Unit Supervisor <i>NEO</i>	Date <i>4/8/10</i>
Section Manager	Date

### COMMENTS

Three USTs (gas, diesel) were removed from this property in 1993. Approximately 150 cy of PCS were overexcavated and landfarmed on-site. Confirmation soil samples collected from the excavation indicated that residual soil impacts remained in a small area under the building as gas (850 ppm) and the two other excavation were below MTCA or ND for gas, diesel, and BTEX. No GW was encountered during excavation. The landfarmed soil was reportedly treated to Class I status and used to backfill the excavations. No additional info in file.
