				12/17/2019	7:57	5.19	17.11
				01/29/2020	12:23	4.35	17.95
				04/28/2020	14:11	4.59	17.71

Notes:

ft = feet.

MP = measuring point.

NAVD88 = North American Vertical Datum of 1988.

^(a)Measuring point elevations were surveyed on September 5, 2014, as obtained from Kennedy Jenks' February 12, 2015 groundwater monitoring report. The vertical datum was obtained from the Department of Ecology's Environmental Information Management System database.

Table 3-1
Air Analytical Results
Precision Engineering, Inc.
Dick Morgan
Seattle, Washington

NOTES:

Shading (color key below) indicates values that exceed screening criteria; non-detects ("U") were also compared with screening criteria.

Air PCUL, AR-1 - Detected

Air PCUL, AR-1 - Not Detected

-- = not analyzed.

NA = not applicable.

PCUL = preliminary cleanup level.

U = result is not detected at or above method reporting limit.

ug/m³ = micrograms per cubic meter.

VOC = volatile organic compound.

(a) Eight-hour indoor air sample collected with a 6-liter Summa canister outside normal working conditions.

(b) Field duplicate sample.

(c) Eight-hour outdoor air sample collected with a 6-liter Summa canister outside normal working conditions.

(d) Twenty-four-hour indoor air sample collected with a 6-liter Summa canister outside normal working conditions.

(e) Twenty-four-hour outdoor air sample collected with a 6-liter Summa canister outside normal working conditions.

(f) Eight-hour indoor air sample collected with a 6-liter Summa canister during normal working conditions.

(g) Eight-hour indoor air sample collected with a 6-liter Summa canister during normal working conditions and with air purification.

(h) Twenty-four-hour indoor air, post-interim-action performance sample collected with a 6-liter Summa canister outside normal working conditions without air purification.

(i) Radiello® R130 passive diffusive indoor air sample collected from February 1 to February 13, 2020.

(j) Radiello R130 passive diffusive indoor air sample collected from February 20 to March 12, 2020.

(k) Radiello R130 passive diffusive indoor air sample collected from May 15 to June 5, 2020.

(l) Radiello R130 passive diffusive indoor air sample collected from December 17, 2020, to January 7, 2021.

(m) Total xylene is the sum of m,p-xylene and o-xylene.

Xylenes, total ^(b)	1,500.00	--	--	--	--	--	--	15.10	--	--	--	--
NOTES:												
Shading (color key below) indicates values that exceed screening criteria; non-detects ("U") were also compared with screening criteria.												
Sub-Slab Soil Gas Screening Level, Protect Indoor Air, SG-1 - Detected												
Sub-Slab Soil Gas Screening Level, Protect Indoor Air, SG-1 - Not Detected												
-- = not analyzed.												
E = Result exceeds instrument calibration range.												
J = Result is estimated.												
NA = not applicable.												
U = result is not detected at or above method reporting limit.												
ug/m ³ = micrograms per cubic meter.												
VOC = volatile organic compound.												
(a) Sample SS-1-020715 concentration of helium tracer gas was 22 percent; sampling shroud was approximately 50 to 60 percent.												
(b) Total xylene is the sum of m,p-xylene and o-xylene.

Table 3-3

Vadose Soil Analytical Results
Precision Engineering, Inc.
Dick Morgan
Seattle, Washington

NOTES:

Lower Duwamish Waterway PCUL number SL-9, the site-specific terrestrial ecological evaluation PCUL, was removed from consideration because the simplified terrestrial ecological evaluation was ended.

Shading (color key below) indicates values that exceed screening criteria; non-detects ("U") were compared with screening criteria.

This table does not include results from samples collected from locations in the drainage ditch that were excavated during the 2008 soil-removal actions (HA3, HA4, HA5, HA22, P1, P9, and SS6).

Most Stringent Soil PCUL Vadose Zone Potable GW SL #s 1-4, 8, 10—Detected

Most Stringent Soil PCUL Vadose Zone Potable GW SL #s 1-4, 8, 10—Not Detected

-- = not analyzed.

cPAH = carcinogenic PAH.

EPH = extractable petroleum hydrocarbons.

FD = field duplicate sample.

ft bgs = feet below ground surface.

GW = groundwater.

HPAH = high-molecular-weight PAH.

J = result is estimated.

LPAH = low-molecular-weight PAH.

mg/kg = milligrams per kilogram.

N = normal field sample.

NA = not applicable.

ND = non-detect.

PAH = polycyclic aromatic hydrocarbon.

PCUL = preliminary cleanup level.

SL = screening level.

TEF = toxic equivalency factor.

TEQ = toxic equivalency quotient.

TPH = total petroleum hydrocarbons.

U = result is non-detect to method detection limit or method reporting limit.

VOC = volatile organic compound.

^(a)Trivalent chromium concentrations were calculated by subtracting the hexavalent chromium value from the total chromium value. If hexavalent chromium was non-detect, then the trivalent chromium value was assumed to be equal to the entire total chromium value.

^(b)Total xylenes are reported from the lab or are the sum of m,p- and o-xylene. Non-detect results are summed at one-half the reporting limit. When both results are non-detect, the highest reporting limit is used.

^(c)Total naphthalenes is the sum of 1-methylnaphthalene, 2-methylnaphthalene, and naphthalene. Non-detect results are summed at one-half the reporting limit. When all results are non-detect, the highest reporting limit is used.

^(d)cPAH TEQ values are based on toxic equivalence factors from Washington State Department of Ecology Evaluating the Human Health Toxicity of cPAH Using TEF. 2015. Non-detect results are summed according to frequency of detection in soil: analytes detected at least once at the Site are summed at one-half the reporting limit multiplied by the associated TEF: analytes never detected at the Site are not included in the TEQ calculation. If all results are non-detect, the highest reporting limit is used.

^(e)Total HPAHs is the sum of benz(a)anthracene, benzo(a)pyrene, benzo(g,h,i)perylene, chrysene, dibenzo(a,h)anthracene, fluoranthene, indeno(1,2,3-c,d)pyrene, pyrene, and total benzofluoranthenes. Non-detect results are summed according to frequency of detection in soil: analytes detected at least once at the Site are summed at one-half the reporting limit: analytes never detected at the Site are not included in the sum. If all results are non-detect, the highest reporting limit is used.

^(f)Total LPAHs is the sum of acenaphthene, acenaphthylene, anthracene, fluorene, naphthalene, and phenanthrene. Non-detect results are summed according to frequency of detection in soil: analytes detected at least once at the Site are summed at one-half the reporting limit; analytes never detected at the Site are not included in the sum. If all results are non-detect, the highest reporting limit is used.

^(g)Total diesel+oil is the sum of diesel- and oil-range hydrocarbons. Non-detect results are summed at one-half the reported detection limit. When both results are non-detect, the highest detection limit is used.

Saturated Soil Analytical Results
Precision Engineering, Inc.
Dick Morgan
Seattle, Washington

NOTES:

Lower Duwamish Waterway PCUL number SL-9, the site-specific terrestrial ecological evaluation PCUL, was removed from consideration because the simplified terrestrial ecological evaluation was ended.

Shading (color key below) indicates values that exceed screening criteria; non-detects ("U") were compared with screening criteria.

Most Stringent Soil PCUL Saturated Zone Potable GW SL #s 1, 5-8,10 - Detected

Most Stringent Soil PCUL Saturated Zone Potable GW SL #s 1, 5-8,10 - Not Detected

-- = not analyzed.

B = the analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

cPAH = carcinogenic PAH.

EPH = extractable petroleum hydrocarbons.

FD = field duplicate sample.

ft bgs = feet below ground surface.

GW = groundwater.

HPAH = high-molecular-weight PAH.

J = result is estimated.

LPAH = low-molecular-weight PAH.

mg/kg = milligrams per kilogram.

N = normal field sample.

NA = not applicable.

ND = non-detect.

PAH = polycyclic aromatic hydrocarbon.

PCUL = preliminary cleanup level.

SL = screening level.

TEE = terrestrial ecological evaluation.

TEF = toxic equivalency factor.

TEQ = toxic equivalency quotient.

TPH = total petroleum hydrocarbons.

U = result is non-detect to method detection limit or method reporting limit.

VOC = volatile organic compound.

^(a)Trivalent chromium concentrations were calculated by subtracting the hexavalent chromium value from the total chromium value. If hexavalent chromium was non-detect, then the trivalent chromium value was assumed to be equal to the entire total chromium.

^(b)Total xylenes are reported from the lab or are the sum of m,p- and o-xylene. Non-detect results are summed at one-half the reporting limit. When both results are non-detect, the highest reporting limit is used.

^(c)Total naphthalenes is the sum of 1-methylnaphthalene, 2-methylnaphthalene, and naphthalene. Non-detect results are summed at one-half the reporting limit. When all results are non-detect, the highest reporting limit is used.

^(d)cPAH TEQ values are based on toxic equivalence factors from Washington State Department of Ecology Evaluating the Human Health Toxicity of cPAHs Using TEFs. 2015. Non-detect results are summed according to frequency of detection in soil: analytes detected at least once at the Site are summed at one-half the reporting limit multiplied by the associated TEF; analytes never detected at the Site are not included in the TEQ calculation. If all results are non-detect, the highest reporting limit is used.

^(e)Total HPAHs is the sum of benz(a)anthracene, benzo(a)pyrene, benzo(g,h,i)perylene, chrysene, dibenzo(a,h)anthracene, fluoranthene, indeno(1,2,3-c,d)pyrene, pyrene, and total benzofluoranthenes. Non-detect results are summed according to frequency of detection in soil: analytes detected at least once at the Site are summed at one-half the reporting limit; analytes never detected at the Site are not included in the sum. If all results are non-detect, the highest reporting limit is used.

^(f)Total LPAHs is the sum of acenaphthene, acenaphthylene, anthracene, fluorene, naphthalene, and phenanthrene. Non-detect results are summed according to frequency of detection in soil: analytes detected at least once at the Site are summed at one-half the reporting limit; analytes never detected at the Site are not included in the sum. If all results are non-detect, the highest reporting limit is used.

^(g)Total diesel+oil is the sum of diesel- and oil-range hydrocarbons. Non-detect results are summed at one-half the reported detection limit. When both results are non-detect, the highest detection limit is used.

Shallow Groundwater Analytical Results
Precision Engineering, Inc.
Dick Morgan
Seattle, Washington

NOTES:

Shading (color key below) indicates values that exceed screening criteria; non-detects ("U" or "UJ") were compared with screening criteria.

Most Stringent PCUL Potable Water GW #s 1-5 - Detected

Most Stringent PCUL Potable Water GW #s 1-5 - Not Detected

-- = not analyzed.

cPAH = carcinogenic PAH.

EPH = extractable petroleum hydrocarbons.

FD = field duplicate sample.

ft bgs = feet below ground surface.

GW = groundwater.

J = result is estimated.

N = normal field sample.

NA = not applicable.

ND = non-detect.

PAH = polycyclic aromatic hydrocarbon.

PCB = polychlorinated biphenyl.

PCUL = preliminary cleanup level.

TEQ = toxic equivalency quotient.

TEF = toxic equivalency factor.

TPH = total petroleum hydrocarbons.

U = result is non-detect to method detection limit or method reporting limit.

ug/L = micrograms per liter.

UJ = result is non-detect to method detection limit or method reporting limit and is estimated.

VOC = volatile organic compound.

^(a)Trivalent chromium concentrations were calculated by subtracting the hexavalent chromium value from the total chromium value. If hexavalent chromium was non-detect, then the trivalent chromium value was assumed to be equal to the entire total chromium value. If hexavalent chromium was greater than total chromium, then the trivalent chromium result was assumed to be ND.

^(b)Total PCBs are the sum of all detected PCB Aroclors. When all results are non-detect, the highest reporting limit is used.

^(c)Total xylenes are reported from the lab or are the sum of m,p- and o-xylene. Non-detect results are summed at one-half the reporting limit. When both results are non-detect, the highest reporting limit is used.

^(d)Total naphthalenes are the sum of 1-methylnaphthalene, 2-methylnaphthalene, and naphthalene. Non-detect results are summed at one-half the reporting limit. When all results are non-detect, the highest reporting limit is used.

^(e)cPAH TEQ values are based on toxic equivalence factors from Washington State Department of Ecology Evaluating the Human Health Toxicity of cPAH Using TEFs. 2015. Non-detect results are summed according to frequency of detection in groundwater: analytes detected at least once at the Site are summed at one-half the reporting limit multiplied by the associated TEF; analytes never detected at the Site are not included in the TEQ calculation. If all results are non-detect, the highest reporting limit is used.

^(f)Total diesel+oil is the sum of diesel- and oil-range hydrocarbons. Non-detect results are summed at one-half the reported detection limit. When both results are non-detect, the highest detection limit is used.

Table 3-6
Deep Groundwater Analytical Results
Precision Engineering, Inc.
Dick Morgan
Seattle, Washington

ft bgs = feet below ground surface.

Shading (color key below) indicates values that exceed screening criteria; non-detects ("U" or "UJ") were compared with screening criteria.

Most Stringent PCUL Potable Water GW #s 1-5 - Detected

Most Stringent PCUL Potable Water GW #s 1-5 - Not Detected

-- = not analyzed.

cPAH = carcinogenic PAH.

FD = field duplicate sample.

ft bgs = feet below ground surface.

GW = groundwater.

J = result is estimated.

N = normal field sample.

NA = not applicable.

ND = non-detect.

PAH = polycyclic aromatic hydrocarbon.

PCUL = preliminary cleanup level.

TEQ = toxic equivalency quotient.

TEF = toxic equivalency factor.

TPH = total petroleum hydrocarbons.

U = result is non-detect to method detection limit or method reporting limit.

ug/L = micrograms per liter.

UJ = result is non-detect to method detection limit or method reporting limit and is estimated.

VOC = volatile organic compound.

^(a)Trivalent chromium concentrations were calculated by subtracting the hexavalent chromium value from the total chromium value. If hexavalent chromium was non-detect, then the trivalent chromium value was assumed to be equal to the entire total chromium value.

^(b)Total xylenes are reported from the lab or are the sum of m,p- and o-xylene. Non-detect results are summed at one-half the reporting limit. When both results are non-detect, the highest reporting limit is used.

^(c)Total naphthalenes are the sum of 1-methylnaphthalene, 2-methylnaphthalene, and naphthalene. Non-detect results are summed at one-half the reporting limit. When all results are non-detect, the highest reporting limit is used.

^(d)cPAH TEQ values are based on toxic equivalence factors from Washington State Department of Ecology Evaluating the Human Health Toxicity of cPAH Using TEFs. 2015. Non-detect results are summed according to frequency of detection in groundwater: analytes detected at least once at the Site are summed at one-half the reporting limit multiplied by the associated TEF; analytes never detected at the Site are not included in the TEQ calculation. If all results are non-detect, the highest reporting limit is used.

^(e)Total diesel+oil is the sum of diesel- and oil-range hydrocarbons. Non-detect results are summed at one-half the reported detection limit. When both results are non-detect, the highest detection limit is used.

Notes:

The PCOPC selections summarized in this table are based on available data. The COPC selection process will be completed as part of the remedial investigation following additional data collection.

Chemicals identified as PCOPC in this table are those that were identified as "Retain" in Appendix H tables H2-1 through H2-6. Some chemicals identified as "Data Gap" in Appendix H were identified as PCOPCs in this table, consistent with Section 7.1.

-- = data not available or not applicable.

COI = chemical of interest.

PCOPC = preliminary chemical of potential concern.

cPAH TEQ = carcinogenic PAHs.

FOD = frequency of detection.

HCID = hydrocarbon identification.

HPAHs = high molecular weight PAHs.

LPAHs = low molecular weight PAHs.

NA = not applicable.

MTCA = Model Toxics Control Act.

No. = number.

PAHs = polycyclic aromatic hydrocarbons.

PCUL = preliminary cleanup level.

RL = reporting limit.

UCL = upper confidence limit.

Notes:

The PCOPC selections summarized in this table are based on available data. The COPC selection process will be completed as part of the remedial investigation following additional data collection.

Chemicals identified as PCOPC in this table are those that were identified as "Retain" in Appendix H tables H2-1 through H2-6. Some chemicals identified as "Data Gap" in Appendix H were identified as PCOPCs in this table, consistent with Section 7.1.

-- = data not available or not applicable.

COI = chemical of interest.

PCOPC = preliminary chemical of potential concern.

cPAH TEQ = carcinogenic PAHs.

FOD = frequency of detection.

HCID = hydrocarbon identification.

HPAHs = high molecular weight PAHs.

LPAHs = low molecular weight PAHs.

NA = not applicable.

MTCA = Model Toxics Control Act.

No. = number.

PAHs = polycyclic aromatic hydrocarbons.

PCUL = preliminary cleanup level.

RL = reporting limit.

UCL = upper confidence limit.

Table 4-1
LDW Environmental Transport and Exposure Pathways
Precision Engineering, Inc.
Dick Morgan
Seattle, Washington

LDW PCUL No.	LDW PCUL Name	Medium	Potentially Complete Under Current Conditions		Potentially Complete Under Potential Future Conditions		Notes
			On-Property	Off-Property	On-Property	Off-Property	
SL-1	Direct Contact	Soil	No	Yes	Yes	Yes	Property is currently paved, but pavement could be removed in the future Drainage ditch and other off-Property areas are not paved
SL-2	Protect Drinking Water, Vadose Zone	Soil, Vadose	No	No	Yes	Yes	Groundwater not used currently but could be used in the future
SL-3	Protect Surface Water via GW, Vadose Zone	Soil, Vadose	No	Unknown	Unknown	Unknown	Property is currently paved, but pavement could be removed in the future Unknown if groundwater contamination reaches the LDW
SL-4	Protect Sediment via GW, Vadose Zone	Soil, Vadose	No	Unknown	Unknown	Unknown	Property is currently paved, but pavement could be removed in the future Unknown if groundwater contamination reaches the LDW
SL-5	Protect Drinking Water, Saturated Zone	Soil, Saturated	No	No	Yes	Yes	Groundwater not used currently but could be used in the future
SL-6	Protect Surface Water via GW, Saturated Zone	Soil, Saturated	Unknown	Unknown	Unknown	Unknown	Unknown if groundwater contamination reaches the LDW
SL-7	Protect Sediment via GW, Saturated Zone	Soil, Saturated	Unknown	Unknown	Unknown	Unknown	Unknown if groundwater contamination reaches the LDW
SL-8	Protect Sediment via Erosion	Soil	Unknown	Unknown	Unknown	Unknown	Property is currently paved, but pavement could be removed in the future allowing soil to erode into the drainage ditch Unpaved off-Property soil could erode into the drainage ditch On- and off-Property soil could infiltrate into storm sewers
SL-9	Terrestrial Ecological Evaluation	Soil	No	No	No	No	Simplified terrestrial ecological evaluation ended
GW-1	Protect Drinking Water	GW	No	No	Yes	Yes	Groundwater not used currently but could be used in the future
GW-2	Protect Surface Water	GW	Unknown	Unknown	Unknown	Unknown	Unknown if groundwater contamination reaches the LDW
GW-3	Protect Sediment	GW	Unknown	Unknown	Unknown	Unknown	Unknown if groundwater contamination reaches the LDW
GW-4	Protect Indoor Air	GW	Yes	Unknown	Yes	Unknown	Off-Property extent of shallow groundwater contamination not fully delineated
AR-1	Air	Air	Yes	Unknown	Yes	Unknown	Off-Property buildings not evaluated
SG-1	Protect Indoor Air	Sub-slab Soil Gas	Yes	Unknown	Yes	Unknown	Off-Property areas not evaluated
SG-2	Protect Indoor Air	Deep Soil Gas	Unknown	Unknown	Unknown	Unknown	Deep soil gas not evaluated May not be included following further characterization of hydrogeology and vertical extent of volatiles in soil and groundwater

Notes:

GW = groundwater.

LDW = Lower Duwamish Waterway.

No. = number.

PCUL = preliminary cleanup level.

Property = 1231 S Director Street, Seattle, Washington.

MW18	Sonic	20	1	FS	1		Assess shallow GW south of building, between MW4 and MW8	x	x		x					A		

Notes:

Soil Sample Analyses = See SAP/QAPP for full lists and complete details

Vad = Vadose soil sample

Fringe = Capillary fringe soil sample: only analyzed if field screening (FS) warrants analysis

Sat = Saturated soil sample

Deep WBZ/SI = Soil sample from deep water bearing zone (borings) / screened interval (monitoring well boring)

Vadose = vadose soil sample only to be analyzed

Purpose - Bound = The purpose of the boring is to attempt to bound previously-identified locations with elevated concentrations of PCOPCs

Purpose - Analytes = The purpose of the boring is to collect samples and analyze them for additional analytes not previously analyzed (PFAS, full SVOCs, PCBs)

Metals = Arsenic, cadmium, chromium [hexavalent and total], copper, lead, mercury, nickel, selenium, and zinc

TCE+ = Trichloroethene and degradation products

HCID w/Follow up = Hydrocarbon identification, with follow up analysis by NWTPH-Gx and/or NWTPH-Dx if there are detections of either by HCID

VPH/EPH = Volatile petroleum hydrocarbons and extractable petroleum hydrocarbons analyzed in at least 3 samples with greater than 1,000 mg/kg TPH detected

NWTPH-Gx = Northwest total petroleum hydrocarbons gasoline range

NWTPH-Dx = Northwest total petroleum hydrocarbons diesel- and oil-range

PAHs- SIM = Polycyclic aromatic hydrocarbons - selected ion mode

SVOCs - Other = 1,2,4-trichlorobenzene; 1,2-, 1,3-, and 1,4-dichlorobenzene; and hexachlorobutadiene

Full VOCs+ = Full suite volatile organic compounds and 1,4-Dioxane

PFAS = Perfluoroalkyl substances

Full SVOCs = Full suite semivolatile organic compounds

PCBs = polychlorinated biphenyls congeners

FS = Sample collected at capillary fringe if field screening warrants analysis

WH = Warehouse

A = Archive

X = Analyze

Direct Push = Direct push boring with continuous sampling

Hollow Stem = Hollow stem auger boring with samples collected at 2.5' bgs, 5' bgs, and every 5' thereafter

ft bgs = feet below ground surface

Notes:

Groundwater Sample Analyses: See SAP/QAPP for full lists and complete details

Metals = Arsenic, cadmium, chromium [hexavalent and total], copper, lead, mercury, nickel, selenium, thallium and zinc

HCID w/Follow up = Hydrocarbon Identification with Follow up for gasoline-range organics if detected by HCID

NWTPH-Dx = Northwest Total Petroleum Hydrocarbons - Diesel range organics

NWTPH-Dx w/SGT = Northwest Total Petroleum Hydrocarbons - Diesel range organics with acid/silica gel cleanup if detections by NWTPH-Dx

VPH/EPH = Volatile petroleum hydrocarbons and extractable petroleum hydrocarbons analyzed in at least three samples if TPH detected in groundwater

X = Analyze

A = Archive

PAHs- SIM = Polycyclic aromatic hydrocarbons - selected ion mode

Full SVOCs = Full suite SVOCs

SVOCs - Other = 1,2,4-trichlorobenzene; 1,2-, 1,3-, and 1,4-dichlorobenzene; and hexachlorobutadiene

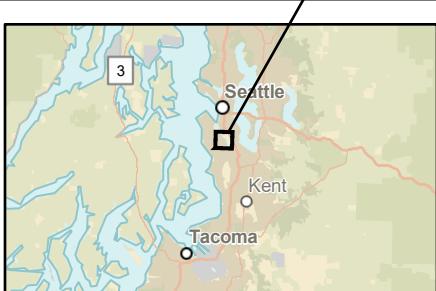

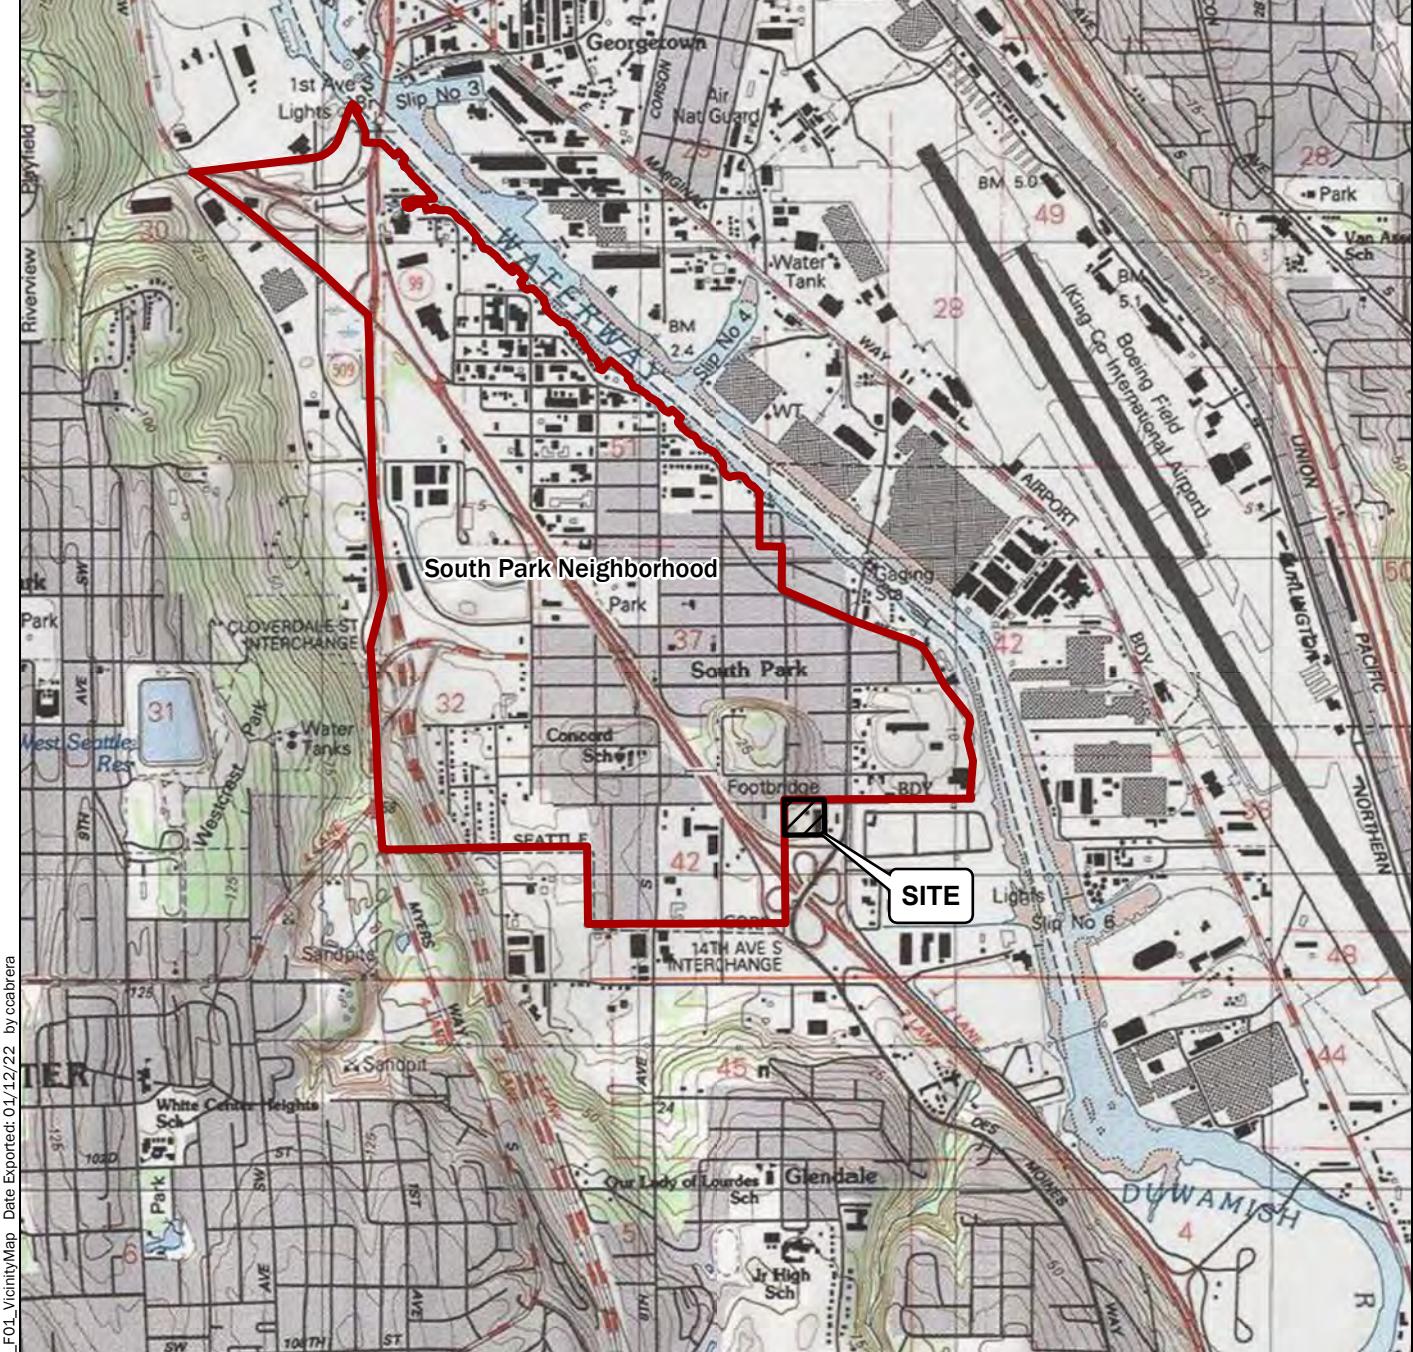

PFAS = Perfluoroalkyl substances

Geochemical parameters = Total organic carbon, nitrate, sulfate, and dissolved manganese

PCBs = PCB congeners

Hyd Cyl Vault = A grab sample from the Hydraulic Cylinder Test Vault

Full VOCs+ = Full suite VOCs and 1,4-Dioxane

NOTES:
Detections and PCUL exceedances are identified for each analyte group as follows based on the maximum results for all COIs:

- Detected Exceedance
- Detected Non-Exceedance
- ND Exceedance
- ND Non-Exceedance

This figure includes groundwater sample results for the subset of analytes selected as COIs from each analyte group (rather than the full suite of analytes). Refer to Table 3-7 for a list of COIs included in each analyte group and their respective PCULs.

This figure presents exceedance data from the last four groundwater sampling events (July 2019 through April 2020) at monitoring wells that were sampled. Polychlorinated biphenyls are not included in this figure due to the limited number of sample results, but are discussed in the text.

Exceedances are relative to the PCULs for each COI included in the analyte group.

Deep = groundwater from the deep water-bearing zone.
Shallow = groundwater from the shallow water-bearing zone.
Gray symbols represent locations that were not sampled.

COI = chemical of interest.
ND = non-detect.
PAH = polycyclic aromatic hydrocarbon.
PCUL = preliminary cleanup level.
PH = petroleum hydrocarbons.
SVOCs = semivolatile organic compounds.
VOCs = volatile organic compounds.

Soil Sampling Locations – Chromium, TCE, and TPH (and other COIs)

Precision Engineering, Inc.
Seattle, Washington

Legend

- Manhole
- ▼ Outfall
- GP Boring 2005
- SB Boring 2014/2015
- △ Hand Auger
- Shallow Monitoring Well
- Deep Monitoring Well
- Former Sanitary Sewer
- - Property Parcel
- ||||| Drainage Ditch
- Sanitary Sewer (SPU)
- Historical Trench Drain
- Catch Basin
- Stormwater Piping
- ||||| Stormwater Runoff
- Chromic Acid Plating Tank
- Trichloroethene Tank
- Former Sanitary Sewer Drain
- Other Historical Features:
- A: Hydraulic Cylinder Test Vault
- B: Former Deep Sump
- C: Steam Clean Pit
- D: Former Waste Oil Tank
- E: Compressor Condensate Tank
- F: Covered Dumpster Area (former steam-cleaning area)

Notes:

1. The locations of all features shown are approximate.
 2. This drawing is for information purposes. It is intended to assist in showing features discussed in an attached document. GeoEngineers, Inc. cannot guarantee the accuracy and content of electronic files. The master file is stored by GeoEngineers, Inc. and will serve as the official record of this communication.
- Data Source: 2019 image from King County GIS.
Site features from Figure 2-4 Previous Sample Locations, July 9, 2021, Maul Foster Alongi.
