QLast Update : Wed Aug 25 09:28:09 2021
Response via : Initial Calibration
DataAcq Meth:TO15DC.M

#20
Methylene chloride
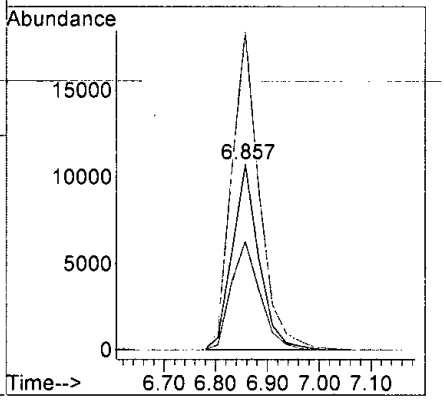
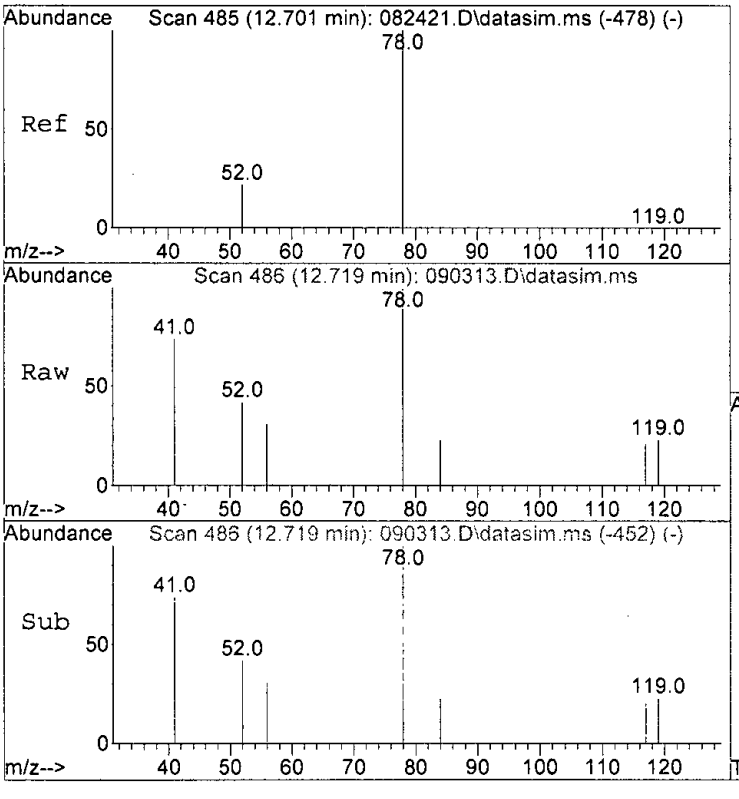
Concen: 2.138 ppbv
RT: 6.86 min Scan# 123
Delta R.T. 0.000 min
Lab File: 090313.D
Acq: 3 Sep 2021 3:37 pm

Tgt Ion: 84 Resp: 38507

Ion	Ratio	Lower	Upper
84	100		
86	58.7	33.9	93.9
49	171.7	116.6	176.6

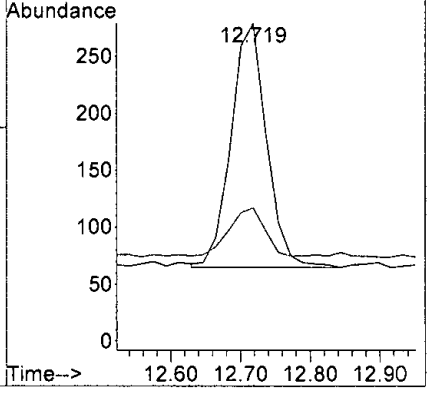


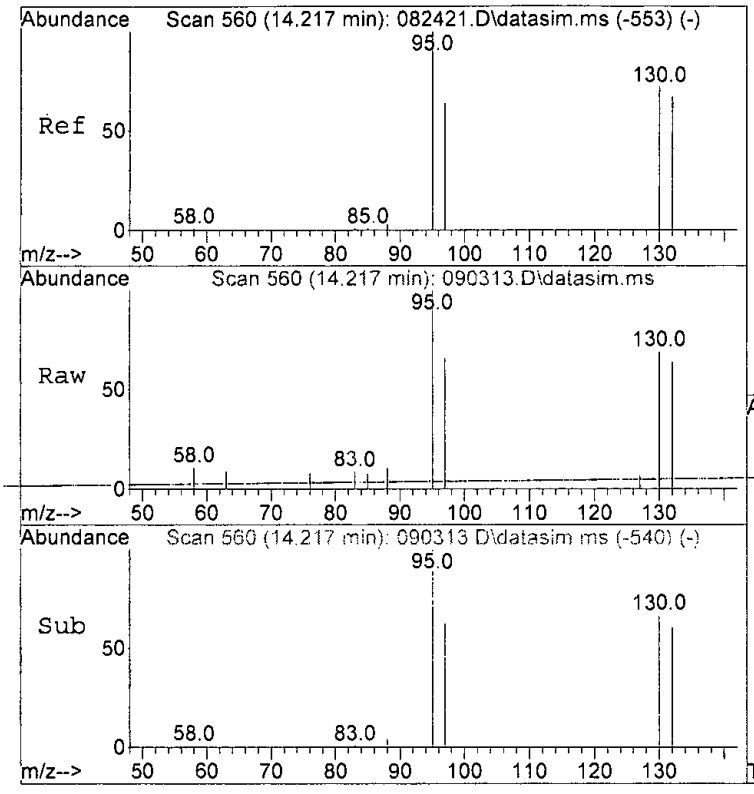


#37
Benzene
Concen: 0.012 ppbv
RT: 12.72 min Scan# 486
Delta R.T. 0.018 min
Lab File: 090313.D
Acq: 3 Sep 2021 3:37 pm

Tgt Ion: 78 Resp: 758

Ion	Ratio	Lower	Upper
78	100		
52	19.6	0.0	49.7

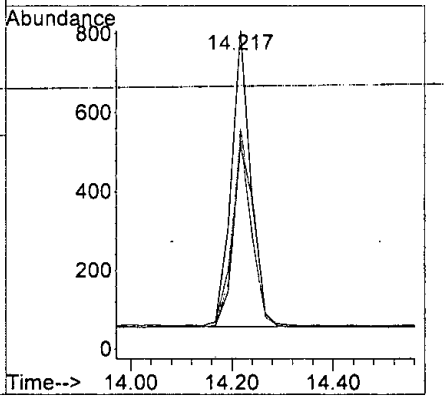


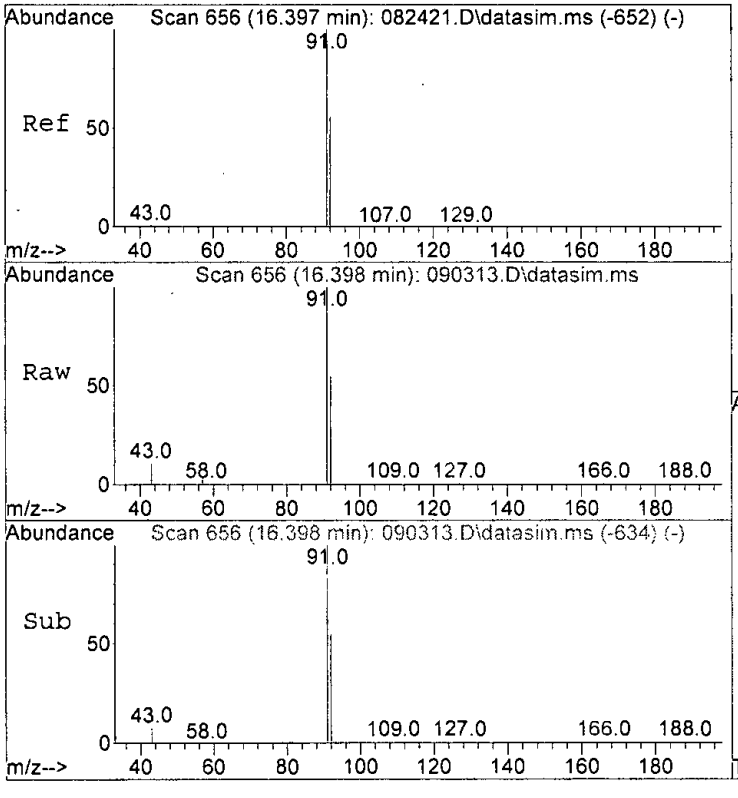


#46
Trichloroethene
Concen: 0.068 ppbv
RT: 14.22 min Scan# 560
Delta R.T. -0.000 min
Lab File: 090313.D
Acq: 3 Sep 2021 3:37 pm

Tgt Ion: 95 Resp: 1989

Ion	Ratio	Lower	Upper
95	100		
97	63.2	37.1	97.1
130	67.3	56.1	116.1
132	61.3	54.3	114.3

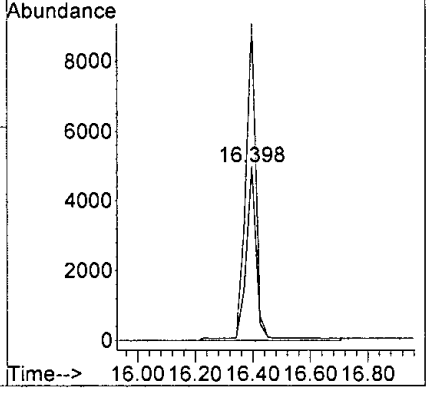


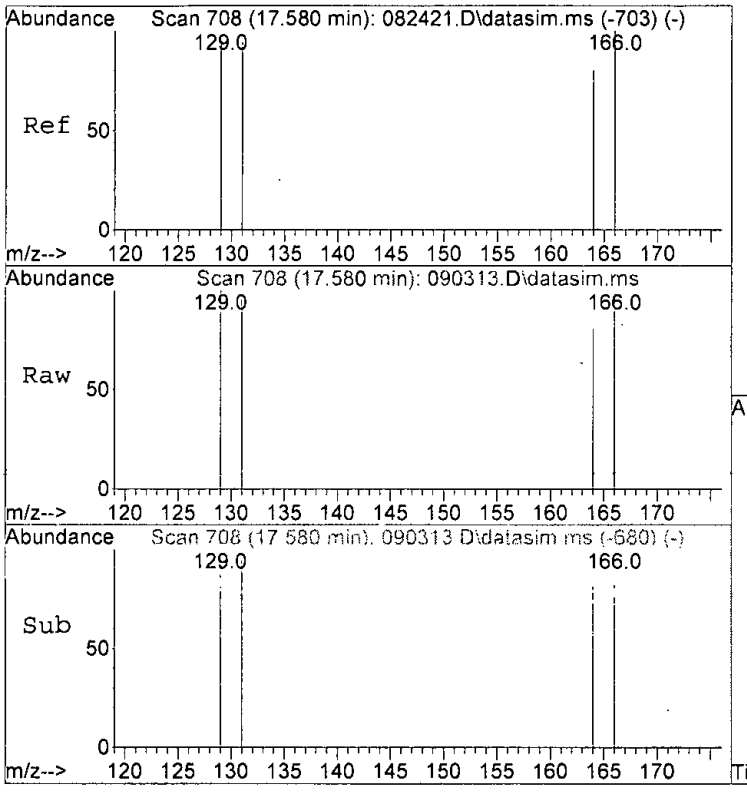


#50
Toluene
Concen: 0.370 ppbv
RT: 16.40 min Scan# 656
Delta R.T. 0.001 min
Lab File: 090313.D
Acq: 3 Sep 2021 3:37 pm

Tgt Ion: 92 Resp: 13075

Ion	Ratio	Lower	Upper
92	100		
91	182.9	174.6	234.6

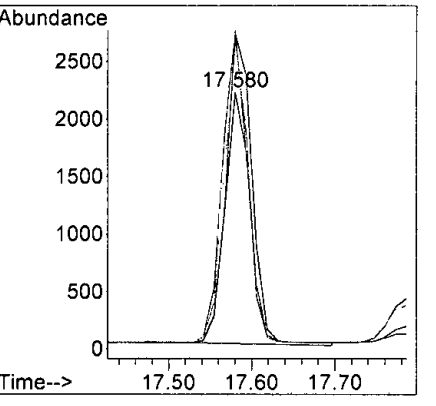


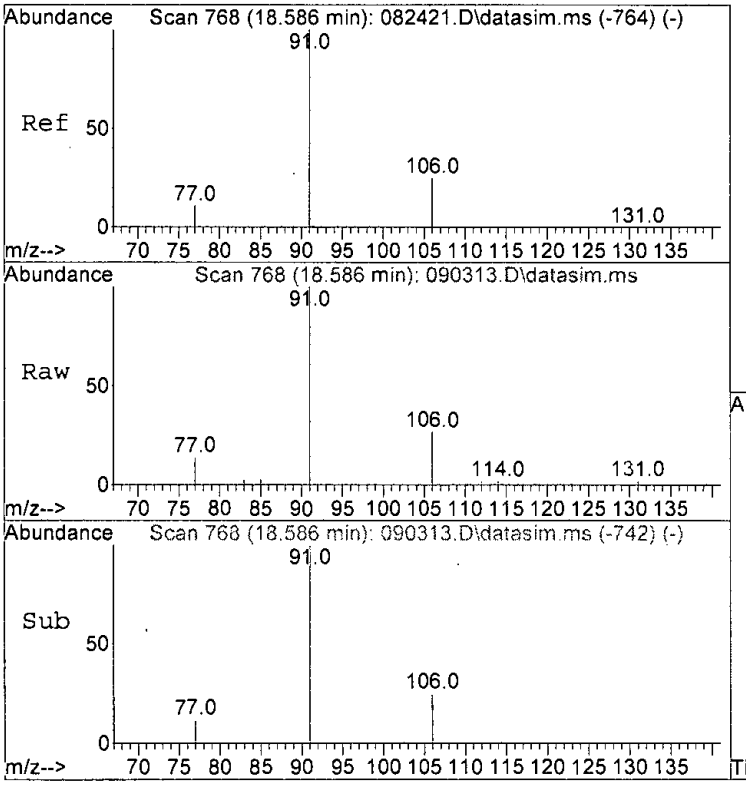


#53
Tetrachloroethene
Concen: 0.258 ppbv
RT: 17.58 min Scan# 708
Delta R.T. 0.000 min
Lab File: 090313.D
Acq: 3 Sep 2021 3:37 pm

Tgt Ion:164 Resp: 4633

Ion	Ratio	Lower	Upper
164	100		
129	124.5	63.2	123.2#
131	119.9	70.7	130.7
166	123.5	107.5	167.5

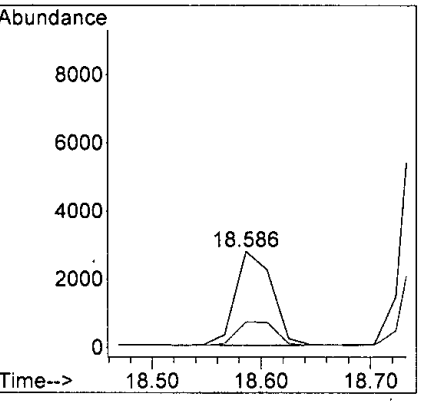


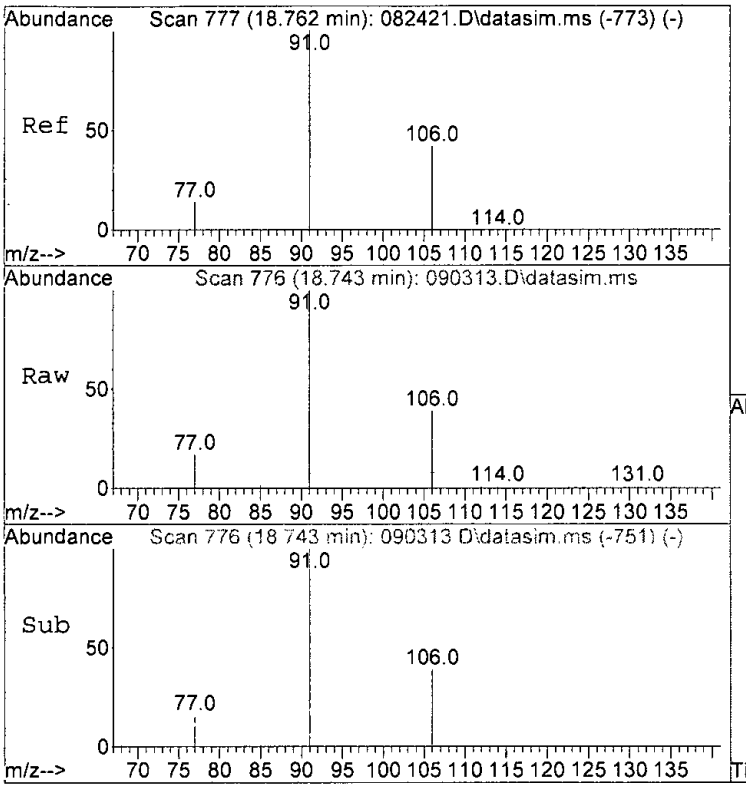


#58
Ethylbenzene
Concen: 0.070 ppbv
RT: 18.59 min Scan# 768
Delta R.T. 0.000 min
Lab File: 090313.D
Acq: 3 Sep 2021 3:37 pm

Tgt Ion: 91 Resp: 6407

Ion	Ratio	Lower	Upper
91	100		
106	25.2	0.0	57.0

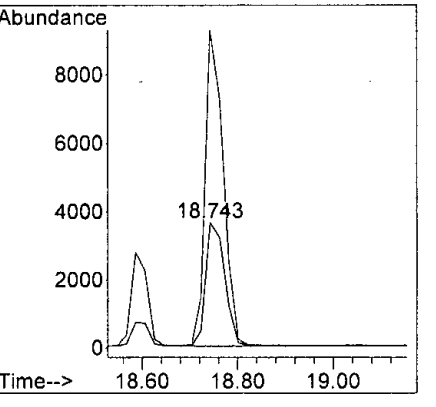


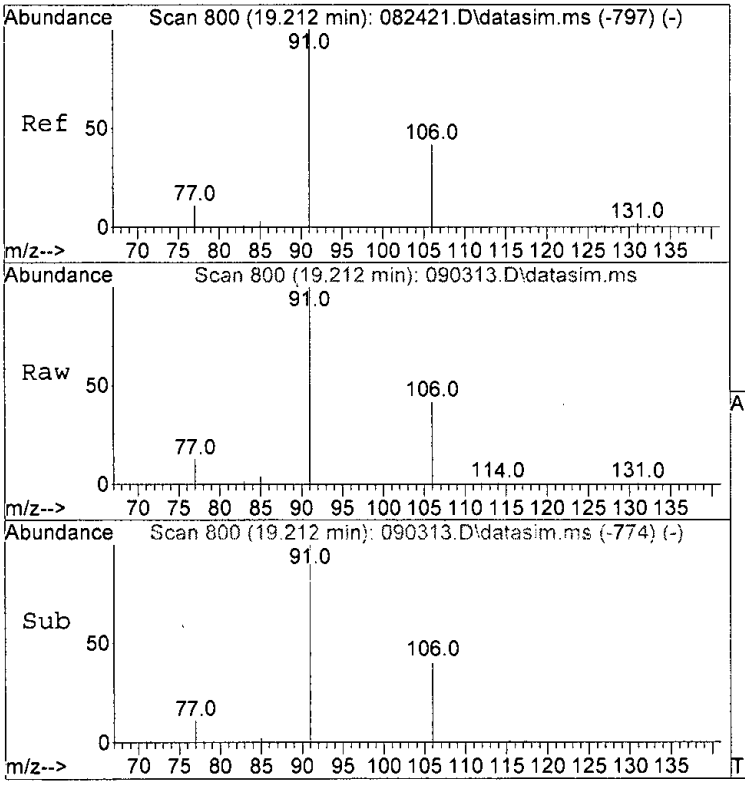


#65
m,p-Xylene
Concen: 0.340 ppbv
RT: 18.74 min Scan# 776
Delta R.T. -0.019 min
Lab File: 090313.D
Acq: 3 Sep 2021 3:37 pm

Tgt Ion:106 Resp: 10031

Ion	Ratio	Lower	Upper
106	100		
91	255.3	193.0	253.0#





#66
o-Xylene
Concen: 0.129 ppbv
RT: 19.21 min Scan# 800
Delta R.T. 0.000 min
Lab File: 090313.D
Acq: 3 Sep 2021 3:37 pm

Tgt Ion:106 Resp: 3747

Ion	Ratio	Lower	Upper
106	100		
91	242.1	194.4	254.4

Trevor Louviere, Project Manager
Dalton Olmsted Fuglevand
1001 SW Klickitat Way, Suite 200B
Seattle, WA 98134

Dear Mr Louviere:

Included are the results from the testing of material submitted on August 31, 2021 from the TWAFAA, F&BI 108514 project. There are 27 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days, or as directed by the Chain of Custody document. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

CASE NARRATIVE

This case narrative encompasses samples received on August 31, 2020 by Friedman & Bruya, Inc. from the Dalton Olmsted Fuglevand TWAFAA, F&BI 108514 project. Samples were logged in under the laboratory ID's listed below.

Laboratory ID	Dalton Olmsted Fuglevand
108514 -01	TWA-SB5
108514 -02	Trip Blank

The 8270E 2-nitroaniline and the 8260D 2-hexanone calibration standards failed the acceptance criteria. The data were flagged accordingly.

Bromomethane in the 8260D water laboratory control sample exceeded the acceptance criteria. The analyte was not detected in the sample, therefore the data were acceptable.

The 8082A reporting limits for Aroclor 1260 and 1262 were raised due to the presence of interfering compounds.

All other quality control requirements were acceptable.

Date of Report: 09/14/21
Date Received: 08/31/21
Project: TWAFAA, F&BI 108514
Date Extracted: 09/07/21
Date Analyzed: 09/07/21

RESULTS FROM THE ANALYSIS OF SOIL SAMPLES FOR TOTAL PETROLEUM HYDROCARBONS AS GASOLINE USING METHOD NWTPH-Gx

Results Reported on a Dry Weight Basis
Results Reported as mg/kg (ppm)

Sample ID Laboratory ID	Gasoline Range	Surrogate (% Recovery) (Limit 58-139)

QUALITY ASSURANCE RESULTS FOR THE ANALYSIS OF SOIL SAMPLES FOR POLYCHLORINATED BIPHENYLS AS AROCLOR 1016/1260 BY EPA METHOD 8082A

Laboratory Code: 109026-01 1/6 (Matrix Spike) 1/6

Analyte	Reporting Units	Spike Level	Sample Result (Wet Wt)	Percent Recovery MS	Percent Recovery MSD	Control Limits	RPD (Limit 20)
Aroclor 1016	mg/kg (ppm)	0.25	<0.02	82	82	29-125	0
Aroclor 1260	mg/kg (ppm)	0.25	<0.02	85	83	25-137	2

Laboratory Code: Laboratory Control Sample 1/6

Analyte	Reporting Units	Spike Level	Percent Recovery LCS	Acceptance Criteria
Aroclor 1016	mg/kg (ppm)	0.25	78	55-137
Aroclor 1260	mg/kg (ppm)	0.25	86	51-150

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht – The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

Subject: Taylor Way and Alexander Ave Fill Area (TWAAFA) Site - CleanCare Deep GW and Soil Sampling Data Validation Summary
Client Project No., Task Order No.: Not Specified, Task No. 2
QA/QC Solutions, LLC Project No.: 122321.1

Dear Tasya:

This letter documents the results of the data validation summary of selected organic compounds and elements completed on groundwater samples associated with the October and December sampling events associated with the Taylor Way and Alexander Ave Fill Area (TWAAFA) Site - CleanCare Taylor Way and Alexander Ave Fill Area (TWAAFA) Site Deep GW and Soil Sampling located in Tacoma, Washington.

The available data were validated to verify applicable laboratory quality assurance and quality control (QA/QC) measurements were reported, documented, and of sufficient quality to support its intended purpose(s). A summary of the overall assessment of data quality, the data set, a summary of the analytical methods used to complete the chemical analyses, a summary of the data validation procedures used, and a summary of the reasons why data were qualified (including other items noted during data validation) is presented below.

Overall Assessment of Data Quality

Overall, the data reported are of good quality (with the exception of data that were rejected) and the results for the applicable QA/QC measurements that were used by the laboratories during the analysis of the samples were generally acceptable. Some sample results required qualification during data validation because method-specific QA/QC criteria were not met; results maybe qualified for more than one reason. During data validation the following actions were taken:

- A total of 3 results reported as detected required qualification as estimated and were assigned a *J* data validation qualifier.
- A total of 2 results reported as detected required qualification as estimated with an associated negative bias and were assigned a *J-* data validation qualifier.
- A total of 11 results reported as detected required qualification as tentatively identified and estimated and were assigned a *NJ* data validation qualifier.

- A total of 12 results reported as undetected required qualification as estimated and were assigned a *UJ* data validation qualifier,
- A total of 124 results reported as undetected and 1 result that was restated as undetected required qualification as estimated with an associated negative bias and were assigned a *UJ-* data validation qualifier,
- A total of 9 results reported as detected required restatement as undetected and were assigned a *U* data validation qualifier,
- A total of 52 results reported as undetected required rejection and were assigned a *R* data validation qualifier,

Analytical data that did not meet method- and/or laboratory-established control limits for applicable quality control measurements were qualified as estimated (*J, NJ, UJ, or UJ-*) by the laboratory or during data validation. These qualified data are usable and represent data of good quality and reasonable confidence and have an acceptable degree of uncertainty (i.e., may be less precise or less accurate than unqualified data). Sample results that were rejected (*R*) may not be usable for their intended purpose at the reporting limits reported.

Data Set

The data set consisted of 10 groundwater, 9 trip blank, and 2 equipment blank samples that were collected on in October and December 2021.

Analyses were completed by Friedman & Bruya, Inc. Environmental Chemists located in Seattle, Washington. The laboratory submitted 10 hardcopy data validation deliverable and electronic data deliverable (EDDs).

Analytical Methods

The analytical methods used to complete the chemical analyses are listed as follows and are also listed in Table 1.

- Gasoline-range petroleum hydrocarbons by purge and trap and analysis by gas chromatography/flame ionization detection (GC/FID) using the Washington Department of Ecology NWTPH-Gx method (Ecology 1997).
- Diesel- and oil-range petroleum hydrocarbons by extraction and analysis by GC/FID using the Washington Department of Ecology NWTPH-Dx (extended) method (Ecology 1997).
- Total metals (antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, copper, iron, lead, manganese, nickel, selenium, silver, thallium, vanadium, and zinc by digestion and analysis by inductively coupled plasma-mass spectrometry (ICP-MS) EPA Method 6020B (U.S. EPA 2021).
- Total mercury by oxidation, purge and trap, and Cold Vapor Atomic Fluorescence Spectrometry by Method 1631, Revision E (U.S. EPA 2002a).
- Volatile organic compounds (VOCs) for 63 target analytes (including co-eluting VOCs) by purge and trap and analysis by GC/MS using U.S. EPA SW-846 Method 8260D, respectively (U.S. EPA 2021).

- Semivolatile organic compounds (SVOCs) for 66 target analytes (including co-eluting SVOCs) by extraction and analysis by gas chromatography/mass spectrometry (GC/MS) using U.S. EPA SW-846 Method 8270E (U.S. EPA 2021).
- Polychlorinated biphenyls (PCBs) for nine Aroclors® mixtures by extraction and analysis by gas chromatography/electron capture detection (GC/ECD) using U.S. EPA SW-846 method 8082A (U.S. EPA 2020).

Data Validation Procedures

Data validation procedures included evaluating a summary of the sample results and applicable quality control results reported by the laboratory; this level of validation is also referred to as an abbreviated data review (equivalent to "Stage 2A/2B" review per U.S. EPA 2009. The analytical data were validated generally following the applicable guidance and requirements:

- Method-specific and laboratory-established quality control requirements, as applicable.
- Guidance on Environmental Data Verification and Validation (U.S. EPA 2002b)
- Guidance for Labeling Externally Validated Laboratory Analytical Data for Superfund Use. OSWER No. 9200.1-85. EPA 540-R-08-005. (U.S. EPA 2009).
- National Functional Guidelines for Organic Superfund Methods Data Review. OLEM 9240.0-51 EPA 540-R-20-005 November 2020 OLEM 9355.0-136. USEPA-540-R-2017-002. June 2017. U.S. Environmental Protection Agency (EPA), Office of Superfund Remediation and Technology Innovation (OSRTI), Washington, DC. (U.S. EPA 2020a).
- National Functional Guidelines for Inorganic Data Superfund Data Review. Final. OLEM 9240.1-66 EPA 542-R-20-006 November 2020. U.S. Environmental Protection Agency (EPA), Office of Superfund Remediation and Technology Innovation (OSRTI), Washington, DC. (U.S. EPA 2020b).

The laboratory data deliverables that were validated and available for review included the following:

- Case narratives discussing analytical problems (if any) and procedures.
- Chain-of-custody documentation to verify completeness of the data set.
- Sample preparation logs or laboratory summary result forms to verify analytical holding times were met.
- Results for applicable method blanks, trip blanks, and equipment blanks to determine whether an analyte that may have been reported as detected in a sample was the result of possible contamination introduced at the laboratory or during transport of samples, respectively.
- Results for applicable surrogate compound, laboratory control sample (LCS) (i.e., blank spike), duplicate LCS, matrix spike (MS), and matrix spike duplicate (MSD) recoveries to assess analytical accuracy.
- Results for applicable laboratory duplicate sample, duplicate LCS, and MSD analyses to assess analytical precision as are applicable
- Laboratory summary of analytical results.

Verification and validation of 100-percent of all applicable laboratory calculations, transcriptions, review of instrument printouts, and review of bench sheets were not completed during the data validation review. There may be analytical problems that could only be identified by reviewing every instrument printout and associated analytical quality control results. Verification of all possible factors that could result in the degradation of data quality was not completed nor should be inferred at this time. The laboratory case narratives did not indicate any significant problems with data that were not reviewed during data validation. The adequacy of the sampling procedures was not completed during the data validation.

Performance based control limits established by the laboratory, applicable control limits specified in the analytical methods, and best professional judgement were used to evaluate data quality and to determine if specific data required qualification. Data qualifiers were assigned during data validation following guidance specified by U.S. EPA (2002b, 2020a, and 2020b) to the EDD when applicable QC measurement criteria were not met and qualification of the data was warranted.

Reasons for Data Qualification

The reasons for qualification of samples results are summarized in Table 2 (Summary of Qualified Data).

General Comments:

- Results were reported as not detected at the reporting limit.
- One result was reported as detected at a concentration below the reporting limit.
- Several results reported as detected for diesel- and motor oil-range petroleum hydrocarbons were qualified as tentatively identified and estimated (*NJ*) because the sample chromatographic pattern does not resemble the fuel standard used for quantitation.
- Several results reported for thallium were reported as undetected at reporting limits that were below the lowest instrument calibration standard. There is a greater degree of uncertainty associated with the affected data.
- For the analysis of SVOCs, there is an apparent systematic negative bias associated with the phenols and benzoic acid as determined by the recoveries of 2 of the 3 acid (i.e., phenol) surrogate compounds and three of the acid compound LCS recoveries. A summary of the average sample, method blank, and LCS recoveries for the affected acid compounds is as follows (note, there were several batch method blank and LCS data and were not used in the calculations summarized below).

Compound	No. Data Points	Average Recovery	Standard Deviation	%RSD
2-Fluorophenol (surrogate)	N-24	12.9 percent	3.08	28.5
Phenol-d6 (surrogate)	N=24	9.2 percent	1.35	14.7
Phenol (LCSs)	N=6	7.8 percent	0.75	9.7
Benzoic Acid (LCSs)	N=6	3.7 percent	3.14	11.9
4-Nitrophenol (LCSs)	N=4	6.25 percent	3.0	48

- Based on the apparent systematic negative bias associated with the recoveries for 2 of the 3 acid surrogate compound and the recoveries of

three acid in associated LCSs sample results were qualified based on best professional judgement as undetected and estimated (*UJ*-) and/or rejected (*R*) if the LCS recoveries were <10 percent. A complete summary of the affected data may be found in Table 2.

- Two results reported as detected for diethyl phthalate required reanalysis because the original concentrations exceeded the calibration range of the instrument. Only the reanalysis results were used.

This concludes the data validation review. Should you have any questions regarding the information presented herein, please contact me by telephone at 503.763.6948 or by e-mail at jjmcateer@msn.com.

Notes:

Data Validation Assigned Data Qualifiers and Definitions

J = estimated

LCS = laboratory control sample

NJ = tentatively identified and estimated

QC = quality control

R = rejected

RL = reporting limit

UJ = result restated as undetected at value shown

UJ = undetected at value shown and estimated

UJ- = undetected at value shown and estimated with negative bias

w/ SG = with silica gel cleanup

w/o SG = without silica gel cleanup

Total results qualified "J" =	3
Total results qualified "J-" =	2
Total results qualified "NJ"	11
Total results qualified "UJ" =	12
Total results qualified "UJ-" =	125
Total results qualified "U" =	9
Total results qualified "R" =	52

ory Assigned Data Qualifiers and Definitions

ca = calibration results for this analyte were outside of acceptance criteria; result is an estimate

fb = The analyte was detected in the method blank.

j = The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

jl = The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js = The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc = The presence of the analyte is likely due to laboratory contamination.

ve = The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

x = The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

Dear Mr Louviere:

Included are the amended results from the testing of material submitted on December 8, 2021 from the TWAAFA, F&BI 112142 project. The 6020B molybdenum results were removed and manganese was added.

Sincerely,

FRIEDMAN & BRUYA, INC.

Seattle, WA 98134

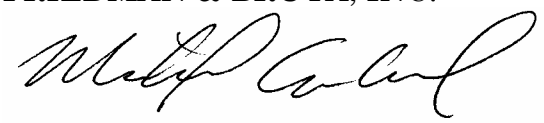
Dear Mr Louviere:

Included are the results from the testing of material submitted on December 8, 2021 from the TWAAFA, F&BI 112142 project. There are 26 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days, or as directed by the Chain of Custody document. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.



Michael Erdahl
Project Manager

CASE NARRATIVE

This case narrative encompasses samples received on December 8, 2021 by Friedman & Bruya, Inc. from the Dalton Olmsted Fuglevand TWAAFA, F&BI 112142 project. Samples were logged in under the laboratory ID's listed below.

Laboratory ID	Dalton Olmsted Fuglevand
112142 -01	TWA-7_40-42_1221
112142 -02	Trip Blank

Several compounds in the 8270E laboratory control sample and laboratory control sample duplicate failed the acceptance criteria. The data were flagged accordingly.

The 8082 laboratory control sample and laboratory control sample duplicate failed the relative percent difference for Aroclor 1016 and 1260. PCBs were not detected therefore the data were acceptable.

An 8270 surrogate in the method blank did not pass the acceptance criteria. The affected compounds were qualified accordingly.

All other quality control requirements were acceptable.

QUALITY ASSURANCE RESULTS FOR THE ANALYSIS OF WATER SAMPLES FOR POLYCHLORINATED BIPHENYLS AS AROCLOR 1016/1260 BY EPA METHOD 8082A

Laboratory Code: Laboratory Control Sample 1/0.25

Analyte	Reporting Units	Spike Level	Percent Recovery LCS	Percent Recovery LCSD	Acceptance Criteria	RPD (Limit 20)
Aroclor 1016	ug/L (ppb)	0.063	46	58	25-165	23 vo
Aroclor 1260	ug/L (ppb)	0.063	56	69	25-163	21 vo

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht – The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

October 26, 2021

Trevor Louviere, Project Manager
Dalton Olmsted Fuglevand
1001 SW Klickitat Way, Suite 200B
Seattle, WA 98134

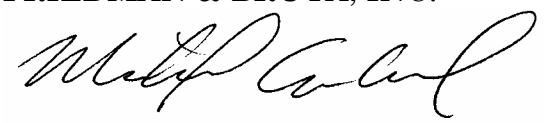
Dear Mr Louviere:

Included are the results from the testing of material submitted on October 15, 2021 from the TWAAFA TWAAFA-001, F&BI 110326 project. There are 25 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days, or as directed by the Chain of Custody document. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.



Michael Erdahl
Project Manager

CASE NARRATIVE

This case narrative encompasses samples received on October 15, 2021 by Friedman & Bruya, Inc. from the Dalton Olmsted Fuglevand TWAAFA TWAAFA-001, F&BI 110326 project. Samples were logged in under the laboratory ID's listed below.

Laboratory ID	Dalton Olmsted Fuglevand
110326 -01	TWA-EB1-1021
110326 -02	TRIP BLANK

The 8270E samples were filtered at Friedman & Bruya on 10/18/21. The data were flagged accordingly.

Thallium was reported between the 6020 method detection limit and the reporting limit. The data were flagged accordingly.

Methylene chloride was detected in the 8260D analysis of sample TWA-EB1-1021. The data were flagged as due to laboratory contamination.

The 8260D calibration standard failed the acceptance criteria for methylene chloride. The data were flagged accordingly.

Diethyl phthalate, di-n-butyl phthalate, and bis(2-ethylhexyl)phthalate were detected in the 8270E analysis of samples TWA-8_40-42_1021, TWA-8_50-52_1021, and the method blank. The data were flagged as likely due to laboratory contamination.

Several compounds in the 8270E laboratory control sample and laboratory control sample duplicate failed the acceptance criteria. The data were flagged accordingly.

An 8270E surrogate failed the laboratory acceptance criteria in the method blank. The data were flagged accordingly.

The 8082 laboratory control sample and laboratory control sample duplicate failed the relative percent difference for Aroclor 1016. PCBs associated with Aroclor 1016 were not detected therefore the data were acceptable.

All other quality control requirements were acceptable.

QUALITY ASSURANCE RESULTS FOR THE ANALYSIS OF WATER SAMPLES FOR POLYCHLORINATED BIPHENYLS AS AROCLOR 1016/1260 BY EPA METHOD 8082A

Laboratory Code: Laboratory Control Sample 1/0.25

Analyte	Reporting Units	Spike Level	Percent Recovery LCS	Percent Recovery LCSD	Acceptance Criteria	RPD (Limit 20)
Aroclor 1016	ug/L (ppb)	0.13	56	62	25-111	10
Aroclor 1260	ug/L (ppb)	0.13	69	77	23-123	11

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht – The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

Trevor Louviere, Project Manager
Dalton Olmsted Fuglevand
1001 SW Klickitat Way, Suite 200B
Seattle, WA 98134

Dear Mr Louviere:

Included are the results from the testing of material submitted on October 12, 2021 from the TWAAFA-001, F&BI 110235 project. There are 31 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days, or as directed by the Chain of Custody document. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

CASE NARRATIVE

This case narrative encompasses samples received on October 12, 2021 by Friedman & Bruya, Inc. from the Dalton Olmsted Fuglevand TWAAFA-001, F&BI 110235 project. Samples were logged in under the laboratory ID's listed below.

Laboratory ID	Dalton Olmsted Fuglevand
110235 -01	TWA-9_45-47_1021
110235 -02	TWA-9_55-57_1021
110235 -03	Trip Blank

The 8270E samples were filtered at Friedman & Bruya on 10/14/21. The data were flagged accordingly.

Thallium was reported between the 6020 method detection limit and the reporting limit. The data were flagged accordingly.

Diethyl phthalate, di-n-butyl phthalate, and bis(2-ethylhexyl)phthalate were detected in the 8270E analysis of samples TWA-9_45-47_1021, TWA-9_55-57_1021, and the method blank. The data were flagged as likely due to laboratory contamination.

Several compounds in the 8270E laboratory control sample and laboratory control sample duplicate failed the acceptance criteria. The data were flagged accordingly.

An 8270E surrogate failed the laboratory acceptance criteria in the method blank. The data were flagged accordingly.

The 8082 laboratory control sample and laboratory control sample duplicate failed the relative percent difference for Aroclor 1016. PCBs associated with Aroclor 1016 were not detected therefore the data were acceptable.

All other quality control requirements were acceptable.

QUALITY ASSURANCE RESULTS FOR THE ANALYSIS OF WATER SAMPLES FOR POLYCHLORINATED BIPHENYLS AS AROCLOR 1016/1260 BY EPA METHOD 8082A

Laboratory Code: Laboratory Control Sample 1/0.25

Analyte	Reporting Units	Spike Level	Percent Recovery LCS	Percent Recovery LCSD	Acceptance Criteria	RPD (Limit 20)
Aroclor 1016	ug/L (ppb)	0.5	47	59	25-111	23 vo
Aroclor 1260	ug/L (ppb)	0.5	65	69	23-123	6

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht – The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

Dear Mr Louviere:

Included are the results from the testing of material submitted on October 13, 2021 from the TWAAFA-001, F&BI 110266 project. There are 28 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days, or as directed by the Chain of Custody document. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

CASE NARRATIVE

This case narrative encompasses samples received on October 13, 2021 by Friedman & Bruya, Inc. from the Dalton Olmsted Fuglevand TWAAFA-001, F&BI 110266 project. Samples were logged in under the laboratory ID's listed below.

Laboratory ID	Dalton Olmsted Fuglevand
110266 -01	TWA-8_20-22_1021
110266 -02	Trip Blank

The 8270E samples were filtered at Friedman & Bruya on 10/14/21. The data were flagged accordingly.

Thallium was reported between the 6020 method detection limit and the reporting limit. The data were flagged accordingly.

Diethyl phthalate, di-n-butyl phthalate, and bis(2-ethylhexyl)phthalate were detected in the 8270E analysis of sample TWA-8_20-22_1021 and the method blank. The data were flagged as likely due to laboratory contamination.

Several compounds in the 8270E laboratory control sample and laboratory control sample duplicate failed the acceptance criteria. The data were flagged accordingly.

An 8270E surrogate failed the laboratory acceptance criteria in the method blank. The data were flagged accordingly.

The 8082 laboratory control sample and laboratory control sample duplicate failed the relative percent difference for Aroclor 1016. PCBs associated with Aroclor 1016 were not detected therefore the data were acceptable.

All other quality control requirements were acceptable.

QUALITY ASSURANCE RESULTS FOR THE ANALYSIS OF WATER SAMPLES FOR POLYCHLORINATED BIPHENYLS AS AROCLOR 1016/1260 BY EPA METHOD 8082A

Laboratory Code: Laboratory Control Sample 1/0.25

Analyte	Reporting Units	Spike Level	Percent Recovery LCS	Percent Recovery LCSD	Acceptance Criteria	RPD (Limit 20)
Aroclor 1016	ug/L (ppb)	0.13	47	59	25-111	23 vo
Aroclor 1260	ug/L (ppb)	0.13	65	69	23-123	6

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht – The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

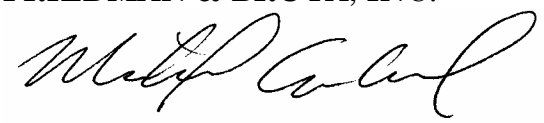
Dear Mr Louviere:

Included are the results from the testing of material submitted on October 14, 2021 from the TWAAFA-01, F&BI 110280 project. There are 33 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days, or as directed by the Chain of Custody document. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.



Michael Erdahl

CASE NARRATIVE

This case narrative encompasses samples received on October 14, 2021 by Friedman & Bruya, Inc. from the Dalton Olmsted Fuglevand TWAAFA-01, F&BI 110280 project. Samples were logged in under the laboratory ID's listed below.

Laboratory ID	Dalton Olmsted Fuglevand
110280 -01	TWA-8_40-42_1021
110280 -02	TWA-8_50-52_1021
110280 -03	Trip Blank

The 8270E samples were filtered at Friedman & Bruya on 10/14/21. The data were flagged accordingly.

Thallium was reported between the 6020 method detection limit and the reporting limit. The data were flagged accordingly.

Diethyl phthalate, di-n-butyl phthalate, and bis(2-ethylhexyl)phthalate were detected in the 8270E analysis of samples TWA-8_40-42_1021, TWA-8_50-52_1021, and the method blank. The data were flagged as likely due to laboratory contamination.

Several compounds in the 8270E laboratory control sample and laboratory control sample duplicate failed the acceptance criteria. The data were flagged accordingly.

An 8270E surrogate failed the laboratory acceptance criteria in the method blank. The data were flagged accordingly.

The 8082 laboratory control sample and laboratory control sample duplicate failed the relative percent difference for Aroclor 1016. PCBs associated with Aroclor 1016 were not detected therefore the data were acceptable.

All other quality control requirements were acceptable.

Date of Report: 10/26/21
Date Received: 10/14/21
Project: TWAAFA-01, F&BI 110280

QUALITY ASSURANCE RESULTS FOR THE ANALYSIS OF WATER SAMPLES FOR POLYCHLORINATED BIPHENYLS AS AROCLOR 1016/1260 BY EPA METHOD 8082A

Laboratory Code: Laboratory Control Sample 1/0.25

Analyte	Reporting Units	Spike Level	Percent Recovery LCS	Percent Recovery LCSD	Acceptance Criteria	RPD (Limit 20)
Aroclor 1016	ug/L (ppb)	0.13	47	59	25-111	23 vo
Aroclor 1260	ug/L (ppb)	0.13	65	69	23-123	6

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht – The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

Dear Mr Louviere:

Included are the results from the testing of material submitted on October 14, 2021 from the TWAAFA-001, F&BI 110281 project. There are 5 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days, or as directed by the Chain of Custody document. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht – The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

Dear Mr Louviere:

Included are the results from the testing of material submitted on December 7, 2021 from the TWAAFA-001, F&BI 112116 project. There are 27 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days, or as directed by the Chain of Custody document. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

CASE NARRATIVE

This case narrative encompasses samples received on December 7, 2021 by Friedman & Bruya, Inc. from the Dalton Olmsted Fuglevand TWAAFA-001, F&BI 112116 project. Samples were logged in under the laboratory ID's listed below.

Laboratory ID	Dalton Olmsted Fuglevand
112116 -01	TWA-4_50-52_1221
112116 -02	TRIP BLANK

The 8260D laboratory control sample and laboratory control sample duplicate failed the relative percent difference for 2-butanone (MEK). The analyte was not detected therefore the data were acceptable.

The 8270E calibration standard failed the acceptance criteria for several analytes. The data were flagged accordingly.

Several compounds in the 8270E laboratory control sample and laboratory control sample duplicate failed the acceptance criteria. The data were flagged accordingly.

An 8270 surrogate in the method blank did not pass the acceptance criteria. The affected compounds were qualified accordingly.

The 8082 laboratory control sample and laboratory control sample duplicate failed the relative percent difference for Aroclor 1016 and 1260. PCBs were not detected therefore the data were acceptable.

All other quality control requirements were acceptable.

QUALITY ASSURANCE RESULTS FOR THE ANALYSIS OF WATER SAMPLES FOR POLYCHLORINATED BIPHENYLS AS AROCLOR 1016/1260 BY EPA METHOD 8082A

Laboratory Code: Laboratory Control Sample 1/0.25

Analyte	Reporting Units	Spike Level	Percent Recovery LCS	Percent Recovery LCSD	Acceptance Criteria	RPD (Limit 20)
Aroclor 1016	ug/L (ppb)	0.063	46	58	25-165	23 vo
Aroclor 1260	ug/L (ppb)	0.063	56	69	25-163	21 vo

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht – The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

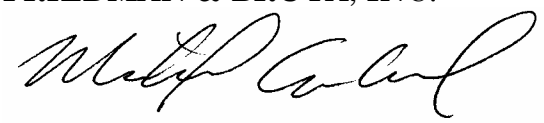
Dear Mr Louviere:

Included are the results from the testing of material submitted on December 9, 2021 from the TWAAFA-001, F&BI 112173 project. There are 26 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days, or as directed by the Chain of Custody document. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.



Michael Erdahl
Project Manager

CASE NARRATIVE

This case narrative encompasses samples received on December 9, 2021 by Friedman & Bruya, Inc. from the Dalton Olmsted Fuglevand TWAAFA-001, F&BI 112173 project. Samples were logged in under the laboratory ID's listed below.

Laboratory ID	Dalton Olmsted Fuglevand
112173 -01	TWA-7_55-57_1221
112173 -02	Trip Blank

Several compounds in the 8270E laboratory control sample and laboratory control sample duplicate failed the acceptance criteria. The data were flagged accordingly.

The 8082 laboratory control sample and laboratory control sample duplicate failed the relative percent difference for Aroclor 1016 and 1260. PCBs were not detected therefore the data were acceptable.

An 8270 surrogate in the method blank did not pass the acceptance criteria. The affected compounds were qualified accordingly.

All other quality control requirements were acceptable.

QUALITY ASSURANCE RESULTS FOR THE ANALYSIS OF WATER SAMPLES FOR POLYCHLORINATED BIPHENYLS AS AROCLOR 1016/1260 BY EPA METHOD 8082A

Laboratory Code: Laboratory Control Sample 1/0.25

Analyte	Reporting Units	Spike Level	Percent Recovery LCS	Percent Recovery LCSD	Acceptance Criteria	RPD (Limit 20)
Aroclor 1016	ug/L (ppb)	0.063	46	58	25-165	23 vo
Aroclor 1260	ug/L (ppb)	0.063	56	69	25-163	21 vo

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht – The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

Seattle, WA 98134

Dear Mr Louviere:

Included are the results from the testing of material submitted on December 10, 2021 from the TWAAFA-001, F&BI 112213 project. There are 25 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days, or as directed by the Chain of Custody document. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

CASE NARRATIVE

This case narrative encompasses samples received on December 10, 2020 by Friedman & Bruya, Inc. from the Dalton Olmsted Fuglevand TWAAFA-001, F&BI 112213 project. Samples were logged in under the laboratory ID's listed below.

Laboratory ID	Dalton Olmsted Fuglevand
112213 -01	TWA-EB2-1221
112213 -02	TRIP BLANK

Several compounds in the 8270E laboratory control sample and laboratory control sample duplicate failed the acceptance criteria. The data were flagged accordingly.

The 8082 laboratory control sample and laboratory control sample duplicate failed the relative percent difference for Aroclor 1016 and 1260. PCBs were not detected therefore the data were acceptable.

An 8270 surrogate in the method blank did not pass the acceptance criteria. The affected compounds were qualified accordingly.

All other quality control requirements were acceptable.

Date Received: 12/10/21
Project: TWAAFA-001, F&BI 112213
Date Extracted: 12/13/21
Date Analyzed: 12/14/21

RESULTS FROM THE ANALYSIS OF WATER SAMPLES FOR TOTAL MERCURY USING EPA METHOD 1631E

Results Reported as ug/L (ppb)

Sample ID Laboratory ID	Total Mercury
TWA-EB2-1221 112213-01	<0.02
Method Blank i1-827 MB	<0.02

Analysis For Volatile Compounds By EPA Method 8260D Dual Acquisition

Client Sample ID:	TWA-EB2-1221	Client:	Dalton Olmsted Fuglevand
Date Received:	12/10/21	Project:	TWAAFA-001, F&BI 112213

QUALITY ASSURANCE RESULTS FOR THE ANALYSIS OF WATER SAMPLES FOR POLYCHLORINATED BIPHENYLS AS AROCLOR 1016/1260 BY EPA METHOD 8082A

Laboratory Code: Laboratory Control Sample 1/0.25

Analyte	Reporting Units	Spike Level	Percent Recovery LCS	Percent Recovery LCSD	Acceptance Criteria	RPD (Limit 20)
Aroclor 1016	ug/L (ppb)	0.063	46	58	25-165	23 vo
Aroclor 1260	ug/L (ppb)	0.063	56	69	25-163	21 vo

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht – The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

DATA QUALITY ASSURANCE/QUALITY CONTROL REVIEW

PROJECT NO. M0615.20.001 | APRIL 1, 2022 | PORT OF TACOMA

Maul Foster & Alongi, Inc. (MFA), conducted an independent review of the quality of analytical results for groundwater samples and associated quality control samples collected at the Taylor Way and Alexander Avenue Fill Area in December 2021.

Friedman & Bruya, Inc. (FBI), performed the analyses. FBI report numbers 112209-amended, 112227, 112245, and 112244 were reviewed. The analyses performed and samples analyzed are listed below. Additional samples submitted on hold are also listed below.

Analysis	Reference
Diesel- and oil-range hydrocarbons	NWTPH-Dx
Diesel- and oil-range hydrocarbons with silica-gel clean up	NWTPH-DX-SG
Gasoline-range hydrocarbons	NWTPH-Gx
Polychlorinated biphenyls	EPA 8082A
Semivolatile organic compounds	EPA 8270E
Total and dissolved metals	EPA 6020B
Total and dissolved mercury	EPA 1631E
Volatile organic compounds	EPA 8260D
NOTES: EPA = U.S. Environmental Protection Agency. NWTPH = Northwest Total Petroleum Hydrocarbons. SG = silica-gel clean up.	

Samples Analyzed

TWA-10_51-56_1213	Trip Blank	Trip Blank

DATA QUALIFICATION

Analytical results were evaluated according to applicable sections of U.S. Environmental Protection Agency (EPA) guidelines for data review (EPA, 2020a,b) and appropriate laboratory- and method-specific guidelines (EPA, 1986; FBI, 2019).

Data validation procedures were modified, as appropriate, to accommodate quality control requirements for methods that EPA data review procedures do not specifically address (e.g., NWTPH-Dx).

FBI noted that they filtered all samples submitted for EPA Method 8270E analysis prior to analysis. No action was required by the reviewer.

Based on the results of the data quality review procedures described below, the data are considered acceptable for their intended use, with the appropriate final data qualifiers assigned. Final data qualifiers represent qualifiers originating from the laboratory and accepted by the reviewer, as well as data qualifiers assigned by the reviewer during validation.

- Final data qualifiers:
  - J = result is estimated.
  - U = result is non-detect at the method reporting limit (MRL).
  - UJ = result is non-detect with an estimated MRL.
  - R = result is rejected.

According to reports 112209-amended, 112245, 112227, and 112244, the NWTPH-Dx silica gel extraction diesel- and oil-range hydrocarbons results from TWA-10_20-25-1210, TWA-10_51-56_1213, TWA-10-30-35-1210, and TWA-10_45-50-1213 were flagged by the laboratory due to chromatographic patterns not resembling the fuel standards used for quantitation. These results were reported as diesel- and/or oil-range hydrocarbons instead of specific fuel products; thus, qualification was not required.

TOTAL AND DISSOLVED COMPOUNDS

Total and dissolved metals results were compared. Sample results were qualified if dissolved results were greater than associated total results, except when the relative percent difference (RPD) was less than 20 percent. All detected total metals results were greater than their associated dissolved metals results or met the RPD acceptance criteria.

HOLDING TIMES, PRESERVATION, AND SAMPLE STORAGE

Holding Times

Extractions and analyses were performed within the recommended holding time criteria.

Preservation and Sample Storage

The samples were preserved and stored appropriately.

BLANKS

Method Blanks

Laboratory method blanks are used to assess whether laboratory contamination was introduced during sample preparation and analysis. Laboratory method blank analyses were

performed at the required frequencies. For purposes of data qualification, the laboratory method blanks were associated with all samples prepared in the analytical batch.

All laboratory method blank results were non-detect to MRL for all target analytes.

Equipment Rinsate Blanks

Equipment rinsate blanks are used to evaluate field equipment decontamination. These blanks were not required for this sampling event, as all samples were collected using dedicated, single-use equipment.

Trip Blanks

Trip blanks are used to evaluate whether volatile organic compound contamination was introduced during sample storage and shipment between the sampling location and the laboratory.

One trip blank was submitted with each of the sample delivery group 112227 and 112244 for EPA Method 8260D analysis. The trip blanks were non-detect to MRL for all target analytes.

LABORATORY CONTROL SAMPLE/LABORATORY CONTROL SAMPLE DUPLICATE RESULTS

A laboratory control sample (LCS) and a laboratory control sample duplicate (LCSD) are spiked with target analytes to provide information about laboratory precision and accuracy. When LCSD results were not reported, batch precision was evaluated based on laboratory duplicate or matrix spike (MS) and matrix spike duplicate (MSD) relative percent difference (RPDs). The reported LCS/LCSD samples were extracted and analyzed at the required frequency.

According to reports 112209-amended, 112245, 112227, and 112244, the EPA Method 8270E LCS and LSCD results for phenol and benzoic acid were below the lower percent recovery acceptance limit of 10 percent, ranging from 9 percent to 4 percent. Additionally, the RPD between the LCS and LCSD exceeded the 20 percent limit, at 22 percent, for benzoic acid. The reviewer rejected the associated non-detect sample results, as shown in the table below. The LCS and LCSD results for bis(2-chloroethyl) ether and 2,2'-oxybis(1-chloropropane) were above their respective upper percent recovery acceptance limits, at 88 percent, 94 percent, and 87 percent. Bis(2-chloroethyl) ether and 2,2'-oxybis(1-chloropropane) were non-detect in the associated samples; thus, no qualifications were necessary.

Report	Sample	Component	Original Result (ug/L)	Qualified Result (ug/L)
112209-amended	TWA-10_20-25-1210	Phenol	1 U	R
		Benzoic acid	5 U	R
112227	TWA-10-30-35-1210	Phenol	1 U	R

Report	Sample	Component	Original Result (ug/L)	Qualified Result (ug/L)
		Benzoic acid	5 U	R
112244	TWA-10_45-50-1213	Phenol	1 U	R
		Benzoic acid	5 U	R
112245	TWA-10_51-56_1213	Phenol	1 U	R
		Benzoic acid	5 U	R

NOTES:
R = result is rejected.
U = result is non-detect at the method reporting limit.
ug/L = micrograms per liter.

According to reports 112209-amended, 112245, 112227, and 112244, the EPA Method 8082A RPD between the LCS and LCSD exceeded the 20 percent limit, at 23 percent and 21 percent, respectively, for Aroclor 1016 and Aroclor 1260. The associated sample results were non-detect; thus, no qualifications were necessary

All remaining LCS/LCSD results were within acceptance limits for percent recovery and relative percent difference (RPD).

LABORATORY DUPLICATE RESULTS

Laboratory duplicate results are used to evaluate laboratory precision. No duplicates were analyzed, and batch precision and accuracy were evaluated based on MS/MSD RPDs.

MATRIX SPIKE/MATRIX SPIKE DUPLICATE RESULTS

Matrix spike/matrix spike duplicate (MS/MSD) results are used to evaluate laboratory precision and accuracy as well as the effect of the sample matrix on sample preparation and analysis. All MS/MSD samples were prepared and analyzed at the required frequency. When MS/MSD percent recoveries and RPDs were outside acceptance limits because of high concentrations of analyte in the sample, no qualifications were made by the reviewer.

MS/MSD percent recovery and RPD control limit exceedances did not require qualification in cases where the MS/MSD had been prepared by the laboratory with samples from unrelated projects because MS/MSD with these sample matrices were not representative of project sample matrices.

According to report 112227, the EPA Method 8260D MS results for hexane, ethylbenzene, m,p-xylene, o-xylene, styrene, isopropylbenzene, n-propylbenzene, bromobenzene, 1,3,5-trimethylbenzene, 2-chlorotoluene, 4-chlorotoluene, tert-butylbenzene, 1,2,4-trimethylbenzene, 1,3-dichlorobenzene, 1,4-dichlorobenzene, 1,2-dichlorobenzene, 1,2,4-trichlorobenzene, and naphthalene recovered below the lower acceptance limit of 50 percent, ranging from 43 percent to 49 percent. The reviewer qualified the associated source sample

non-detect results with "UJ" as non-detect with an estimated reporting limit, as shown in the table below.

Report	Sample	Component	Original Result (ug/L)	Qualified Result (ug/L)
112227	TWA-10-30-35-1210	Hexane	5 U	5 UJ
		Ethylbenzene	1 U	1 UJ
		m,p-Xylene	2 U	2 UJ
		o-Xylene	1 U	1 UJ
		Styrene	1 U	1 UJ
		Isopropylbenzene	1 U	1 UJ
		n-Propylbenzene	1 U	1 UJ
		Bromobenzene	1 U	1 UJ
		1,3,5-Trimethylbenzene	1 U	1 UJ
		2-Chlorotoluene	1 U	1 UJ
		4-Chlorotoluene	1 U	1 UJ
		tert-Butylbenzene	1 U	1 UJ
		1,2,4-Trimethylbenzene	1 U	1 UJ
		1,3-Dichlorobenzene	1 U	1 UJ
		1,4-Dichlorobenzene	1 U	1 UJ
		1,2-Dichlorobenzene	1 U	1 UJ
		1,2,4-Trichlorobenzene	1 U	1 UJ
		Naphthalene	1 U	1 UJ

NOTES:
U = result is non-detect at the method reporting limit.
ug/L = micrograms per liter.
UJ = result is non-detect with an estimated reporting limit.

All MS/MSD results were within acceptance limits for percent recovery and RPD.

SURROGATE RECOVERY RESULTS

The samples were spiked with surrogate compounds to evaluate laboratory performance for individual samples. The laboratory appropriately documented and qualified surrogate outliers. The reviewer took no action based on surrogate percent recoveries that were outside acceptance limits because of dilutions necessary to quantify high concentrations of target analytes present in the samples. The reviewer confirmed that batch quality assurance/quality control results for samples with surrogate outliers were within acceptance limits.

According to reports 112209-amended, 112245, 112227, and 112244, the EPA Method 8270E laboratory method blank surrogate compound phenol-d6 recovery was below the lower

acceptance limit of 11 percent, at 10 percent. Batch quality control does not require qualifiers by the reviewer; thus, no qualifications were made.

According to report 112209, the EPA Method 8082A surrogate compound tetrachloro-m-xylene (TCMX) recovery was below the lower acceptance limit of 25 percent, at 7 percent for TWA-10_20-25-1210. The associated sample results were qualified with "R" and rejected, as shown in the table below.

Report	Sample	Component	Original Result (ug/L)	Qualified Result (ug/L)
112209	TWA-10_20-25-1210	Aroclor 1221	0.0035 U	R
		Aroclor 1232	0.0035 U	R
		Aroclor 1016	0.0035 U	R
		Aroclor 1242	0.0035 U	R
		Aroclor 1248	0.0035 U	R
		Aroclor 1254	0.0035 U	R
		Aroclor 1260	0.0035 U	R
		Aroclor 1262	0.0035 U	R
		Aroclor 1268	0.0035 U	R
NOTES: R = result is rejected. U = result is non-detect at the method reporting limit. ug/L = micrograms per liter.				

According to reports 112227 and 112245, the EPA Method 8270E surrogate compound phenol-d6 was below the lower acceptance limit of 11 percent, at 10 percent for both samples TWA-10-51-56_1213 and TWA-10-30-35-1210. The reviewer confirmed with the laboratory that phenol, 2-chlorophenol, benzyl alcohol, 2-methylphenol, and 3-methylphenol + 4-methylphenol results are associated with the surrogate compound phenol-d6. As shown in the table below, the associated sample results were qualified by the reviewer with "R," as rejected. Some results were already qualified as rejected based on LCS and LCSD recoveries; additional qualification was not required.

Report	Sample	Component	Original Result (ug/L)	Qualified Result (ug/L)
112245	TWA-10-51-56_1213	2-Chlorophenol	1.0 U	R
		Benzyl alcohol	1.0 U	R
		2-Methylphenol	1.0 U	R
		3-Methylphenol + 4-Methylphenol	2.0 U	R
112227	TWA-10-30-35-1210	2-Chlorophenol	1.0 U	R
		Benzyl alcohol	1.0 U	R

Report	Sample	Component	Original Result (ug/L)	Qualified Result (ug/L)
		2-Methylphenol	1.0 U	R
		3-Methylphenol + 4-Methylphenol	2.0 U	R
NOTES: R = result is rejected. U = result is non-detect at the method reporting limit. ug/L = micrograms per liter.				

According to report 112227, the EPA Method 8082A surrogate compound TCMX recovery was below the lower acceptance limit of 25 percent, at 17 percent for TWA-10-30-35-1210. The laboratory also flagged the TCMX result due to calibration exceedances. The associated sample results were qualified with "UJ" as non-detect with an estimated reporting limit, as shown in the table below.

Report	Sample	Component	Original Result (ug/L)	Qualified Result (ug/L)
112227	TWA-10_30-35-1210	Aroclor 1221	0.0035 U	0.0035 UJ
		Aroclor 1232	0.0035 U	0.0035 UJ
		Aroclor 1016	0.0035 U	0.0035 UJ
		Aroclor 1242	0.0035 U	0.0035 UJ
		Aroclor 1248	0.0035 U	0.0035 UJ
		Aroclor 1254	0.0035 U	0.0035 UJ
		Aroclor 1260	0.0035 U	0.0035 UJ
		Aroclor 1262	0.0035 U	0.0035 UJ
		Aroclor 1268	0.0035 U	0.0035 UJ
NOTES: U = result is non-detect at the method reporting limit. ug/L = micrograms per liter. UJ = result is non-detect with an estimated reporting limit.				

According to reports 112244, 112227, 112209, and 112245, the laboratory method blanks were flagged by the laboratory due to low phenol-d6 recovery. Basic fractions were flagged by the laboratory based to retention time grouping but the reviewer confirmed with the laboratory that only acidic fractions would be affected by the phenol-d6 exceedance. The reviewer did not require qualification on batch quality control.

All surrogate results were within percent recovery acceptance limits.

CONTINUING CALIBRATION VERIFICATION RESULTS

Continuing calibration verification (CCV) results are used to demonstrate instrument precision and accuracy through the end of the sample batch. CCV results were not required for

validation but were reviewed when provided. Surrogate or batch quality control results flagged by the laboratory based on CCV exceedances, but meeting percent recovery and/or RPD acceptance criteria, required no action from the reviewer.

According to reports 112209-amended, 112245, 112227, and 112244, the laboratory flagged EPA Method 8270E di-n-octyl phthalate results as estimated due to the calibration results being outside of acceptable criteria. The reviewer qualified the non-detect di-n-octyl phthalate results with "UJ" as non-detect with an estimated reporting limit, as shown in the table below.

Report	Sample	Component	Original Result (ug/L)	Qualified Result (ug/L)
112209-amended	TWA-10_20-25-1210	Di-n-octyl phthalate	1 U	1 UJ
112227	TWA-10-30-35-1210		1 U	1 UJ
112244	TWA-10_45-50-1213		1 U	1 UJ
112245	TWA-10_51-56_1213		1 U	1 UJ

NOTES:
U = result is non-detect at the method reporting limit.
ug/L = micrograms per liter.
UJ = result is non-detect with an estimated reporting limit.

FIELD DUPLICATE RESULTS

Field duplicate samples measure both field and laboratory precision. No field duplicates were submitted with reports 112209-amended, 112245, 112227, and 112244.

REPORTING LIMITS

FBI used routine reporting limits for non-detect results, except for samples requiring dilutions because of high analyte concentrations and/or matrix interferences. The reviewer confirmed that when samples were diluted for analysis, the dilution factor was provided by the laboratory at the end of the laboratory sample identification number.

DATA PACKAGE

The data package was reviewed for transcription errors, omissions, and anomalies.

Report 112209 was amended and reissued on December 29, 2021, to separate a waste soil sample to a separate report. No further action was required by the reviewer.

Sample TWA-10_44-45_1213 was submitted with report 112244 for volatile organic compound analysis but was placed on hold once the samples were received by the laboratory. No further action was required by the reviewer.

Sample TWA-10_39-40_1210 was submitted with report 112227 for VOC analysis but was placed on hold once the samples were received by the laboratory. No further action was required by the reviewer.

Samples TWA-10_45-50-1213 and TWA-10_51-56_1213 were flagged by the laboratory as potential laboratory contamination. The reviewer confirmed the samples were reanalyzed with consistent concentrations and the laboratory method blank and other quality control blank samples were non-detect; thus, the reviewer did not add qualifications due to potential contamination.

The reviewer confirmed that samples TWA-10_20-25-1210, TWA-10-30-35-1210, TWA-10_45-50-1213 and TWA-10_51-56_1213 provided with sample delivery groups 112209-amended, 112227, 112244, and 112245 were collected from monitoring well TWA-10D. The sample names included in laboratory report 112209-amended, 112227, 112244, and 112245 are consistent with those provided on the associated COC forms.

No additional issues were found.

Dear Ms Hackett:

Included is the amended report from the testing of material submitted on December 10, 2021 from the TWAAFA-Taylor Way 0615.20.01-03, F&BI 112209 project. Per your request, the soil and water results were split into separate reports.

We appreciate this opportunity to be of service to you and hope you will call if you should have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

Audrey Hackett, Project Manager
Maul Foster Alongi
2815 2nd Ave, Suite 540
Seattle, WA 98121

Dear Ms Hackett:

Included are the water results from the testing of material submitted on December 10, 2021 from the TWAAFA-Taylor Way 0615.20.01-03, F&BI 112209 project. There are 31 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days, or as directed by the Chain of Custody document. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you should have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

CASE NARRATIVE

This case narrative encompasses samples received on December 10, 2021 by Friedman & Bruya, Inc. from the Maul Foster Alongi TWAAFA-Taylor Way 0615.20.01-03, F&BI 112209 project. Samples were logged in under the laboratory ID's listed below.

Laboratory ID	Maul Foster Alongi
112209 -01	TWA-10_20-25-1210

Several compounds in the 8270E laboratory control sample and laboratory control sample duplicate failed the acceptance criteria. The data were flagged accordingly.

An 8270 surrogate in the method blank did not pass the acceptance criteria. The affected compounds were qualified accordingly.

The 8082 laboratory control sample and laboratory control sample duplicate failed the relative percent difference for Aroclor 1016 and 1260. PCBs were not detected therefore the data were acceptable.

All other quality control requirements were acceptable.

QUALITY ASSURANCE RESULTS FOR THE ANALYSIS OF WATER SAMPLES FOR POLYCHLORINATED BIPHENYLS AS AROCLOR 1016/1260 BY EPA METHOD 8082A

Laboratory Code: Laboratory Control Sample 1/0.25

Analyte	Reporting Units	Spike Level	Percent Recovery LCS	Percent Recovery LCSD	Acceptance Criteria	RPD (Limit 20)
Aroclor 1016	ug/L (ppb)	0.063	46	58	25-165	23 vo
Aroclor 1260	ug/L (ppb)	0.063	56	69	25-163	21 vo

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht – The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

December 23, 2021

Audrey Hackett, Project Manager
Maul Foster Alongi
2815 2nd Ave, Suite 540
Seattle, WA 98121

Dear Ms Hackett:

Included are the results from the testing of material submitted on December 10, 2021 from the TWAAFA-Taylor 0615.20.01.03, F&BI 112227 project. There are 33 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days, or as directed by the Chain of Custody document. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you should have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

CASE NARRATIVE

This case narrative encompasses samples received on December 10, 2020 by Friedman & Bruya, Inc. from the Maul Foster Alongi TWAAFA-Taylor 0615.20.01.03 project. Samples were logged in under the laboratory ID's listed below.

Laboratory ID	Maul Foster Alongi
112227 -01	TWA-10-30-35-1210
112227 -02	TWA-10-39-40-1210
112227 -03	Trip Blank

Several 8260D compounds failed below the acceptance criteria in the matrix spike samples. The laboratory control samples met the acceptance criteria, therefore the data were likely due to sample matrix effect.

Several compounds in the 8270E laboratory control sample and laboratory control sample duplicate failed the acceptance criteria. The data were flagged accordingly.

An 8270 surrogate in the method blank did not pass the acceptance criteria. The affected compounds were qualified accordingly.

The 8082 laboratory control sample and laboratory control sample duplicate failed the relative percent difference for Aroclor 1016 and 1260. PCBs were not detected therefore the data were acceptable.

All other quality control requirements were acceptable.

QUALITY ASSURANCE RESULTS FOR THE ANALYSIS OF WATER SAMPLES FOR POLYCHLORINATED BIPHENYLS AS AROCLOR 1016/1260 BY EPA METHOD 8082A

Laboratory Code: Laboratory Control Sample 1/0.25

Analyte	Reporting Units	Spike Level	Percent Recovery LCS	Percent Recovery LCSD	Acceptance Criteria	RPD (Limit 20)
Aroclor 1016	ug/L (ppb)	0.063	46	58	25-165	23 vo
Aroclor 1260	ug/L (ppb)	0.063	56	69	25-163	21 vo

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht – The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

Audrey Hackett, Project Manager
Maul Foster Alongi
2815 2nd Ave, Suite 540
Seattle, WA 98121

Dear Ms Hackett:

Included are the results from the testing of material submitted on December 13, 2021 from the TWAAFA-Taylor Way 0615.20.01-03, F&BI 112244 project. There are 33 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days, or as directed by the Chain of Custody document. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you should have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

CASE NARRATIVE

This case narrative encompasses samples received on December 13, 2021 by Friedman & Bruya, Inc. from the Maul Foster Alongi TWAAFA-Taylor Way 0615.20.01-03, F&BI 112244 project. Samples were logged in under the laboratory ID's listed below.

Laboratory ID	Maul Foster Alongi
112244 -01	TWA-10_44-45_1213
112244 -02	TWA-10_45-50-1213
112244 -03	Trip Blanks

Methylene chloride was detected in sample TWA-10_45-50-1213. The sample was reanalyzed from two separate VOAs with similar levels of methylene chloride. The data were flagged accordingly.

Several compounds in the 8270E laboratory control sample and laboratory control sample duplicate failed the acceptance criteria. The data were flagged accordingly.

The 8082 laboratory control sample and laboratory control sample duplicate failed the relative percent difference for Aroclor 1016 and 1260. PCBs were not detected therefore the data were acceptable.

An 8270 surrogate in the method blank did not pass the acceptance criteria. The affected compounds were qualified accordingly.

All other quality control requirements were acceptable.

QUALITY ASSURANCE RESULTS FOR THE ANALYSIS OF WATER SAMPLES FOR POLYCHLORINATED BIPHENYLS AS AROCLOR 1016/1260 BY EPA METHOD 8082A

Laboratory Code: Laboratory Control Sample 1/0.25

Analyte	Reporting Units	Spike Level	Percent Recovery LCS	Percent Recovery LCSD	Acceptance Criteria	RPD (Limit 20)
Aroclor 1016	ug/L (ppb)	0.063	46	58	25-165	23 vo
Aroclor 1260	ug/L (ppb)	0.063	56	69	25-163	21 vo

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht – The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

Audrey Hackett, Project Manager
Maul Foster Alongi
2815 2nd Ave, Suite 540
Seattle, WA 98121

Dear Ms Hackett:

Included are the results from the testing of material submitted on December 13, 2021 from the TWAAFA-Taylor Way 0615.20.01-03, F&BI 112245 project. There are 33 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days, or as directed by the Chain of Custody document. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you should have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

CASE NARRATIVE

This case narrative encompasses samples received on December 13, 2021 by Friedman & Bruya, Inc. from the Maul Foster Alongi TWAAFA-Taylor Way 0615.20.01-03, F&BI 112245 project. Samples were logged in under the laboratory ID's listed below.

Laboratory ID	Maul Foster Alongi
112245 -01	TWA-10_51-56_1213

Several compounds in the 8270E laboratory control sample and laboratory control sample duplicate failed the acceptance criteria. The data were flagged accordingly.

Methylene chloride was detected in sample TWA-10_51-56_1213. The data were qualified as possible laboratory contamination.

The 8082 laboratory control sample and laboratory control sample duplicate failed the relative percent difference for Aroclor 1016 and 1260. PCBs were not detected therefore the data were acceptable.

An 8270 surrogate in the method blank did not pass the acceptance criteria. The affected compounds were qualified accordingly.

All other quality control requirements were acceptable.

QUALITY ASSURANCE RESULTS FOR THE ANALYSIS OF WATER SAMPLES FOR POLYCHLORINATED BIPHENYLS AS AROCLOR 1016/1260 BY EPA METHOD 8082A

Laboratory Code: Laboratory Control Sample 1/0.25

Analyte	Reporting Units	Spike Level	Percent Recovery LCS	Percent Recovery LCSD	Acceptance Criteria	RPD (Limit 20)
Aroclor 1016	ug/L (ppb)	0.063	46	58	25-165	23 vo
Aroclor 1260	ug/L (ppb)	0.063	56	69	25-163	21 vo

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht – The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

Subject: Taylor Way and Alexander Ave Fill Area (TWAAFA) Site - Burlington Property Soil Vapor Samples Data Validation Summary
Client Project No., Task Order No.: Not Specified, Task No. 5
QA/QC Solutions, LLC Project No.: 080522.1

Dear Tasya:

This letter documents the results of the data validation completed for the analyses of selected organic compounds on soil vapor samples associated with Taylor Way and Alexander Ave Fill Area (TWAAFA) Site located in Tacoma, Washington sampling events.

The available data were validated to verify applicable laboratory quality assurance and quality control (QA/QC) measurements were reported, documented, and of sufficient quality to support its intended purpose(s). A summary of the overall assessment of data quality, the data set, a summary of the analytical methods used to complete the chemical analyses, a summary of the data validation procedures used, and a summary of the reasons why data were qualified (including other items noted during data validation) is presented below.

Overall Assessment of Data Quality

Overall, the data reported are of good quality and the results for the applicable QA/QC measurements that were used by the laboratories during the analysis of the samples were generally acceptable. Some sample results required qualification during data validation because method-specific QA/QC criteria were not met; results maybe qualified for more than one reason.

During data validation two results reported as detected for methylene chloride required qualification as estimated (*J*); see *Reasons for Data Qualification* section below for additional details.

Analytical data that did not meet method- and/or laboratory-established control limits for applicable quality control measurements were qualified by the laboratory or during data validation. These qualified data are usable and represent data of good quality and reasonable confidence and have an acceptable degree of uncertainty (i.e., may be less precise or less accurate than unqualified data).

Data Set

The data set consisted of eight soil vapor samples and one field duplicate soil vapor sample that were collected during two sampling events completed on March 1, 2022 and July 27, 2022. A summary of the samples collected and the analyses completed is summarized in Table 1.

Analyses were completed by Friedman & Bruya, Inc. Environmental Chemists located in Seattle, Washington. The laboratory submitted two (2) data summary packages and electronic data deliverable (EDDs).

Analytical Methods

The analytical methods used to complete the chemical analyses on all samples listed in Table 1 are as follows:

- Air phase hydrocarbon (APH) ranges for APH EC5-8 and EC9-12 Aliphatics and APH EC9-10 Aromatics by the Method for the Determination of Air Phase Hydrocarbons (MA APH) prepared by the Massachusetts Department of Environmental Protection using gas chromatography/mass spectrometry (GC/MS) (MA APH 2009)
- Volatile organic compounds (VOCs) for 11 target compounds (including co-eluting VOCs) by GC/MS using EPA Method TO-15 (U.S. EPA 1999).

Data Validation Procedures

Data validation procedures included evaluating a summary of the sample results and applicable quality control results reported by the laboratory; this level of validation is also referred to as an abbreviated data review (equivalent to "Stage 2A/2B" review per U.S. EPA 2009. The analytical data were validated generally following the applicable guidance and requirements:

- Method-specific and laboratory-established quality control requirements, as applicable.
- Guidance on Environmental Data Verification and Validation (U.S. EPA 2002)
- Guidance for Labeling Externally Validated Laboratory Analytical Data for Superfund Use. OSWER No. 9200.1-85. EPA 540-R-08-005. (U.S. EPA 2009).
- *National Functional Guidelines for Organic Superfund Methods Data Review*. Final. OLEM 9240.0-51. EPA 542-R-20-007. November 2020. Office of Superfund Remediation and Technology Innovation (OSRTI), U.S. Environmental Protection Agency. (U.S. EPA 2020).

The laboratory data deliverables that were validated and available for review included the following:

- Case narratives discussing analytical problems (if any) and procedures.
- Chain-of-custody documentation to verify completeness of the data set.
- Sample preparation logs or laboratory summary result forms to verify analytical holding times were met.
- Results for applicable method blanks to determine whether an analyte that may have been reported as detected in a sample was the result of possible

contamination introduced at the laboratory, during sampling, and/or during transport of samples, respectively.

- Results for applicable surrogate compound, laboratory control sample (LCS) (i.e., blank spike), duplicate LCS, matrix spike (MS), and matrix spike duplicate (MSD) recoveries to assess analytical accuracy.
- Results for applicable laboratory duplicate sample, duplicate LCS, and MSD analyses to assess analytical precision as are applicable.
- Results for the field duplicate samples to provide additional information.
- Laboratory summaries of analytical results reported for the analyses competed.

Verification and validation of 100-percent of all applicable laboratory calculations, transcriptions, review of instrument printouts, and review of bench sheets were not completed during the data validation review. There may be analytical problems that could only be identified by reviewing every instrument printout and associated analytical quality control results. Verification of all possible factors that could result in the degradation of data quality was not completed nor should be inferred at this time. The laboratory case narratives did not indicate any significant problems with data that were not reviewed during data validation. The adequacy of the sampling procedures was not completed during the data validation.

Performance based control limits established by the laboratory, applicable control limits specified in the analytical methods, and best professional judgement were used to evaluate data quality and to determine if specific data required qualification. Data qualifiers were assigned during data validation following guidance specified by U.S. EPA (2002 and 2020) to the EDD when applicable QC measurement criteria were not met and qualification of the data was warranted.

Reasons for Data Qualification

During data validation two results reported as detected for methylene chloride required qualification as estimated (*J*) because the concentration reported was above the upper instrument calibration range. The affected samples included TWA-SV-LP-D-1-030122 (methylene chloride at 510 ug/m^3) and TWA-SV-LP-B-1-030122 (methylene chloride at 530 ug/m^3).

General Comments:

- Data users should refer to the laboratory data packages for complete information pertinent to the analyses completed.
- Results were reported as not detected were at the applicable method reporting limit (MRL).
- All reported detections of methylene chloride were assigned a *lc* laboratory data flag to indicate the presence of this VOC is likely due to laboratory contamination. This VOC was not present in the associated method blank (i.e., reported as not detected); therefore, no sample results required qualification for this reason.

This concludes the data validation review. Should you have any questions regarding the information presented herein, please contact me by telephone at 503.763.6948 or by e-mail at jjmcateer@msn.com.

Dear Mr Gray:

Included are the results from the testing of material submitted on March 2, 2022 from the CE Tacoma-Lab Pack Soil Vapor TWAAFA-001, F&BI 203054 project. There are 16 pages included in this report.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

Enclosures
c: Trevor Louviere

CASE NARRATIVE

This case narrative encompasses samples received on March 2, 2022 by Friedman & Bruya, Inc. from the Dalton Olmsted Fuglevand CE Tacoma-Lab Pack Soil Vapor TWAAFA-001, F&BI 203054 project. Samples were logged in under the laboratory ID's listed below.

Laboratory ID	Dalton Olmsted Fuglevand
203054 -01	TWA-SV-LP-E-1-030122
203054 -02	TWA-SV-LP-D-1-030122
203054 -03	TWA-SV-LP-C-2-030122
203054 -04	TWA-SV-LP-A-2-030122
203054 -05	TWA-SV-LP-B-1-030122

Non-petroleum compounds identified in the air phase hydrocarbon (APH) ranges were subtracted per the MA-APH method.

Methylene chloride was detected in the TO-15 analysis of samples TWA-SV-LP-D-1-030122, TWA-SV-LP-C-2-030122, and TWA-SV-LP-B-1-030122. The data were flagged as due to laboratory contamination.

All other quality control requirements were acceptable.

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht – The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

SAMPLE CONDITION UPON RECEIPT CHECKLIST

PROJECT # 203084 CLIENT DOF INITIALS/ DATE: MB 3-2-22

If custody seals are present on cooler, are they intact? ☑ NA ☐ YES ☐ NO

Cooler/Sample temperature 17 °C

Were samples received on ice/cold packs? ☐ YES ☑ NO

How did samples arrive?
- ☑ Over the Counter
- ☐ Picked up by F&BI
- ☐ FedEx/UPS/GSO

Number of days samples have been sitting prior to receipt at laboratory 1 days

Is there a Chain-of-Custody* (COC)? ☑ YES ☐ NO
*or other representative documents, letters, and/or shipping memos

Are the samples clearly identified? (explain "no" answer below) ☑ YES ☐ NO

Is the following information provided on the COC* ? (explain "no" answer below)

Sample ID's	☑ Yes ☐ No	# of Containers	☑ Yes ☐ No
Date Sampled	☑ Yes ☐ No	Relinquished	☑ Yes ☐ No
Time Sampled	☐ Yes ☐ No	Requested analysis	☑ Yes ☐ No

Were all sample containers received intact (i.e. not broken, leaking etc.)? (explain "no" answer below) ☑ YES ☐ NO

Were appropriate sample containers used? ☑ YES ☐ NO ☐ Unknown

If custody seals are present on samples, are they intact? ☑ NA ☐ YES ☐ NO

Are samples requiring no headspace, headspace free? ☑ NA ☐ YES ☐ NO

Air Samples: Were any additional canisters received? ☐ NA ☐ YES ☑ NO

If Yes, number of unused 1L canisters _____

number of unused 6L canisters _____

Explain "no" items from above (use the back if needed)

Matrix Spikes: 25 µL of 25 ppbv ppm of T015 ccv/lcs Lot # 65-189a 03/09/22 BL
(Amount / Concentration / Analytes and Solvent)

Matrix Spikes: 150 µL of 112.5 µg/m³ ppm of APH LCS Lot # 65-172C
(Amount / Concentration / Analytes and Solvent)

MS Surrogates: ~~50~~ 20 µL of 1000 ppbv ppm of Gx ccv/LCS Lot # 65-188C
(Amount / Concentration / Analytes and Solvent)

Internal Standards: 50 µL of 50 ppbv ppm of T015 IS/SURR/DFB Lot # 65-190a
(Amount / Concentration / Analytes and Solvent)

Notes:

TO-15 EXTRACTION WORKSHEET (AIR)

HT_____

Project #: 203054 | Date Received: 3/2/22

Client: DOF-TWAFAA | Date Extracted: 3/9/22

QC Batch ID: 02-0457 | Date Analyzed: _____

Samples checked against COC k | GCMS ☐7 ~~☐8~~, Seq. Date _____

Sample Type:
- ☒ Soil Gas
- ☐ Indoor Air
- ☐ Other_____

Due Date: 3/16

Requested Analytes:
- ☐ TO-15 Full List (sDF=3.3)
- ☐ cVOCs (sDF=10)
- ☒ APH (sDF=39)
- ☐
- ☒ BTEX (sDF=33)
- ☒ Naphthalene (sDF=3.3)
- ☒ cis-1,2-DCE
- ☒ PCE, TCE, VC, MeCl2

sDF = Acceptable Dilution Factor For Soil Gas
iDF = Acceptable Dilution Factor For Indoor Air

Reporting Units:
- ☒ µg/m3
- ☐ Other_____
- ☐ ve's not Acceptable
- ☐ Dilutions Not Acceptable for Non-Detects
- ☒ Screen Samples First

Sample ID	Canister ID	Initial Vacuum (P_i)	Final Vacuum (P_f)	Initial Dilution Factor	Volume Injected (cc)	Final Dilution Factor	Observations

TO15 Sequence Procedure

7016D Previous Run

- ☑ Print sequence from Chemstation (colored and white paper).
- ☑ Compare Entech and Chemstation sequences
- ☑ Check Entech position and canister #:
  - Position 5 to 16
  - Position _____ to _____
- ☑ **GCMS 8 ONLY:** Close Entech software and restart computer

TO15 Tear Down
(previous day samples done running)

- ☑ Close all canisters (blue valves)
- ☑ Remove canisters on tree- EXCEPT Rinse (Position 1)
  loosten nut closest to tree.

If hissing occurs. List cans below under "Canisters Vented".

- ☑ Handtighten caps onto canisters
- ☑ Place canisters on floor next to tree
- ☒ If certified canisters, check starting pressure. Record any less than 20 PSI below

Completed TWC 3/7

TO15 Start Up

- ☑ Check all canisters closed: Rinse, Cal, IS, and lines 2,3, 4
- ☑ Cleaning System ~1hr (cans on counter + under counter behind tree)
  Flush x2: (O) ✓ 10:59 (C) ✓ 11:35
  (If only can cert was ran x1, closed)
  Leak check : ✓ 12:56
- ☑ Clean Lines ~35min ✓ 13:53
  Entech: Load Morning System Condition
- ☑ Entech: Load sequence: TO15MorningSTARTUP
  Change name to month, day, and sample: (080501)
  Chemstation: Load TO15Morning sequence
  Change name, data path, and batch number
  Run Sequence
- ☑ Open all cans attached: Rinse, Cal, IS, and lines 2,3, 4
  Run sequence on Entech

Certified Canisters with starting pressure below 20 PSI	**Canisters Vented**
☑ Check if none	☑ Check if none

TO15 Sequence Procedure

7016D Previous Run

- [x] Print sequence from Chemstation (colored and white paper).
- [x] Compare Entech and Chemstation sequences
- [x] Check Entech position and canister #:
  - Position 2 to 16
  - Position _____ to _____
- [x] **GCMS 8 ONLY:** Close Entech software and restart computer

TO15 Tear Down
(previous day samples done running)

- [x] Close all canisters (blue valves)
- [x] Remove canisters on trec- EXCEPT Rinse (Position 1)
  loosten nut closest to trec.

If hissing occurs. List cans below under "Canisters Vented".

- [x] Handtighten caps onto canisters
- [x] Place canisters on floor next to trec

- [ ] If certified canisters, check starting pressure. Record any less than 20 PSI below

TO15 Start Up

- [x] Check all canisters closed: Rinse, Cal, IS, and lines 2,3, 4
- [x] Cleaning System ~1hr
  Flush x2: (O) ✓ 14:01 (C) ✓ 14:29
  (If only can cert was ran x1, closed)
  Leak check : _____
- [x] Clean Lines ~35min _____
  Entech: Load Morning System Condition
- [x] Entech: Load sequence: TO15MorningSTARTUP
  Change name to month, day, and sample: (080501)
  Chemstation: Load TO15Morning sequence
  Change name, data path, and batch number
  Run Sequence
- [x] Open all cans attached: Rinse, Cal, IS, and lines 2,3, 4
  Run sequence on Entech

Certified Canisters with starting pressure below 20 PSI	**Canisters Vented**

Dear Mr Louviere:

Included are the results from the testing of material submitted on July 28, 2022 from the CE Tacoma-Soil Vapor TWAAFA-001, F&BI 207479 project. There are 14 pages included in this report.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

CASE NARRATIVE

This case narrative encompasses samples received on July 28, 2022 by Friedman & Bruya, Inc. from the Dalton Olmsted Fuglevand CE Tacoma-Soil Vapor TWAAFA-001, F&BI 207479 project. Samples were logged in under the laboratory ID's listed below.

Laboratory ID	Dalton Olmsted Fuglevand
207479 -01	TWA-SV-33-072722
207479 -02	TWA-SV-34-072722
207479 -03	TWA-SV-32-072722
207479 -04	TWA-SV-32-072722-D

Non-petroleum compounds identified in the air phase hydrocarbon (APH) ranges were subtracted per the MA-APH method.

All quality control requirements were acceptable.

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht – The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

DATA QUALITY ASSURANCE/QUALITY CONTROL REVIEW

PROJECT NO. M0615.20.003 | AUGUST 12, 2022 | PORT OF TACOMA

Maul Foster & Alongi, Inc. (MFA), conducted an independent stage 2A review of the quality of tier II analytical results for sub-slab soil vapor samples and associated quality control samples collected at the Potter property located at 1801 E Alexander Avenue in Tacoma, Washington, on July 26 and 27, 2022.

Friedman & Bruya, Inc. (FBI), and Fremont Analytical, Inc. (Fremont), performed the analyses. FBI report number 207462 and Fremont report number 2207392 were reviewed. Portions of samples were subcontracted from FBI to Fremont for major gases analysis, and Fremont report 2207392 is appended to FBI report 207462. The analyses performed and samples analyzed are listed below.

Per project requirements, FBI and Fremont released additional tier IV data packages for reports 207462 and 2207392, respectively. The reviewer performed a quality assurance review and completeness check of the tier IV data packages.

Analysis	Reference
Air-phase petroleum hydrocarbons	MA-APH
Helium	ASTM D1946
Major gases	EPA 3C
Volatile organic compounds	EPA TO-15

Notes
ASTM = ASTM International.
EPA = U.S. Environmental Protection Agency.
MA-APH = Massachusetts Department of Environmental Protection Method for the Determination of Air-Phase Petroleum Hydrocarbons.
TO = toxic organics.

DATA QUALIFICATION

Analytical results were evaluated according to applicable sections of U.S. Environmental Protection Agency (EPA) guidelines for data review (EPA 2020) and appropriate laboratory- and method-specific guidelines (EPA 1986, FBI 2019, Fremont 2020).

Data validation procedures were modified, as appropriate, to accommodate quality control requirements for methods that EPA data review procedures do not specifically address (e.g., Massachusetts Department of Environmental Protection Method for the Determination of Air-Phase Petroleum Hydrocarbons [MA-APH]).

Based on the results of the data quality review procedures described below, the data are considered acceptable for their intended use, with the appropriate final data qualifiers assigned. Final data qualifiers represent qualifiers originating from the laboratory and accepted by the reviewer, as well as data qualifiers assigned by the reviewer during validation.

- Final data qualifiers:
  - J = result is estimated.
  - U = result is non-detect at the method reporting limit (MRL).
  - UJ = result is non-detect with an estimated detection limit.

The reviewer confirmed that sub-slab soil gas samples were collected under a helium shroud to detect leaks in the collection system. All associated sample results were non-detect for helium by ASTM International [ASTM] Method D1946.

According to the case narrative accompanying report 207462, several non-petroleum compounds identified in the air-phase hydrocarbon ranges were subtracted per the MA-APH method. The compounds are summarized in the tier II report case narrative, and details of specific data adjustments and the presence of non-air-phase petroleum compounds are disclosed in MA-APH sample data section of the tier IV report, in accordance with the method. The reviewer performed a completeness check of this information. No further action was required for stage 2A validation.

According to report 207462, several MA-APH and EPA Method TO-15 results exceeded the instrument calibration range and were reported as estimates. The reviewer confirmed with the laboratory that samples were screened to determine appropriate sample dilutions and were subsequently diluted to the highest reasonable extent to achieve low reporting limits for the analytes at lower concentrations, as well as to avoid potential bias from multiple serial dilutions. The over-calibration results are much greater than their applicable screening levels, where present, and the reviewer confirmed with the MFA project manager that the estimated results are acceptable for reporting without reanalysis. The reviewer qualified the associated sample results with "J," as shown in the following table.

Report	Sample	Analysis	Component	Original Result (ug/m³)	Qualified Result (ug/m³)
207462	TWA-SV-35-072622	MA-APH	C5-C8 aliphatic hydrocarbons	770,000	770,000 J
		EPA TO-15	Hexane	27,000	27,000 J
			Cyclohexane	21,000	21,000 J
			2,2,4-Trimethylpentane	50,000	50,000 J
			Heptane	42,000	42,000 J
	TWA-SV-DUP-072622	MA-APH	C5-C8 aliphatic hydrocarbons	780,000	780,000 J
			C9-C12 aliphatic hydrocarbons	260,000	260,000 J
		EPA TO-15	Hexane	28,000	28,000 J
			Cyclohexane	21,000	21,000 J
			2,2,4-Trimethylpentane	51,000	51,000 J
			Heptane	43,000	43,000 J
	TWA-SV-41-072622	EPA TO-15	Tetrachloroethene	8,200	8,200 J

Notes
EPA = U.S. Environmental Protection Agency.
J = result is estimated.
MA-APH = Massachusetts Department of Environmental Protection Method for the Determination of Air-Phase Petroleum Hydrocarbons.
TO = toxic organics.
ug/m³ = micrograms per cubic meter.

According to report 207462, some naphthalene results for EPA Method TO-15 were reported at a level below the lowest calibration standard, and the reported laboratory detection limits are considered estimates. The reviewer qualified associated sample results with "UJ," as shown in the following table.

Report	Sample	Component	Original Result (ug/m³)	Qualified Result (ug/m³)
207462	TWA-SV-41-072622	Naphthalene	2.4 U	2.4 UJ
	TWA-SV-36-072622		2.4 U	2.4 UJ
	TWA-SV-37-072622		2.4 U	2.4 UJ
	TWA-SV-43-072722		2.4 U	2.4 UJ
	TWA-SV-DUP-072722		2.4 U	2.4 UJ

Notes
U = result is non-detect at the laboratory detection limit.
ug/m³ = micrograms per cubic meter.
UJ = result is non-detect with an estimated detection limit.

HOLDING TIMES, PRESERVATION, AND SAMPLE STORAGE

Holding Times

Extractions and analyses were performed within the recommended holding time criteria.

Preservation and Sample Storage

The samples were preserved and stored appropriately.

BLANKS

Method Blanks

Laboratory method blanks are used to assess whether laboratory contamination was introduced during sample preparation and analysis. Laboratory method blank analyses were performed at the required frequencies. For purposes of data qualification, the laboratory method blanks were associated with all samples prepared in the analytical batch.

In subcontracted report 2207392, Fremont did not report a laboratory method blank for EPA Method 3C. The method does not require a laboratory method blank.

All laboratory method blank results were non-detect to MRLs.

LABORATORY CONTROL SAMPLE/LABORATORY CONTROL SAMPLE DUPLICATE RESULTS

A laboratory control sample (LCS) and a laboratory control sample duplicate (LCSD) are spiked with target analytes to provide information about laboratory precision and accuracy. FBI and Fremont did not report LCSDs for any methods; the reviewer evaluated laboratory precision using laboratory duplicate results. FBI did not report LCSs for ASTM D1946, as it is not required by the method; the reviewer confirmed with the laboratory that initial calibration and continuing calibration passed for this method.

The LCSs were extracted and analyzed at the required frequency, and all results were within acceptance limits for percent recovery.

LABORATORY DUPLICATE RESULTS

Laboratory duplicate results are used to evaluate laboratory precision. All laboratory duplicate samples were extracted and analyzed at the required frequency. Laboratory duplicate results greater than five times the MRL were compared to laboratory relative percent difference (RPD) control limits. Where laboratory duplicate results were less than five times the MRL, including non-detect results, the reviewer compared the absolute difference of the laboratory duplicate and parent sample result to the MRL of the parent sample.

All laboratory duplicate results met the acceptance criteria.

MATRIX SPIKE/MATRIX SPIKE DUPLICATE RESULTS

Matrix spike (MS) and matrix spike duplicate (MSD) results are used to evaluate laboratory precision and accuracy as well as the effect of the sample matrix on sample preparation and analysis.

FBI and Fremont did not report MSs or MSDs, as they are not required by the methods.

SURROGATE RECOVERY RESULTS

The samples were spiked with surrogate compounds to evaluate laboratory performance for individual samples. FBI reported surrogate results for MA-APH and EPA TO-15 sample results, but not for batch quality control results.

All surrogate results were within percent recovery acceptance limits.

FIELD DUPLICATE RESULTS

Field duplicate samples measure both field and laboratory precision. The following field duplicate and parent sample pairs were submitted for analysis:

Reports	Parent Sample	Field Duplicate Sample
207462/2207392	TWA-SV-35-072622	TWA-SV-DUP-072622
	TWA-SV-38-072722	TWA-SV-DUP-072722

MFA uses acceptance criteria of 100 percent RPD for results that are less than five times the MRL, or 50 percent RPD for results that are greater than five times the MRL. Non-detect data are not used in the evaluation of field duplicate results.

All field duplicate results met the RPD acceptance criteria.

REPORTING LIMITS

FBI and Fremont used routine reporting limits for non-detect results. Samples requiring dilutions because of high analyte concentrations and/or matrix interferences were reported with raised MRLs and required no action by the reviewer.

DATA PACKAGE

The data package was reviewed for transcription errors, omissions, and anomalies.

FBI report 207462 was revised on September 2, 2022, to include an expanded case narrative concerning sample dilutions. Subcontracted Fremont report 2207392 within the FBI report was also revised due to a sample switch at the laboratory. Samples TWA-SV-DUP-072622 and

TWA-SV-DUP-072722 had been mislabeled during sample receipt. The reviewer confirmed with the laboratory that no other samples were mislabeled and all EPA Method 3C results are correct in the revised report. The reviewer initiated a corrective action investigation with the laboratory, and corrective action responses are included in the report 2207392 tier IV data package.

No other issues were found.

Audrey Hackett, Project Manager
Maul Foster Alongi
2815 2nd Ave, Suite 540
Seattle, WA 98121

Dear Ms Hackett:

Included are the amended results from the testing of material submitted on July 27, 2022 from the Potter Property M0615.20.002, F&BI 207462 project. The case narrative was expanded.

We appreciate this opportunity to be of service to you and hope you will call if you should have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

CASE NARRATIVE

This case narrative encompasses samples received on July 27, 2022 by Friedman & Bruya, Inc. from the Maul Foster Alongi Potter Property M0615.20.002, F&BI 207462 project. Samples were logged in under the laboratory ID's listed below.

Laboratory ID	Maul Foster Alongi
207462 -01	TWA-SV-42-072622
207462 -02	TWA-SV-41-072622
207462 -03	TWA-SV-35-072622
207462 -04	TWA-SV-DUP-072622
207462 -05	TWA-SV-36-072622
207462 -06	TWA-SV-37-072622
207462 -07	TWA-SV-40-072622
207462 -08	TWA-SV-43-072722
207462 -09	TWA-SV-39-072722
207462 -10	TWA-SV-38-072722
207462 -11	TWA-SV-DUP-072722

Individually certified canisters were provided for TO-15 sampling.

The canisters were pressurized and screened prior to analysis. The screening data were reviewed to determine applicable dilution levels. Samples TWA-SV-35-072622 and TWA-SV-DUP-072622 were serially diluted into a separate canister due to elevated analyte concentrations. The concentration of several analytes exceeded the calibration range of the instrument in those samples. The data were flagged accordingly.

The samples were sent to Fremont Analytical for major gasses analysis. The report is enclosed.

Non-petroleum compounds identified in the air phase hydrocarbon (APH) ranges were subtracted per the MA-APH method. The following compounds were subtracted, if present – methylene chloride, acetone, 2-propanol, methyl t-butyl ether (MTBE), hexamethylcyclotrisiloxane, octamethylcyclotetrasiloxane, and tetrachloroethene.

All quality control requirements were acceptable.

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The analyte is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht – The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits due to sample matrix effects.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

RE: 207462
Work Order Number: 2207392

August 19, 2022

Attention Michael Erdahl:

Fremont Analytical, Inc. received 11 sample(s) on 7/27/2022 for the analyses presented in the following report.

Major Gases by EPA Method 3C

This report consists of the following:

- Case Narrative
- Analytical Results
- Applicable Quality Control Summary Reports
- Chain of Custody

All analyses were performed consistent with the Quality Assurance program of Fremont Analytical, Inc. Please contact the laboratory if you should have any questions about the results.

Thank you for using Fremont Analytical.

Sincerely,

Brianna Barnes
Project Manager

Case Narrative

WO#: **2207392**
Date: **8/19/2022**

CLIENT: Friedman & Bruya
Project: 207462

I. SAMPLE RECEIPT:
Samples receipt information is recorded on the attached Sample Receipt Checklist.

II. GENERAL REPORTING COMMENTS:
Major gases are reported as % ratio of the Major Gases analyzed (Carbon dioxide, Carbon Monoxide, Methane, Nitrogen, Oxygen and Hydrogen).

The validity of the analytical procedures for which data is reported in this analytical report is determined by the Laboratory Control Sample (LCS). The LCS is processed with the samples to ensure method criteria are achieved throughout the entire analytical process.

III. ANALYSES AND EXCEPTIONS:
Exceptions associated with this report will be footnoted in the analytical results page(s) or the quality control summary page(s) and/or noted below.

8/19/2022: Revision 1 includes corrected data for "TWA-SV-DUP-072622" and "TWA-SV-DUP-072722".

Qualifiers:

* - Flagged value is not within established control limits
B - Analyte detected in the associated Method Blank
D - Dilution was required
E - Value above quantitation range
H - Holding times for preparation or analysis exceeded
I - Analyte with an internal standard that does not meet established acceptance criteria
J - Analyte detected below Reporting Limit
N - Tentatively Identified Compound (TIC)
Q - Analyte with an initial or continuing calibration that does not meet established acceptance criteria
S - Spike recovery outside accepted recovery limits
ND - Not detected at the Reporting Limit
R - High relative percent difference observed

Acronyms:

%Rec - Percent Recovery
CCB - Continued Calibration Blank
CCV - Continued Calibration Verification
DF - Dilution Factor
DUP - Sample Duplicate
HEM - Hexane Extractable Material
ICV - Initial Calibration Verification
LCS/LCSD - Laboratory Control Sample / Laboratory Control Sample Duplicate
MCL - Maximum Contaminant Level
MB or MBLANK - Method Blank
MDL - Method Detection Limit
MS/MSD - Matrix Spike / Matrix Spike Duplicate
PDS - Post Digestion Spike
Ref Val - Reference Value
REP - Sample Replicate
RL - Reporting Limit
RPD - Relative Percent Difference
SD - Serial Dilution
SGT - Silica Gel Treatment
SPK - Spike
Surr - Surrogate

QC SUMMARY REPORT

Major Gases by EPA Method 3C

Sample ID: **LCS-R77187** SampType: **LCS** Units: **%** Prep Date: **7/29/2022** RunNo: **77187**
Client ID: **LCSW** Batch ID: **R77187** Analysis Date: **7/29/2022** SeqNo: **1585662**

Analyte	Result	RL	SPK value	SPK Ref Val	%REC	LowLimit	HighLimit	RPD Ref Val	%RPD	RPDLimit	Qual
Carbon Dioxide	100	0.0500	100.0	0	100	70	130				
Methane	100	0.0500	100.0	0	100	70	130				
Oxygen	99.3	0.0500	100.0	0	99.3	70	130				

Sample ID: **2207392-001AREP** SampType: **REP** Units: **%** Prep Date: **7/29/2022** RunNo: **77187**
Client ID: **TWA-SV-42-072622** Batch ID: **R77187** Analysis Date: **7/29/2022** SeqNo: **1585660**

Analyte	Result	RL	SPK value	SPK Ref Val	%REC	LowLimit	HighLimit	RPD Ref Val	%RPD	RPDLimit	Qual
Carbon Dioxide	3.10	0.0500						3.113	0.543	30	
Methane	ND	0.0500						0		30	
Oxygen	24.8	0.0500						24.86	0.275	30	

Sample Log-In Check List

Client Name:	FB	Work Order Number:	2207392
Logged by:	Clare Griggs	Date Received:	7/27/2022 3:23:00 PM

Chain of Custody

1.	Is Chain of Custody complete?	Yes	☑	No ☐	Not Present	☐
2.	How was the sample delivered?	Courier				

Log In

3.	Coolers are present?	Yes	☐	No ☑	NA	☐
		Air Samples				
4.	Shipping container/cooler in good condition?	Yes	☑	No ☐		
5.	Custody Seals present on shipping container/cooler? (Refer to comments for Custody Seals not intact)	Yes	☐	No ☐	Not Present	☑
6.	Was an attempt made to cool the samples?	Yes	☐	No ☐	NA	☑
7.	Were all items received at a temperature of >2°C to 6°C *	Yes	☐	No ☐	NA	☑
8.	Sample(s) in proper container(s)?	Yes	☑	No ☐		
9.	Sufficient sample volume for indicated test(s)?	Yes	☑	No ☐		
10.	Are samples properly preserved?	Yes	☑	No ☐		
11.	Was preservative added to bottles?	Yes	☐	No ☑	NA	☐
12.	Is there headspace in the VOA vials?	Yes	☐	No ☐	NA	☑
13.	Did all samples containers arrive in good condition(unbroken)?	Yes	☑	No ☐		
14.	Does paperwork match bottle labels?	Yes	☑	No ☐		
15.	Are matrices correctly identified on Chain of Custody?	Yes	☑	No ☐		
16.	Is it clear what analyses were requested?	Yes	☑	No ☐		
17.	Were all holding times able to be met?	Yes	☑	No ☐		

Special Handling (if applicable)

18.	Was client notified of all discrepancies with this order?	Yes	☐	No ☐	NA	☑

Person Notified:		Date:	
By Whom:		Via:	☐ eMail ☐ Phone ☐ Fax ☐ In Person
Regarding:			
Client Instructions:			

19. Additional remarks:

Item Information

* Note: DoD/ELAP and TNI require items to be received at 4°C +/- 2°C
