COMMENTS

Two USTs (gas, diesel) were removed from this property (the refinery) in 1991. Free product was observed on GW in the excavation during removal. The excavation was de-watered and GW was discharged into ARCO's wastewater treatment plant. An undisclosed amount of PCS was overexcavated and transferred into the landfarming area of the refinery. Confirmation soil samples collected from the excavation indicated that remaining soils were above MTCA for TPH (144 to 4428 ppm), B (10.6 ppm), T (79.4 ppm), E (39.9 ppm), and X (8.81 to 185 ppm). Soil borings advanced around the former tanks

were above MTCA for TPH (455 to 1,900 ppm) but below for BTEX. The soil borings were converted into monitoring wells and GW samples were above MTCA for TPH (12 ppm), B (5.74 to 5.76 ppm), T (0.462 to 0.508 ppm), and X (1.62 to 1.74 ppm). No additional info in file.
