Unit Supervisor <i>AK</i>	Date 5/3/11
Section Manager	Date

COMMENTS

Five USTs (gas, HO) were removed from this property in 1989. The file only has a short letter from the contractor, some loose analytical, and an Ecology Environmental Complaint Form. The letter stated that approx. 8 cy of PCS were overexcavated and landfarmed on-site and that a final composite soil sample collected from the excavation was below MTCA for Gas and BTEX. The analytical report from the laboratory has 9 soil samples from which only 2 were above MTCA for TPH (209.3 to 742.9 ppm) and BTEX was ND or below MTCA. Since no figure or explanation was provided with the letter or lab results,

HCID: 883

it is unknown if the two high samples were from stockpiles or the excavation and what was the nature of the rest of the samples. The contractor's letter indicated that Ecology determined that no additional work was needed at the site. The complaint form indicated that the remediation was successful.
