	overwhelming		heavy	

Comments: Coarse organics at 10 cm - very dark grey - At edge of 12' drainage, duck wading tracks. decanted surface water, surface layer has red, pink green & brown

Grab Number: _____ Water Depth: _____ ft. Grab Recovery: _____ cm Time: _____
Tide Level: _____ ft. Sample Interval: _____ cm
Bioassay / Chemistry Depth MLLW: _____ ft.

Sediment Type:	Sediment Color:	Density:	Sediment Odor:		Sheen:	Moisture:

ATTN: Ms. Cindy Fields

June 28, 2012

SUBJECT: Jeld-Wen Maulsby Marsh, Data Validation

Dear Ms. Fields,

Enclosed are the final validation reports for the fractions listed below. These SDGs were received on June 14, 2012. Attachment 1 is a summary of the samples that were reviewed for each analysis.

LDC Project # 27826:

SDG #	Fraction
UU52/UU62 UW85	Semivolatiles, Chlorinated Pesticides, Polychlorinated Biphenyls, Metals, Wet Chemistry, Total Petroleum Hydrocarbons as Diesel, Extractable Petroleum Hydrocarbons

The data validation was performed under Stage 2B guidelines. The analyses were validated using the following documents, as applicable to each method:

- USEPA, Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review, June 2008
- USEPA, Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Data Review, January 2010
- EPA SW 846, Third Edition, Test Methods for Evaluating Solid Waste, update 1, July 1992; update IIA, August 1993; update II, September 1994; update IIB, January 1995; update III, December 1996; update IIIA, April 1998; IIIB, November 2004; Update IV, February 2007

Please feel free to contact us if you have any questions.

Sincerely,

Ming-Hwa Hwang
Project Manager/Senior Chemist

R-changed validation to Stage 2B

Introduction

This data review covers 13 sediment samples and 2 water samples listed on the cover sheet including dilutions and reanalysis as applicable. The analyses were per EPA SW 846 Method 8270D for Semivolatiles.

This review follows a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review (June 2008).

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Raw data were not reviewed for this SDG. The review was based on QC data.

The following are definitions of the data qualifiers:

U Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.

J Indicates an estimated value.

R Quality control indicates the data is not usable.

NJ Presumptive evidence of the presence of the compound at an estimated quantity.

UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.

A Indicates the finding is based upon technical validation criteria.

P Indicates the finding is related to a protocol/contractual deviation.

None Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

II. GC/MS Instrument Performance Check

Instrument performance was checked at 12 hour intervals.

All ion abundance requirements were met.

III. Initial Calibration

Initial calibration was performed using required standard concentrations.

Percent relative standard deviations (%RSD) were less than or equal to 20.0% for all compounds.

In the case where the laboratory used a calibration curve to evaluate the compounds, all coefficients of determination (r^2) were greater than or equal to 0.990 .

Average relative response factors (RRF) for all compounds were within method and validation criteria.

IV. Continuing Calibration

Continuing calibration was performed at the required frequencies.

Percent differences (%D) between the initial calibration RRF and the continuing calibration RRF were within the method criteria of less than or equal to 20.0% for all compounds.

The percent differences (%D) of the second source calibration standard were less than or equal to 30.0% for all compounds with the following exceptions:

Date	Compound	%D	Associated Samples	Flag	A or P
5/23/12	Pentachlorophenol	34.6	MS-SSRB-120515 MS-SSFB-120515 MB-052112	J (all detects) UJ (all non-detects)	A

All of the continuing calibration relative response factors (RRF) were within method and validation criteria.

V. Blanks

Method blanks were reviewed for each matrix as applicable. No semivolatile contaminants were found in the method blanks.

VI. Surrogate Spikes

Surrogates were added to all samples and blanks as required by the method. All surrogate recoveries (%R) were within QC limits.

VII. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Compound	MS (%R) (Limits)	MSD (%R) (Limits)	RPD (Limits)	Flag	A or P
MS007-SS-120515MS/MSD (MS007-SS-120515)	Phenol Benzoic acid 2-Methylnaphthalene	26.8 (50-150) - 48.4 (50-150)	23.2 (50-150) 47.0 (50-150) 48.8 (50-150)	- - -	J (all detects) UJ (all non-detects)	A
MS007-SS-120515MS/MSD (MS007-SS-120515)	4-Methylphenol	8.1 (50-150)	-1.6 (50-150)	-	J (all detects) R (all non-detects)	A

VIII. Laboratory Control Samples (LCS)

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits with the following exceptions:

LCS ID (Associated Samples)	Compound	LCS %R (Limits)	Flag	A or P
LCS-052212 (MS001-SS-120515 MS101-SS-120515 MS002-SS-120515 MS003-SS-120515 MS004-SS-120515 MS005-SS-120515 MS006-SS-120515 MS006-SS-120515DL MS007-SS-120515 MS008-SS-120515 MS009-SS-120515 MB-052212)	Benzoic acid	48.4 (50-150)	J (all detects) UJ (all non-detects)	P

IX. Regional Quality Assurance and Quality Control

Not applicable.

X. Internal Standards

All internal standard areas and retention times were within QC limits.

XI. Target Compound Identifications

Raw data were not reviewed for this SDG.

XII. Compound Quantitation and RLs

All compound quantitation and RLs were within validation criteria with the following exceptions:

Sample	Compound	Finding	Criteria	Flag	A or P
MS006-SS-120515	Naphthalene	Sample result exceeded calibration range.	Reported result should be within calibration range.	J (all detects)	A

Raw data were not reviewed for this SDG.

XIII. Tentatively Identified Compounds (TICs)

Raw data were not reviewed for this SDG.

XIV. System Performance

Raw data were not reviewed for this SDG.

XV. Overall Assessment

The analysis was conducted within all specifications of the method.

In the case where more than one result was reported for an individual sample, the least technically acceptable results were rejected as follows:

Sample	Compound	Flag	A or P
MS006-SS-120515	Naphthalene	R	A
MS006-SS-120515DL	All TCL compounds except Naphthalene	R	A

Due to calibration %D, MS/MSD and LCS %R problems, data were qualified as estimated in ten samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be rejected (R) are unusable for all purposes. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the Stage 2B data validation all other results are considered valid and usable for all purposes.

Data flags are summarized at the end of this report if data has been qualified.

XVI. Field Duplicates

Samples MS001-SS-120515 and MS101-SS-120515 were identified as field duplicates. No semivolatiles were detected in any of the samples with the following exceptions:

Compound	Concentration (ug/Kg)		RPD
	MS001-SS-120515	MS101-SS-120515	
Phenol	300	400	29 (≤50)
4-Methylphenol	1200	1600	29 (≤50)
Benzoic acid	390	640	49 (≤50)
Naphthalene	1100	1800	48 (≤50)

total-Benzofluoranthenes	570	640	12 (≤50)

XVII. Field Blanks

Sample MS-SSFB-120515 was identified as a field blank. No semivolatile contaminants were found with the following exceptions:

Blank ID	Compound	Concentration (ug/L)
MS-SSFB-120515	Dimethylphthalate Di-n-butylphthalate	0.8 3.7

Sample MS-SSRB-120515 was identified as a rinsate blank. No semivolatile contaminants were found with the following exceptions:

Blank ID	Compound	Concentration (ug/L)
MS-SSRB-120515	Dimethylphthalate	0.9

Introduction

This data review covers 22 sediment samples and 2 water samples listed on the cover sheet including dilutions and reanalysis as applicable. The analyses were per EPA SW 846 Method 8081A for Chlorinated Pesticides.

This review follows a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review (June 2008).

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Raw data were not reviewed for this SDG. The review was based on QC data.

The following are definitions of the data qualifiers:

U Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.

J Indicates an estimated value.

R Quality control indicates the data is not usable.

NJ Presumptive evidence of presence of the compound at an estimated quantity.

UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.

A Indicates the finding is based upon technical validation criteria.

P Indicates the finding is related to a protocol/contractual deviation.

None Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

II. GC/ECD Instrument Performance Check

Instrument performance was acceptable unless noted otherwise under initial calibration and continuing calibration sections.

III. Initial Calibration

Initial calibration of single compounds was performed for the primary (quantitation) column and confirmation column as required by this method.

The percent relative standard deviations (%RSD) were less than or equal to 20.0% for all compounds.

In the case where the laboratory used a calibration curve to evaluate the compounds, all coefficients of determination (r^2) were greater than or equal to 0.990.

IV. Continuing Calibration

Continuing calibration was performed at required frequencies.

The percent differences (%D) of calibration factors in continuing standard mixtures were within the 20.0% QC limits with the following exceptions:

Date	Standard	Column	Compound	%D	Associated Samples	Flag	A or P
5/26/12	INDAE	STX-CLP1	4,4'-DDE	26.6	MS006-SS-120515 MS007-SS-120515 MS008-SS-120515 MS009-SS-120515	J (all detects) UJ (all non-detects)	A
5/26/12	INDAE	STX-CLP2	4,4'-DDT	40.9	MS006-SS-120515 MS007-SS-120515 MS008-SS-120515 MS009-SS-120515	J (all detects) UJ (all non-detects)	A

The percent differences (%D) of the second source calibration standard were less than or equal to 20.0% for all compounds.

The individual 4,4'-DDT and Endrin breakdowns (%BD) were less than or equal to 15.0% with the following exceptions:

Date	Standard ID	Column	Compound	%BD	Associated Samples	Affected Compounds	Flag	A or P
5/26/12	DS	STX-CLP1	4,4'-DDT	27.5	MS006-SS-120515 MS007-SS-120515 MS008-SS-120515 MS009-SS-120515	4,4'-DDE 4,4'-DDD 4,4'-DDT	J (all detects) J (all detects) J (all detects)	P
5/26/12	DS	STX-CLP2	4,4'-DDT	40.6	MS006-SS-120515 MS007-SS-120515 MS008-SS-120515 MS009-SS-120515	4,4'-DDE 4,4'-DDD 4,4'-DDT	J (all detects) J (all detects) J (all detects)	P

V. Blanks

Method blanks were reviewed for each matrix as applicable. No chlorinated pesticide contaminants were found in the method blanks.

VI. Surrogate Spikes

Surrogates were added to all samples and blanks as required by the method. Surrogate recoveries (%R) were not within QC limits for several samples. Since the samples were diluted out, no data were qualified.

VII. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were not within the QC limits. Since the samples were diluted out, no data were qualified.

VIII. Laboratory Control Samples (LCS)

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) were within QC limits.

IX. Regional Quality Assurance and Quality Control

Not applicable.

X. Florisil Cartridge Check

Florisil cleanup was not required and therefore not performed in this SDG.

XI. GPC Calibration

GPC cleanup was not required and therefore not performed in this SDG.

XII. Target Compound Identification

Raw data were not reviewed for this SDG.

XIII. Compound Quantitation and RLs

Raw data were not reviewed for this SDG.

XIV. Overall Assessment of Data

The analysis was conducted within all specifications of the method.

In the case where more than one result was reported for an individual sample, the least technically acceptable results were rejected as follows:

Sample	Compound	Flag	A or P
MS001-SS-120515DL MS101-SS-120515DL MS002-SS-120515DL MS003-SS-120515DL MS004-SS-120515DL MS005-SS-120515DL MS006-SS-120515DL MS007-SS-120515DL MS008-SS-120515DL MS009-SS-120515DL	All TCL compounds	R	A

Due to calibration and 4,4'-DDT breakdown %D problems, data were qualified as estimated in four samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be rejected (R) are unusable for all purposes. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the Stage 2B data validation all other results are considered valid and usable for all purposes.

Data flags are summarized at the end of this report if data has been qualified.

XV. Field Duplicates

Samples MS001-SS-120515 and MS101-SS-120515 and samples MS001-SS-120515DL and MS101-SS-120515DL were identified as field duplicates. No chlorinated pesticides were detected in any of the samples with the following exceptions:

Compound	Concentration (ug/Kg)		RPD (Limits)
	MS001-SS-120515	MS101-SS-120515	
beta-BHC	14	14	0 (≤50)

Compound	Concentration (ug/Kg)		RPD (Limits)
	MS001-SS-120515	MS101-SS-120515	
Dieldrin	9.9	9.9	0 (≤50)
4,4'-DDE	12	12	0 (≤50)
4,4'-DDD	13	13	0 (≤50)
4,4'-DDT	19	19	0 (≤50)
Endrin ketone	12	12	0 (≤50)

Compound	Concentration (ug/Kg)		RPD (Limits)
	MS001-SS-120515DL	MS101-SS-120515DL	
beta-BHC	140	140	0 (≤50)
Dieldrin	99	99	0 (≤50)
4,4'-DDE	120	120	0 (≤50)
4,4'-DDD	130	130	0 (≤50)
4,4'-DDT	190	190	0 (≤50)
Endrin ketone	120	120	0 (≤50)

XVI. Field Blanks

Sample MS-SSRB-120515 was identified as a rinsate blank. No chlorinated pesticide contaminants were found.

Sample MS-SSFB-120515 was identified as a field blank. No chlorinated pesticide contaminants were found.

Introduction

This data review covers 13 sediment samples and 2 water samples listed on the cover sheet including dilutions and reanalysis as applicable. The analyses were per EPA SW 846 Method 8082 for Polychlorinated Biphenyls.

This review follows a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review (June 2008).

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Raw data were not reviewed for this SDG. The review was based on QC data.

The following are definitions of the data qualifiers:

U Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.

J Indicates an estimated value.

R Quality control indicates the data is not usable.

NJ Presumptive evidence of the presence of the compound at an estimated quantity.

UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.

A Indicates the finding is based upon technical validation criteria.

P Indicates the finding is related to a protocol/contractual deviation.

None Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

II. GC/ECD Instrument Performance Check

Instrument performance was acceptable unless noted otherwise under initial calibration and continuing calibration sections.

III. Initial Calibration

Initial calibration of multicomponent compounds was performed for the primary (quantitation) column as required by the method.

The percent relative standard deviations (%RSD) were less than or equal to 20.0% for all compounds.

IV. Continuing Calibration

Continuing calibration was performed at required frequencies.

The percent differences (%D) of calibration factors in continuing standard mixtures were within the 20.0% QC limits.

The percent differences (%D) of the second source calibration standard were less than or equal to 20.0% for all compounds.

V. Blanks

Method blanks were reviewed for each matrix as applicable. No polychlorinated biphenyl contaminants were found in the method blanks.

VI. Surrogate Spikes

Surrogates were added to all samples and blanks as required by the method. All surrogate recoveries (%R) were within QC limits with the following exceptions:

Sample	Column	Surrogate	%R (Limits)	Compound	Flag	A or P
MS-SSRB-120515	Not specified	Decachlorobiphenyl	22.5 (29-118)	All TCL compounds	J (all detects) UJ (all non-detects)	P

All internal standard data were reviewed and within QC limits.

VII. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits.

VIII. Laboratory Control Samples (LCS)

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits.

IX. Regional Quality Assurance and Quality Control

Not applicable.

X. Florisil Cartridge Check

Florisil cleanup was not required and therefore not performed in this SDG.

XI. GPC Calibration

GPC cleanup was not required and therefore not performed in this SDG.

XII. Target Compound Identification

Raw data were not reviewed for this SDG.

XIII. Compound Quantitation and Reported RLs

Raw data were not reviewed for this SDG.

XIV. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to surrogate %R problems, data were qualified as estimated in one samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the Stage 2B data validation all other results are considered valid and usable for all purposes.

Data flags are summarized at the end of this report if data has been qualified.

XV. Field Duplicates

Samples MS001-SS-120515 and MS101-SS-120515 were identified as field duplicates. No polychlorinated biphenyls were detected in any of the samples with the following exceptions:

Compound	Concentration (ug/Kg)		RPD (Limits)
	MS001-SS-120515	MS101-SS-120515	
Aroclor 1248	22	17	26 (≤50)
Aroclor 1254	44	37	17 (≤50)

XVI. Field Blanks

Sample MS-SSRB-120515 was identified as a rinsate blank. No polychlorinated biphenyl contaminants were found.

Sample MS-SSFB-120515 was identified as a field blank. No polychlorinated biphenyl contaminants were found.

Introduction

This data review covers 12 sediment samples and 4 water samples listed on the cover sheet including dilutions and reanalysis as applicable. The analyses were per EPA SW 846 Methods 6010C, 7471A, and 7470A, and EPA 200.8 for Metals. The metals analyzed were Antimony, Arsenic, Cadmium, Chromium, Copper, Lead, Mercury, Nickel, Silver, and Zinc.

This review follows a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Data Review (January 2010).

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Raw data were not reviewed for this SDG. The review was based on QC data.

The following are definitions of the data qualifiers:

U Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.

J Indicates an estimated value.

R Quality control indicates the data is not usable.

NJ Presumptive evidence of the presence of the compound at an estimated quantity.

UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.

A Indicates the finding is based upon technical validation criteria.

P Indicates the finding is related to a protocol/contractual deviation.

None Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

II. ICPMS Tune

The mass calibration was within 0.1 AMU and the percent relative standard deviation (%RSD) was less than or equal to 5% .

III. Calibration

The initial and continuing calibrations were performed at the required frequency.

The calibration standards criteria were met.

IV. Blanks

Method blanks were reviewed for each matrix as applicable. No metals contaminants were found in the initial, continuing and preparation blanks.

V. ICP Interference Check Sample (ICS) Analysis

The frequency of analysis was met.

The criteria for analysis were met.

VI. Matrix Spike Analysis

Matrix spike (MS) analyses were reviewed for each matrix as applicable. Percent recoveries (%R) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Analyte	%R (Limits)	Flag	A or P
MS002-SS-120515MS (All sediment samples in SDG UU52/UU62)	Antimony	9.8 (75-125)	J (all detects) UJ (all non-detects)	A

VII. Duplicate Sample Analysis

Duplicate (DUP) sample analyses were reviewed for each matrix as applicable. Results were within QC limits.

VIII. Laboratory Control Samples (LCS)

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) were within QC limits.

IX. Internal Standards (ICP-MS)

ICP-MS was not utilized in this SDG.

X. Furnace Atomic Absorption QC

Graphite furnace atomic absorption was not utilized in this SDG.

XI. ICP Serial Dilution

ICP serial dilution was not performed for this SDG.

XII. Sample Result Verification

Raw data were not reviewed for this SDG.

XIII. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to MS %R problems, data were qualified as estimated in ten samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the Stage 2B data validation all other results are considered valid and usable for all purposes.

Data flags are summarized at the end of this report if data has been qualified.

XIV. Field Duplicates

Samples MS001-SS-120515 and MS101-SS-120515 were identified as field duplicates. No metals were detected in any of the samples with the following exceptions:

Analyte	Concentration (mg/Kg)		RPD (Limits)
	MS001-SS-120515	MS101-SS-120515	
Arsenic	33	33	0 (≤50)
Cadmium	3.2	3.4	6 (≤50)

Analyte	Concentration (mg/Kg)		RPD (Limits)
	MS001-SS-120515	MS101-SS-120515	
Chromium	37	38	3 (≤50)
Copper	129	125	3 (≤50)
Lead	170	170	0 (≤50)
Mercury	0.4	0.4	0 (≤50)
Nickel	50	42	17 (≤50)
Zinc	400	374	7 (≤50)

XV. Field Blanks

Sample MS-SSRB-120515 was identified as a rinsate blank. No metal contaminants were found.

Sample MS-SSFB-120515 was identified as a field blank. No metal contaminants were found with the following exceptions:

Blank ID	Analyte	Concentration (ug/L)
MS-SSFB-120515	Copper	7

METHOD: Trace Metals (EPA SW 846 Method 6010/6020/7000)

Please see qualifications below for all questions answered "N". Not applicable questions are identified as "N/A".

(Y) N N/A Was a matrix spike analyzed for each matrix in this SDG?

Y (N) N/A Were matrix spike percent recoveries (%R) within the control limits of 75-125? If the sample concentration exceeded the spike concentration by a factor of 4 or more, no action was taken.

(Y) N N/A Was a post digestion spike analyzed for ICP elements that did not meet the required criteria for matrix spike recovery?

LEVEL IV ONLY:

Y N (N/A) Were recalculated results acceptable? See Level IV Recalculation Worksheet for recalculations.

#	Date	Matrix Spike ID	Matrix	Analyte	%R	Associated Samples	Qualifications

Introduction

This data review covers 25 sediment samples listed on the cover sheet including dilutions and reanalysis as applicable. The analyses were per EPA Method 350.1M for Ammonia as Nitrogen, EPA Method 376.2 for Sulfide, Standard Method 2540B for Total Solids and Preserved Total Solids, EPA SW 846 Method 9060M for Total Organic Carbon, and PSEP for Grain Size.

The review follows a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Data Review (January 2010).

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Raw data were not reviewed for this SDG. The review was based on QC data.

The following are definitions of the data qualifiers:

U Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.

J Indicates an estimated value.

R Quality control indicates the data is not usable.

NJ Presumptive evidence of the presence of the compound at an estimated quantity.

UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.

A Indicates the finding is based upon technical validation criteria.

P Indicates the finding is related to a protocol/contractual deviation.

None Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

II. Initial Calibration

All criteria for the initial calibration of each method were met.

III. Calibration Verification

Calibration verification frequency and analysis criteria were met for each method when applicable.

IV. Blanks

Method blanks were reviewed for each matrix as applicable. No contaminant concentrations were found in the initial, continuing and preparation blanks.

V. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) analyses were reviewed for each matrix as applicable. Percent recoveries (%R) were within QC limits.

VI. Duplicates/Triplicates

Duplicate (DUP) sample analyses were reviewed for each matrix as applicable. Results were within QC limits.

Triplicate (TRP) sample analyses were reviewed for each matrix as applicable. Results were within QC limits.

VII. Laboratory Control Samples

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) were within QC limits.

VIII. Sample Result Verification

Raw data were not reviewed for this SDG.

IX. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

The quality control criteria reviewed were met and are considered acceptable. Based upon the Stage 2B data validation all results are considered valid and usable for all purposes.

X. Field Duplicates

Samples MS001-SS-120515 and MS101-SS-120515 and samples MS010-SS-120515 and MS110-SS-120515 were identified as field duplicates. No contaminant concentrations were detected in any of the samples with the following exceptions:

Analyte	Concentration		RPD (Limits)
	MS001-SS-120515	MS101-SS-120515	
Total Solids	10.20%	10.20%	0 (≤50)

MS008-SS-120515MS
MS008-SS-120515MSD

Introduction

This data review covers 12 sediment samples and 2 water samples listed on the cover sheet including dilutions and reanalysis as applicable. The analyses were per NWTPH-Dx for Total Petroleum Hydrocarbons (TPH) as Diesel.

This review follows a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review (June 2008).

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Raw data were not reviewed for this SDG. The review was based on QC data.

The following are definitions of the data qualifiers:

U Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.

J Indicates an estimated value.

R Quality control indicates the data is not usable.

NJ Presumptive evidence of the presence of the compound at an estimated quantity.

UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.

A Indicates the finding is based upon technical validation criteria.

P Indicates the finding is related to a protocol/contractual deviation.

None Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

II. Initial Calibration

Initial calibration of compounds was performed as required by the method.

The percent relative standard deviations (%RSD) of calibration factors for compounds were less than or equal to 20.0%.

III. Calibration Verification

Calibration verification was performed at required frequencies. The percent differences (%D) of amounts in continuing standard mixtures were within the 20.0% QC limits.

The percent differences (%D) of the second source calibration standard were less than or equal to 20.0% for all compounds.

IV. Blanks

Method blanks were reviewed for each matrix as applicable. No total petroleum hydrocarbons as diesel contaminants were found in the method blanks.

V. Surrogate Recovery

Surrogates were added to all samples and blanks as required by the method. All surrogate recoveries (%R) were within QC limits.

VI. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits.

VII. Laboratory Control Samples

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits.

VIII. Target Compound Identification

Raw data were not reviewed for this SDG.

IX. Compound Quantitation and RLs

Raw data were not reviewed for this SDG.

X. System Performance

Raw data were not reviewed for this SDG.

XI. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

The quality control criteria reviewed were met and are considered acceptable. Based upon the Stage 2B data validation all results are considered valid and usable for all purposes.

XII. Field Duplicates

Samples MS001-SS-120515 and MS101-SS-120515 were identified as field duplicates. No total petroleum hydrocarbons as diesel were detected in any of the samples with the following exceptions:

Compound	Concentration (mg/Kg)		RPD (Limits)
	MS001-SS-120515	MS101-SS-120515	
Diesel	53	54	2 (≤50)
Motor oil	150	140	7 (≤50)

XIII. Field Blanks

Sample MS-SSRB-120515 was identified as a rinsate blank. No total petroleum hydrocarbons as diesel contaminants were found.

Sample MS-SSFB-120515 was identified as a field blank. No total petroleum hydrocarbons as diesel contaminants were found.

Introduction

This data review covers 6 sediment samples listed on the cover sheet including dilutions and reanalysis as applicable. The analyses were per WDOE Interim Method for Extractable Petroleum Hydrocarbons.

This review follows a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review (June 2008).

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Raw data were not reviewed for this SDG. The review was based on QC data.

The following are definitions of the data qualifiers:

U Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.

J Indicates an estimated value.

R Quality control indicates the data is not usable.

NJ Presumptive evidence of the presence of the compound at an estimated quantity.

UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.

A Indicates the finding is based upon technical validation criteria.

P Indicates the finding is related to a protocol/contractual deviation.

None Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

II. Initial Calibration

Initial calibration of compounds was performed as required by the method.

The percent relative standard deviations (%RSD) of calibration factors for compounds were less than or equal to 20.0%.

III. Calibration Verification

Calibration verification was performed at required frequencies. The percent differences (%D) of amounts in continuing standard mixtures were within the 20.0% QC limits.

The percent differences (%D) of the second source calibration standard were less than or equal to 20.0% for all compounds.

IV. Blanks

Method blanks were reviewed for each matrix as applicable. No extractable petroleum hydrocarbons contaminants were found in the method blanks.

V. Surrogate Recovery

Surrogates were added to all samples and blanks as required by the method. All surrogate recoveries (%R) were within QC limits.

VI. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits.

VII. Laboratory Control Samples

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits.

VIII. Target Compound Identification

Raw data were not reviewed for this SDG.

IX. Compound Quantitation and RLs

Raw data were not reviewed for this SDG.

X. System Performance

Raw data were not reviewed for this SDG.

XI. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

The quality control criteria reviewed were met and are considered acceptable. Based upon the Stage 2B data validation all results are considered valid and usable for all purposes.

XII. Field Duplicates

No field duplicates were identified in this SDG.

XIII. Field Blanks

No field blanks were identified in this SDG.

RE: Client Project: Jeld Wen Maulsby Marsh, 120909-01.01
ARI Job Nos.: UU52 & UU62

Dear David:

Please find enclosed the Chain of Custody (COC) records, sample receipt documentation, and the final data package for samples from the project referenced above.

Sample receipt and details of these analyses are discussed in the Case Narrative.

An electronic copy of this package will remain on file with ARI. Should you have any questions or problems, please feel free to contact me at your convenience.

Sincerely,

ANALYTICAL RESOURCES, INC.

Cheronne Oreiro

Cooler Receipt Form

ARI Client: Anchor QEA

Project Name: JW - maul sby Marsh

COC No(s): _____ NA

Delivered by: Fed-Ex UPS Courier Hand Delivered Other: _____

Assigned ARI Job No: UU52

Tracking No: _____ NA

Preliminary Examination Phase:

Were intact, properly signed and dated custody seals attached to the outside of to cooler?	YES	NO
Were custody papers included with the cooler?	YES	NO
Were custody papers properly filled out (ink, signed, etc.)	YES	NO

Temperature of Cooler(s) (°C) (recommended 2.0-6.0 °C for chemistry): 0.5 0.5 0.5 0.3 4.4 3.0 0.4

If cooler temperature is out of compliance fill out form 00070F

Temp Gun ID#: 90877952

Cooler Accepted by: CA Date: 5/16/12 Time: 10:05

Complete custody forms and attach all shipping documents

Log-In Phase:

Was a temperature blank included in the cooler?		YES	NO
What kind of packing material was used? ... Bubble Wrap Wet Ice Gel Packs Baggies Foam Block Paper Other: _____			
Was sufficient ice used (if appropriate)?	NA	YES	NO
Were all bottles sealed in individual plastic bags?		YES	NO
Did all bottles arrive in good condition (unbroken)?		YES	NO
Were all bottle labels complete and legible?		YES	NO
Did the number of containers listed on COC match with the number of containers received?		YES	NO
Did all bottle labels and tags agree with custody papers?		YES	NO
Were all bottles used correct for the requested analyses?		YES	NO
Do any of the analyses (bottles) require preservation? (attach preservation sheet, excluding VOCs)...	NA	YES	NO
Were all VOC vials free of air bubbles?	NA	YES	NO
Was sufficient amount of sample sent in each bottle?		YES	NO
Date VOC Trip Blank was made at ARI...	NA		_____

Was Sample Split by ARI : NA YES Date/Time: _____ Equipment: _____ Split by: _____

CC: Cindy Fields <cfields@anchorqea.com>

Hi Delaney - To keep it simple, we'll create the duplicate from the first sample.
Thanks,
-Cheronne

On 5/16/2012 12:23 PM, Delaney Peterson wrote:

Hi Cheronne,
We need to create a field duplicate from one of the samples that is being analyzed for everything. The duplicate was accidentally taken on an archive sample. It doesn't matter which one so we can base it on volume. Will you check to see which sample would be the best one to split and create a field duplicate? Or just create one from the first sample and log it in for the same analyses of the parent sample? The id would be MS101-SS-120515.
Let me know if you have questions.
Thanks,
Delaney

ARI Job Nos.: UU52 & UU62

Sample receipt

Twenty sediment samples and two water samples were received on May 16, 2012 under ARI jobs UU52 and UU62. Select sample containers archived upon receipt. The cooler temperatures measured by IR thermometer following ARI SOP were between 0.3 and 4.4°C. For further details regarding sample receipt, please refer to the Cooler Receipt Form.

Semivolatiles by SW8270

The samples and associated laboratory QC were extracted and analyzed within the method recommended holding times.

Initial calibrations were within method requirements.

The continuing calibration (CCAL) on 5/30/12 fell outside the 20% control limit low for Benzoic Acid. All detected sample results associated with this CCAL have been flagged with a "Q" qualifier. No further corrective action was taken.

Internal standard areas were within limits.

The surrogate percent recoveries were within control limits.

The method blanks were clean at the reporting limits The LCS and LCSD percent recoveries were within control limits.

Several matrix spike and matrix spike duplicate percent recoveries were outside advisory control limits for sample **MS007-SS-120512**. No corrective action is required for matrix QC.

Pesticides by SW8081

The samples and associated laboratory were extracted and analyzed within the method recommended holding times.

The sediment samples were initially diluted at the instrument due to extract color and low total solids results. The samples were re-analyzed on 5/26/12 at lesser dilutions to obtain lower reporting limits. Both sets of data have been reported for review. No further corrective action was taken.

UU52 : 00011

Initial calibrations were within method requirements

Several compounds were outside the 20% control limit on both columns for the continuing calibrations (CCALs) on 5/26/12 at 10:43 and 13:33. DDT breakdowns associated with these CCALs were outside the 15% control limit. All data have been reported as is. No corrective action was taken.

Internal standard areas were within limits.

The surrogate percent recoveries were within control limits.

The method blanks were clean at the reporting limits. The LCS and LCSD percent recoveries were within control limits.

Both matrix spike and matrix spike duplicates could not be recovered for sample **MS002-SS-120515**. No corrective action is required for matrix QC.

Aroclor PCBs by SW8082

The samples and associated laboratory QC were extracted and analyzed within the method recommended holding times.

Initial and continuing calibrations were within method requirements. Internal standard areas were within limits.

The surrogate percent recovery of Decachlorobiphenyl fell outside the control limits low for sample **MS-SSRB-120515**. All other percent recoveries were within control limits. No corrective action was taken.

The method blanks were clean at the reporting limits. The LCS and LCSD percent recoveries were within control limits.

The matrix spike and matrix spike duplicate percent recoveries were within advisory control limits.

NWTPH-Dx

The samples and associated laboratory QC were extracted and analyzed within the method recommended holding times.

Initial and continuing calibrations were within method requirements.

The surrogate percent recoveries were within control limits.

The method blanks were clean at the reporting limits. The LCS and LCSD percent recoveries were within control limits.

The matrix spike and matrix spike duplicate percent recoveries were within advisory control limits.

Metals and Mercury by SW6010C/200.8/7471A/7470

The samples and associated laboratory QC for ARI jobs were digested and analyzed within recommended holding times.

The method blanks were clean at the reporting limits. The LCS percent recoveries were within control limits.

The matrix spike percent recovery of antimony fell outside the control limits low for sample **MS002-SS-120515**. A post digestion spike was performed and the recovery was within control limits. All relevant data have been flagged with an "N" qualifier on the appropriate Form V. No further corrective action was taken.

The duplicate RPDs were within control limits.

General Chemistry Parameters

The samples and associated laboratory QC were prepared and analyzed within the method recommended holding times.

The method blanks were clean at the reporting limits. The LCS percent recoveries were within control limits.

The SRM percent recoveries were within limits.

The matrix spike percent recoveries and replicate RPD/RSDs were within control limits.

Geotechnical Parameters

Client: Anchor QEA, LLC	**ARI Job No.:** UU52
Client Project: Jeld Wen Maulsby Marsh	**Client Project No.:** 120909-01.01

Case Narrative

1. Eleven samples were submitted for grain size analysis according to Puget Sound Estuary Protocol (PSEP) methodology on May 16, 2012.
2. The samples appeared to be composed almost entirely of organic debris and/or organic fine material. The total solids percentages for these samples were extremely low.
3. The samples were run in a single batch and one sample from this job was chosen for triplicate analysis. The triplicate data is reported on the QA summary.
4. Three samples did not contain the required 5 grams of fines for the pipette portion of the analysis. The analytical balance has a capacity of about 200 grams (by 0.0001 grams) and a sample that would yield 5 grams of fines could not be split and stay within the capacity of the balance. A full pipette was performed on the samples, because the percentage of fines was greater than 19%, but due to the low total solids percentages, these samples have been qualified on the QA summary.
5. One sample, MS008-SS-120515, had a QA percentage outside of the allowed range. A sample could not be resplit to come within the allowed QA range. The data has been qualified on the QA summary.
6. The samples contained woody or other organic matter which dried into a hard disk after the oven drying portion of the testing procedure. This material was extremely hard to break down and sieve. Individual organic particles may have broken down during the sieving process, also affecting grain size analysis.
7. The data is provided in summary tables and plots.
8. There were no other noted anomalies in this project.

Data Reporting Qualifiers

Effective 2/14/2011

Inorganic Data

U	Indicates that the target analyte was not detected at the reported concentration
*	Duplicate RPD is not within established control limits
B	Reported value is less than the CRDL but ≥ the Reporting Limit
N	Matrix Spike recovery not within established control limits
NA	Not Applicable, analyte not spiked
H	The natural concentration of the spiked element is so much greater than the concentration spiked that an accurate determination of spike recovery is not possible
L	Analyte concentration is ≤5 times the Reporting Limit and the replicate control limit defaults to ±1 RL instead of the normal 20% RPD

Organic Data

U	Indicates that the target analyte was not detected at the reported concentration
*	Flagged value is not within established control limits
B	Analyte detected in an associated Method Blank at a concentration greater than one-half of ARI's Reporting Limit or 5% of the regulatory limit or 5% of the analyte concentration in the sample.
J	Estimated concentration when the value is less than ARI's established reporting limits
D	The spiked compound was not detected due to sample extract dilution
E	Estimated concentration calculated for an analyte response above the valid instrument calibration range. A dilution is required to obtain an accurate quantification of the analyte.
Q	Indicates a detected analyte with an initial or continuing calibration that does not meet established acceptance criteria (<20%RSD, <20%Drift or minimum RRF).

UU52:00018

S Indicates an analyte response that has saturated the detector. The calculated concentration is not valid; a dilution is required to obtain valid quantification of the analyte

NA The flagged analyte was not analyzed for

NR Spiked compound recovery is not reported due to chromatographic interference

NS The flagged analyte was not spiked into the sample

M Estimated value for an analyte detected and confirmed by an analyst but with low spectral match parameters. This flag is used only for GC-MS analyses

M2 The sample contains PCB congeners that do not match any standard Aroclor pattern. The PCBs are identified and quantified as the Aroclor whose pattern most closely matches that of the sample. The reported value is an estimate.

N The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification"

Y The analyte is not detected at or above the reported concentration. The reporting limit is raised due to chromatographic interference. The Y flag is equivalent to the U flag with a raised reporting limit.

EMPC Estimated Maximum Possible Concentration (EMPC) defined in EPA Statement of Work DLM02.2 as a value "calculated for 2,3,7,8-substituted isomers for which the quantitation and /or confirmation ion(s) has signal to noise in excess of 2.5, but does not meet identification criteria" **(Dioxin/Furan analysis only)**

C The analyte was positively identified on only one of two chromatographic columns. Chromatographic interference prevented a positive identification on the second column

P The analyte was detected on both chromatographic columns but the quantified values differ by ≥40% RPD with no obvious chromatographic interference

X Analyte signal includes interference from polychlorinated diphenyl ethers. **(Dioxin/Furan analysis only)**

Z Analyte signal includes interference from the sample matrix or perfluorokerosene ions. **(Dioxin/Furan analysis only)**

UU52 : 00019

Geotechnical Data

A The total of all fines fractions. This flag is used to report total fines when only sieve analysis is requested and balances total grain size with sample weight.

F Samples were frozen prior to particle size determination

SM Sample matrix was not appropriate for the requested analysis. This normally refers to samples contaminated with an organic product that interferes with the sieving process and/or moisture content, porosity and saturation calculations

SS Sample did not contain the proportion of "fines" required to perform the pipette portion of the grain size analysis

W Weight of sample in some pipette aliquots was below the level required for accurate weighting

(1) Detection Limit (DL), Limit of Detection (LOD) and Limit of Quantitation (LOQ) are defined in ARI SOP 1018S
(2) Control limits calculated using all data from 8/1/10 through 7/31/11.
(3) Highlighted control limits (**bold font**) are adjusted from the calculated values to reflect that ARI does not use control limits < 10 for the lower limit or < 100 for the upper limit.
(4) Relative Percent Difference between analytes in replicate analyzes. If C_O and C_D are the concentrations of the original and duplicate respectively then $RPD = \frac{|C_O - C_D|}{\frac{C_O + C_D}{2}} x100$

(5) Sample extracts for 1,4-Dioxane analysis are concentrated to 1 mL.

Hexachlorobutadiene	19 - **100**	**10** - 104	21 - **100**	11 - **100**
MB / LCS Surrogate Recovery				
Tetrachloro-*m*-xylene (TCMX)	52 - **100**	(3)	25 - **100**	(3)
Decachlorobiphenyl	54 - **100**	(3)	34 - 115	(3)
Sample Surrogate Recovery				
Tetrachloro-xylene (TCMX)	43 - 106	(3)	11 - 110	(3)
Decachlorobiphenyl	32 - 116	(3)	13 - 133	(3)

(1) Control limits calculated using all recovery data from 9/1/09 through 8/31/10.
(2) **ME** = A **marginal exceedance** defined in the NELAC Standard [6] as beyond the LCS-CL but still within the ME limits. ME limits are between 3 and 4 standard deviations around the mean. A maximum of one marginal exceedance is acceptable. Two or more marginal exceedances require corrective action.
(3) Marginal Exceedances not allowed for a surrogate standard.
(4) Laboratory Control Sample (LCS) spike recovery control limits also used as advisory control limits for sample matrix spike (MS) analyzes. MS recovery values are advisory and not used to assess the acceptability of an analytical batch.
(5) Highlighted control limits (**bold font**) adjusted to demonstrate that ARI does not use control limits < 10 for the lower limit or < 100 for the upper limit.
(6) **2003 NELAC Standard (EPA/600/R-04/003), July 2003**, Chapter 5, pages 251-252.

(1) Detection Limit (DL), Limit of Detection Limit (LOD) and Limit of Quantitation (LOQ) as defined in ARI SOP 1018S
(2) 50 mL sample and 50 mL final volume
(3) Solids LOQ based on 100% solids using 1.0 g sample with 100 mL final volume.
(4) Relative Percent Difference between analytes in replicate analyzes. If C_O and C_D are the concentrations of the original and duplicate respectively then $RPD = \frac{|C_O - C_D|}{\frac{C_O + C_D}{2}} x100$

(5) ARI has no accreditation for these elements.

Quality Control Parameters for Mercury Analysis using CVAA

	Aqueous Samples[2]			Spike Recovery		RPD[5]
	DL[1] µg/L	LOD[1] µg/L	LOQ[1] µg/L	Matrix Spike	LCS	
Mercury	0.0069	0.05	**0.10**[2]	75 – 125	80 – 120	≤ 20
Mercury (low level)	0.0026	0.01	**0.02**[3]	75 – 125	80 – 120	≤ 20
	Soil / Sediment / Tissue[4] Samples			**Spike Recovery**		**RPD[5]**
	DL[1] mg/kg	**LOD[1] mg/kg**	**LOQ[1] mg/kg**	**Matrix Spike**	**LCS**	
Mercury	0.0021	0.0125	**0.025**[3,4]	75 – 125	80 – 120	≤ 20

(1) Detection Limit (DL), Limit of Detection Limit (LOD) and Limit of Quantitation (LOQ) as defined in ARI SOP 1018S
(2) 20 mL sample with 20 mL final volume
(3) 0.2 g sample with 50 mL final volume assuming 100% dry weight. Soil and sediment are reported on a dry weight basis.
(4) Tissue LOQ is 0.005 mg/kg as received (wet weight) based on 1 g sample with 50 mL final volume.
(5) Relative Percent Difference between analytes in replicate analyzes. If C_O and C_D are the concentrations of the original and duplicate respectively then $RPD = \frac{|C_O - C_D|}{\frac{C_O + C_D}{2}} x100$

SEMIVOLATILE METHOD BLANK SUMMARY

BLANK NO.

UU52MBS1

Lab Name: ANALYTICAL RESOURCES INC

Client: ANCHOR QEA, LLC.

ARI Job No: UU52

Project: JELD WEN MAULSBY MAR

Lab File ID: UU52MB

Date Extracted: 05/22/12

Instrument ID: NT10

Date Analyzed: 05/26/12

Matrix: SOLID

Time Analyzed: 1556

THIS METHOD BLANK APPLIES TO THE FOLLOWING SAMPLES, MS and MSD:

	CLIENT SAMPLE NO.	LAB SAMPLE ID	LAB FILE ID	DATE ANALYZED

TPH ANALYTICAL SEQUENCE

Lab Name: ANALYTICAL RESOURCES INC Client: ANCHOR QEA

SDG No.: UU52 Project: 120909-01.01

Instrument ID: FID4A GC Column: RTX-1

Run Date: 05/14/12

THE ANALYTICAL SEQUENCE OF BLANKS, SAMPLES, AND STANDARDS, IS GIVEN BELOW:

SURROGATE RT FROM DAILY STANDARD
TERPH: 6.31 TRIAC: 9.20

	CLIENT SAMPLE NO.	LAB SAMPLE ID	DATE ANALYZED	TIME ANALYZED	TERPH RT #	TRIAC RT #
01		MOIL 100	05/14/12	1351	6.32	9.19
02		MOIL 250	05/14/12	1415	6.32	9.19
03		MOIL 500	05/14/12	1439	6.33	9.21
04		MOIL 1000	05/14/12	1503	6.32	9.24
05		MOIL 2500	05/14/12	1527	6.31	9.29*
06		MOIL 5000	05/14/12	1551	6.31	9.37*

QC LIMITS

TERPH = o-terph (+/- 0.05 MINUTES)
TRIAC = Triacon Surr (+/- 0.05 MINUTES)

* Values outside of QC limits.

Notes to the Testing:

1. Organic matter was not removed prior to testing, thus the reported values are the "apparent" grain size distribution. See narrative for discussion of the testing.

SPECIAL INSTRUCTIONS: Weigh into beakers-lightly dry with Sodium Sulfate. 2. Transfer to microwave vessel. Note: do not fill vessel more than 2/3rd full. Some samples may require two vessels). → or more
3. Add 1:1 DCM/ACE to the vessels (until solvent is 3" above soil layer after homogenization). 4. Add surr/spike.
5. Microwave on appropriate power setting determined by # of samples. 6. After microwave-re-homogenize while hot then let cool 10-15 min in cold water. 7. Decant 1:1 DCM/ACE into Erlenmeyer flask with sodium sulfate in the bottom and funnel containing pre-deactivated glasswool. 8. Rinse with DCM 9. Microwave a 2nd time using DCM only (until solvent is 3" above soil layer after homogenization). 10. Let cool and decant the solvent then empty the soil into the funnel and rinse with DCM.
11. KD ([redacted]/large drying column with pre-deactivated glasswool-Blanks=5g of sulfate)) to 5mL at 80- 85°C.
12. GPC Optional. 13. TurboVap. 14. IF NO GPC: TurboVap to 3mL add 2mL Hexane. TurboVap to Final Volume and vial in DCM. 15. (After GPC): KD at 80-85°. 16. TurboVap. 17. Vial in DCM.

in house stock	1939-3	7/4/12	in house stock	1939-3	7/4/12

Detail problems, corrective actions and/or other pertinent information below:

1) first point dropped: P-Benzoquinone, Benzoic Acid, Hexachlorocyclopentadiene, 2,4-Dinitrophenol, 4-Nitrophenol, 4,6-Dinitro-2-methylphenol Pentachlorophenol. Benzidine. (< RL)
2) highest point dropped. Acenaphthene
3) linear fit used: Benzoic Acid. 4-Nitrophenol
4) Quadratic fit used: 2,4-Dinitrophenol, Pentachlorophenol
5) out of QC: Benzidine ICV: Pentachlorophenol recovery @ 62.4%

Surrogate Recovery in Control?	YES / NO	Special Analysis Criteria Met?	YES / NO / NA
Manual Integrations for ICal?	YES / NO	Manual Integrations for Samples?	Yes / NO

Detail problems, corrective actions and/or other pertinent information below (use reverse side when necessary):

All samples were run @ 3x dilution due to dark color of the extracts. High Matrix BKG.

Sample 6 was re-run @ 6x dilution due to high concentration of Naphthalene.

Extremely Wet Sample (marsh) 90% ish wet

Di-n-Octyl phthalate UJ to MDL. No Sample Hits found

Additional Details on Reverse: Yes / NO

$ 36 2-Fluorobiphenyl	497.3	294.2	59.17	30-160
$ 55 2,4,6-Tribromophen	746.0	486.6	65.23	30-160
$ 66 Terphenyl-d14	497.3	307.9	61.91	30-160

Data File: /chem1/nt10.i/20120529.b/uu52i.d
Date : 29-MAY-2012 12:56
Client ID: MS008-SS-120515
Sample Info: UU52I,3
Volume Injected (uL): 1.0
Column phase: ZB-5msi

Instrument: nt10.i
Operator: VTS/YZ
Column diameter: 0.25

UU52 : 00991

Data File: /chem1/nt10.i/20120529.b/uu52i.d

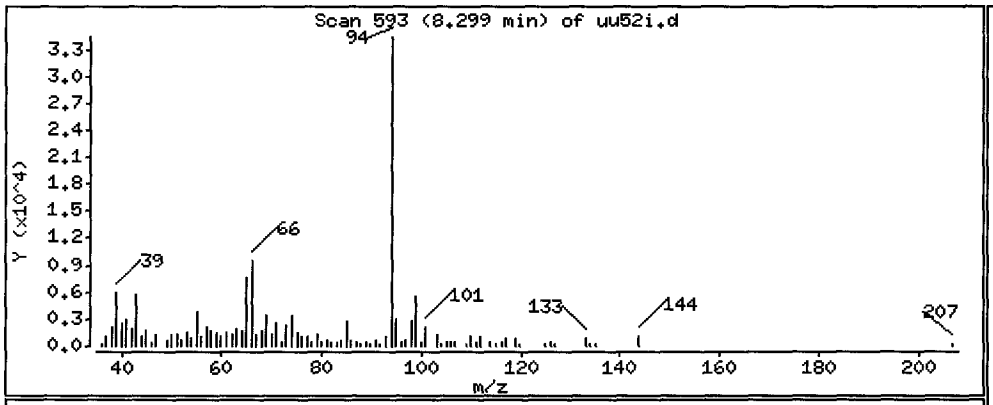
Date : 29-MAY-2012 12:56

Client ID: MS008-SS-120515

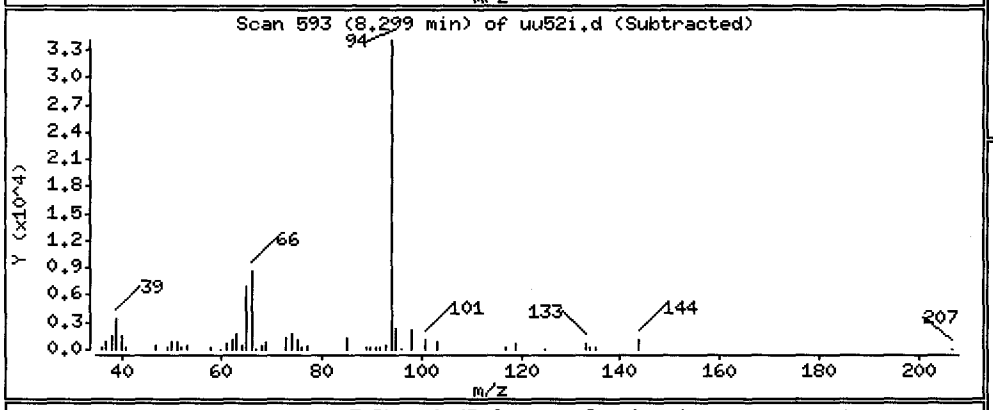
Instrument: nt10.i

Sample Info: UU52I,3

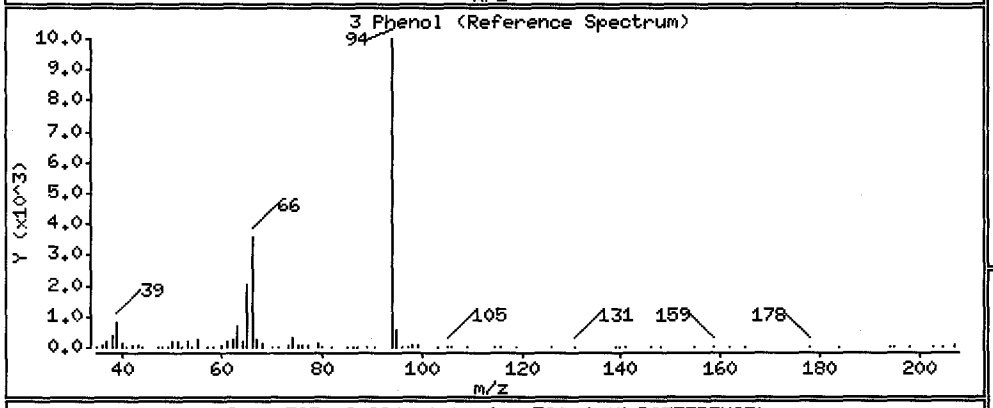
Volume Injected (uL): 1.0



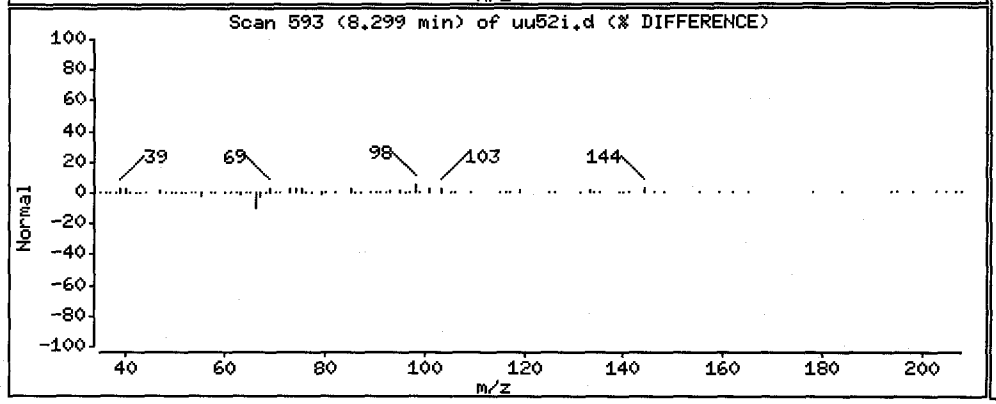
Operator: VTS/YZ



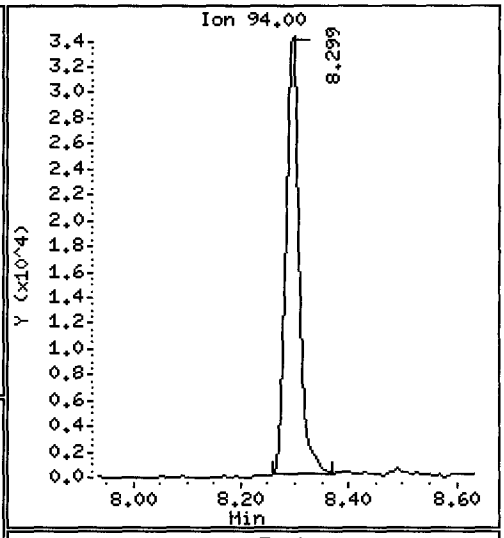
Column phase: ZB-5msi



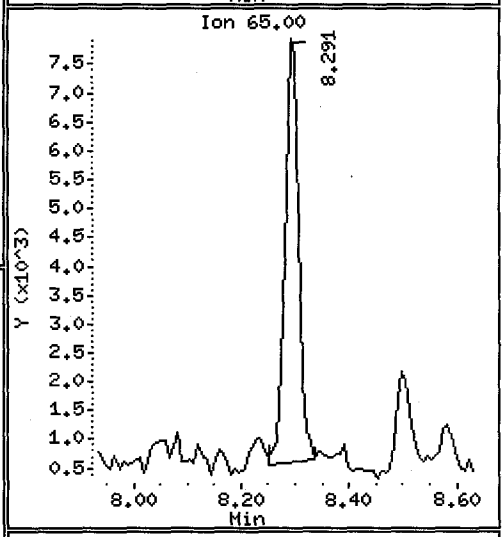
Column diameter: 0.25

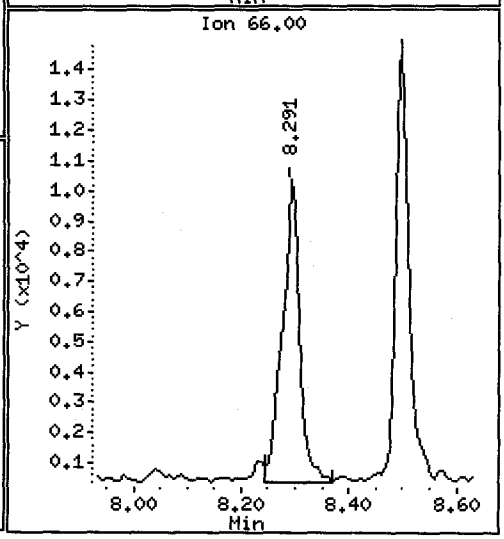


3 Phenol



Concentration: 192.7 ug/kg





Data File: /chem1/nt10.i/20120529.b/uu52i.d

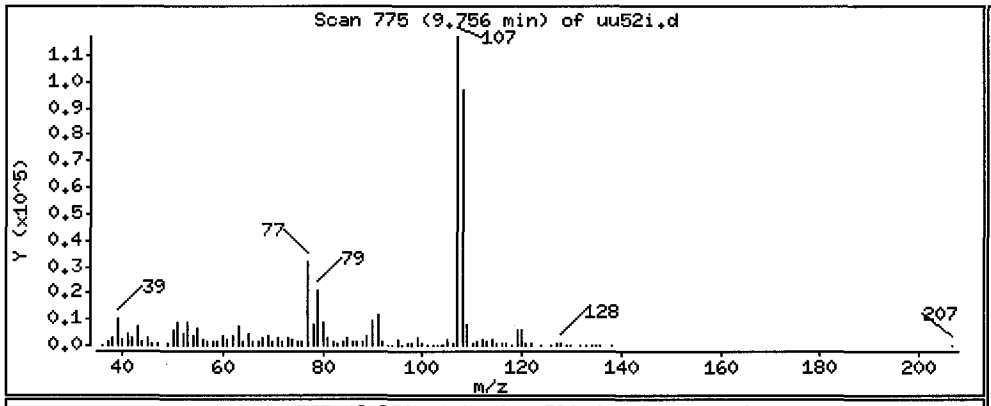
Date : 29-MAY-2012 12:56

Client ID: MS008-SS-120515

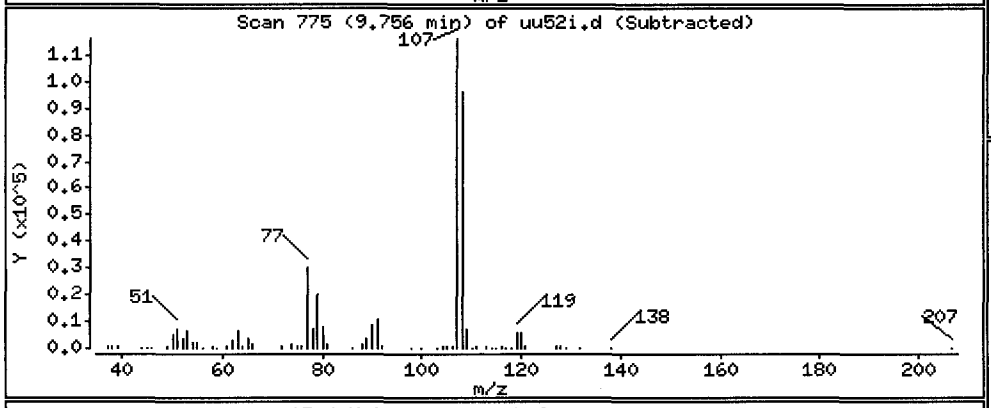
Instrument: nt10.i

Sample Info: UU52I,3

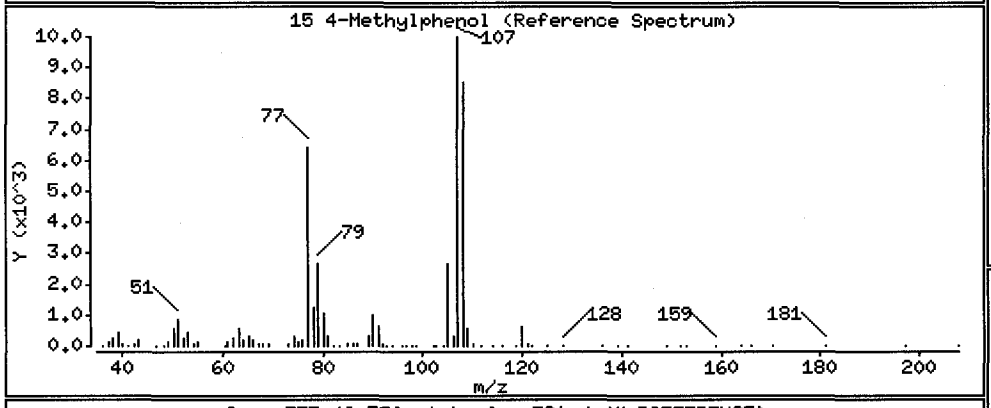
Volume Injected (uL): 1.0



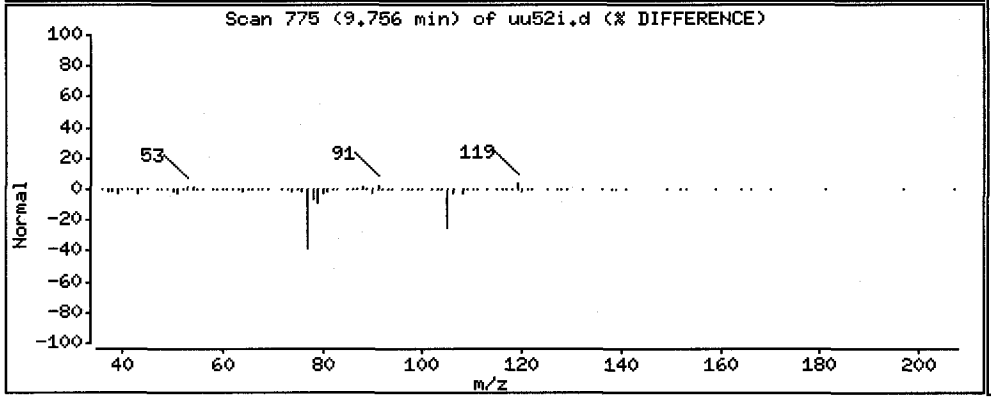
Operator: VTS/YZ



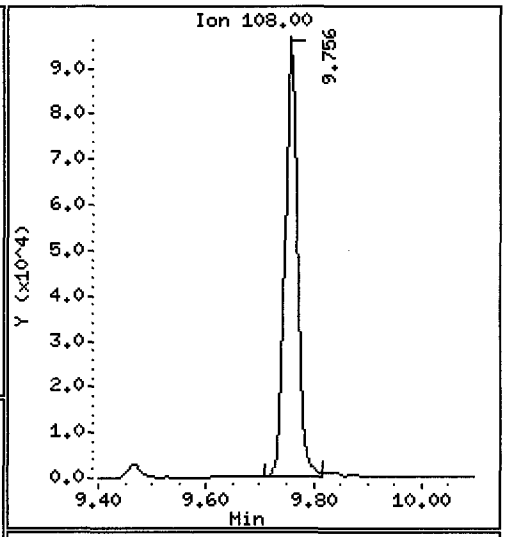
Column phase: ZB-5msi



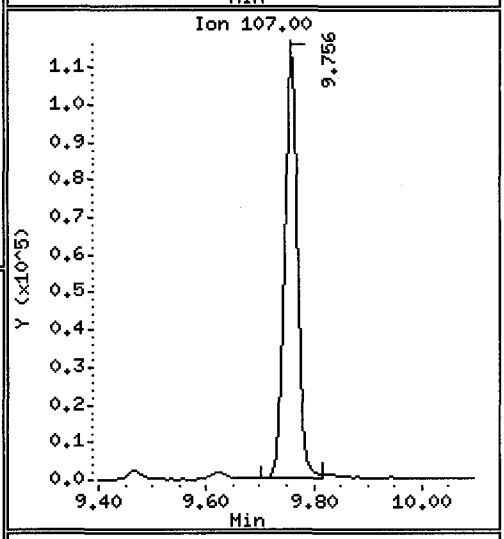
Column diameter: 0.25

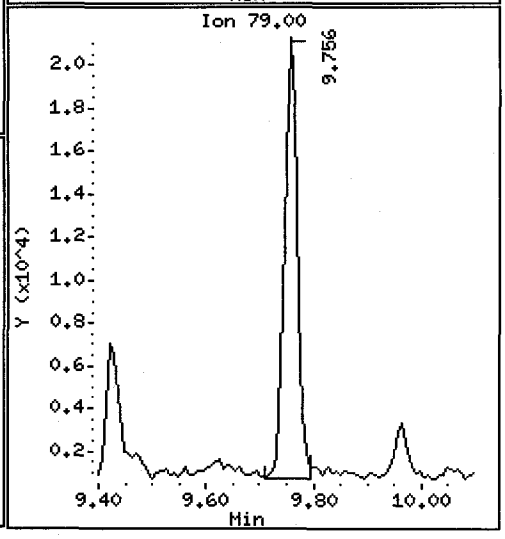


15 4-Methylphenol



Concentration: 611.0 ug/kg





Data File: /chem1/nt10.i/20120529.b/uu52i.d

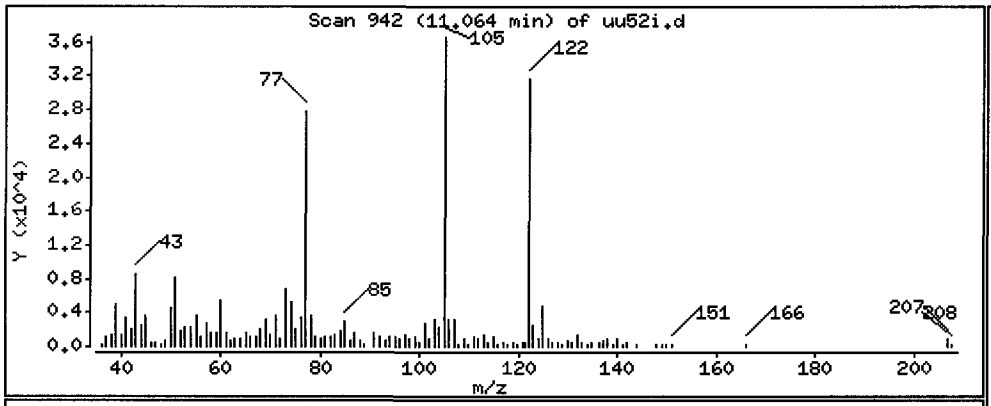
Date : 29-MAY-2012 12:56

Client ID: MS008-SS-120515

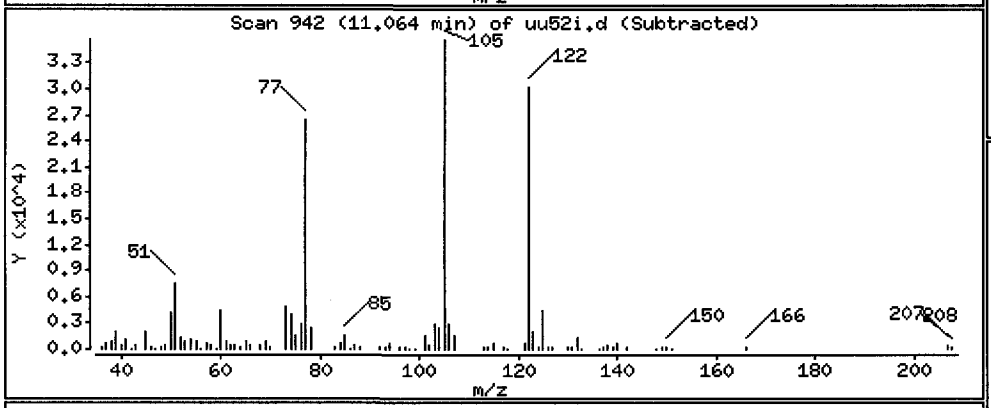
Instrument: nt10.i

Sample Info: UU52I,3

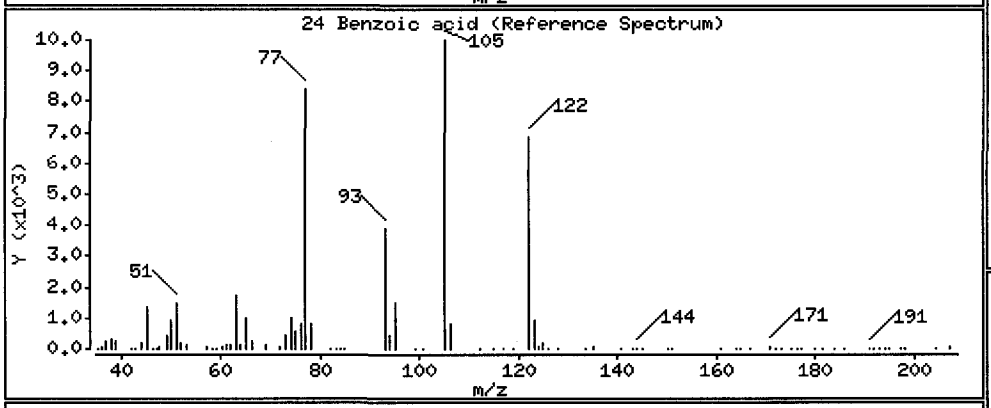
Volume Injected (uL): 1.0



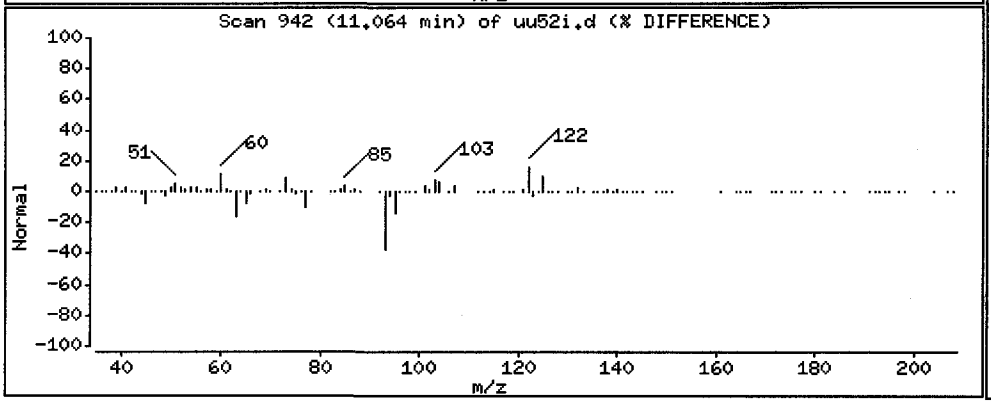
Operator: VTS/YZ



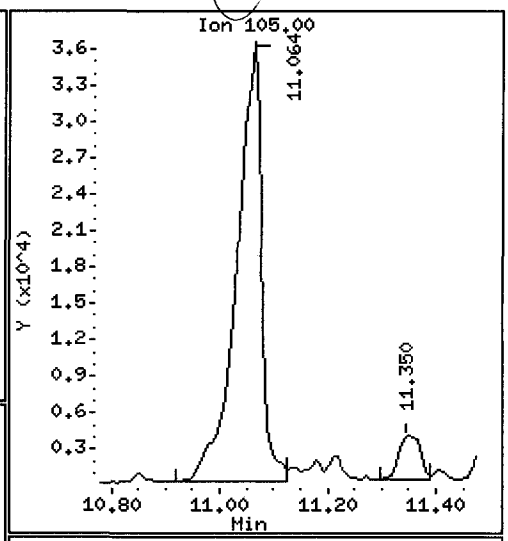
Column phase: ZB-5msi



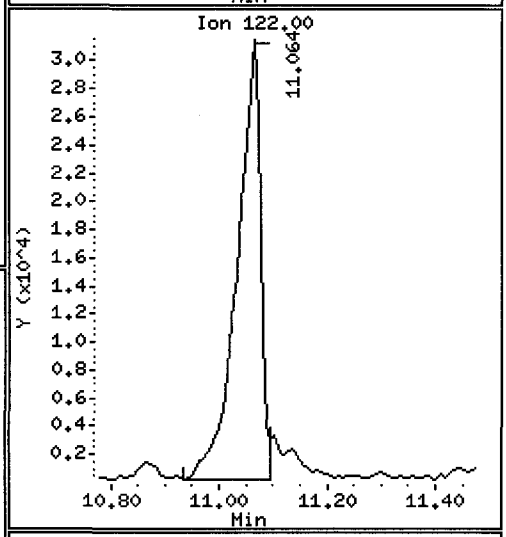
Column diameter: 0.25

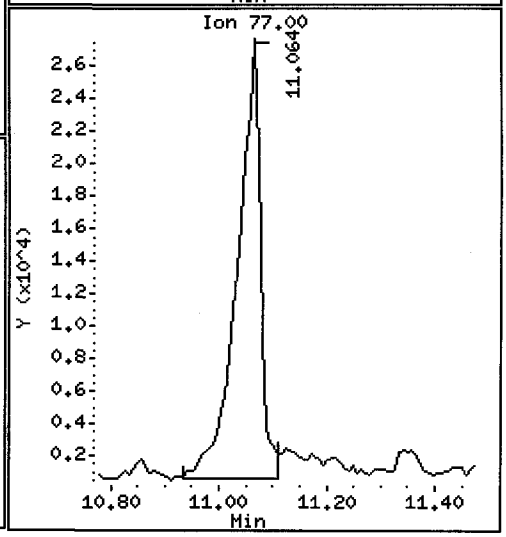


24 Benzoic acid



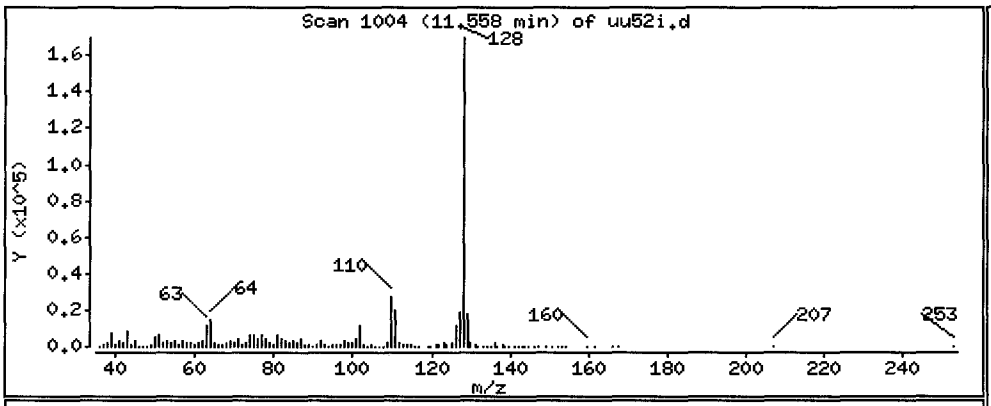
Concentration: 744.4 ug/kg



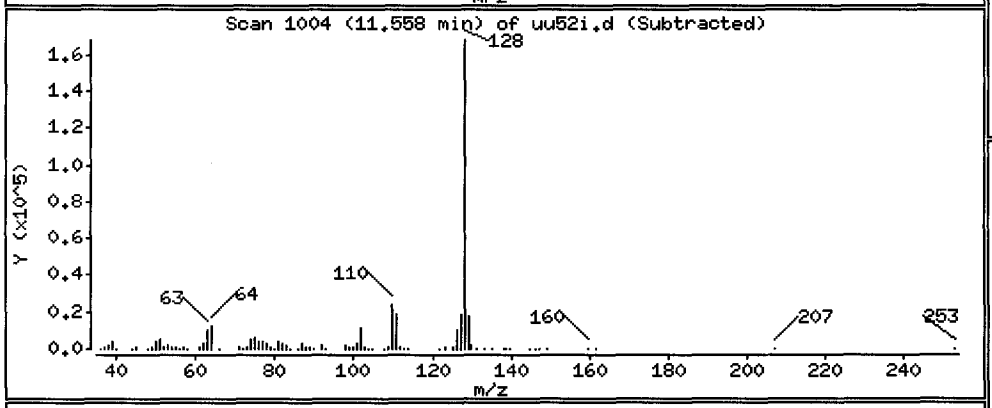


Data File: /chem1/nt10.i/20120529.b/uu52i.d

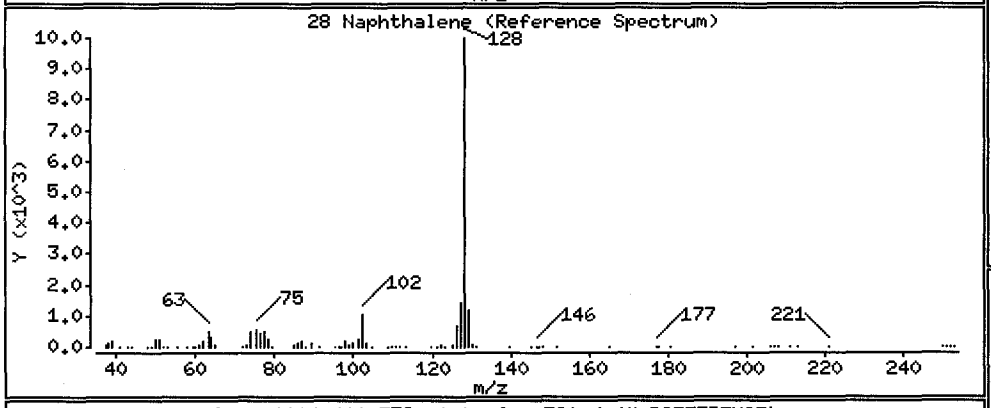
Date : 29-MAY-2012 12:56



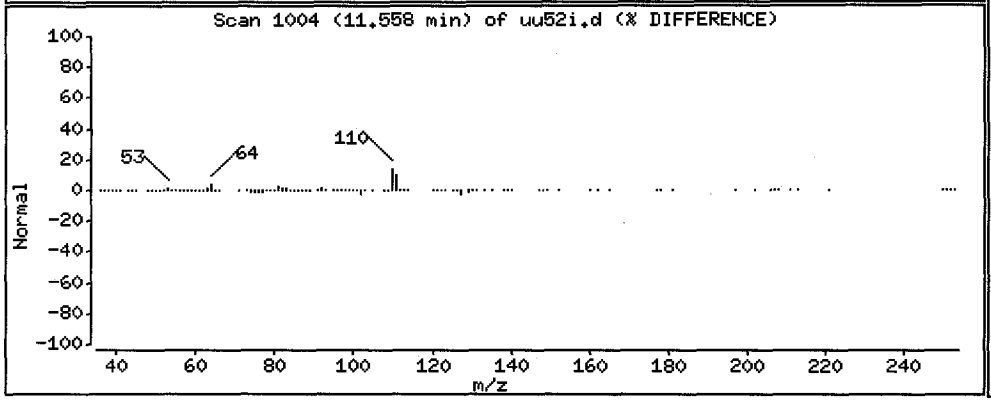
Client ID: MS008-SS-120515 Instrument: nt10.i



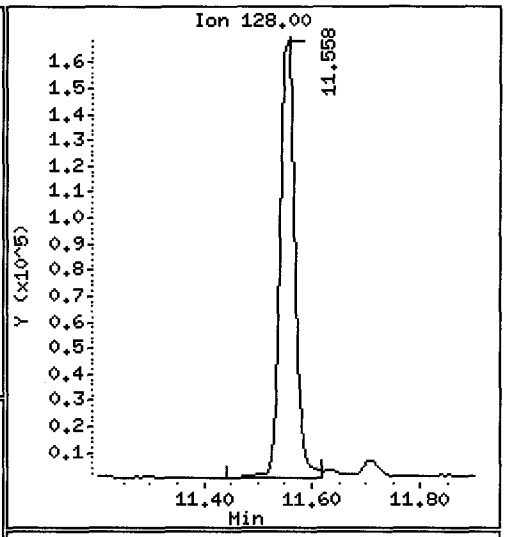
Sample Info: UU52I,3



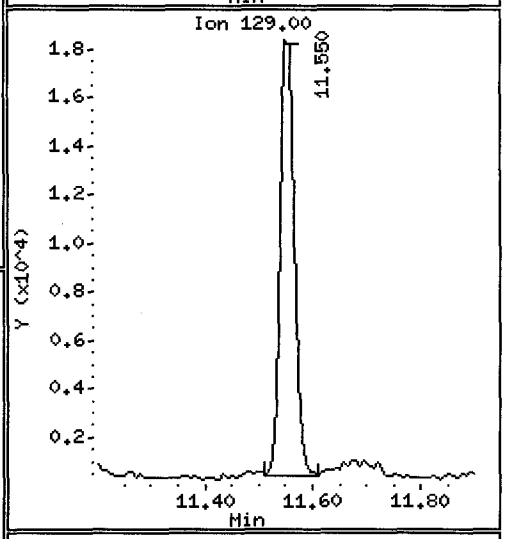
Volume Injected (uL): 1.0 Operator: VTS/YZ

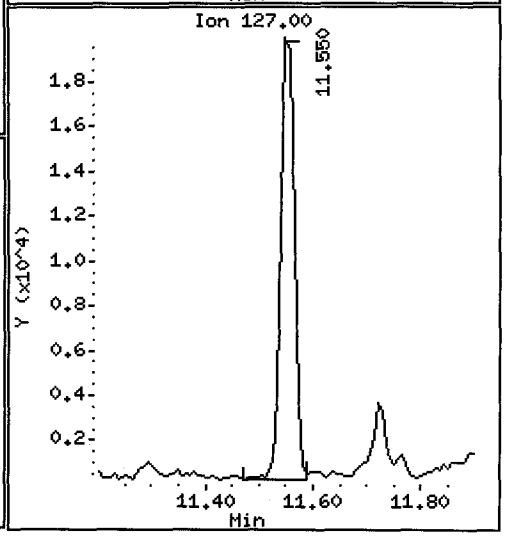


Column phase: ZB-5msi Column diameter: 0.25



28 Naphthalene Concentration: 457.2 ug/kg





Data File: /chem1/nt10.i/20120529.b/uu52i.d

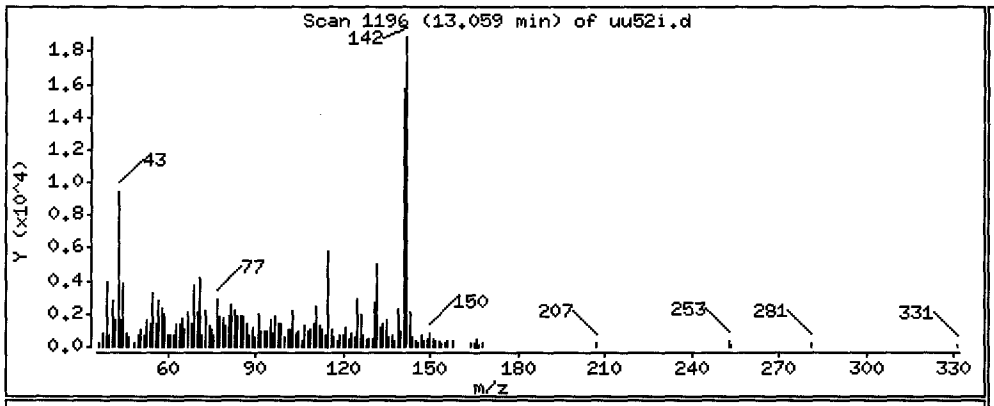
Date : 29-MAY-2012 12:56

Client ID: MS008-SS-120515

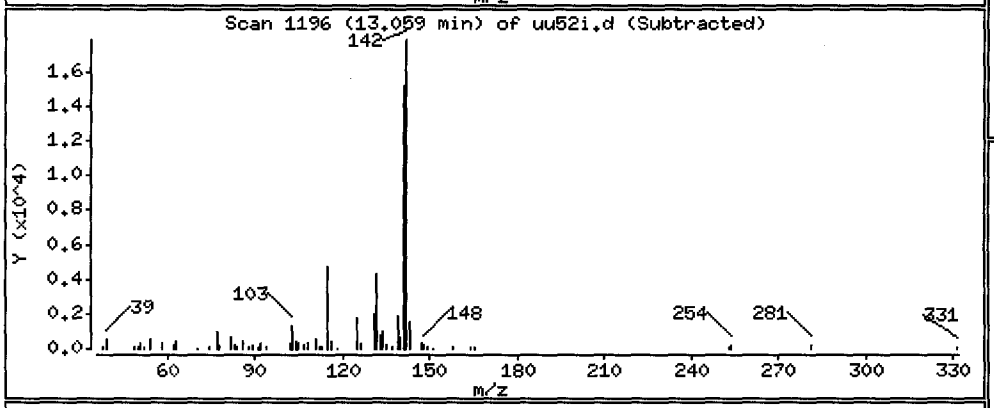
Instrument: nt10.i

Sample Info: UU52I,3

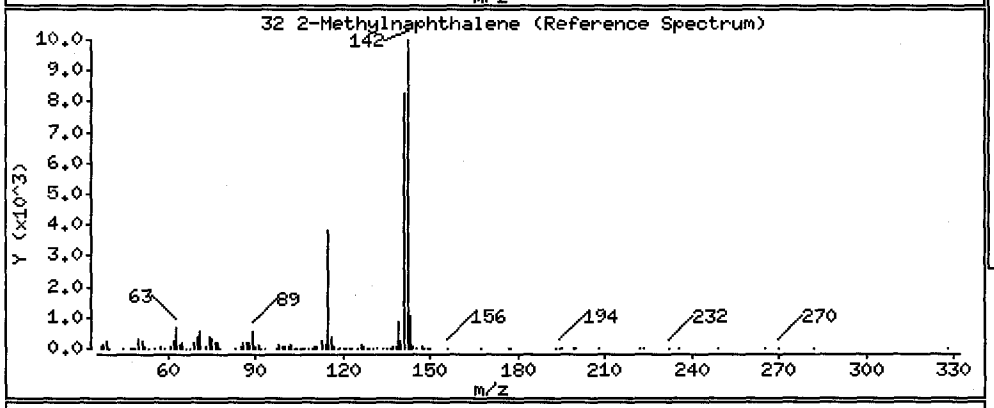
Volume Injected (uL): 1.0



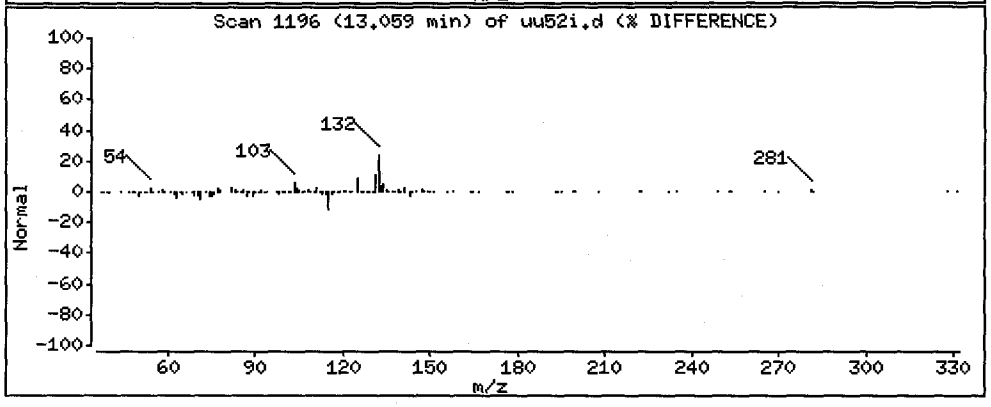
Operator: VTS/YZ



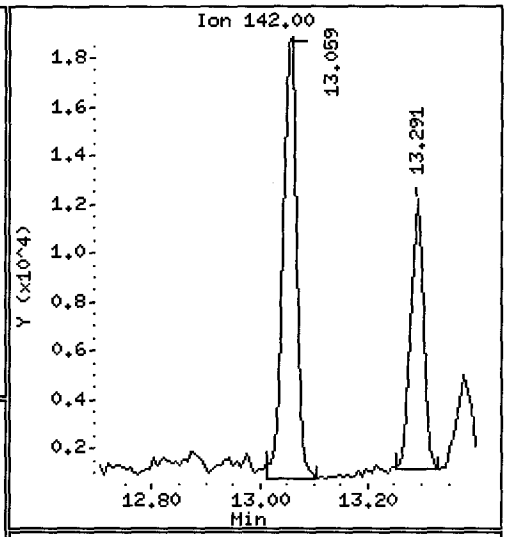
Column phase: ZB-5msi



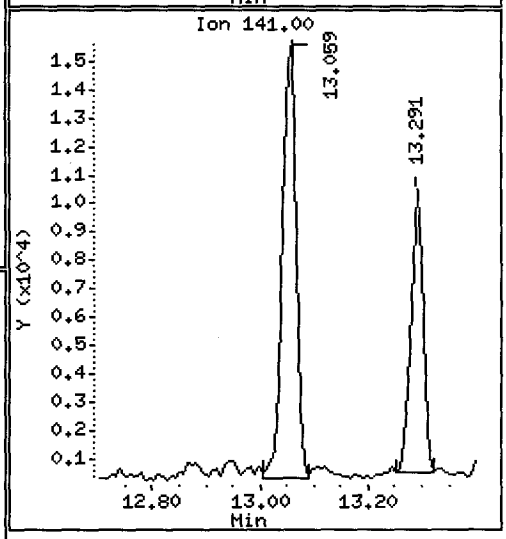
Column diameter: 0.25



32 2-Methylnaphthalene



Concentration: 65.42 ug/kg



Data File: /chem1/nt10.i/20120529.b/uu52i.d

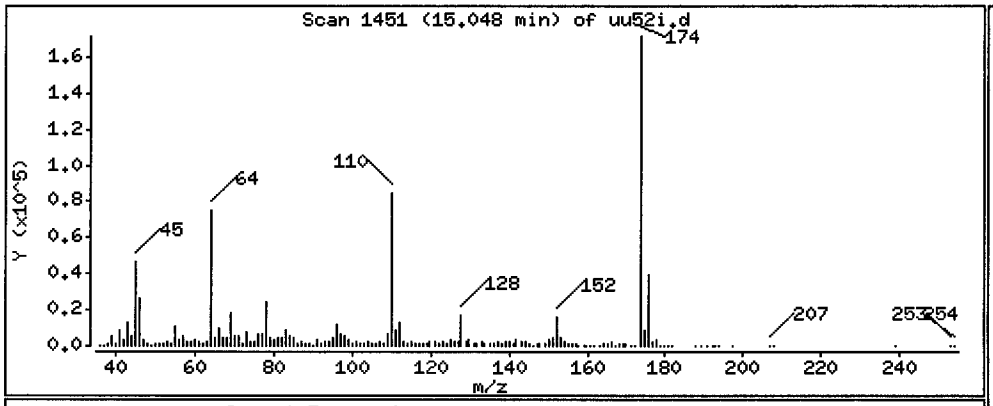
Date : 29-MAY-2012 12:56

Client ID: MS008-SS-120515

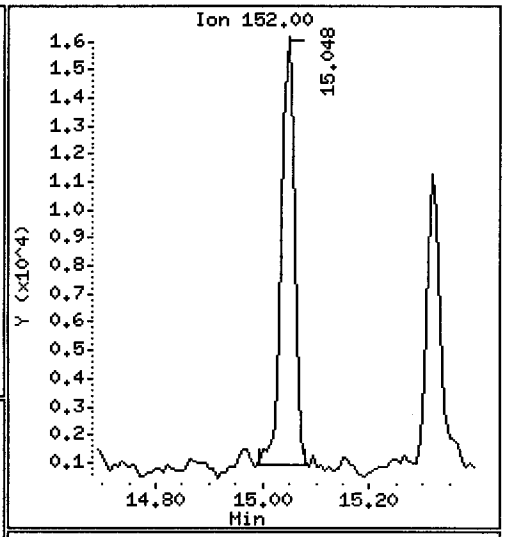
Instrument: nt10.i

Sample Info: UU52I,3

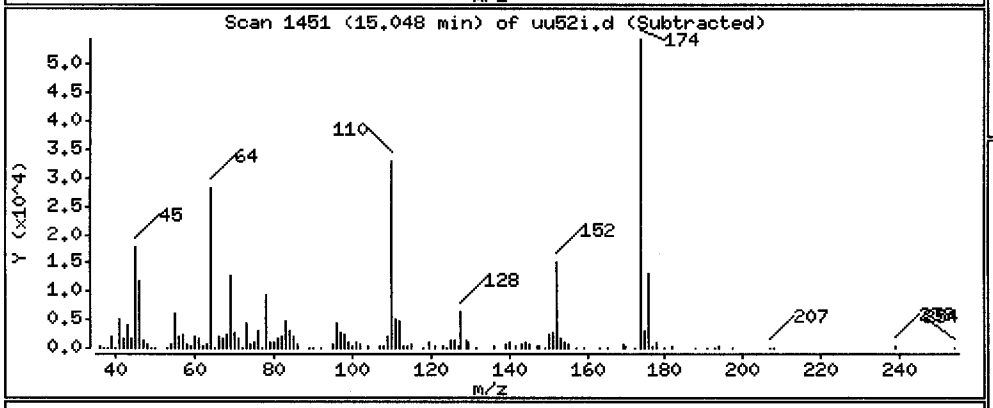
Volume Injected (uL): 1.0



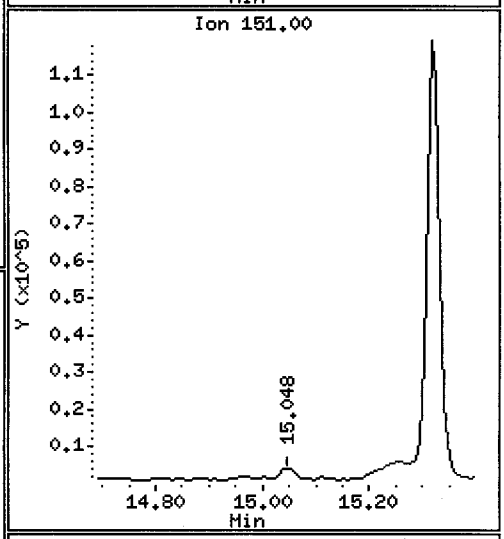
Operator: VTS/YZ



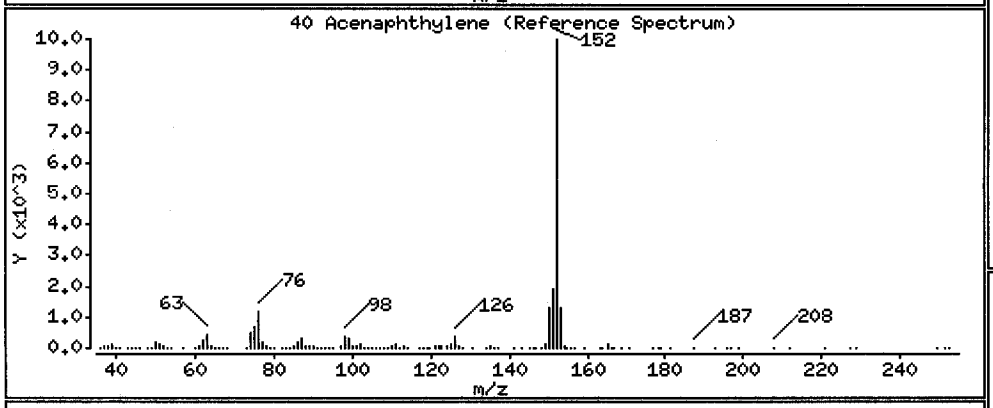
Column phase: ZB-5msi



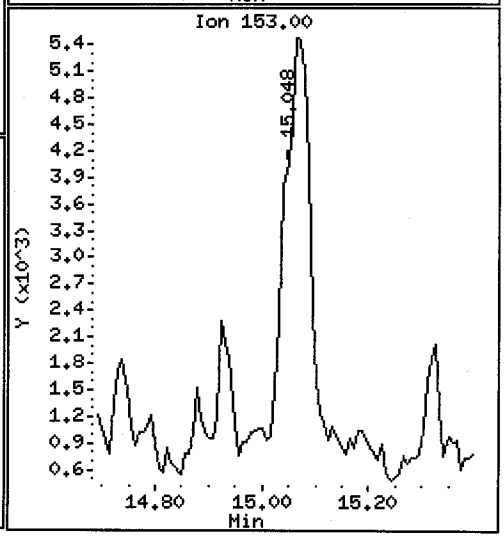
Column diameter: 0.25

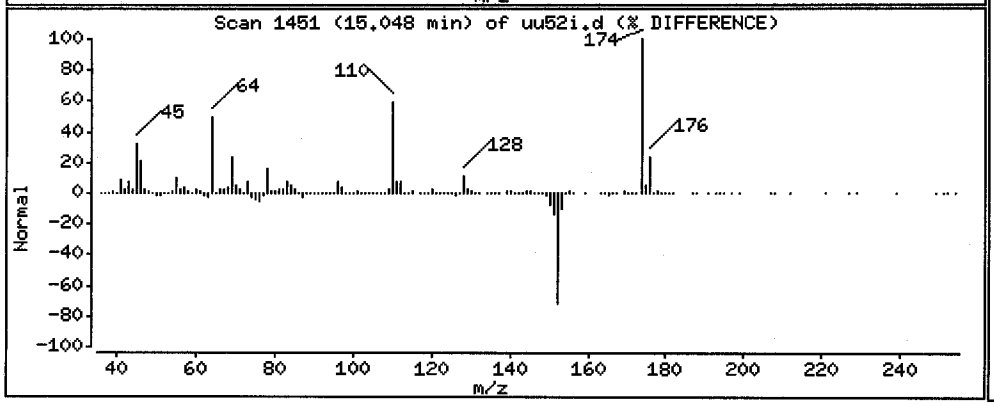


40 Acenaphthylene



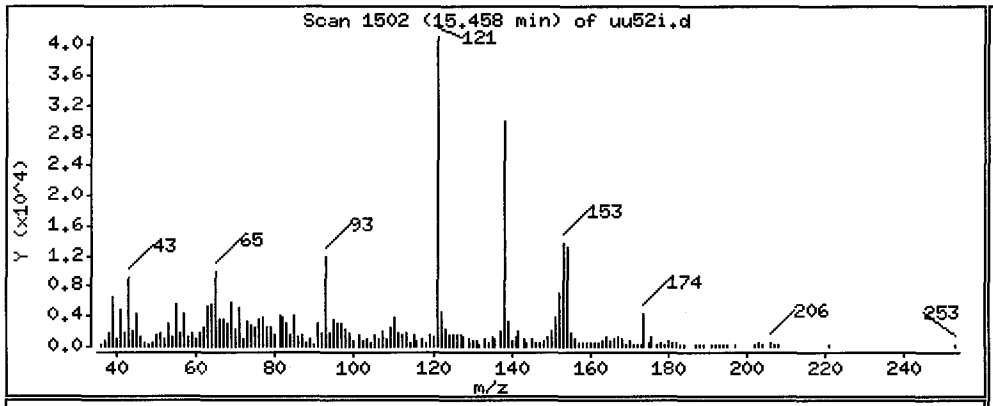
Concentration: 38.94 ug/kg



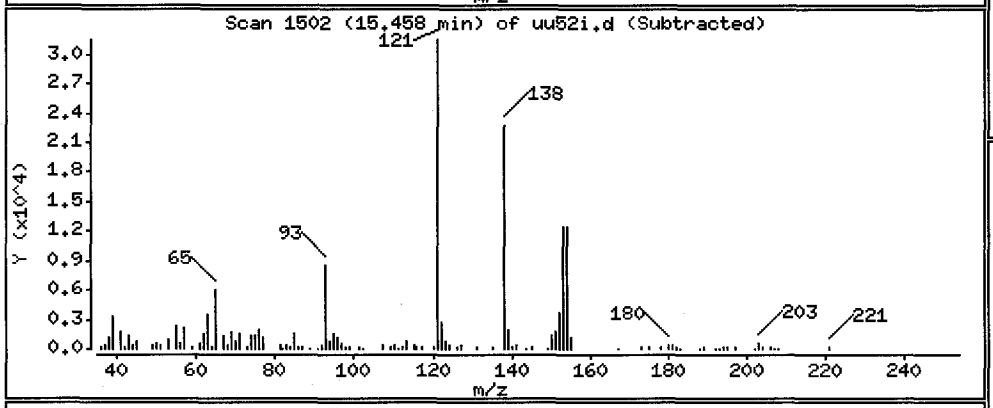


Data File: /chem1/nt10.i/20120529.b/uu52i.d

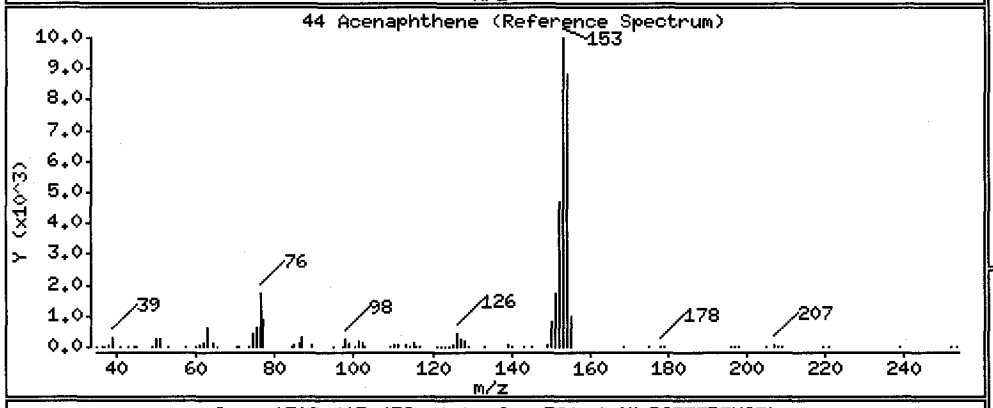
Date : 29-MAY-2012 12:56



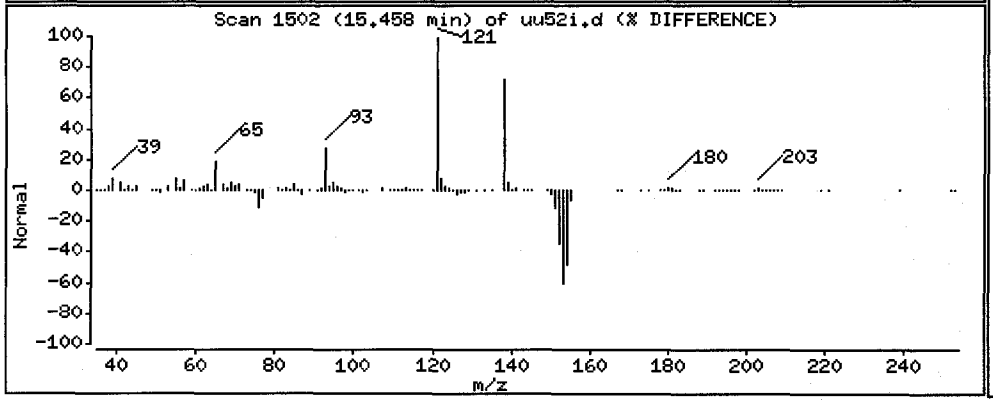
Client ID: MS008-SS-120515 Instrument: nt10.i



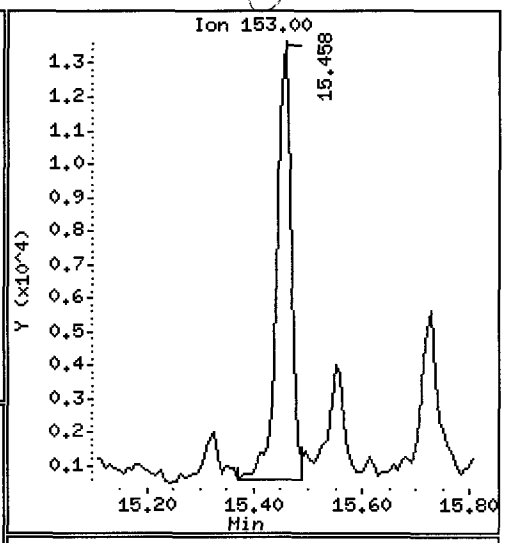
Sample Info: UU52I,3



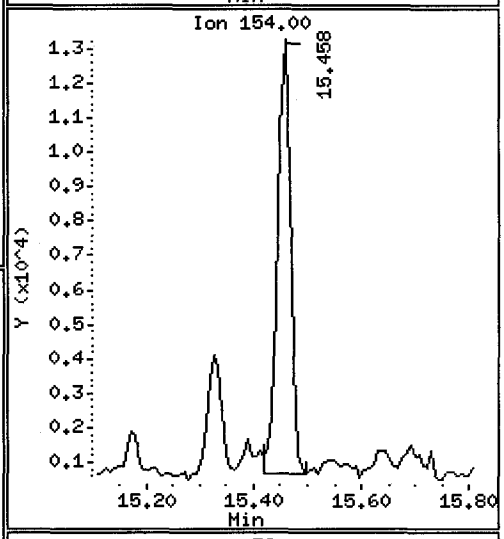
Volume Injected (uL): 1.0 Operator: VTS/YZ

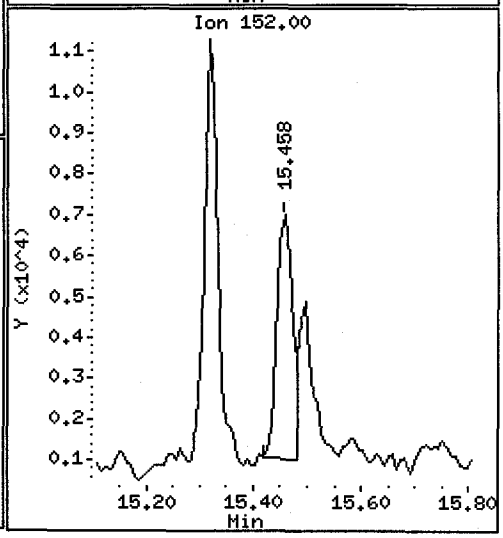


Column phase: ZB-5msi Column diameter: 0.25



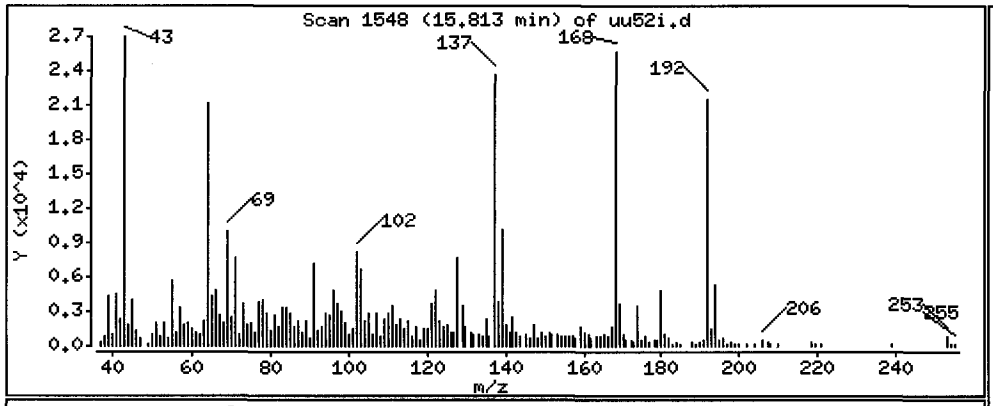
44 Acenaphthene Concentration: 57.30 ug/kg



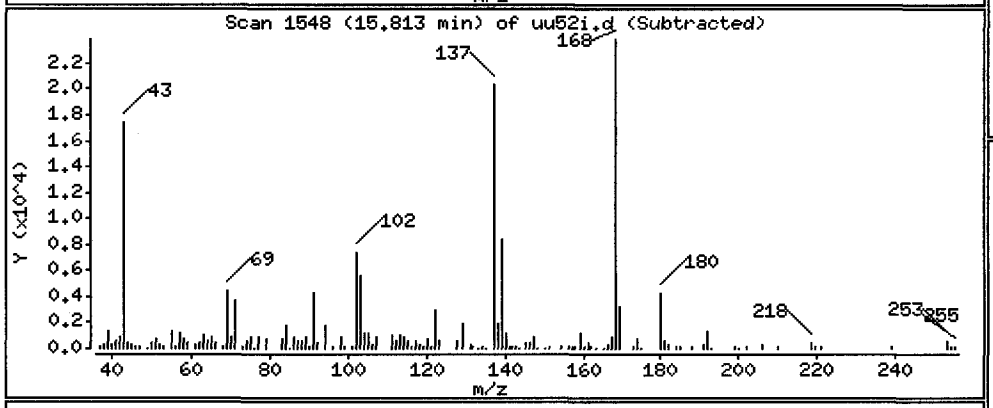


Data File: /chem1/nt10.i/20120529.b/uu52i.d

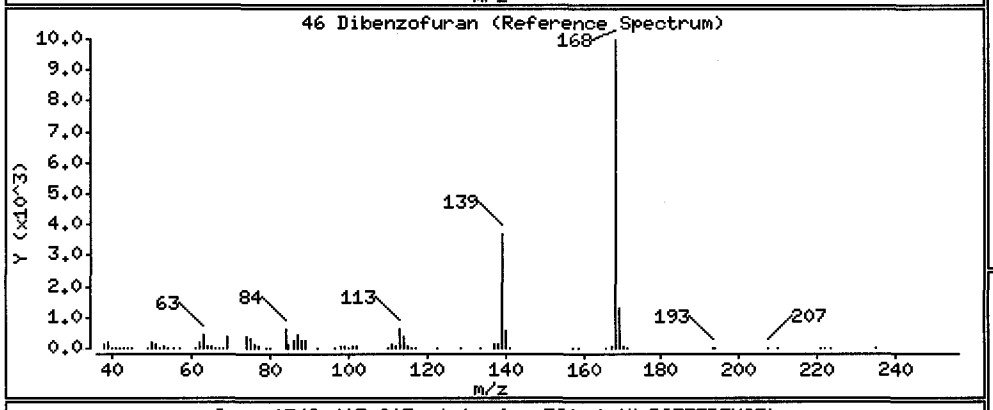
Date : 29-MAY-2012 12:56



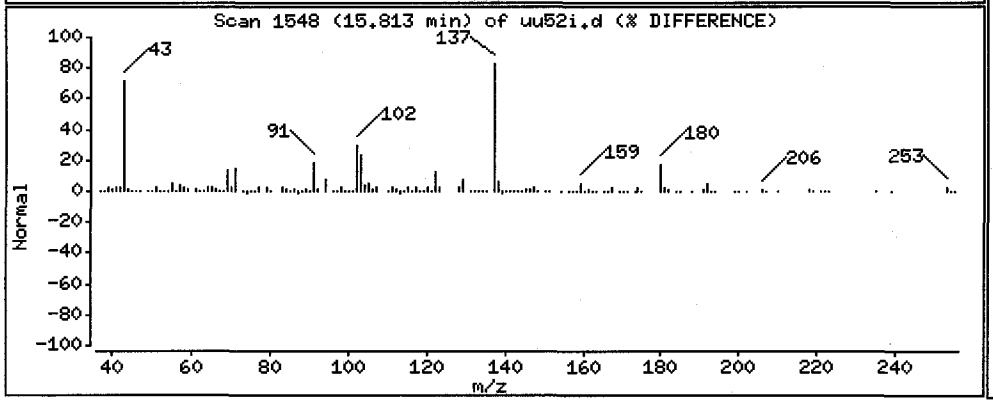
Client ID: MS008-SS-120515 Instrument: nt10.i



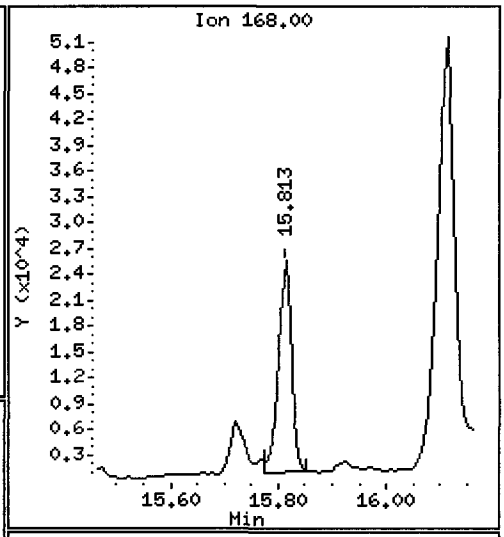
Sample Info: UU52I,3



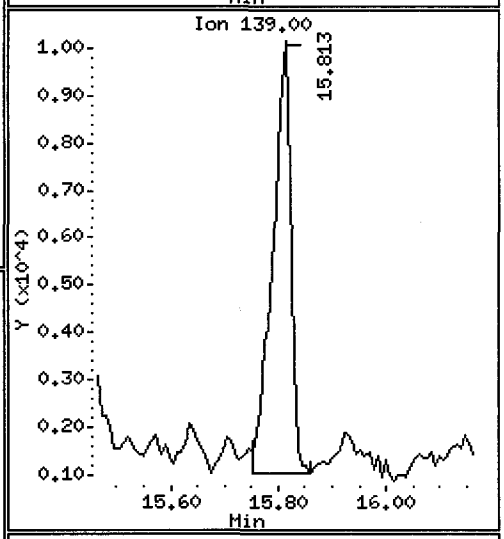
Volume Injected (uL): 1.0 Operator: VTS/YZ

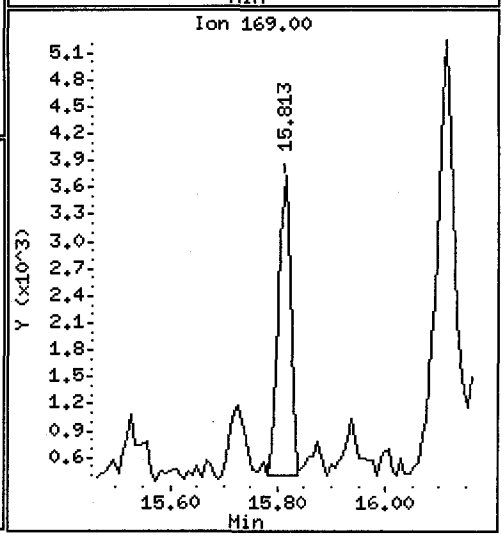


Column phase: ZB-5msi Column diameter: 0.25



46 Dibenzofuran Concentration: 68.62 ug/kg





Data File: /chem1/nt10.i/20120529.b/uu52i.d

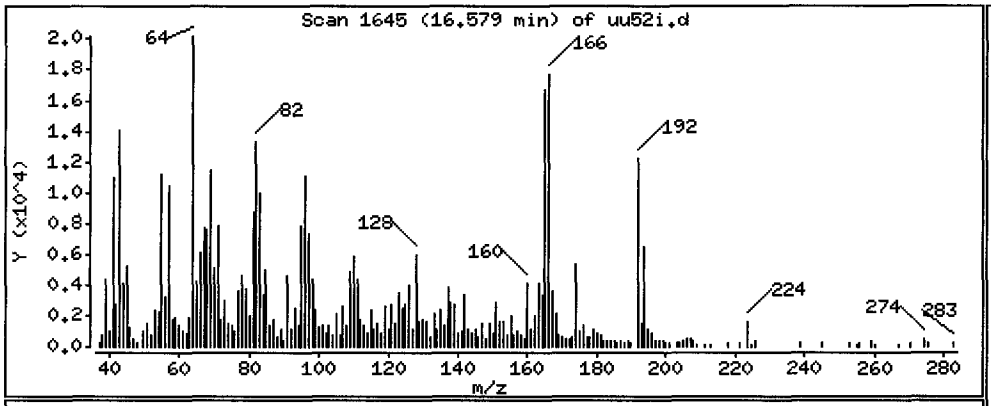
Date : 29-MAY-2012 12:56

Client ID: MS008-SS-120515

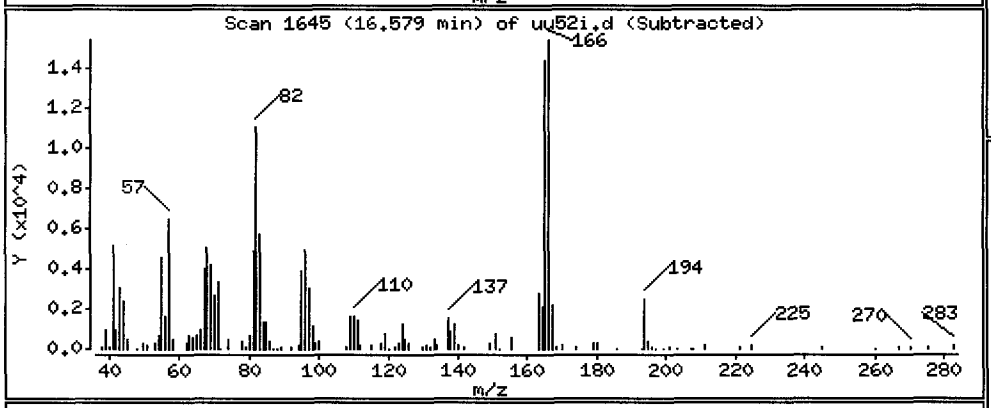
Instrument: nt10.i

Sample Info: UU52I,3

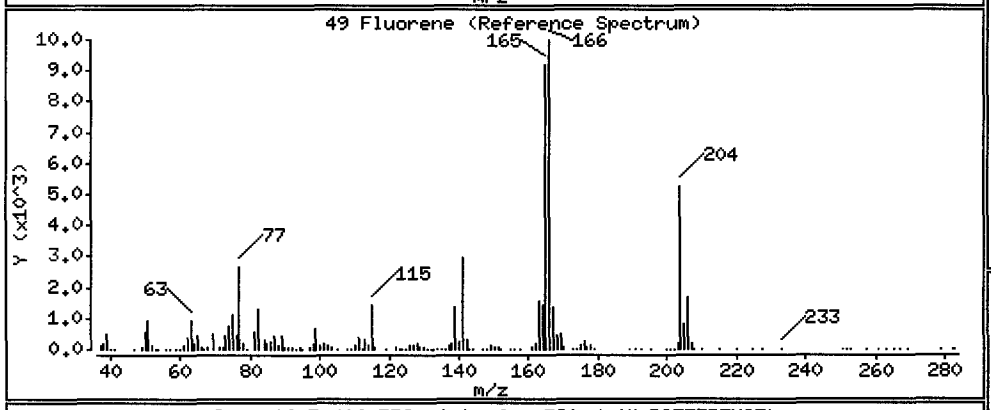
Volume Injected (uL): 1.0



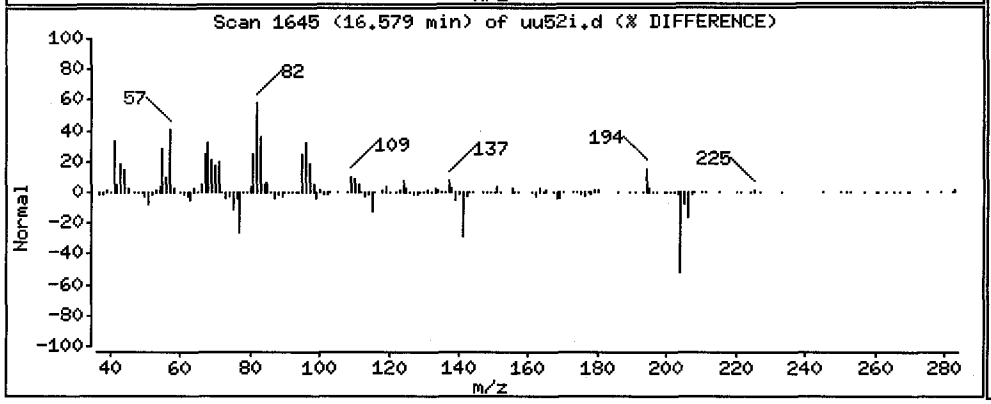
Operator: VTS/YZ



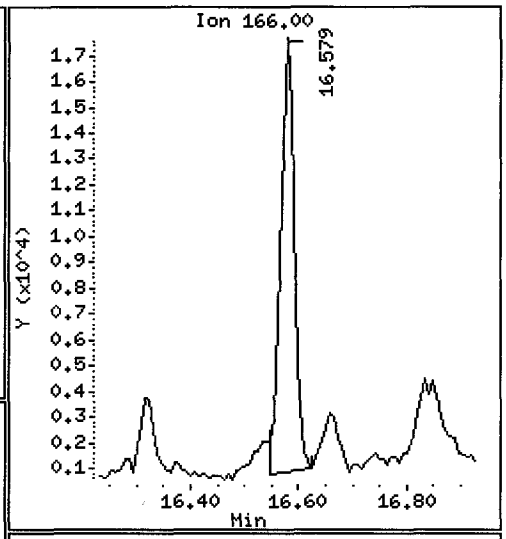
Column phase: ZB-5msi



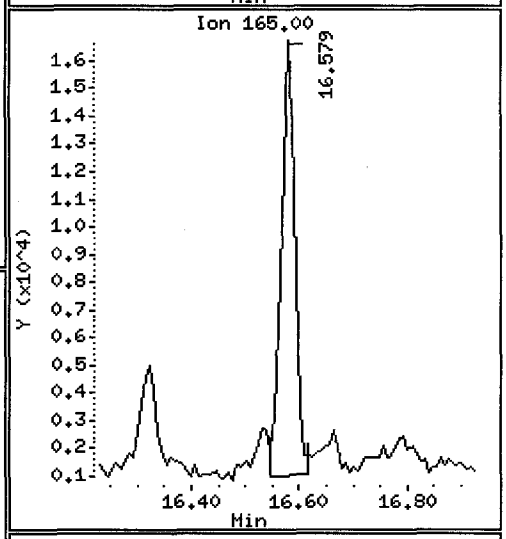
Column diameter: 0.25

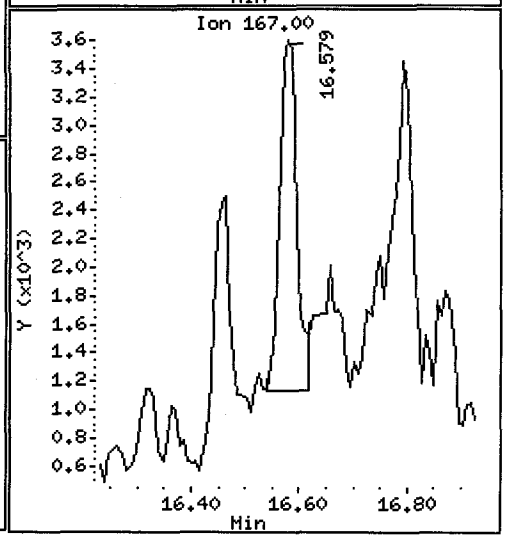


49 Fluorene



Concentration: 66.29 ug/kg





Data File: /chem1/nt10.i/20120529.b/uu52i.d

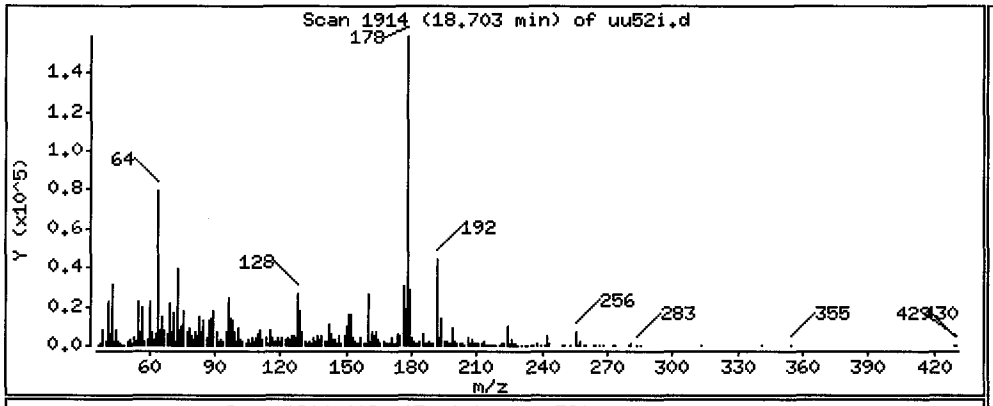
Date : 29-MAY-2012 12:56

Client ID: MS008-SS-120515

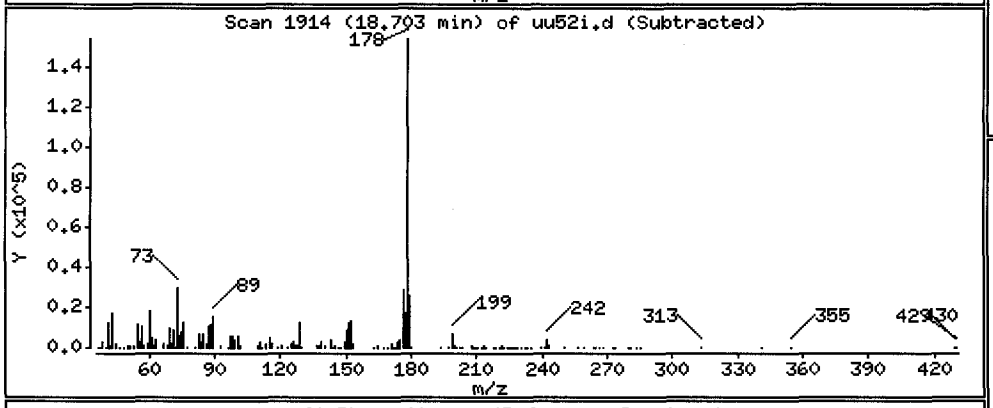
Instrument: nt10.i

Sample Info: UU52I,3

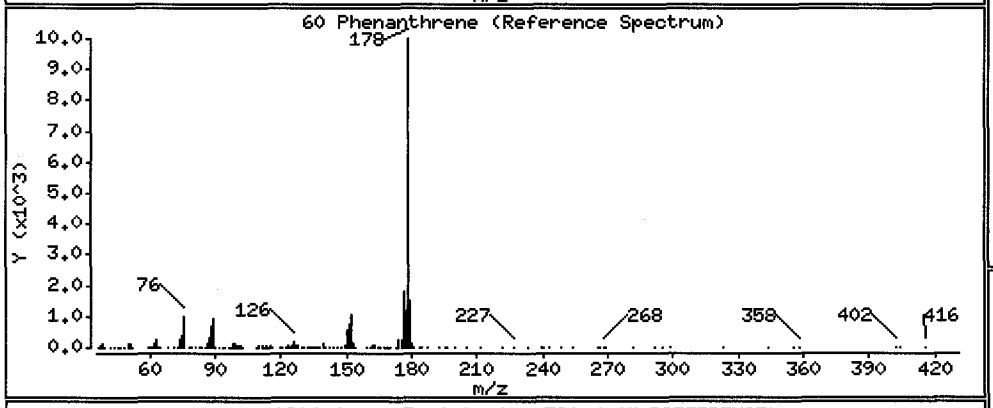
Volume Injected (uL): 1.0



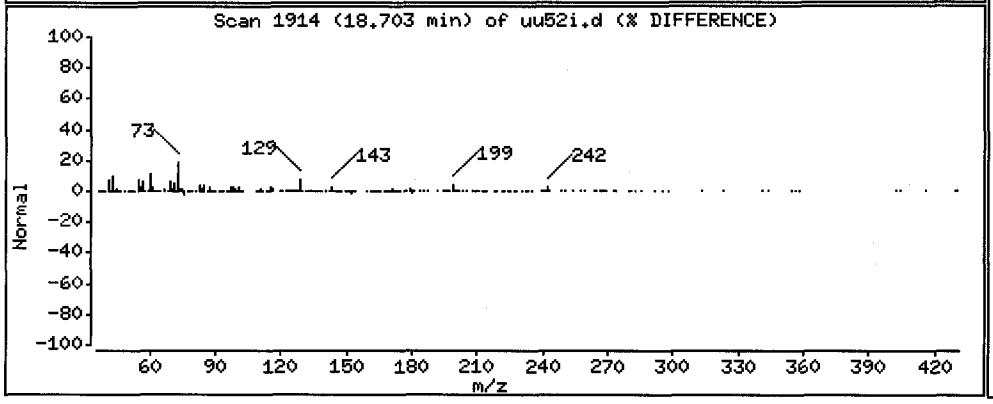
Operator: VTS/YZ



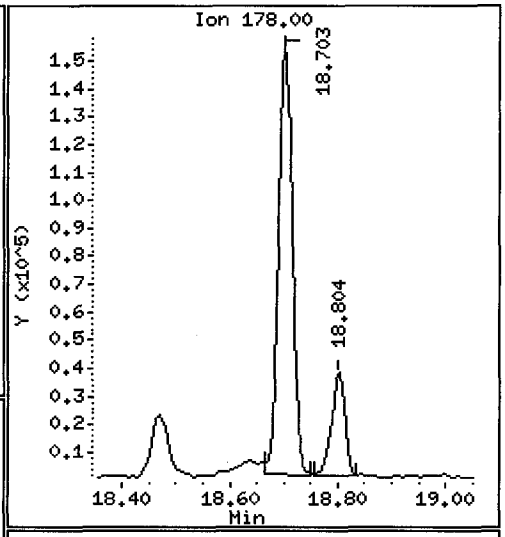
Column phase: ZB-5msi



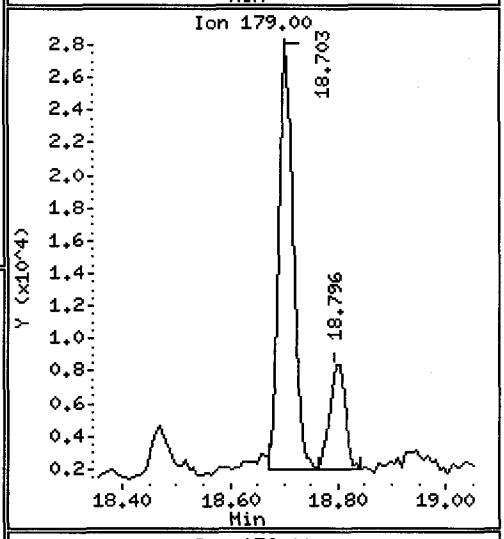
Column diameter: 0.25

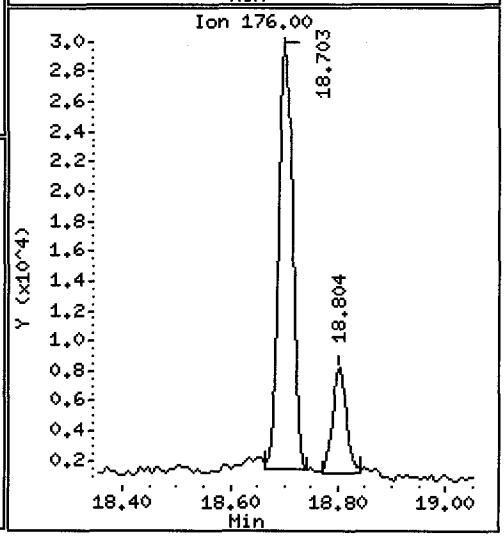


60 Phenanthrene



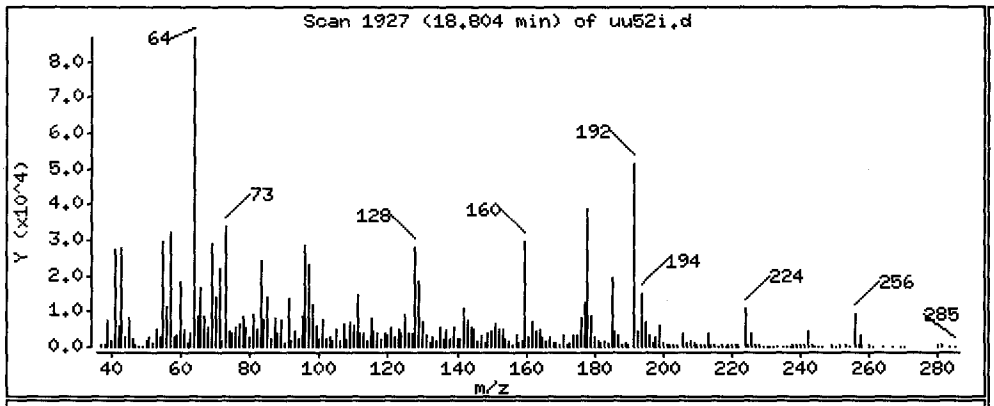
Concentration: 482.9 ug/kg



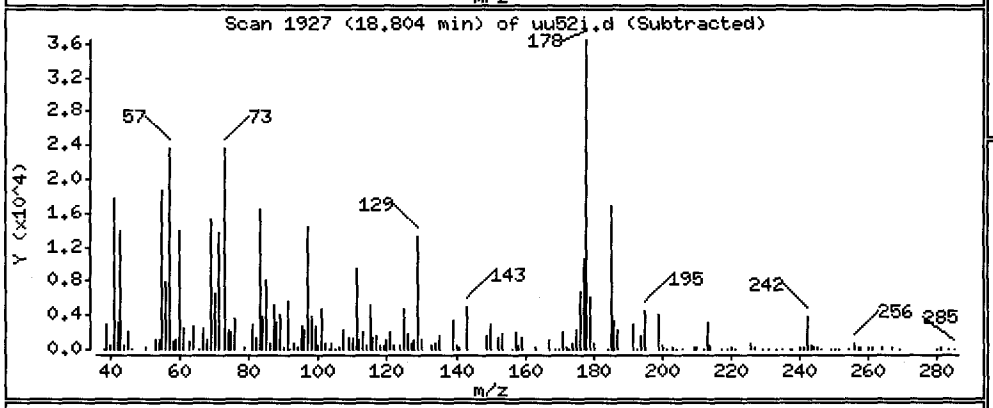


Data File: /chem1/nt10.i/20120529.b/uu52i.d

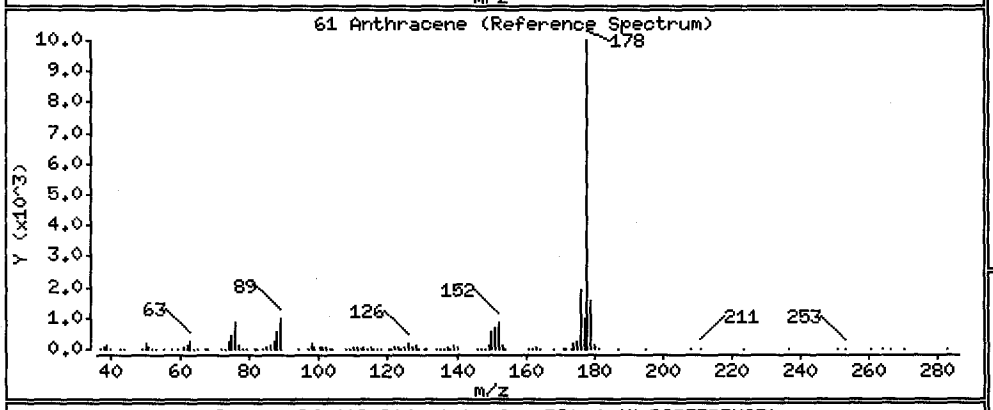
Date : 29-MAY-2012 12:56



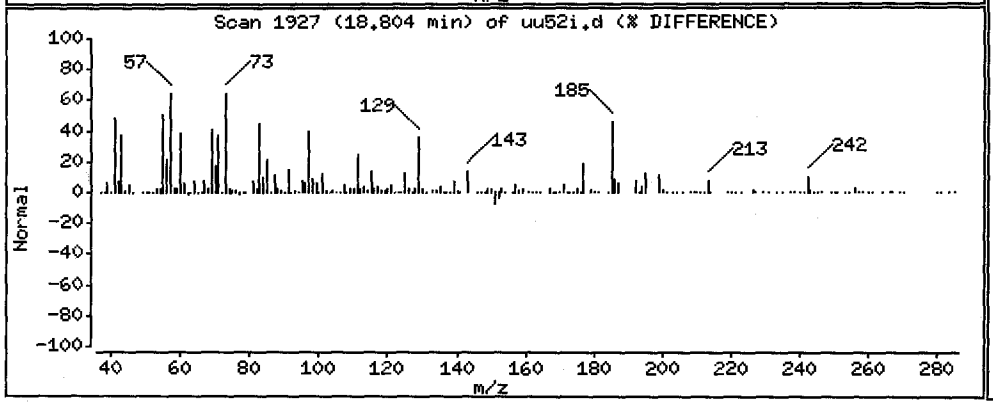
Client ID: MS008-SS-120515 Instrument: nt10.i



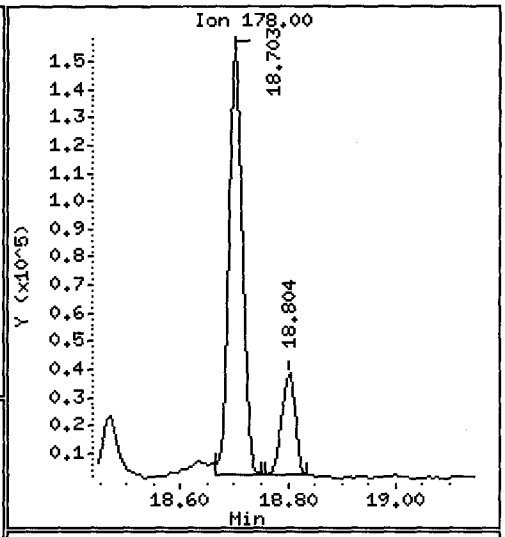
Sample Info: UU52I,3



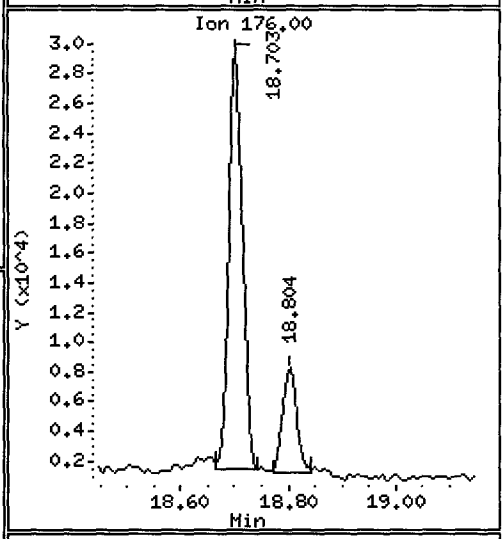
Volume Injected (uL): 1.0 Operator: VTS/YZ

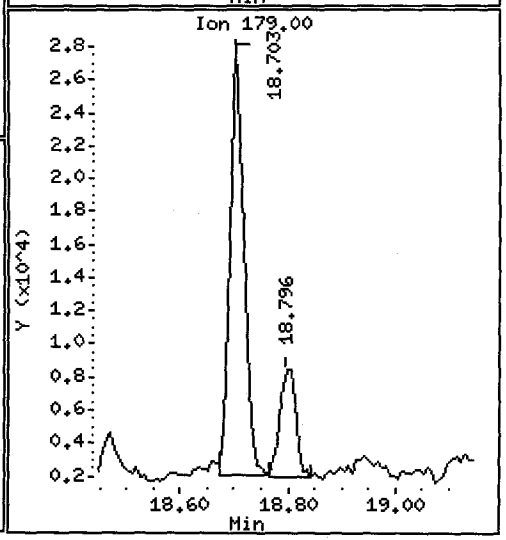


Column phase: ZB-5msi Column diameter: 0.25



61 Anthracene Concentration: 113.7 ug/kg





Data File: /chem1/nt10.i/20120529.b/uu52i.d

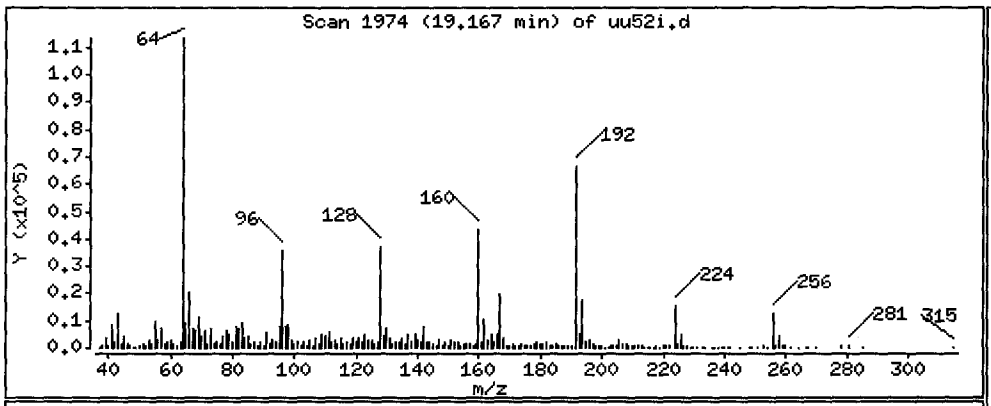
Date : 29-MAY-2012 12:56

Client ID: MS008-SS-120515

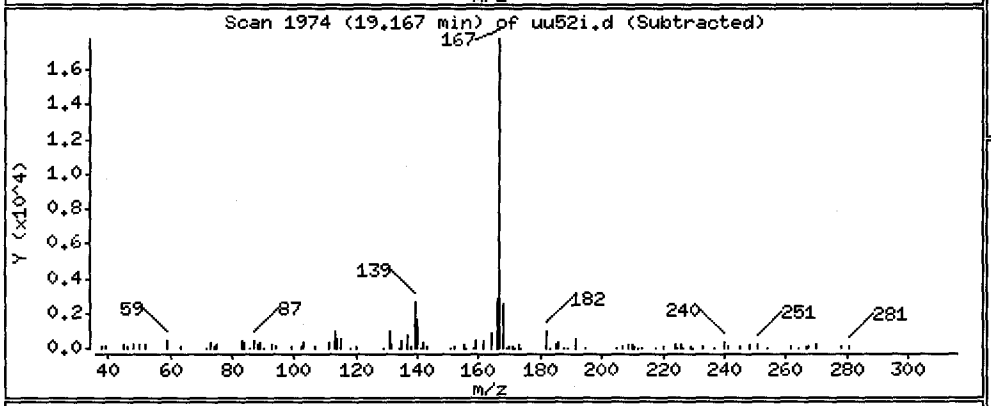
Instrument: nt10.i

Sample Info: UU52I,3

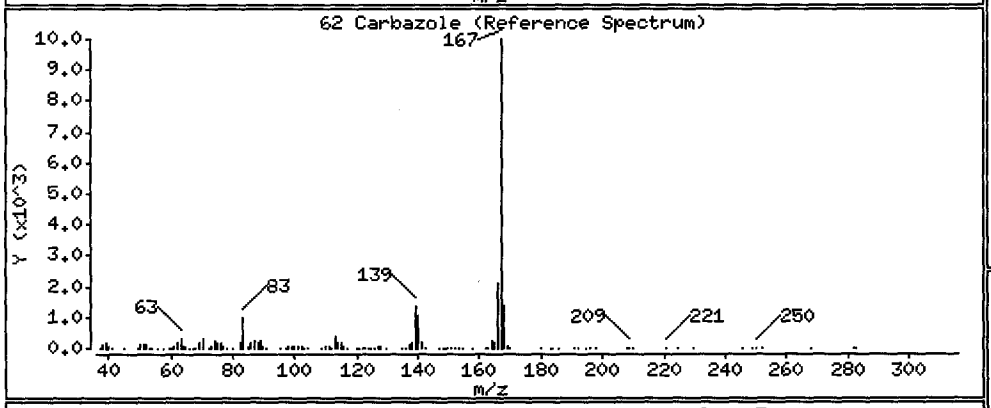
Volume Injected (uL): 1.0



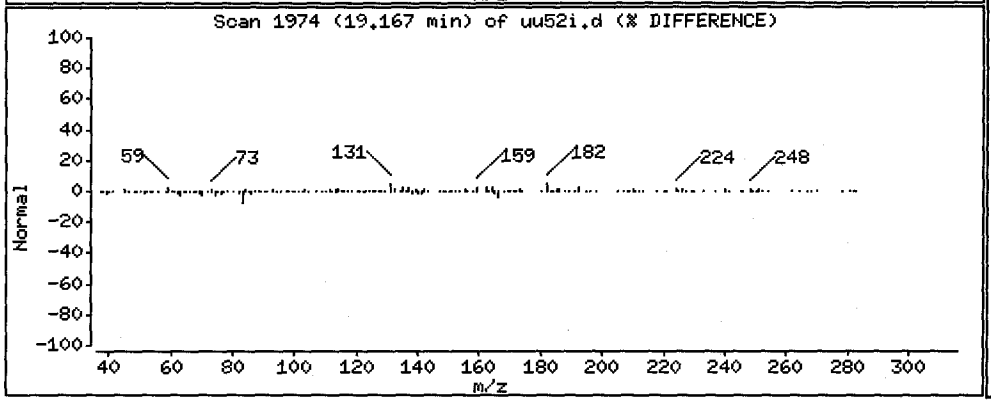
Operator: VTS/YZ



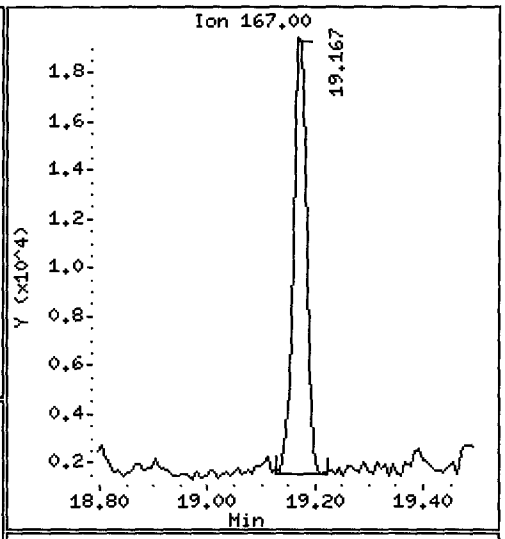
Column phase: ZB-5msi



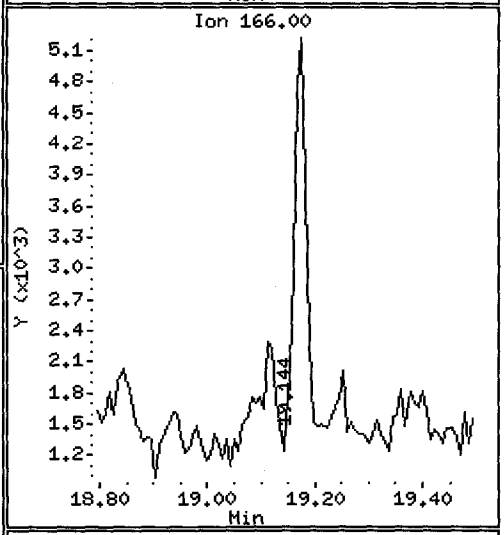
Column diameter: 0.25

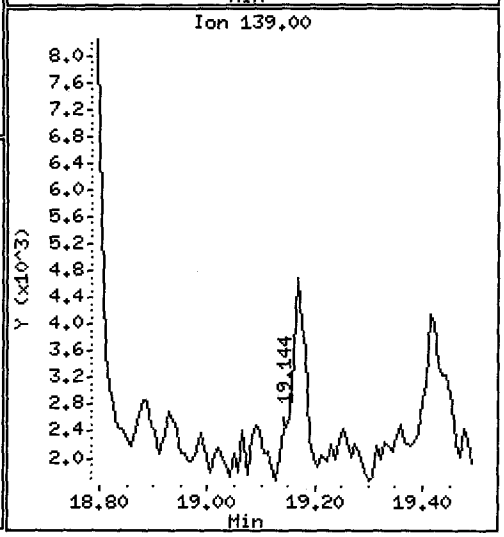


62 Carbazole



Concentration: 61.74 ug/kg





Data File: /chem1/nt10.i/20120529.b/uu52i.d

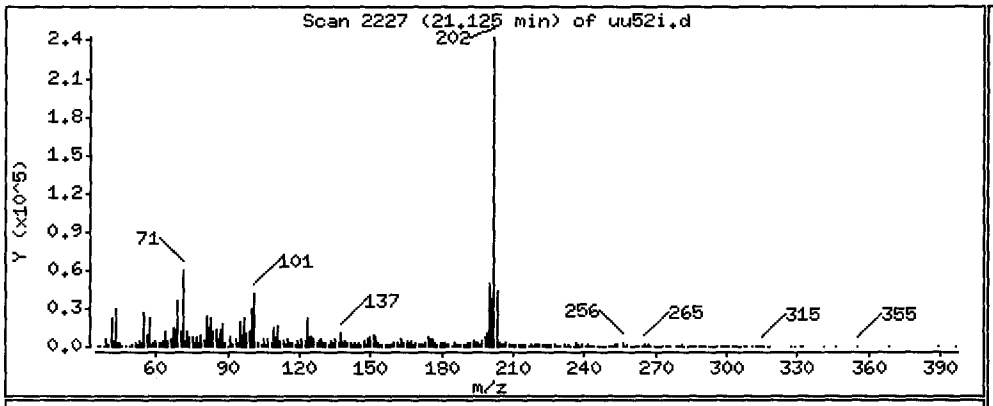
Date : 29-MAY-2012 12:56

Client ID: MS008-SS-120515

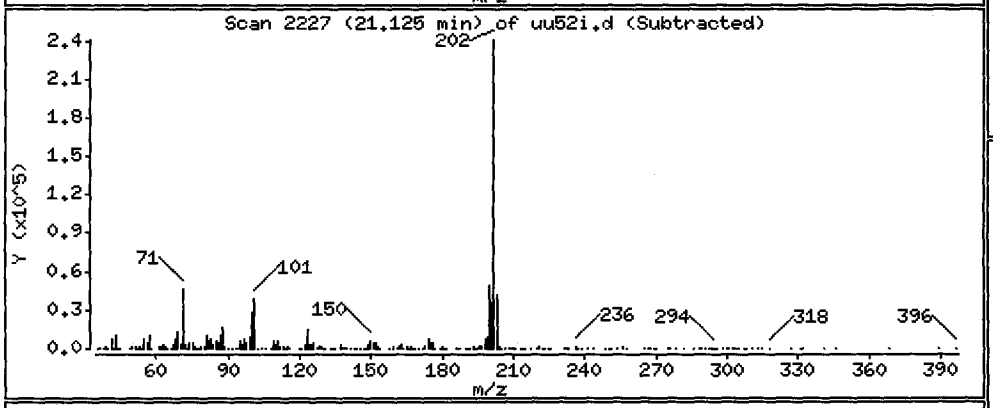
Instrument: nt10.i

Sample Info: UU52I,3

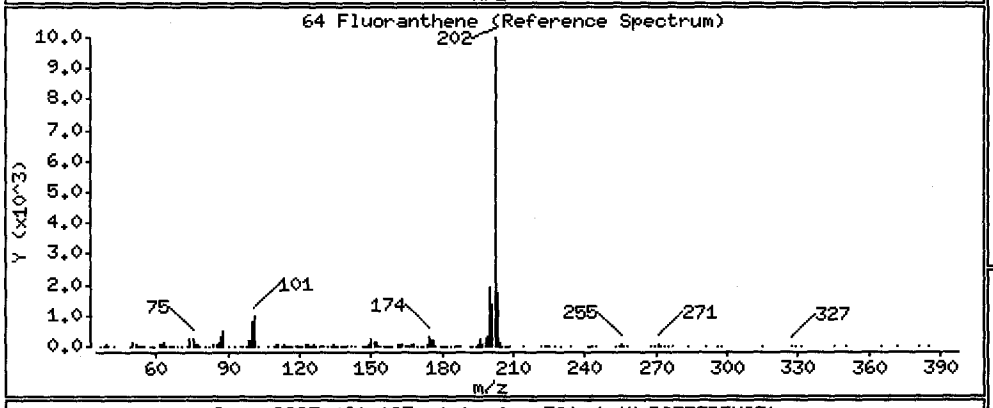
Volume Injected (uL): 1.0



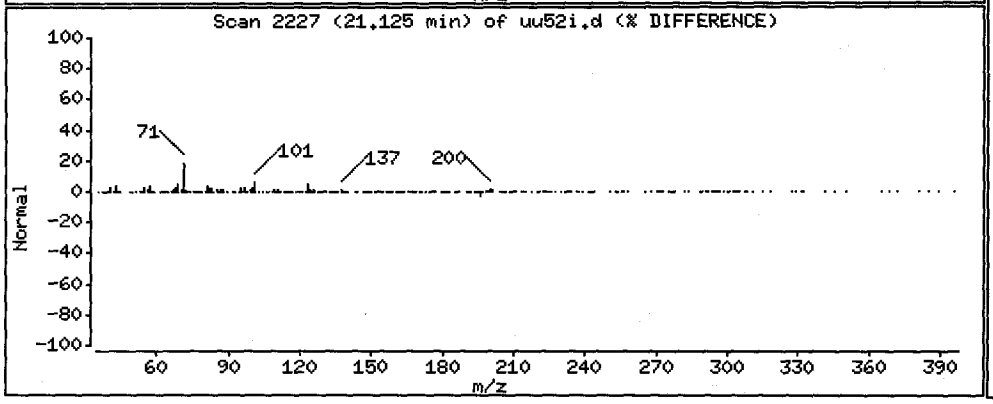
Operator: VTS/YZ



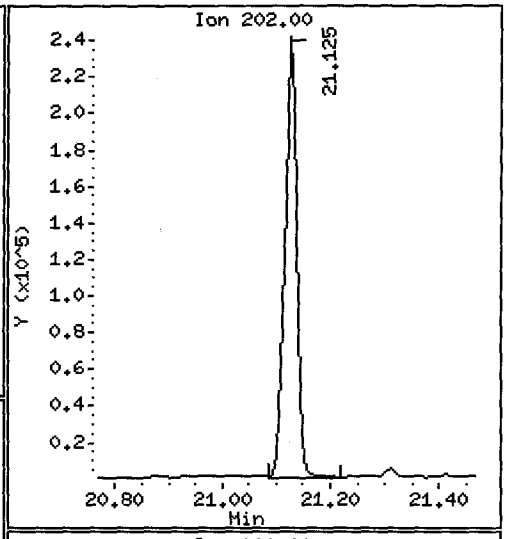
Column phase: ZB-5msi



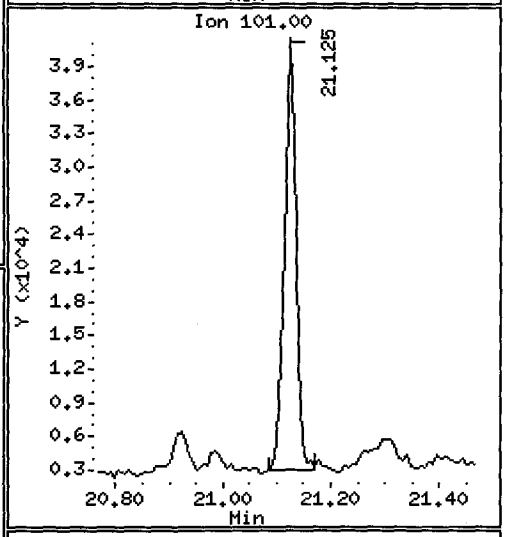
Column diameter: 0.25

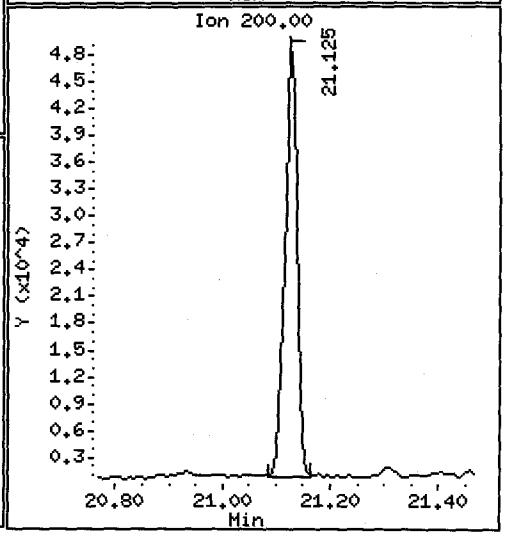


64 Fluoranthene



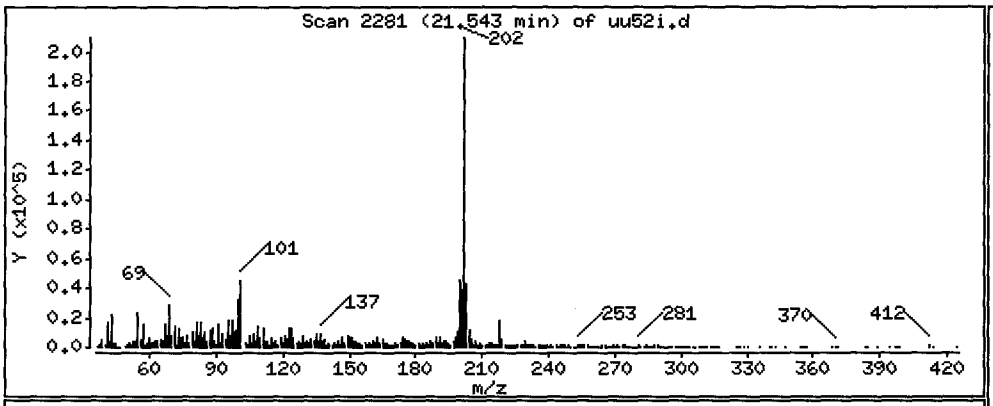
Concentration: 595.6 ug/kg



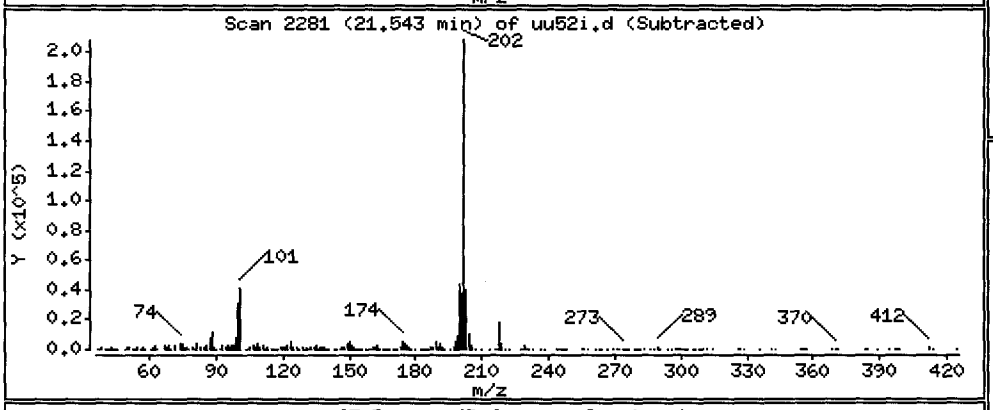


Data File: /chem1/nt10.i/20120529.b/uu52i.d

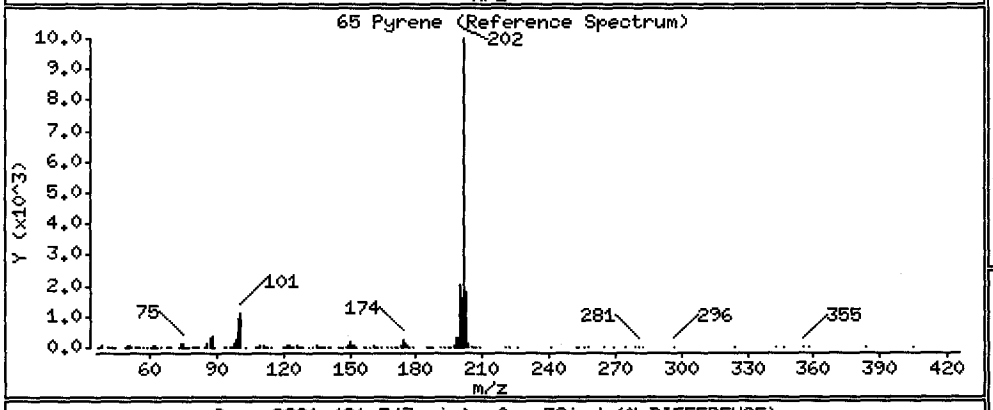
Date : 29-MAY-2012 12:56



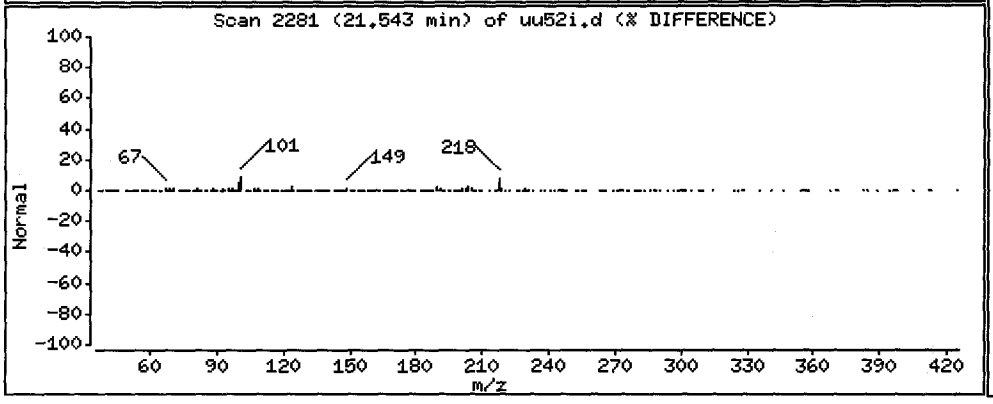
Client ID: MS008-SS-120515 Instrument: nt10.i



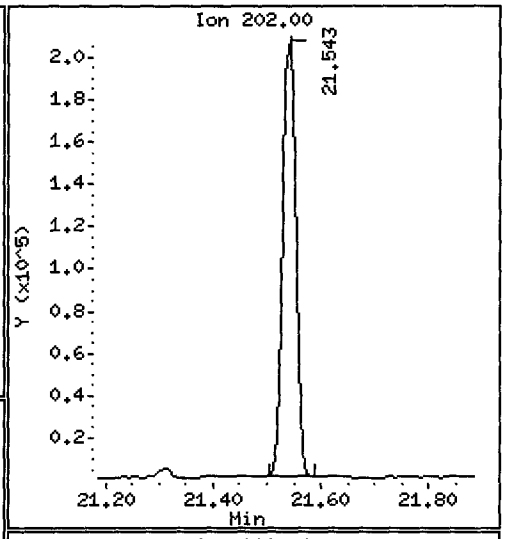
Sample Info: UU52I,3



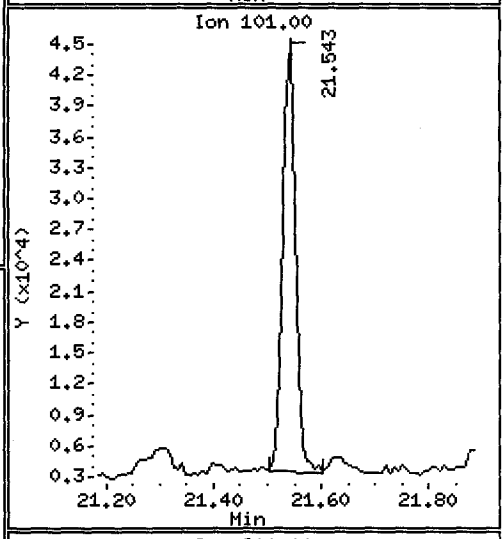
Volume Injected (uL): 1.0 Operator: VTS/YZ

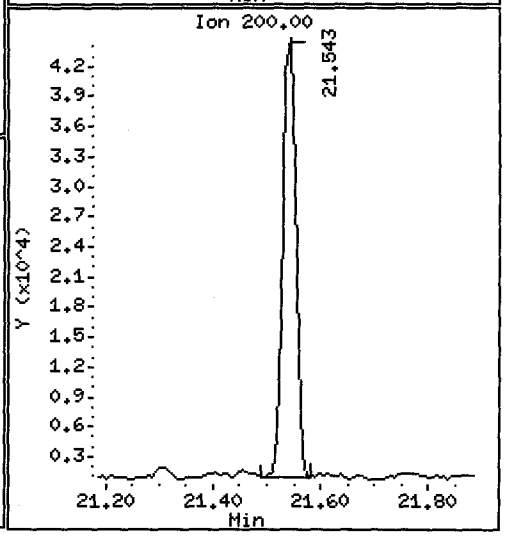


Column phase: ZB-5msi Column diameter: 0.25



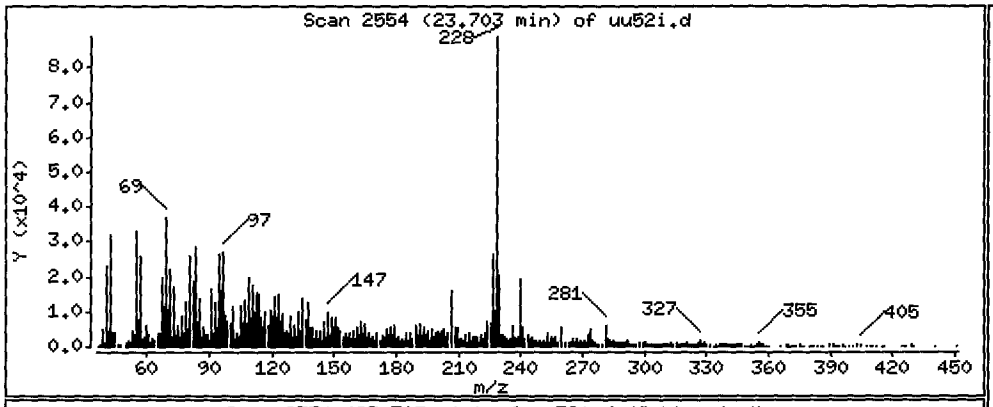
65 Pyrene Concentration: 458.0 ug/kg



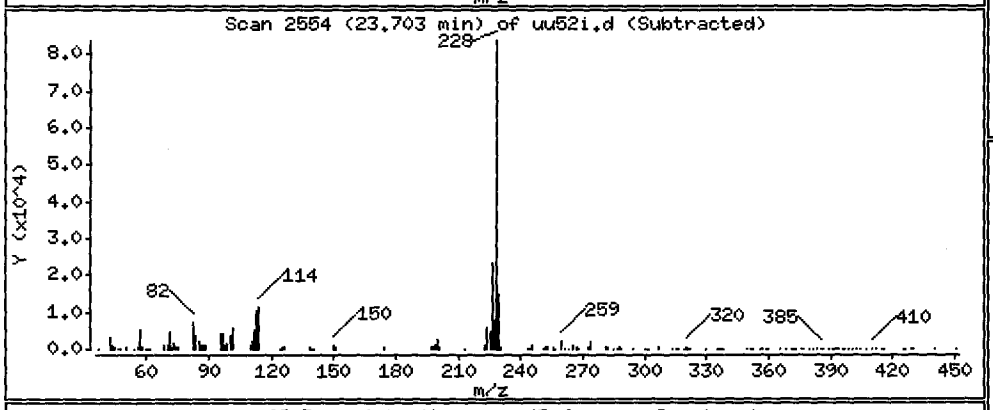


Data File: /chem1/nt10.i/20120529.b/uu52i.d

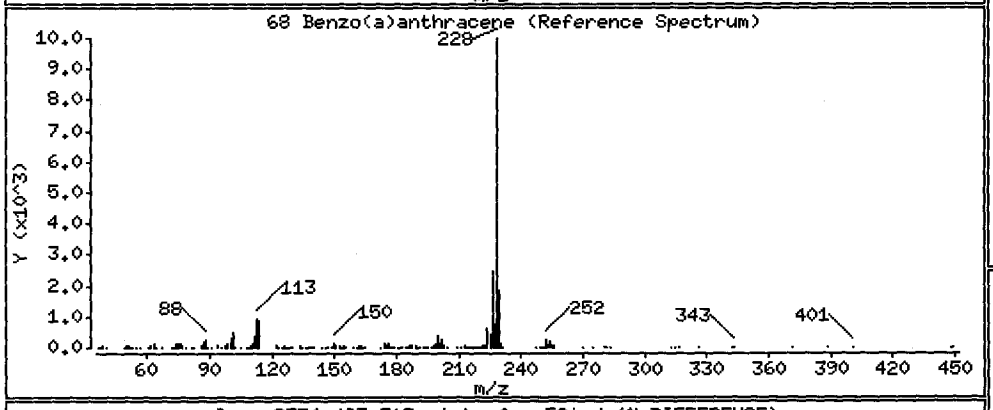
Date : 29-MAY-2012 12:56



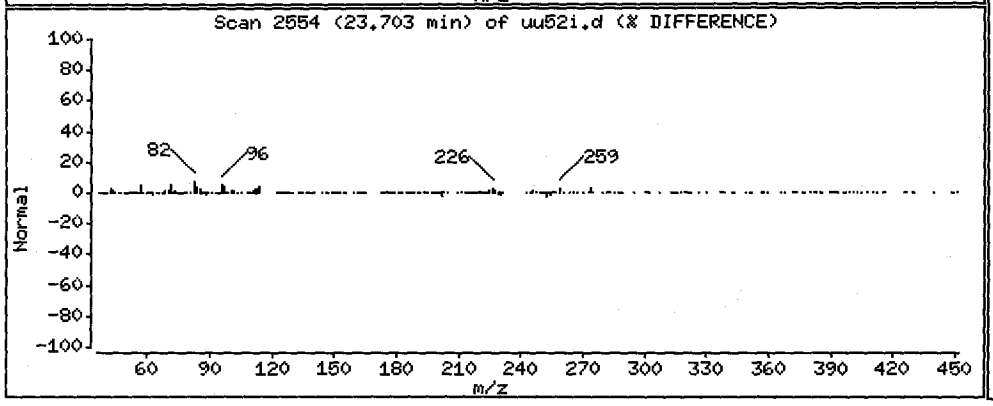
Client ID: MS008-SS-120515 Instrument: nt10.i



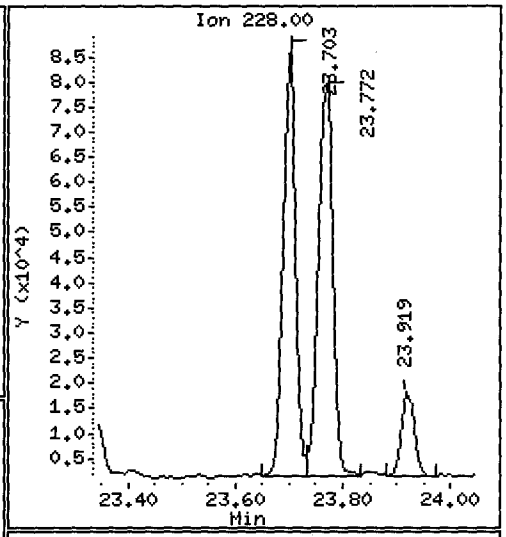
Sample Info: UU52I,3



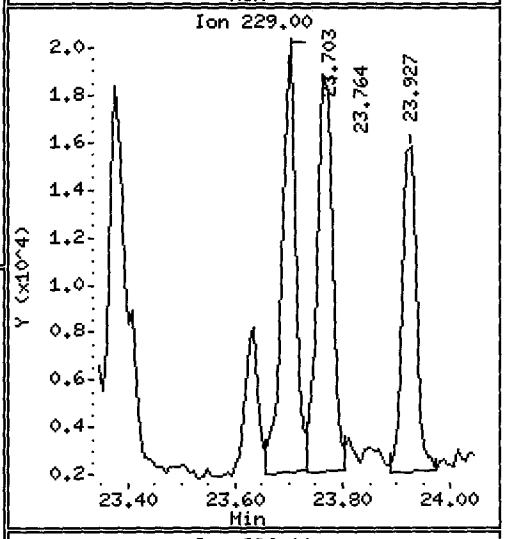
Volume Injected (uL): 1.0 Operator: VTS/YZ

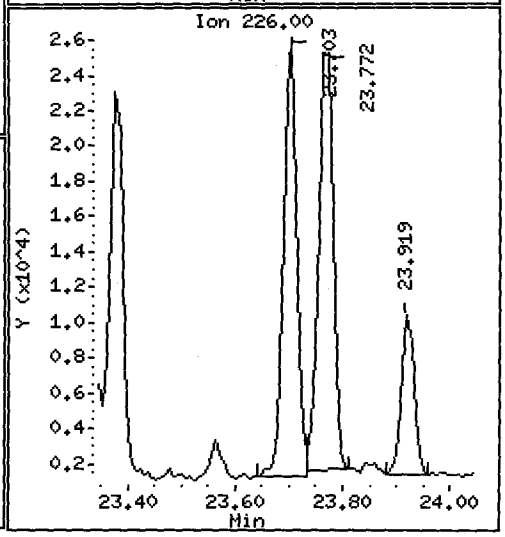


Column phase: ZB-5msi Column diameter: 0.25



68 Benzo(a)anthracene Concentration: 194.9 ug/kg





Data File: /chem1/nt10.i/20120529.b/uu52i.d

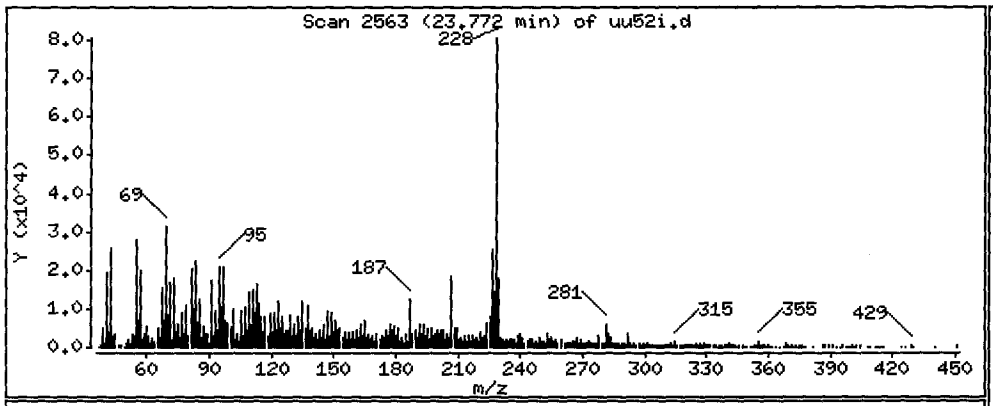
Date : 29-MAY-2012 12:56

Client ID: MS008-SS-120515

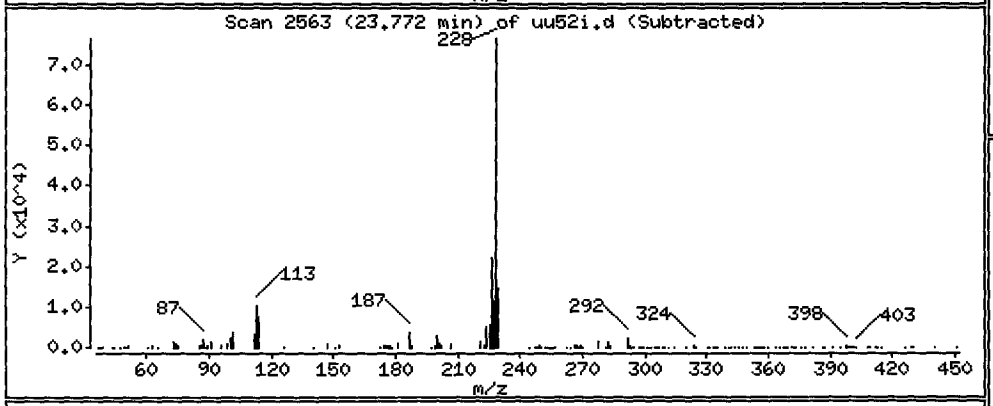
Instrument: nt10.i

Sample Info: UU52I,3

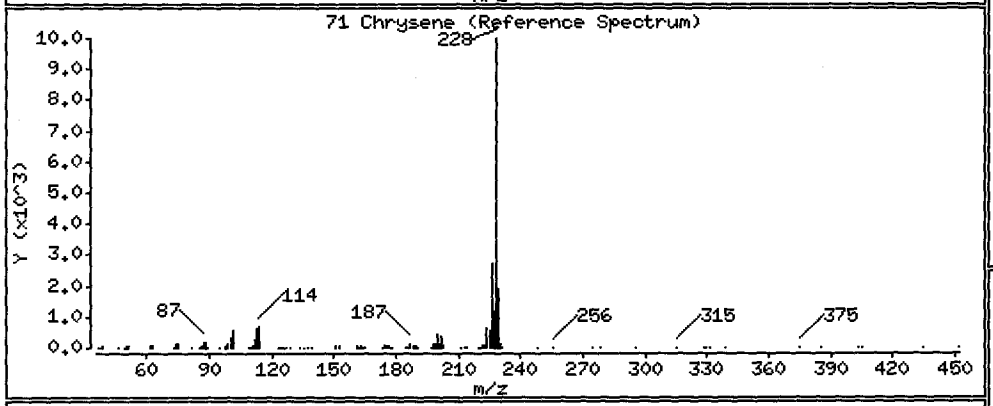
Volume Injected (uL): 1.0



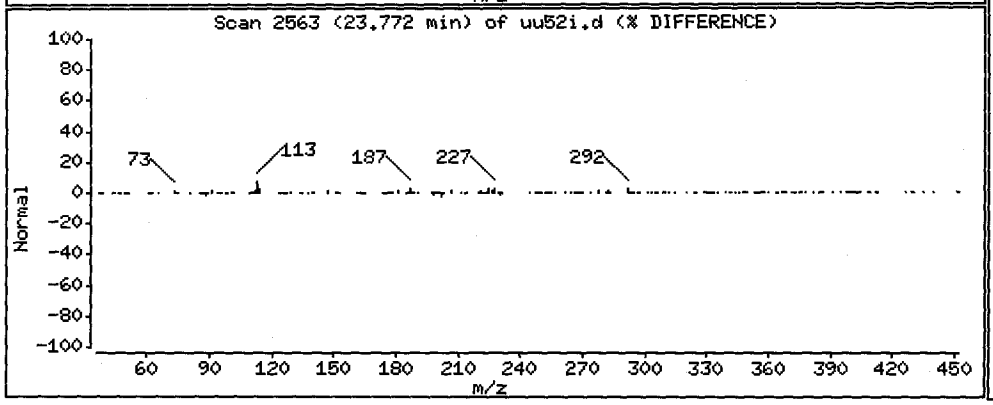
Operator: VTS/YZ



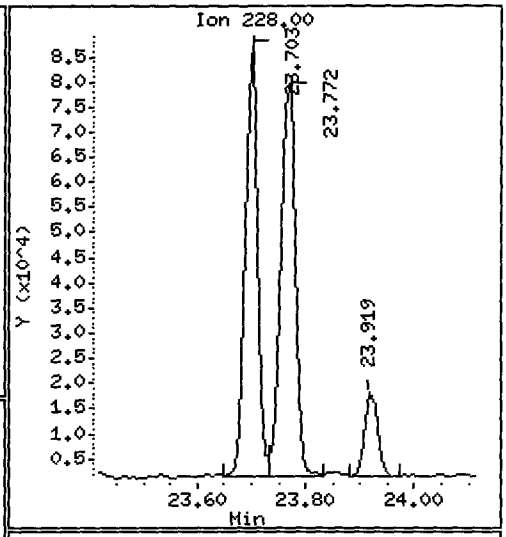
Column phase: ZB-5msi



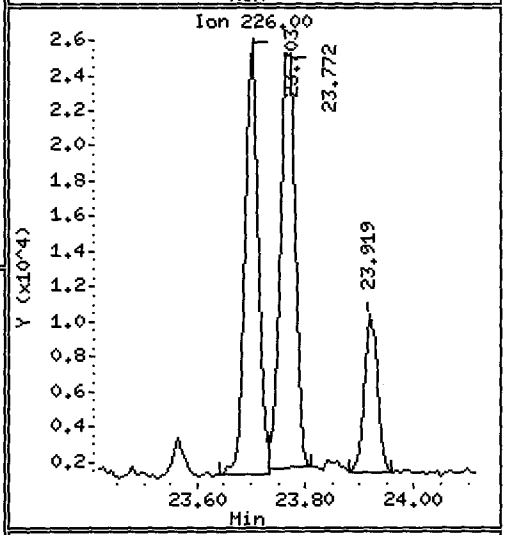
Column diameter: 0.25

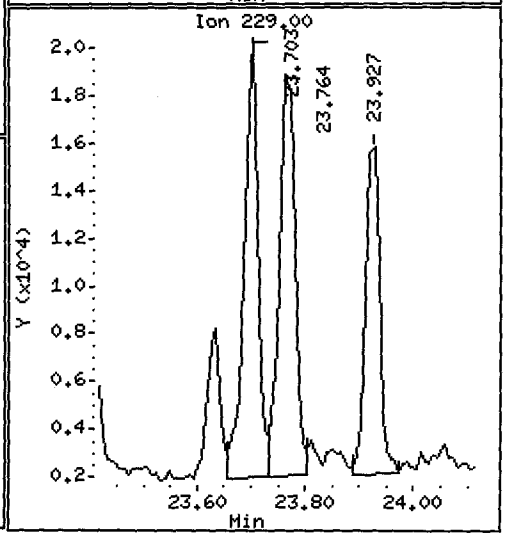


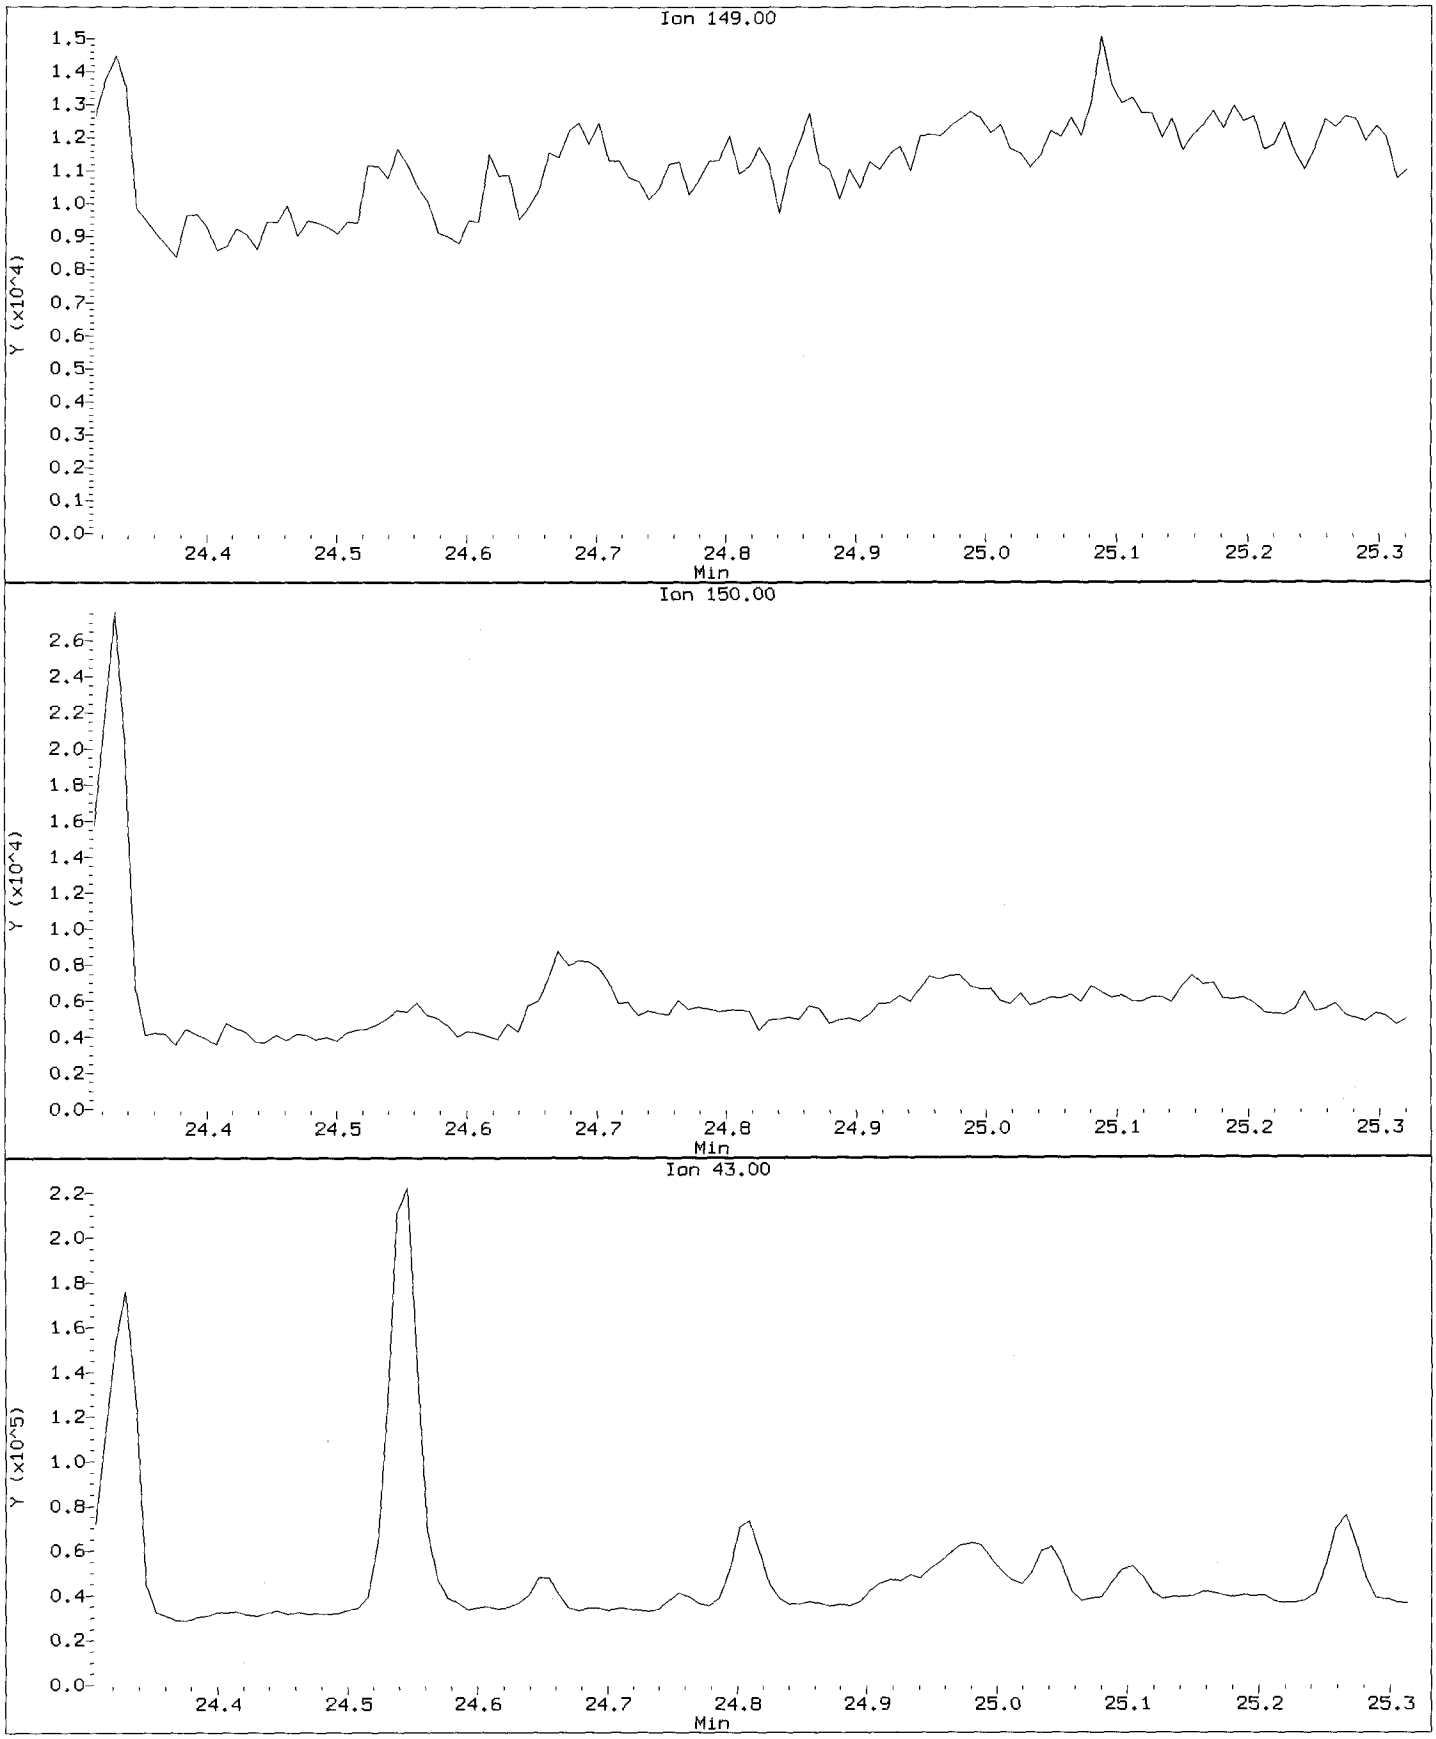
71 Chrysene



Concentration: 236.7 ug/kg





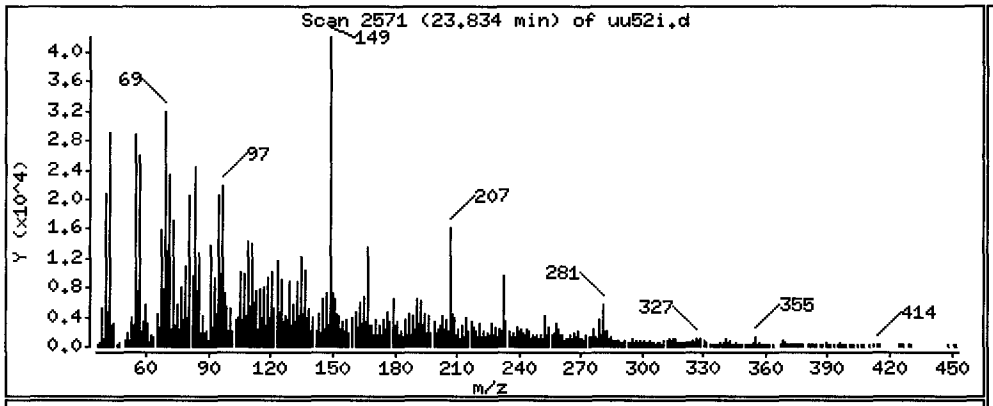


Data File: /chem1/nt10.i/20120529.b/uu52i.d
Injection Date: 29-MAY-2012 12:56
Instrument: nt10.i
Client Sample ID: MS008-SS-120515

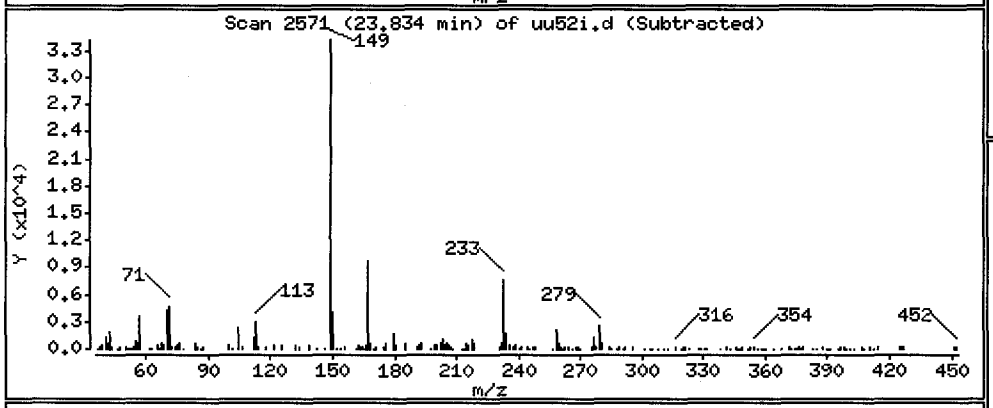
Compound: Di-n-octylphthalate
CAS Number: 117-84-0

Data File: /chem1/nt10.i/20120529.b/uu52i.d

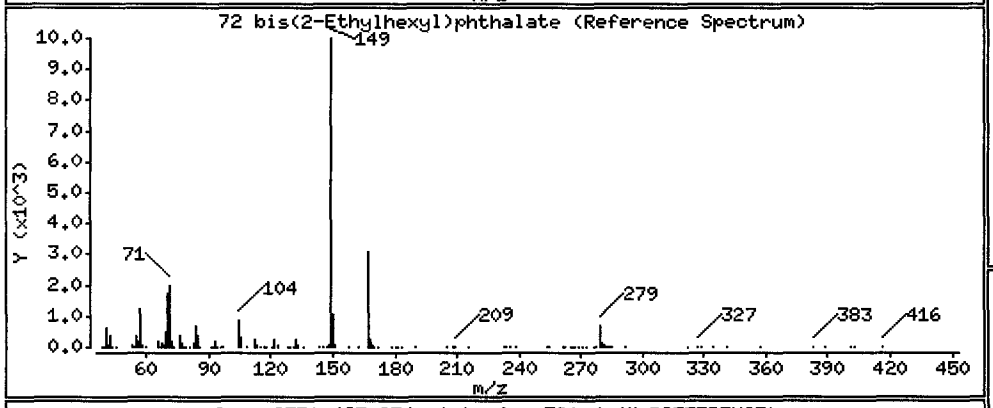
Date : 29-MAY-2012 12:56



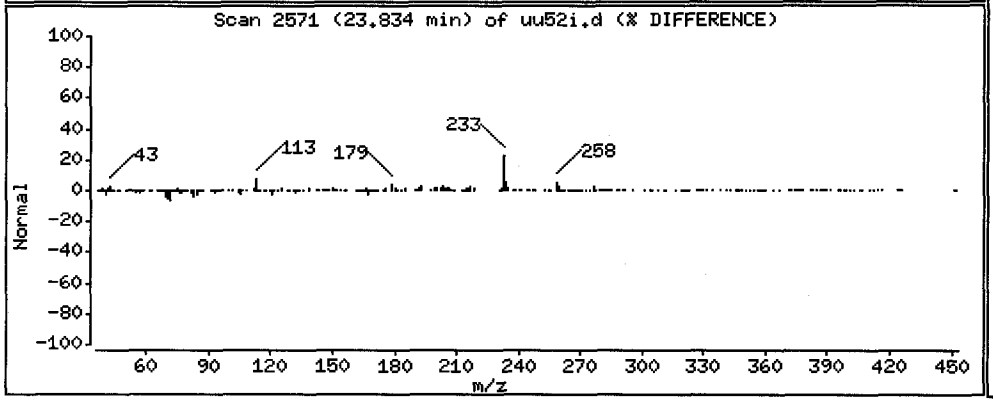
Client ID: MS008-SS-120515 Instrument: nt10.i



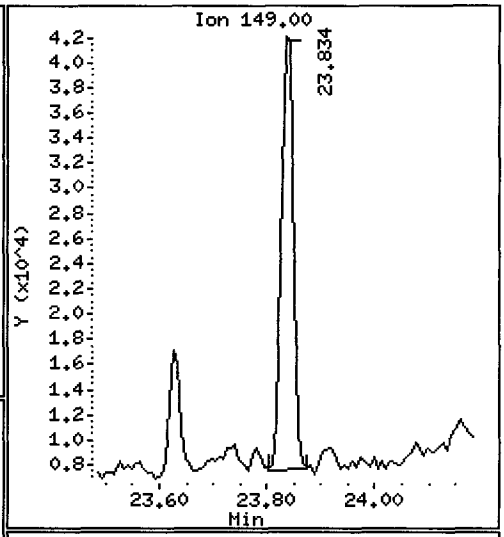
Sample Info: UU52I,3



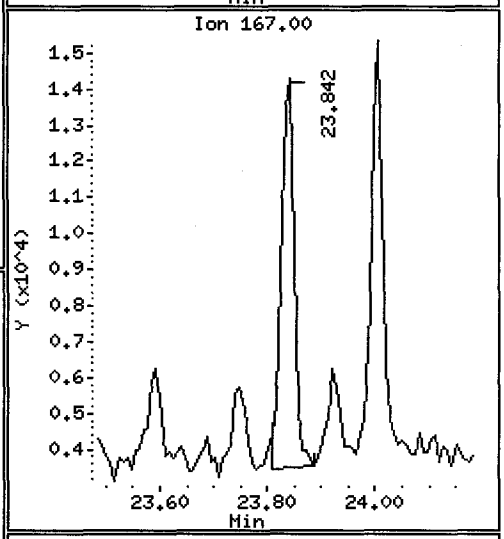
Volume Injected (uL): 1.0 Operator: VTS/YZ

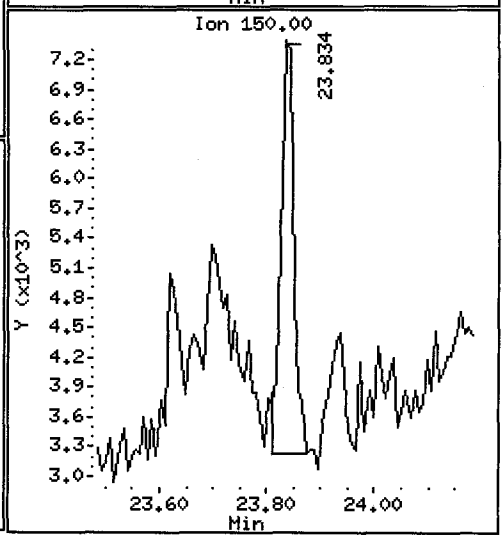


Column phase: ZB-5msi Column diameter: 0.25



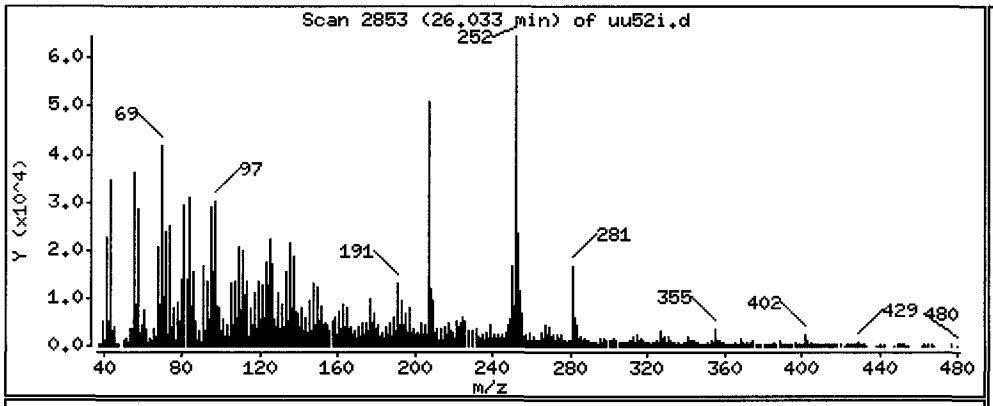
72 bis(2-Ethylhexyl)phthalate Concentration: 99.07 ug/kg



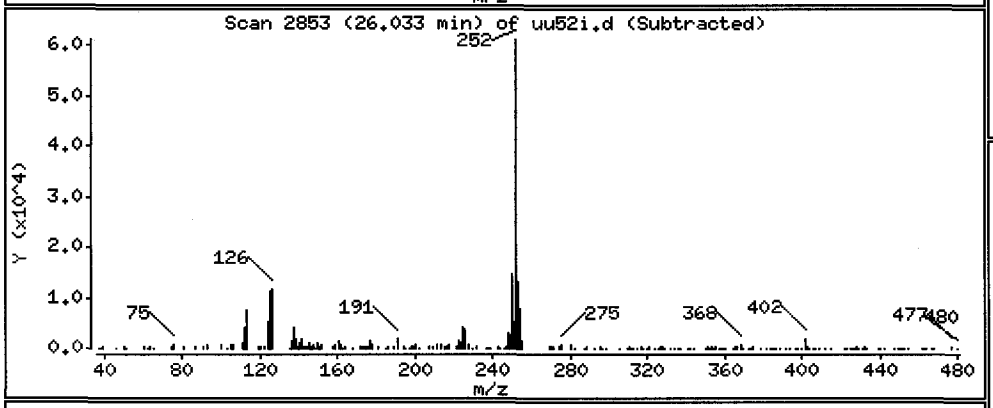


Data File: /chem1/nt10.i/20120529.b/uu52i.d

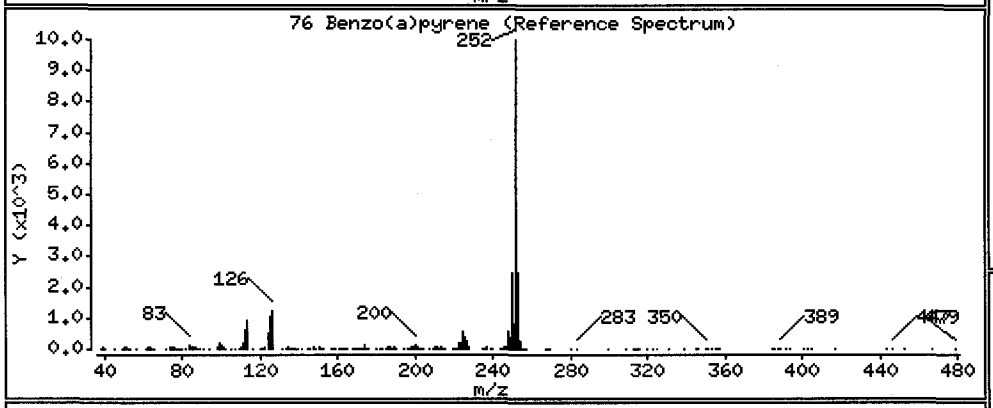
Date : 29-MAY-2012 12:56



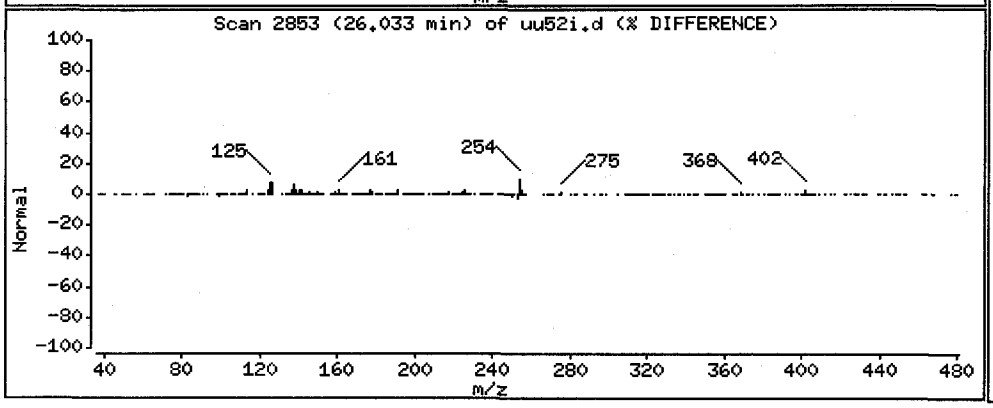
Client ID: MS008-SS-120515 Instrument: nt10.i



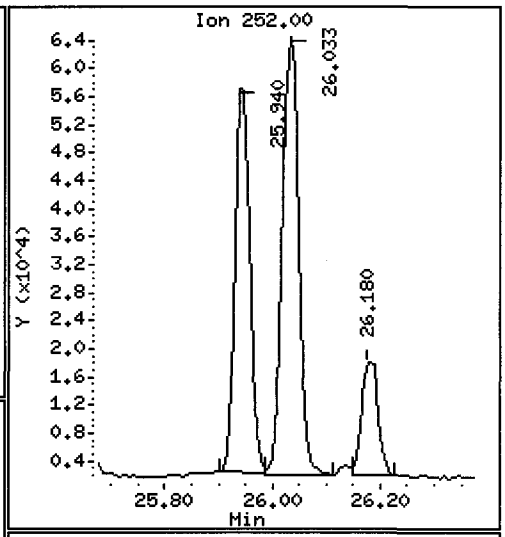
Sample Info: UU52I,3



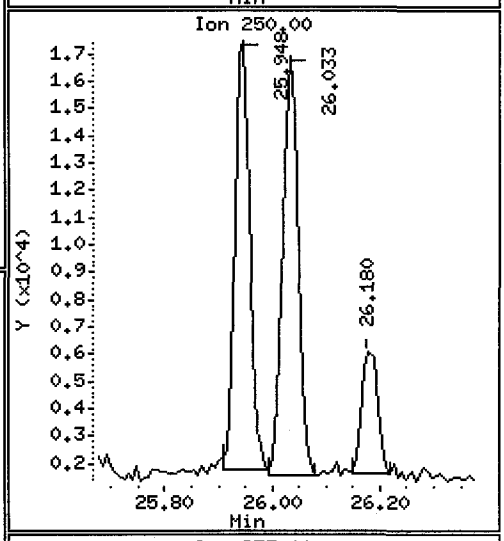
Volume Injected (uL): 1.0 Operator: VTS/YZ

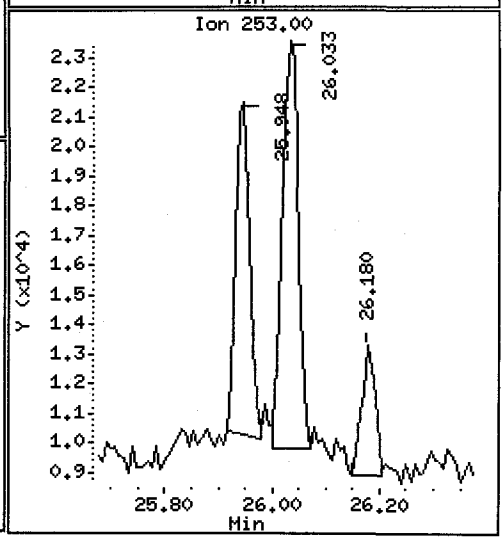


Column phase: ZB-5msi Column diameter: 0.25



76 Benzo(a)pyrene Concentration: 213.4 ug/kg





Data File: /chem1/nt10.i/20120529.b/uu52i.d

Date : 29-MAY-2012 12:56
