RE: Spokane River Upriver Dam PCB Site
Addendum to the Draft-Final versions of the February 2005 Focused Remedial
Investigation Report and Feasibility Study
Acceptance of the February 2005 Focused reports

The February 2005 Draft-Final report versions of the Remedial Investigation and Feasibility Study (RI/FS) for the Spokane River Upriver Dam PCB Site have been reviewed and accepted by Ecology. After evaluation of correspondence received during the March 22 through May 6, 2005 public comment period, Ecology has determined that no substantive changes are needed or appropriate. The February 2005 RI and FS report packages have been accepted without modification except as noted below and will be considered final editions.

Please be aware that the 1st sentence on page 24 in Section 5.2.6 of the RI report incorrectly states that “levels were low enough” and should actually be “levels were high enough.”
