Appendix B Laboratory Analytical Data

1.0 INTRODUCTION

This Soil Sampling Report was prepared to provide a brief summary of soil sampling activities, soil analytical results, and other supporting documentation associated with Phase 2 of the Westlake/Mercer Cleanup Project (WMCP).

WMCP Phase 2 was performed by ConocoPhillips as part of a voluntary cleanup under the Washington State Department of Ecology (Ecology) Model Toxics Control Act (MTCA), Chapter 173-340 of the Washington Administrative Code (WAC). The primary purpose of this project was to clean up former releases of gasoline fuel (predominately an approximately 80,000-gallon gasoline spill from an underground product line in 1980 associated with the former Unocal Service Station located at 600 Westlake Avenue North) to levels that meet Ecology's MTCA Method A Cleanup Levels for total petroleum hydrocarbons (TPH) as gasoline, diesel, lube oil, and kerosene, benzene, toluene, ethylbenzene, and xylenes (BTEX), and total lead. WMCP.

WMCP Phase 2 was intended to address residual petroleum hydrocarbons and associated compounds present on the ConocoPhillips property (600 Westlake Avenue North) and 965 Valley Street in Seattle, WA. Phase 2 remedial excavation activities consisted of removal of petroleum hydrocarbon impacted soil exceeding MTCA Method A Cleanup Levels on the City Investors property and the majority of the ConocoPhillips property. Soil was removed to a minimum approximate depth of 15 feet below ground surface (bgs), which corresponds to approximately 14 feet above City of Seattle datum.

Phase 2 construction activities were performed from December, 2008 through August 2009. Construction began with mobilization on December 1, 2008. Demolition of pavements, pre-trenching and utility capping activities began on December 15th to prepare for installation of a soil/cement/bentonite (SCB) barrier wall. The SCB wall provided shoring for the primary excavation and served as a hydraulic barrier. The SCB wall was installed between late January and March 13, 2009. Mass excavation began in early March and was completed June 30, 2009. Site backfill and surface restoration activities were completed in July 2009.

Confirmation soil sampling was conducted during excavation activities to document conditions at the base of the excavation and to assess whether additional excavation was required to achieve cleanup levels or other project requirements. The decision to excavate additional soil or terminate the excavation was made by ConocoPhillips based on the sampling results.

2.0 CONFIRMATION SOIL SAMPLING

The soil sampling program performed during Phase 2 remedial excavation activities was intended to confirm whether petroleum hydrocarbon impacts exceeding MTCA Method A Cleanup Levels remain in soils at the floor of the excavation. The soil sampling excavation and sampling areas were designated in the Soil Sampling Plan (URS 2009 and included in Appendix A). The soil sampling plan was modified slightly in the field to accommodate installation of an additional 4-foot wide section of SCB wall along the east side of the ConocoPhillips parcel (600 Westlake Avenue). This modification is documented on the As-Built Soil Sampling Locations drawing included in Appendix A.

The Phase 2 excavation was divided into two areas. Area 1 is the 965 Valley Street property (the northern most parcel) which is approximately 240 feet by 180 feet. Area 2 is the majority of the ConocoPhillips property (the southern most parcel) which is approximately 160 feet by 180 feet. In general, soil was sampled within the excavation at the maximum proposed depth of 15 feet bgs (Elevation 14) to confirm concentrations at the floor of the excavation. A sampling grid was established across the site for the purposes of collecting confirmation samples at the base of the excavation. One confirmation sample was collected from each cell in the grid at the target excavation depth of 15 feet bgs. Samples were analyzed on a 24-hour rush basis for petroleum hydrocarbons and related compounds (see Section 2.1). If petroleum hydrocarbon impacts were detected at concentrations exceeding MTCA Method A Cleanup Levels, the ConocoPhillips Site Manager was notified. On a cell by cell basis, ConocoPhillips evaluated the data and assessed whether or not site conditions and/or project objectives required additional excavation. If requested by ConocoPhillips, the excavation continued down until residual concentrations were below MTCA Method A Cleanup Levels or as far as reasonably practicable depending on the accessibility of the contamination and other actual conditions in the field.

2.1 SOIL SAMPLING PROCEDURES

Once the excavation was advanced to the target depth, URS field sampling personnel instructed the excavator operator to bring soil from the floor of the excavated area up to a safe location for sample collection. Representative soil samples were collected from the bucket of the excavator, taking care to collect the sample from the middle of the bucket away from the sides. Samples were screened for the presence of volatile organic vapors using a photo-ionization detector (PID) and placed in laboratory-supplied containers.

Samples were preserved in laboratory-grade glass jars with Teflon™-lined lids, and labeled in accordance with the procedures identified in the soil sampling plan. Soil samples to be analyzed for diesel- and oil-range petroleum hydrocarbons and other analytes were packed into the glass jars using a new pair of nitrile gloves for each sample interval. Soil samples to be analyzed for volatile hydrocarbon fractions (gasoline-range petroleum hydrocarbons, benzene, toluene, ethylbenzene, xylenes, etc.) were collected and preserved in the field using EPA Method 5035A,

per Washington State Ecology requirements. Per the method 5035A requirements, each of these samples were collected using a new disposable plastic syringe sampler provided by the laboratory, and placed into a methanol-preserved glass bottle.

Confirmation samples were submitted to the laboratory for 24-hour turnaround to determine if further excavation is necessary.

2.2 SOIL SAMPLING RESULTS

Tabulated summaries of soil analytical results are presented in Tables 1 and 2. Laboratory analytical data sheets are included in Appendix B.

Notes:
Model Toxics Control Act (MTCA) Cleanup Regulation, chapter 173-340 WAC; MTCA Method A and B from Ecology website downloaded August 2009 (<https://fortress.wa.gov/ecy/clarc/Reporting/CLARCReporting.aspx>).

DUP - Field duplicate

J - Estimated value

NA - Not applicable

NE - Not established

PAHs - Polynuclear aromatic hydrocarbons

TPHs - Total petroleum hydrocarbons

U - Compound was analyzed for but not detected above the reporting limit shown.

UJ - Compound was analyzed for but not detected above the reporting limit shown. The reporting limit is an estimated value.

VOCs - Volatile organic compounds

TTEC - Total Toxicity Equivalent Soil Concentration

^a The soil cleanup level is

Notes:
Model Toxics Control Act (MTCA) Cleanup Regulation, chapter 173-340 WAC; MTCA Method A and B from Ecology website downloaded August 2009 (<https://fortress.wa.gov/ecy/clarc/Reporting/CLARCReporting.aspx>).

DUP - Field duplicate

J - Estimated value

NA - Not applicable

NE - Not established

PAHs - Polynuclear aromatic hydrocarbons

TPHs - Total petroleum hydrocarbons

U - Compound was analyzed for but not detected above the reporting limit shown.

UJ - Compound was analyzed for but not detected above the reporting limit shown. The reporting limit is an estimated value.

VOCs - Volatile organic compounds

TTEC - Total Toxicity Equivalent Soil Concentration

^a The soil cleanup level is 100 mg/kg if benzene is not present and the total of ethylbenzene, toluene, and xylenes is less than 1% of the gasoline mixture. The cleanup level for all other gasoline mixtures is 30 mg/kg.

^b These compounds are considered carcinogenic PAHs (c-PAHs) and are subject to WAC-173-340 Toxicity Equivalent Soil Concentration calculations.

^c Total PAHs are the sum of PAHs detailed by the WAC 173-303-040 (Acenaphthene, acenaphthylene, fluorene, anthracene, fluoranthene, phenanthrene, benzo(a)anthracene, benzo(b)fluoranthene, benzo(k)fluoranthene, pyrene, chrysene, benzo(a)pyrene, dibenz(a,h)anthracene, indeno(1,2,3-cd)pyrene, and benzo(g,h)perylene).

Note benzo(a,e), (a,h), (a,i), and (a,l) pyrenes and dibenzo(a,j) acridine are not included as these compounds were not analyzed for and are not typically included in the PAH analyte list. The waste characterization is determined based on an exceedance of a 1% total PAHs as described in WAC 173-303-100.

^d WAC 173-303-090 - Dangerous Waste Criteria, dated July 31, 2009.

Notes:
Model Toxics Control Act (MTCA) Cleanup Regulation, chapter 173-340 WAC; MTCA Method A and B from Ecology website downloaded August 2009 (<https://formex.wa.gov/ccy/clear/Reporting/CLAR/Reporting.aspx>).
DUP - Field duplicate
J - Estimated value
NA - Not applicable
NE - Not established
PAHs - Polynuclear aromatic hydrocarbons
TPHs - Total petroleum hydrocarbons
UJ - Compound was analyzed for but not detected above the reporting limit shown. The reporting limit is an estimated value.
VOCs - Volatile organic compounds
TTEC - Total Toxicity Equivalent Soil Concentration
* The soil cleanup level is 100 mg/kg if benzene is not present and the total of ethylbenzene, toluene, and xylenes is less than 1% of the gasoline mixture. The cleanup level for all other gasoline mixtures is 30 mg/kg.
* These compounds are considered carcinogenic PAHs (c-PAHs) and are subject to WAC 173-340 Toxicity Equivalent Soil Concentration calculations.
* Total PAHs are the sum of PAHs detailed by the WAC 173-303-040 (Acenaphthene, acenaphthylene, fluorene, anthracene, fluoranthene, phenanthrene, benzo(a)anthracene, benzo(b)fluoranthene, benzo(k)fluoranthene, pyrene, chrysene, benzo(a)pyrene, dibenz(a,h)anthracene, indeno(1,2,3-cd)pyrene, and benzo(g,h,i)perylene. Note dibenzo [f,g,h,i] pyrenes and dibenzo[a,j] acridine are not included as these compounds were not analyzed for and are not typically included in the PAH analyze list. The waste characterization is determined based on an exceedance of a 1% total PAHs as described in WAC 173-303-100.
* WAC 173-303-090 - Dangerous Waste Criteria, dated July 31, 2009.

Model Toxics Control Act (MTCA) Cleanup Regulation, chapter 173-340 WAC; MTCA Method A and B from Ecology website downloaded August 2009 (<https://fortress.wa.gov/ecy/claro/Reporting/CLARCReporting.aspx>).

DUP - Field duplicate

J - Estimated value

NA - Not applicable

NE - Not established

PAHs - Polynuclear aromatic hydrocarbons

TPHs - Total petroleum hydrocarbons

U - Compound was analyzed for but not detected above the reporting limit shown.

UJ - Compound was analyzed for but not detected above the reporting limit shown. The reporting limit is an estimated value.

VOCs - Volatile organic compounds

TTEC - Total Toxicity Equivalent Soil Concentration

* The soil cleanup level is 100 mg/kg if benzene is not present and the total of ethylbenzene, toluene, and xylenes is less than 1% of the gasoline mixture. The cleanup level for all other gasoline mixtures is 30 mg/kg.

** These compounds are considered carcinogenic PAHs (c-PAHs) and are subject to WAC-173-340 Toxicity Equivalent Soil Concentration calculations.

^c Total PAHs are the sum of PAHs detailed by the WAC 173-303-040 (Acenaphthene, acenaphthylene, fluorene, anthracene, fluoranthene, phenanthrene, benzo(a)anthracene, benzo(b)fluoranthene, benzo(k)fluoranthene, pyrene, chrysene, benzo(a)pyrene, dibenz(a,h)anthracene, indeno(1,2,3-c,d)pyrene, and benzo(g,h,i)perylene).

Note dibenzo (f,e,g), (h,b), (k,i), and (a,l) pyrenes and dibenzo(a,j) acridine are not included as these compounds were not analyzed for and are not typically included in the PAH analysis list. The waste characterization is determined based on an exceedance of a 1% total PAHs as defined in WAC 173-303-040.

^d WAC 173-303-090 - Dangerous Waste Criteria, dated July 31, 2009.

Notes:

Model Toxics Control Act (MTCA) Cleanup Regulation, chapter 173-340 WAC; MTCA Method A and B from Ecology website downloaded August 2009 (<https://fortress.wa.gov/ecy/claro/Reporting/CLARCReporting.aspx>).

DUP - Field duplicate

J - Estimated value

NA - Not applicable

NE - Not established

PAHs - Polynuclear aromatic hydrocarbons

TPHs - Total petroleum hydrocarbons

U - Compound was analyzed for but not detected above the reporting limit shown.

UJ - Compound was analyzed for but not detected above the reporting limit shown. The reporting limit is an estimated value.

VOCs - Volatile organic compounds

TTEC - Total Toxicity Equivalent Soil Concentration

^a The soil cleanup level is 100 mg/kg if benzene is not present and the total of ethylbenzene, toluene, and xylenes is less than 1% of the gasoline mixture. The cleanup level for all other gasoline mixtures is 30 mg/kg.

^b These compounds are considered carcinogenic PAHs (c-PAHs) and are subject to WAC-173-340 Toxicity Equivalent Soil Concentration calculations.

^c Total PAHs are the sum of PAHs detailed by the WAC 173-303-040 (Acenaphthene, acenaphthylene, fluorene, anthracene, fluoranthene, phenanthrene, benzo(a)anthracene, benzo(b)fluoranthene, benzo(k)fluoranthene, pyrene, chrysene, benzo(a)pyrene, dibenz(a,h)anthracene, indeno(1,2,3-c,d)pyrene, and benzo(g,h,i)perylene). None dibenzo [l,e], (a,h), (a,i), and (a,l)] pyrenes and dibenzo(a,j) acridine are not included as these compounds were not analyzed for and are not typically included in the PAH analysis list. The waste characterization is determined based on an exceedance of a 1% total PAHs as described in WAC 173-303-100.

^d WAC 173-303-090 - Dangerous Waste Criteria, dated July 31, 2009.

Notes:

Model Toxics Control Act (MTCA) Cleanup Regulation, chapter 173-340 WAC; MTCA Method A and B from Ecology website downloaded August 2009 (<https://fortress.wa.gov/ecy/clarc/Reporting/CLARCReporting.aspx>).

DUP - Field duplicate

J - Estimated value

NA - Not applicable

NE - Not established

PAHs - Polynuclear aromatic hydrocarbons

TPHs - Total petroleum hydrocarbons

U - Compound was analyzed for but not detected above the reporting limit shown.

UJ - Compound was analyzed for but not detected above the reporting limit shown. The reporting limit is an estimated value.

VOCs - Volatile organic compounds

TTEC - Total Toxicity Equivalent Soil Concentration

^a The soil cleanup level is 100 mg/kg if benzene is not present and the total of ethylbenzene, toluene, and xylenes is less than 1% of the gasoline mixture. The cleanup level for all other gasoline mixtures is 30 mg/kg.

^b These compounds are considered carcinogenic PAHs (c-PAHs) and are subject to WAC-173-340 Toxicity Equivalent Soil Concentration calculations.

^c Total PAHs are the sum of PAHs detailed by the WAC 173-303-040 (Acenaphthene, acenaphthylene, fluorene, anthracene, fluoranthene, phenanthrene, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, pyrene, chrysene, benzo(e)pyrene, dibenz(a,h)anthracene, indeno(1,2,3-cd)pyrene, and benzo(g,h,i)perylene. Note dibenzo [f,g,h], (i,j), (k,l), and (m,n) pyrenes and dibenzo(a,j) acridine are not included as these compounds were not analyzed for and are not typically included in the PAH analyze list. The waste characterization is determined based on an exceedance of a 1% total PAHs as defined in WAC 173-303-100.

^d WAC 173-303-090 - Dangerous Waste Criteria, dated July 31, 2009.

Notes:
 Model Toxics Control Act (MTCA) Cleanup Regulation, chapter 173-340 WAC; MTCA Method A and B from Ecology website downloaded August 2009 (<https://forrest.wa.gov/ecy/clearing/CLAR/Reporting.aspx>).
 DUP - Field duplicate
 J - Estimated value
 NA - Not applicable
 NE - Not established
 PAHs - Polynuclear aromatic hydrocarbons
 TPHs - Total petroleum hydrocarbons
 U - Compound was analyzed for but not detected above the reporting limit shown. The reporting limit is an estimated value.
 UJ - Compound was analyzed for but not detected above the reporting limit shown. The reporting limit is an estimated value.
 VOCs - Volatile organic compounds
 TTEC - Total Toxicity Equivalent Soil Concentration
 * The soil cleanup level is 100 mg/kg if benzene is not present and the total of ethylbenzene, toluene, and xylenes is less than 1% of the gasoline mixture. The cleanup level for all other gasoline mixtures is 30 mg/kg.
 † These compounds are considered carcinogenic PAHs (c-PAHs) and are subject to WAC-173-340 Toxicity Equivalent Soil Concentration calculations.
 ‡ Total PAHs are the sum of PAHs detailed by the WAC 173-303-040 (Acenaphthylene, acenaphthylene, fluorene, anthracene, fluoranthene, phenanthrene, benzo(a)anthracene, benzo(b)fluoranthene, benzo(k)fluoranthene, pyrene, chrysene, benzo(a)pyrene, dibenz(a,h)anthracene, indeno(1,2,3-cd)pyrene, and benzo(ghi)perylene). Note dibenzo[a,e], [a,h], [f,i], and [g,l] pyrenes and dibenzo[a,j] acridine are not included as these compounds were not analyzed for and are not typically included in the PAH analysis list. The waste characterization is determined based on an exceedance of a 1% total PAHs as described in WAC 173-303-100.
 § WAC 173-303-090 - Dangerous Waste Criteria, dated July 31, 2009.

Model Toxics Control Act (MTCA) Cleanup Regulation, chapter 173-340 WAC; MTCA Method A and B from Ecology website downloaded August 2009 (<https://fortress.wa.gov/ecy/claro/Reporting/CLARCRpt.aspx>).

DUP - Field duplicate

J - Estimated value

NA - Not applicable

NE - Not established

PAHs - Polynuclear aromatic hydrocarbons

TPHs - Total petroleum hydrocarbons

U - Compound was analyzed for but not detected above the reporting limit shown.

UJ - Compound was analyzed for but not detected above the reporting limit shown. The reporting limit is an estimated value.

VOCs - Volatile organic compounds

TTEC - Total Toxicity Equivalent Soil Concentration

* The soil cleanup level is 100 mg/kg if benzene is not present and the total of ethylbenzene, toluene, and xylenes is less than 1% of the gasoline mixture. The cleanup level for all other gasoline mixtures is 30 mg/kg.

† These compounds are considered carcinogenic PAHs (c-PAHs) and are subject to WAC-173-340 Toxicity Equivalent Soil Concentration calculations.

‡ Total PAHs are the sum of PAHs detailed by the WAC 173-303-040 (Acenaphthene, acenaphthylene, fluorene, anthracene, fluoranthene, phenanthrene, benzo(a)anthracene, benzo(b)fluoranthene, benzo(k)fluoranthene, pyrene, chrysene, benzo(a)pyrene, dibenz(a,h)anthracene, indeno(1,2,3-cd)pyrene, and benzo(g,h,i)perylene).

Note dibenzo(a,e), (a,h), (b,i), and (a,i) pyrenes and dibenzo(a,j) acridine are not included as these compounds were not analyzed for and are not typically included in the PAH analyze list. The waste characterization is determined based on an exceedance of a 1% total PAHs as described in WAC 173-303-100.

§ WAC 173-303-090 - Dangerous Waste Criteria, dated July 31, 2009.

Model Toxics Control Act (MTCA) Cleanup Regulation, chapter 173-340 WAC; MTCA Method A and B from Ecology website downloaded August 2009 (<https://fortress.wa.gov/ecy/clare/Reporting/CLARCRpt.asp>).

DUP - Field duplicate

J - Estimated value

NA - Not applicable

NE - Not established

PAHs - Polynuclear aromatic hydrocarbons

TPHs - Total petroleum hydrocarbons

U - Compound was analyzed for but not detected above the reporting limit shown.

UJ - Compound was analyzed for but not detected above the reporting limit shown. The reporting limit is an estimated value.

VOCs - Volatile organic compounds

TTEC - Total Toxicity Equivalent Soil Concentration

^a The soil cleanup level is 100 mg/kg if benzene is not present and the total of ethylbenzene, toluene, and xylenes is less than 1% of the gasoline mixture. The cleanup level for all other gasoline mixtures is 30 mg/kg.

^b These compounds are considered carcinogenic PAHs (c-PAHs) and are subject to WAC-173-340 Toxicity Equivalent Soil Concentration calculations.

^c Total PAHs are the sum of PAHs detailed by the WAC 173-303-040 (Acenaphthene, acenaphthylene, fluorene, anthracene, fluoranthene, phenanthrene, benzo(a)anthracene, benzo(b)fluoranthene, benzo(k)fluoranthene, pyrene, chrysene, benzo(a)pyrene, dibenz(a,h)anthracene, indeno(1,2,3-c,d)pyrene, and benzo(ghi)perylene).

Note dibenzo [(a,e), (a,h), (a,i), and (a,l)] pyrenes and dibenzo(a,j) acridine are not included as these compounds were not analyzed for and are not typically included in the PAH analyte list. The waste characterization is determined based on an exceedance of a 1% total PAHs as described in WAC 173-303-100.

^d WAC 173-303-090 - Dangerous Waste Criteria, dated July 31, 2009.

Notes:

Model Toxics Control Act (MTCA) Cleanup Regulation, chapter 173-340 WAC; MTCA Method A and B from Ecology website downloaded August 2009 (<https://fortress.wa.gov/ecy/clare/Reporting/CLARCReporting.aspx>).

DUP - Field duplicate

J - Estimated value

NA - Not applicable

NE - Not established

PAHs - Polynuclear aromatic hydrocarbons

TPHs - Total petroleum hydrocarbons

U - Compound was analyzed for but not detected above the reporting limit shown.

UJ - Compound was analyzed for but not detected above the reporting limit shown. The reporting limit is an estimated value.

VOCs - Volatile organic compounds

TTEC - Total Toxicity Equivalent Soil Concentration

^a The soil cleanup level is 100 mg/kg if benzene is not present and the total of ethylbenzene, toluene, and xylenes is less than 1% of the gasoline mixture. The cleanup level for all other gasoline mixtures is 30 mg/kg.

^b These compounds are considered carcinogenic PAHs (c-PAHs) and are subject to WAC-173-340 Toxicity Equivalent Soil Concentration calculations.

^c Total PAHs are the sum of PAHs detailed by the WAC 173-303-040 (Acenaphthene, acenaphthylene, fluorene, anthracene, fluoranthene, phenanthrene, benzo(a)anthracene, benzo(b)fluoranthene, benzo(k)fluoranthene, pyrene, chrysene, benzo(a)pyrene, dibenz(a,h)anthracene, indeno(1,2,3-c,d)pyrene, and benzo(g,h,i)perylene).

Note dibenzo [(a,e), (a,h), (a,i), and (a,l)] pyrenes and dibenzo(a,j) acridine are not included as these compounds were not analyzed for and are not typically included in the PAH analyte list. The waste characterization is determined based on an exceedance of a 1% total PAHs as described in WAC 173-303-100.

^d WAC 173-303-090 - Dangerous Waste Criteria, dated July 31, 2009.

1.0 INTRODUCTION

At the request of ConocoPhillips Company (ConocoPhillips), URS Corporation (URS) has prepared this Soil Sampling Plan for the Phase 2 site remediation/excavation activities associated with the Westlake/Mercer Cleanup Project at 600 Westlake Avenue North in Seattle, Washington. Excavation activities are scheduled to occur on the two private properties within the Westlake/Mercer Cleanup Site over several months beginning in January 2009. Sampling activities will be performed to maintain compliance with state and local agency requirements, as well as the settlement agreement.

2.0 PROJECT LOCATION

The project site consists of the two private properties bounded by Westlake Avenue N., Terry Avenue N., Mercer Street, and Valley Street, in Seattle, Washington.

The southernmost property includes two parcels located at 600 Westlake Avenue N and 966 Mercer Street owned by ConocoPhillips. The western portion of the ConocoPhillips property (600 Westlake Avenue N.) was formerly a 76-branded gasoline service station (Number 255353). The station was closed and demolished during 2008. The service station building, canopies, dispensers, signs, underground storage tanks (USTs), and subsurface fuel piping have been removed. The eastern portion of the ConocoPhillips property (966 Mercer Street) is currently an asphalt parking lot that is leased to West Marine for use as a parking lot. The West Marine retail store is located directly across Terry Avenue N. A Denny's restaurant was formerly located on this property. Approximately one half of the existing parking lot will be retained for parking by West Marine during Phase 2 construction, while the remaining half will be used by ConocoPhillips for construction purposes.

The northernmost property includes four parcels located at 965 Valley Street and is owned by City Investor's XI, L.L.C. (City Investor's). This property is commonly referred to as City Investor's Lot 14 (CI Lot 14). CI Lot 14 is currently a paved vacant lot (part asphalt and concrete) and is surrounded by a chain-link fence. A Unocal service station was formerly located on the northwestern portion of CI Lot 14. An approximate 7,000 square foot wood-framed two-story building (former Brace Lumber Building) was also formerly located on the eastern portion of CI Lot 14 property. Remaining structures on the CI Lot 14 property include several retaining walls, a chain-link perimeter fence, and a low-point sump (and pump). Until recently, a monopole sign was located at the northeast portion of the CI Lot 14 property in the vicinity of Valley Street and Terry Avenue N. The sign was removed in late December 2008, in preparation for the start of construction.

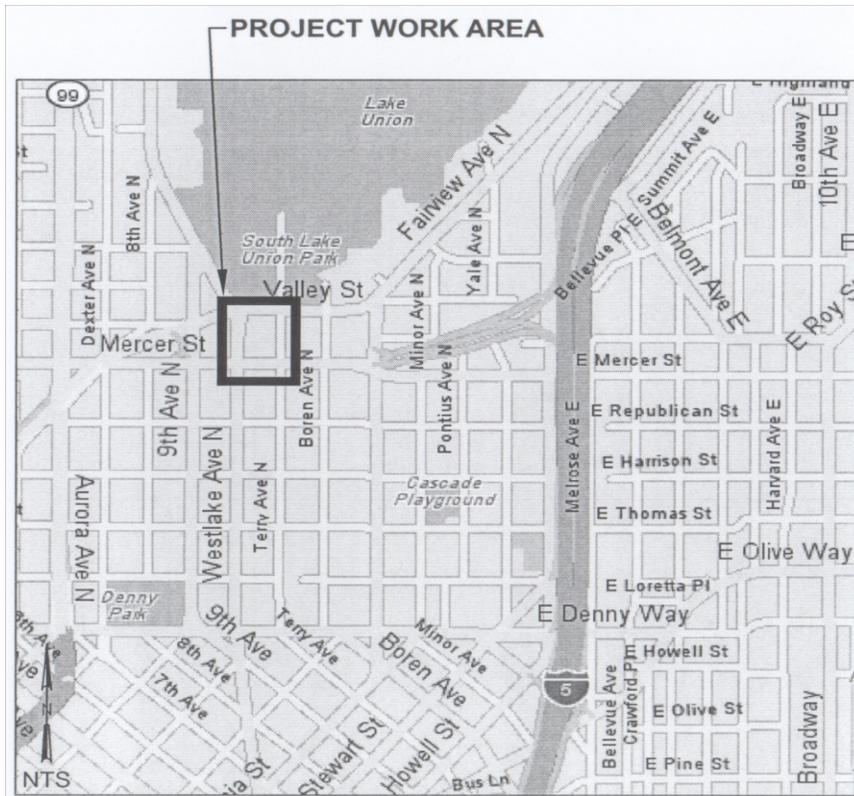

Figure 1: Site Vicinity Map

3.0 BACKGROUND AND SITE CONDITIONS

Numerous investigative and remedial site activities have been performed on and around the ConocoPhillips property since the 1980's. Results of investigative and remedial activities have indicated the presence of petroleum hydrocarbon impacts in subsurface soils and groundwater beneath the ConocoPhillips property, City Investors Lot 14, and portions of the surrounding Rights-of way (ROW). Recent pilot testing activities indicated soil vapors in the vicinity of Westlake Avenue North with concentrations of total petroleum hydrocarbons in the gasoline range (TPH-G) and benzene as high as 6,330 and 147 parts per million by volume (ppmv), respectively. Pilot testing results also indicated methane concentrations as high as 3.1% (31,000 ppmv) in soil vapors in the vicinity of Westlake Avenue North and as high as 9.5% (95,000 ppmv) in the vicinity of Terry Avenue North. Hydrogen sulfide concentrations in soil vapors were also detected as high as 8.5 ppmv in the vicinity of Terry Avenue North and as high as 0.12 ppmv in the vicinity of Westlake Avenue North. Recent groundwater monitoring at the site indicated that the maximum concentrations of petroleum hydrocarbons present at the site were located beneath the City ROW in Westlake Avenue North, immediately west of the ConocoPhillips station property.

In order to address these conditions, ConocoPhillips performed “Phase 1” remediation activities in portions of the City ROW at the Westlake/Mercer Cleanup Site from July 2006 to April 2007. The remedial activities included soil excavation of the eastern lanes of Westlake Avenue North, installation of air sparge (AS) wells and soil vapor extraction (SVE) trenches in the western lanes of Westlake Avenue North, and installation of SVE and enhanced fluid recovery (EFR) wells in Terry Avenue North. Approximately 17,000 tons of soil was excavated from the eastern lanes of Westlake Avenue North between Valley Street and Mercer Street. The excavation extended to approximately 15 feet below ground surface (bgs). The groundwater table was observed at 10 to 12 feet bgs. However, due to the construction methods and soil conditions, very little groundwater entered the excavation. The excavated soil consisted of brown to gray silty sand with traces of clay and organic matter. Wood debris was also present in the excavation throughout the subsurface including old trestle and pier supports.

Historical site activities have shown that subsurface soils directly beneath asphalt and/or concrete pavement on site primarily consist of silts and sands with varying amounts of clay and gravel to depths ranging from approximately 10 to 20 feet bgs. A layer of wood debris, ranging from trace amounts to as much as 10 feet in thickness, exists beneath many areas of the ConocoPhillips property, the adjacent City Investors property, and the surrounding City streets (Westlake, Mercer, Terry, and Valley). The wood layer was encountered at depths ranging from approximately 9 feet to 20 feet bgs. Peat is also present in many areas in the vicinity of Mercer Street at depths of approximately 16 to 19 feet bgs. Deeper exploration on the ConocoPhillips property and in Westlake Avenue North indicate that the wood layer is underlain by native silts and sands with varying amounts of clay in some locations. Depth to groundwater typically fluctuates between 9 and 12 feet bgs over much of the area.

4.0 PROJECT DESCRIPTION

Phase 2 of the Westlake/Mercer Cleanup Project is intended to address residual petroleum hydrocarbons and associated compounds present on the ConocoPhillips property and CI Lot 14. Phase 2 remedial excavation activities to the extent practicable, will consist of removal of petroleum hydrocarbon impacted soil exceeding Washington Department of Ecology Model Toxics Control Act (MTCA) Method A cleanup levels on the City Investors property and the majority of the ConocoPhillips property.

In total, approximately 36,300 cubic yards (cy) of soil and pavement are estimated to be excavated from the two properties, which include 17,300 cy from the ConocoPhillips property and 19,000 cy from the City Investors’ property. In general, soil will be excavated to approximately 14 feet above City of Seattle datum, which corresponds to approximately 15 feet below the surrounding grade.

Phase 2 excavation is divided into two areas. Area 1 is the City Investors property and will be approximately 240 feet by 180 feet. Area 2 is the majority of the ConocoPhillips property and will be approximately 160 feet by 180 feet. The Phase 2 excavation will begin in Area 1. Where necessary, the perimeter of the excavation will be shored using a soil/cement/bentonite gravity

wall which will be installed to a depth of 20 feet bgs. Confirmation sampling will not be possible below the base of the gravity wall. However, based on the results of previous investigations, installation of the shoring wall to a depth of 20 feet bgs will address any soil impacts above MTCA Method A Cleanup Levels, to the extent practicable that may have been present in the location of the gravity wall.

5.0 SOIL SAMPLING METHODOLOGY

The soil sampling program that will be performed during Phase 2 remedial excavation activities is intended to confirm whether petroleum hydrocarbon impacts exceeding MTCA Method A Cleanup levels remain in soils at the floor of the excavation. Soil will be sampled within each remedial excavation area at the maximum proposed depth of 15 feet bgs to assess concentrations at the floor of the excavation. If petroleum hydrocarbon impacts in soils are detected in concentrations exceeding MTCA Method A cleanup levels at 15 feet bgs, the excavation will continue down to as far as reasonably practicable depending on the horizontal and vertical extent of the contamination, the accessibility of the contamination, and other actual conditions in the field. While reasonable efforts will be made to remove substantially all such contaminated soil as described in the settlement agreement, any remaining residual soil contamination would undergo natural attenuation and the groundwater in the area would be monitored to confirm impacts have been removed.

5.1 SOIL SAMPLE DESIGNATION

For the purposes of soil sample identification, soil samples will be designated according to the sampling grid shown in Figure 2. Area 1 of the excavation will be sectioned into 11 rows (A through K), from north to south, and 15 columns (1, 2, 3, etc), from west to east. Area 2 of the excavation will be sectioned into 11 rows (A through K) from north to south, and 11 columns from west to east. In areas where more than 50 percent of the grid square is covered by the gravity wall or is outside of the excavation area, the grid square will not be sampled. These areas are marked with an "X" across the square on Figure 2.

Based on this grid, approximately 279 soil samples (not including quality assurance/quality control samples) will be collected during remedial excavations of Areas 1 and 2. Identification of soil samples collected from the excavation areas will consist of the area designation (Area1 or Area2), the sample grid row and column designation (i.e., A1, A2, etc.), and the sample depth. For example, a soil sample collected from a depth of fifteen feet within the northwest corner of Area 2 would be identified as Area2-A1-15. Duplicate soil samples will also be collected for quality control purposes at a rate of 5 percent, or 1 for every 20 samples, and will be identified as such (i.e.: Dup-1, Dup-2, etc.).

5.2 SOIL SAMPLING PROCEDURES

During remedial excavation activities, URS field sampling personnel will instruct the excavation contractor to bring up soil from the excavated area in order to enable collection of soil samples from a safe position. Representative soil samples will be collected from the bucket of the excavator in the middle of the bucket, away from the sides, screened for the presence of volatile organic vapors using a photo-ionization detector (PID), and placed in laboratory-supplied containers.

Samples will be preserved in laboratory-grade glass jars with Teflon™-lined lids, and labeled in accordance with WDOE specified sampling procedures. Soil samples to be analyzed for diesel- and oil-range petroleum hydrocarbons and other analytes will be packed into the glass jars by a technician using a new pair of nitrile gloves for each sample interval. Soil samples to be analyzed for volatile hydrocarbon fractions (gasoline-range petroleum hydrocarbons, benzene, toluene, ethylbenzene, xylenes, etc.) will be collected and preserved in the field using EPA Method 5035A, per Washington State Ecology requirements. Per the method 5035A requirements, each of these samples will be collected using a new disposable plastic syringe sampler provided by the laboratory, and placed into a methanol-preserved glass bottle.

Confirmation samples will be submitted to the laboratory for 24-hour turnaround to determine whether further excavation may be necessary.

5.3 DECONTAMINATION PROCEDURES

All sampling equipment will be decontaminated prior to use and between grid segments in order to minimize the potential for cross-contamination between locations. The decontamination procedures will include a pre-rinse with potable water, a phosphate-free detergent wash and a re-rinse with potable water.

5.4 SAMPLING DOCUMENTATION AND CHAIN-OF-CUSTODY PROCEDURES

Soil sampling data will be recorded on weatherproof field sheets or in a designated field notebook, and will include sample identification, sample date and time, sample location and depth, PID readings, and other notable field observations. Each sample will be labeled and properly sealed immediately after collection. All sample labels will include:

- Project name and number
- Sample identification
- Sample date and time
- Sample location
- Sample depth

Soil sample information will be recorded on chain-of-custody forms, which will accompany each sample cooler containing laboratory samples. URS field personnel will retain a copy of each chain-of-custody form, and original forms will be sent with the samples to the laboratory.

5.5 SAMPLE STORAGE, SHIPMENT, AND ANALYSIS

Soil samples will be stored in laboratory-prepared glass jars, individually labeled, and placed in a chilled cooler pending delivery to the analytical laboratory. The samples will be delivered to TestAmerica Analytical Testing Corporation of Bothell, Washington under standard chain-of-custody protocol. The soil samples will be analyzed for the following:

- Total petroleum hydrocarbons in the gasoline range (TPH-G) using Northwest Method NWTPH-Gx;
- Total petroleum hydrocarbons in the diesel (TPH-D) and oil (TPH-O) ranges using Northwest Method NWTPH Dx. TPH-D and TPH-O will be analyzed using an acid/silica gel cleanup method to minimize interference from biogenic sources which may be present in the samples;
- Benzene, toluene, ethylbenzene, and total xylenes (BTEX), Methyl tert-Butyl Ether (MTBE), and Naphthalene using USEPA Method 8260; and
- Total lead using USEPA Series 6000 Methods.

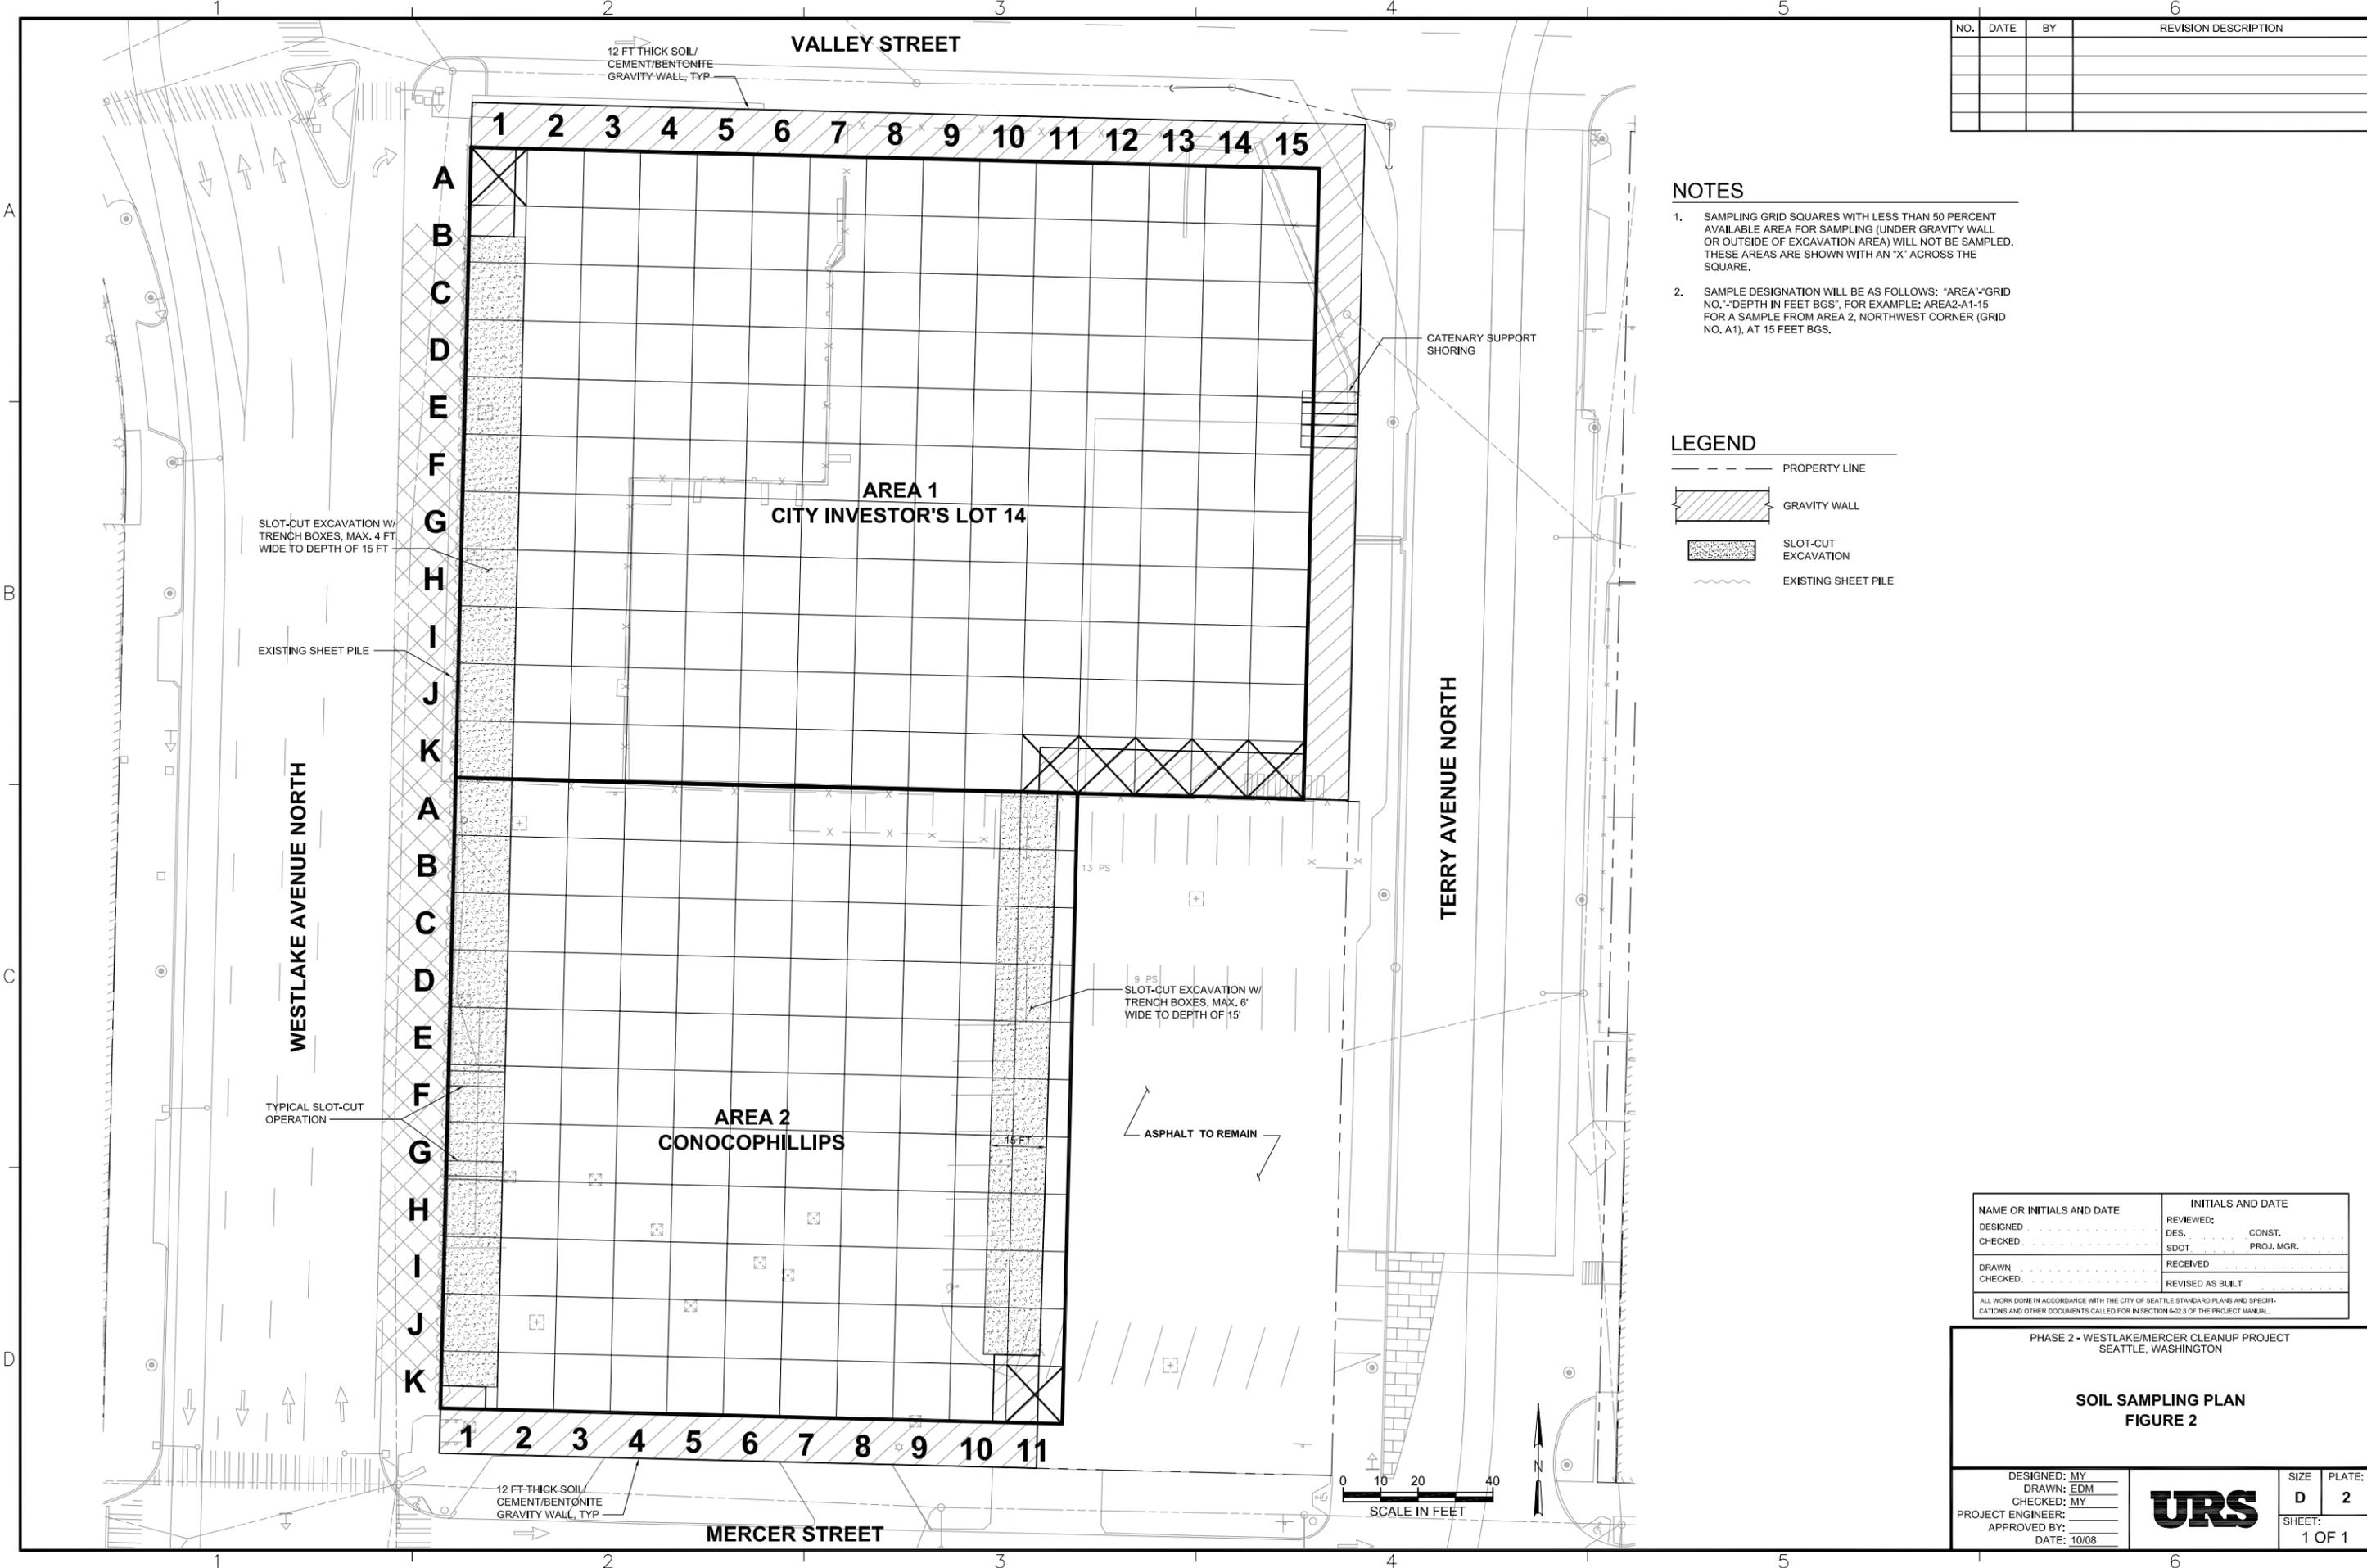

6.0 REPORTING

6.1 REPORT OF ENVIRONMENTAL ACTIVITIES

Soil sampling field data will be summarized and presented in a report. The report will include tables summarizing soil analytical results and field data and a site map showing sampling locations. Analytical laboratory reports and chain-of-custody documents will also be included as attachments to the report.

**QUALITY ASSURANCE PROJECT PLAN
CONOCO-PHILLIPS
PHASE 2 WESTLAKE/MERCER CLEANUP PROJECT
SEATTLE, WASHINGTON**

1.0 PROJECT DESCRIPTION

This document presents the Quality Assurance Project Plan (QAPP) for Phase 2 Site Excavation/Remediation activities associated with the Westlake/Mercer Cleanup Project (WMCP) at 600 Westlake Avenue North in Seattle, Washington. Sampling activities will be performed to confirm whether petroleum hydrocarbon impacts remain in soils at the floor of the excavation and to maintain compliance with state and local regulatory agency requirements. This QAPP will serve as the basis for evaluation of data from environmental sampling conducted as part of the Phase 2 Site Cleanup. This QAPP has been prepared in accordance with the Washington Department of Ecology (Ecology) publication *Guidelines for Preparing Quality Assurance Project Plans for Environmental Studies* (Ecology 2004b). The procedures outlined in this plan govern all aspects of chemical data collection activities under the sampling and analysis plan (SAP) and work plan approved by ConocoPhillips. The purpose of the QAPP and associated SAPs and work plans is to ensure that the data are representative of the conditions in the field and that analytical data are valid and accurately reported. The procedures outlined in this QAPP may also be applied to supplemental investigations, remedial investigations, remedial actions, or other actions for which chemical data collection occurs provided this QAPP is referenced in the specific project plan (monitoring plan, SAP, or work plan).

Numerous investigative and remedial site activities have been performed on and around the ConocoPhillips station property since the 1980's, following a release of an estimated 80,000 gallons of leaded gasoline at the station property. Remedial actions conducted at the site have included product recovery, soil vapor extraction (SVE), deep and shallow air sparging, and soil excavation. Pilot tests have also been performed on the ConocoPhillips station property and surrounding properties to assess aquifer characteristics and evaluate bioremediation response. A remediation system utilizing air sparging and SVE technology operated at the ConocoPhillips station site to remediate residual hydrocarbons in soil and groundwater at the site. The aboveground portions of this treatment system will be removed prior to the Phase 2 excavation work.

ConocoPhillips performed "Phase 1" remediation activities on the WMCP site from July 2006 to April 2007. The remedial activities included soil excavation of the eastern lanes of Westlake Avenue North, installation of air sparge (AS) wells and SVE trenches in the west lanes of Westlake Avenue North, and installation of SVE and enhanced fluid recovery (EFR) wells in Terry Avenue North. Approximately 17,000 tons of soil were excavated from the east lanes of Westlake Avenue North between Valley Street and Mercer Street. The excavation extended to approximately 15 feet below ground surface (bgs). The groundwater table was observed at 10 to 12 feet bgs. However, due to the construction methods and soil conditions, very little groundwater entered the excavation. The excavated soil consisted of brown to gray silty sand

with traces of clay and organic matter. Wood debris was also present in the excavation throughout the subsurface including old trestle and pier supports.

Phase 2 remedial excavation activities are described in the Soil Sampling Plan (URS 2008) and will consist of removing petroleum hydrocarbon impacted soil exceeding Ecology's Model Toxics Control Act (MTCA) Method A soil cleanup levels. The soil sampling program will confirm whether petroleum hydrocarbon impacts exceeding MTCA Method A soil cleanup levels remain in soils at the floor of the excavation. Following excavation to a proposed depth of 15 feet bgs, soil samples within each remedial excavation area will be collected confirm concentrations are below the MTCA Method A cleanup level at the floor of the excavation. If petroleum hydrocarbon impacts in soils are present exceeding MTCA Method A cleanup levels at 15 feet bgs, the excavation will continue down incrementally as far as practicable (approximately 20 feet bgs). Samples will be collected from the excavation floor until petroleum hydrocarbon impacts to soil are below MTCA Method A soil cleanup levels or until further excavation is not practicable.

2.0 PROJECT ORGANIZATION AND RESPONSIBILITY

The project team will consist of personnel from ConocoPhillips, URS Corporation (URS) and their subcontractors and TestAmerica Analytical Testing Corporation (TestAmerica). The following paragraphs describe the major positions and responsibilities of the team along with the approach to quality assurance management. Key project personnel and regulatory personnel and their responsibilities for QA activities are described below.

2.1 PROJECT COORDINATOR

- Kipp Eckert
ConocoPhillips Contract Manager
19909 120th Ave. NE
Suite 101
Bothell, WA 98011
(425) 402-3221 (Direct Line)
(206) 890-6293 (Cellular)
email – kipp.w.eckert@contractor.conocophillips.com

The Project Coordinator will be responsible for overseeing the implementation of the cleanup project at the Westlake/Mercer project area. To the maximum extent possible, all documents should be directed through the Project Coordinator. These documents include but are not limited to reports, QAPPs, project plans, and other correspondence concerning the activities performed.

2.2 PROJECT MANAGER

- Ty Griffith
URS Corporation

1501 4th Avenue, Suite 1400
Seattle, WA 98101
(206) 438-2700
(206) 438-2134 (Direct Line)
(206) 617-5708 (Cellular)
email - ty_griffith@urscorp.com

The Project Manager is responsible for implementation of all aspects of the cleanup plan, and applicable project plans. Specific responsibilities include review and approval of revisions to SAPs, QAPPs and applicable project plans, ensuring that all technical procedures are followed, reporting of deviations to the Project Coordinator, and ensuring that the data collected will satisfy the Data Quality Objectives (DQOs) discussed in Section 3 of this document. In addition, the Project Manager will provide technical review of reports.

2.3 QA/QC MANAGER

- Jen Garner

URS Corporation
1501 4th Avenue, Suite 1400
Seattle, WA 98101
(206) 438-2700
(206) 438-2063
email – jen_garner@urscorp.com

The QA/QC Manager is responsible for developing and managing procedures described in the QAPP, interfacing with the project laboratory and data quality assessment personnel, reviewing QA/QC audit reports, coordinating audit procedures, implementing necessary corrective action procedures, reviewing and evaluating analytical laboratory results, reviewing data quality assessment reports, and reporting to the URS Project Manager.

2.4 ANALYTICAL LABORATORY PROJECT MANAGER

- Kate Haney

TestAmerica Analytical Testing Corporation
18939 120th Ave NE
Bothell, WA 98011
(425) 420-9200
(425) 420-9249
email – kate.haney@testamericainc.com

The analytical laboratory project manager is responsible for reviewing and reporting all analytical data generated during the project, responding to questions or concerns regarding the quality of the data that the project managers, QA/QC manager, or data quality assessment personnel may have, and implementing any corrective actions deemed necessary by these individuals with regards to laboratory operations.

2.5 ENVIRONMENTAL MEDIA SAMPLING PERSONNEL

- Various URS or Other Contract Personnel

The field sampling personnel are responsible for implementing the sampling and handling procedures as specified in the QAPP and/or SAP, ensuring all field procedures follow the appropriate project plan, notifying the Project Manager and QA/QC Manager of any difficulties encountered during the field program, and implementing corrective actions to the field procedures as approved by the Project Manager.

3.0 DATA QUALITY OBJECTIVES

Data Quality Objectives (DQOs) are qualitative and/or quantitative statements of the precision (a measure of the random error), bias (a measure of systematic error), representativeness, completeness, and comparability necessary for the data to serve the objectives of the remedial activities at the site. The objectives of each remedial activity are discussed in detail in the associated project plan. During plan implementation, field as well as laboratory data will be generated. The quality of the field data will be evaluated based on successful calibration of each instrument supplying the data and the stated accuracy and precision by the manufacturer. The quality of laboratory data will be evaluated based on the relative precision, bias, representativeness, completeness, and comparability of the data generated by each type of analysis. These terms are defined below:

Precision	Precision is a measure of the scatter in the data due to random error. For most environmental measurements, the major sources of random error are sampling and analytical procedures. Sampling and analytical precision is expressed as the relative percent difference (RPD).
Bias	Bias is a measure of the difference between the analytical result for a parameter and the true value due to systematic errors. Potential sources of systematic errors include sample collection, physical/chemical instability of samples, interference effects, calibration of the measurement system, and artificial contamination.
Representativeness	Representativeness of the environmental conditions at the time of sampling is achieved by selecting sampling locations, methods and times so that the data describe the site conditions that the project seeks to evaluate.
Completeness	Completeness refers to the amount of usable data produced in the project.
Comparability	Comparability refers to the ability to compare the data from the project to other data.

Project DQOs for method detection limits (MDLs) and laboratory reporting limits (RLs) are summarized in Table 1. The analytical methods and RLs provided in Table 1 were selected to achieve data that was equal to or below MTCA Method A soil screening levels. MDLs should support RLs; however, since MDLs are statistically calculated values under clean matrix conditions, data will be reported based on the RL.

The DQOs for precision and bias are assessed based on the laboratory control limits provided in Table 1. Representativeness of the data collected will be ensured by using appropriate sampling procedures at sampling locations designed to produce data meeting the objectives of the sampling plan. Representative samples will also be ensured through following proper protocols for sample handling (storage, preservation, packaging, custody, and transportation), sample documentation, and laboratory sample handling and documentation procedures.

Comparability of the data will be ensured by selecting standard USEPA and/or state analytical methodologies for sample analysis. Data will be reported from the laboratory to the URS Project Manager both electronically and in paper copy form. The laboratory-provided data will be converted by TestAmerica into a suitable database format specified by URS. The electronic and paper copy analytical reports will be checked by URS to ensure reporting accuracy. Data quality will be assessed in terms of precision, bias, representativeness, completeness and comparability using specific data quality assessment procedures outlined in Section 10. Results of these assessments, along with any data that is qualified, will be submitted to the QA/QC manager in a data review memorandum for review and, if necessary, additional assessment.

4.0 SAMPLING PROCEDURES

The soil sampling program that will be performed during Phase 2 remedial excavation activities will confirm whether petroleum hydrocarbon impacts exceeding MTCA Method A cleanup levels remain in soils at the floor of the excavation. Soil will be sampled within each remedial excavation area at the maximum proposed depth of 15 feet bgs to confirm concentrations at the floor of the excavation. However, if petroleum hydrocarbon impacts in soils are present exceeding MTCA Method A cleanup levels at 15 feet bgs, the excavation will continue down incrementally as far as practicable. Post-excavation confirmation soil samples will be collected after completion of excavation activities as compliance samples to confirm impacts have been removed.

Samples will be preserved in laboratory-provided glass jars with Teflon®-lined lids, and labeled in accordance with sampling procedures specified in the SAP. Soil samples to be analyzed for diesel- and oil-range petroleum hydrocarbons, and other analytes, will be packed into the glass jars. Soil samples to be analyzed for volatile hydrocarbon fractions (gasoline-range petroleum hydrocarbons, benzene, toluene, ethylbenzene, xylenes, etc.) will be collected and preserved in the field using EPA

Method 5035A, per Ecology requirements (Ecology 2004a). Per the Method 5035A requirements, each of these samples will be collected using a new disposable plastic syringe sampler provided by the laboratory, and placed into a glass VOA vial. For this project, 10 grams of sample will be collected using a sampler syringe and placed in a pre-weighed VOA vial containing 10 milliliters of methanol. Two unpreserved VOA vials will be filled with 5 grams of sample collected using a

sampler syringe. Confirmation samples will be submitted to the laboratory for 24-hour turnaround to determine if further excavation is necessary.

Containers, sample size, preservation, and holding times are summarized in Table 2 for soil and accumulated solids for each analytical methodology that may be used to analyze these media. Samples will be identified according to the sample designation system described in the applicable project plan on waterproof labels with indelible markers. Sample custody will be tracked with a chain-of-custody (COC) form in accordance with the procedures outlined in the applicable project plan. Samples will remain in the custody of the sample collector until transport to the laboratory, unless a secure storage area is available.

5.0 ANALYTICAL PROCEDURES

The analytical procedures that may be used in the field and by the contract laboratory are outlined in Table 1 and discussed in Sections 5.1 and 5.2 below.

5.1 FIELD ANALYTICAL PROCEDURES

Soil samples may be field screened for organic vapor emissions using a portable organic vapor monitor as indicated in the specific project plan. The portable instruments used for field measurements will be operated, maintained, and calibrated in accordance with the manufacturer's operations manual specific for the instrument.

5.2 LABORATORY ANALYTICAL PROCEDURES

The analytical methodologies, including MDLs and laboratory RLs, that will be used to analyze soil samples are listed in Table 1. These methods are derived from *SW-846, EPA Test Methods for Evaluating Solid Waste* (USEPA 2008), Ecology's document *Analytical Methods for Petroleum Hydrocarbons* (Ecology, 1997), and methods developed by TestAmerica. TestAmerica will perform all organic and inorganic analyses of soil samples collected during the remedial activity in general accordance with the appropriate specific EPA or Ecology methodology. TestAmerica in an Ecology-accredited laboratory for the analyses they will be performing. Specialized analyses not available from TestAmerica may be subcontracted to another laboratory that can meet the specific needs of the required analysis. All method-required QC will be completed by the laboratory conducting the analyses/tests and reported along with the analytical and testing results.

6.0 DATA REDUCTION, REVIEW AND REPORTING

Data reduction is the process of converting raw data to final results. Data from direct-reading field instruments will be obtained from the instrument and recorded onto a sample collection form, or other appropriate field form as described in the applicable project plan. Laboratory analytical data reduction, review and reporting will be conducted by the laboratory in accordance

with their standard operating procedures discussed in their Quality Assurance Manual and requirements of the appropriate project plan. Results will be reported to the reporting limit as defined by the QAPP. Data deliverables will include the project sample results and QC results in electronic format and standard paper report format. The data will be submitted to URS electronically and in paper form for data quality assessment and database formatting as directed by the project plan or project manager. The data assessment will consist of ensuring that the laboratory has met the QC control limits established for surrogate recovery, matrix spike/matrix spike duplicate recovery and RPD, sample duplicate RPDs, and that the samples were properly preserved and analyzed within the recommended holding times for each analysis. Once the data have been assessed and input into the database, electronic and hard copies of the data, including qualifications, if any, will be submitted to the URS Project Manager along with the data quality assessment reports. In conjunction with the data quality assessment, the database information will be spot checked with the hard copy analytical results. If transcription errors are discovered by URS, the laboratory will be notified and the discrepancy corrected.

Data will be summarized in Excel tables. Under certain circumstances, more than one result for the same analyte may be reported by the laboratory. For samples that are extracted and/or analyzed multiple times due to laboratory QC procedures or matrix specific issues, the most appropriate data to report will be evaluated individually during data assessment. When evaluating the appropriate data to report, factors such as hold time, QC parameters, and agreement between analyses will be reviewed and the rationale for the decision will be documented in the associated data review report and summarized in the project reports.

Results will be compared to MTCA Method A cleanup levels. Data assessment procedures are outlined in Section 10.

7.0 QUALITY CONTROL PROCEDURES

Quality control procedures provide the means of evaluating and controlling the precision and bias of the analytical results. Careful adherence to established procedures for sample collection, preservation, and storage will minimize errors due to sampling and sample instability.

7.1 FIELD QC PROCEDURES

The types of field QC samples that will be collected during the remedial excavation sampling efforts and their purpose in relation to the DQOs discussed in Section 3 are listed below.

7.1.1 Field Blanks

Field blanks can indicate bias in analytical results caused by artificially introduced contamination from sample containers, sampling equipment, filtration equipment, preservation reagents, transportation and storage practices, and other samples. Two kinds of field blanks may be used: trip blanks and rinsate (decontamination or equipment) blanks.

Trip blanks will accompany all volatile samples as they are transported to and from the sampling site and then to the laboratory. They will consist of 40-milliliter glass vials filled with distilled/carbon-free water provided by the laboratory. One trip blank will be included with each cooler of sample containers destined for volatiles analysis. Trip blanks will be prepared by the laboratory at the time sample containers are prepared for the site sampling.

If non-dedicated sampling equipment is used during sample collection of any media, one rinsate blank should be prepared each day sampling is conducted with non-dedicated equipment or at the frequency described in the applicable project plan. This sample will consist of deionized water provided by the laboratory poured over the non-dedicated sampling equipment after the equipment has been cleaned in accordance with the procedures specified in the applicable SAP. The rinsate water will be collected in the appropriate sample jar provided by the laboratory for the type of analysis to be conducted.

7.1.2 Field Duplicates

Field duplicates are samples that are collected at the same time and location, and are preserved, stored, and analyzed under identical conditions as the parent sample. Generally, the most significant source of random error is the sampling procedures. The sampling error cannot be measured directly, although it may be the largest source of error in the results. Evaluation of the difference between the analytical results of field duplicates can provide an estimate of the sampling error for project samples. A good estimate of the random error due to sampling can only be made if the results of the field duplicates are significantly above the RL for a particular analysis. Hence, samples selected for duplication should be those expected to produce positive results, if possible. In addition, to provide a better estimate of the standard deviation of field duplicate results, it is important to collect several pairs of duplicates. Collection of at least one duplicate per 20 samples of a specific media (i.e., groundwater, soil, surface water, etc.) collected should provide a sufficient number of duplicates. Field duplicates will not be identified to the laboratory but will be recorded on the sample collection forms or other appropriate field forms for identification after analysis has been conducted. A list of field duplicates will be provided to the data quality assessment personnel.

7.2 LABORATORY QC PROCEDURES

Laboratory QC samples are used to assess if analytical results are within quality control limits and documented. The types of QC samples the laboratory will employ depend on the particular analytical methodology that will be used to analyze the samples. Each analytical method has required QC that must meet laboratory developed acceptance limits in order for the data to be considered valid. In addition, as part of the laboratory's annual accreditation program, performance evaluation samples and MDL studies are conducted to evaluate the laboratory's capability of performing the method accurately and precisely. Specific types of QC samples and corresponding control or acceptance limits for each analyte with respect to the particular analytical methodology are presented in Table 1. Matrix spike/matrix spike duplicates shall be performed on project samples at a rate of one per 20 samples collected for each matrix and analysis. In some cases, this will require the collection of additional sample volume in the field. If so, project plans will specify the sample volume required.

The control limits provided in Table 1 were obtained from the TestAmerica laboratory during formulation of this QAPP. In general, these control limits were statistically calculated for each analytical method and matrix in accordance with SW-846 guidance based on actual sample results from a sample population which includes samples from other projects in addition to ConocoPhillips WMCP. In some cases, the control limits are defined by the analytical method. The control limits therefore represent the normal laboratory variability associated with analysis of samples from many sites and are not specific to ConocoPhillips WMCP samples. Matrix spike, laboratory control sample, and surrogate recoveries associated with analyses of ConocoPhillips WMCP samples are reviewed by the laboratory to assess whether the recoveries indicate an out-of-control situation and to determine if corrective action is necessary. The laboratory will document the findings of their QC review and the corrective actions performed in the case narrative for the analytical reports.

8.0 PERFORMANCE AND SYSTEM AUDITS

Two types of audits may be conducted to determine whether procedures outlined in the project plans and laboratory QA program are being followed, or to detect problems so that corrective action can be initiated. The two different types of audits are described below.

8.1 PERFORMANCE AUDITS

In a performance audit, performance evaluation (PE) samples are submitted to the laboratory and analyzed for the purpose of evaluating the performance of the measurement or analytical procedures used by the laboratory. The PE sample consists of some type of environmental matrix (e.g., soil, water) which contains a known amount of a particular analyte(s). The laboratory analyzes the sample using routine procedures and then reports their results. TestAmerica is an Ecology-accredited laboratory and routinely participates in performance audits of their routine procedures. Results of these audits are available from the laboratory. Review of the audit results that are part of Ecology's accreditation program may be conducted if there are questions concerning the capability of the laboratory in performing any of the series of analytical measurements of this interim action.

8.2 SYSTEM AUDITS

System audits are conducted in order to determine if the requirements described in the applicable project plan are being properly carried out. A system audit may cover the field and laboratory portions of the project. The project manager, upon recommendation by the QA/QC manager, may request that a system audit of the field or laboratory operations be performed. Results of system audits will be reported to the project manager and project coordinator. The results will be summarized in a technical memorandum that describes problems encountered and corrective measures taken to correct the problem. Any corrective actions required should be implemented as discussed in Section 11.

9.0 PREVENTATIVE MAINTENANCE

Preventative maintenance procedures and schedule for field sampling equipment and measurement equipment will be conducted in accordance with the manufacturer's operations manual for each piece of equipment. Any critical spare parts or sampling equipment disposables such as small tools, disposable bailers, sample containers and other small items should be inventoried by field personnel in order to prevent and/or minimize equipment downtime. The laboratory will be responsible for preventative maintenance of its measurement equipment.

10.0 DATA ASSESSMENT PROCEDURES

When the results of the measurements have been obtained, the URS Project Manager and QA/QC manager will determine whether the project DQOs have been achieved. Whether the overall project DQOs have been met will be assessed by review of the analytical data quality assessment reports generated by the data quality assessment personnel. The responsibility of these personnel will be to ensure that the analytical DQOs have been met through review of the QC results associated with the project analytical data. Data quality assessment reports will discuss the completeness of the data and will document the reasons for any data qualifiers that are assigned. Specific procedures to be used in the data quality assessment of project data precision, bias, and completion are discussed in this section.

In order to ensure that data is of a known and acceptable quality, all analytical data generated for the remedial excavation activity will undergo a data quality review. This data review is an assessment of data precision and accuracy using quality control summary sheet results provided by the laboratory for each data package. If outliers occur during calibration or calibration verification or other analytical problems are identified, the laboratory will contact the URS QA/QC manager to discuss the problems/outliers. Professional judgment will be used to determine necessary actions, if any. The problems/outliers will be identified and the remedial measures implemented will be noted in the case narrative from the laboratory. Data will be evaluated and data qualifiers assigned based on the method requirements and guidance for qualification outlined in the USEPA documents *USEPA Contract Laboratory Program (CLP) National Functional Guidelines for Organic Data Review*, October 1999 and *USEPA Contract Laboratory Program (CLP) National Functional Guidelines for Inorganic Data Review*, October 2004. If several problems or deficiencies are encountered or specific data appear to be problematic based on the initial data review, more extensive data review will be implemented such as review of raw data. The data review consists of the following elements:

- Verification that sample numbers and analyses match the chain-of-custody request.
- Verification that sample preservation and holding times are met.
- Verification that field and laboratory blanks were performed at the proper frequency and that no analytes were present in the blanks.

- Verification that field and laboratory duplicates, matrix spikes, and laboratory control samples were run at the proper frequency and that control limits were met.
- Verification that surrogate compound analyses have been performed and that results met the QC criteria.
- Verification that established reporting limits have been achieved.

Data quality assessment will also include a review of the precision, bias, and completeness of analytical data. Precision will be assessed based on the RPD of matrix spike / matrix spike duplicate (MS/MSD) or laboratory duplicate pairs. Calculated RPDs will be compared to the control limits and if the RPD is within these limits, then the precision of the analysis will be assumed to meet the DQOs of the project. Bias will be reviewed by comparing the percent recoveries of surrogates, matrix spikes, and laboratory control samples to the appropriate control limits. Table 1 summarizes the control limits for addressing precision and bias for each analysis. The control limits provided in Table 1 were provided by the laboratory during development of this QAPP and represent the output of statistical evaluation of results from a set of samples which includes samples from both ConocoPhillips WMCP and other projects.

Completeness will be expressed as the percentage of the total tests (including sample and field QC results) conducted that are valid and considered usable for project objectives. Analytical results qualified as estimated based on data quality assessment are considered usable but the reason for qualification should be considered when using the data for site assessment or remedial evaluation. Rejected data are not usable.

11.0 CORRECTIVE ACTION

Evaluation of field and laboratory QC data and/or audits conducted for field operations and/or laboratory operations may indicate the need for a corrective action. Problems with analytical QC data will be addressed by the laboratory QC officer. Problems arising during field operations, however, will be addressed by the QA/QC manager through communication of the identified problem and a potential corrective action to the URS Project Manager. The Project Manager will then relay this information to the field personnel for implementation. The field personnel will then report back to the Project Manager upon successful implementation of the corrective action. ConocoPhillips will be notified of variances to the QAPP or applicable project plans through status reports, data review reports, quarterly reports, or other written correspondence as deemed appropriate.

12.0 QUALITY ASSURANCE REPORTS

A data assessment report will be prepared for the analytical data generated for each sampling event. The data assessment reports will indicate if DQOs were met and identify general QA problems, assigned data qualifiers and reasons for the qualifier, impact to data quality, if any, and the recommended and/or implemented corrective actions. Data assessment reports will be

submitted to the QA/QC manger and the URS Project Manager for review prior to the final reporting of analytical data.

Notes:

A- Model Toxics Control Act Cleanup Regulation, WAC 173-340. 2008 MTCA Method A and B values are from Ecology website CLARC tables downloaded

July 2008 (<https://fortress.wa.gov/ecy/clarc/reporting/CLARCReporting.aspx>), when available.

B - MDLs and RLs will vary based on sample weight. Limits shown are for 5 gram sample weight (soil).

C - In soil, the cleanup level is 100 mg/kg if benzene is not present, and the total of ethylbenzene, toluene, and xylenes is less than 1% of the gasoline mixture.

The cleanup level for all other gasoline mixtures is 30 mg/kg.

MDL - Method Detection Limit

LCS/LCSD - Laboratory control sampling/laboratory control sample duplicate

-- - Not applicable or Not available

MS/MSD - Matrix spike/matrix spike duplicate

NE - Not established

RPD - Relative percent difference

RL - Reporting Limit

Note: Other allowable containers for soil samples include stainless steel rings with teflon-lined plastic caps for analyses other than volatile parameters.

**Summary Data Quality Review
Westlake-Mercer, Phase 2
Soil, Water, Oil Samples**

marked for samples associated with SDG BSB0073 and the NWTPH-Gx samples were submitted in the incorrect bottle. After confirmation with URS, TA analyzed the sample for VOCs, NWTPH-Gx and -Dx, PCBs, RCRA Metals, and pH. Data were not qualified based on the incorrect bottle for Gx samples.

Several analyses were not marked for samples associated with SDGs BSD0125 and BSD0222. After confirmation with URS, TA analyzed the samples for VOCs, NWTPH-Gx and -Dx, TPH- HCID, total lead, and/or TCLP lead.

Sample COP-T2-W (SDG BSB0014) was submitted to the laboratory in the incorrect sample container for PCBs. Per URS PM, the PCB analysis was suspended until the sample was recollected. The sample was recollected in the correct container for PCBs and TA put the PCBs analysis for sample COP-T2-W in SDG BSB0021. Per URS, the VOC analyses for samples E02-020409 and E03-020409 (SDG BSB0032) were canceled.

The laboratory noted that samples Area2-A7-8, Area2-A8-14 and Area2-A9-14 did not have sample times on containers and the container labels for samples Area1-K8-14 and Area1-K7-14 were listed as Area2, not Area1. The laboratory noted that the sampled time on the container label for samples Area20C2-14 and Area1-14-9 did not match the COC. Per URS, the laboratory logged samples in per the COC.

The laboratory noted that the sampled time on the container label for samples Amazon Lot 34-16 and samples associated with SDG BSE0081 did not match the COC. After confirmation from URS, the laboratory used the sample time from the container labels.

The laboratory misidentified sample Area1-G1-4 as Area-G1-4 (SDG BSE0210). The correct sample identification (Area1-G1-4) is used within this report and associated tables.

Data validation is based on method performance criteria and QC criteria documented in *Phase 2, Westlake/Mercer Cleanup Project, Seattle, Washington, Soil Sampling Plan*, dated February 2009 and using laboratory quality control measures. Hold times, field / method / trip blanks, surrogate recoveries, matrix spike/matrix spike duplicate recoveries, laboratory duplicate results, blank spike recoveries (laboratory control samples) and reporting limits were reviewed to assess compliance with applicable methods. If data qualification was required, data were qualified based on the definitions and use of qualifying flags outlined in the EPA documents *USEPA Contract Laboratory Program (CLP) National Functional Guidelines for Organic Data Review*, October 1999 and *USEPA Contract Laboratory Program (CLP) National Functional Guidelines for Inorganics Data Review*, October 2004. A summary of qualifiers assigned to results in these SDGs is included in Table 1. Qualifiers that may be assigned to results include:

Data Qualifier Definitions:

- U The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
- J The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample. For inorganic analyses, the analyte may be qualified J+ or J- to indicate bias high or low, respectively.
- UJ The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
- R The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.
- DNR Do Not Report. Another result is available that is more reliable.

**Summary Data Quality Review

Soil, Water, Oil Samples**

Organic Analysis

Samples were analyzed for VOCs, TPH (gasoline, diesel and residual range), TPH-HCID, PAHs, and/or PCBs by the methods identified in the introduction of this report.

1. Holding Times – Acceptable
2. Blanks – Acceptable except as noted below:

VOCs by 8260B – Tetrachloroethene (PCE, 0.430 ug/L) was detected in the method blank analyzed on February 5, 2009. Ethylbenzene (0.0120 mg/kg), methyl-tert-butylether (MTBE, 0.0130 mg/kg), toluene (0.0100 mg/kg), m,p-xylene (0.0290) and total xylenes (0.0400 mg/kg) were detected in the method blank analyzed on April 22, 2009. Benzene (0.0110 mg/kg), ethylbenzene (0.0140 mg/kg), toluene (0.0140 mg/kg), and m,p-xylene (0.0220) were detected in the method blank analyzed on April 30, 2009. Per CLP guidelines, results reported at concentrations less than five times (5x) the method blank concentration are qualified as not detected and flagged with a ‘U’. When the associated sample results are reported between the method detection limit (MDL) and the reporting limit, and are less than 5x the method blank concentration, the results are qualified as not detected at the reporting limit. Results reported at concentrations greater than 5x the concentration found in the method blank do not require qualification. The sample results for PCE, benzene, ethylbenzene, MTBE, toluene, m,p-xylene and total xylenes were reported at concentrations greater than 5x the method blank concentration, were not reported in samples associated with the batch, or were reported as not detected and do not require qualification based on the associated method blank results.

Gasoline-range by NWTPH-Gx – Gasoline-range TPH (1.99 mg/kg) was detected in the method blank analyzed on April 13, 2009. The associated sample results for gasoline-range TPH were reported at concentrations greater than 5x the method blank concentration or were reported as not detected and do not require qualification based on the method blank result.

TPH by NWTPH-Dx – Bunker C (253 mg/kg), lube oil (164 mg/kg) and diesel-range (15.4 mg/kg) TPH were detected in the method blank analyzed on February 11, 2009. The associated sample results for Bunker C, lube oil and diesel-range TPH were reported at concentrations greater than 5x the method blank concentration and do not require qualification based on the method blank results.

3. Surrogates – Acceptable except as noted below:

VOCs by Method 8260B – The percent recoveries for surrogates d4-1,2-dichloroethane (1,2-DCA-d4), toluene-d8, and/or 4-BFB were outside the laboratory control limits in several samples as noted below:

Sample ID	1,2-DCA-d4 CL: 70-140%	Toluene-d8 CL: 70-130%	4-BFB CL: 70-130%	Action

RE: Reanalysis ND: Not detected

In some cases, surrogate recoveries were outside the control limits in quality control samples; however, these surrogate recoveries were not presented above. Data were not qualified based on the surrogate recoveries in the quality control samples.

TPH by NWTPH-Dx – The percent recoveries for surrogates 2-FBP and octacosane were outside the laboratory control limits in several samples as noted below:

Sample ID	2-FBP	2-FBP Control limit	Octacosane	Octacosane Control limit	Action
COP-T2-N	139%	60-135%	ok	75-125%	No flag
COP-T1-W	29.2%	53-120%	46.9%	68-123%	Detections = J, ND = No flag
COP-T2-W	129%	53-120%	ok	68-123%	No flag

CI-TK1	129%	53-125%	ok	62-142%	No flag

Ok: Result acceptable RE: Reanalysis ND: Not detected NR: Not recovered

Due to high concentrations of target analytes, one or more surrogates were diluted out of samples DUP-4, Area1-D8-14, Area1-D11-12 and the re-analyses of samples Area1-D11-12, Area1-E11-14, and Area1-D8-14. Data were not qualified based on the surrogate recoveries in the above noted samples. Data were not qualified based on the surrogate recoveries in the quality control samples.

PCBs by Method 8082 – The surrogate decachlorobiphenyl was not recovered for sample COP-T1-2-Oil. As the percent recovery for the alternate surrogate, tetrachlorometaxylene, was acceptable, data were not qualified based on the decachlorobiphenyl result.

4. Laboratory Control/Laboratory Control Duplicate Samples (LCS/LCSD) – Acceptable
5. Matrix Spike / Matrix Spike Duplicates (MS/MSD) – Acceptable except as noted below:

VOCs by Method 8260B – MS/MSDs were performed on samples I-042309, I-050509, I-061209, and 2 water samples from unrelated projects in association with the water samples. Matrix spikes were performed on 3 water samples from unrelated projects in association with the water samples. Results were acceptable. MS/MSDs were not performed in association with the soil samples. Precision and accuracy were assessed using the LCS/LCSD results.

TPH-HCID by NWTPH-HCID – A MS/MSD was not performed in association with this analysis. Precision and accuracy were assessed using the LCS/LCSD results.

Gasoline-range by NWTPH-Gx – Matrix spikes were performed on samples I-030509, Amazon Lot 34-6, Amazon Lot 34-7, Area1-J11-9, Area1-B5-14, Area1-H12-9, M-041509, Area2-C10-9, Amazon Lot 34-13, I-042309, Area1-C1-14, Area1-E1-9, I-050509, Amazon Lot 34-15, Amazon Lot 34-16, Area1-G10-7, Area1-E9-7, Area1-E1-4, Area1-G1-4, Area1-F1-4, DUP-15, Area2-I2-14, Area1-J5-9, Area2-A1-11, Area2-A2-14, ICON-POS-1, M-061209, E02-032009, and 20 samples from unrelated projects. Results were acceptable.

MS and/or MSDs were performed on samples COP-T1-S, Area2-I5-14, Area2-K5-14, Area2-F9-14, Area2-F5-11, Area1-A11-14, Area1-J15-14, Area1-J13-14, Area1-K7-10.5, Area1-J8-14, Area1-I11-14, Area2-C10-14, Area1-H13-14, Area1-H12-14, Area1-I10-9, Area1-E10-14, Area1-G13-9, Area1-A9-14, Area1-B4-9, Area1-H2-14, Area1-E9-7, Area1-G1-4, Area1-F1-4, Area2-I2-14, Area1-J5-9, Area2-A1-11, Area2-A2-14, Area2-F7-14, and 10 samples from unrelated projects. The percent recoveries for the gasoline in the MS and/or MSD were outside the laboratory control limits of 75-130% as described below.

		Naphthalene	-197%	-635%	47-147%
		Fluorene	ok	50.5%	74-150%

Data were not qualified based on unrelated project quality control sample results.

PCBs by 8082 – A MS/MSD associated with the soil samples was performed on a sample from an unrelated project. Results were acceptable. A MS/MSD was not performed in association with the water samples. Precision and accuracy were assessed using the LCS/LCSD. A MS/MSD was not performed in association with the oil sample. Accuracy was assessed using the LCS. Precision was not assessed.

**Summary Data Quality Review
Westlake-Mercer, Phase 2
Soil, Water, Oil Samples**

6. Laboratory Duplicates – Acceptable except as noted below:

VOCs by 8260B – Laboratory duplicates were performed on 2 water samples from unrelated projects. Results were acceptable.

Gasoline Range by NWTPH-Gx – Laboratory duplicates were performed on samples COP-T1-S, E02-020509, I-030509, Area2-I5-14, Area2-I7-14, Area2-K5-14, Area2-H6-14, Area2-F9-14, Amazon Lot 34-6, Area2-F5-11, Area2-F6-12, Amazon Lot 34-7, Area2-C5-14, Area1-A11-14, Area1-A10-14, Area1-J15-14, Area1-J14-14, Area1-J13-14, Area2-A6-11, Area1-K7-10.5, Area1-J8-14, Area1-I11-14, Area2-B9-9, Area1-H13-14, Area1-H12-14, Area1-H14-14, Area1-I10-9, Area1-E10-14, Area1-E10-14, Area1-C10-14, Area1-H12-9, M-041509, Area2-C10-9, Area1-G13-9, Area1-A9-14, Amazon Lot 34-12, Area1-B5-14, Amazon Lot 34-13, Area1-A2-14, Area1-B4-9, Area1-C5-7, Area1-H2-14, I-042309, Area1-C1-9, Area1-C1-14, Area1-E1-9, I-050509, Amazon Lot 34-15, Amazon Lot 34-16, Area1-G10-7, Area1-E9-7, Area1-F9-7, Area1-E1-4, Area1-G1-4, Area1-F1-4, DUP-15, Amazon Lot 34-20, Area2-I2-14, Area1-J5-9, Area2-A1-11, Area2-A2-14, DUP-20, Area2-F7-14, Area2-E9-14, ICON-POS-1, ICON-POS-2, M-032009, and 40 samples from unrelated projects. Results were acceptable.

A laboratory duplicate was performed on sample Area1-J11-9. The relative percent difference (RPD) for gasoline-range TPH (73.9%) exceeded the control limit of 40%; therefore, the result for gasoline-range TPH in sample Area1-J11-9 is qualified as estimated and flagged with a ‘J’ based on the elevated RPD.

TPH by NWTPH-Dx – Laboratory duplicates were performed on samples Area2-I5-14, Area2-J6-14, Area2-G6-14, Area2-F8-14, Area2-F8-10.5, Amazon Lot 34-6, Area2-F5-11, Area1-C12-14, Amazon Lot 34-7, Amazon Lot 34-10, Area1-A11-14, Area1-G15-14, Area2-B8-11.5, Area1-J10-14, Area1-I12-14, Area1-G11-14, Area1-G14-14, Area1-D10-14, Area1-E12-14, Area1-J11-9, Area1-I15-9, Area1-D11-9, Area1-C9-14, Area1-C7-14, Area2-C10-9, Area1-G13-9, Area1-A9-14, Area1-D12-6, Amazon Lot 34-12, Area1-E4-14, Area1-G4-14, Amazon Lot 34-13, Area1-C2-14, Area1-D9-7, Area1-I5-14, Area1-J4-14, Amazon Lot 34-14, Area1-C1-9, Area1-D8-2, Area1-K4-14, Amazon Lot 34-15, Area1-E9-7, Area1-C1-4, Area1-D1-7, Area1-E1-4, Area1-H1-4, Amazon Lot 34-18, Area1-G1-4, Amazon Lot 34-19, Area1-F1-4, Area1-B14-2, Area1-I1-9, Area1-I4-4, Area2-J3-14, Area1-K1-9, Amazon Lot 34-20, Area2-I2-14, Area1-J5-9, Area2-I1-11, Area2-C1-14, Area2-B2-9, Amazon Lot 34-21, Area2-F7-14, Area2-E5-14, Area1-J6-14, Area1-J7-14, Area2-G9-14, Area2-G1-14, Area2-A3-14, ICON-POS-5, Area2-C8-14, and 12 soil samples from unrelated projects. Results were acceptable.

Laboratory duplicates were performed on samples Area2-I6-10, Area2-D8-14, Area1-F10-14, Area2-B5-14, and Area1-F3-14. The relative percent differences (RPDs) for one or more analytes exceeded the control limit of 20% as described below.

Lab dup performed on:	Analyte	RPD	Action
Area2-I6-10	Diesel-range	73.7%	No flag
	Lube oil	113%	No flag
Area2-D8-14	Lube oil	56.7%	No flag
Area1-F10-14	Kerosene	59.0%	J
	Diesel Range	69.6%	J
	Lube Oil	69.2%	J
Area2-B5-14	Diesel Range	73.0%	J
	Lube Oil	92.5%	J
Area1-F3-14	Diesel Range	121%	J
	Lube Oil	108%	J

**Summary Data Quality Review
Westlake-Mercer, Phase 2
Soil, Water, Oil Samples**

The results for TPHs were reported as not detected or were within 2x the reporting limit in samples Area2-I6-10 and Area2-D8-14; therefore, data is not qualified based on the RPD results.

7. Field Duplicate – Acceptable except as noted below:

General – Field duplicates were submitted for VOCs, gasoline-range TPH, and diesel-range, lube oil, and kerosene TPH for the parent sample / field duplicate pairs noted in the table below. The RPDs for one or more analytes exceeded the control limit of 50% for the parent sample / field duplicate pairs as described below.

Duplicate ID	Parent Sample ID	Analyte	% RPD	Action
Dup-1	Area2-H5-14	Benzene	81%	J
		Ethylbenzene	117%	J

8. Reporting Limits – Acceptable except as noted below:

General – The reporting limits for several analytes were elevated in the soil samples due to the percent moisture content of the samples and/or dilutions necessary to quantitate target analytes. In some cases, the elevated reporting limits may affect the use of the data for project objectives.

The results for one or more analytes in several samples were assigned a ‘J’ qualifier by the laboratory to indicate that the reported concentration is above the MDL, but below the MRL. All J-flagged results are considered estimated unless previously qualified.

The laboratory noted for one or more samples that “the sample/solvent ratio was not in accordance with the stated method and may not allow for complete extraction of volatile organics from the soil/solid matrix.”

VOCs by 8260B – The laboratory noted the internal standard was below method limits for several VOCs in several samples and/or associated surrogates. The results for VOCs flagged ‘I’ or ‘I2’ in the samples are qualified as estimated and flagged with a ‘J’ when reported as detected or a ‘UJ’ when reported as not detected. Data were not qualified in quality control samples based on the internal standard results.

Sample CI-TK1 was analyzed for benzene, toluene, ethylbenzene, and total xylenes by both EPA Method 8260B and EPA Method 8021B in order to meet the data quality objectives (DQOs) of the project. As the reporting limits for benzene, toluene, ethylbenzene, and/or total xylenes analyzed by EPA Method 8260 are lower than those reported by EPA Method 8021B, the sample results for benzene, toluene, and ethylbenzene by EPA Method 8021B are qualified with the flag Do Not Report (DNR) and reported from the EPA Method 8260B. The results from xylenes are qualified with the flag ‘DNR’ in EPA Method 8260B and reported from EPA Method 8021B.

The results for several VOCs in sample Area2-K5-14 were flagged ‘E’ by the laboratory. The laboratory reanalyzed the sample and the results were inconsistent. Sample results for the reanalysis of this sample are qualified ‘DNR.’ VOCs flagged ‘E’ in the initial analysis of the sample are qualified as estimated and flagged with a ‘J’.

The laboratory noted that additional methanol was added due to sample matrix absorption for samples Area2-B9-12 and Area2-B7-11.5 resulting in elevated reporting limits. Data were not qualified based on the methanol addition.

Summary Data Quality Review
Westlake-Mercer, Phase 2
Soil, Water, Oil Samples

The percent differences (%Ds) for MTBE, acetone, 2-butanone, chloromethane, dichlorodifluoromethane, methylene chloride, and vinyl chloride exceeded the method limit of 15% in several continuing calibrations. The results for acetone in samples Amazon Lot 34-15 and Amazon Lot 34-16 are qualified as estimated and flagged with a 'UJ' based on the %Ds in the continuing calibration. Data were not qualified for the quality control samples associated with these continuing calibrations.

The percent differences (%Ds) for methylene chloride, dichlorodifluoromethane, benzene, MTBE, 1,2-dichloroethane, and toluene exceeded the method limit of 15% in several continuing calibrations. The results for methylene chloride in sample Amazon Lot 34-10 is qualified as estimated and flagged with a 'UJ' based on the %Ds in the continuing calibration. The results for dichlorodifluoromethane in samples Amazon Lot 34-7, Amazon Lot 34-8, and Amazon Lot 34-9 are qualified as estimated and flagged with a 'UJ' based on the %Ds in the continuing calibration. Data were not qualified in quality control samples based on the associated continuing calibration.

TPH-HCID by NWTPH-HCID – The laboratory noted that the chromatograph pattern for the TPH results resembled weathered diesel.

Gasoline-range by NWTPH-Gx – The results for gasoline-range TPH in several samples were assigned a qualifier by the laboratory to indicate that the chromatographic fingerprint did not match the calibration standard. No additional qualifiers were necessary based on the qualifiers assigned by the laboratory.

The laboratory noted that additional methanol was added due to sample matrix absorption for samples Area1-J12-14, Area2-B9-12, and Area2-B7-11.5 resulting in elevated reporting limits. Data were not qualified based on the methanol addition.

The laboratory noted the continuing calibration recoveries for gasoline-range TPH was out high in several samples. Data were qualified in samples Area1-J2-9 and Area1-J2-7 as estimated and flagged with a 'J' unless previously qualified. The results for gasoline-range TPH in the remaining associated samples were reported as not detected; therefore, data were not qualified in these samples based on the continuing calibration recoveries.

TPH by NWTPH-Dx – The laboratory noted the continuing calibration recoveries for lube oil was out high in samples I-020509, M-020509, E01-020509, E02-020509, and E03-020509. As lube oil was not detected in the samples, data were not qualified based on the continuing calibration recoveries.

The laboratory noted the continuing calibration recovery for the surrogate octacosane was out high. Data were not qualified based on the surrogate recoveries in continuing calibrations.

The laboratory analyzed samples Area2-G6-14, Area2-G5-14, Area2-F9-14, and Area2-F8-14 for NWTPH-Dx with silica gel cleanup and without silica gel cleanup. The results from the NWTPH-Dx without silica gel cleanup are qualified Do Not Report and flagged 'DNR'.

The results for TPHs in several samples were assigned a qualifier by the laboratory to indicate that the chromatographic fingerprint did not match the calibration standard. No additional qualifiers were necessary based on the qualifiers assigned by the laboratory.

PAHs by 8270-SIM – The laboratory noted the internal standard was below method limits for several PAHs in the method blank. Method blank results were not qualified based on the internal standard results.

The laboratory noted the continuing calibration recoveries for fluoranthene and benzo(b)fluoranthene were exceeded the method limits of 20%. As fluoranthene and benzo(b)fluoranthene were not detected in the associated samples, data were not qualified based on the continuing calibration recoveries. Data were not qualified in quality control samples based on the associated continuing calibration.

**Summary Data Quality Review
Westlake-Mercer, Phase 2
Soil, Water, Oil Samples**

Metals

Samples were analyzed for metals by the methods identified in the introduction to this report.

1. Holding Times - Acceptable
2. Blanks – Acceptable
3. Laboratory Control/Laboratory Control Duplicate Samples (LCS/LCSD) – Acceptable
4. Matrix Spike / Matrix Spike Duplicates (MS/MSD) – Acceptable except as noted below:

Total Metals by 6000/7000 – Matrix spikes were performed on samples COP-T2-W, Area2-I5-14, Area2-F9-14, Area2-D6-14, Area2-F9-11.5, Area1-A11-14, Area1-J15-14, Area1-I11-14, Area1-I10-9, Area1-J11-9, Area1-C7-14, Area2-C10-9, Area1-G13-9, Area1-A9-14, Amazon Lot 34-12, Area1-B4-14, Area1-F4-14, Amazon Lot 34-13, Area1-B4-9, Area1-C1-14, Area1-K4-14, Amazon Lot 34-15, Amazon Lot 34-16, Area1-C1-4, Area1-E1-7, Area1-H1-4, Amazon Lot 34-19, Area1-B3-4, Area2-A5-11, Area1-I1-14, Area2-J3-14, Area1-K1-14, Area2-F2-14, Area1-J5-9, Area2-G1-14, Area2-C1-14, Area2-A2-14, Area2-B2-9, Area2-E8-14, CI-TK1, ICON-POS-1, Area2-A6-11, and 10 samples from unrelated projects. Results were acceptable.

A MS was performed on sample Area2-K9-14. The percent recovery for lead (-168%) was below the laboratory control limits of 75-125%. As the sample concentration was more than four times the spike concentration, data were not qualified based on the MS result.

A MS was performed on sample Area2-J5-14. The percent recovery for lead (131%) exceeded the laboratory control limits of 75-125%. The results for lead in samples Area2-J5-14, Area2-I9-14, Area2-H6-14, Area2-H7-14, Area2-H8-14, Area2-G7-14, Area2-G8-14, and Area2-G9-14 are qualified as estimated and flagged with a 'J'.

A MS was performed on sample Area1-H12-9. The percent recovery for lead (25.9%) was below the laboratory control limits of 75-125%. The results for lead in samples Area1-H12-9, Area1-I15-9, Area1-B10-14, Area1-C10-14, Area1-C11-14, Area1-F12-9, Area1-E11-9, Area1-D11-9, DUP-5, Area1-H15-9, Area1-G15-9, and Area1-F15-9 are qualified as estimated and flagged with a 'J'.

A MS was performed on sample Area1-I4-14. The percent recovery for barium (126%) exceeded the laboratory control limits of 75-125%. The result for barium in sample Amazon Lot 34-14 is qualified as estimated and flagged with a 'J'.

A MS was performed on sample Area2-C5-14. The percent recoveries for lead (189%) and barium (134%) exceeded the laboratory control limits of 75-125%. The results for lead reported as detected in samples Area2-C5-14, Area2-B5-14, Area2-B6-14, Area2-B7-14, Area2-B8-14, Area2-B9-14, Area2-A6-14, Area2-A7-14, Area2-A8-14, Area2-A9-14, Area2-D5-11.5, Area2-D6-11.5, Area2-D7-11.5, Area2-D8-11.5, Area2-D9-11.5, Area1-K9-14, Area1-K8-14, Area1-K7-14, and Amazon Lot 34-10 are qualified as estimated and flagged with a 'J'. Barium was not detected in the associated samples and no qualification for this analyte is required based on this MS.

MS/MSDs were performed on samples COP-T1-N, COP-T1-W, COP-T2-W, Amazon Lot 34-6, Area2-F5-11, Amazon Lot 34-7, Amazon Lot 34-10, Amazon Lot 34-12, Amazon Lot 34-13, Amazon Lot 34-14, Amazon Lot 34-15, Amazon Lot 34-16, Amazon Lot 34-18, Amazon Lot 34-19, Area1-B14-2, Amazon Lot 34-21, ICON-POS-1, Amazon Lot 34-10, and 6 samples from unrelated projects. Results were acceptable.

**Summary Data Quality Review
Westlake-Mercer, Phase 2
Soil, Water, Oil Samples**

A MS/MSD was performed on a sample from an unrelated project. The percent recoveries for mercury in the MS (14.1%) and the MSD (17.1%) were below the laboratory control limits of 75-125%. Data were not qualified based on unrelated project quality control sample results.

TCLP lead by 1311/6000/7000 – Matrix spikes were performed on samples Areal-G10-14, Areal-H12-14, Areal-H12-9, Areal-C9-14, Areal-H11-12, Areal-G3-14, Areal-D9-7, and ICON-POS-1. Results were acceptable.

5. Post-Digestion Spikes – Acceptable

Total Metals by 6000/7000 – Post-digestion spikes were performed on samples COP-T2-W, Area2-I5-14, Area2-K9-14, Area2-J5-14, Area-F9-14, Area2-D6-14, Area2-F9-11.5, Area2-F5-11, Amazon Lot 34-7, Area2-C5-14, Areal-A11-14, Areal-J15-14, Areal-I11-14, Areal-I10-9, Areal-J11-9, Areal-H12-9, Areal-C7-14, Area2-C10-9, Areal-G13-9, Areal-A9-14, Amazon Lot 34-12, Areal-B4-14, Areal-F4-14, Amazon Lot 34-13, Areal-B4-9, Areal-I4-14, Areal-C1-14, Areal-K4-14, Amazon Lot 34-15, Amazon Lot 34-16, Areal-C1-4, Areal-E1-7, Areal-H1-4, Amazon Lot 34-19, Areal-B3-4, Area2-A5-11, Areal-I1-14, Area2-J3-14, Areal-K1-14, Area2-F2-14, Areal-J5-9, Area2-G1-14, Area2-C1-14, Area2-A2-14, Area2-B2-9, Area2-E8-14, C1-TK1, ICON-POS-1, Area2-A6-11, and 14 samples from unrelated projects. Results were acceptable.

TCLP lead by 1311/6000/7000 – Post-digestion spikes were performed on samples Areal-G10-14, Areal-H12-14, Areal-H12-9, Areal-C9-14, Areal-H11-12, Areal-G3-14, Areal-D9-7, and ICON-POS-1. Results were acceptable.

6. Laboratory Duplicates – Acceptable except as noted below:

Total Metals by 6000/7000 – Laboratory duplicates were performed on samples COP-T2-W, Area2-K9-14, Area2-J5-14, Area-F9-14, Area2-D6-14, Area2-F5-11, Amazon Lot 34-7, Area2-C5-14, Areal-A11-14, Areal-J15-14, Areal-I11-14, Areal-I10-9, Area2-C10-9, Areal-G13-9, Amazon Lot 34-12, Areal-F4-14, Areal-I4-14, Areal-C1-14, Areal-K4-14, Amazon Lot 34-15, Areal-C1-4, Areal-E1-7, Areal-B14-2, Areal-K1-14, Area2-F2-14, Areal-J5-9, Area2-G1-14, Area2-C1-14, Area2-A2-14, Area2-B2-9, Amazon Lot 34-21, C1-TK1, ICON-POS-1, Area2-A6-11, and 10 samples from unrelated projects. Results were acceptable.

Laboratory duplicates were performed on samples Area2-I5-14, Area2-F9-11.5, Areal-J11-9, Areal-H12-9, Areal-C7-14, Areal-A9-14, Areal-B4-14, Amazon Lot 34-13, Areal-B4-9, Amazon Lot 34-16, Areal-H1-4, Amazon Lot 34-19, Areal-B3-4, Area2-A5-11, Areal-I1-14, Area2-J3-14, Area2-E8-14, and 3 samples from unrelated projects. The RPDs for one or more total metals exceeded the control limit of 20% as described below.

Lab dup performed on:	Analyte	RPD	Action
Area2-I5-14	Lead	43.7%	J all associated sample results
Area2-F9-11.5	Lead	41.0%	J all associated sample results
Areal-J11-9	Lead	26.3%	J all associated sample results
Areal-H12-9	Lead	21.6%	J all associated sample results
Areal-C7-14	Lead	31.7%	J all associated sample results
Areal-A9-14	Lead	23.2%	J all associated sample results
Areal-B4-14	Lead	32.6%	J all associated sample results
Amazon Lot 34-13	Lead	27.2%	J all associated sample results

**Summary Data Quality Review
Westlake-Mercer, Phase 2
Soil, Water, Oil Samples**

Lab dup performed on (continued):	Analyte	RPD	Action
Area1-B4-9	Lead	23.6%	J all associated sample results
Amazon Lot 34-16	Lead	76.5%	J all associated sample results
Area1-H1-4	Cadmium	40.0%	J/UJ all associated sample results
	Arsenic	33.8%	J all associated sample results
Amazon Lot 34-19	Barium	26.6%	J all associated sample results
Area1-B3-4	Lead	35.5%	J all associated sample results
Area2-A5-11	Lead	55.8%	J all associated sample results
Area1-I1-14	Lead	38.5%	J all associated sample results
Area2-J3-14	Lead	75.7%	J all associated sample results
Area2-E8-14	Lead	25.8%	J all associated sample results
Unknown (9B02018)	Silver	30.3%	No flag based on unrelated QC samples
	Cadmium	28.2%	No flag based on unrelated QC samples
Unknown (9C20046)	Lead	30.7%	No flag based on unrelated QC samples
Unknown (9D13002)	Arsenic	25.0%	No flag based on unrelated QC samples
Unknown (9F09032)	Lead	43.0%	No flag based on unrelated QC samples

(#) = Lab Batch ID

The results for arsenic, barium, cadmium, and/or lead are qualified as estimated and flagged with a 'J' or 'UJ' in all samples associated with the above noted samples based on laboratory duplicate results. Data were not qualified based on unrelated project quality control sample results.

TCLP lead by 1311/6000/7000 – Laboratory duplicates were performed on samples Area1-G10-14, Area1-H12-14, Area1-H12-9, Area1-C9-14, Area1-H11-12, Area1-G3-14, Area1-D9-7, and ICON-POS-1. Results were acceptable.

7. Field Duplicate – Acceptable except as noted below:

General – Field duplicates were submitted for total metals and/or TCLP lead for the parent sample / field duplicate pairs noted in the table below. The RPDs for total lead exceeded the control limit of 50% for the parent sample / field duplicate pairs as described below.

Duplicate ID	Parent Sample ID	Analyte	RPD	Action
Dup-1	Area2-H5-14	Lead, total	66%	J
DUP-12	Area1-G3-14	Lead, total	80%	J

ok – RPD within limits

6. Reporting Limits – Acceptable except as noted below:

The reporting limits for one or more metals were elevated in the soil samples due to the percent moisture content of the samples and/or dilutions necessary to quantitate target analytes. In some cases, the elevated reporting limits may affect the use of the data for project objectives.

Conventional Analysis

Samples were analyzed for pH by the methods specified in the introduction to this report.

1. Holding Times – Acceptable

**Summary Data Quality Review
Westlake-Mercer, Phase 2
Soil, Water, Oil Samples**

2. Laboratory Duplicates – Acceptable

Laboratory duplicates were performed on sample COP-T1.2-W and a sample from an unrelated project. Results were acceptable.

3. Reporting Limits - Acceptable

Overall Assessment of Data

The data reported in these SDGs, as qualified, are considered to be usable for meeting project objectives. The completeness for these SDGs is 100%.

Qualifier Definition/Glossary

Client: URS Corporation
Project/Site: WMCP Phase II

TestAmerica Job ID: 580-13985-1

Qualifiers

Fuels

Qualifier	Qualifier Description
Q12	Detected hydrocarbons in the diesel range do not have a distinct diesel pattern and may be due to heavily weathered diesel or possibly biogenic interference.

Job Number: 580-13985-1

Login Number: 13985
Creator: Gamble, Cathy
List Number: 1

List Source: TestAmerica Tacoma

Question	T / F / NA	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True

Notes and Definitions

Report Specific Notes:

- C - Calibration Verification recovery was above the method control limit for this analyte. Analyte not detected, data not impacted.
- L - Laboratory Control Sample and/or Laboratory Control Sample Duplicate recovery was above the acceptance limits. Analyte not detected, data not impacted.
- L1 - Laboratory Control Sample and/or Laboratory Control Sample Duplicate recovery was above acceptance limits.
- M1 - The MS and/or MSD were above the acceptance limits due to sample matrix interference. See Blank Spike (LCS).
- M2 - The MS and/or MSD were below the acceptance limits due to sample matrix interference. See Blank Spike (LCS).
- MHA - Due to high levels of analyte in the sample, the MS/MSD calculation does not provide useful spike recovery information. See Blank Spike (LCS).
- Q10 - Hydrocarbon pattern most closely resembles a blend of Diesel and Gasoline Range Hydrocarbons.
- Q6 - Results in the diesel organics range are primarily due to overlap from a heavy oil range product.
- Q7 - The heavy oil range organics present are due to hydrocarbons eluting primarily in the diesel range.
- R4 - Due to the low levels of analyte in the sample, the duplicate RPD calculation does not provide useful information.
- ZX - Due to sample matrix effects, the surrogate recovery was outside the acceptance limits.

Laboratory Reporting Conventions:

- DET - Analyte DETECTED at or above the Reporting Limit. Qualitative Analyses only.
- ND - Analyte NOT DETECTED at or above the reporting limit (MDL or MRL, as appropriate).
- NR/NA - Not Reported / Not Available
- dry - Sample results reported on a Dry Weight Basis. Results and Reporting Limits have been corrected for Percent Dry Weight.
- wet - Sample results and reporting limits reported on a Wet Weight Basis (as received). Results with neither 'wet' nor 'dry' are reported on a Wet Weight Basis.
- RPD - RELATIVE PERCENT DIFFERENCE (RPDs calculated using Results, not Percent Recoveries).
- MRL - METHOD REPORTING LIMIT. Reporting Level at, or above, the lowest level standard of the Calibration Table.
- MDL* - METHOD DETECTION LIMIT. Reporting Level at, or above, the statistically derived limit based on 40CFR, Part 136, Appendix B. *MDLs are listed on the report only if the data has been evaluated below the MRL. Results between the MDL and MRL are reported as Estimated Results.
- Dil - Dilutions are calculated based on deviations from the standard dilution performed for an analysis, and may not represent the dilution found on the analytical raw data.
- Reporting Limits - Reporting limits (MDLs and MRLs) are adjusted based on variations in sample preparation amounts, analytical dilutions and percent solids, where applicable.
- Electronic Signature - Electronic Signature added in accordance with TestAmerica's *Electronic Reporting and Electronic Signatures Policy*. Application of electronic signature indicates that the report has been reviewed and approved for release by the laboratory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

RE: WMCP Phase 2

Enclosed are the results of analyses for samples received by the laboratory on 02/02/09 15:00.
The following list is a summary of the Work Orders contained in this report, generated on 02/06/09
15:15.

If you have any questions concerning this report, please feel free to contact me.

<u>Work Order</u>	<u>Project</u>	<u>ProjectNumber</u>
BSB0004	WMCP Phase 2	33759381

Notes and Definitions

Report Specific Notes:

- M1 - The MS and/or MSD were above the acceptance limits due to sample matrix interference. See Blank Spike (LCS).
- MHA - Due to high levels of analyte in the sample, the MS/MSD calculation does not provide useful spike recovery information. See Blank Spike (LCS).
- Q1 - Does not match typical pattern
- Q7 - The heavy oil range organics present are due to hydrocarbons eluting primarily in the diesel range.
- ZX - Due to sample matrix effects, the surrogate recovery was outside the acceptance limits.

Laboratory Reporting Conventions:

- DET - Analyte DETECTED at or above the Reporting Limit. Qualitative Analyses only.
- ND - Analyte NOT DETECTED at or above the reporting limit (MDL or MRL, as appropriate).
- NR/NA - Not Reported / Not Available
- dry - Sample results reported on a Dry Weight Basis. Results and Reporting Limits have been corrected for Percent Dry Weight.
- wet - Sample results and reporting limits reported on a Wet Weight Basis (as received). Results with neither 'wet' nor 'dry' are reported on a Wet Weight Basis.
- RPD - RELATIVE PERCENT DIFFERENCE (RPDs calculated using Results, not Percent Recoveries).
- MRL - METHOD REPORTING LIMIT. Reporting Level at, or above, the lowest level standard of the Calibration Table.
- MDL* - METHOD DETECTION LIMIT. Reporting Level at, or above, the statistically derived limit based on 40CFR, Part 136, Appendix B. *MDLs are listed on the report only if the data has been evaluated below the MRL. Results between the MDL and MRL are reported as Estimated Results.
- Dil - Dilutions are calculated based on deviations from the standard dilution performed for an analysis, and may not represent the dilution found on the analytical raw data.
- Reporting Limits - Reporting limits (MDLs and MRLs) are adjusted based on variations in sample preparation amounts, analytical dilutions and percent solids, where applicable.
- Electronic Signature - Electronic Signature added in accordance with TestAmerica's *Electronic Reporting and Electronic Signatures Policy*. Application of electronic signature indicates that the report has been reviewed and approved for release by the laboratory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Analytical Case Narrative

TestAmerica - Seattle, WA

BSB0014

SAMPLE RECEIPT

The samples were received February 3rd, 2009 by TestAmerica - Seattle. The temperature of the samples at the time of receipt was 5.5 degrees Celsius. There were no unpreserved ambers received for PCB analysis.

PREPARATIONS AND ANALYSIS

No additional anomalies, discrepancies, or issues were associated with sample preparation, analysis and quality control other than those already qualified in the data and described in the Notes and Definitions page at the end of the report.

TestAmerica Seattle

Kate Haney, Project Manager

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report shall not be reproduced except in full, without the written approval of the laboratory.

Notes and Definitions

Report Specific Notes:

- B - Analyte was detected in the associated Method Blank.
- Q7 - The heavy oil range organics present are due to hydrocarbons eluting primarily in the diesel range.
- ZX - Due to sample matrix effects, the surrogate recovery was outside the acceptance limits.

Laboratory Reporting Conventions:

- DET - Analyte DETECTED at or above the Reporting Limit. Qualitative Analyses only.
- ND - Analyte NOT DETECTED at or above the reporting limit (MDL or MRL, as appropriate).
- NR/NA - Not Reported / Not Available
- dry - Sample results reported on a Dry Weight Basis. Results and Reporting Limits have been corrected for Percent Dry Weight.
- wet - Sample results and reporting limits reported on a Wet Weight Basis (as received). Results with neither 'wet' nor 'dry' are reported on a Wet Weight Basis.
- RPD - RELATIVE PERCENT DIFFERENCE (RPDs calculated using Results, not Percent Recoveries).
- MRL - METHOD REPORTING LIMIT. Reporting Level at, or above, the lowest level standard of the Calibration Table.
- MDL* - METHOD DETECTION LIMIT. Reporting Level at, or above, the statistically derived limit based on 40CFR, Part 136, Appendix B. *MDLs are listed on the report only if the data has been evaluated below the MRL. Results between the MDL and MRL are reported as Estimated Results.
- Dil - Dilutions are calculated based on deviations from the standard dilution performed for an analysis, and may not represent the dilution found on the analytical raw data.
- Reporting Limits - Reporting limits (MDLs and MRLs) are adjusted based on variations in sample preparation amounts, analytical dilutions and percent solids, where applicable.
- Electronic Signature - Electronic Signature added in accordance with TestAmerica's *Electronic Reporting and Electronic Signatures Policy*. Application of electronic signature indicates that the report has been reviewed and approved for release by the laboratory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Notes and Definitions

Report Specific Notes:

- C - Calibration Verification recovery was above the method control limit for this analyte. Analyte not detected, data not impacted.
- E - Concentration exceeds the calibration range and therefore result is semi-quantitative.
- MHA - Due to high levels of analyte in the sample, the MS/MSD calculation does not provide useful spike recovery information. See Blank Spike (LCS).
- MNR1 - There was no MS/MSD analyzed with this batch due to insufficient sample volume. See Blank Spike/Blank Spike Duplicate.
- Q10 - Hydrocarbon pattern most closely resembles a blend of gasoline and weathered diesel..
- Z2 - Surrogate recovery was above the acceptance limits. Data not impacted.
- ZX - Due to sample matrix effects, the surrogate recovery was outside the acceptance limits.

Laboratory Reporting Conventions:

- DET - Analyte DETECTED at or above the Reporting Limit. Qualitative Analyses only.
- ND - Analyte NOT DETECTED at or above the reporting limit (MDL or MRL, as appropriate).
- NR/NA - Not Reported / Not Available
- dry - Sample results reported on a Dry Weight Basis. Results and Reporting Limits have been corrected for Percent Dry Weight.
- wet - Sample results and reporting limits reported on a Wet Weight Basis (as received). Results with neither 'wet' nor 'dry' are reported on a Wet Weight Basis.
- RPD - RELATIVE PERCENT DIFFERENCE (RPDs calculated using Results, not Percent Recoveries).
- MRL - METHOD REPORTING LIMIT. Reporting Level at, or above, the lowest level standard of the Calibration Table.
- MDL* - METHOD DETECTION LIMIT. Reporting Level at, or above, the statistically derived limit based on 40CFR, Part 136, Appendix B. *MDLs are listed on the report only if the data has been evaluated below the MRL. Results between the MDL and MRL are reported as Estimated Results.
- Dil - Dilutions are calculated based on deviations from the standard dilution performed for an analysis, and may not represent the dilution found on the analytical raw data.
- Reporting Limits - Reporting limits (MDLs and MRLs) are adjusted based on variations in sample preparation amounts, analytical dilutions and percent solids, where applicable.
- Electronic Signature - Electronic Signature added in accordance with TestAmerica's *Electronic Reporting and Electronic Signatures Policy*. Application of electronic signature indicates that the report has been reviewed and approved for release by the laboratory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Analytical Case Narrative

TestAmerica - Seattle, WA

BSB0073

SAMPLE RECEIPT

The samples were received 02/10/09 by TestAmerica - Seattle. The temperature of the samples at the time of receipt was 11.2 degrees Celsius.

PREPARATIONS AND ANALYSIS

No additional anomalies, discrepancies, or issues were associated with sample preparation, analysis and quality control other than those already qualified in the data and described in the Notes and Definitions page at the end of the report.

TestAmerica Seattle

Notes and Definitions

Report Specific Notes:

- B1 - Analyte was detected in the associated method blank. Analyte concentration in the sample is greater than 10x the concentration found in the method blank.
- P4 - Sample received in inappropriate sample container.
- Q9 - Hydrocarbon pattern most closely resembles Heavy Fuel Oil/Bunker C.
- RL1 - Reporting limit raised due to sample matrix effects.
- ZX - Due to sample matrix effects, the surrogate recovery was outside the acceptance limits.

Laboratory Reporting Conventions:

- DET - Analyte DETECTED at or above the Reporting Limit. Qualitative Analyses only.
- ND - Analyte NOT DETECTED at or above the reporting limit (MDL or MRL, as appropriate).
- NR/NA - Not Reported / Not Available
- dry - Sample results reported on a Dry Weight Basis. Results and Reporting Limits have been corrected for Percent Dry Weight.
- wet - Sample results and reporting limits reported on a Wet Weight Basis (as received). Results with neither 'wet' nor 'dry' are reported on a Wet Weight Basis.
- RPD - RELATIVE PERCENT DIFFERENCE (RPDs calculated using Results, not Percent Recoveries).
- MRL - METHOD REPORTING LIMIT. Reporting Level at, or above, the lowest level standard of the Calibration Table.
- MDL* - METHOD DETECTION LIMIT. Reporting Level at, or above, the statistically derived limit based on 40CFR, Part 136, Appendix B. *MDLs are listed on the report only if the data has been evaluated below the MRL. Results between the MDL and MRL are reported as Estimated Results.
- Dil - Dilutions are calculated based on deviations from the standard dilution performed for an analysis, and may not represent the dilution found on the analytical raw data.
- Reporting Limits - Reporting limits (MDLs and MRLs) are adjusted based on variations in sample preparation amounts, analytical dilutions and percent solids, where applicable.
- Electronic Signature - Electronic Signature added in accordance with TestAmerica's *Electronic Reporting and Electronic Signatures Policy*. Application of electronic signature indicates that the report has been reviewed and approved for release by the laboratory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Notes and Definitions

Report Specific Notes:

- HFP - Field parameter with a holding time of 15 minutes.
- M2 - The MS and/or MSD were below the acceptance limits due to sample matrix interference. See Blank Spike (LCS).

Laboratory Reporting Conventions:

- DET - Analyte DETECTED at or above the Reporting Limit. Qualitative Analyses only.
- ND - Analyte NOT DETECTED at or above the reporting limit (MDL or MRL, as appropriate).
- NR/NA - Not Reported / Not Available
- dry - Sample results reported on a Dry Weight Basis. Results and Reporting Limits have been corrected for Percent Dry Weight.
- wet - Sample results and reporting limits reported on a Wet Weight Basis (as received). Results with neither 'wet' nor 'dry' are reported on a Wet Weight Basis.
- RPD - RELATIVE PERCENT DIFFERENCE (RPDs calculated using Results, not Percent Recoveries).
- MRL - METHOD REPORTING LIMIT. Reporting Level at, or above, the lowest level standard of the Calibration Table.
- MDL* - METHOD DETECTION LIMIT. Reporting Level at, or above, the statistically derived limit based on 40CFR, Part 136, Appendix B. *MDLs are listed on the report only if the data has been evaluated below the MRL. Results between the MDL and MRL are reported as Estimated Results.
- Dil - Dilutions are calculated based on deviations from the standard dilution performed for an analysis, and may not represent the dilution found on the analytical raw data.
- Reporting Limits - Reporting limits (MDLs and MRLs) are adjusted based on variations in sample preparation amounts, analytical dilutions and percent solids, where applicable.
- Electronic Signature - Electronic Signature added in accordance with TestAmerica's *Electronic Reporting and Electronic Signatures Policy*. Application of electronic signature indicates that the report has been reviewed and approved for release by the laboratory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Notes and Definitions

Report Specific Notes:

None

Laboratory Reporting Conventions:

- DET - Analyte DETECTED at or above the Reporting Limit. Qualitative Analyses only.
- ND - Analyte NOT DETECTED at or above the reporting limit (MDL or MRL, as appropriate).
- NR/NA - Not Reported / Not Available
- dry - Sample results reported on a Dry Weight Basis. Results and Reporting Limits have been corrected for Percent Dry Weight.
- wet - Sample results and reporting limits reported on a Wet Weight Basis (as received). Results with neither 'wet' nor 'dry' are reported on a Wet Weight Basis.
- RPD - RELATIVE PERCENT DIFFERENCE (RPDs calculated using Results, not Percent Recoveries).
- MRL - METHOD REPORTING LIMIT. Reporting Level at, or above, the lowest level standard of the Calibration Table.
- MDL* - METHOD DETECTION LIMIT. Reporting Level at, or above, the statistically derived limit based on 40CFR, Part 136, Appendix B. *MDLs are listed on the report only if the data has been evaluated below the MRL. Results between the MDL and MRL are reported as Estimated Results.
- Dil - Dilutions are calculated based on deviations from the standard dilution performed for an analysis, and may not represent the dilution found on the analytical raw data.
- Reporting Limits - Reporting limits (MDLs and MRLs) are adjusted based on variations in sample preparation amounts, analytical dilutions and percent solids, where applicable.
- Electronic Signature - Electronic Signature added in accordance with TestAmerica's *Electronic Reporting and Electronic Signatures Policy*. Application of electronic signature indicates that the report has been reviewed and approved for release by the laboratory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

CERTIFICATION SUMMARY

TestAmerica Seattle

Method	Matrix	Nelac	Washington
EPA 8260B	Water	X	X
NWTPH-Dx	Water		X
NWTPH-Gx	Water		X

Any abnormalities or departures from sample acceptance policy shall be documented on the 'Sample Receipt and Temperature Log Form' and 'Sample Non-conformance Form' (if applicable) included with this report.

For information concerning certifications of this facility or another TestAmerica facility, please visit our website at www.TestAmericaInc.com

Samples collected by TestAmerica Field Services personnel are noted on the Chain of Custody (COC) .

Notes and Definitions

Report Specific Notes:

- MNR1 - There was no MS/MSD analyzed with this batch due to insufficient sample volume. See Blank Spike/Blank Spike Duplicate.
- Q1 - Does not match typical pattern
- Q12 - Detected hydrocarbons in the diesel range do not have a distinct diesel pattern and may be due to heavily weathered diesel or possibly biogenic interference.

Laboratory Reporting Conventions:

- DET - Analyte DETECTED at or above the Reporting Limit. Qualitative Analyses only.
- ND - Analyte NOT DETECTED at or above the reporting limit (MDL or MRL, as appropriate).
- NR/NA - Not Reported / Not Available
- dry - Sample results reported on a Dry Weight Basis. Results and Reporting Limits have been corrected for Percent Dry Weight.
- wet - Sample results and reporting limits reported on a Wet Weight Basis (as received). Results with neither 'wet' nor 'dry' are reported on a Wet Weight Basis.
- RPD - RELATIVE PERCENT DIFFERENCE (RPDs calculated using Results, not Percent Recoveries).
- MRL - METHOD REPORTING LIMIT. Reporting Level at, or above, the lowest level standard of the Calibration Table.
- MDL* - METHOD DETECTION LIMIT. Reporting Level at, or above, the statistically derived limit based on 40CFR, Part 136, Appendix B. *MDLs are listed on the report only if the data has been evaluated below the MRL. Results between the MDL and MRL are reported as Estimated Results.
- Dil - Dilutions are calculated based on deviations from the standard dilution performed for an analysis, and may not represent the dilution found on the analytical raw data.
- Reporting Limits - Reporting limits (MDLs and MRLs) are adjusted based on variations in sample preparation amounts, analytical dilutions and percent solids, where applicable.
- Electronic Signature - Electronic Signature added in accordance with TestAmerica's *Electronic Reporting and Electronic Signatures Policy*. Application of electronic signature indicates that the report has been reviewed and approved for release by the laboratory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

RE: WMCP Phase 2

Enclosed are the results of analyses for samples received by the laboratory on 03/19/09 15:35.
The following list is a summary of the Work Orders contained in this report, generated on 03/24/09
17:14.

If you have any questions concerning this report, please feel free to contact me.

<u>Work Order</u>	<u>Project</u>	<u>ProjectNumber</u>
BSC0199	WMCP Phase 2	33759381

TestAmerica Seattle

Kate Haney, Project Manager

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report shall not be reproduced except in full, without the written approval of the laboratory.

Notes and Definitions

Report Specific Notes:

- A-01 - Results in the kerosene range are primarily due to overlap from heavy oil range product
- C - Calibration Verification recovery was above the method control limit for this analyte. Analyte not detected, data not impacted.
- C4 - Calibration Verification recovery was below the method control limit for this analyte.
- C8 - Calibration Verification recovery was above the method control limit for this analyte. A high bias may be indicated.
- I2 - Internal Standard recovery was outside of method limits.
- M1 - The MS and/or MSD were above the acceptance limits due to sample matrix interference. See Blank Spike (LCS).
- Q13 - Detected hydrocarbons do not have pattern and range consistent with typical petroleum products and may be due to biogenic interference.
- Q6 - Results in the diesel organics range are primarily due to overlap from a heavy oil range product.
- Q9 - Hydrocarbon pattern most closely resembles gasoline.
- R3 - The RPD exceeded the acceptance limit due to sample matrix effects.
- ZX - Due to sample matrix effects, the surrogate recovery was outside the acceptance limits.

Laboratory Reporting Conventions:

- DET - Analyte DETECTED at or above the Reporting Limit. Qualitative Analyses only.
- ND - Analyte NOT DETECTED at or above the reporting limit (MDL or MRL, as appropriate).
- NR/NA - Not Reported / Not Available
- dry - Sample results reported on a Dry Weight Basis. Results and Reporting Limits have been corrected for Percent Dry Weight.
- wet - Sample results and reporting limits reported on a Wet Weight Basis (as received). Results with neither 'wet' nor 'dry' are reported on a Wet Weight Basis.
- RPD - RELATIVE PERCENT DIFFERENCE (RPDs calculated using Results, not Percent Recoveries).
- MRL - METHOD REPORTING LIMIT. Reporting Level at, or above, the lowest level standard of the Calibration Table.
- MDL* - METHOD DETECTION LIMIT. Reporting Level at, or above, the statistically derived limit based on 40CFR, Part 136, Appendix B. *MDLs are listed on the report only if the data has been evaluated below the MRL. Results between the MDL and MRL are reported as Estimated Results.
- Dil - Dilutions are calculated based on deviations from the standard dilution performed for an analysis, and may not represent the dilution found on the analytical raw data.
- Reporting Limits - Reporting limits (MDLs and MRLs) are adjusted based on variations in sample preparation amounts, analytical dilutions and percent solids, where applicable.
- Electronic Signature - Electronic Signature added in accordance with TestAmerica's *Electronic Reporting and Electronic Signatures Policy*. Application of electronic signature indicates that the report has been reviewed and approved for release by the laboratory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Analytical Case Narrative

TestAmerica - Seattle, WA

BSC0225

Volatile Organic Compounds by EPA Method 8260B (5035/8260B):

The original analysis for laboratory sample BSC0225-01 yielded results that were over the calibration range for Ethylbenzene and Xylenes. The sample was re-shot on the instrument as BSC0225-01RE1. The results for the re-analysis were inconsistent with the original results.

The internal standard responses for both the initial analysis and re-analysis were within acceptance limits and the chromatograms were similar in overall shape and peak detection. It is the determination of the laboratory that sample aliquots obtained for the two VOA Vials submitted for the 5035/8260B method were non-homogeneous. Both sets of data have been included in the final report with the appropriate qualification.

No additional anomalies, discrepancies, or issues were associated with sample preparation, analysis and quality control other than those already qualified in the data and described in the Notes and Definitions page at the end of the report.

TestAmerica Seattle

Notes and Definitions

Report Specific Notes:

- E - Concentration exceeds the calibration range and therefore result is semi-quantitative.
- M1 - The MS and/or MSD were above the acceptance limits due to sample matrix interference. See Blank Spike (LCS).
- N1 - See case narrative.
- R3 - The RPD exceeded the acceptance limit due to sample matrix effects.

Laboratory Reporting Conventions:

- DET - Analyte DETECTED at or above the Reporting Limit. Qualitative Analyses only.
- ND - Analyte NOT DETECTED at or above the reporting limit (MDL or MRL, as appropriate).
- NR/NA - Not Reported / Not Available
- dry - Sample results reported on a Dry Weight Basis. Results and Reporting Limits have been corrected for Percent Dry Weight.
- wet - Sample results and reporting limits reported on a Wet Weight Basis (as received). Results with neither 'wet' nor 'dry' are reported on a Wet Weight Basis.
- RPD - RELATIVE PERCENT DIFFERENCE (RPDs calculated using Results, not Percent Recoveries).
- MRL - METHOD REPORTING LIMIT. Reporting Level at, or above, the lowest level standard of the Calibration Table.
- MDL* - METHOD DETECTION LIMIT. Reporting Level at, or above, the statistically derived limit based on 40CFR, Part 136, Appendix B. *MDLs are listed on the report only if the data has been evaluated below the MRL. Results between the MDL and MRL are reported as Estimated Results.
- Dil - Dilutions are calculated based on deviations from the standard dilution performed for an analysis, and may not represent the dilution found on the analytical raw data.
- Reporting Limits - Reporting limits (MDLs and MRLs) are adjusted based on variations in sample preparation amounts, analytical dilutions and percent solids, where applicable.
- Electronic Signature - Electronic Signature added in accordance with TestAmerica's *Electronic Reporting and Electronic Signatures Policy*. Application of electronic signature indicates that the report has been reviewed and approved for release by the laboratory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Notes and Definitions

Report Specific Notes:

- MNR1 - There was no MS/MSD analyzed with this batch due to insufficient sample volume. See Blank Spike/Blank Spike Duplicate.
- Q1 - Does not match typical pattern
- Q3 - The chromatographic pattern is not consistent with diesel fuel.
- Q7 - The heavy oil range organics present are due to hydrocarbons eluting primarily in the diesel range.

Laboratory Reporting Conventions:

- DET - Analyte DETECTED at or above the Reporting Limit. Qualitative Analyses only.
- ND - Analyte NOT DETECTED at or above the reporting limit (MDL or MRL, as appropriate).
- NR/NA - Not Reported / Not Available
- dry - Sample results reported on a Dry Weight Basis. Results and Reporting Limits have been corrected for Percent Dry Weight.
- wet - Sample results and reporting limits reported on a Wet Weight Basis (as received). Results with neither 'wet' nor 'dry' are reported on a Wet Weight Basis.
- RPD - RELATIVE PERCENT DIFFERENCE (RPDs calculated using Results, not Percent Recoveries).
- MRL - METHOD REPORTING LIMIT. Reporting Level at, or above, the lowest level standard of the Calibration Table.
- MDL* - METHOD DETECTION LIMIT. Reporting Level at, or above, the statistically derived limit based on 40CFR, Part 136, Appendix B. *MDLs are listed on the report only if the data has been evaluated below the MRL. Results between the MDL and MRL are reported as Estimated Results.
- Dil - Dilutions are calculated based on deviations from the standard dilution performed for an analysis, and may not represent the dilution found on the analytical raw data.
- Reporting Limits - Reporting limits (MDLs and MRLs) are adjusted based on variations in sample preparation amounts, analytical dilutions and percent solids, where applicable.
- Electronic Signature - Electronic Signature added in accordance with TestAmerica's *Electronic Reporting and Electronic Signatures Policy*. Application of electronic signature indicates that the report has been reviewed and approved for release by the laboratory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Report Created:

03/24/09 17:41

Notes and Definitions

Report Specific Notes:

- I2 - Internal Standard recovery was outside of method limits.
- M1 - The MS and/or MSD were above the acceptance limits due to sample matrix interference. See Blank Spike (LCS).
- MHA - Due to high levels of analyte in the sample, the MS/MSD calculation does not provide useful spike recovery information. See Blank Spike (LCS).
- Q13 - Detected hydrocarbons do not have pattern and range consistent with typical petroleum products and may be due to biogenic interference.
- Q6 - Results in the diesel organics range are primarily due to overlap from a heavy oil range product.
- R4 - Due to the low levels of analyte in the sample, the duplicate RPD calculation does not provide useful information.
- ZX - Due to sample matrix effects, the surrogate recovery was outside the acceptance limits.

Laboratory Reporting Conventions:

- DET - Analyte DETECTED at or above the Reporting Limit. Qualitative Analyses only.
- ND - Analyte NOT DETECTED at or above the reporting limit (MDL or MRL, as appropriate).
- NR/NA - Not Reported / Not Available
- dry - Sample results reported on a Dry Weight Basis. Results and Reporting Limits have been corrected for Percent Dry Weight.
- wet - Sample results and reporting limits reported on a Wet Weight Basis (as received). Results with neither 'wet' nor 'dry' are reported on a Wet Weight Basis.
- RPD - RELATIVE PERCENT DIFFERENCE (RPDs calculated using Results, not Percent Recoveries).
- MRL - METHOD REPORTING LIMIT. Reporting Level at, or above, the lowest level standard of the Calibration Table.
- MDL* - METHOD DETECTION LIMIT. Reporting Level at, or above, the statistically derived limit based on 40CFR, Part 136, Appendix B. *MDLs are listed on the report only if the data has been evaluated below the MRL. Results between the MDL and MRL are reported as Estimated Results.
- Dil - Dilutions are calculated based on deviations from the standard dilution performed for an analysis, and may not represent the dilution found on the analytical raw data.
- Reporting Limits - Reporting limits (MDLs and MRLs) are adjusted based on variations in sample preparation amounts, analytical dilutions and percent solids, where applicable.
- Electronic Signature - Electronic Signature added in accordance with TestAmerica's *Electronic Reporting and Electronic Signatures Policy*. Application of electronic signature indicates that the report has been reviewed and approved for release by the laboratory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Notes and Definitions

Report Specific Notes:

- M1 - The MS and/or MSD were above the acceptance limits due to sample matrix interference. See Blank Spike (LCS).
- Q10 - Hydrocarbon pattern most closely resembles a blend of Kerosene and Lube Oil.
- ZX - Due to sample matrix effects, the surrogate recovery was outside the acceptance limits.

Laboratory Reporting Conventions:

- DET - Analyte DETECTED at or above the Reporting Limit. Qualitative Analyses only.
- ND - Analyte NOT DETECTED at or above the reporting limit (MDL or MRL, as appropriate).
- NR/NA - Not Reported / Not Available
- dry - Sample results reported on a Dry Weight Basis. Results and Reporting Limits have been corrected for Percent Dry Weight.
- wet - Sample results and reporting limits reported on a Wet Weight Basis (as received). Results with neither 'wet' nor 'dry' are reported on a Wet Weight Basis.
- RPD - RELATIVE PERCENT DIFFERENCE (RPDs calculated using Results, not Percent Recoveries).
- MRL - METHOD REPORTING LIMIT. Reporting Level at, or above, the lowest level standard of the Calibration Table.
- MDL* - METHOD DETECTION LIMIT. Reporting Level at, or above, the statistically derived limit based on 40CFR, Part 136, Appendix B. *MDLs are listed on the report only if the data has been evaluated below the MRL. Results between the MDL and MRL are reported as Estimated Results.
- Dil - Dilutions are calculated based on deviations from the standard dilution performed for an analysis, and may not represent the dilution found on the analytical raw data.
- Reporting Limits - Reporting limits (MDLs and MRLs) are adjusted based on variations in sample preparation amounts, analytical dilutions and percent solids, where applicable.
- Electronic Signature - Electronic Signature added in accordance with TestAmerica's *Electronic Reporting and Electronic Signatures Policy*. Application of electronic signature indicates that the report has been reviewed and approved for release by the laboratory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Notes and Definitions

Report Specific Notes:

- C4 - Calibration Verification recovery was below the method control limit for this analyte.
- I - Internal Standard recovery was outside of method limits. Matrix interference was confirmed by reanalysis.
- I2 - Internal Standard recovery was outside of method limits.
- M1 - The MS and/or MSD were above the acceptance limits due to sample matrix interference. See Blank Spike (LCS).
- Q1 - Does not match typical pattern
- Q11 - Detected hydrocarbons in the diesel range do not have a distinct diesel pattern and may be due to heavily weathered diesel.
- Q12 - Detected hydrocarbons in the diesel range do not have a distinct diesel pattern and may be due to heavily weathered diesel or possibly biogenic interference.
- Q3 - The chromatographic pattern is not consistent with diesel fuel.
- Q5 - Results in the diesel organics range are primarily due to overlap from a gasoline range product.
- Q6 - Results in the diesel organics range are primarily due to overlap from a heavy oil range product.
- ZX - Due to sample matrix effects, the surrogate recovery was outside the acceptance limits.

Laboratory Reporting Conventions:

- DET - Analyte DETECTED at or above the Reporting Limit. Qualitative Analyses only.
- ND - Analyte NOT DETECTED at or above the reporting limit (MDL or MRL, as appropriate).
- NR/NA - Not Reported / Not Available
- dry - Sample results reported on a Dry Weight Basis. Results and Reporting Limits have been corrected for Percent Dry Weight.
- wet - Sample results and reporting limits reported on a Wet Weight Basis (as received). Results with neither 'wet' nor 'dry' are reported on a Wet Weight Basis.
- RPD - RELATIVE PERCENT DIFFERENCE (RPDs calculated using Results, not Percent Recoveries).
- MRL - METHOD REPORTING LIMIT. Reporting Level at, or above, the lowest level standard of the Calibration Table.
- MDL* - METHOD DETECTION LIMIT. Reporting Level at, or above, the statistically derived limit based on 40CFR, Part 136, Appendix B. *MDLs are listed on the report only if the data has been evaluated below the MRL. Results between the MDL and MRL are reported as Estimated Results.
- Dil - Dilutions are calculated based on deviations from the standard dilution performed for an analysis, and may not represent the dilution found on the analytical raw data.
- Reporting Limits - Reporting limits (MDLs and MRLs) are adjusted based on variations in sample preparation amounts, analytical dilutions and percent solids, where applicable.
- Electronic Signature - Electronic Signature added in accordance with TestAmerica's *Electronic Reporting and Electronic Signatures Policy*. Application of electronic signature indicates that the report has been reviewed and approved for release by the laboratory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Notes and Definitions

Report Specific Notes:

- I2 - Internal Standard recovery was outside of method limits.
- M1 - The MS and/or MSD were above the acceptance limits due to sample matrix interference. See Blank Spike (LCS).
- P13 - The sample/solvent ratio was not in accordance with the stated method and may not allow for complete extraction of volatile organics from the soil/solid matrix. Because of this, the reported sample results may be substantially biased low.
- Q1 - Does not match typical pattern
- Q3 - The chromatographic pattern is not consistent with diesel fuel.
- Q6 - Results in the diesel organics range are primarily due to overlap from a heavy oil range product.
- QP - Hydrocarbon result partly due to individual peak(s) in quantitation range.
- R3 - The RPD exceeded the acceptance limit due to sample matrix effects.
- R4 - Due to the low levels of analyte in the sample, the duplicate RPD calculation does not provide useful information.
- ZX - Due to sample matrix effects, the surrogate recovery was outside the acceptance limits.

Laboratory Reporting Conventions:

- DET - Analyte DETECTED at or above the Reporting Limit. Qualitative Analyses only.
- ND - Analyte NOT DETECTED at or above the reporting limit (MDL or MRL, as appropriate).
- NR/NA - Not Reported / Not Available
- dry - Sample results reported on a Dry Weight Basis. Results and Reporting Limits have been corrected for Percent Dry Weight.
- wet - Sample results and reporting limits reported on a Wet Weight Basis (as received). Results with neither 'wet' nor 'dry' are reported on a Wet Weight Basis.
- RPD - RELATIVE PERCENT DIFFERENCE (RPDs calculated using Results, not Percent Recoveries).
- MRL - METHOD REPORTING LIMIT. Reporting Level at, or above, the lowest level standard of the Calibration Table.
- MDL* - METHOD DETECTION LIMIT. Reporting Level at, or above, the statistically derived limit based on 40CFR, Part 136, Appendix B. *MDLs are listed on the report only if the data has been evaluated below the MRL. Results between the MDL and MRL are reported as Estimated Results.
- Dil - Dilutions are calculated based on deviations from the standard dilution performed for an analysis, and may not represent the dilution found on the analytical raw data.
- Reporting Limits - Reporting limits (MDLs and MRLs) are adjusted based on variations in sample preparation amounts, analytical dilutions and percent solids, where applicable.
- Electronic Signature - Electronic Signature added in accordance with TestAmerica's *Electronic Reporting and Electronic Signatures Policy*. Application of electronic signature indicates that the report has been reviewed and approved for release by the laboratory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

CERTIFICATION SUMMARY

TestAmerica Seattle

Method	Matrix	Nelac	Washington
BSOPSPL003R08	Soil		
EPA 6020	Soil	X	X
EPA 8260B	Soil	X	X
NWTPH-Dx	Soil		X
NWTPH-Gx	Soil		X

Any abnormalities or departures from sample acceptance policy shall be documented on the 'Sample Receipt and Temperature Log Form' and 'Sample Non-conformance Form' (if applicable) included with this report.

For information concerning certifications of this facility or another TestAmerica facility, please visit our website at www.TestAmericaInc.com

Samples collected by TestAmerica Field Services personnel are noted on the Chain of Custody (COC) .

Notes and Definitions

Report Specific Notes:

- C - Calibration Verification recovery was above the method control limit for this analyte. Analyte not detected, data not impacted.
- C8 - Calibration Verification recovery was above the method control limit for this analyte. A high bias may be indicated.
- I - Internal Standard recovery was outside of method limits. Matrix interference was confirmed by reanalysis.
- I2 - Internal Standard recovery was outside of method limits.
- Q3 - The chromatographic pattern is not consistent with diesel fuel.
- R4 - Due to the low levels of analyte in the sample, the duplicate RPD calculation does not provide useful information.
- ZX - Due to sample matrix effects, the surrogate recovery was outside the acceptance limits.

Laboratory Reporting Conventions:

- DET - Analyte DETECTED at or above the Reporting Limit. Qualitative Analyses only.
- ND - Analyte NOT DETECTED at or above the reporting limit (MDL or MRL, as appropriate).
- NR/NA - Not Reported / Not Available
- dry - Sample results reported on a Dry Weight Basis. Results and Reporting Limits have been corrected for Percent Dry Weight.
- wet - Sample results and reporting limits reported on a Wet Weight Basis (as received). Results with neither 'wet' nor 'dry' are reported on a Wet Weight Basis.
- RPD - RELATIVE PERCENT DIFFERENCE (RPDs calculated using Results, not Percent Recoveries).
- MRL - METHOD REPORTING LIMIT. Reporting Level at, or above, the lowest level standard of the Calibration Table.
- MDL* - METHOD DETECTION LIMIT. Reporting Level at, or above, the statistically derived limit based on 40CFR, Part 136, Appendix B. *MDLs are listed on the report only if the data has been evaluated below the MRL. Results between the MDL and MRL are reported as Estimated Results.
- Dil - Dilutions are calculated based on deviations from the standard dilution performed for an analysis, and may not represent the dilution found on the analytical raw data.
- Reporting Limits - Reporting limits (MDLs and MRLs) are adjusted based on variations in sample preparation amounts, analytical dilutions and percent solids, where applicable.
- Electronic Signature - Electronic Signature added in accordance with TestAmerica's *Electronic Reporting and Electronic Signatures Policy*. Application of electronic signature indicates that the report has been reviewed and approved for release by the laboratory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Notes and Definitions

Report Specific Notes:

- A-01 - Internal Standard and/or surrogate was outside method control limits biasing results high. Reported analytes ND; data not affected.
- C - Calibration Verification recovery was above the method control limit for this analyte. Analyte not detected, data not impacted.
- C8 - Calibration Verification recovery was above the method control limit for this analyte. A high bias may be indicated.
- I2 - Internal Standard recovery was outside of method limits.
- Q6 - Results in the diesel organics range are primarily due to overlap from a heavy oil range product.
- R3 - The RPD exceeded the acceptance limit due to sample matrix effects.
- R4 - Due to the low levels of analyte in the sample, the duplicate RPD calculation does not provide useful information.
- Z1 - Surrogate recovery was above acceptance limits.
- Z2 - Surrogate recovery was above the acceptance limits. Data not impacted.

Laboratory Reporting Conventions:

- DET - Analyte DETECTED at or above the Reporting Limit. Qualitative Analyses only.
- ND - Analyte NOT DETECTED at or above the reporting limit (MDL or MRL, as appropriate).
- NR/NA - Not Reported / Not Available
- dry - Sample results reported on a Dry Weight Basis. Results and Reporting Limits have been corrected for Percent Dry Weight.
- wet - Sample results and reporting limits reported on a Wet Weight Basis (as received). Results with neither 'wet' nor 'dry' are reported on a Wet Weight Basis.
- RPD - RELATIVE PERCENT DIFFERENCE (RPDs calculated using Results, not Percent Recoveries).
- MRL - METHOD REPORTING LIMIT. Reporting Level at, or above, the lowest level standard of the Calibration Table.
- MDL* - METHOD DETECTION LIMIT. Reporting Level at, or above, the statistically derived limit based on 40CFR, Part 136, Appendix B. *MDLs are listed on the report only if the data has been evaluated below the MRL. Results between the MDL and MRL are reported as Estimated Results.
- Dil - Dilutions are calculated based on deviations from the standard dilution performed for an analysis, and may not represent the dilution found on the analytical raw data.
- Reporting Limits - Reporting limits (MDLs and MRLs) are adjusted based on variations in sample preparation amounts, analytical dilutions and percent solids, where applicable.
- Electronic Signature - Electronic Signature added in accordance with TestAmerica's *Electronic Reporting and Electronic Signatures Policy*. Application of electronic signature indicates that the report has been reviewed and approved for release by the laboratory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Notes and Definitions

Report Specific Notes:

- C - Calibration Verification recovery was above the method control limit for this analyte. Analyte not detected, data not impacted.
- C8 - Calibration Verification recovery was above the method control limit for this analyte. A high bias may be indicated.
- I2 - Internal Standard recovery was outside of method limits.
- R3 - The RPD exceeded the acceptance limit due to sample matrix effects.

Laboratory Reporting Conventions:

- DET - Analyte DETECTED at or above the Reporting Limit. Qualitative Analyses only.
- ND - Analyte NOT DETECTED at or above the reporting limit (MDL or MRL, as appropriate).
- NR/NA - Not Reported / Not Available
- dry - Sample results reported on a Dry Weight Basis. Results and Reporting Limits have been corrected for Percent Dry Weight.
- wet - Sample results and reporting limits reported on a Wet Weight Basis (as received). Results with neither 'wet' nor 'dry' are reported on a Wet Weight Basis.
- RPD - RELATIVE PERCENT DIFFERENCE (RPDs calculated using Results, not Percent Recoveries).
- MRL - METHOD REPORTING LIMIT. Reporting Level at, or above, the lowest level standard of the Calibration Table.
- MDL* - METHOD DETECTION LIMIT. Reporting Level at, or above, the statistically derived limit based on 40CFR, Part 136, Appendix B. *MDLs are listed on the report only if the data has been evaluated below the MRL. Results between the MDL and MRL are reported as Estimated Results.
- Dil - Dilutions are calculated based on deviations from the standard dilution performed for an analysis, and may not represent the dilution found on the analytical raw data.
- Reporting Limits - Reporting limits (MDLs and MRLs) are adjusted based on variations in sample preparation amounts, analytical dilutions and percent solids, where applicable.
- Electronic Signature - Electronic Signature added in accordance with TestAmerica's *Electronic Reporting and Electronic Signatures Policy*. Application of electronic signature indicates that the report has been reviewed and approved for release by the laboratory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Report Created:

04/02/09 17:02

Notes and Definitions

Report Specific Notes:

- A-01 - Only analytes without detections will be reported with additional A-01 qualifier: Internal Standard and/or surrogate was outside method control limits biasing results high. Reported analytes ND; data not affected.
- C - Calibration Verification recovery was above the method control limit for this analyte. Analyte not detected, data not impacted.
- C8 - Calibration Verification recovery was above the method control limit for this analyte. A high bias may be indicated.
- I2 - Internal Standard recovery was outside of method limits.
- M1 - The MS and/or MSD were above the acceptance limits due to sample matrix interference. See Blank Spike (LCS).
- P13 - The sample/solvent ratio was not in accordance with the stated method and may not allow for complete extraction of volatile organics from the soil/solid matrix. Because of this, the reported sample results may be substantially biased low.
- Q6 - Results in the diesel organics range are primarily due to overlap from a heavy oil range product.
- QP - Hydrocarbon result partly due to individual peak(s) in quantitation range.
- R4 - Due to the low levels of analyte in the sample, the duplicate RPD calculation does not provide useful information.
- Z1 - Surrogate recovery was above acceptance limits.
- ZX - Due to sample matrix effects, the surrogate recovery was outside the acceptance limits.

Laboratory Reporting Conventions:

- DET - Analyte DETECTED at or above the Reporting Limit. Qualitative Analyses only.
- ND - Analyte NOT DETECTED at or above the reporting limit (MDL or MRL, as appropriate).
- NR/NA - Not Reported / Not Available
- dry - Sample results reported on a Dry Weight Basis. Results and Reporting Limits have been corrected for Percent Dry Weight.
- wet - Sample results and reporting limits reported on a Wet Weight Basis (as received). Results with neither 'wet' nor 'dry' are reported on a Wet Weight Basis.
- RPD - RELATIVE PERCENT DIFFERENCE (RPDs calculated using Results, not Percent Recoveries).
- MRL - METHOD REPORTING LIMIT. Reporting Level at, or above, the lowest level standard of the Calibration Table.
- MDL* - METHOD DETECTION LIMIT. Reporting Level at, or above, the statistically derived limit based on 40CFR, Part 136, Appendix B. *MDLs are listed on the report only if the data has been evaluated below the MRL. Results between the MDL and MRL are reported as Estimated Results.
- Dil - Dilutions are calculated based on deviations from the standard dilution performed for an analysis, and may not represent the dilution found on the analytical raw data.
- Reporting Limits - Reporting limits (MDLs and MRLs) are adjusted based on variations in sample preparation amounts, analytical dilutions and percent solids, where applicable.
- Electronic Signature - Electronic Signature added in accordance with TestAmerica's *Electronic Reporting and Electronic Signatures Policy*. Application of electronic signature indicates that the report has been reviewed and approved for release by the laboratory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Notes and Definitions

Report Specific Notes:

- C5 - Calibration Verification recovery was below the method control limit for this analyte. An additional check standard was analyzed at the reporting limit to ensure instrument sensitivity at the reporting limit. Samples ND.
- M1 - The MS and/or MSD were above the acceptance limits due to sample matrix interference. See Blank Spike (LCS).

Laboratory Reporting Conventions:

- DET - Analyte DETECTED at or above the Reporting Limit. Qualitative Analyses only.
- ND - Analyte NOT DETECTED at or above the reporting limit (MDL or MRL, as appropriate).
- NR/NA - Not Reported / Not Available
- dry - Sample results reported on a Dry Weight Basis. Results and Reporting Limits have been corrected for Percent Dry Weight.
- wet - Sample results and reporting limits reported on a Wet Weight Basis (as received). Results with neither 'wet' nor 'dry' are reported on a Wet Weight Basis.
- RPD - RELATIVE PERCENT DIFFERENCE (RPDs calculated using Results, not Percent Recoveries).
- MRL - METHOD REPORTING LIMIT. Reporting Level at, or above, the lowest level standard of the Calibration Table.
- MDL* - METHOD DETECTION LIMIT. Reporting Level at, or above, the statistically derived limit based on 40CFR, Part 136, Appendix B. *MDLs are listed on the report only if the data has been evaluated below the MRL. Results between the MDL and MRL are reported as Estimated Results.
- Dil - Dilutions are calculated based on deviations from the standard dilution performed for an analysis, and may not represent the dilution found on the analytical raw data.
- Reporting Limits - Reporting limits (MDLs and MRLs) are adjusted based on variations in sample preparation amounts, analytical dilutions and percent solids, where applicable.
- Electronic Signature - Electronic Signature added in accordance with TestAmerica's *Electronic Reporting and Electronic Signatures Policy*. Application of electronic signature indicates that the report has been reviewed and approved for release by the laboratory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Notes and Definitions

Report Specific Notes:

- I2 - Internal Standard recovery was outside of method limits.
- J - Estimated value. Analyte detected at a level less than the Reporting Limit (RL) and greater than or equal to the Method Detection Limit (MDL). The user of this data should be aware that this data is of limited reliability.
- MHA - Due to high levels of analyte in the sample, the MS/MSD calculation does not provide useful spike recovery information. See Blank Spike (LCS).
- Q1 - Does not match typical pattern
- Q3 - The chromatographic pattern is not consistent with diesel fuel.
- Q6 - Results in the diesel organics range are primarily due to overlap from a heavy oil range product.
- R3 - The RPD exceeded the acceptance limit due to sample matrix effects.
- ZX - Due to sample matrix effects, the surrogate recovery was outside the acceptance limits.

Laboratory Reporting Conventions:

- DET - Analyte DETECTED at or above the Reporting Limit. Qualitative Analyses only.
- ND - Analyte NOT DETECTED at or above the reporting limit (MDL or MRL, as appropriate).
- NR/NA - Not Reported / Not Available
- dry - Sample results reported on a Dry Weight Basis. Results and Reporting Limits have been corrected for Percent Dry Weight.
- wet - Sample results and reporting limits reported on a Wet Weight Basis (as received). Results with neither 'wet' nor 'dry' are reported on a Wet Weight Basis.
- RPD - RELATIVE PERCENT DIFFERENCE (RPDs calculated using Results, not Percent Recoveries).
- MRL - METHOD REPORTING LIMIT. Reporting Level at, or above, the lowest level standard of the Calibration Table.
- MDL* - METHOD DETECTION LIMIT. Reporting Level at, or above, the statistically derived limit based on 40CFR, Part 136, Appendix B. *MDLs are listed on the report only if the data has been evaluated below the MRL. Results between the MDL and MRL are reported as Estimated Results.
- Dil - Dilutions are calculated based on deviations from the standard dilution performed for an analysis, and may not represent the dilution found on the analytical raw data.
- Reporting Limits - Reporting limits (MDLs and MRLs) are adjusted based on variations in sample preparation amounts, analytical dilutions and percent solids, where applicable.
- Electronic Signature - Electronic Signature added in accordance with TestAmerica's *Electronic Reporting and Electronic Signatures Policy*. Application of electronic signature indicates that the report has been reviewed and approved for release by the laboratory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Analytical Case Narrative

TestAmerica - Seattle, WA

BSD0053

SAMPLE RECEIPT

The samples were received 04/03/2009 by TestAmerica - Seattle. The temperature of the samples at the time of receipt was 2.1 degrees Celsius. For samples Area2-A7-8, Area2-A8-14 and Area2-A9-14, there were no sampled times listed on the sample containers. The labels for samples Area1-K8-14 and Area1-K7-14 listed Area2, not Area1 on the sample containers. All samples were logged in according to the COC document.

PREPARATIONS AND ANALYSIS

No additional anomalies, discrepancies, or issues were associated with sample preparation, analysis and quality control other than those already qualified in the data and described in the Notes and Definitions page at the end of the report.

TestAmerica Seattle

Kate Haney, Project Manager

Notes and Definitions

Report Specific Notes:

- C5 - Calibration Verification recovery was below the method control limit for this analyte. An additional check standard was analyzed at the reporting limit to ensure instrument sensitivity at the reporting limit. Samples ND.
- I2 - Internal Standard recovery was outside of method limits.
- J - Estimated value. Analyte detected at a level less than the Reporting Limit (RL) and greater than or equal to the Method Detection Limit (MDL). The user of this data should be aware that this data is of limited reliability.
- M1 - The MS and/or MSD were above the acceptance limits due to sample matrix interference. See Blank Spike (LCS).
- Q1 - Does not match typical pattern
- Q6 - Results in the diesel organics range are primarily due to overlap from a heavy oil range product.
- R3 - The RPD exceeded the acceptance limit due to sample matrix effects.
- R4 - Due to the low levels of analyte in the sample, the duplicate RPD calculation does not provide useful information.
- Z1 - Surrogate recovery was above acceptance limits.
- Z2 - Surrogate recovery was above the acceptance limits. Data not impacted.
- ZX - Due to sample matrix effects, the surrogate recovery was outside the acceptance limits.

Laboratory Reporting Conventions:

- DET - Analyte DETECTED at or above the Reporting Limit. Qualitative Analyses only.
- ND - Analyte NOT DETECTED at or above the reporting limit (MDL or MRL, as appropriate).
- NR/NA - Not Reported / Not Available
- dry - Sample results reported on a Dry Weight Basis. Results and Reporting Limits have been corrected for Percent Dry Weight.
- wet - Sample results and reporting limits reported on a Wet Weight Basis (as received). Results with neither 'wet' nor 'dry' are reported on a Wet Weight Basis.
- RPD - RELATIVE PERCENT DIFFERENCE (RPDs calculated using Results, not Percent Recoveries).
- MRL - METHOD REPORTING LIMIT. Reporting Level at, or above, the lowest level standard of the Calibration Table.
- MDL* - METHOD DETECTION LIMIT. Reporting Level at, or above, the statistically derived limit based on 40CFR, Part 136, Appendix B. *MDLs are listed on the report only if the data has been evaluated below the MRL. Results between the MDL and MRL are reported as Estimated Results.
- Dil - Dilutions are calculated based on deviations from the standard dilution performed for an analysis, and may not represent the dilution found on the analytical raw data.
- Reporting Limits - Reporting limits (MDLs and MRLs) are adjusted based on variations in sample preparation amounts, analytical dilutions and percent solids, where applicable.
- Electronic Signature - Electronic Signature added in accordance with TestAmerica's *Electronic Reporting and Electronic Signatures Policy*. Application of electronic signature indicates that the report has been reviewed and approved for release by the laboratory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Notes and Definitions

Report Specific Notes:

- C5 - Calibration Verification recovery was below the method control limit for this analyte. An additional check standard was analyzed at the reporting limit to ensure instrument sensitivity at the reporting limit. Samples ND.
- M1 - The MS and/or MSD were above the acceptance limits due to sample matrix interference. See Blank Spike (LCS).
- M2 - The MS and/or MSD were below the acceptance limits due to sample matrix interference. See Blank Spike (LCS).
- MHA - Due to high levels of analyte in the sample, the MS/MSD calculation does not provide useful spike recovery information. See Blank Spike (LCS).
- ZX - Due to sample matrix effects, the surrogate recovery was outside the acceptance limits.

Laboratory Reporting Conventions:

- DET - Analyte DETECTED at or above the Reporting Limit. Qualitative Analyses only.
- ND - Analyte NOT DETECTED at or above the reporting limit (MDL or MRL, as appropriate).
- NR/NA - Not Reported / Not Available
- dry - Sample results reported on a Dry Weight Basis. Results and Reporting Limits have been corrected for Percent Dry Weight.
- wet - Sample results and reporting limits reported on a Wet Weight Basis (as received). Results with neither 'wet' nor 'dry' are reported on a Wet Weight Basis.
- RPD - RELATIVE PERCENT DIFFERENCE (RPDs calculated using Results, not Percent Recoveries).
- MRL - METHOD REPORTING LIMIT. Reporting Level at, or above, the lowest level standard of the Calibration Table.
- MDL* - METHOD DETECTION LIMIT. Reporting Level at, or above, the statistically derived limit based on 40CFR, Part 136, Appendix B. *MDLs are listed on the report only if the data has been evaluated below the MRL. Results between the MDL and MRL are reported as Estimated Results.
- Dil - Dilutions are calculated based on deviations from the standard dilution performed for an analysis, and may not represent the dilution found on the analytical raw data.
- Reporting Limits - Reporting limits (MDLs and MRLs) are adjusted based on variations in sample preparation amounts, analytical dilutions and percent solids, where applicable.
- Electronic Signature - Electronic Signature added in accordance with TestAmerica's *Electronic Reporting and Electronic Signatures Policy*. Application of electronic signature indicates that the report has been reviewed and approved for release by the laboratory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Report Created:

04/07/09 16:59

Notes and Definitions

Report Specific Notes:

- C5 - Calibration Verification recovery was below the method control limit for this analyte. An additional check standard was analyzed at the reporting limit to ensure instrument sensitivity at the reporting limit. Samples ND.
- I2 - Internal Standard recovery was outside of method limits.
- M1 - The MS and/or MSD were above the acceptance limits due to sample matrix interference. See Blank Spike (LCS).
- MNR1 - There was no MS/MSD analyzed with this batch due to insufficient sample volume. See Blank Spike/Blank Spike Duplicate.
- P13 - The sample/solvent ratio was not in accordance with the stated method and may not allow for complete extraction of volatile organics from the soil/solid matrix. Because of this, the reported sample results may be substantially biased low.
- Q5 - Results in the diesel organics range are primarily due to overlap from a gasoline range product.
- QP - Hydrocarbon result partly due to individual peak(s) in quantitation range.
- R4 - Due to the low levels of analyte in the sample, the duplicate RPD calculation does not provide useful information.
- ZX - Due to sample matrix effects, the surrogate recovery was outside the acceptance limits.

Laboratory Reporting Conventions:

- DET - Analyte DETECTED at or above the Reporting Limit. Qualitative Analyses only.
- ND - Analyte NOT DETECTED at or above the reporting limit (MDL or MRL, as appropriate).
- NR/NA - Not Reported / Not Available
- dry - Sample results reported on a Dry Weight Basis. Results and Reporting Limits have been corrected for Percent Dry Weight.
- wet - Sample results and reporting limits reported on a Wet Weight Basis (as received). Results with neither 'wet' nor 'dry' are reported on a Wet Weight Basis.
- RPD - RELATIVE PERCENT DIFFERENCE (RPDs calculated using Results, not Percent Recoveries).
- MRL - METHOD REPORTING LIMIT. Reporting Level at, or above, the lowest level standard of the Calibration Table.
- MDL* - METHOD DETECTION LIMIT. Reporting Level at, or above, the statistically derived limit based on 40CFR, Part 136, Appendix B. *MDLs are listed on the report only if the data has been evaluated below the MRL. Results between the MDL and MRL are reported as Estimated Results.
- Dil - Dilutions are calculated based on deviations from the standard dilution performed for an analysis, and may not represent the dilution found on the analytical raw data.
- Reporting Limits - Reporting limits (MDLs and MRLs) are adjusted based on variations in sample preparation amounts, analytical dilutions and percent solids, where applicable.
- Electronic Signature - Electronic Signature added in accordance with TestAmerica's *Electronic Reporting and Electronic Signatures Policy*. Application of electronic signature indicates that the report has been reviewed and approved for release by the laboratory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

RE: WMCP Phase 2

Enclosed are the results of analyses for samples received by the laboratory on 04/07/09 16:00.
The following list is a summary of the Work Orders contained in this report, generated on 04/08/09
16:37.

If you have any questions concerning this report, please feel free to contact me.

<u>Work Order</u>	<u>Project</u>	<u>ProjectNumber</u>
BSD0078	WMCP Phase 2	33759381

TestAmerica Seattle

Curtis D. Armstrong For Kate Haney, Project Manager

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report shall not be reproduced except in full, without the written approval of the laboratory.

Notes and Definitions

Report Specific Notes:

- A-01 - Additional methanol was added at the bench level due to sample matrix absorption.
- A-01a - Results in the kerosene range are primarily due to overlap from a heavy oil range product.
- A-01b - Sample was extracted by laboratory.
- C4 - Calibration Verification recovery was below the method control limit for this analyte.
- I2 - Internal Standard recovery was outside of method limits.
- M1 - The MS and/or MSD were above the acceptance limits due to sample matrix interference. See Blank Spike (LCS).
- MNR1 - There was no MS/MSD analyzed with this batch due to insufficient sample volume. See Blank Spike/Blank Spike Duplicate.
- P13 - The sample/solvent ratio was not in accordance with the stated method and may not allow for complete extraction of volatile organics from the soil/solid matrix. Because of this, the reported sample results may be substantially biased low.
- Q1 - Does not match typical pattern
- Q6 - Results in the diesel organics range are primarily due to overlap from a heavy oil range product.
- QP - Hydrocarbon result partly due to individual peak(s) in quantitation range.
- R4 - Due to the low levels of analyte in the sample, the duplicate RPD calculation does not provide useful information.
- ZX - Due to sample matrix effects, the surrogate recovery was outside the acceptance limits.

Laboratory Reporting Conventions:

- DET - Analyte DETECTED at or above the Reporting Limit. Qualitative Analyses only.
- ND - Analyte NOT DETECTED at or above the reporting limit (MDL or MRL, as appropriate).
- NR/NA - Not Reported / Not Available
- dry - Sample results reported on a Dry Weight Basis. Results and Reporting Limits have been corrected for Percent Dry Weight.
- wet - Sample results and reporting limits reported on a Wet Weight Basis (as received). Results with neither 'wet' nor 'dry' are reported on a Wet Weight Basis.
- RPD - RELATIVE PERCENT DIFFERENCE (RPDs calculated using Results, not Percent Recoveries).
- MRL - METHOD REPORTING LIMIT. Reporting Level at, or above, the lowest level standard of the Calibration Table.
- MDL* - METHOD DETECTION LIMIT. Reporting Level at, or above, the statistically derived limit based on 40CFR, Part 136, Appendix B. *MDLs are listed on the report only if the data has been evaluated below the MRL. Results between the MDL and MRL are reported as Estimated Results.
- Dil - Dilutions are calculated based on deviations from the standard dilution performed for an analysis, and may not represent the dilution found on the analytical raw data.
- Reporting Limits - Reporting limits (MDLs and MRLs) are adjusted based on variations in sample preparation amounts, analytical dilutions and percent solids, where applicable.
- Electronic Signature - Electronic Signature added in accordance with TestAmerica's *Electronic Reporting and Electronic Signatures Policy*. Application of electronic signature indicates that the report has been reviewed and approved for release by the laboratory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Report Created:

04/23/09 15:57

Notes and Definitions

Report Specific Notes:

- A-01 - Results in the kerosene range are primarily due to overlap from heavy oil range product.
- A-01a - The hydrocarbons present are a complex mixture of multiple heavy oil range products.
- C4 - Calibration Verification recovery was below the method control limit for this analyte.
- I2 - Internal Standard recovery was outside of method limits.
- J - Estimated value. Analyte detected at a level less than the Reporting Limit (RL) and greater than or equal to the Method Detection Limit (MDL). The user of this data should be aware that this data is of limited reliability.
- L2 - Laboratory Control Sample and/or Laboratory Control Sample Duplicate recovery was below acceptance limits.
- M1 - The MS and/or MSD were above the acceptance limits due to sample matrix interference. See Blank Spike (LCS).
- MNR1 - There was no MS/MSD analyzed with this batch due to insufficient sample volume. See Blank Spike/Blank Spike Duplicate.
- P13 - The sample/solvent ratio was not in accordance with the stated method and may not allow for complete extraction of volatile organics from the soil/solid matrix. Because of this, the reported sample results may be substantially biased low.
- Q1 - Does not match typical pattern
- Q6 - Results in the diesel organics range are primarily due to overlap from a heavy oil range product.
- R4 - Due to the low levels of analyte in the sample, the duplicate RPD calculation does not provide useful information.
- Z1 - Surrogate recovery was above acceptance limits.
- Z2 - Surrogate recovery was above the acceptance limits. Data not impacted.
- ZX - Due to sample matrix effects, the surrogate recovery was outside the acceptance limits.

Laboratory Reporting Conventions:

- DET - Analyte DETECTED at or above the Reporting Limit. Qualitative Analyses only.
- ND - Analyte NOT DETECTED at or above the reporting limit (MDL or MRL, as appropriate).
- NR/NA - Not Reported / Not Available
- dry - Sample results reported on a Dry Weight Basis. Results and Reporting Limits have been corrected for Percent Dry Weight.
- wet - Sample results and reporting limits reported on a Wet Weight Basis (as received). Results with neither 'wet' nor 'dry' are reported on a Wet Weight Basis.
- RPD - RELATIVE PERCENT DIFFERENCE (RPDs calculated using Results, not Percent Recoveries).
- MRL - METHOD REPORTING LIMIT. Reporting Level at, or above, the lowest level standard of the Calibration Table.
- MDL* - METHOD DETECTION LIMIT. Reporting Level at, or above, the statistically derived limit based on 40CFR, Part 136, Appendix B. *MDLs are listed on the report only if the data has been evaluated below the MRL. Results between the MDL and MRL are reported as Estimated Results.
- Dil - Dilutions are calculated based on deviations from the standard dilution performed for an analysis, and may not represent the dilution found on the analytical raw data.
- Reporting Limits - Reporting limits (MDLs and MRLs) are adjusted based on variations in sample preparation amounts, analytical dilutions and percent solids, where applicable.

Notes and Definitions

Report Specific Notes:

- I2 - Internal Standard recovery was outside of method limits.
- J - Estimated value. Analyte detected at a level less than the Reporting Limit (RL) and greater than or equal to the Method Detection Limit (MDL). The user of this data should be aware that this data is of limited reliability.
- L2 - Laboratory Control Sample and/or Laboratory Control Sample Duplicate recovery was below acceptance limits.
- M1 - The MS and/or MSD were above the acceptance limits due to sample matrix interference. See Blank Spike (LCS).
- M2 - The MS and/or MSD were below the acceptance limits due to sample matrix interference. See Blank Spike (LCS).
- Q1 - Does not match typical pattern
- Q6 - Results in the diesel organics range are primarily due to overlap from a heavy oil range product.
- Z1 - Surrogate recovery was above acceptance limits.
- ZX - Due to sample matrix effects, the surrogate recovery was outside the acceptance limits.

Laboratory Reporting Conventions:

- DET - Analyte DETECTED at or above the Reporting Limit. Qualitative Analyses only.
- ND - Analyte NOT DETECTED at or above the reporting limit (MDL or MRL, as appropriate).
- NR/NA - Not Reported / Not Available
- dry - Sample results reported on a Dry Weight Basis. Results and Reporting Limits have been corrected for Percent Dry Weight.
- wet - Sample results and reporting limits reported on a Wet Weight Basis (as received). Results with neither 'wet' nor 'dry' are reported on a Wet Weight Basis.
- RPD - RELATIVE PERCENT DIFFERENCE (RPDs calculated using Results, not Percent Recoveries).
- MRL - METHOD REPORTING LIMIT. Reporting Level at, or above, the lowest level standard of the Calibration Table.
- MDL* - METHOD DETECTION LIMIT. Reporting Level at, or above, the statistically derived limit based on 40CFR, Part 136, Appendix B. *MDLs are listed on the report only if the data has been evaluated below the MRL. Results between the MDL and MRL are reported as Estimated Results.
- Dil - Dilutions are calculated based on deviations from the standard dilution performed for an analysis, and may not represent the dilution found on the analytical raw data.
- Reporting Limits - Reporting limits (MDLs and MRLs) are adjusted based on variations in sample preparation amounts, analytical dilutions and percent solids, where applicable.
- Electronic Signature - Electronic Signature added in accordance with TestAmerica's *Electronic Reporting and Electronic Signatures Policy*. Application of electronic signature indicates that the report has been reviewed and approved for release by the laboratory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Notes and Definitions

Report Specific Notes:

- A-01 - Results in the kerosene range are primarily due to overlap from a heavy oil range product.
- A-01a - Sample was extracted into methanol within 48 hours at the laboratory.
- I2 - Internal Standard recovery was outside of method limits.
- J - Estimated value. Analyte detected at a level less than the Reporting Limit (RL) and greater than or equal to the Method Detection Limit (MDL). The user of this data should be aware that this data is of limited reliability.
- M1 - The MS and/or MSD were above the acceptance limits due to sample matrix interference. See Blank Spike (LCS).
- P13 - The sample/solvent ratio was not in accordance with the stated method and may not allow for complete extraction of volatile organics from the soil/solid matrix. Because of this, the reported sample results may be substantially biased low.
- Q1 - Does not match typical pattern
- Q6 - Results in the diesel organics range are primarily due to overlap from a heavy oil range product.
- QP - Hydrocarbon result partly due to individual peak(s) in quantitation range.
- R3 - The RPD exceeded the acceptance limit due to sample matrix effects.
- Z - Due to sample matrix effects, the surrogate recovery was below the acceptance limits.
- Z1 - Surrogate recovery was above acceptance limits.
- ZX - Due to sample matrix effects, the surrogate recovery was outside the acceptance limits.

Laboratory Reporting Conventions:

- DET - Analyte DETECTED at or above the Reporting Limit. Qualitative Analyses only.
- ND - Analyte NOT DETECTED at or above the reporting limit (MDL or MRL, as appropriate).
- NR/NA - Not Reported / Not Available
- dry - Sample results reported on a Dry Weight Basis. Results and Reporting Limits have been corrected for Percent Dry Weight.
- wet - Sample results and reporting limits reported on a Wet Weight Basis (as received). Results with neither 'wet' nor 'dry' are reported on a Wet Weight Basis.
- RPD - RELATIVE PERCENT DIFFERENCE (RPDs calculated using Results, not Percent Recoveries).
- MRL - METHOD REPORTING LIMIT. Reporting Level at, or above, the lowest level standard of the Calibration Table.
- MDL* - METHOD DETECTION LIMIT. Reporting Level at, or above, the statistically derived limit based on 40CFR, Part 136, Appendix B. *MDLs are listed on the report only if the data has been evaluated below the MRL. Results between the MDL and MRL are reported as Estimated Results.
- Dil - Dilutions are calculated based on deviations from the standard dilution performed for an analysis, and may not represent the dilution found on the analytical raw data.
- Reporting Limits - Reporting limits (MDLs and MRLs) are adjusted based on variations in sample preparation amounts, analytical dilutions and percent solids, where applicable.
- Electronic Signature - Electronic Signature added in accordance with TestAmerica's *Electronic Reporting and Electronic Signatures Policy*. Application of electronic signature indicates that the report has been reviewed and approved for release by the laboratory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

CERTIFICATION SUMMARY

TestAmerica Seattle

Method	Matrix	Nelac	Washington
BSOPSPL003R08	Soil		
EPA 1311	Soil	N/A	N/A
EPA 6010B	Soil	X	X
EPA 6020	Soil	X	X
EPA 8260B	Soil	X	X
NWTPH-Dx	Soil		X
NWTPH-Gx	Soil		X

Any abnormalities or departures from sample acceptance policy shall be documented on the 'Sample Receipt and Temperature Log Form' and 'Sample Non-conformance Form' (if applicable) included with this report.

For information concerning certifications of this facility or another TestAmerica facility, please visit our website at www.TestAmericaInc.com

Samples collected by TestAmerica Field Services personnel are noted on the Chain of Custody (COC) .

TestAmerica Seattle

Kate Haney, Project Manager

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report shall not be reproduced except in full, without the written approval of the laboratory.

Project Manager: Ty Griffith

Report Created:

08/04/09 08:45

Notes and Definitions

Report Specific Notes:

- A-01 - Results in the kerosene range are primarily due to overlap from a heavy oil range product.
- I2 - Internal Standard recovery was outside of method limits.
- J - Estimated value. Analyte detected at a level less than the Reporting Limit (RL) and greater than or equal to the Method Detection Limit (MDL). The user of this data should be aware that this data is of limited reliability.
- M1 - The MS and/or MSD were above the acceptance limits due to sample matrix interference. See Blank Spike (LCS).
- Q1 - Does not match typical pattern
- Q6 - Results in the diesel organics range are primarily due to overlap from a heavy oil range product.
- QP - Hydrocarbon result partly due to individual peak(s) in quantitation range.
- R4 - Due to the low levels of analyte in the sample, the duplicate RPD calculation does not provide useful information.
- Z - Due to sample matrix effects, the surrogate recovery was below the acceptance limits.
- Z1 - Surrogate recovery was above acceptance limits.
- Z3 - The sample required a dilution due to the nature of the sample matrix. Because of this dilution, the surrogate spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.
- ZX - Due to sample matrix effects, the surrogate recovery was outside the acceptance limits.

Laboratory Reporting Conventions:

- DET - Analyte DETECTED at or above the Reporting Limit. Qualitative Analyses only.
- ND - Analyte NOT DETECTED at or above the reporting limit (MDL or MRL, as appropriate).
- NR/NA - Not Reported / Not Available
- dry - Sample results reported on a Dry Weight Basis. Results and Reporting Limits have been corrected for Percent Dry Weight.
- wet - Sample results and reporting limits reported on a Wet Weight Basis (as received). Results with neither 'wet' nor 'dry' are reported on a Wet Weight Basis.
- RPD - RELATIVE PERCENT DIFFERENCE (RPDs calculated using Results, not Percent Recoveries).
- MRL - METHOD REPORTING LIMIT. Reporting Level at, or above, the lowest level standard of the Calibration Table.
- MDL* - METHOD DETECTION LIMIT. Reporting Level at, or above, the statistically derived limit based on 40CFR, Part 136, Appendix B. *MDLs are listed on the report only if the data has been evaluated below the MRL. Results between the MDL and MRL are reported as Estimated Results.
- Dil - Dilutions are calculated based on deviations from the standard dilution performed for an analysis, and may not represent the dilution found on the analytical raw data.
- Reporting Limits - Reporting limits (MDLs and MRLs) are adjusted based on variations in sample preparation amounts, analytical dilutions and percent solids, where applicable.
- Electronic Signature - Electronic Signature added in accordance with TestAmerica's *Electronic Reporting and Electronic Signatures Policy*. Application of electronic signature indicates that the report has been reviewed and approved for release by the laboratory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Notes and Definitions

Report Specific Notes:

- C - Calibration Verification recovery was above the method control limit for this analyte. Analyte not detected, data not impacted.
- C8 - Calibration Verification recovery was above the method control limit for this analyte. A high bias may be indicated.
- I - Internal Standard recovery was outside of method limits. Matrix interference was confirmed by reanalysis.
- J - Estimated value. Analyte detected at a level less than the Reporting Limit (RL) and greater than or equal to the Method Detection Limit (MDL). The user of this data should be aware that this data is of limited reliability.
- P13 - The sample/solvent ratio was not in accordance with the stated method and may not allow for complete extraction of volatile organics from the soil/solid matrix. Because of this, the reported sample results may be substantially biased low.
- R3 - The RPD exceeded the acceptance limit due to sample matrix effects.
- R4 - Due to the low levels of analyte in the sample, the duplicate RPD calculation does not provide useful information.

Laboratory Reporting Conventions:

- DET - Analyte DETECTED at or above the Reporting Limit. Qualitative Analyses only.
- ND - Analyte NOT DETECTED at or above the reporting limit (MDL or MRL, as appropriate).
- NR/NA - Not Reported / Not Available
- dry - Sample results reported on a Dry Weight Basis. Results and Reporting Limits have been corrected for Percent Dry Weight.
- wet - Sample results and reporting limits reported on a Wet Weight Basis (as received). Results with neither 'wet' nor 'dry' are reported on a Wet Weight Basis.
- RPD - RELATIVE PERCENT DIFFERENCE (RPDs calculated using Results, not Percent Recoveries).
- MRL - METHOD REPORTING LIMIT. Reporting Level at, or above, the lowest level standard of the Calibration Table.
- MDL* - METHOD DETECTION LIMIT. Reporting Level at, or above, the statistically derived limit based on 40CFR, Part 136, Appendix B. *MDLs are listed on the report only if the data has been evaluated below the MRL. Results between the MDL and MRL are reported as Estimated Results.
- Dil - Dilutions are calculated based on deviations from the standard dilution performed for an analysis, and may not represent the dilution found on the analytical raw data.
- Reporting Limits - Reporting limits (MDLs and MRLs) are adjusted based on variations in sample preparation amounts, analytical dilutions and percent solids, where applicable.
- Electronic Signature - Electronic Signature added in accordance with TestAmerica's *Electronic Reporting and Electronic Signatures Policy*. Application of electronic signature indicates that the report has been reviewed and approved for release by the laboratory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Notes and Definitions

Report Specific Notes:

- A-01 - Results in the Kerosene range are primarily due to overlap from a heavy oil range product
- I - Internal Standard recovery was outside of method limits. Matrix interference was confirmed by reanalysis.
- I2 - Internal Standard recovery was outside of method limits.
- J - Estimated value. Analyte detected at a level less than the Reporting Limit (RL) and greater than or equal to the Method Detection Limit (MDL). The user of this data should be aware that this data is of limited reliability.
- M1 - The MS and/or MSD were above the acceptance limits due to sample matrix interference. See Blank Spike (LCS).
- MHA - Due to high levels of analyte in the sample, the MS/MSD calculation does not provide useful spike recovery information. See Blank Spike (LCS).
- P13 - The sample/solvent ratio was not in accordance with the stated method and may not allow for complete extraction of volatile organics from the soil/solid matrix. Because of this, the reported sample results may be substantially biased low.
- Q1 - Does not match typical pattern
- Q6 - Results in the diesel organics range are primarily due to overlap from a heavy oil range product.
- QP - Hydrocarbon result partly due to individual peak(s) in quantitation range.
- R3 - The RPD exceeded the acceptance limit due to sample matrix effects.
- R4 - Due to the low levels of analyte in the sample, the duplicate RPD calculation does not provide useful information.
- Z1 - Surrogate recovery was above acceptance limits.
- ZX - Due to sample matrix effects, the surrogate recovery was outside the acceptance limits.

Laboratory Reporting Conventions:

- DET - Analyte DETECTED at or above the Reporting Limit. Qualitative Analyses only.
- ND - Analyte NOT DETECTED at or above the reporting limit (MDL or MRL, as appropriate).
- NR/NA - Not Reported / Not Available
- dry - Sample results reported on a Dry Weight Basis. Results and Reporting Limits have been corrected for Percent Dry Weight.
- wet - Sample results and reporting limits reported on a Wet Weight Basis (as received). Results with neither 'wet' nor 'dry' are reported on a Wet Weight Basis.
- RPD - RELATIVE PERCENT DIFFERENCE (RPDs calculated using Results, not Percent Recoveries).
- MRL - METHOD REPORTING LIMIT. Reporting Level at, or above, the lowest level standard of the Calibration Table.
- MDL* - METHOD DETECTION LIMIT. Reporting Level at, or above, the statistically derived limit based on 40CFR, Part 136, Appendix B. *MDLs are listed on the report only if the data has been evaluated below the MRL. Results between the MDL and MRL are reported as Estimated Results.
- Dil - Dilutions are calculated based on deviations from the standard dilution performed for an analysis, and may not represent the dilution found on the analytical raw data.
- Reporting Limits - Reporting limits (MDLs and MRLs) are adjusted based on variations in sample preparation amounts, analytical dilutions and percent solids, where applicable.

CERTIFICATION SUMMARY

TestAmerica Seattle

Method	Matrix	Nelac	Washington
EPA 8260B	Water	X	X
NWTPH-Dx	Water		X
NWTPH-Gx	Water		X

Any abnormalities or departures from sample acceptance policy shall be documented on the 'Sample Receipt and Temperature Log Form' and 'Sample Non-conformance Form' (if applicable) included with this report.

For information concerning certifications of this facility or another TestAmerica facility, please visit our website at www.TestAmericaInc.com

Samples collected by TestAmerica Field Services personnel are noted on the Chain of Custody (COC) .

Notes and Definitions

Report Specific Notes:

- MNR1 - There was no MS/MSD analyzed with this batch due to insufficient sample volume. See Blank Spike/Blank Spike Duplicate.
- Q12 - Detected hydrocarbons in the diesel range do not have a distinct diesel pattern and may be due to heavily weathered diesel or possibly biogenic interference.
- Q7 - The heavy oil range organics present are due to hydrocarbons eluting primarily in the diesel range.

Laboratory Reporting Conventions:

- DET - Analyte DETECTED at or above the Reporting Limit. Qualitative Analyses only.
- ND - Analyte NOT DETECTED at or above the reporting limit (MDL or MRL, as appropriate).
- NR/NA - Not Reported / Not Available
- dry - Sample results reported on a Dry Weight Basis. Results and Reporting Limits have been corrected for Percent Dry Weight.
- wet - Sample results and reporting limits reported on a Wet Weight Basis (as received). Results with neither 'wet' nor 'dry' are reported on a Wet Weight Basis.
- RPD - RELATIVE PERCENT DIFFERENCE (RPDs calculated using Results, not Percent Recoveries).
- MRL - METHOD REPORTING LIMIT. Reporting Level at, or above, the lowest level standard of the Calibration Table.
- MDL* - METHOD DETECTION LIMIT. Reporting Level at, or above, the statistically derived limit based on 40CFR, Part 136, Appendix B. *MDLs are listed on the report only if the data has been evaluated below the MRL. Results between the MDL and MRL are reported as Estimated Results.
- Dil - Dilutions are calculated based on deviations from the standard dilution performed for an analysis, and may not represent the dilution found on the analytical raw data.
- Reporting Limits - Reporting limits (MDLs and MRLs) are adjusted based on variations in sample preparation amounts, analytical dilutions and percent solids, where applicable.
- Electronic Signature - Electronic Signature added in accordance with TestAmerica's *Electronic Reporting and Electronic Signatures Policy*. Application of electronic signature indicates that the report has been reviewed and approved for release by the laboratory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.
