Dear Jeff Bullen, Scott Briggs and Bill Briggs:

The Department of Ecology (Ecology) recently held a public comment period from March 28 to April 26, 2022, on the public review draft remedial investigation (RI) report¹ for the Fuel Processors, Inc. site.

No comments were received during the public comment period; however, one comment was received shortly after the end of the public comment period. The commenter expressed concern about the current site appearance and about the timeline for cleanup of contamination. The comment did not result in any changes to the public review draft RI report.

A responsiveness summary, which includes the comment received and Ecology's response will soon be available at <https://apps.ecology.wa.gov/publications/SummaryPages/2104052.html>. With this letter, Ecology approves the public review draft RI report as the final RI report. You are required to draft an agency review work plan for the preparation of a feasibility study (FS) report. The draft work plan must be submitted within 30 days of receipt of this letter for Ecology's review and comment. It must include the schedule to develop an FS report and

Page 2

include the necessary work to develop an FS report that meets the requirements in WAC 173-340-350(8).

The draft work plan should include plans for an assessment and evaluation of vapor intrusion in all structures on the property. This additional investigation is needed to order to evaluate the feasibility of potential remedial alternative plans for the site. This assessment and evaluation should follow Ecology guidance.²

The draft work plan should also include plans for the installation of a replacement well for monitoring well MW-2, since it's needed to monitor the performance of the future cleanup action.

If you have any questions, please contact me at 360-764-0886.

Sincerely,

Kaia Petersen
Hazardous Waste and Toxics Reduction
