RE: Bothell Landing Facility Site

Ms. Becker:

Pursuant to Washington State Department of Ecology (Ecology) letter dated August 15, 2022, the City accepts the following proposed path forward, with clarifications noted below, in reflection of having satisfactorily completed the Bothell Landing Facility Site remedial actions required by Agreed Order No. DE 15746:

- 1) The City requests to terminate and remove the environmental covenant on Parcel 9457200015 (Parcel #4) of the Bothell Landing Site (Instrument Number 2020051356).
- 2) The City agrees to keep in place the Memorandum of Agreement (MOA), City of Bothell Contract #2277, with Ecology addressing contamination within right of ways.
- 3) The City will decommission wells MW-1, BLMW-11, and BLMW-12 per state regulations, including submitting a NOI (Notice of Intent) and required fees to Ecology's Water Resources Program and following WAC 173-160-460.
- 4) Ecology shall issue a letter to the City on the status of Agreed Order No. DE 15746 to document that no further remedial action is required pursuant to that Agreed Order. The City will continue to undertake actions necessary to control and monitor the remaining contamination within the right of ways pursuant to the MOA.

When notified by Ecology, the City will pursue to completion the activities noted above and understands the Site will not be delisted due to remaining right of way contamination. For any further coordination regarding these matters, I may be contacted at ryan.roberts@bothellwa.gov or 425.471.1837.
