**Re: Excavation Completion Report  
Upper Hudson Street Site  
4815 15<sup>th</sup> Avenue SW  
Seattle, WA  
TCPID NW1585  
SESCO Project # 3424**

Dear Mr. Myers:

SESCO Group (SESCO) is pleased to provide you with the attached Excavation Completion Report that details the source removal of cement kiln dust (CKD) at 4815 15<sup>th</sup> Avenue SW in Seattle, WA 98106 (the Site).

Excavation activities were conducted on the Site from January 27 through February 2, 2006 during which approximately 2,767 tons of CKD was removed and disposed at the Columbia Ridge, Oregon, landfill. Confirmation samples collected from the perimeter and base of the excavation demonstrate that the excavation was effective and contaminant levels in remaining soils are minimal.

By removing the CKD and collecting confirmatory soil samples, SESCO has successfully eliminated a potential future risk to humans or the environment at this Site. Based on results from this removal effort, on behalf of the site owner, we conclude that the remedial objectives have been met and the risks associated with the former CKD stockpile appear to be mitigated. SESCO requests that you provide us with a status letter regarding our remedial efforts at the Site after your review of the enclosed Report.

Please call me at 317-347-9590 if you have any questions regarding this matter.

Respectfully Submitted,

Kerry Behnke  
Environmental Scientist

David G. Coles M.S., L.G.

## **EXCAVATION COMPLETION REPORT**

**Upper Hudson Street Site  
4815 SW 15<sup>th</sup> Avenue  
Seattle, WA 46038  
TCPID NW1585**

**Date Issued: March 2, 2006  
SESCO GROUP Project Number 3424**

**Prepared By**

**Kerry Behnke**

## **EXECUTIVE SUMMARY**

On behalf of Mr. John M. McFarland, SESCO Group (SESCO) has completed a source removal of cement kiln dust (CKD) located at 4815 15<sup>th</sup> Avenue, Seattle, Washington.

Excavation activities were conducted on the Site from January 27 through February 2, 2006. Steve Davis Excavating, under the supervision of SESCO, removed 2,767 tons of stockpiled CKD from the Site. The CKD soil was transported to Waste Management's Alaska Street transfer station for final disposal at their Columbia Ridge, Oregon landfill.

Confirmation samples taken in the excavation pit sidewalls and pit bottom were submitted to North Creek Analytical Laboratory, Inc. for lead, arsenic and pH analysis.

Confirmation samples collected from the perimeter and bottom of the pit demonstrate that the excavation was effective because the contaminant levels in the majority of the remaining soils are below Model Toxics Control Act Method A Cleanup levels for soils. By removing the CKD and collecting confirmatory soil samples, it appears that SESCO has successfully eliminated a potential future risk to humans or the environment at this Site.

## 1.0 INTRODUCTION

SESCO Group (SESCO) has completed remedial activities under the Washington State Department of Ecology's (DOE) Voluntary Cleanup Program (VCP) for the Site located at 4815 15<sup>th</sup> Avenue SW in Seattle, Washington. The Remedial Action Report for this Site was acknowledged by the DOE on February 6, 2006 and given a TCP identification number of NW 1585 (**Appendix A**). The following Completion Report provides a summary and documentation of the excavation and confirmation sampling.

### 1.1 SITE BACKGROUND

#### 1.1.1 SITE LOCATION AND HISTORY

This Excavation Completion Report has been prepared by SESCO Group on behalf of Mr. John M. McFarland for the property located at 4815 15<sup>th</sup> Avenue SW, Seattle, Washington.

The site contained stockpiled cement kiln dust (CKD) under a polyethylene sheet (visqueen). A representative of SESCO provided oversight of the excavation and removal of 2,767 tons of the stockpiled CKD from January 17 through February 2, 2006. The CKD was transported from the Site for disposal at the Waste Management landfill located in Columbia Ridge, OR.

## 2.0 REMEDIAL ACTION

### 2.1 PROJECT DESCRIPTION SUMMARY

On January 27, 2006, representatives of SESCO Group met at the Site with Steve Davis Excavation to begin the removal of the CKD. Excavation activities were conducted on the Site from January 27, 2006 through February 2, 2006. A photographic log of excavation activities is included in **Appendix B** of this report. Steve Davis Excavating, under the supervision of SESCO, removed approximately 2767 tons of CKD from the stockpile area as identified in **Figure 1**. Approximately 18 inches of native soil and fill directly under the stockpile also was removed. All soil was transported to Waste Management's Alaska Street transfer station for final disposal at their Columbia Ridge, Oregon landfill. A complete list of the waste manifests and disposal tickets is included in **Appendix C**.

Confirmation soil samples were taken by the SESCO representative in the excavation pit sidewalls, bottom of the pit, and backfill material. All soil samples were submitted to North Creek Analytical Laboratory, Inc. for lead, arsenic and pH analysis. These analytes were selected based on the CKD profile sample analysis results. Lead and arsenic were analyzed using USEPA Method SW-6020 and pH was analyzed using USEPA Method SW-150.1/9040A.

## 2.2 REMEDIATION SYSTEM DETAILS

### 2.2.1 EQUIPMENT USED

A track-mounted excavator was used during excavation activities and tri-axle dump trucks were utilized for transportation of the CKD material to the Alaska Street transfer station. The removal activities included over-excavation to approximately 18 inches below the bottom of the visually recognizable CKD into native soil (or fill material) to insure the complete removal of the CKD. The SESCO representative was able to verify the complete removal of the CKD stockpile via visual inspection.

### 2.2.2 DECONTAMINATION PROCEDURES

Trucks containing CKD excavated material were washed before leaving the Site to reduce the potential of spillage onto the streets. The truck loading pad and wash area were over-excavated at the end of the process to ensure complete removal of any CKD material which may have been spilled during the loading and washing process.

SESCO personnel utilized a two (2) inch stainless steel hand auger to collect the confirmatory soil samples. Decontamination of the hand auger involved an Alconox wash followed by a water rinse. A new pair of disposable latex gloves was used for each sample collected.

## 2.3 CONFIRMATION SAMPLING

### 2.3.1 DATA COLLECTION AND EVALUATION

#### Excavation Pit

The excavation activities were completed at the Site on February 2, 2006. Groundwater was not encountered during excavation activities. On February 2-3, 2006, Ms. Kerry Behnke, the onsite SESCO representative, conducted confirmatory soil sampling within the excavation. A total of three pit-bottom samples were collected (S-4, S-6 and S-7) and a total of seven sidewall samples were collected (S-1 through S-3, S-5, and S-10 through S-12). **Figure 1** shows the location of each confirmation soil boring.

Sample locations were determined to be at approximately twenty-foot intervals along the sidewalls. Soil samples were collected with a hand auger from a horizon no more than 6-inches into the base or sidewall of the excavation. Soil samples were placed into laboratory supplied containers and immediately packed on ice in a cooler. Chain-of-custody forms accompanied the samples to the laboratory and are attached to this Excavation Completion Report in **Appendix D**.

### 2.3.2 SAMPLE ANALYSIS RESULTS

The following laboratory was used to analyze the samples collected during the confirmation-sampling project:

North Creek Analytical  
9405 SW Nimbus Avenue,  
Beaverton, OR 97008  
(503) 906-9200

Results from the laboratory analysis were compared to the Model Toxics Control Act Method A Cleanup levels for soils. Laboratory results for soil show that arsenic concentrations were above industrial levels in sample S-1. Laboratory results for soil show that lead concentrations were above industrial levels in sample S-6. The laboratory analytical data and chain-of-custody forms are included as **Appendix D**. The table presenting the confirmation soil sample results is included in **Table 1**.

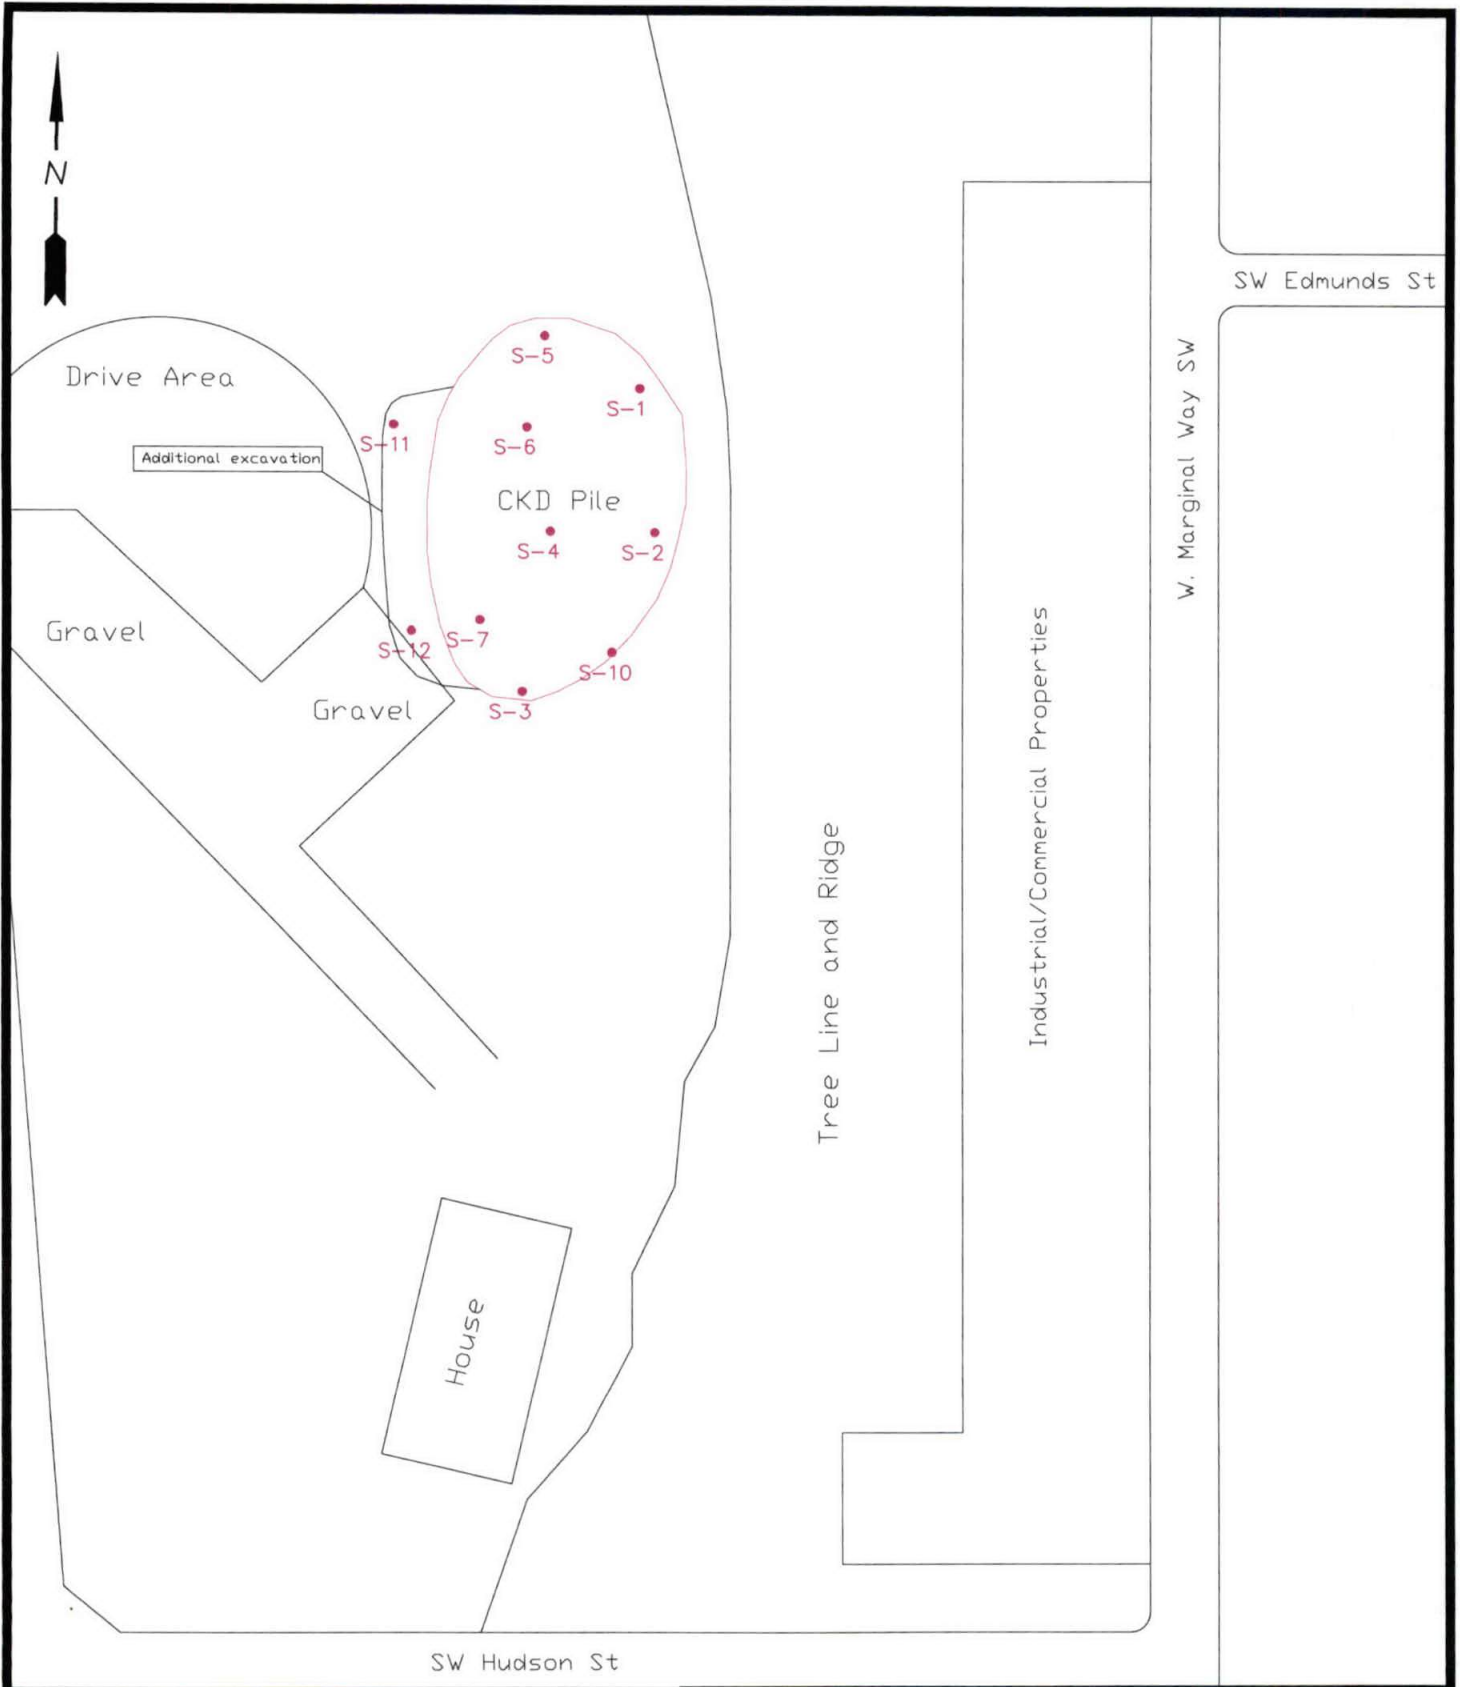

During the CKD removal, broken auto-battery casings were discovered at one edge of the CKD excavation in a shallow layer. This material was separated and stockpiled at the site under cover. Elevated lead and arsenic levels (above MTCA Method A) were found in this material, although the pH values were near neutral. The elevated lead and arsenic in a couple of the CKD confirmatory samples is attributed to the battery waste, not to the CKD. The battery waste is being addressed through a separate task. Regardless, the mean concentrations of lead and arsenic in the confirmatory samples were 182 mg/kg and 10.4 mg/kg respectively, both well under the MTCA Method A levels of 250 mg/kg (Pb) and 20 mg/kg (As).

### 3.0 RECOMMENDATIONS

Confirmation samples collected from the perimeter and base of the excavation demonstrate that the excavation and removal of CKD was effective and contaminant levels in the remaining soils are minimal.

DOE Response to Remedial Action Report

STATE OF WASHINGTON  
DEPARTMENT OF ECOLOGY

Northwest Regional Office • 3190 160th Avenue SE • Bellevue, Washington 98008-5452 • (425) 649-7000

February 6, 2006

Mr. John M. McFarland  
9360 Forest Ct SW  
Seattle WA 98136

Dear Mr. John M. McFarland:

Re: Request for Review: Independent Remedial Action  
Upper Hudson St. Site, 3815 15th Ave SW, Seattle WA 98106

Thank you for submitting the independent remedial action reports(s) for this site for Ecology's review. Ecology appreciates your initiative in pursuing a voluntary cleanup under the Model Toxics Control Act.

This is to acknowledge receipt of your *Request* and your \$500 deposit. A copy of the *Request* form is enclosed. All correspondence relating to this project should include the site name and a reference to the TCP identification number NW1585.

The Department of Ecology (Ecology) will publish a notice in the *Site Register* that we have received the report(s) and of your request for Ecology review of the independent remedial action. The *Site Register* is a bi-weekly publication regarding sites undergoing cleanup or remedial action throughout the state.

If you have any questions about this letter or the Voluntary Cleanup Program, please do not hesitate to call me at (425) 649-4446.

Sincerely,

Dale R. Myers  
Voluntary Cleanup Program Administrator

RE: McFarland CKD

Enclosed are the results of analyses for samples received by the laboratory on 02/06/06 17:03.  
The following list is a summary of the NCA Work Orders contained in this report.  
If you have any questions concerning this report, please feel free to contact me.

---

| <u>Work</u> | <u>Project</u> | <u>Project Number</u> |
|-------------|----------------|-----------------------|
| P6B0189     | McFarland CKD  | 3424                  |

---

Thank You,

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

---

**Notes and Definitions**

Report Specific Notes:

Q-02 - The matrix spike recovery, and/or RPD, for this QC sample is outside of established control limits due to sample matrix interference.

Laboratory Reporting Conventions:

DET - Analyte DETECTED at or above the Reporting Limit. Qualitative Analyses only.

ND - Analyte NOT DETECTED at or above the reporting limit (MDL or MRL, as appropriate).

NR / NA - Not Reported / Not Available

dry - Sample results reported on dry weight basis. Reporting Limits have been corrected for %Solids.

wet - Sample results and reporting limits reported on awet weight basis (as received).

RPD - Relative Percent Difference. (RPDs calculated using Results, not Percent Recoveries).

MRL - METHOD REPORTING LIMIT. Reporting Level at, or above, the lowest level standard of the Calibration Table.

MDL\* - METHOD DETECTION LIMIT. Reporting Level at, or above, the statistically derived limit based on 40CFR, Part 136, Appendix B.  
 \*MDLs are listed on the report only if the data has been evaluated below the MRL. Results between the MDL and MRL are reported as Estimated results.

Dil - Dilutions are calculated based on deviations from the standard dilution performed for an analysis, and may not represent the dilution found on the analytical raw data.

Reporting limits - Reporting limits (MDLs and MRIs) are adjusted based on variations in sample preparation amounts, analytical dilutions and percent solids, where applicable.
