Out of Sight - Out of Mind - Out of Business
 The importance of keeping firm and product names in the public eye is recognized by all business men. It is astonishing to see how a firm or product, however meritorious, will slip into the limbo of the forgotten if not persistently advertised into the actual medium for keeping a business or product name in the spotlight.
The City Directory is the actual medium for keeping a business or product name in the spotlight. Insist on Being Well Represented in its Pages.

Contact: Cody Laramie

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Landau Associates, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Qualifications of Environmental Professionals

David Johnson, PE

Associate Environmental Engineer

Role: Project Manager/Phase I and II ESAs

Expertise

Phase I and II environmental site assessments

Remedial investigations, feasibility studies, and cleanup action plans

Regulatory and permitting compliance

Remediation

UST site assessment/remediation

Solid waste/landfill gas engineering

Education

MS Environmental Engineering, Washington State University, 2011

BS, Civil Engineering, Washington State University, 2010

Registration

Professional Engineer (Civil): 2012/Washington (No. 52655)

*Experience prior to Landau Associates

David is an Associate Environmental Engineer with 10 years of environmental consulting and public sector experience. He is based in Landau Associates' office in Olympia and has extensive experience with the investigation and cleanup of contaminated properties throughout the western United States. David also has specific expertise in Phase I and II environmental site assessments (ESAs), site characterization, feasibility pilot studies, remedial system design, vapor intrusion mitigation, and cleanup of chlorinated solvents, petroleum products, polychlorinated biphenyls, polycyclic aromatic hydrocarbons, and other contaminants in soil, groundwater, air, and surface water. Prior to joining Landau Associates, David worked in both private consulting and for public agencies including Thurston County Public Works and Tacoma Water.

Lewis County, Phase I ESAs; Chehalis, WA. David provided due diligence Phase I ESA services on behalf of Lewis County for two commercial properties. The County was considering purchasing the two properties and developing them into County facilities.

City of Olympia, Phase I ESAs; Olympia, WA. David provided due diligence Phase I ESA services to the City of Olympia for two separate non-adjacent properties. The City was considering purchasing the two properties and developing them into parks.

Pierce Transit, Phase II ESAs; Spanaway, WA. David provided due diligence Phase II ESA services to Pierce Transit for six parcels in support of potential development of a transit facility and park and ride lot.

City of Tacoma, Characterization, Removal, and Disposal of Lead and Arsenic Contaminated Soil; Tacoma, WA. David provided engineering and environmental compliance services for Tacoma Water during water service line installations within an area of lead- and arsenic-contaminated soil from historical operations in the neighborhood.*

City of Olympia, West Olympia Commercial Property (Former West Olympia Landfill) Interim Action Work Plan; Olympia, WA. David provided environmental engineering services to the City of Olympia for the former landfill at the West Olympia Commercial Property. He was lead engineer on writing and developing the Interim Action Work Plan to satisfy Model Toxics Control Act requirements for the interim cleanup action with the goal of selling and developing the property. Numerous investigations have been completed at the site to characterize the extent of waste and contamination in groundwater, soil, and soil gas. Landau Associates is assisting with completing a remedial investigation/feasibility study report for the site.

City of Redmond, Contaminated Soil Characterization and Offsite Disposal; Redmond, WA. David provided on-call engineering and environmental support services for contaminated soil discovered during a water line and valve installation within the public right-of-way. He was lead engineer and project manager for contaminated soil characterization and offsite disposal coordination.

Jeffrey Fellows, PE

Principal

Role: Senior Technical Review

Expertise

Phase I and II environmental site assessments

Multi-media investigations

Site characterization and remediation

Source control evaluations

Compliance and agency negotiations

Environmental risk management

Data and technical document review

Education

MBA, Marketing and Finance, SUNY at Buffalo, 1994

BS, Geomechanical Engineering, University of Rochester, 1991

Registration

Professional Engineer (Civil): 2003/ WA (No. 39848); 2007/AK (No. 12555)

Jeff has more than 22 years of experience in the planning, management, and implementation of investigation, remediation, and compliance programs throughout the Pacific Northwest and Alaska. His work has included multi-media environmental investigation and remediation services, client-agency negotiations, source control evaluations, compliance and permitting support, Phase I and II environmental site assessments (ESAs), and insurance cost recovery. Much of his expertise includes projects at sites adjacent to waterbodies, where source control and recontamination dynamics are of primary concern. Several recent projects have involved investigation and remedial alternative development for properties identified for repurposing or redevelopment. These projects have required management of multiple involved parties/agencies, under extremely tight schedules that are necessary to achieve key milestones linked to grant- and insurance-related funding, and permitting constraints

Puget Sound Energy, Site Investigation, Monitoring and Infrastructure Evaluations, Everett Operations Base; Everett, WA. Jeff was the project manager and lead engineer for site investigation, monitoring, and infrastructure evaluations at Puget Sound Energy's (PSE's) Everett Operations Base in Everett, Washington. The site, located adjacent to the Snohomish River, is the former location of a manufactured gas plant (MGP). Site investigations led to interim remedial actions that included contained site contamination; however, recent utility upgrades (City of Everett, Tulalip Tribe) identified additional volumes of MGP-related contamination in the adjacent road right-of-way. Jeff sponsored multi-party negotiations concerning right-of-way management/acquisition (including coordination with BNSF, which owns the adjacent railway right-of-way) necessary to effectively address additional contamination while maintaining and expanding the infrastructure needs of the site.

Former Boise Cascade Mill Site, Phase I and II ESA Program; Yakima, WA. Jeff was the senior engineering and technical reviewer during planning and implementation of a Phase I ESA and a two-stage Phase II ESA program at the former Boise Cascade Mill Site in Yakima, Washington. A Phase I ESA was completed for the entire 250+ acre former Mill, comprising 23 parcels, owned and operated by numerous entities. Upon completion of the Phase I ESA, Jeff designed and oversaw implementation of a two-stage Phase II investigation. The results of the investigation were used by the City of Yakima during land acquisition and environmental liability discussions with existing property owners and insurance carriers.

Port of Bellingham, Weldcraft Steel and Marine Remedial Investigation/Feasibility Study; Bellingham, WA. Jeff was the engineering lead for the evaluation of remediation and source control strategies and stormwater management dynamics associated with the Weldcraft Steel's active boatyard operations. Source control and recontamination potential were of primary concern for the governing agency (i.e., the Washington State Department of Ecology) with respect to ongoing remediation of historically impacted sediment impacted with various contaminants including persistent bioaccumulative toxins (e.g., tributyltin, carcinogenic polycyclic aromatic hydrocarbons, and metals). The Sediment Cleanup User Manual guidance was used to evaluate risk-based cleanup levels proposed in the Cleanup Action Plan) for the site. Support has also included assessment of existing boatyard permit requirements, stormwater treatment Best Management Practices (i.e., bioswales and passive treatment), and site redevelopment strategies.
