**CONOCOPHILLIPS COMPANY  
GROUNDWATER MONITORING REPORT**

May 6, 2004

Site No.: 255353 Site Address: 600 Westlake Avenue, Seattle, Washington  
ConocoPhillips Site Manager: Tim Johnson  
Consultant/Contact Person: Delta Environmental Consultants, Inc. – Eric Larsen  
Primary Agency/Regulatory ID No.: Washington DOE Northwest Region

**WORK PERFORMED THIS QUARTER [First - 2004]**

- Measured depth to water in 18 monitoring wells (SMW-03, MW-03, MW-32A, MW-33, MW-34, MW-35, MW-36, MW-37, MW-38, MW-40, MW-43, MW-44, MW-45, MW-47, MW-50, MW-51, MW-52, and MW-53).
- Purged and sampled groundwater from 18 monitoring wells (SMW-03, MW-03, MW-32A, MW-33, MW-34, MW-35, MW-36, MW-37, MW-38, MW-40, MW-43, MW-44, MW-45, MW-47, MW-50, MW-51, MW-52, and MW-53) on March 30, 2004.
- Analyzed groundwater samples for TPH-G using Northwest Method NWTPH-Gx, TPH-D and TPH-O using Northwest Method NWTPH-Dx, BTEX using EPA Method 8260B.

**WORK PROPOSED FOR NEXT QUARTER [Second - 2004]**

- Measure depth to water in 10 monitoring wells (MW-32A, MW-33, MW-34, MW-35, MW-37, MW-45, MW-50, MW-51, MW-52, and MW-53).
- Purge and sample groundwater from 18 monitoring wells (MW-32A, MW-33, MW-34, MW-35, MW-37, MW-45, MW-50, MW-51, MW-52, and MW-53).
- Analyze groundwater samples for TPH-G using Northwest Method NWTPH-Gx, TPH-D and TPH-O using Northwest Method NWTPH-Dx, BTEX using EPA Method 8260B.
- Next sampling event is scheduled for June 2004.

**SUMMARY**

Consultant/Contact Person: Delta Environmental Consultants, Inc. – Eric Larsen  
Primary Agency/Regulatory ID No.: Washington DOE Northwest Region

## DISCUSSION

- TPH-G was detected above the Washington State Model Toxics Control Act (MTCA) Method A cleanup level in groundwater samples collected from Wells MW-3, MW-32A, MW-33, MW-34, MW-50, and MW53. The maximum TPH-G concentration was detected in groundwater from MW-34 at 15,100 ppb.
- TPH-D was detected above the MTCA Method A cleanup level in groundwater samples collected from Wells MW-3, MW-32A, MW-33, MW-34, MW-40, MW-50, and MW-53. The maximum TPH-D concentration was detected in groundwater from MW-3 at 1,950 ppb.
- TPH-O was detected above the MTCA Method A cleanup level in groundwater samples collected from Wells MW-40 and MW-47. The maximum TPH-D concentration was detected in groundwater from MW-40 at 3,360 ppb. TPH-O had not been detected above the laboratory reporting limit in MW-47 prior to this event. MW-47 is located in the street on Terry Avenue, east of the subject property.
- Benzene was detected above the MTCA Method A cleanup level in groundwater samples collected from Wells MW-3, MW-32A, MW-33, MW-34, MW-37, MW-50, MW-52, and MW-53. The maximum benzene concentration was detected in groundwater from MW-34 at 3,060 ppb.
- Toluene was not detected above the laboratory reporting limit in groundwater samples collected from Wells SMW-3, MW-3, MW-32A, MW-35 through MW-38, MW-40, MW-43 through MW-45, MW-47, and MW-50 through MW-52. Toluene was detected below the MTCA Method A cleanup level in groundwater from Wells MW-33, MW-34, and MW-53, at concentrations ranging from 14.7 ppb to 238 ppb.
- Ethylbenzene was not detected above the laboratory reporting limit in groundwater samples collected from Wells SMW-3, MW-35 through MW-38, MW-40, MW-43 through MW-45, MW-47, and MW-51. Ethylbenzene was detected below the MTCA Method A cleanup level in groundwater sampled from MW-3, MW-32A, MW-33, MW-34, MW-50, MW-52, and MW-53, at concentrations ranging from 18.4 ppb to 564 ppb.
- Total xylenes were not detected above the laboratory reporting limit in groundwater samples collected from Wells SMW-3, MW-35, MW-36, MW-38, MW-40, MW-43 through MW-45, MW-47, and MW-51. Total xylenes were detected above the MTCA Method A cleanup level in groundwater samples collected from MW-3, MW-32A, MW-33, MW-34, MW-37, MW-50, MW-52, and MW-53, at concentrations ranging from 1.53 ppb to 846.6 ppb.
- TPH and BTEX concentrations have decreased significantly with respect to historical levels in Wells MW-3, MW-32A, MW-33, MW-35, MW-37, MW-45, MW-50, MW-51, MW-52, and MW-53. Additionally, free product previously observed in Wells MW-33 and MW-37 has not been observed in the wells since 2002.
- Concentrations of TPH-G, TPH-D, and benzene increased significantly in Well MW-34 with respect to the previous two events. However, the current concentrations are generally consistent with historical values in MW-34.

**Notes:**

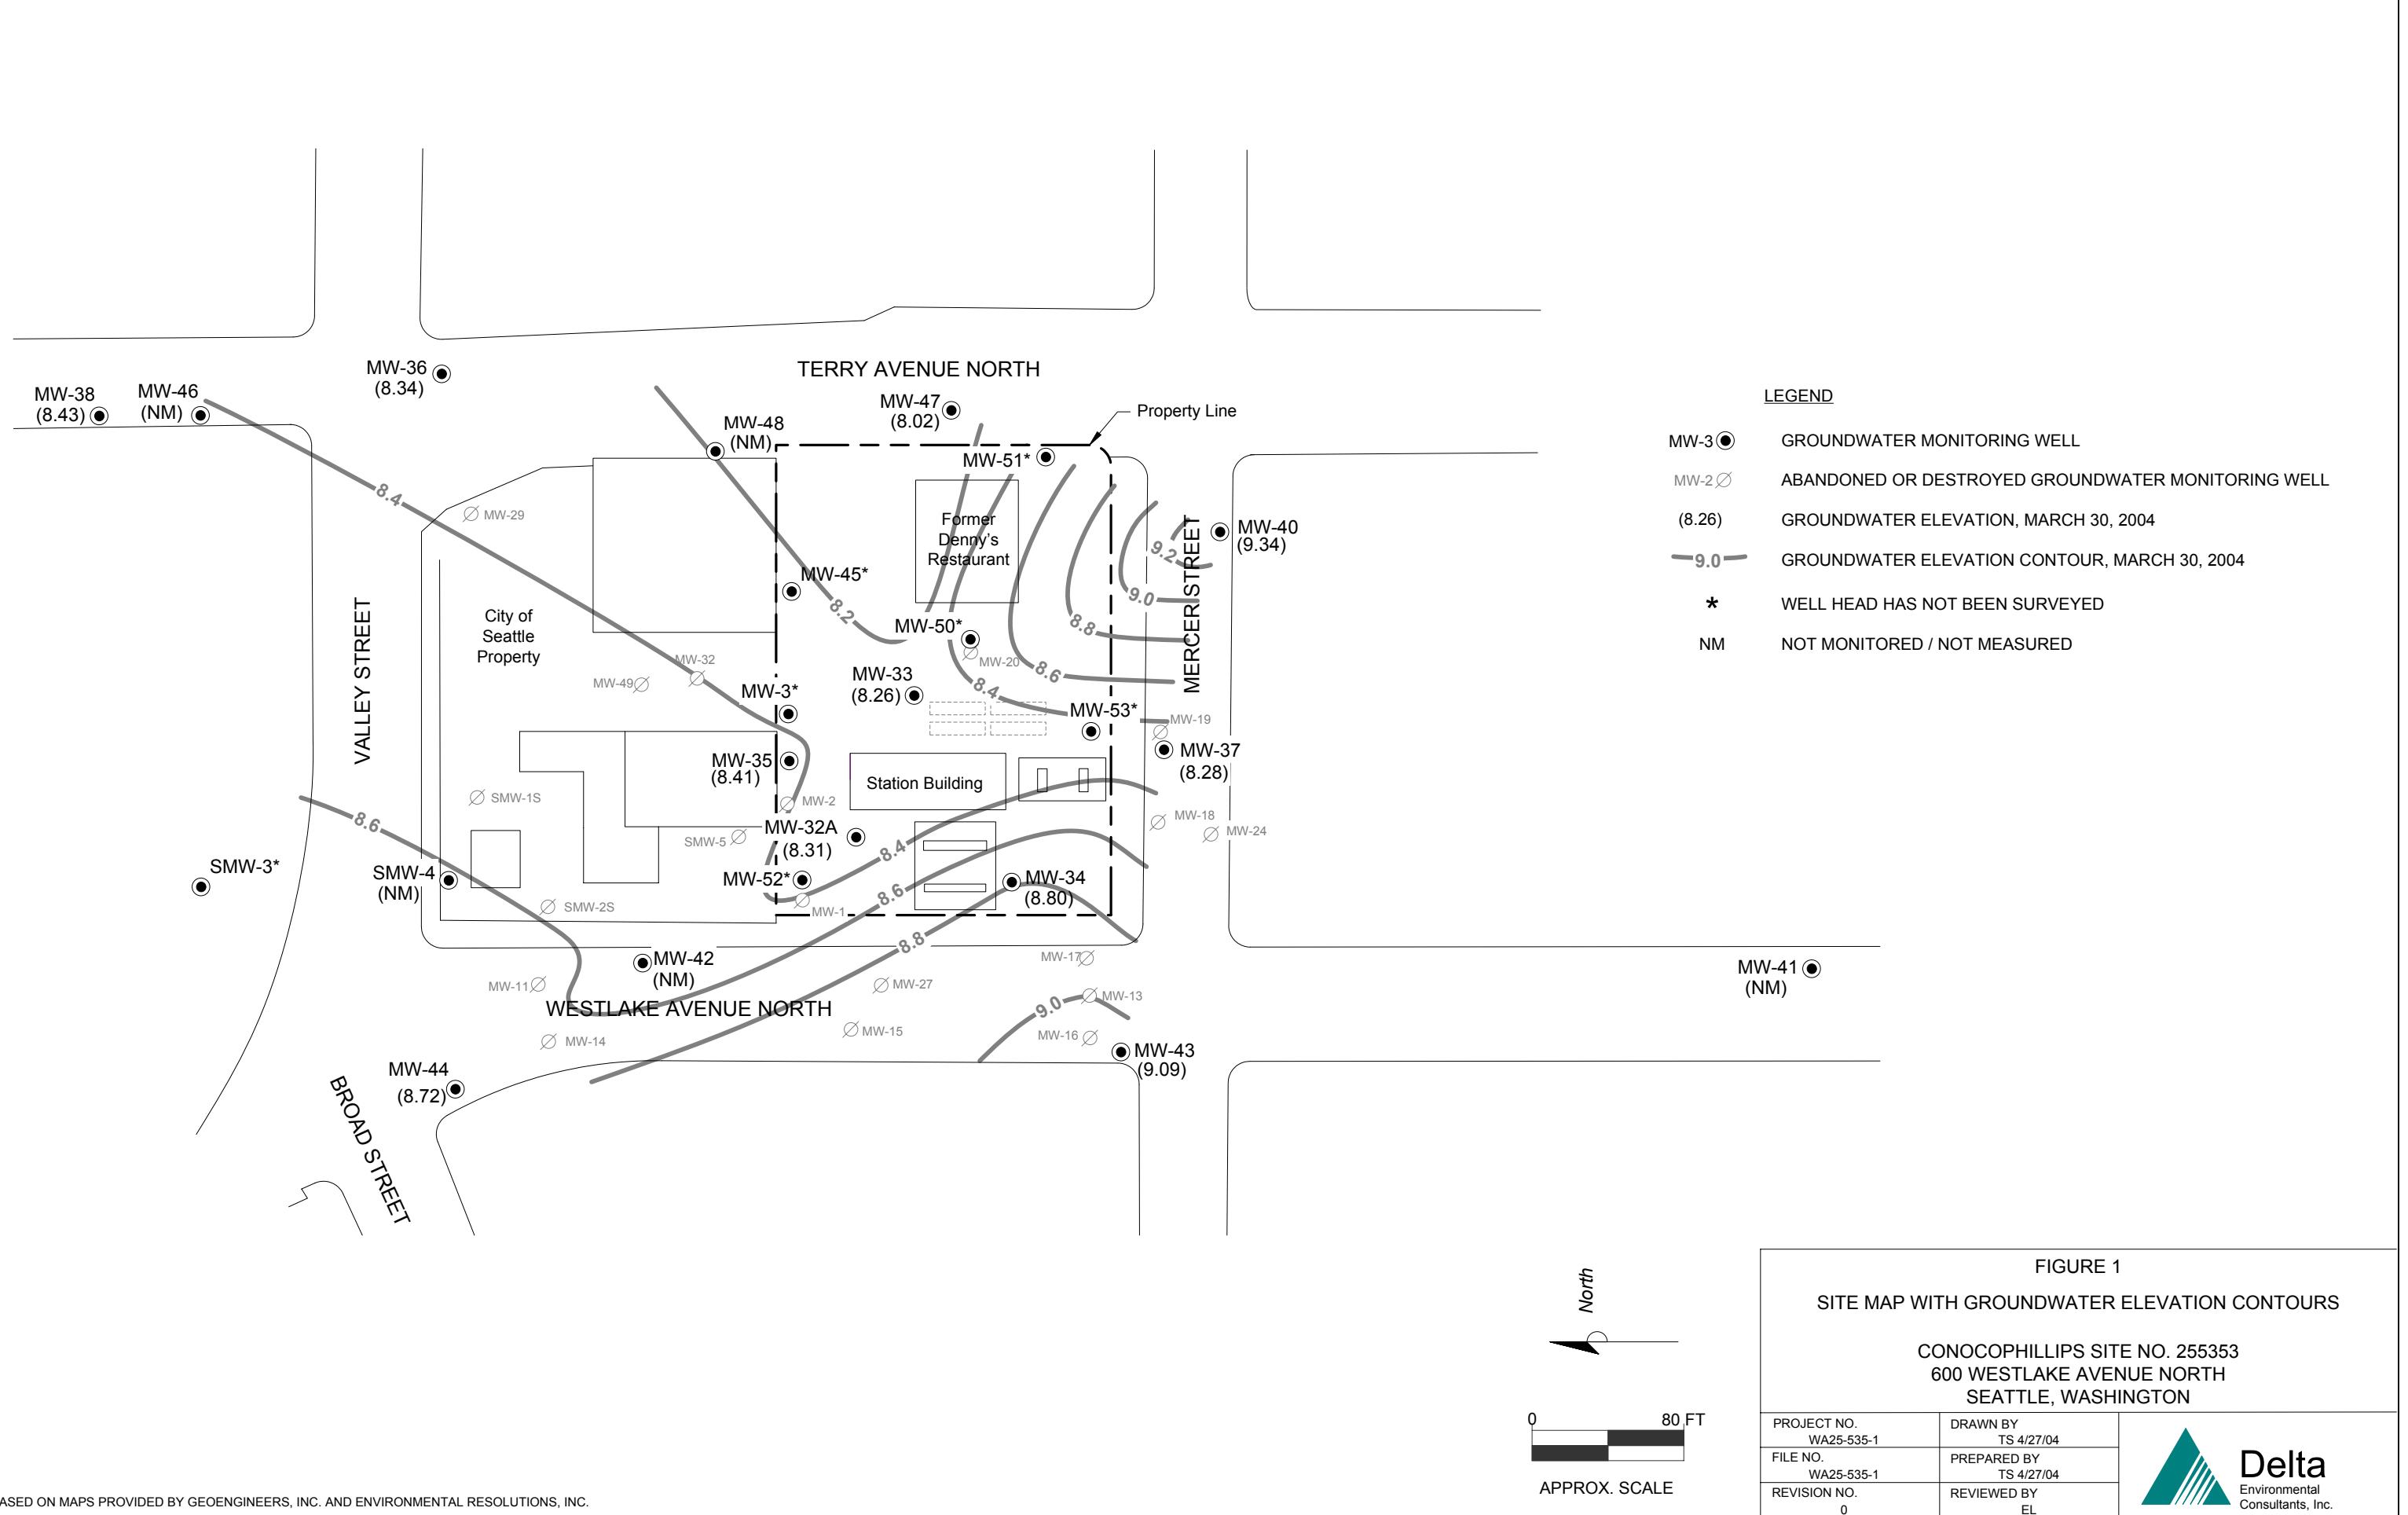

µg/l = micrograms per liter  
 TOC = Top of casing elevation, provided by previous consultants  
 DTW = Depth to water  
 SPH = Separate-phase hydrocarbon thickness  
 GWE = Groundwater table elevation relative to DTW data; corrected for SPH where applicable using a specific gravity of 0.80  
 <n = Below the detection limit  
 "--" = Not analyzed, sampled, or reported  
 NM = Not Measured  
 TPH as Gasoline - Analysis by Northwest Method NWTPH-Gx  
 TPH as Diesel and Oil - Analysis by Northwest Method NWTPH-Dx  
 BTEX Compounds - Analysis by EPA Method 8020A, 8021B or 8260B

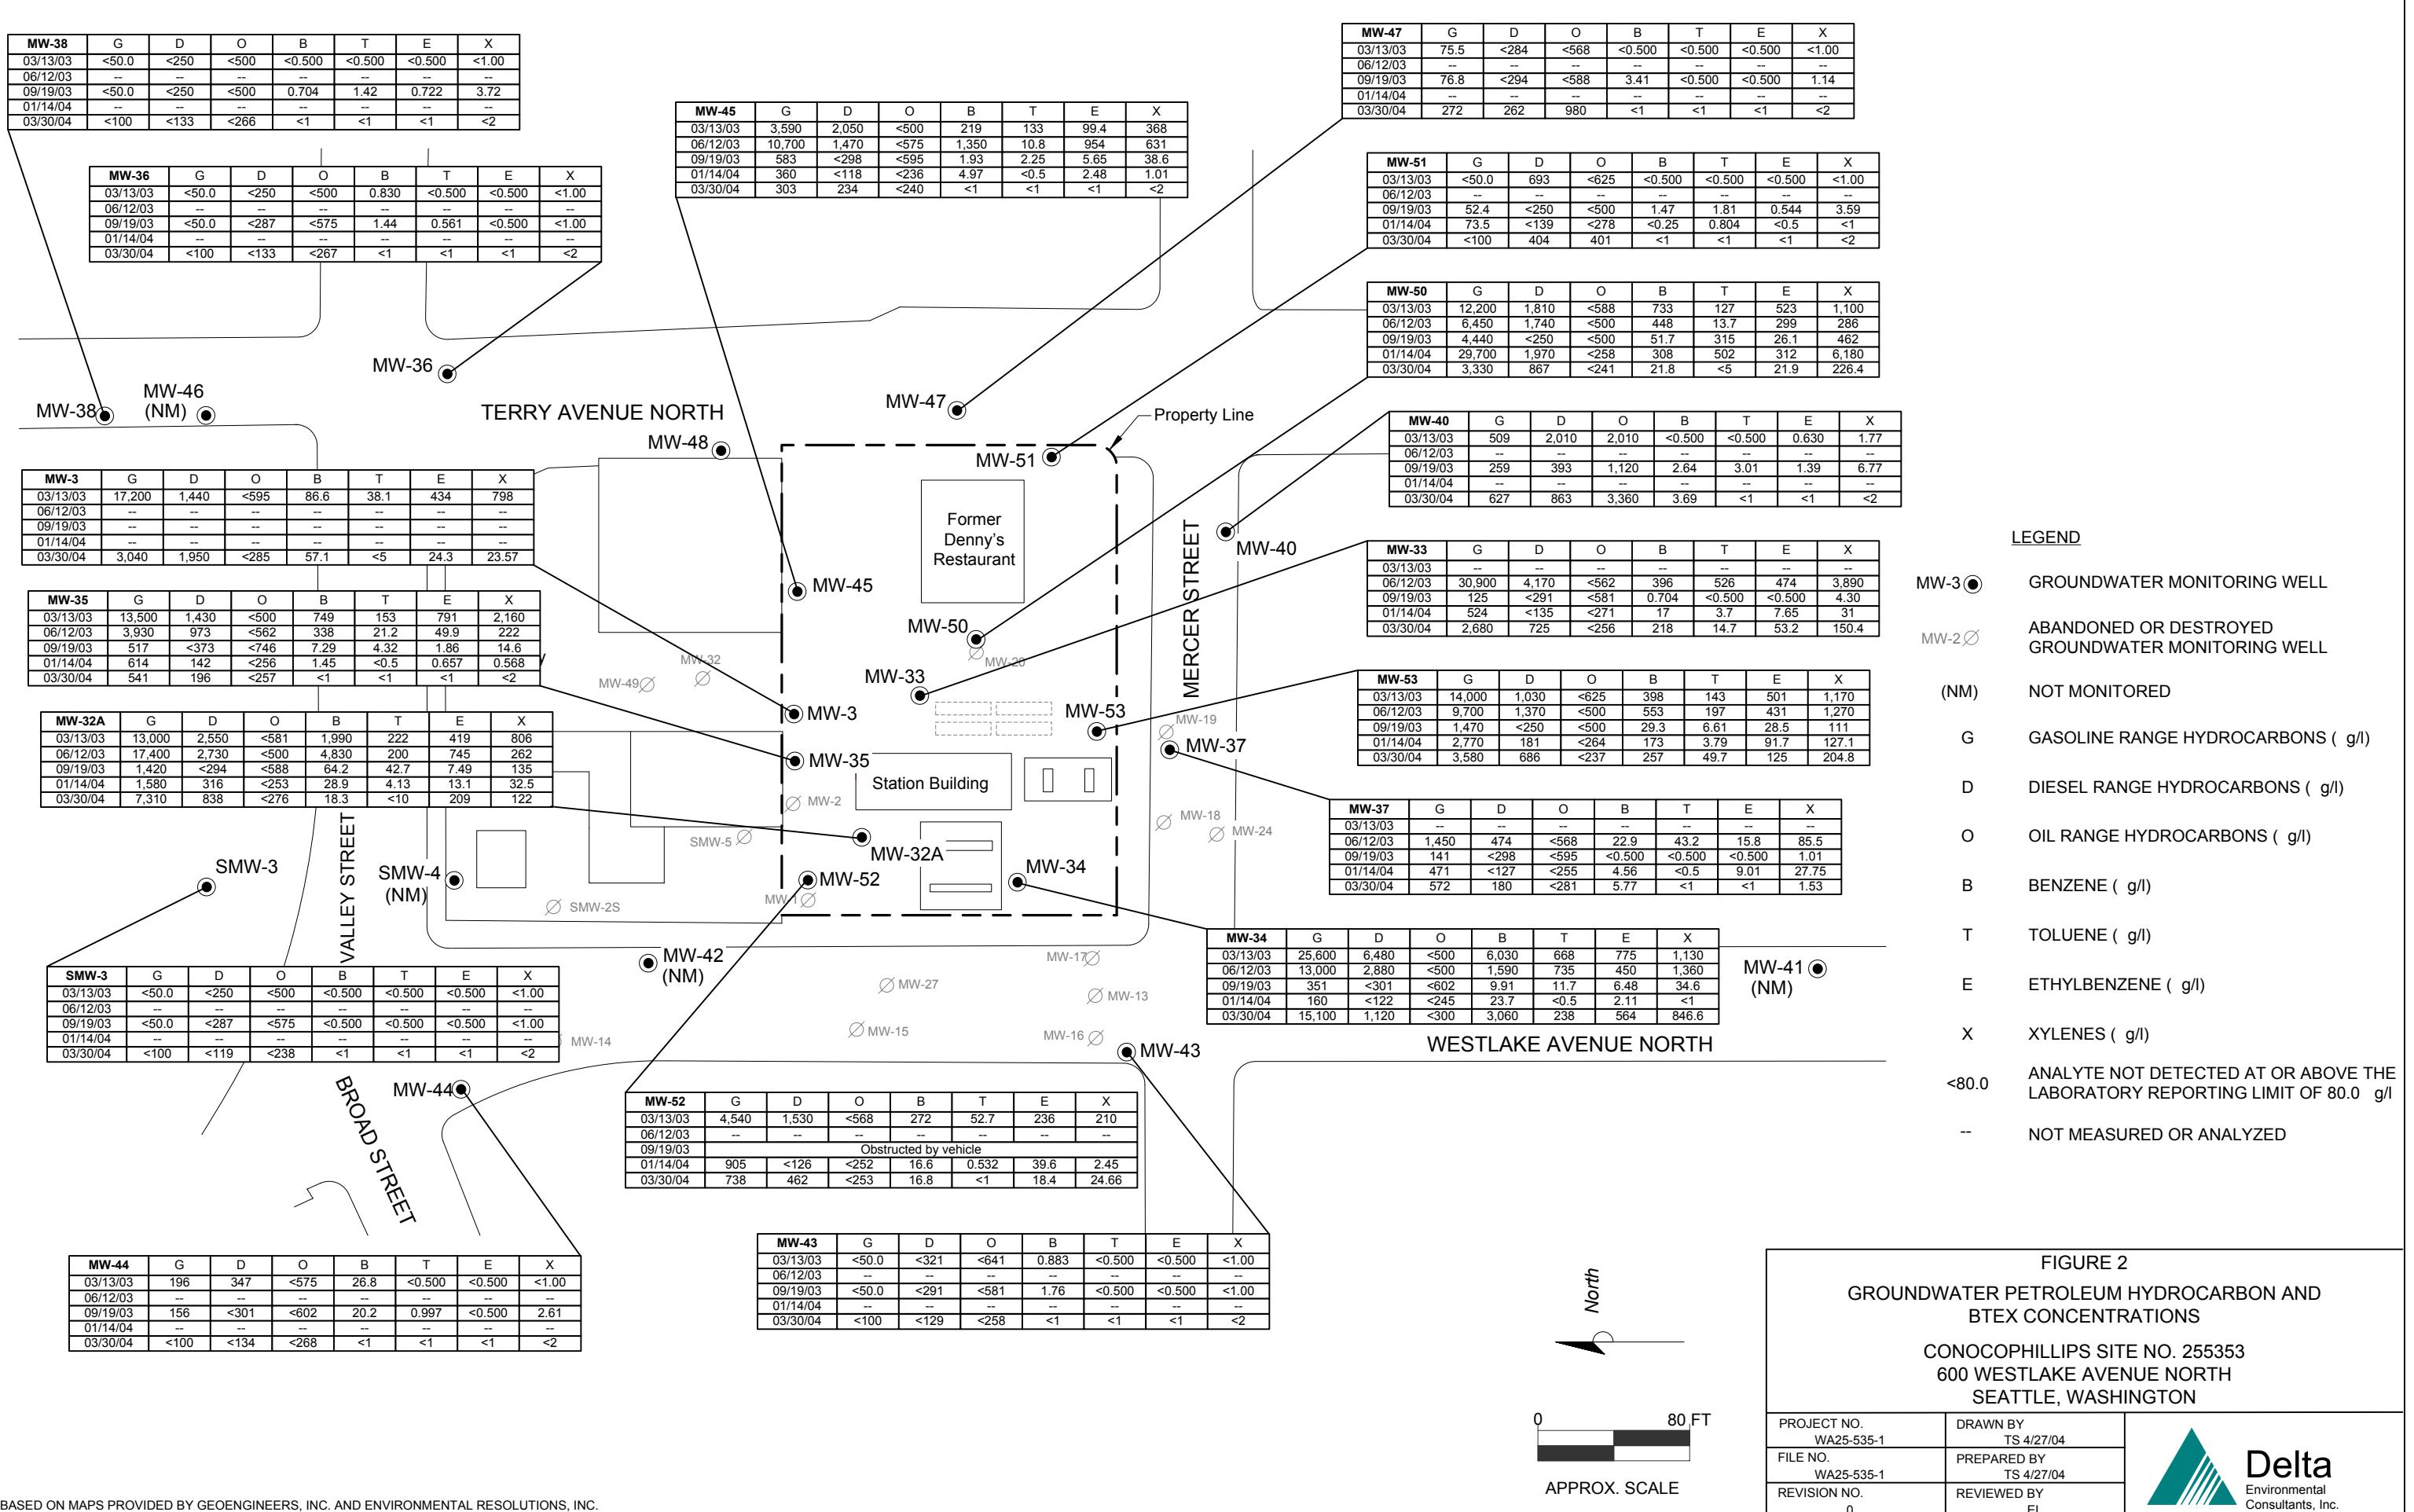

<sup>1</sup> Top of casing elevations for SM-W3, MW-3, MW-45, and MW-50 through MW-53 have not been established.

<sup>2</sup> Well was not purged prior to sample collection.

<sup>3</sup> TPH-D & TPH-O did not resemble chromatogram used for quantitation.

<sup>4</sup> MTCA Method A Cleanup Level for TPH-Gasoline is 1,000 µg/l if benzene is not detectable in groundwater.

TRANSMITTAL MEMORANDUM

RECEIVED  
APR 16 2004  
BY: \_\_\_\_\_

DATE: April 13, 2004

TO: Eric Larsen  
Delta Environmental  
17720 NE 65th Street Ste 201  
Redmond, WA 98052

PROJECT: 600 Westlake - 255353

REPORT NUMBER: 120334

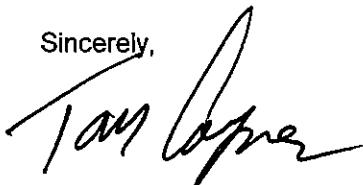

TOTAL NUMBER OF PAGES: 48

Enclosed are the test results for nineteen samples received at STL Seattle on March 31, 2004.

The report consists of this transmittal memo, analytical results, quality control reports, a copy of the chain-of-custody, a list of data qualifiers and analytical narrative when applicable, and a copy of any requested raw data.

Should there be any questions regarding this report, please contact me at (253) 922-2310.

Sincerely,

Tom Coyner  
Project Manager

**DATA QUALIFIERS AND ABBREVIATIONS**

- B1: This analyte was detected in the associated method blank. The analyte concentration was determined not to be significantly higher than the associated method blank (less than ten times the concentration reported in the blank).
- B2: This analyte was detected in the associated method blank. The analyte concentration in the sample was determined to be significantly higher than the method blank (greater than ten times the concentration reported in the blank).
- C1: Second column confirmation was performed. The relative percent difference value (RPD) between the results on the two columns was evaluated and determined to be < 40%.
- C2: Second column confirmation was performed. The RPD between the results on the two columns was evaluated and determined to be > 40%. The higher result was reported unless anomalies were noted.
- C3: Second analysis confirmation was performed. The relative percent difference value (RPD) between the results on the two columns was evaluated and determined to be  $\leq$  30%.
- C4: Second analysis confirmation was performed. The RPD between the results on the two columns was evaluated and determined to be > 30%. The presence of this analyte was not verified per WAC 246-290-010. The original analysis was reported unless anomalies were noted.
- M: GC/MS confirmation was performed. The result derived from the original analysis was reported.
- D: The reported result for this analyte was calculated based on a secondary dilution factor.
- E: The concentration of this analyte exceeded the instrument calibration range and should be considered an estimated quantity.
- J: The analyte was analyzed for and positively identified, but the associated numerical value is an estimated quantity.

MCL: Maximum Contaminant Level

MDL: Method Detection Limit

MRL: Method Reporting Limit

N: See analytical narrative

ND: Not Detected

PQL: Practical Quantitation Limit

X1: Contaminant does not appear to be "typical" product. Elution pattern suggests it may be \_\_\_\_\_.

X2: Contaminant does not appear to be "typical" product.

X3: Identification and quantitation of the analyte or surrogate was complicated by matrix interference.

X4: RPD for duplicates was outside advisory QC limits. The sample was re-analyzed with similar results. The sample matrix may be nonhomogeneous.

X4a: RPD for duplicates outside advisory QC limits due to analyte concentration near the method practical quantitation limit/detection limit.

X5: Matrix spike recovery was not determined due to the required dilution.

X6: Recovery and/or RPD values for matrix spike(/matrix spike duplicate) outside advisory QC limits. Sample was re-analyzed with similar results.

X7: Recovery and/or RPD values for matrix spike(/matrix spike duplicate) outside advisory QC limits. Matrix interference may be indicated based on acceptable blank spike recovery and/or RPD.

X7a: Recovery and/or RPD values for this spiked analyte outside advisory QC limits due to high concentration of the analyte in the original sample.

X8: Surrogate recovery was not determined due to the required dilution.

X9: Surrogate recovery outside advisory QC limits due to matrix interference.

## **GROUNDWATER SAMPLING PROCEDURES AND FIELD SHEETS**

ConocoPhillips Quarterly Groundwater Sampling  
Site No. 255353

## **GROUNDWATER MONITORING AND SAMPLING**

---

Before the sampling event, Delta measured depth to water in each groundwater monitoring well at the facility with an electronic water level meter. This information was recorded on waterproof field sheets. Groundwater elevations (GWE) were measured to an accuracy of 0.01 feet. Wells were sampled after purging three casing volumes of water from the well (or until dry). After the well had recharged to approximately 80% of static level, samples were collected using a disposable polyethylene bailer and placed in the appropriate laboratory-provided container. Samples were labeled, placed into ice filled coolers, logged onto chain-of-custody forms and transported to the laboratory.
