## **EXECUTIVE SUMMARY**

BB&A Environmental (BB&A)<sup>1</sup> was retained by Papé Properties, Inc. to perform Phase I and Focused Phase II Environmental Site Assessments (ESAs) for the properties located at 7109 to 7601 48<sup>th</sup> Street East, in Fife, Washington (herein referred to as the *subject property*). The Phase I and Focused Phase II ESAs were conducted in general accordance with the scope and limitations of American Society for Testing and Materials (ASTM) Standard Practice E 1527-13 and All Appropriate Inquiries (AAI) rule, Federal Register, Vol. 70, No. 210; and ASTM Designation E1903-11 (Phase II ESA Standard). The purpose of the environmental site assessments was to identify potential environmental liabilities (i.e., *recognized environmental conditions* [RECs], *historic recognized environmental conditions* [HRECs], and *controlled recognized environmental conditions* [CRECs]<sup>2</sup>) associated with the *subject property*. The assessments included a site history review, a government agency list review, interviews with individuals familiar with the site, a site inspection, and investigations for sampling and analysis of subsurface soil and groundwater, and indoor air.

Based on the results of the Phase I and Focused Phase II ESAs, BB&A presents this cursory summary of the following findings, conclusions, and opinions. BB&A emphasizes that details presented in the Executive Summary are not intended to be complete or fully developed, and the report must be read in its entirety for a comprehensive understanding of the items contained herein.

**Site Description and Use:** The *subject property* is an approximately 18-acre agricultural- and residential-use property located at 7109 to 7601 (north side of) 48<sup>th</sup> Street East, in Fife, Washington. Pierce County identifies the *subject property* as approximately 18 acres in size and composed of the following parcels within map 042017-3: 047, 048, 008, 024, 025, 018, 039, 040, 037, 038, 029, and 031. At the time of the site reconnaissance, the *subject property* was developed with three (3) residences with detached garages; one (1) residence with an attached garage; and one (1) residence with two (2) shops and nine (9) greenhouses. Located on the *subject property* is an abandoned mobile home, which at the time of the site reconnaissance was surrounded by dense invasive blackberry. Also, at the time of the site reconnaissance, only a couple of the greenhouses were being utilized to grow starter seedling plants, and production of small wood cedar planters. The remainder of the *subject property* was noted to be a mix of agricultural use (pumpkin production), and fields of periodically cut grass. Adjacent and nearby properties to the north and west are predominantly of industrial use, and adjacent / nearby properties to the south and east are predominantly of residential and agricultural use.

---

<sup>1</sup> Refer to **Appendix A** for a list of common acronyms typically utilized by environmental consultants in this area. The list of acronyms is not intended to be a complete list and all listed acronyms may not be utilized in this report.

<sup>2</sup> Refer to **Appendix B** for a select list of terminology, including definitions and descriptions, as defined in ASTM Standard Practice E 1527-13. For a complete list of terminology used in this Practice, refer to Section 3 of ASTM Standard Practice E 1527-13.

**Site History:** Based on historical aerals and County information, the *subject property* appears to have always been predominantly of agricultural and residential use. The agricultural fields appear to have been a mix of rotating grass and row crops (e.g., pumpkins from 2020). The on-site residences appear to have been constructed between 1940 and 1975, and the on-site greenhouses appear to have been constructed in stages between the late 1980's and 2005.

**Environmental Database Review:** Environmental Data Resources Inc. (EDR) provided an environmental database report for the *subject property* to identify potential sites of concern within ASTM standard radii of the *subject property*. The EDR radius report identified the *subject property* and surrounding area as having Indian Reservation and flood hazard overlays. The EDR report also identified the western portion of the *subject property* as having a National Pollution Elimination Discharge System (NPDES) permit from April 25, 2019 to December 31, 2020 – likely related to stormwater management during a construction project. The EDR report also identified numerous sites of potential concern within ASTM standard radii of the *subject property*, however, based on distance, the estimated groundwater gradient, and the types of listing, all were found to likely pose low to no concerns to the *subject property* regarding potential environmental trespass and impact to subsurface soil, groundwater, and vapor.

**Building Materials:** Based on the age of the on-site residential structures, and garages / shops (constructed 1940 - 1975), asbestos-containing materials and lead-based may have been used in their construction. In addition, ballasts within interior fluorescent lights may still contain PCBs.

**Site Inspection:** The *subject property* was inspected for evidence of *RECs*. The *subject property* was noted to be of residential and agricultural use. The following potential *RECs* or areas of concern were noted associated with the *subject property*:

- ▶ **USTs - 7519 48<sup>th</sup> St Residence:** 500-gallon and 1,000-gallon underground storage tanks (USTs) are reportedly located beneath the asphalt area a short distance northwest of the residence at 7519 48<sup>th</sup> Street E. The USTs reportedly were used to store gasoline. The fuel dispensers for these USTs were reportedly next to the USTs.
- ▶ **Heating Oil UST - 7503 48<sup>th</sup> St Residence:** On the west side of this residence, is an estimated 675-gallon UST, approximately eight (8) feet long and four (4) feet wide. The UST appears to be approximately two (2) feet below ground, and empty.
- ▶ **Historical Herbicide / Pesticide Use - Agricultural Fields and Greenhouses:** The majority of the *subject property* has historically been of agricultural use, including many years of row crops. The greenhouses north of the residence at 7519 48<sup>th</sup> Street have operated for high density grown of various plants and flowers since the late 1980's. Greenhouses are often the site of elevated concentrations of herbicides and pesticides.

## **Focused Phase II Investigation**

On February 10<sup>th</sup>, 2021, a Focused Phase II ESA was conducted to evaluate current subsurface soil and groundwater conditions beneath the *subject property* within near vicinity of the current / former USTs, and areas of agricultural production. As part of the Focused Phase II ESA, a ground-penetrating radar (GPR) survey was conducted to identify the location of the former gasoline USTs, as well as to confirm the absence of utilities in the areas of proposed borings (on either side of the USTs). The GPR survey identified the approximate location of the 500- and 1,000-gallon gasoline USTs. The subsurface investigation included six (6) push-probe borings – one (1) on either side of each of the three (3) USTs. Each of the six (6) push-probe borings were advanced to 10 feet below land surface (BLS), with groundwater encountered at four (4) to six (6) feet BLS.

- **Soil Analytical Results:** Laboratory analysis of soil samples did not detect gasoline-range hydrocarbons, or benzene, toluene, ethylbenzene, and xylenes (BTEX) compounds in any of the four (4) soil samples collected from borings P1 through P4, near the former gasoline USTs. At the heating oil UST site, diesel-range hydrocarbon was detected at 271 and 517 parts per million (ppm) in soil samples from probes P5 and P6, respectively. BTEX compounds were not detected in either of these samples. The detected diesel does not exceed MTCA Method A Cleanup Levels for unrestricted land use.
- **Groundwater:** Laboratory analysis did not detect gasoline-range hydrocarbons or BTEX compounds in any of the four (4) groundwater samples collected from borings P1 through P4, near the former gasoline USTs. At the heating oil UST site, diesel-range hydrocarbon was detected at 1,640 and 5,460 ppb in probes P5 and P6. BTEX compounds were not detected in these two (2) groundwater samples. The detected diesel-range TPH exceeds the MTCA Method A Cleanup Level of 500 ppb.
- **Soil Sampling for Pesticides and Herbicides:** As part of the focused investigation, composite soil samples were collected from surface soils immediately beneath the tables within the greenhouses, as well as from the agricultural fields composing the *subject property*. Each composite sample from each greenhouse was composed of 10 random surface soil grab samples. Similarly, the agricultural parcels were subdivided into six (6) segments, where 10 random grab samples were collected and combined for six (6) composite soil samples (collected just beneath the root zone). Clean nitrile gloves were changed between samples to prevent cross-contamination.

**Soil Analytical Results:** Laboratory analysis of the composite soil samples detected the herbicide 2,4-D in four (4) greenhouse composite samples and the following pesticides in most of the greenhouse and agricultural field samples: Aldrin, beta-BHC, Lindane, cis-Chlordane, trans-Chlordane, 4,4'-DDD, 4,4'-DDE, 4,4'-DDT, Dieldrin, Endosulfan II, Endosulfan Sulfate, Endrin Ketone, and Heptachlor Epoxide.

**MTCA Cleanup Level Comparison:** Dieldrin was found to slightly exceed the *carcinogenic* MTCA Method B cleanup level in two (2) soil samples from the agricultural fields; however, the detected Dieldrin concentrations do not exceed the *non-carcinogenic* MTCA Method B cleanup level. All other detected herbicide and pesticide concentrations were generally orders of magnitude below MTCA Method B cleanup levels.

- **Water Well Sampling:** As part of the Focused Phase II ESA, the water well at 7519 48<sup>th</sup> Street E was sampled for dissolved arsenic, nitrates, organochlorine pesticides, and herbicides. None of the potential contaminants analyzed for were detected above method-reporting limits.

**CONCLUSIONS AND OPINIONS:** The findings of this investigation support the following:

- Three (3) USTs are reportedly located on-site, including a 675-gallon UST for storing heating oil at the residence at 7305 48<sup>th</sup> Street, and 500- and 1,000-gallon gasoline USTs at the residence at 7519 48<sup>th</sup> Street. A release of heating oil was found to have impacted soil and groundwater at 675-gallon UST. The USTs represent *RECs* associated with the *subject property*. Based on the detected contaminant concentrations, residual impact does not appear to pose a *Vapor Encroachment Condition* associated with the *subject property*.
- The three (3) on-site USTs should be properly decommissioned by a licensed contractor and Site Assessor. Upon removal of the USTs, appropriate sampling of soil (and groundwater - if encountered) should be conducted. At the heating oil UST site, limited soil and groundwater removal may be necessary to attain necessary cleanup levels. All analytical results and reports related to the heating oil UST should be submitted to the Pollution Liability Insurance Agency (PLIA) for approval and to facilitate a No Further Action (NFA) determination.
- Surface soil beneath the subject property has been impacted by an herbicide and several pesticides. This represents a *REC* associated with the *subject property*. Surface soils can be excavated and moved on-site, but should not be hauled off-site as clean fill. The analytical results appear to show that historical use of pesticides occurred across most of the agricultural fields, and to some extent inside the greenhouses. Based on the results of the focused sampling and analytical results, and proposed future use as an industrial property, the concentrations of Dieldrin do not appear to pose a human-health concern under industrial use scenarios.

- Prior to demolition or remodeling of the on-site residence, asbestos and lead-paint surveys should be conducted at the on-site residences and structures. In addition, fluorescent lighting should be checked for PCB-containing ballasts for proper disposal.
- Owners or operators of heating oil tanks should report releases to the Department of Ecology office located in the region where the release occurred within 90 days of discovery. For this site, the release should be reported within 90 days of the date of this report by calling Ecology's Southwest Region hotline at 360-407-6300.
- The water well at 7519 48<sup>th</sup> Street was analyzed for arsenic, nitrates, and herbicides and pesticides. None were detected. If this water well is to be utilized in the future, further testing for E. coli and Total Coliform should be conducted. Similar analyses are recommended at any other water wells on-site that may be used in the future. Lastly, if any of the water wells are not to be used in the future, then they will need to be decommissioned by a licensed water well driller.

## **1.0 INTRODUCTION**

BB&A Environmental (BB&A) was retained by Papé Properties, Inc. to perform Phase I and Focused Phase II Environmental Site Assessments (ESAs) for the properties located at 7109 to 7601 (north side of) 48<sup>th</sup> Street East, in Fife, Washington (herein referred to as the *subject property*). Pierce County identifies the *subject property* as approximately 18 acres in size and composed of the following parcels within map 042017-3: 047, 048, 008, 024, 025, 018, 039, 040, 037, 038, 029, and 031. At the time of the site reconnaissance, the *subject property* was a mix of residential and agricultural use.

### **1.1 Purpose**

The purpose of this site assessment was to identify potential environmental liabilities currently associated with the property in general accordance with the scope and limitations of Phase I ESA guidance as provided in the ASTM Standard Practice E 1527-13 and All Appropriate Inquiries (AAI) rule, Federal Register, Vol. 70, No. 210. BB&A reviewed ascertainable records specified within the ASTM standard and performed a site inspection to identify *RECs*. *RECs* are defined under the ASTM standard as “the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.”

The terms hazardous substances and petroleum products are “not intended to include de minimis conditions that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.” This assessment “is intended to reduce, but not eliminate, uncertainty regarding the potential for *recognized environmental conditions*” at the *subject property* completed within “reasonable limits of time and cost.” This report is not intended to establish the compliance status of the *subject property* with respect to other state or federal environmental regulations.

The purpose for conducting the ***focused*** Phase II ESA was threefold: 1.) establish baseline environmental conditions prior to purchasing the property; 2.) confirm or deny contaminant concentrations, if present, in areas of potential concern (e.g., greenhouses, agricultural fields, and underground storage tanks [USTs]); and 3.) eliminate potential environmental liability associated with the property in the future.

### **1.2 Scope of Work**

Specific objectives of this assessment (investigation) included:

- ☐ Determining the past ownership and land use of the *subject property*;
- ☐ Investigating past uses of adjoining and surrounding properties;
- ☐ Determining general geography and geology of the site area;

- Investigating the *subject property* for any undocumented surface staining or other visible indications of environmental impairment;
- Investigating adjoining properties for indications of surface chemical trespass;
- Investigating the possibility of pesticides and herbicides in shallow soil beneath the greenhouses and agricultural fields; and
- Completing an onsite *focused* assessment of subsurface soil and groundwater in the area of a former fuel pump and two (2) gasoline-containing underground storage tanks (USTs), and a heating oil UST.

The objectives were achieved by performing the following tasks:

- Review of historical ownership and land use of the *subject property*;
- Review of aerial photographs;
- Review of City and County directories;
- Review of local and State agency records;
- Review of published information concerning groundwater in the area;
- Completion of a site inspection of the *subject property*;
- Review of the contiguous properties for evidence of surface chemical trespass;
- Inspection of the adjoining property boundaries for evidence of chemical trespass;
- Advancing four (4) push-probe borings in the vicinity of two (2) USTs formerly used to contain gasoline for collection and laboratory analysis of soil and groundwater;
- Advancing push-probe borings on either side of an empty residential heating oil UST at a residential property, and collection and laboratory analysis of soil and groundwater.

### **1.3 Significant Assumptions**

The findings, conclusions, opinions, and recommendations of this Phase I ESA are based on commonly known or reasonably ascertainable information that is 1) publicly available; 2) obtainable from its source within reasonable time and cost constraints; and 3) practically reviewable as defined in ASTM Standard Practice E 1527-13. One (1) significant assumption has been made in completion of this investigation. Groundwater flow beneath and in the near vicinity of the *subject property* is assumed to flow generally west and northwest, with decreasing topography, towards and parallel to the Puyallup River, approximately 740 feet southwest of the *subject property* (at its closest point). A site specific evaluation of groundwater occurrence or flow direction was not performed as part of this Phase I ESA investigation. Based on local topography, the uppermost groundwater flow direction, for purposes of this investigation, is presumed to be to the west-northwest beneath the *subject property*. Nearby facilities at a higher elevation than the *subject property* (to the east-southeast) are considered hydrogeologically upgradient. Generally, the vicinity located west of the *subject property* is located at a lower elevation and will be presumed to be hydrogeologically downgradient of the *subject property*.

#### **1.4 Limitations and Exceptions**

The professional services of BB&A have been rendered using the degree of care and skill ordinarily exercised under similar circumstances by reputable environmental consulting firms practicing in this or similar locations. This report provides information on the *subject property* only as specified in the scope of work and is based on the conditions of the *subject property* at the time of the study. No other warranty expressed or implied is made.

This report was prepared in general accordance with ASTM Standard Practice E 1527-13. BB&A reviewed reasonably ascertainable records specified within the standard and performed a site inspection to identify *RECs*. This investigation did not include any inquiry with respect to methane, electromagnetic fields (EMF), lead in drinking water, formaldehyde, endangered species, compliance audits, and geotechnical investigations. However, general discussions of non-scope issues including wetlands, asbestos, lead-based paint, and radon are discussed herein. In those instances where additional services or non-scope issues are addressed in the report as requested or authorized by the client, specific limitations related to those services are presented in the text of the report.

The opinions and conclusions presented in this report are based only on the available information, including data provided by others, presumed groundwater flow direction, and limited observations made during the site inspection. The accuracy of these findings is based upon the accuracy of data and information provided by others. The results of soil and groundwater analyses only indicate the presence or absence of petroleum hydrocarbons and hazardous constituents in those discrete sample locations. Analytical data from the laboratory samples should only be considered as indicators of site conditions and not a guarantee of the absence of petroleum hydrocarbons and hazardous constituents in areas not sampled. The findings of this assessment should not be considered as scientific certainties, but rather as professional opinion based upon selected and limited data.

#### **1.5 Special Terms and Conditions**

No special terms or conditions were identified in the completion of this investigation.

#### **1.6 User Reliance**

BB&A acknowledges that Papé Properties, Inc. may rely upon the information, findings, conclusions, opinions, and recommendations contained in this document for up to 180 days following the date of this report in accordance with Section 4.6 of ASTM Standard Practice E 1527-13. Reliance of this report by all other parties not listed, including the information, findings, conclusions, opinions, and recommendations, shall require the expressed authorization of Papé Properties, Inc. and BB&A. The continued viability of this Phase I ESA beyond 180 days of the report date is subject to the requirements found in Sections 4.6 and 4.7 of ASTM Standard Practice E 1527-13.

## **2.0 SITE DESCRIPTION**

### **2.1 Location and Legal Description**

The *subject property* is an approximately 18-acre agricultural- and residential-use property located at 7109 to 7601 (north side of) 48<sup>th</sup> Street East, in Fife, Washington. Pierce County identifies the *subject property* as approximately 18 acres in size and composed of the following parcels within map 042017-3: 047, 048, 008, 024, 025, 018, 039, 040, 037, 038, 029, and 031. The geodesic location of the *subject property* is described as the southwest quarter of Section 17, Township 20 North, Range 4 East. The general location of the *subject property* is depicted on the Site Vicinity map included as **Figure 1**.

### **2.2 Site and Vicinity General Description and Current Use**

The *subject property* is an approximately 18-acre agricultural and residential property located in southeast Fife, Washington. At the time of the site reconnaissance, the *subject property* was developed with three (3) residences with detached garages; one (1) residence with an attached garage; and one (1) residence with two (2) shops and nine (9) greenhouses. Also located on the *subject property* is an abandoned mobile home, which at the time of the site reconnaissance was surrounded by dense invasive blackberry. At the time of the site reconnaissance, only two (2) of the greenhouses were being utilized to grow starter seedling plants, and production of small wood cedar planters. The remainder of the *subject property* was noted to be a mix of agricultural use (pumpkin production), and fields of periodically cut grass.

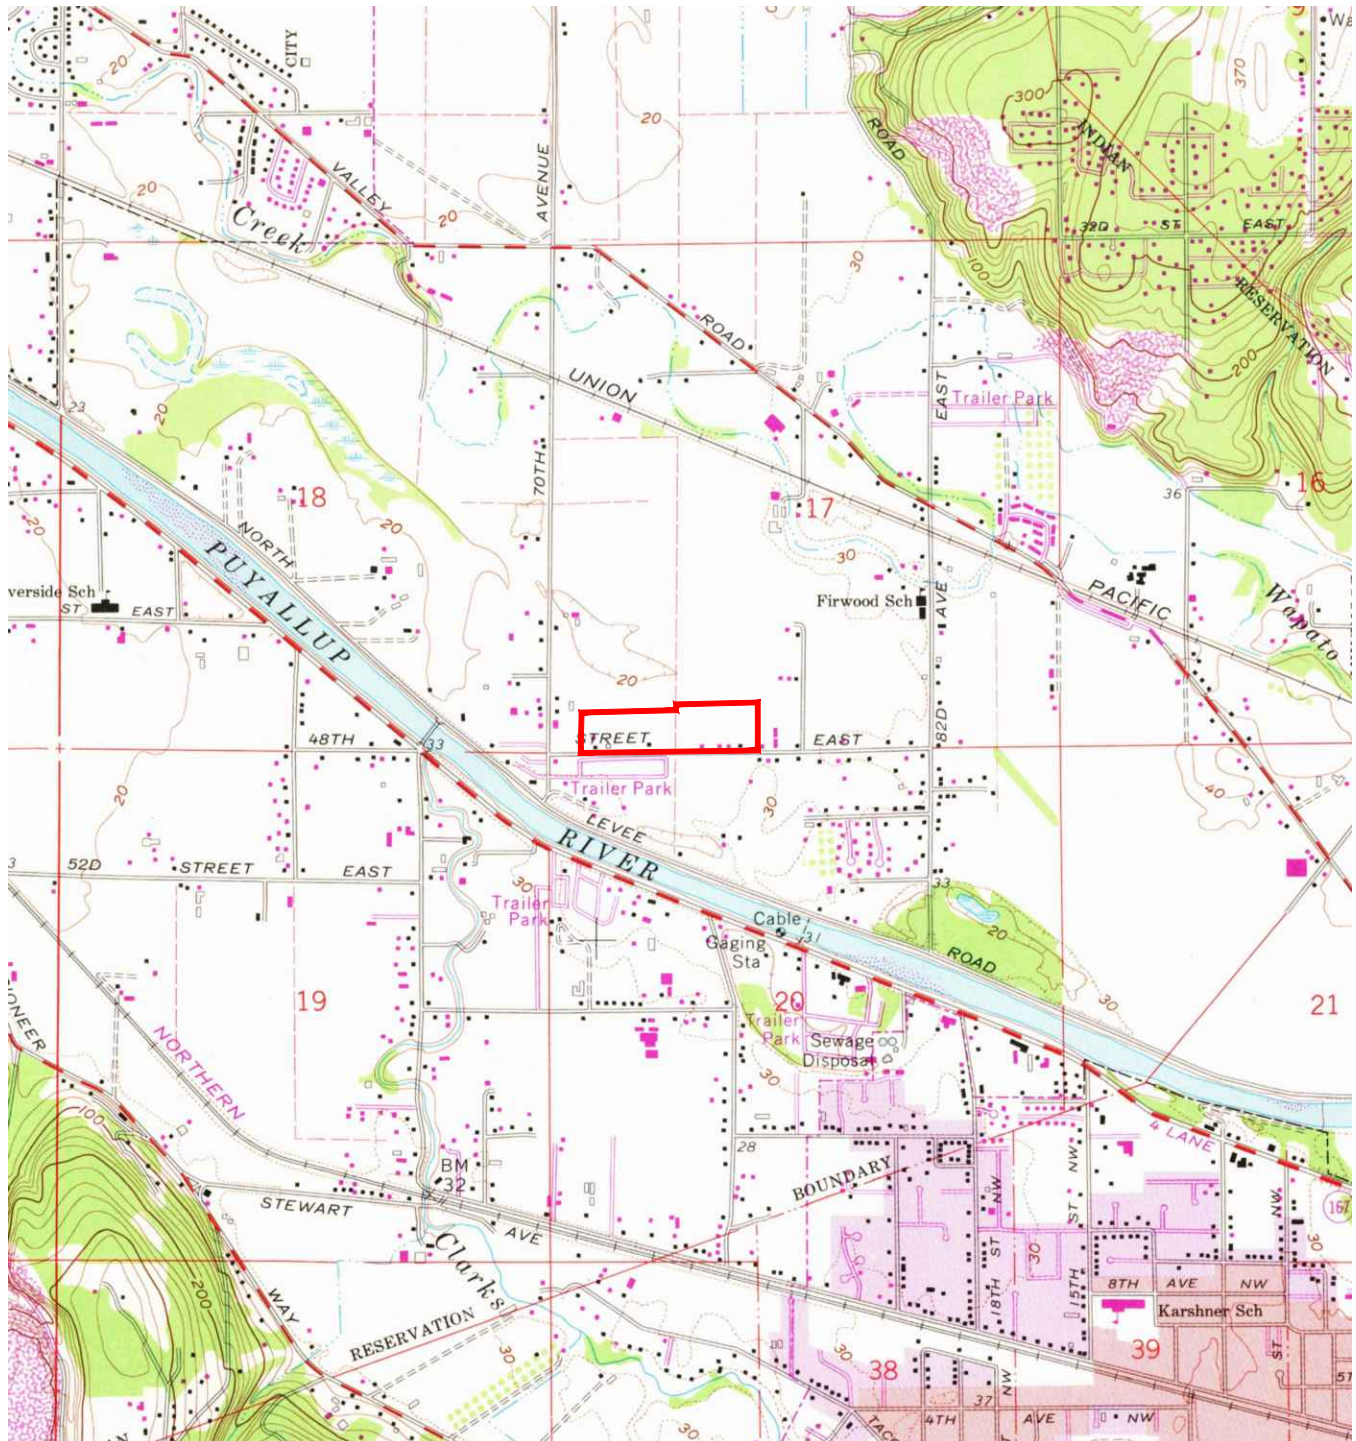

Adjacent and nearby properties to the north and west are primarily of industrial use, and adjacent and nearby properties to the south and east are predominantly of residential and agricultural use.

### **2.3 Description of Structures, Roads, and Other Improvements on the Site**

The subject property is located on the north side of 48<sup>th</sup> Street East, in southeast Fife, Washington. Five (5) residences are located along the southern property boundary, along 48<sup>th</sup> Street East. On the southwest corner of the *subject property* are two (2) residences, each with detached garages. The southwestern-most residence at 7109 48<sup>th</sup> Street E is a single-story structure in good condition, and with a well maintained yard.

The adjacent residence to the east, at 7111 48<sup>th</sup> Street E, is a two (2) story structure with basement. At the time of the inspection, this house was vacant and boarded up. This house and garage were in poor condition, and appeared to have been vacant for several years. An aboveground storage tank (AST) for storing heating oil was noted in the basement of this residence. North and east of these two (2) residences, the subject property was noted to be covered with grass that had not been cut in recent months.

Approximately 350 feet northeast of these residences is an abandoned mobile home, surrounded by invasive blackberry and grass. The mobile home was in poor condition.

Approximately 700 feet east of the southwest corner of the *subject property* is a third residence, with the address of 7305 48<sup>th</sup> Street E. This residence is a single-story structure with a detached garage. On the west side of the residence is a 275-gallon AST containing heating oil, and a vent pipe and fill port for an underground storage tank (UST) beneath the AST. The adjacent agricultural fields west, east, and north of this residence were reportedly used this past fall to produce pumpkins.

Approximately 500 feet west of the southeast corner of the *subject property* is a fourth residence, with an address of 7501 48<sup>th</sup> Street E. This residence is a single-story structure with attached garage. A propane tank was noted a short distance west of this residence, which utilizes a propane furnace and electric wall heaters as sources of heat. This residence receives water from a water well located beneath the east-central property boundary. North and east of this residence are agricultural fields covered with grass.

Approximately 230 feet west of the southeast corner of the *subject property* is a single-story residence with an attached garage. Approximately 60 to 70 feet west and northwest of this residence are two (2) shops, and further north and northwest are nine (9) greenhouses. At the time of the site reconnaissance, only two (2) of the greenhouses were being utilized to grow starter seedling plants, and production of small wood cedar planters. Located north of the greenhouses are two (2) large propane tanks that are used as a source of heat for the greenhouses. The property north of the propane tanks was covered with grass. The easternmost parcel of the subject property was covered with grass.

## **2.4 Current Use of Adjoining Properties**

The *subject property* is bounded to the south by 48<sup>th</sup> Street East, beyond which are a large mobile home park, a large agricultural field, and a couple residences. To the west, the *subject property* is bounded by a lot used by *Murrey's Disposal Company* for storage of new plastic trash and recycling bins. Further west is 70<sup>th</sup> Avenue East, and then the main industrial property for *Murrey's Disposal Company*, a company that provides waste and recycling collection services. To the east, the *subject property* is bounded by predominantly rural residential properties, although the residence immediately adjacent to the *subject property* appears to be also utilized for vehicle repair. To the north, the *subject property* appears to be bounded by several industrial businesses, including: *Service Steel Aerospace* (a supplier of specialty metals), *Renton Technical College for Aerospace / Machining*, and *American Fast Freight*.

## **2.5 Physical Setting**

The *subject property* is relatively level, with a very slight topographical gradient dipping to the north from a topographical high of 27 to 28 feet above mean sea level (MSL)<sup>3</sup> along 48<sup>th</sup> Street, to a localized low of approximately 22 to 23 feet above MSL at the northeastern portion of the property. Local and regional topography dips gently to the west-northwest (see **Figure 1**).

According to the County soil survey compiled by the U.S. Department of Agriculture's Soil Conservation Service, the dominant soils underlying the *subject property* are identified as *Puyallup* silt loam, which is described as well drained and having moderate infiltration rates.

According to the US Geological Survey (USGS) *Geologic Map of the Tacoma 1:100,000-Scale Quadrangle, Washington*, the *subject property* and surrounding area are underlain by alluvial (Qa) deposits of loose, stratified fluvial silt, sand, and gravel associated with the Puyallup River valley, within which, the *subject property* is located. More specifically, based on soils encountered in on-site borings (see **Section 8.0**), native soils encountered beneath the subject property from the surface to a depth of 10 feet below land surface (BLS) include clayey silt and silt with fine-grained sand. Groundwater was found to occur at a depth of approximately five (5) to six (6) feet BLS.

Local groundwater flow beneath the *subject property* (and nearby areas) is assumed to flow generally west-northwest with decreasing topography towards and parallel to the flow of the Puyallup River.

### **3.0 USER PROVIDED INFORMATION**

Pursuant to ASTM Standard Practice E 1527-13, *User* and *Owner Questionnaires* are to be completed to help “identify the possibility of *recognized environmental conditions* in connection with the property.” It is assumed that the completed *Questionnaires* will provide information to BB&A that will help “identify the possibility of *recognized environmental conditions* in connection with the property.” The *User Questionnaire* was completed by Mr. Doug Pennington, Environmental and Project Manager for Papé Properties. In addition, *Owner Questionnaires* were completed by the following:

- Marla Rees completed an *Owner Questionnaire* for parcels 029, 031, 037, 038, and 039. Included with the questionnaire was a letter from her husband, Dale Rees, which included information regarding two (2) underground storage tanks (USTs) still in place next to the residence at 7519 48<sup>th</sup> Street East. According to the letter, titled, *Declaration of Tanks Wells on Property*, 500- and 1000-gallon USTs used for storing gasoline are still in place (although empty) west and northwest of the residence at 7519 48<sup>th</sup> Street East. In an interview, Mrs. Rees indicated that the gas pumps for these USTs were also located in this same area west and northwest of the house, along the edge of the grass and asphalt driveway. None of the other responses identified potential *recognized environmental conditions* associated with the parcels described.
- Jerry Grattis completed an *Owner Questionnaire* for parcel 040 (7501 48<sup>th</sup> St E). None of the responses identified potential *recognized environmental conditions* associated with the 040. However, it is important to note that a question was left blank regarding registered or unregistered storage tanks (above or underground) on the property.
- W.A. Richter, as representative for the *Joan Ethel Richter Estate*, completed an *Owner Questionnaire* for parcel 018. None of the other responses identified potential *recognized environmental conditions* associated with this parcel.
- Matt Aatai, managing partner for Seawest Investments Associates, LLC, completed an *Owner Questionnaire* for parcels 047 (7109 48<sup>th</sup> St E), 048 (7111 48<sup>th</sup> St E), and 008 (agricultural property with the abandoned mobile home). None of the responses identified potential *recognized environmental conditions* associated with these parcels. However, it is important to note that a question was left blank regarding registered or unregistered storage tanks (above or underground) on the property.
- Gerald F. Duris, owner of parcel 025, completed an *Owner Questionnaire* for this agricultural parcel. None of the responses identified potential *recognized environmental conditions* associated with this parcel.

- Jean and Douglas Knudson, owners of parcel 024, completed an *Owner Questionnaire* for this agricultural parcel. None of the responses identified potential *recognized environmental conditions* associated with this parcel.

The completed *Questionnaires* are included as **Appendix C**. The available information provided in the completed *Questionnaire* is summarized below.

### **3.1 Title Records**

A preliminary title report was not provided by Mr. Doug Pennington, Environmental Manager for Papé Properties. According to the Pierce County assessor, no liens or deed restrictions were identified associated with the *subject property*.

### **3.2 Environmental Liens or Activity and Use Limitations (AULs)**

The information contained in the *Owner* and *User Questionnaires* indicates no knowledge of environmental liens or activity and use limitations associated with the *subject property*.

### **3.3 Commonly Known or Reasonably Ascertainable Information**

The completed questionnaires identified USTs at parcels 037 and 039 (7305 48<sup>th</sup> Street E and 7519 48<sup>th</sup> Street E), and represent potential *recognized environmental conditions* associated with the *subject property*.

### **3.4 Valuation Reduction for Environmental Issues**

The information contained in the *Owner* and *User Questionnaires* does not indicate knowledge that the value of the *subject property* has been reduced as a result of known or potential *recognized environmental conditions* at the *subject property*.

### **3.5 Owner, Property Manager, and/or Occupant Information**

The *subject property* is owned by multiple owners. The *subject property* is predominantly of residential and agricultural use, although a commercial agricultural business operates in the greenhouses at 7511 and 7519 48<sup>th</sup> Street E (parcels 037 and 039).

### **3.6 Reason for Performing Phase I Environmental Site Assessment**

This Phase I ESA was requested by Papé Properties, Inc. in fulfillment of environmental due diligence prior to potential purchase of the *subject property*.

#### **4.0 DATA COLLECTION AND REVIEW**

A search of available public records was conducted to help determine the past history and usage of the site and to assess confirmed and/or suspected incidents or activities resulting in environmental impairment of both the *subject* and surrounding properties. This information was obtained by performing a site history and government agency list review. The findings are presented below.

#### **4.1 Site History Review**

The site history review relies upon public documents to determine past ownership and land uses. The history of the site has also been ascertained through a review of aerial photographs and historical records provided by Environmental Data Resources, Inc. (EDR), and interviews with knowledgeable persons.

##### **4.1.1 County and State Records**

Pierce County identifies the *subject property* as being composed of the following parcels (west to east):

County Information by Parcel					
Parcel No.	Address (if available)	Owner	Acres	Sq. Ft House / Garage	Year Built
042017-3-047	7109 48 <sup>th</sup> St E	Seawest Investment Assoc.	1.0	1,508 / 660	1975
042017-3-048	7111 48 <sup>th</sup> St E	Seawest Investment Assoc.	1.92	2,148 / 720	1940
042017-3-008	No Situs Address	Seawest Investment Assoc.	1.92	None	--
042017-3-024	7305 48 <sup>th</sup> St E	Knudson Family Trust	1.95	956 / 480	1951
042017-3-025	No Situs Address	Gerald F Duris	1.95	None	--
042017-3-018	No Situs Address	Joan Richter Estate	2.53	None	--

042017-3-038	7519 48 <sup>th</sup> St E	Marla Rees	0.35	1,959 / 640	1975
042017-3-029	7601 48 <sup>th</sup> St E	Marla Rees	0.35	None	--
042017-3-031	7601 48 <sup>th</sup> St E	Marla Rees	2.15	None	--

County records indicate a total acreage of 18.09 acres. County records reviewed did not identify any environmental liens, engineering controls, land use restrictions, and/or institutional controls recorded against the *subject property* that would indicate restricted use of the property due to *RECs*.

#### **4.1.2 Property Zoning**

The *subject property* is located within the Fife city limits, and is zoned *Community Commercial*. Adjacent properties to the south, across 48<sup>th</sup> Street are zoned *Community Commercial* (to the southwest), *Single-Family Residential* (central), and *Medium Density Residential* (to the southeast). To the north, the adjacent properties are zoned *Industrial*.

#### **4.1.3 Aerial Photographs**

Historical aerial photographs were obtained for the years 1941, 1943, 1957, 1968, 1972, 1980, 1990, 2006, 2009, 2013, and 2017. Copies of the aerial photographs are provided in **Appendix D**. Review summaries for each aerial photograph are presented below.

**1941, 1943, and 1957:** The aerial photographs for this time period appear to show the *subject property* to be predominantly of agricultural use, although, three (3) residences, with detached garages and barns are visible. The current-day residence and detached garage at 7111 48<sup>th</sup> Street East is visible, as are four (4) or five (5) barn-like structures to the north and east of this residence. The current-day residence and detached garage at 7305 48<sup>th</sup> Street East is also visible. Also visible is a former residence and garage / barn at 7601 48<sup>th</sup> Street East. The remainder of the *subject property* appears to be a mix of row crops, and grass / hay production. Row crops are visible covering most of parcels 048, 008, and 024, and a small portion of parcels 039 and 031. Adjacent and nearby properties are predominantly of similar agricultural use, with a few rural residences to the east and west. The Puyallup river is visible to the south and southwest.

**1968:** The 1968 aerial photograph shows all the previously mentioned residences, garages and barns (visible from 1941 to 1957) on the *subject property*, additionally, the on-site residence at 7501 48<sup>th</sup> Street East is now visible. County records indicate this residence was constructed in 1965. The remainder of the *subject property* appears to be predominantly covered with grass, although a couple parcels still appear to have row crops. Adjacent and nearby properties are predominantly of similar agricultural use, with a few rural residences to the east and west.

**1972 and 1980:** The 1972 and 1980 aerial photographs show all the previously mentioned residences, garages and barns (visible from 1941 to 1968) on the *subject property*; additionally, the on-site residence at 7519 48<sup>th</sup> Street East is now visible. The remainder of the *subject property* appears to be predominantly covered with grass, although a couple parcels still appear to have row crops. Between 1968 and 1972, the current-day mobile home park has been developed to the south and southwest of the *subject property*. All other adjacent and nearby properties are predominantly of similar agricultural use, with a few rural residences to the east and west.

**1990:** The 1990 aerial photograph shows all the previously mentioned residences, garages and barns (visible from 1941 to 1968) on the *subject property*, plus the remainder of the property remains predominantly of agricultural use. During the period of 1980 to 1990, the following additions have occurred: the current-day mobile home has been moved onto the north portion of parcel 008; the current-day residence and garage at 7109 48<sup>th</sup> Street E has been constructed; and the current-day shops/garages and two (2) greenhouses have been constructed northwest and west of the residence at 7519 48<sup>th</sup> Street E. The remainder of the *subject property* appears to be predominantly covered with grass, although a couple parcels still appear to have row crops. Adjacent and nearby properties are predominantly of similar residential and agricultural use. The adjacent and nearby property to the northwest appears to have wood stacked in the yard.

**2006:** The 2006 aerial photograph shows little change at the *subject property* (since 1990), except that since 1990 the residence and garage / barn at 7601 48<sup>th</sup> Street E has been removed. All other current-day residences, garages, shops, and greenhouses are visible on the *subject property*. A little over half of the fields are occupied by row crops. Adjacent and nearby properties are predominantly of similar residential and agricultural use. Since 1990, commercial and industrial development appears to have occurred on nearby and distant properties to the west and northwest.

**2009, 2013, and 2017:** The aerial photographs for this time period show the *subject property* and adjacent properties to be of the condition noted during the site reconnaissance. During this time period, the adjacent properties to the north have been developed with the current-day industrial and commercial business buildings.

#### **4.1.4 Sanborn Fire Insurance Maps**

EDR was contracted to provide Sanborn Insurance Maps for the *subject property* and surrounding area. EDR certified that the complete holdings of the Sanborn Library, LLC collection were searched based on the location of the *subject property* and no fire insurance maps covering the *subject property* and surrounding area were found. A copy of the EDR *Certified Sanborn Map Report*, dated February 2, 2021, is presented as **Appendix E**.

#### **4.1.5 Historical City Directory Search**

Historical city telephone directories are commonly reviewed for information pertaining to past occupancy and use of the *subject property* for indications of the use, sale, storage, and/or disposal of hazardous chemicals and wastes. EDR reviewed City Directories for addresses associated with the subject property, and nearby addresses and streets. EDR identified available Digital Archive records for the years 2000, 2005, 2010, 2014, and 2017. A copy of the EDR *City Directory Abstract Report*, dated February 5, 2021, is presented in **Appendix F**.

The findings from the City Directory report identified *Heart of the Valley Greenhouses* at 7519 48<sup>th</sup> St E on the *subject property* for the year 2005. No other businesses were identified associated with the *subject property* for the years covered; only residential use properties are listed. Adjacent and nearby businesses included the following:

##### **2000**

- *Plants Planting Greenhouses* (7722 48<sup>th</sup> St E - *subject property*)

##### **2005**

- *Plants Planting Greenhouses* (7722 48<sup>th</sup> St E - *subject property*)
- Sorenson Food Equipment (7888 48<sup>th</sup> St E - east)
- *Flex A Lite Consolidated* (7213 45<sup>th</sup> Ct E - north)

##### **2010**

- *Flex A Lite Consolidated* (7213 45<sup>th</sup> Ct E - north)

##### **2014**

- *Honey House Naturals* (7704 45<sup>th</sup> Ct E - north)
- *American Fast Freight* (7400 45<sup>th</sup> Ct E - north)

##### **2017**

- *Honey House Naturals* (7704 45<sup>th</sup> Ct E - north)
- *American Fast Freight* (7400 45<sup>th</sup> Ct E - north)
- JWD Machine (7213 45<sup>th</sup> Ct E - north)
- Flair Flexible Packaging, Roof Truss Supply, Scotts Dental (7217 45<sup>th</sup> Ct - north)

## **4.2 Government Agency List Review**

Environmental site and facility databases maintained by the U.S. Environmental Protection Agency (EPA) and the Washington Department of Ecology (Ecology) were reviewed to determine the environmental status of the *subject property*, as well as potential environmental trespass from surrounding and nearby properties. The reviews were conducted using updated lists maintained by EDR. Standard practice search radii established by the ASTM were used for the database review. A copy of the EDR *Radius Map™ Report*, dated February 2, 2021, is presented in **Appendix G**.

Two (2) radius maps showing the immediate vicinity surrounding the *subject property* are presented in the EDR report. The radius maps show the location of the *subject property* and the approximate locations of potential sites of concern. On these maps, each site of concern is identified with an EDR Map Identification (ID) based on a number and lettering system. Letters represent multiple listings of the same address. The closer the identified site to the *subject property*, the lower the number or letter. It is helpful to review the EDR maps when reading the following sections to recognize the distance and location relative to the *subject property*. BB&A considers those sites of greatest concern to be those having known groundwater contamination and located adjacent to or immediately upgradient<sup>4</sup> (i.e., east-southeast) of the *subject property*.

### **4.2.1 Subject Parcel – Environmental Database Findings**

The EDR radius report maps identify the *subject property* and surrounding area as having Indian Reservation and flood hazard overlays (see maps after Executive Summary page 18). In addition, the EDR radius report identified the *subject property*, specifically the residential properties at 7109, 7111, and 7223 48<sup>th</sup> Street E (EDR Map ID #1), as having an expired National Pollution Elimination Discharge System (NPDES) permit from April 25, 2019 to December 31, 2020. The permit was related to stormwater management during a construction project. The subject property is not listed in any other environmental databases, nor identified as having any spills, releases, registered ASTs / USTs, or storage / disposal of hazardous chemicals or petroleum products.

### **4.2.2 Off-Site Environmental Database Findings**

The EDR environmental database report identified numerous potential sites of environmental concern within ASTM standard radius of the *subject property*. Those of greatest concern are described and evaluated below, in order of proximity to the *subject property*:

- **Fife Regional Pond (EDR Map ID #2) - N Levee Rd, 70<sup>th</sup> Ave, & Freeman Rd:** This adjacent site is located immediately southeast of the *subject property*, across 48<sup>th</sup> Street.

Hydraulic gradient may be estimated based on topography. Those facilities at a higher elevation than the *subject property* are considered hydraulically upgradient of the *subject property*. Contaminants in groundwater at hydraulically upgradient sites may potentially flow towards the *subject property*. Contaminants in groundwater at hydraulically downgradient sites will likely flow away from the *subject property*. Groundwater beneath cross or side gradient sites likely flows parallel to the *subject property*.

No details are available as to why this site is listed on the ALLSITES database, although it is likely related to control of stormwater runoff. No spills or releases of hazardous chemicals or petroleum products have been identified at this adjacent property. This site is not expected to be an environmental concern to the *subject property*.

- **A&G Collision** (EDR Map ID #3) - 7619 48<sup>th</sup> St E: This site is located immediately east of the *subject property*, and is listed as an automotive body paint, interior repair and maintenance shop. The site is listed as a Conditionally Exempt Small Quantity Generator (CESQG) of hazardous waste for a couple years, but as a non-generator of hazardous waste for most years. No violations or spills or releases of hazardous chemicals or petroleum products were noted at this facility. Nor is this site identified as storing hazardous chemicals or petroleum products in aboveground storage tanks (ASTs) or underground storage tanks (USTs). Based on the absence of spills or releases, and available information provided by the EDR Radius Map report, this facility likely poses a low environmental concern to the *subject property* regarding potential environmental trespass.
- **DM Recycling / Murrey's Disposal Co / Transfer Station** (EDR Map ID #A4, A5, A9, D11, D12, A18, A19, A20, A21, D23, 28) - 4621 / 4625 70<sup>th</sup> Ave E and 4622 / 4722 70<sup>th</sup> Ave E: This facility, with multiple names and addresses, appears to operate as one company on either side of 70<sup>th</sup> Avenue E. The closest facility is located on the adjacent property, west of the *subject property*, in a downgradient location, and appears to operate as storage of new residential waste and recycle bins. This property appears to utilize a large double-walled steel AST containing diesel fuel. No spills or releases of hazardous chemicals or petroleum products were noted at this portion of the facility.

On the west side of 70<sup>th</sup> Avenue (4622 and 4722 70<sup>th</sup> Ave), over 400 feet west and downgradient of the *subject property*, is the main facility office headquarters, a solid waste and recycling transfer station, and location for parking (and possibly servicing) the fleet of trucks used for pickup of residential solid waste and recycling. This portion of the facility is identified on the following databases:

- ▶ **MANIFEST:** The facility appears to be listed on the MANIFEST database for storage of diesel fuel. Note that during the site reconnaissance, a large double-walled steel AST labeled as diesel was noted on this property, immediately west of 70<sup>th</sup> Avenue.
- ▶ **Solid Waste Facility:** This facility is listed on the SWF/LF database as a transfer station for solid waste and recycling facility.

- ▶ **Leaking Underground Storage Tank (LUST):** This facility is identified as discovering a leak from a UST in 1995. Sufficient investigation and cleanup has occurred at this site to receive a no further action (NFA) determination from Ecology. This portion of the facility is over 400 feet downgradient of the subject property.
- ▶ **Confirmed and Suspected Contaminated Sites List (CSCSL):** This facility is listed on Ecology's CSCSL database, likely for the above release identified from the LUST. The EDR report identifies that this site has received a NFA determination.
- ▶ **Drycleaners:** This facility is listed on the Drycleaners database, likely for managing drycleaning waste.
- ▶ **SPILLS:** This facility is also listed on the SPILLS database for the release of 10 gallons of hydraulic oil.
- ▶ **Solid Waste Recycling Facility (SWRCY):** This is the portion of the facility that accepts residential recycled materials, such as glass, plastic, paper, cardboard, aluminum and tin cans.

Based on the information provided by EDR, the type of facility, the NFA determination, distance from the subject property, and the estimated groundwater gradient, these facilities do not likely pose an environmental concern to the *subject property* regarding potential environmental trespass.

- ▶ **American Fast Freight** (EDR Map ID #B6 / B7 / B8 / E15) - 7400 45<sup>th</sup> Ct E: The facility, located approximately 300 feet north of the *subject property*, is listed on the MANIFEST and ALLSITES databases, as a Small Quantity Generator (SQG) of hazardous waste during early years of operation, but more recently as a verified non-generator of hazardous waste. No spills or releases of hazardous chemicals or petroleum products have been identified at this adjacent property. Based on available information, this facility does not likely pose an environmental concern to the *subject property* regarding potential environmental trespass.
- **SSA Service Steel Aerospace Corp** (EDR Map ID #C10) - 4609 70<sup>th</sup> Ave E: The facility, located 340 feet west-northwest (downgradient) of the *subject property*, is listed on the NPDES and SPILLS databases. The NPDES permit is related to industrial stormwater runoff, and the SPILLS is related to a surface release of an unknown petroleum product, of unknown quantity, to surface water in 2011. The absence of additional information related to the spill likely indicates that the volume and impact was minimal. Based on available information, distance from the *subject property*, and the estimated groundwater gradient, this facility does not likely pose an environmental concern to the *subject property* regarding potential environmental trespass.

- **George Nelson** (EDR Map ID # D13) - 4821 70<sup>th</sup> Ave: This historical auto repair and gasoline service station formerly operated between 1985 and 1993 at this site approximately 360 feet west-southwest of the *subject property*, at a downgradient location. No additional information is provided regarding the use of former USTs or ASTs, or any spills / releases. Based on available information, distance from the *subject property*, and the estimated groundwater gradient this facility does not likely pose an environmental concern to the *subject property* regarding potential environmental trespass.
- **RTC Aerospace** (EDR Map ID #E16 / E17) - 7215 45<sup>th</sup> Street Ct E: This site operates as the *Renton Technical College for Aerospace / Machining*, and is located approximately 370 feet northwest of the *subject property*. The EDR report identifies this site as being listed on the MANIFEST and ALLSITES databases, as a very-small quantity generator of hazardous waste (VSQG), and CESQG. No violations have been identified at this facility, nor have any spills or releases of hazardous chemicals or petroleum products been identified. Based on available information, this facility does not likely pose an environmental concern to the *subject property* regarding potential environmental trespass.
- **Premier Building Systems** (EDR Map ID C25) - 4609 70<sup>th</sup> Ave E: This site, located 475 feet west-northwest (downgradient) of the *subject property*, is listed as a non-generator of hazardous waste, and is not reported to have had any violations. No spills or releases of hazardous chemicals or petroleum products have been identified at this facility. Based on available information, this facility does not likely pose an environmental concern to the *subject property* regarding potential environmental trespass.
- **Cascades Plastics / CFM Consolidated** (EDR Map ID F26, F27) - 7009 45<sup>th</sup> St Ct E: This site, located over 500 feet west-northwest (downgradient) of the *subject property*, is listed as a non-generator of hazardous waste, as having a NPDES permit for stormwater, and is not reported to have had any violations. No spills or releases of hazardous chemicals or petroleum products have been identified at this facility. Based on available information, this facility does not likely pose an environmental concern to the *subject property* regarding potential environmental trespass.
- **WA WSU Farm Number 3** (EDR Map ID 29) - 4313 70<sup>th</sup> Ave E: This site, located over 680 feet northeast of the *subject property*, at an estimated upgradient to cross-gradient location, is listed as having a small UST (less than 1,100 gallons). No spills or releases of petroleum products have been identified at this facility. Based on available information, this facility does not likely pose an environmental concern to the *subject property* regarding potential environmental trespass.

All other sites, based on location, distance from the *subject property*, groundwater flow direction, and types of listings, are not likely to pose a concern to the *subject property* regarding potential environmental trespass.

#### **4.2.3 Orphan Sites**

The EDR report also identified those sites that could not be accurately located based on poor or inadequate address information. BB&A reviewed the potential location of each of the orphan sites listed in the EDR report. Based on address, the type of listing, and our research, each of the orphan sites was found to be beyond the respective ASTM search radius prescribed for the type of site listed, and/or are considered unlikely to pose a concern to the *subject parcel* regarding potential environmental trespass.

#### **4.3 Vapor Intrusion Screening**

In accordance with ASTM Standard Practice E 2600-10, “*Vapor Encroachment Screening on Property Involved in Real Estate Transactions*,” the *subject property* was screened for potential vapor encroachment of subsurface vapors from on- or off-site chemical sources. The Phase I ESA included the Tier 1 Search Distance Test referenced in ASTM Standard Practice E 2600-10 to determine if a *Vapor Encroachment Condition* (VEC)<sup>5</sup> exists at the *subject property*. No onsite historic operations represent potential VECs at the *subject property*.

Regarding potential off-site sources of concern, ASTM Standard Practice E 2600-10 defines the area of concern (AOC) for petroleum hydrocarbon sites (e.g., *LUST* sites) in presumed upgradient or cross-gradient positions as the area within a one-tenth (0.1) mile radius of the *subject property*; and the AOC for non-petroleum hydrocarbon sites (e.g., sites with known chlorinated solvent contamination like PCE/TCE) in presumed upgradient or cross-gradient positions is defined as the area within a one-third (0.33) mile radius of the *subject property*. The AOC in presumed downgradient positions is reduced to the critical distance<sup>6</sup> of 30 feet for petroleum hydrocarbon sites and 100 feet for non-petroleum hydrocarbon sites.

Nearby petroleum and non-petroleum hydrocarbon sites were evaluated based on distance from the *subject property*, the estimated groundwater gradient, and nearby soil and groundwater investigations. Based on this evaluation, sites of potential concern do not likely pose a concern to the *subject property* regarding potential VECs at the *subject property*.

---

<sup>5</sup> The presence or likely presence of chemicals of concern (COC) vapors in the subsurface of the target property (i.e., *subject property*) caused by the release of vapors from contaminated soil and/or groundwater either on or near the *subject property* as identified by the Tier 1 or Tier 2 screening procedures referenced in ASTM Standard Practice E 2600-10.

<sup>6</sup> The critical distance, as defined in ASTM Standard Practice E 2600-10, is the lineal distance in any direction between the nearest edge of the contaminant plume and the nearest target property (i.e., *subject property*) boundary. The critical distance represents an estimate of the lineal distance chemical vapors volatilized from contaminated groundwater or contaminated soil might migrate in the vadose zone towards the target property.

## **5.0 SITE INSPECTION**

### **5.1 Methodology and Limiting Conditions**

A site inspection was performed at the *subject property* that focused on features of the site that may be related to potential environmental liabilities, including: 1) soil staining and/or stressed vegetation; 2) the presence of hazardous substances or petroleum products on the property or on neighboring properties; and 3) any other conditions relative to the presence of material which may present an environmental liability. The site inspection was conducted on February 8, 2021, by BB&A personnel, in the company of Mr. David Nelson. The *subject property* was physically walked and inspected for the presence of hazardous substances or environmental concerns. Selected photographs taken during the inspections are included as **Appendix H**.

### **5.2 General Site Setting**

The *subject property* is an approximately 18-acre agricultural and residential property located in southeast Fife, Washington. At the time of the site reconnaissance, the *subject property* was developed with three (3) residences with detached garages; one (1) residence with an attached garage; and one (1) residence with two (2) shops and nine (9) greenhouses. Also located on the *subject property* is an abandoned mobile home, which at the time of the site reconnaissance was surrounded by dense invasive blackberry. Adjacent and nearby properties to the north and west are predominantly of industrial use, and adjacent / nearby properties to the south and east are predominantly of residential and agricultural use.

### **5.3 Site Observations**

#### **5.3.1 Site-Walk Observations**

The following describes the *subject property* and the structures observed onsite:

- **7109 48<sup>th</sup> Street E:** The property at this address, located on the southwest corner of the *subject property*, is developed with a single-story residence and detached garage. According to Pierce County records, this residence is 1,508 square-feet in size, the garage is 660 square-feet in size, and both were constructed in 1975. At the time of the site reconnaissance, the interior of these structures were not viewed, as the renter of the property was not home. The residence and garage appear to be constructed with wood framing, wood siding, and a composite-shingle roof.
- **7111 48<sup>th</sup> Street E:** The property at this address, located on the southwest portion of the *subject property*, is developed with a two (2) story residence with full basement, and a detached garage. According to Pierce County records, this residence is 2,148 square-feet in size, the garage is 720 square-feet in size, and both were constructed in 1940. The residence was noted to be constructed with wood framing, aluminum siding with some areas of cedar shake siding and brick, composite-shingle roofing, lathe and plaster walls, carpet and sheet vinyl flooring, and wood-framed and single-pane windows.

Inside the southeast corner of the basement, a 275-gallon aboveground storage tank (AST) for storing heating oil was noted. Also noted in this area was a pump and filter tank for a suspected water well, southeast of the house. At the time of the site inspection, the house was vacant, boarded up, and in poor condition. The detached garage was noted to be constructed with wood framing, wood siding, a metal roof, with interior walls covered with gypsum board (i.e., drywall), and a concrete slab foundation. At the time of the site inspection, the garage was locked, but a portion of the main garage was observed through a removed wood panel.

- North and east of the residences at 7109 and 7111 48<sup>th</sup> Street E are parcels covered with grass, clover, and weeds. These parcels did not appear to have been mowed in recent months.
- **7223 48<sup>th</sup> Street E:** On the approximate north-central portion of the *subject property* is an abandoned 900 square-foot mobile home that is surrounded by thick invasive blackberry. Based on limited visual inspection from beyond the blackberry, the mobile home appears to be constructed with aluminum siding. The windows appeared to be missing, and the mobile home appeared to be in poor condition. No aboveground utilities appeared to be connected to the mobile home.
- **7305 48<sup>th</sup> Street E:** The property at this address, located on the south-central portion of the *subject property*, is developed with a single-story residence with basement, and detached garage. According to Pierce County records, this residence is 956 square-feet in size, the garage is 480 square-feet in size, and both were constructed in 1951. The residence was noted to be constructed with wood framing; wood siding; composite-shingle roofing; lathe and plaster walls; carpet, hardwood, and sheet vinyl flooring; and wood-framed and single-pane windows. The detached garage was noted to be constructed with wood framing, wood siding, a composite-shingle roof, and a concrete slab foundation. Outside the west wall of the residence, a 275-gallon AST containing heating oil was noted. Next to the AST, a vent pipe and fill port for an underground storage tank (UST) was noted (beneath the AST). Probing the ground with a thin metal rod, the UST appears to be approximately eight (8) feet long and four (4) feet wide, and of 675-gallon capacity. Upon removing the metal cap and probing the UST with a tape measure, the UST was found to be approximately two (2) feet below ground, and found to be empty. At the time of the site inspection, the house was vacant and in good condition.
- The agricultural fields to the west, east, and north of the residence at 7305 48<sup>th</sup> Street E were reportedly used for growing pumpkins during the last summer and fall.

- **7501 48<sup>th</sup> Street E:** The property at this address, located on the southeast portion of the *subject property*, is developed with a single-story residence with detached garage. According to Pierce County records, this residence was constructed in 1965, is 1,536 square-feet in size, and has an attached garage 576 square-feet in size. The residence was noted to be constructed with wood framing and wood structural beams; wood siding; composite-shingle roofing; gypsum-board walls; tongue and groove ceilings; flooring consisting of carpet, sheet vinyl, and nine (9) inch floor tiles; and vinyl windows. The attached garage was noted to be constructed with wood framing, wood siding, a composite-shingle roof, and a concrete slab foundation. The residence is heated with a wood-pellet stove and propane heater. The propane tank is located a short distance west of the residence. The residence utilizes a water well located along the eastern parcel boundary.
- **7519 48<sup>th</sup> Street E:** The property at this address, located on the southeast portion of the *subject property*, is developed with a single-story residence with attached garage, two (2) detached shops and nine (9) greenhouses. According to Pierce County records, this residence is 1,959 square-feet in size, with an attached 640 square-foot garage, and was constructed in 1972. West-northwest of the residence are 640 square-foot and 1,352 square-foot shops. Further north and northwest are nine (9) greenhouses, ranging from 1,840 to 3,055 square feet in size. The residence was noted to be constructed with wood framing; wood siding; composite-shingle roofing; lightly textured gypsum-board walls and ceilings; carpet, hardwood, ceramic tile, and sheet vinyl flooring; and vinyl windows.

The two (2) detached shops west-northwest of the residence were noted to be constructed with wood framing, metal siding and roofing, and a concrete slab foundation. The shops were noted to be used for storing tools, fertilizer and herbicides, and farm equipment, such as a backhoe, a mower, and a forklift. Fuel appeared to be stored in a 55-gallon drum and a couple five (5) gallon plastic containers.

West of the two (2) shops is a well head for a water well. Immediately north of the northern shop is a small shed containing a water filtration tank for filtering water from the well.

North and northwest of the residence are nine (9) greenhouses. The southernmost greenhouse is approximately 3,055 square feet in size and constructed of wood framing and clear corrugated plastic. North of this greenhouse are three (3) quonset-style greenhouses that are 1,840 square feet in size and constructed with metal hoop framing that is covered with plastic sheeting. East of these three (3) greenhouses is a 2,976 square-foot greenhouse constructed with metal framing, plastic sheeting sidewalls, and a clear corrugated plastic roof. The four (4) northwestern greenhouses are all 2,592 square feet in size, and constructed with metal framing, clear corrugated plastic walls, and plastic sheeting roofing.

Each of the nine (9) greenhouses have long wooden tables for holding various potted plants. The floors beneath the tables (and in the northeastern greenhouses) are soil covered with erosion fabric. Most of the greenhouses have concrete sidewalks between the tables. Above the tables are plastic hoses and misters for watering the plants on the tables. Inside the greenhouses are propane heaters. Two (2) large propane tanks, are located a short distance north of the greenhouses, and are used to heat the greenhouses. At the time of the site reconnaissance, only two (2) of the greenhouses were being utilized to grow starter seedling plants, and production of small wood cedar planters. Several small containers of pesticides were noted in the southwest greenhouse.

- The easternmost parcels (i.e., 029 and 031) were noted to be covered with grass. No evidence was noted of the former residence that occupied parcel 029.

### **5.3.2 Underground and Aboveground Storage Tanks**

As previously described, the following USTs and ASTs were noted at the *subject property*:

- **Gasoline USTs - 7519 48<sup>th</sup> Street E Residence:** According to the owner of this residence, two (2) USTs are located beneath the asphalt area northwest of this residence. The USTs are reportedly of 500- and 1,000-gallon capacity, and were used to store gasoline. The fuel dispensers for these USTs were reportedly along the edge of the asphalt and grass northwest of the house. The USTs are reportedly empty. **Recommendation:** Soil and groundwater adjacent to these USTs should be sampled for gasoline-range total petroleum hydrocarbons (TPH) and gasoline-related constituents.
- **Propane ASTs - 7519 48<sup>th</sup> Street E Residence:** North of the greenhouses at this address are two (2) large propane ASTs on a concrete pad. The propane is used to heat the greenhouses.
- **Heating Oil UST and AST - 7305 48<sup>th</sup> Street E Residence:** On the west side of this residence, is a 275-gallon AST containing heating oil. Beneath this AST is a fill port and vent line for an estimated 675-gallon UST, approximately eight (8) feet long and four (4) feet wide. Upon removing the metal cap, and probing the inside of the UST with a tape measure, the UST was found to be approximately two (2) feet below ground, and found to be empty. Further west of this residence is a small propane AST. **Recommendation:** Soil and groundwater adjacent to the heating oil UST should be sampled for diesel-range TPH and diesel-related constituents.
- **Heating Oil AST - 7111 48<sup>th</sup> Street Residence:** In the southeast corner of the basement at this residence is a 275-gallon AST used to store heating oil. The AST appeared to be empty or mostly empty.

### **5.3.3 Water Wells, Septic System, Dry Wells, or Injection Wells**

There appears to be four (4) water wells on the *subject property*, at each of the following addresses along 48<sup>th</sup> Street E: 7111, 7305, 7501, and 7519. Similarly, each of these residences are likely connected to septic systems north of these residences. It is unknown if the residence at 7109 48<sup>th</sup> Street E is connected to a water well or septic system, or connected to the local municipal water supply and sanitary sewer systems. None of the well construction logs for these water wells could be identified in Ecology's Water Well database.

Northwest of the residence at 7519 48<sup>th</sup> Street E, is an asphalt driveway and parking area with several catch basins, two (2) additional catch basins are located in the concrete driveway between the east and west rows of greenhouses. All of these catch basins reportedly drain to a drainfield north of the greenhouses. No evidence of injection wells was noted on the *subject property*.

### **5.3.4 Hazardous Substances, Petroleum Products or Unidentified Containers**

During the site reconnaissance, the following additional hazardous chemicals and petroleum products were noted (excluding previously mentioned ASTs and USTS):

- **Shops - 7519 48<sup>th</sup> Street E:** Inside the shops at this address, the following were noted: a 55-gallon drum (mostly empty) with hand pump for dispensing fuel; four (4) 5-gallon plastic containers for storing fuel; a few small containers of motor oil and antifreeze; a few one-gallon containers of paint; and approximately 10 to 12 containers of various herbicides (one-quart to 2-gallon capacity), such as Crossbow, Roundup, Weed-B-Gon, Lawn Weed and Crabgrass Killer, Broadleaf Killer, and Moss Killer.
- **Greenhouses - 7519 48<sup>th</sup> Street E:** Inside the two (2) southwestern greenhouses, the following chemicals were noted: a small 10-15 gallon poly tank of fertilizer; several one-gallon containers of bleach; dry Acephate Insecticide; one- to two-gallon containers of Subdue Fungicide, Green Shield Disinfectant and Algecide, Eagle 20EW Fungicide, Cycocel Plant Growth Regulator, Cornerstone Plus Herbicide, and Crossbow.
- **Residence - 7501 48<sup>th</sup> Street E:** Inside the garage at this address, small containers of petroleum and hazardous chemicals included motor oil, brake cleaner, acetone, fertilizer, weed killer, and gas cans. Outside the east side of the house/garage, several five (5) gallon buckets of used oil were noted. The homeowner stores the used oil in this manner until it can be recycled offsite.
- **Residence - 7305 48<sup>th</sup> Street E:** Inside the garage at this address, small containers of petroleum and hazardous chemicals included motor oil, fertilizer, insecticide, and gas cans.

### **5.3.5 Ground Surface Conditions**

No obvious areas of staining or indications of spillage of petroleum products or overuse of herbicides or pesticides were noted on the *subject property*. However a couple bags of trash were noted in the driveway and backyard of the residence at 7111 48<sup>th</sup> Street E; and several large trash bags were noted on the south-central portion of the subject property, specifically along the parcel boundary between parcels 018 and 025, north of the large oak tree.

### **5.3.6 Chemical Trespass from Off-site Sources**

A visual inspection of the property boundaries of the adjoining or contiguous properties was conducted during the site inspection to investigate obvious signs of surface chemical trespass onto the *subject property*. During the site reconnaissance, no obvious indications of surface chemical trespass onto the *subject property* from the contiguous or adjoining properties were noted.

### **5.3.7 Electrical Transformers**

Polychlorinated biphenyls (PCBs) are a listed hazardous substance that, prior to 1979, were commonly used in transformers and fluorescent light ballasts. After 1979, construction of ballasts and transformers containing PCBs was banned. However, PCBs still exist in some transformers and ballasts installed prior to 1979. During the site walk, three (3) pole-mounted transformer were noted along 48<sup>th</sup> Street E and the southern property boundary. Inside the onsite residences, fluorescent lights were noted. Based on the age of the residential structures, each light ballast in the fluorescent lights should be checked for “non-PCB” labeling prior to disposal. Those ballasts with “No PCBs” labeling may be disposed of as municipal solid waste. Those ballasts without such labeling should be treated as containing PCBs. Federal law requires that PCB-containing ballasts be disposed of as hazardous waste in accordance with 40 Code of Federal Regulations (CFR) §761.60 at an acceptable PCB disposal or recycling facility. These can sometimes be disposed at local hazardous waste collection sites.

### **5.3.8 Asbestos-Containing Materials**

The manufacture of most asbestos-containing materials (ACMs) was banned by the EPA by 1979. Prior to this, asbestos was a common constituent of numerous building materials, including floor and ceiling tiles, caulking, pipe insulation, roofing materials, and exterior siding. The on-site residences was reportedly constructed between 1940 and 1975. As such, ACMs may have been used in their construction. The site specific determination of ACMs is outside the scope of practice defined by ASTM Standard Practice E 1527-13 and was not conducted during the completion of this Phase I ESA. Prior to demolition or remodeling, an asbestos survey should be conducted at each of the residences.

### **5.3.9 Lead-Based Paint**

Before 1977, paint commonly contained lead concentrations greater than 1.0 mg/cm<sup>2</sup>, or 0.5 percent (%) by weight, the level at which lead-based paint is considered to cause human health problems if ingested. Based on the age of the on-site residences (1940 - 1975), lead-based paint may have been used to coat interior and exterior surfaces. The site specific determination of lead-based paint is outside the scope of practice defined by ASTM Standard Practice E 1527-13 and was not conducted during the completion of this Phase I ESA.

### **5.3.10 Radon**

Radon is a naturally occurring radioactive gas formed by the decay of uranium in some rocks and soil. The adverse health effects may occur from radon accumulation in buildings. The potential concentration of radon gas within a building depends on subsurface soil conditions, the integrity of the building's foundation, the existence of a basement or crawl space (primary areas of concern), and the building's ventilation. The US EPA recommended action level for radon gas is 4 picocuries per liter (pCi/L). The EDR report (see **Appendix G**) identified one (1) radon test result for this portion of Pierce County, the results of which identified radon below the action level of 4.0 pCi/L.

## **6.0 INTERVIEWS**

Pursuant to ASTM Standard Practice E 1527-13, the "objective of interviews is to obtain information indicating recognized environmental conditions in connection with the property."

### **6.1 Interview with Owner Representative**

As part of this Phase I ESA, *Owner Questionnaires* were completed by each of the property owners, and tenants and owner of the residences were interviewed regarding their respective properties. Information from the questionnaires and interviews are discussed in relevant sections of this report (e.g., **Section 3.0**). Copies of the completed *Questionnaires* are provided in **Appendix C**.

### **6.2 Interviews with Local Government Officials and Others**

Other than the specific references identified throughout this report, no other local government officials were interviewed regarding information pertaining to the *subject* or surrounding properties. Other than the specific references identified throughout this report, no other parties were interviewed regarding information pertaining to the *subject* or surrounding properties.

### **6.3 Previous Reports Reviewed**

As part of this Phase I ESA, no other Phase I ESA reports were reviewed regarding the *subject property*.

## **7.0 SUMMARY OF RECS AND CONCERNS ASSOCIATED WITH SUBJECT PROPERTY**

Based on the findings of this Phase I ESA, the following RECs were identified at the *subject property*:

1. **USTs - 7519 48<sup>th</sup> St E Residence:** A 500-gallon UST and a 1,000-gallon UST are reportedly located beneath the asphalt area a short distance northwest of the residence at 7519 48<sup>th</sup> Street E. The USTs reportedly were used to store gasoline. The fuel dispensers for these USTs were reportedly along the edge of the asphalt and grass northwest of the house. The USTs are reportedly empty. **Recommendation:** a Ground-Penetrating Radar survey should be conducted to identify the location of these USTs. Once identified, push-probe borings should be placed at each end of each UST to sample soil and groundwater for gasoline-range TPH and gasoline-related constituents.
2. **Heating Oil UST - 7305 48<sup>th</sup> St E Residence:** On the west side of this residence, is a 275-gallon AST containing heating oil. Beneath this AST is a fill port and vent line for an estimated 675-gallon UST, approximately eight (8) feet long and four (4) feet wide. The UST appears to be approximately two (2) feet below ground, and empty. **Recommendation:** Push-probe borings should be placed immediately north and south of the UST for collection of soil and groundwater samples. These sample should be analyzed for diesel-range TPH and diesel-related constituents.
3. **Historical Herbicide / Pesticide Use - Agricultural Fields:** The majority of the *subject property* has historically been utilized for agricultural purposes, including many years of row crops. **Recommendation:** Composite soil samples should be collected from each parcel historically of agricultural use. Each soil sample should be a composite of a minimum of 10 random grab samples, immediately beneath the root zone.
4. **Historical Herbicide / Pesticide Use - Greenhouses:** The greenhouses north of the residence at 7519 48<sup>th</sup> Street have long tables for holding various potted plants. Beneath the tables are earthen floors covered with erosion fabric. The greenhouses have been used for plant and flower production since at least 1990. Often the soil beneath greenhouses can have elevated concentrations of herbicides and pesticides. **Recommendation:** Composite soil samples should be collected from each greenhouse. Each soil sample should be a composite of a minimum of 10 random grab samples, immediately beneath erosion fabric beneath the tables.
5. **Asbestos Materials:** Prior to demolition or remodeling, an asbestos survey should be conducted at all residential structures and garages. As necessary, suspect asbestos-containing materials should be sampled for laboratory analysis.

## **8.0 FOCUSED PHASE II ENVIRONMENTAL SITE ASSESSMENT**

On February 10<sup>th</sup>, 2021, BB&A conducted a focused Phase II ESA at the *subject property* to address the areas of concern outlined in **Section 7.0**.

### **8.1 GPR Survey and Utility Clearance**

As part of the investigation, a ground-penetrating radar (GPR) survey was conducted at the location of the known and suspected USTs. The purpose of the GPR survey was to first identify the location of the two (2) suspected USTs northwest of the residence at 7519 48<sup>th</sup> Street, and to identify any utilities that may be in conflict with potential borings to be advanced next to the USTs. The approximate locations of the USTs were identified, and no utilities were identified within the areas of proposed borings.

### **8.2 Probing and Sampling Locations**

As part of the investigation, BB&A advanced six (6) push-probe borings to sample soil and groundwater in the following areas of concern:

#### **7519 Residence - Gasoline USTs:**

- **Push Probe P1:** Push-probe boring P1 was placed at the estimated northeast corner of the former 500-gallon gasoline UST, and estimated southwest corner of the former gas dispenser pump;
- **Push Probe P2:** Push-probe boring P2 was placed at the estimated western edge of the former 500-gallon gasoline UST;
- **Push Probe P3:** Push-probe P3 was placed at the estimated northwest corner of the former 1,000-gallon UST;
- **Push Probe P4:** Push-probe P4 was placed at the estimated southeast corner of the former 1,000-gallon UST;

#### **7305 Residence - Heating Oil UST**

- **Push Probe P5:** Push-probe P5 was placed at the estimated southwest corner of the former 675-gallon heating oil UST; and
- **Push Probe P6:** Push-probe P6 was placed at the estimated southwest corner of the former 675-gallon heating oil UST.

### **8.3 Probing and Soil Sampling Procedures, Methodology, and Observations**

The six (6) push-probe borings were advanced using track-mounted Geoprobe®, and push-probe technology, rods, and equipment. Soil cores from each boring were collected using hollow, stainless steel core barrels approximately 60 inches in length and 3.25 inches in diameter. Additional core barrels are added as the probe is advanced. Subsurface soil samples were retrieved within 60-inch long clear plastic tubes, 2.625 inches in diameter, inserted within the lead core barrel.

Soils collected in the liners were characterized, as well as inspected for potential indications of soil contamination, such as visual or olfactory evidence (i.e., soil staining, or diesel odors), and detectable volatile organic vapors using an Organic Vapor Meter with Photoionization detector (OVM-PID). Observations, measurements, and other field notes are recorded on the attached probe logs (**Appendix I**). To prevent cross-contamination, the push-probe rods were decontaminated between borings using alconox, and triple rinsed with fresh water.

Native soils encountered within the borings generally included silts with clay and a trace of fine-grained sand from the surface to a depth of 10 feet below land surface (BLS). Uppermost groundwater was encountered at a depth of approximately four (4) to six (6) feet BLS.

No obvious evidence of contamination was noted in soil from borings P1 through P4. As such, soil samples were collected at a depth of seven (7) feet BLS, from the estimated bottom of the USTs; assuming the USTs are four (4) feet in diameter and buried two (2) to three (3) feet BLS. For push-probes P5 and P6, slight indications of heating oil (i.e., diesel) contamination were encountered in the field at depths between six (6) and ten (10) feet BLS. Soil samples were collected at approximately seven (7) feet and 9.5 to 10 feet.

Each soil sample included collection of soil via EPA Method 5035A, using new Terra Core® samplers and laboratory-prepared 40 milliliter (ml) glass VOA vials with appropriate methanol preservative; plus collection of a laboratory-supplied four (4) ounce glass container. Each four (4) ounce soil sample container was filled to maximize volume and minimize headspace. New Terra Core® samplers were used for each sample (i.e., no Terra Core® samplers were re-used). The samples were collected using clean nitrile gloves. Each clean four (4) ounce glass jar was sealed with threaded, teflon-lined caps. The jars were filled such that remaining headspace volume was minimized. The sample jars were uniquely labeled, logged on a chain-of-custody document, and placed on ice in an insulated portable cooler. All soil samples were delivered to Apex Laboratories in Tigard, Oregon, for laboratory analysis.

#### **8.4 Applicable or Relevant and Appropriate Requirements (ARARs)**

The primary purpose of this investigation was to confirm or deny the presence of petroleum contamination in soil and/or groundwater beneath the *subject property* near USTs, as well as confirm or deny the presence of herbicides and pesticides in shallow soils in areas of agricultural use. In accordance with Chapter 173-340 of the Washington Administrative Code (WAC), Ecology issued the Model Toxics Control Act Regulation (MTCA), as a means for identifying applicable and appropriate cleanup values for media (i.e., soil, groundwater, and surface water) contaminated with hazardous materials and petroleum products. Protective of human and ecological receptors, the cleanup values are either Ecology-derived default values, or based on site-specific data. MTCA provides the following three (3) basic options for establishing cleanup values:

- **Method A – Applicable Laws and Tables:** Method A provides cleanup levels that are protective of human health for 28 of the most common hazardous substances (metals and organics) found at contaminated sites. These cleanup levels are based on applicable state and federal laws (developed by many of the procedures outlined in Method B); natural background concentrations; or laboratory-analysis practical quantitation limits (PQLs).
- **Method B – Universal Method:** Method B cleanup levels are established using applicable state and federal laws and risk assessment equations, and as appropriate, site-specific data. Method B is divided into two (2) tiers – standard and modified – and are based on less than a one-in-a-million for individual carcinogens, and a hazard quotient of less than one (1) for non-carcinogens (the point at which the substance may cause illness in humans). Standard B uses generic default assumptions in the risk equations to calculate cleanup levels. Modified Method B provides for the use of chemical- and site-specific data in the risk equations to calculate cleanup values. Method B cleanup levels generally do not require future land use restrictions.
- **Method C – Conditional Method:** Method C cleanup levels are also divided into standard and modified tiers, but were developed with industrial sites in mind, utilizing less stringent exposure assumptions, based on a 1 in 100,000 ( $10^{-5}$ ) cancer risk.

In order to evaluate detected contaminants and place them in a regulatory framework, contaminant concentrations were compared to MTCA Method A Cleanup Levels (CULs) developed by Ecology. The MTCA Method A CULs were established for unrestricted land use, and as such, are considered protective of human-health under various potential exposure pathways and receptor scenarios, including those for excavation / utility workers, and current onsite workers or potential residents under future land use scenarios (e.g. dermal contact / inhalation exposure pathways).

## **8.5 Soil Analytical Results**

Soil samples from push-probe borings P1 through P4 (placed next to the former gasoline USTs) were submitted for analysis of gasoline-range Total Petroleum Hydrocarbon (TPH) per Northwest Method NWTPH-Gx. Soil samples from probes P5 and P6 were submitted for analysis of diesel-range TPH per Northwest Method NWTPH-Dx. All six (6) soil samples were also submitted for analysis of Benzene, Toluene, Ethylbenzene, and Xylenes (BTEX) per EPA Method 8260B. The boring locations and soil analytical results are provided on **Figures 4 and 5**. The soil analytical results are summarized in **Table 1**. The complete laboratory report is presented in **Appendix J**.

Laboratory analysis of the soil samples did not detect gasoline-range TPH or BTEX compounds in any of the four (4) soil samples collected from borings P1 through P4, near the former gasoline USTs. At the heating oil UST site, diesel-range TPH was detected at 271 and 517 milligrams per kilogram (mg/kg), or parts per million (ppm) in soil samples P5-9.5-10' and P6-7', respectively. BTEX compounds were not detected in either of these samples, indicating that significant degradation has occurred since the time of the release. The detected diesel-range TPH does not exceed MTCA Method A CULs.

**Table 1: Soil Analytical Results**7305 and 7519 48<sup>th</sup> Street E, Fife, Washington

All concentrations in milligrams per kilogram (mg/kg), or parts per million (ppm).

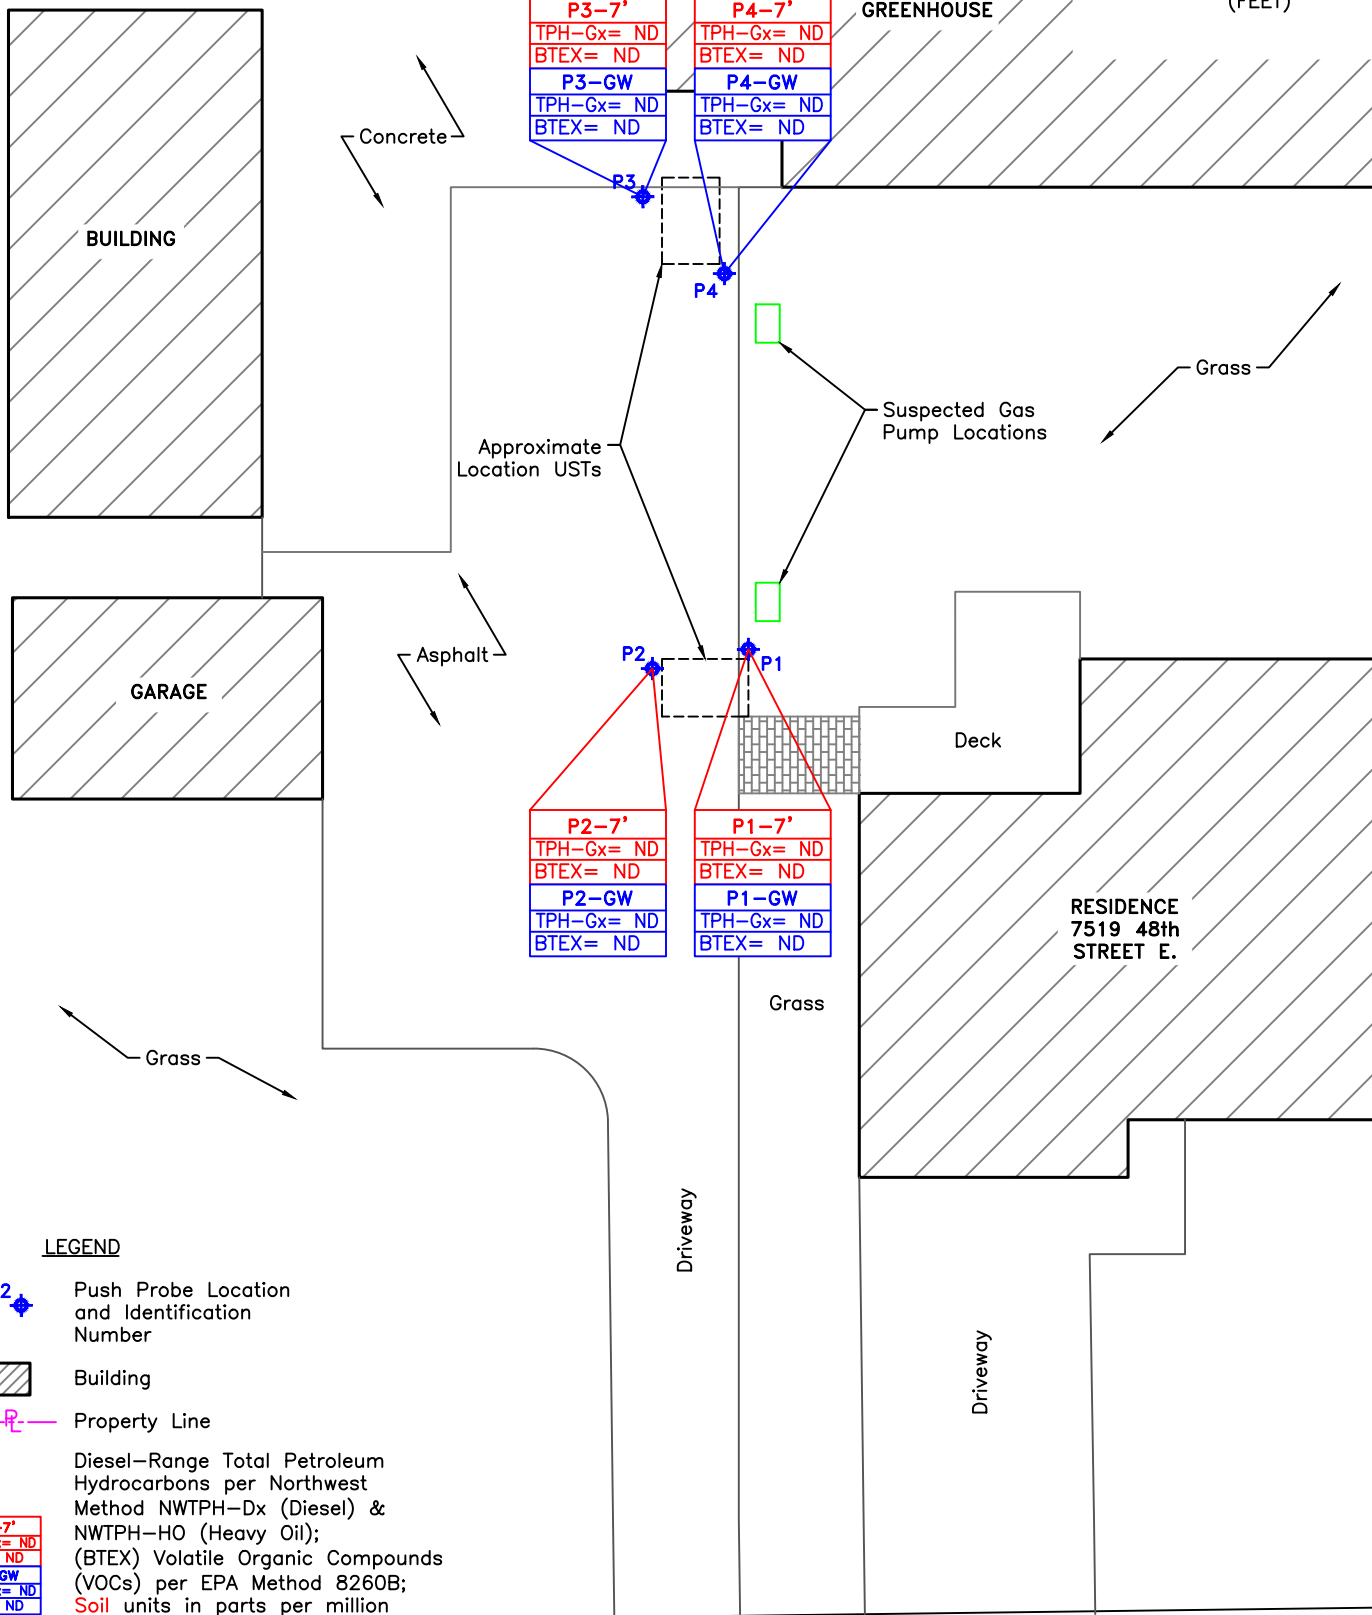

ND (&gt;20): Indicates contaminant was not detected above method-reporting limit shown in parenthesis.

Shaded cells indicate analysis not performed.

\*MTCA A Cleanup Level for Gasoline-range TPH is 100 ppm if benzene is not detected, and 30 ppm if benzene is detected.

## **8.6 Groundwater Sampling Methodology**

Upon completing each of the push-probe borings and collecting soil samples, a temporary well casing was installed, and accumulating groundwater allowed to equilibrate. Prior to groundwater sampling, groundwater was purged to the extent that three (3) well casing volumes had been purged, and the purged groundwater was clear of sediment. Groundwater was purged using a low-flow peristaltic pump using new polyethylene tubing at each sample location. None of the groundwater purged exhibited any evidence of contamination (i.e., odor or sheen). Groundwater samples were collected from recharging formation water using the peristaltic pump at its lowest setting (0.1 to 0.3 liters per minute), and transferring groundwater directly into laboratory-supplied glassware with appropriate sample preservatives.

Groundwater samples from push-probe borings P1 through P4 (placed next to the former gasoline USTs) were submitted for analysis of gasoline-range TPH per Northwest Method NWTPH-Gx, and the groundwater samples from probes P5 and P6 were submitted for analysis of diesel-range TPH per Northwest Method NWTPH-Dx. All six (6) groundwater samples were also submitted for analysis of BTEX compounds per EPA Method 8260B. The boring locations and groundwater analytical results are provided on **Figures 4 and 5**. The soil analytical results are summarized in **Table 2**. The complete laboratory report is presented in **Appendix J**.

## **8.7 Groundwater Sampling and Analytical Results**

Laboratory analysis of the groundwater samples did not detect gasoline-range TPH or BTEX compounds in any of the four (4) groundwater samples collected from borings P1 through P4, near the former gasoline USTs. At the heating oil UST site, diesel-range TPH was detected at 5,460 micrograms per liter (µg/L), or parts per billion (ppb) in the groundwater sample from probe P5, and at 1,640 ppb in groundwater from probe P6. BTEX compounds were not detected in either of these samples, indicating that significant degradation has occurred since the time of the release. The detected diesel-range TPH exceeds the MTCA Method A Cleanup Level of 500 ppb.

## **9.0 FOCUSED SAMPLING FOR HERBICIDES AND PESTICIDES**

As part of the Focused Phase II ESA, on February 10, 2021, BB&A conducted focused surface soil sampling within each of the greenhouses, and at the agricultural parcels of the *subject property*. The purpose of the sampling event was to confirm or deny the presence (and magnitude if present) of herbicides and pesticides in shallow soil in the areas of agricultural use.

### **9.1 Soil Sampling Methodology**

As part of this focused investigation, composite soil samples were collected from surface soils immediately beneath the tables within the greenhouses, as well as from the agricultural fields composing the *subject property*. The following sample protocols were performed for each composite soil sample:

- **Greenhouse Samples:** Within each greenhouse are raised tables for holding various potted plants. When watered or treated using herbicides or pesticides, excess water runoff from these tables drips on the soil beneath each table. The soil beneath each table is covered with erosion fabric. Within each greenhouse, the erosion fabric was moved aside, and 10 random grab samples were collected throughout the greenhouse using clean nitrile gloves. The nitrile gloves were changed between samples to prevent cross-contamination. The grab samples were combined within a one-gallon plastic ziploc bag, from which two (2), four (4) ounce soil jars were filled to capacity. Each clean four (4) ounce glass jar was sealed with threaded, teflon-lined caps. The jars were filled such that remaining headspace volume was minimized. The sample jars were uniquely labeled, logged on a chain-of-custody document, and placed on ice in an insulated portable cooler.
- **Agricultural Fields:** The agricultural fields for parcels (west to east) 047, 048, 008, 024, 025, 018, 039, and 037 were divided into six (6) sampling segments, approximately two (2) acres in size. The sampling segments are shown on **Figure 6**, as are the approximate location of each grab sample. Within each sampling segment, 10 random grab samples were collected using a shovel and clean nitrile gloves. At each random grab sample location, a one (1) foot by one (1) foot square plug of soil, approximately eight (8) inches deep, was removed using a shovel. To prevent cross-contamination, the grab sample was collected using clean nitrile gloves from the center of the plug, that had not come in contact with the shovel. The nitrile gloves were changed between samples to prevent additional cross-contamination. The grab samples were combined within a one-gallon plastic ziploc bag, from which two (2), four (4) ounce soil jars were filled to capacity. Each clean four (4) ounce glass jar was sealed with threaded, teflon-lined caps. The jars were filled such that remaining headspace volume was minimized. The sample jars were uniquely labeled, logged on a chain-of-custody document, and placed on ice in an insulated portable cooler.

## **9.2 Greenhouse Soil Sample Results**

All of the composite soil samples were submitted for analysis of Organochlorine Pesticides per EPA Method 8081B, and Herbicides per EPA Method 8151A. The analytical results are summarized below in **Table 3**. Laboratory analysis only detected the herbicide 2,4-D above method reporting limits in four (4) of the greenhouse soil samples. Further, pesticides were not detected in the composite soil samples from Greenhouses 4, 5, 6, and 7 (see **Figure 6**). However in all other composite samples, multiple pesticides were detected, including: Aldrin, beta-BHC, Lindane, cis-Chlordane, trans-Chlordane, 4,4'-DDD, 4,4'-DDE, 4,4'-DDT, Dieldrin, Endosulfan II, Endosulfan Sulfate, Endrin Ketone, and Heptachlor Epoxide.

To evaluate the analytical results, the detected pesticide concentrations were compared to MTCA cleanup levels. MTCA Method A cleanup levels were not available for any of the herbicides or pesticides. Instead, the detected concentrations were compared to MTCA Method B cleanup levels for unrestricted land use. MTCA Method B includes cleanup concentrations for carcinogenic and non-carcinogenic compounds. Dieldrin was found to slightly exceed the carcinogenic MTCA Method B cleanup level, however, the detected Dieldrin concentration does not exceed the non-carcinogenic MTCA Method B cleanup level. All other detected herbicide and pesticide concentrations were generally orders of magnitude below MTCA Method B cleanup levels.

The analytical results appear to show that historical use of pesticides occurred across most of the agricultural fields, and to some extent inside the greenhouses. The comparison of detected herbicide and pesticide concentrations to MTCA Method B cleanup levels appears to show that the detected contaminants meet cleanup levels for unrestricted land use, and that only Dieldrin exceeds slightly the MTCA Method B carcinogenic cleanup level. Based on the results of the focused sampling and analytical results, and proposed future use as an industrial property, the concentrations of Dieldrin do not appear to pose a human-health concern under industrial use scenarios.

## **9.3 Water Well Sampling**

As part of the Focused Phase II ESA, the water well at 7519 48<sup>th</sup> Street E was sampled. Prior to sampling, approximately 30 gallons of water was purged from a spigot immediately outside the water well pump house at this address. Upon purging, the water samples were collected directly from the spigot under low-flow conditions. The water sample from this water well was analyzed for dissolved arsenic, nitrates, organochlorine pesticides, and herbicides. None of the potential contaminants analyzed were detected above method-reporting limits. If this water well is to be utilized in the future, further testing for E. coli and Total Coliform may be necessary. Similar analyses are recommended at any other water wells to be used in the future. Last, if any of the water wells are not to be used in the future, they will need to be decommissioned by a licensed water well driller.

## **10.0 FINDINGS**

The findings of the Phase I and Focused Phase II ESA are provided as follows:

- **Site Description and Use:** The *subject property* is an approximately 18-acre agricultural- and residential-use property located at 7109 to 7601 (north side of) 48<sup>th</sup> Street East, in Fife, Washington. Pierce County identifies the *subject property* as approximately 18 acres in size and composed of the following parcels within map 042017-3: 047, 048, 008, 024, 025, 018, 039, 040, 037, 038, 029, and 031. At the time of the site reconnaissance, the *subject property* was developed with three (3) residences with detached garages; one (1) residence with an attached garage; and one (1) residence with two (2) shops and nine (9) greenhouses. Also located on the *subject property* is an abandoned mobile home, which at the time of the site reconnaissance was surrounded by dense invasive blackberry. At the time of the site reconnaissance, only a couple of the greenhouses were being utilized to grow starter seedling plants, and production of small wood cedar planters. The remainder of the *subject property* was noted to be a mix of agricultural use (pumpkin production), and fields of periodically cut grass.

Adjacent and nearby properties to the north and west are predominantly of industrial use, and adjacent / nearby properties to the south and east are predominantly of residential and agricultural use.

- **Site History:** Based on historical aerials and County information, the *subject property* appears to have always been predominantly of agricultural and residential use. The agricultural fields appear to have been a mix of rotating grass and row crops (e.g., pumpkins this past year). The on-site residences appear to have been constructed between 1940 and 1975, and the on-site greenhouses appear to have been constructed in stages between the late 1980's and 2005.
- **Environmental Database Review:** Environmental Data Resources Inc. (EDR) provided an environmental database report for the *subject property* to identify potential sites of concern within ASTM standard radii of the *subject property*. EDR provided a comprehensive review of federal and state regulatory agency databases. The EDR radius report maps identify the *subject property* and surrounding area as having Indian Reservation and flood hazard overlays. In addition, the EDR radius report identified the western portion of the *subject property* as having a NPDES permit from April 25, 2019 to December 31, 2020. The permit was related to stormwater management during a construction project. The subject property is not listed in any other environmental databases, nor identified as having any spills, releases, registered ASTs / USTs, or storage / disposal of hazardous chemicals or petroleum products.

The EDR report identified numerous sites of potential concern within ASTM standard radii of the *subject property*, however, based on distance, the estimated groundwater gradient, and the types of listing, all were found to likely pose low to no concerns to the *subject property* regarding potential environmental trespass and impact to subsurface soil, groundwater, and vapor.

- **Building Materials:** Based on the age of the on-site residential structures, and garages / shops (constructed 1940 - 1975), asbestos-containing materials and lead-based may have been used in their construction. In addition, ballasts within interior fluorescent lights may still contain PCBs.
- **Site Inspection:** The *subject property* was inspected for evidence of RECs. The *subject property* was noted to be of residential and agricultural use. The following potential RECs or areas of concern were noted associated with the *subject property*:
  - ▶ **USTs - 7519 48<sup>th</sup> St Residence:** A 500-gallon UST and a 1,000-gallon UST are reportedly located beneath the asphalt area a short distance northwest of the residence at 7519 48<sup>th</sup> Street E. The USTs reportedly were used to store gasoline. The fuel dispensers for these USTs were reportedly along the edge of the asphalt and grass northwest of the house.
  - ▶ **Heating Oil UST - 7503 48<sup>th</sup> St Residence:** On the west side of this residence, is an estimated 675-gallon UST, approximately eight (8) feet long and four (4) feet wide. The UST appears to be approximately two (2) feet below ground, and empty.
  - ▶ **Historical Herbicide / Pesticide Use - Agricultural Fields and Greenhouses:** The majority of the *subject property* has historically been of agricultural use, including many years of row crops. The greenhouses north of the residence at 7519 48<sup>th</sup> Street have operated for high density grown of various plants and flowers since the late 1980's. Greenhouses are often the site of elevated concentrations of herbicides and pesticides.

### **Focused Phase II Investigation**

- On February 10<sup>th</sup>, 2021, a Focused Phase II ESA was conducted to evaluate current subsurface soil and groundwater conditions beneath the *subject property* within near vicinity of the current / former USTs, and areas of agricultural production. As part of the Focused Phase II ESA, a ground-penetrating radar (GPR) survey was conducted to identify the location of the former gasoline USTs, as well as to confirm the absence of utilities in the areas of proposed borings (on either side of the USTs). The GPR survey identified the approximate location of the 500- and 1,000-gallon gasoline USTs. The subsurface investigation included six (6) push-probe borings – one (1) on either side of each of the three (3) USTs. Each of the six (6) push-probe borings were advanced to 10 feet below land surface (BLS), with groundwater encountered at four (4) to six (6) feet BLS.

- **Soil Analytical Results:** Laboratory analysis of the soil samples did not detect gasoline-range TPH or BTEX compounds in any of the four (4) soil samples collected from borings P1 through P4, near the former gasoline USTs. At the heating oil UST site, diesel-range TPH was detected at 271 and 517 ppm in soil samples from probes P5 and P6, respectively. BTEX compounds were not detected in either of these samples, indicating that significant degradation has occurred since the time of the release. The detected diesel-range TPH does not exceed MTCA Method A CULs for unrestricted land use.
- **Groundwater:** Laboratory analysis of the groundwater samples did not detect gasoline-range TPH or BTEX compounds in any of the four (4) groundwater samples collected from borings P1 through P4, near the former gasoline USTs. At the heating oil UST site, diesel-range TPH was detected at 1,640 and 5,460 ppb in probes P5 and P6. BTEX compounds were not detected in these two (2) groundwater samples. The detected diesel-range TPH exceeds the MTCA Method A Cleanup Level of 500 ppb.
- **Release Reporting and UST Decommissioning:** The release from the heating oil UST is required to be reported to Ecology within 90 days of discovery. The three (3) on-site USTs should be properly decommissioned by a licensed contractor and Site Assessor.
- **Soil Sampling for Pesticides and Herbicides:** As part of the focused investigation, composite soil samples were collected from surface soils immediately beneath the tables within the greenhouses, as well as from the agricultural fields composing the *subject property*. Each composite sample from each greenhouse was composed of 10 random surface soil grab samples. Similarly, the agricultural parcels were subdivided into six (6) segments, where 10 random grab samples were collected and combined for six (6) composite soil samples (collected just beneath the root zone). Clean nitrile gloves were changed between samples to prevent cross-contamination.

**Soil Analytical Results:** Laboratory analysis of the composite soil samples detected the herbicide 2,4-D in four (4) greenhouse composite samples and the following pesticides in most of the greenhouse and agricultural field samples: Aldrin, beta-BHC, Lindane, cis-Chlordane, trans-Chlordane, 4,4'-DDD, 4,4'-DDE, 4,4'-DDT, Dieldrin, Endosulfan II, Endosulfan Sulfate, Endrin Ketone, and Heptachlor Epoxide.

**MTCA Cleanup Level Comparison:** To evaluate the herbicide and pesticide analytical results, the detected concentrations were compared to applicable MTCA Method B cleanup levels for unrestricted land use. Dieldrin was found to slightly exceed the *carcinogenic* MTCA Method B cleanup level in two (2) soil samples from the agricultural fields; however, the detected Dieldrin concentration does not exceed the *non-carcinogenic* MTCA Method B cleanup level. All other detected herbicide and pesticide

concentrations were generally orders of magnitude below MTCA Method B cleanup levels. The analytical results appear to show that historical use of pesticides occurred across most of the agricultural fields, and to some extent inside the greenhouses. Based on the results of the focused sampling and analytical results, and proposed future use as an industrial property, the concentrations of Dieldrin do not appear to pose a human-health concern under industrial use scenarios.

- **Water Well Sampling:** As part of the Focused Phase II ESA, the water well at 7519 48<sup>th</sup> Street E was sampled for dissolved arsenic, nitrates, organochlorine pesticides, and herbicides. None of the potential contaminants analyzed for were detected above method-reporting limits.

## **11.0 CONCLUSIONS AND OPINIONS**

*Recognized environmental conditions (RECs)*, as defined in ASTM Standard Practice E 1527-13 means “the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property.” “The term (RECs) is not intended to include de minimis conditions that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of governmental agencies.” Conclusions and opinions regarding *RECs* at the *Area of Focus* and surrounding areas and adjoining properties should not be considered scientific certainties, but rather as professional opinions based upon selected and limited data. This report must be read in its entirety for a comprehensive understanding of the conclusions and opinions contained herein. The findings of this investigation support the following conclusions and opinions:

- No significant *data gaps* were identified that prevented the identification of *RECs*, *HRECs*, or *CRECs* in connection with the *subject property*.
- Three (3) USTs are reportedly located on-site, including a 675-gallon UST for storing heating oil at the residence at 7305 48<sup>th</sup> Street, and 500- and 1,000-gallon gasoline USTs at the residence at 7519 48<sup>th</sup> Street. A release of heating oil was found to have impacted soil and groundwater at 675-gallon UST. The USTs represent *RECs* associated with the *subject property*. Based on the detected contaminant concentrations, residual impact does not appear to pose a *Vapor Encroachment Condition* associated with the *subject property*.
- The three (3) on-site USTs should be properly decommissioned by a licensed contractor and Site Assessor. Upon removal of the USTs, appropriate sampling of soil (and groundwater - if encountered) should be conducted. At the heating oil UST site, limited soil

and groundwater removal may be necessary to attain necessary cleanup levels. All analytical results and reports related to the heating oil UST should be submitted to the Pollution Liability Insurance Agency (PLIA) for approval and to facilitate a No Further Action (NFA) determination.

- Surface soil beneath the subject property has been impacted by an herbicide and several pesticides. This represents a *REC* associated with the *subject property*. Surface soils can be excavated and moved on-site, but should not be hauled off-site as clean fill.
- Prior to demolition or remodeling of the on-site residence, asbestos and lead-paint surveys should be conducted at the on-site residences and structures. In addition, fluorescent lighting should be checked for PCB-containing ballasts for proper disposal.
- Owners or operators of heating oil tanks should report releases to the Department of Ecology office located in the region where the release occurred within 90 days of discovery. For this site, the release should be reported within 90 days of the date of this report by calling Ecology's Southwest Region hotline at 360-407-6300.
- The water well at 7519 48<sup>th</sup> Street was analyzed for arsenic, nitrates, and herbicides and pesticides. None were detected. If this water well is to be utilized in the future, further testing for E. coli and Total Coliform should be conducted. Similar analyses are recommended at any other water wells on-site that may be used in the future. Lastly, if any of the water wells are not to be used in the future, they will need to be decommissioned by a licensed water well driller.

## **12.0 SIGNATURE OF ENVIRONMENTAL PROFESSIONAL**

This report has been completed by Chris Cremer. As an environmental professional, I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in §312.10 of Title 40, Code of Federal Regulations (CFR) 312 and I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the *subject property*. I have developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Senior Hydrogeologist

## **13.0 QUALIFICATIONS**

Stephen M. Omo is a project manager with BB&A in Wilsonville, Oregon. Mr. Omo has a Bachelor of Science degree in Geology, and over 23 years of geology and environmental site investigation and cleanup experience. His project manager experience has included numerous Phase I and Phase II ESAs, and investigation, cleanup, and oversight of numerous UST and bulk petroleum cleanup sites, and drycleaning facilities. Mr. Omo is additionally responsible for investigative sampling, site research, groundwater and remediation system monitoring, permitting, and reporting.

Mr. Randall Boese has more than 30 years of professional experience involving comprehensive management of environmental projects, including assessment, remediation, compliance, technical review and oversight, and expert testimony. Projects managed by Mr. Boese have included characterization and investigation of hazardous substance releases to soil and groundwater, assessment of hydrogeology, contaminant transport modeling including risk assessment, operation and management of remediation systems, and groundwater monitoring. Mr. Boese is highly specialized in characterization of aquifer systems and the behavior of adsorbed and dissolved contaminants. Environmental compliance has included preparation of Phase I and II ESAs, Spill Prevention, Control, and Countermeasure (SPCC) Plans, Storm Water Pollution Prevention Plans (SWPPP), National Pollution Elimination Discharge System (NPDES) permitting, asbestos surveys, hazardous waste audits, manifesting, and disposal.

Mr. Boese has prepared numerous Corrective Action Plans which have outlined designs for ex-situ and in-situ soil and groundwater remediation systems. Functional ex-situ and in-situ remediation systems have employed bioremediation, groundwater extraction and treatment, chemical oxidation, soil vapor extraction (SVE), bioventing, and air-sparging technologies.

Mr. Boese has extensive experience with the development, execution, and documentation of all phases of projects and has an extensive record of successfully obtaining cost effective and timely regulatory site closure. Mr. Boese has prepared detailed work plans for regulatory review and approval and supervised implementation of the work plans.

## *APPENDIX B*

### *Terminology*

## TERMINOLOGY

**Adjoining Properties:** any real property or properties the border of which is contiguous or partially contiguous with that of the subject property, or that would be contiguous or partially contiguous with that of the subject property but for a street, road, or other public thoroughfare separating them.

**All Appropriate Inquiry:** that inquiry constituting “all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice” as defined in CERCLA, 42 U.S.C. §9601(35)(B), that will qualify a party to a commercial real estate transaction for one of threshold criteria for satisfying the LLPs to CERCLA liability (42 U.S.C. §9601(35)(A) & (B), §9607(b)(3), §9607(q), and §9607®), assuming compliance with other elements of the defense.

**Continued Viability of Environmental Site Assessment:** an environmental site assessment meeting or exceeding this practice and completed less than 180 days prior to the date of acquisition of the property or (for transactions not involving an acquisition) the date of the intended transaction is presumed to be valid.

**Controlled Recognized Environmental Condition (CREC):** a recognized environmental condition (REC) resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, as evidenced by the issuance of a “no further action” determination or equivalent (e.g., contractor certification), or meeting risk-based criteria established by the regulatory authority, with, in some instances, hazardous substances or products are allowed to remain in place subject to the implementation of required controls (e.g., property use restriction, activity and use limitation, institutional controls, or engineering controls). A condition considered by the environmental professional to be a CREC shall be listed in the findings section of the Phase I Environmental Site Assessment report, and as a REC in the conclusions section of the Phase I Environmental Site Assessment.

**De Minimis Condition:** a condition that generally does not represent a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be de minimis are not recognized environmental conditions nor controlled recognized environmental conditions.

**Data Failure:** a failure to achieve the historical research objectives even after reviewing the standard historical resources that are reasonably ascertainable and likely to be useful.

**Data Gap:** a lack of or inability to obtain information required by the ASTM Standard Practice E 1527-05 despite good faith efforts by the environmental professional to gather such information. Data gaps may result from incompleteness in any of the activities required by the practice, including, but not limited to site reconnaissance (e.g., an inability to conduct the site visit), and interviews (e.g., an inability to interview the key site manager, regulatory officials, etc.).

**Drums:** a container (typically, but not necessarily, holding 55 gallons [208 Liters] of liquid) that may be used to store hazardous substances or petroleum products.

**Environmental Site Assessment:** the process by which a person or entity seeks to determine if a particular parcel of real property (including improvements) is subject to recognized environmental conditions. At the option of the user, an environmental site assessment may include more inquiry than that constituting all appropriate inquiry or, if the user is not concerned about qualifying for the Landowner Liability Protections (LLPs), less inquiry than that constituting all appropriate inquiry.

**Hazardous Substances:** a substance defined as a hazardous substance pursuant to CERCLA 42 USC 9601(14), as interpreted by EPA regulations and the courts: “ (A) any substance designated pursuant to section 1321(b)(2)(A) of Title 33, (B) any element, compound, mixture, solution, or substance designated pursuant to section 9602 of this title, © any hazardous waste having the characteristics identified under or listed pursuant to section 3001 of the Resource Conservation and Recovery Act of 1976 (RCRA), as amended, (42 USC 6921) (but not including any waste the regulation of which under RCRA (42 USC 6901 et seq.) Has been suspended by Act of Congress), (D) any toxic pollutant listed under section 1317(a) of Title 33, (E) any hazardous air pollutant listed under section 112 of the Clean Air Act (42 USC 7412), and (F) any imminently hazardous chemical substance or mixture with respect to which the Administrator (of EPA) has taken action pursuant to section 2606 of Title 15. The term does not include petroleum, including crude oil or any fraction thereof which is not otherwise specifically listed or designated as a hazardous substance under subparagraphs (A) through (F) of this paragraph, and the term does not include natural gas, natural gas liquids, liquefied natural gas, or synthetic gas usable for fuel (or mixtures of natural gas and such synthetic gas).”

**Historic Recognized Environmental Condition (HREC):** a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (e.g., property use restrictions, activity and use limitations, institutional controls, or engineering controls). Before calling the past release a HREC, the environmental professional must determine whether the past release is a REC at the time the Phase I Environmental Site Assessment is conducted (e.g., if there has been a change in the regulatory criteria). If the environmental professional considers the past release to be a REC at the time the Phase I Environmental Site Assessment is conducted, the condition shall be included in the conclusions section of the report as a REC.

**Landowner Liability Protections:** landowner liability protections under CERCLA; these protections include the bona fide prospective purchaser liability protection, contiguous property owner liability protection, and innocent landowner defense from CERCLA liability. See 42 U.S.C. §9601(35)(A), 9601(40), 9607(b), 9607(q), and 9607®.

**Material Threat of a Release:** a physically observable or obvious threat which is reasonably likely to lead to a release that, in the opinion of the environmental professional, is threatening and might result in impact to public health or the environment.

**Petroleum Products:** those substances included within the meaning of the petroleum exclusion to CERCLA, 42 USC 9601(14), as interpreted by the courts and EPA, that is: petroleum, including crude oil or any fraction thereof which is not otherwise specifically listed or designated as a hazardous substance under subparagraphs (A) through (F) of 42 USC 9601(14), natural gas, natural gas liquids, liquefied natural gas, and synthetic gas usable for fuel (or mixtures of natural gas and such synthetic gas). (The word fraction refers to certain distillates of crude oil, including gasoline, kerosine, diesel oil, jet fuels, and fuel oil, pursuant to Standard Definitions of Petroleum Statistics.)

**Practically Reviewable:** information that is provided by the source in a manner and in a form that, upon examination, yields information relevant to the subject property without the need for extraordinary analysis of irrelevant data.

**Publicly Available:** the source of the information allows access to the information by anyone upon request.

**Reasonably Ascertainable:** information that is (1) publicly available, (2) obtainable from its source within reasonable time and cost constraints, and (3) practically reviewable.

**Recognized Environmental Condition (REC):** the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. A de minimis condition is not considered a REC.

**Subject Property:** the real property that is the subject of the environmental site assessment. Real property includes buildings and other fixtures and improvements located on the subject property and affixed to the land.

**User:** the party seeking to use Practice E 1527 to complete an environmental site assessment of the subject property. A user may include, without limitation, a potential purchaser of the subject property, a potential tenant of the subject property, an owner of the subject property, a lender, or a property manager.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by BB&A Environmental were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting [www.edrnet.com/sanborn](http://www.edrnet.com/sanborn).

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

## EXECUTIVE SUMMARY

### DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

### RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

### SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

### STANDARD ENVIRONMENTAL RECORDS

#### ***Federal RCRA generators list***

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/14/2020 has revealed that there is 1 RCRA-SQG site within approximately 0.25 miles of the target property.

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 12/14/2020 has revealed that there is 1 RCRA-VSQG site within approximately 0.25 miles of the target property.

### **State- and tribal - equivalent CERCLIS**

CSCSL: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Ecology's Confirmed & Suspected Contaminated Sites List.

A review of the CSCSL list, as provided by EDR, and dated 10/12/2020 has revealed that there are 5 CSCSL sites within approximately 1 mile of the target property.

CSCSL NFA: The data set contains information about sites previously on the Confirmed and Suspected Contaminated Sites list that have received a No Further Action (NFA) determination. Because it is necessary to maintain historical records of sites that have been investigated and cleaned up, sites are not deleted from the database when cleanup activities are completed. Instead a No Further Action code is entered based upon the type of NFA determination the site received.

A review of the CSCSL NFA list, as provided by EDR, and dated 10/12/2020 has revealed that there are 6 CSCSL NFA sites within approximately 0.5 miles of the target property.

### Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/14/2020 has revealed that there are 5 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

### EDR HIGH RISK HISTORICAL RECORDS

#### **EDR Exclusive Records**

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past

sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there is 1 EDR Hist Auto site within approximately 0.125 miles of the target property.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to

replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**Environmental Interest/Information System:**

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and

it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

**Environmental Interest/Information System:**

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

**OSHA ESTABLISHMENT**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.  
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

### STANDARD ENVIRONMENTAL RECORDS

#### ***Federal NPL site list***

##### **NPL: National Priority List**

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

##### **Proposed NPL: Proposed National Priority List Sites**

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

##### **NPL LIENS: Federal Superfund Liens**

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

### ***Federal Delisted NPL site list***

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

### ***Federal CERCLIS NFRAP site list***

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

### ***Federal RCRA non-CORRACTS TSD facilities list***

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

#### ***Local Brownfield lists***

#### **US BROWNFIELDS: A Listing of Brownfields Sites**

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

### EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

### 2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

### RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

### RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

### HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

### UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

### US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

### ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

## EDR HIGH RISK HISTORICAL RECORDS

### EDR Exclusive Records

#### EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

#### EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

### TACOMA/PIERCE COUNTY:

#### LF TACOMA/PIERCE: Closed Landfill Survey

Following numerous requests for information about closed dumpsites and landfills in Pierce County, the Tacoma-Pierce County Health Department decided to conduct a study on the matter. The aim of the study was to evaluate public health risks associated with the closed dumpsites and landfills, and to determine the need, if any, for further investigations of a more detailed nature. The sites represent all of the known dumpsites and landfills closed after 1950.

**Sensitive Receptors:** There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

Target Property Map:	6005097 PUYALLUP, WA
Version Date:	2014

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

### TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

### TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NW

### SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

### HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

### AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

## **GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY**

### **GROUNDWATER FLOW VELOCITY INFORMATION**

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

### **GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY**

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

#### Soil Map ID: 1

Soil Component Name: Puyallup

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 153 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	12 inches	fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 7.3 Min: 6.1
2	12 inches	29 inches	loamy fine sand	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 7.3 Min: 6.1
3	29 inches	59 inches	fine sand	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 7.3 Min: 6.1

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### Soil Map ID: 2

Soil Component Name: Sultan

Soil Surface Texture: silt loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Moderately well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 54 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	14 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 14 Min: 4	Max: 7.3 Min: 6.1
2	14 inches	22 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 14 Min: 4	Max: 7.3 Min: 6.1
3	22 inches	59 inches	stratified sand to silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 14 Min: 4	Max: 7.3 Min: 6.1

### Soil Map ID: 3

Soil Component Name: Pilchuck

Soil Surface Texture: fine sand

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Excessively drained

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

## TOPOGRAPHIC INFORMATION

### USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

## HYDROLOGIC INFORMATION

**Flood Zone Data:** This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

**NWI:** National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

## HYDROGEOLOGIC INFORMATION

### AQUIFLOW<sup>R</sup> Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

## GEOLOGIC INFORMATION

### Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

### STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

### SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

## LOCAL / REGIONAL WATER AGENCY RECORDS

### FEDERAL WATER WELLS

#### PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

#### PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

#### USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

### STATE RECORDS

#### Water Wells

Source: Department of Health

Telephone: 360-236-3148

#### Ecology Well Logs

Source: Department of Ecology

Telephone: 360-407-7294

Point geodatabase with a record for each Ecology well report. Points are located by quarter quarter section centroid.

Points contain all well report types including water wells, resource protection wells, and decommissioned wells.

## OTHER STATE DATABASE INFORMATION

#### Oil and Gas Well Listing

Source: Department of Natural Resources

Telephone: 360-902-1450

Locations that represent oil and gas test well sites in Washington State from 1890 to present.

### RADON

#### Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency

(USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey.

The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

#### EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRRA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

Photographs above and below of residence at 7111 48<sup>th</sup> Street E, on southwest portion of the subject property. Note the poor condition of the interior, and the lathe and plaster construction.

Photographs above and below of 275-gallon heating oil aboveground tank (AST) in basement of residence at 7111 48<sup>th</sup> Street E.

Photograph above of water line coming into filter tank from exterior basement wall into southeast corner of the basement (7111 48<sup>th</sup> St E). Water well for this property is likely southeast of this residence.

Photograph above of mobile home park south of 48<sup>th</sup> Street E, and the subject property. Photograph below of the grass field north of the residences at 7109 and 7111 48<sup>th</sup> Street E.

Photographs above and below of mobile home on northern portion of the subject property (parcel 008).  
The mobile home was surrounded by dense blackberry, and not accessible.

Photographs above and below of the agricultural field (parcel 024 – north of 7305 48<sup>th</sup> St E) recently used for growing pumpkins.

Photographs above and below of residence and garage at 7305 48<sup>th</sup> Street E.

Photographs above and below of aboveground heating oil tank on west side of the residence at 7305 48<sup>th</sup> Street E. Note in the photograph above, the vent pipe for a 675-gallon UST, to the left of the AST.

Photograph above of heating oil product lines in basement wall (residence at 7305 48<sup>th</sup> St E) that appear to be capped off. Photograph below of electric furnace at same property.

Photographs above and below of trash dumped on central portion of the subject property, between parcels 018 and 025.

Photographs above and below of on-site residence at 7501 48<sup>th</sup> Street E.

Photographs above and below of typical household cleaning products, petroleum, and gardening chemicals and fertilizers in garage at 7105 48<sup>th</sup> Street E.

Photographs above of 5-gallon buckets of used oil on east side of residence at 7501 48<sup>th</sup> Street E. Note that the water well for this residence is located on the east side of the wood fence shown above.

Photograph below of propane tank west of this residence.

Photographs above and below of on-site residence at 7519 48<sup>th</sup> Street E. The photograph below shows the shops and greenhouses in the distance to the northwest and north of this residence.

Photograph above and below, showing inside of shop closest to the residence at 7519 48<sup>th</sup> Street E.  
Note the old drum for storing fuel in above photograph.

Photographs above and below of the larger shop northwest of the residence at 7519 48<sup>th</sup> Street E.

Photographs above and below of the larger shop northwest of the residence at 7519 48<sup>th</sup> Street E. Note the minimal amount of herbicides located on the north side of this shop.

Photographs above and below of the inside of the greenhouses north of the residence at 7519 48<sup>th</sup> Street E. Note the erosion fabric covering bare ground beneath the tables.

Photographs above and below showing greenhouses and small spray tanks of fertilizer (below), and unknown product in tank above.

Photograph above of greenhouse showing potted plants above, and production of wood planters below.

Photographs above and below of herbicides, fungicide, and algicide in the southwest greenhouse.

Photograph above of propane tanks (north of the greenhouses), that are used to heat the greenhouses.  
Photograph below of well head west of the shops, and south of the SW greenhouse.

Photographs above and below showing locations of suspected USTs, NW of residence at 7519 48<sup>th</sup> Street E.

RE: A1B0383 - Pape Fife - PAP182PH2.21E

Thank you for using Apex Laboratories. We greatly appreciate your business and strive to provide the highest quality services to the environmental industry.

Enclosed are the results of analyses for work order A1B0383, which was received by the laboratory on 2/11/2021 at 7:39:00AM.

If you have any questions concerning this report or the services we offer, please feel free to contact me by email at: [DAuvil@apex-labs.com](mailto:DAuvil@apex-labs.com), or by phone at 503-718-2323.

Please note: All samples will be disposed of within 30 days of sample receipt, unless prior arrangements have been made.

**QUALIFIER DEFINITIONS**

**Client Sample and Quality Control (QC) Sample Qualifier Definitions:**

**Apex Laboratories**

- A-02** BS and MS both spiked incorrectly. Failure attributed to this mis-spike. SRD confirms as it is withing acceptance criteria.
- C-05** Extract has undergone a GPC (Gel-Permeation Chromatography) cleanup per EPA 3640A. Reporting levels may be raised due to dilution necessary for cleanup. Sample Final Volume includes the GPC dilution factor, see the Prep page for details.
- F-09** Results in the Gasoline Range are primarily due to overlap from a heavier fuel hydrocarbon product.
- F-11** The hydrocarbon pattern indicates possible weathered diesel, mineral oil, or a contribution from a related component.
- FILT1** Sample was lab filtered and acid preserved prior to analysis. See sample preparation section of report for date and time of filtration.
- FILT3** This is a laboratory filtration blank, associated with filtration batch 1020472. See Prep page of report for associated samples.
- P-11** Result estimated. Secondary column confirmation does not meet method criteria due to matrix interference.
- Q-01** Spike recovery and/or RPD is outside acceptance limits.
- Q-05** Analyses are not controlled on RPD values from sample and duplicate concentrations that are below 5 times the reporting level.
- Q-16** Reanalysis of an original Batch QC sample.
- Q-19** Blank Spike Duplicate (BSD) sample analyzed in place of Matrix Spike/Duplicate samples due to limited sample amount available for analysis.
- R-02** The Reporting Limit for this analyte has been raised to account for interference from coeluting organic compounds present in the sample.

**REPORTING NOTES AND CONVENTIONS:****Abbreviations:**

DET Analyte DETECTED at or above the detection or reporting limit.  
ND Analyte NOT DETECTED at or above the detection or reporting limit.  
NR Result Not Reported  
RPD Relative Percent Difference. RPDs for Matrix Spikes and Matrix Spike Duplicates are based on concentration, not recovery.

**Detection Limits: Limit of Detection (LOD)**

Limits of Detection (LODs) are normally set at a level of one half the validated Limit of Quantitation (LOQ).  
If no value is listed ('-----'), then the data has not been evaluated below the Reporting Limit.

**Reporting Limits: Limit of Quantitation (LOQ)**

Validated Limits of Quantitation (LOQs) are reported as the Reporting Limits for all analyses where the LOQ, MRL, PQL or CRL are requested. The LOQ represents a level at or above the low point of the calibration curve, that has been validated according to Apex Laboratories' comprehensive LOQ policies and procedures.

**Reporting Conventions:**

Basis: Results for soil samples are generally reported on a 100% dry weight basis.  
The Result Basis is listed following the units as "dry", "wet", or " " (blank) designation.  
  
"dry" Sample results and Reporting Limits are reported on a dry weight basis. (i.e. "ug/kg dry")  
See Percent Solids section for details of dry weight analysis.  
"wet" Sample results and Reporting Limits for this analysis are normally dry weight corrected, but have not been modified in this case.  
" " Results without 'wet' or 'dry' designation are not normally dry weight corrected. These results are considered 'As Received'.

**QC Source:**

In cases where there is insufficient sample provided for Sample Duplicates and/or Matrix Spikes, a Lab Control Sample Duplicate (LCS Dup) may be analyzed to demonstrate accuracy and precision of the extraction batch.

Non-Client Batch QC Samples (Duplicates and Matrix Spike/Duplicates) may not be included in this report. Please request a Full QC report if this data is required.

**Miscellaneous Notes:**

" --- " QC results are not applicable. For example, % Recoveries for Blanks and Duplicates, % RPD for Blanks, Blank Spikes and Matrix Spikes, etc.  
  
" \*\*\* " Used to indicate a possible discrepancy with the Sample and Sample Duplicate results when the %RPD is not available. In this case, either the Sample or the Sample Duplicate has a reportable result for this analyte, while the other is Non Detect (ND).

**Blanks:**

Standard practice is to evaluate the results from Blank QC Samples down to a level equal to ½ the Reporting Limit (RL).  
-For Blank hits falling between ½ the RL and the RL (J flagged hits), the associated sample and QC data will receive a 'B-02' qualifier.  
-For Blank hits above the RL, the associated sample and QC data will receive a 'B' qualifier, per Apex Laboratories' Blank Policy.

**REPORTING NOTES AND CONVENTIONS (Cont.):**

**Blanks (Cont.):**

Sample results flagged with a 'B' or 'B-02' qualifier are potentially biased high if the sample results are less than ten times the level found in the blank for inorganic analyses, or less than five times the level found in the blank for organic analyses.

'B' and 'B-02' qualifications are only applied to sample results detected above the Reporting Level.

**Preparation Notes:**

**Mixed Matrix Samples:**

**Water Samples:**

Water samples containing significant amounts of sediment are decanted or separated prior to extraction, and only the water portion analyzed, unless otherwise directed by the client.

**Soil and Sediment Samples:**

Soil and Sediment samples containing significant amounts of water are decanted prior to extraction, and only the solid portion analyzed, unless otherwise directed by the client.

**Sampling and Preservation Notes:**

Certain regulatory programs, such as National Pollutant Discharge Elimination System (NPDES), require that activities such as sample filtration (for dissolved metals, orthophosphate, hexavalent chromium, etc.) and testing of short hold analytes (pH, Dissolved Oxygen, etc.) be performed in the field (on-site) within a short time window. In addition, sample matrix spikes are required for some analyses, and sufficient volume must be provided, and billable site specific QC requested, if this is required. All regulatory permits should be reviewed to ensure that these requirements are being met.

Data users should be aware of which regulations pertain to the samples they submit for testing. If related sample collection activities are not approved for a particular regulatory program, results should be considered estimates. Apex Laboratories will qualify these analytes according to the most stringent requirements, however results for samples that are for non-regulatory purposes may be acceptable.

Samples that have been filtered and preserved at Apex Laboratories per client request are listed in the preparation section of the report with the date and time of filtration listed.

Apex Laboratories maintains detailed records on sample receipt, including client label verification, cooler temperature, sample preservation, hold time compliance and field filtration. Data is qualified as necessary, and the lack of qualification indicates compliance with required parameters.

## Qualifiers

### GC Semi VOA

Qualifier	Qualifier Description
*1	LCS/LCSD RPD exceeds control limits.
F1	MS and/or MSD recovery exceeds control limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
p	The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported.

## Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

## Narrative

### Job Narrative 570-50974-1

#### Comments

No additional comments.

#### Receipt

The samples were received on 2/12/2021 11:00 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 1.2° C.

#### GC Semi VOA

Method 8151A: The closing continuing calibration verification (CCVC) associated with batch 570-129696 recovered above the upper control limit. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8151A: The matrix spike/matrix spike duplicate (MS/MSD) for preparation batch 570-128998 and analytical batch 570-130003 exceeded control limits for the following analyte: Dinoseb. Note that this analyte is a known poor performer when analyzed using this method.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

#### General Chemistry

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

#### Organic Prep

Method 8151A: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate/sample duplicate (MS/MSD/DUP) associated with preparation batch 570-128947.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.
