## **APPENDIX 3D**

### **GEOTECHNICAL DATA**

This appendix represents a compilation of geotechnical and grain size data from samples collected during investigations conducted within the Area of Investigation (AOI) between 1999 and 2009. Several data tables or data packages in this appendix also include total organic carbon and/or total solids data, which are presented in the Appendix 5B data tables. A summary of the geotechnical investigations conducted in the upland and sediment portions of the AOI is provided in Table 3D-1. Locations where geotechnical data were collected are indicated in Figure 3D-1; specific tests by location are summarized in Table 3D-2. A geotechnical evaluation of sediment at the adjacent Northlake Shipyard is also included. Each investigation or data package is bookmarked separately; bookmark titles are provided in Table 3D-1.

**Table 3D-1**

**RE: Project: Gas Works Shoreline Investigation**

**ARI Job No: JZ51**

Dear Jane:

Please find enclosed original results for the above referenced project.

A case narrative from the geotechnical laboratory is included.

An electronic copy of the reports and all associated raw data will remain on file with ARI. If you have any questions or require additional information, please contact me at your convenience.

Sincerely,

ANALYTICAL RESOURCES, INC.

Sincerely,

ANALYTICAL RESOURCES, INC.

**Limits of Liability:** ARI will perform all requested services in accordance with appropriate methodology following ARI Standard Operating Procedures and the ARI Quality Assurance Program. This program meets standards for the industry. The total liability of ARI, its officers, agents, employees, or successors, arising out of or in connection with the requested services, shall not exceed the Invoiced amount for said services. The acceptance by the client of a proposal for services by ARI release ARI from any liability in excess thereof, notwithstanding any provision to the contrary in any contract, purchase order or co-signed agreement between ARI and the Client.

**Sample Retention Policy:** All samples submitted to ARI will be appropriately discarded no sooner than 90 days after receipt or 60 days after submission of hardcopy data, whichever is longer, unless alternate retention schedules have been established by work-order or contract.

Tracking NO.: \_\_\_\_\_ Date: \_\_\_\_\_

ARI Job No.: \_\_\_\_\_ Lims NO.: \_\_\_\_\_

## Preliminary Examination Phase:

1. Were intact, properly signed and dated custody seals attached  
To the outside of the cooler? ..... YES  NO
2. Were custody papers included with the cooler ..... YES  NO
3. Were custody papers properly filled out (ink, signed etc.)? ..... YES  NO
4. Complete custody forms and attach all shipping documents ..... OK  NA

Cooler Accepted BY: Bob Long Date: 10/3/06 Time: 1253

## Log-IN Phase:

5. Was a temperature blank include in the cooler? ..... YES  NO
6. Record Cooler Temperature..... 4.0, AMB °C
7. What kind of packing material was used? ..... ICE
8. Was sufficient ice used (if appropriate)? ..... YES  NO
9. Were all bottles sealed in separate plastic bags? ..... YES  NO
10. Did all bottles arrive in good condition (unbroken)? ..... YES  NO
11. Were all bottle labels complete and legible? ..... YES  NO
12. Did all bottle labels and tags agree with custody papers? ..... YES  NO
13. Were all bottles used correct for the requested analyses? ..... YES  NO
14. Do any of the analyses (bottles) require preservative?  
(If so, Preservation checklist must be attached) ..... YES  NO
15. Were all VOA vials free of air bubbles? ..... YES  NO
16. Was sufficient amount of sample sent in each bottle? ..... YES  NO
17. Notify Project Manager of any discrepancies or concerns..... OK  NA

Cooler Opened By: BC Date: 10/3/06 Time: 1253

Client: Floyd, Snider

ARI Project No.: JZ51

Client Project: Gasworks Park Shoreline Invest.

Client Project No.: COS-GWSA

Case Narrative

1. Seventeen samples were received on October 3, 2006, and were in good condition.
2. Fifteen samples were tested for grain size distribution according to ASTM Method D422.
3. Nine samples appeared to contain less than 15% fines and the sieve portion of the procedure was performed, but not the hydrometer portion. The remaining six samples were prepared according to ASTM Method D421, dry prep method, and run for sieve and hydrometer analysis according ASTM Method D422.
4. Three samples were submitted for moisture content determination according to ASTM Method D2216.
5. There were no perceived anomalies to the samples or testing.
6. The data is provided in summary tables and plots.

ARI Job No. LX86**

Dear Jason:

Please find enclosed the original chain of custody record and the final results for the samples from the project referenced above. Four soil samples were received on November 13, 2007. The samples were analyzed for Grain Size as requested.

A copy of these results will be kept on file at ARI. Should you have any questions, please feel free to contact me at your convenience.

Sincerely,

ANALYTICAL RESOURCES, INC.

**Limits of Liability:** ARI will perform all requested services in accordance with appropriate methodology following ARI Standard Operating Procedures and the ARI Quality Assurance Program. This program meets standards for the industry. The total liability of ARI, its officers, agents, employees, or successors, arising out of or in connection with the requested services, shall not exceed the Invoiced amount for said services. The acceptance by the client of a proposal for services by ARI release ARI from any liability in excess thereof, notwithstanding any provision to the contrary in any contract, purchase order or co-signed agreement between ARI and the Client.

**Sample Retention Policy:** All samples submitted to ARI will be appropriately discarded no sooner than 90 days after receipt or 60 days after submission of hardcopy data, whichever is longer, unless alternate retention schedules have been established by work-order or contract.

Client: The Retec Group, Inc.

Project No.: LX86

Client Project: NLU 05570-028-0360

**Case Narrative**

1. Four samples were received on November 13, 2007.
2. The samples were submitted for grain size distribution according to ASTM D422.
3. The samples had a strong fuel odor.
4. The data is provided in summary tables and plots.
5. There were no other noted anomalies in the samples or methods on this project.

Analytical Chemists and Consultants

**Client:** Floyd Snider

**ARI Job No.:** RC58

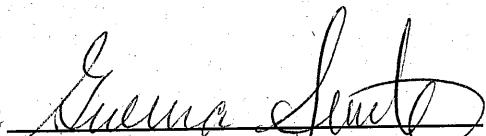

**Client Project:** Phase 3

**Client Project No.:** COSGWA6020

**Case Narrative**

1. Five samples were submitted for testing on July 1, 2010, and were in good condition.
2. The samples were submitted for grain size distribution according to ASTM D422. The samples were prepared according to ASTM D421.
3. An assumed specific gravity of 2.65 was used in the hydrometer calculations.
4. A standard milkshake mixer type device was used to disperse the fine fraction sample.
5. One sample from another job was chosen for triplicate analysis. The triplicate data can be found on the QA summary.
6. The samples contained high percentages of organic matter which may have broken down during the washing and sieving processes.
7. The data is provided in summary tables and plots.
8. There were no further anomalies in the samples or test method.

601 Union Street, Suite 600  
Seattle, WA 98101-2341

**RE: Client Project: Phase 3: COS-GWSA 6020**  
**ARI Job No: RK08**

Dear Ms. Geiselbrecht:

Please find enclosed the Chain-of-Custody (COC) records, receipt documentation, and the final analytical results for the samples from the project referenced above. Analytical Resources, Inc. (ARI) accepted three soil samples on August 23, 2010 under ARI job number RK08. Samples were received within a short time of sampling and transferred to refrigerated storage until they could be logged on 08/24/10. For details regarding sample receipt, refer to the enclosed Cooler Receipt Form.

The samples were analyzed for semivolatiles, TOC, grainsize, metals and aroclor PCBs as requested on the COC.

Due to analyst error, surrogate was not added to the sample aliquots for PCB analysis. All samples were re-extracted and re-analyzed within the recommended holding time for samples stored frozen. Only the results for the re-extract are reported.

A matrix spike (MS) was prepared and analyzed for semivolatiles in conjunction with sample **WW19-04-082310**. Several compounds were outside of advisory control limits. LCS recoveries were within limits. No corrective action is required for matrix QC.

A matrix spike (MS) was prepared and analyzed for total metals with sample **WW19-04-082310**. The percent recovery for zinc was high following the initial analysis of the MS. Since the percent recovery was within acceptable QC limits for the corresponding LCS, it was concluded that the sample matrix was the cause of the high MS recovery. No corrective actions were taken.

There were no further anomalies associated with these analyses.

An electronic copy of this report and all associated raw data will remain on file with ARI. Should you have any questions or problems, feel free to contact me at your convenience.

Sincerely,

ANALYTICAL RESOURCES, INC.

**Limits of Liability:** ARI will perform all requested services in accordance with appropriate methodology following ARI Standard Operating Procedures and the ARI Quality Assurance Program. This program meets standards for the industry. The total liability of ARI, its officers, agents, employees, or successors, arising out of or in connection with the requested services, shall not exceed the Invoiced amount for said services. The acceptance by the client of a proposal for services by ARI release ARI from any liability in excess thereof, notwithstanding any provision to the contrary in any contract, purchase order or co-signed agreement between ARI and the Client.

**Sample Retention Policy:** All samples submitted to ARI will be appropriately discarded no sooner than 90 days after receipt or 60 days after submission of hardcopy data, whichever is longer, unless alternate retention schedules have been established by work-order or contract.

# Cooler Receipt Form

ARI Client: Floyd Snider  
COC No(s): \_\_\_\_\_  NA  
Assigned ARI Job No: RK08

Project Name: Phase 3

Delivered by: Fed-Ex UPS Courier  Hand Delivered Other: \_\_\_\_\_

Tracking No: \_\_\_\_\_  NA

## Preliminary Examination Phase:

- Were intact, properly signed and dated custody seals attached to the outside of to cooler?  YES  NO
- Were custody papers included with the cooler? .....  YES  NO
- Were custody papers properly filled out (ink, signed, etc.) .....  YES  NO
- Temperature of Cooler(s) (°C) (recommended 2.0-6.0 °C for chemistry)..... 13.5
- If cooler temperature is out of compliance fill out form 00070F

Cooler Accepted by: AV Date: 8/23/10 Time: 1025 Temp Gun ID#: 90941609

**Complete custody forms and attach all shipping documents**

## Log-In Phase:

- Was a temperature blank included in the cooler? .....  YES  NO
- What kind of packing material was used? ... Bubble Wrap  Wet Ice  Gel Packs  Baggies  Foam Block  Paper  Other: \_\_\_\_\_
- Was sufficient ice used (if appropriate)? .....  NA  YES  NO
- Were all bottles sealed in individual plastic bags? .....  YES  NO
- Did all bottles arrive in good condition (unbroken)? .....  YES  NO
- Were all bottle labels complete and legible? .....  YES  NO
- Did the number of containers listed on COC match with the number of containers received? .....  YES  NO
- Did all bottle labels and tags agree with custody papers? .....  YES  NO
- Were all bottles used correct for the requested analyses? .....  YES  NO
- Do any of the analyses (bottles) require preservation? (attach preservation sheet, excluding VOCs)...  NA  YES  NO
- Were all VOC vials free of air bubbles? .....  NA  YES  NO
- Was sufficient amount of sample sent in each bottle? .....  YES  NO
- Date VOC Trip Blank was made at ARI.....  NA

Was Sample Split by ARI :  NA  YES Date/Time: \_\_\_\_\_ Equipment: \_\_\_\_\_ Split by: \_\_\_\_\_

Samples Logged by: AV Date: 8/24/10 Time: 1155

## Data Reporting Qualifiers

Effective 7/10/2009

### Inorganic Data

- U Indicates that the target analyte was not detected at the reported concentration
- \* Duplicate RPD is not within established control limits
- B Reported value is less than the CRDL but  $\geq$  the Reporting Limit
- N Matrix Spike recovery not within established control limits
- NA Not Applicable, analyte not spiked
- H The natural concentration of the spiked element is so much greater than the concentration spiked that an accurate determination of spike recovery is not possible
- L Analyte concentration is  $\leq$  5 times the Reporting Limit and the replicate control limit defaults to  $\pm 1$  RL instead of the normal 20% RPD

### Organic Data

- U Indicates that the target analyte was not detected at the reported concentration
- \* Flagged value is not within established control limits
- B Analyte detected in an associated Method Blank at a concentration greater than one-half of ARI's Reporting Limit or 5% of the regulatory limit or 5% of the analyte concentration in the sample.
- J Estimated concentration when the value is less than ARI's established reporting limits
- D The spiked compound was not detected due to sample extract dilution
- E Estimated concentration calculated for an analyte response above the valid instrument calibration range. A dilution is required to obtain an accurate quantification of the analyte.
- Q Indicates a detected analyte with an initial or continuing calibration that does not meet established acceptance criteria (<20%RSD, <20%Drift or minimum RRF).
- S Indicates an analyte response that has saturated the detector. The calculated concentration is not valid; a dilution is required to obtain valid quantification of the analyte

## Data Reporting Qualifiers

Effective 7/10/2009

- NA The flagged analyte was not analyzed for
- NR Spiked compound recovery is not reported due to chromatographic interference
- NS The flagged analyte was not spiked into the sample
- M Estimated value for an analyte detected and confirmed by an analyst but with low spectral match parameters. This flag is used only for GC-MS analyses
- M2 The sample contains PCB congeners that do not match any standard Aroclor pattern. The PCBs are identified and quantified as the Aroclor whose pattern most closely matches that of the sample. The reported value is an estimate.
- N The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification"
- Y The analyte is not detected at or above the reported concentration. The reporting limit is raised due to chromatographic interference. The Y flag is equivalent to the U flag with a raised reporting limit.
- C The analyte was positively identified on only one of two chromatographic columns. Chromatographic interference prevented a positive identification on the second column
- P The analyte was detected on both chromatographic columns but the quantified values differ by  $\geq 40\%$  RPD with no obvious chromatographic interference

## Geotechnical Data

- A The total of all fines fractions. This flag is used to report total fines when only sieve analysis is requested and balances total grain size with sample weight.
- F Samples were frozen prior to particle size determination
- SM Sample matrix was not appropriate for the requested analysis. This normally refers to samples contaminated with an organic product that interferes with the sieving process and/or moisture content, porosity and saturation calculations
- SS Sample did not contain the proportion of "fines" required to perform the pipette portion of the grain size analysis
- W Weight of sample in some pipette aliquots was below the level required for accurate weighting

**Analytical Resources, Incorporated**  
Analytical Chemists and Consultants

**Client:** Floyd Snider

**ARI Job No.:** RK08

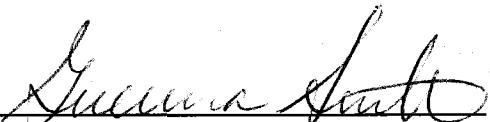

**Client Project:** Phase 3

**Client Project No.:** COS-GWSA 6020

#### Case Narrative

1. Two samples were submitted on August 24, 2010, and were in good condition.
2. The samples were submitted for grain size distribution according to ASTM D422. The samples were prepared according to ASTM D421.
3. An assumed specific gravity of 2.65 was used in the hydrometer calculations.
4. A standard milkshake mixer type device was used to disperse the fine fraction sample.
5. One sample from this job, WW19-04-082310 was chosen for triplicate analysis. The triplicate data can be found on the QA summary table.
6. The data is provided in summary tables and plots.
7. There were no further anomalies in the samples or test method.

**ARI Job No.: WN09**

Dear Zanna:

Please find enclosed the Chain of Custody records (COCs), sample receipt documentation, and the final data package for samples from the project referenced above.

Sample receipt and details of these analyses are discussed in the Case Narrative.

An electronic copy of this package will remain on file with ARI. Should you have any questions or problems, please feel free to contact me at your convenience.

Sincerely,

ANALYTICAL RESOURCES, INC.

# Cooler Receipt Form

ARI Client GeoEngineers  
COC No(s) \_\_\_\_\_ NA  
Assigned ARI Job No WN 39

## Preliminary Examination Phase:

Were intact, properly signed and dated custody seals attached to the outside of to cooler? YES  NO

Were custody papers included with the cooler? YES  NO

Were custody papers properly filled out (ink, signed, etc.)? YES  NO

Temperature of Cooler(s) (°C) (recommended 2-6-0 °C for chemistry). 12.3

If cooler temperature is out of compliance fill out form 00070F

Cooler Accepted by AV Date: 4/18/13 Time: 1705

Complete custody forms and attach all shipping documents

## Log-In Phase:

Was a temperature blank included in the cooler? YES  NO

What kind of packing material was used? Bubble Wrap Wet Ice Gel Packs  Baggies Foam Block Paper Other \_\_\_\_\_

Was sufficient ice used (if appropriate)? YES  NO

Were all bottles sealed in individual plastic bags? YES  NO

Did all bottles arrive in good condition (unbroken)? YES  NO

Were all bottle labels complete and legible? YES  NO

Did the number of containers listed on COC match with the number of containers received? YES  NO

Did all bottle labels and tags agree with custody papers? YES  NO

Were all bottles used correct for the requested analyses? YES  NO

Do any of the analyses (bottles) require preservation? (attach preservation sheet, excluding VOCs) YES  NO

Were all VOC vials free of air bubbles? YES  NO

Was sufficient amount of sample sent in each bottle? YES  NO

Date VOC Trip Blank was made at ARI: YES  NO

Was Sample Split by ARI: YES  Date/Time \_\_\_\_\_ Equipment \_\_\_\_\_ Split by: \_\_\_\_\_

Samples Logged by: TS Date: 4-23-13 Time: 930

**Case Narrative, Data Qualifiers, Control Limits**

**ARI Job ID: WN09**

**Client:** GeoEngineers

**ARI Job No.:** WN09

**Client Project:** Gas Works Park    **Client Project No.:** 0186-846-01, Task 1400

### Case Narrative

1. Nineteen samples were submitted for analysis on April 18, 2013.
2. Fourteen samples were submitted for grain size distribution according to ASTM D422. The samples were prepared according to ASTM D421.
3. An assumed specific gravity of 2.65 was used in the hydrometer calculations.
4. A standard milkshake mixer type device was used to disperse the fine fraction sample for one minute.
5. One sample from this job, MW32D 35.5-37', was chosen for triplicate analysis. The triplicate data can be found on the QA summary table.
6. Due to the sandy nature of the samples, there was not enough fine material to acquire accurate hydrometer readings. Samples MW32D 18.5-20.5', MW32D 20.5-22.5' and GEO-2 14-16' required curve fitting between the sand and silt fractions.
7. Five samples were submitted for percent finer than the No. 200 sieve. The samples were run according to ASTM D1140.
8. The data is provided in summary tables and plots.
9. There were no further anomalies in the samples or test method.

**RE: Client Project: Gas Works Park, 186-846-01**  
**ARI Job No.: WJ09**

Dear Zanna:

Please find enclosed the Chain of Custody records (COCs), sample receipt documentation, and the final data package for samples from the project referenced above.

Sample receipt and details of these analyses are discussed in the Case Narrative.

An electronic copy of this package will remain on file with ARI. Should you have any questions or problems, please feel free to contact me at your convenience.

Sincerely,

ANALYTICAL RESOURCES, INC.

**Limits of Liability:** ARI will perform all requested services in accordance with appropriate methodology following ARI Standard Operating Procedures and the ARI Quality Assurance Program. This program meets standards for the industry. The total liability of ARI, its officers, agents, employees, or successors, arising out of or in connection with the requested services, shall not exceed the Invoiced amount for said services. The acceptance by the client of a proposal for services by ARI release ARI from any liability in excess thereof, notwithstanding any provision to the contrary in any contract, purchase order or co-signed agreement between ARI and the Client.

**Sample Retention Policy:** All samples submitted to ARI will be appropriately discarded no sooner than 90 days after receipt or 60 days after submission of hardcopy data, whichever is longer, unless alternate retention schedules have been established by work-order or contract.

<ajohnson@geoengineers.com>

Cheronne,

Here is the COC markup for the first Gas Works Park sample shipment on 3-26-13 (WJ09).

Please send me copies of the COC whenever there is a cooler pickup from the site and I will review and make changes. Next cooler pickup is scheduled for tomorrow (Thursday) at 4:30.

It is our understanding that if we need to ask ARI to analyze any of the soil samples that are listed as "hold" on the COC, we must do so within 14 days of sampling to stay within the hold time for BTEX & PAHs.

Thank you,

Zanna

**Case Narrative, Data Qualifiers, Control Limits**

**ARI Job ID: WJ09**

## Case Narrative

**Client: GeoEngineers, Inc.**

**Project: Gas Works Park, 186-846-01**

**ARI Job No.: WJ09**

### Sample Receipt

Sixteen soil samples, two water samples, and a trip blank were received on March 26, 2013 under ARI job WJ09. Select samples were archived upon receipt. The cooler temperature measured by IR thermometer following ARI SOP was 2.1°C. For further details regarding sample receipt, please refer to the Cooler Receipt Form.

### BETX by SW8260C

The samples were analyzed within the method recommended holding times.

Initial and continuing calibrations were within method requirements. Internal standard areas were within limits.

The surrogate percent recoveries were within control limits.

The method blanks were clean at the reporting limits. The LCS and LCSD percent recoveries were within control limits.

### PAHs by SW8270-SIM

The samples and associated laboratory QC were extracted and analyzed within the method recommended holding times.

Initial and continuing calibrations were within method requirements. Internal standard areas were within limits.

The surrogate percent recoveries were within control limits.

The soil method blank was clean at the reporting limits. Naphthalene was present in the water method blank at a level that was greater than the reporting limit. All detected water results for this compound have been flagged with a "B" qualifier. No further corrective action was taken.

The LCS and LCSD percent recoveries were within control limits.

The matrix spike and matrix spike duplicate percent recoveries were within advisory control limits.

### **Arsenic by SW200.8**

The samples and associated laboratory QC were digested and analyzed within recommended holding times.

The method blank was clean at the reporting limit. The LCS percent recovery was within control limits.

The matrix spike percent recovery was within control limits.

The duplicate RPD of arsenic was outside the 20% control limit for sample **MW39D-0.5-1.5**. All relevant data have been flagged with a “\*” qualifier on the Form VI. No further corrective action was taken.

### **Geotechnical Parameters**

A laboratory-specific case narrative follows this page.

**Client:** GeoEngineers

**ARI Job No.:** WJ09

**Client Project:** Gas Works Park

**Client Project No.:** 186-846-01

### Case Narrative

1. Four samples were submitted for analysis on March 27, 2013, and were in good condition.
2. The samples were submitted for grain size distribution according to ASTM D422. The samples were prepared according to ASTM D421.
3. An assumed specific gravity of 2.65 was used in the hydrometer calculations.
4. A standard milkshake mixer type device was used to disperse the fine fraction sample for one minute.
5. One sample from this job, MW39S-3.5-13.5, was chosen for triplicate analysis. The triplicate data can be found on the QA summary table.
6. Due to the sandy nature of the samples, there was not enough fine material to acquire accurate hydrometer readings. Sample MW39S-3.5-13.5, required curve fitting between the sand and silt fractions.
7. The samples displayed an oily sheen and all the samples gave off a very strong fuel like odor. The presence of a fuel-like contaminant may have affected the grain size distribution.
8. The data is provided in summary tables and plots.
9. There were no further anomalies in the samples or test method.

## Geotechnical Data

- A The total of all fines fractions. This flag is used to report total fines when only sieve analysis is requested and balances total grain size with sample weight.
- F Samples were frozen prior to particle size determination
- SM Sample matrix was not appropriate for the requested analysis. This normally refers to samples contaminated with an organic product that interferes with the sieving process and/or moisture content, porosity and saturation calculations
- SS Sample did not contain the proportion of "fines" required to perform the pipette portion of the grain size analysis
- W Weight of sample in some pipette aliquots was below the level required for accurate weighting

**ARI Job No.: WJ66**

Dear Zanna:

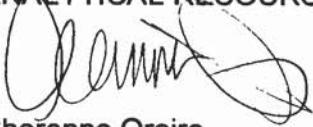

Please find enclosed the Chain of Custody records (COCs), sample receipt documentation, and the final data package for samples from the project referenced above.

Sample receipt and details of these analyses are discussed in the Case Narrative.

An electronic copy of this package will remain on file with ARI. Should you have any questions or problems, please feel free to contact me at your convenience.

Sincerely,

ANALYTICAL RESOURCES, INC.

Cheronne,

Here is the COC markup for the second Gas Works Park sample shipment on 3-28-13.

I plan on dropping off the third sample shipment at ARI this evening before 6pm.

Thank you,

Zanna

**Case Narrative, Data Qualifiers, Control Limits**

**ARI Job ID: WJ66**

## Case Narrative

**Client: GeoEngineers, Inc.**

**Project: Gas Works Park, 186-846-01**

**ARI Job No.: WJ66**

### Sample Receipt

Twenty-one soil samples, one water sample, and a trip blank were received on March 28, 2013 under ARI job WJ66. Select samples were archived upon receipt. The cooler temperatures measured by IR thermometer following ARI SOP were 4.7 and 5.3°C. For further details regarding sample receipt, please refer to the Cooler Receipt Form.

### BETX by SW8260C

The samples and associated laboratory QC were analyzed within the method recommended holding times.

Initial and continuing calibrations were within method requirements. Internal standard areas were within limits.

The surrogate percent recoveries were within control limits.

The method blanks were clean at the reporting limits. The LCS and LCSD percent recoveries were within control limits.

The matrix spike and matrix spike duplicate percent recoveries of Benzene and Toluene fell outside advisory control limits low for sample **MW35S-5-6**. No corrective action is required for matrix QC.

### Alkylated PAHs by SW8270-SIM

The samples and associated laboratory QC were extracted and analyzed within the method recommended holding times.

Initial and continuing calibrations were within method requirements. Internal standard areas were within limits.

The surrogate percent recoveries were within control limits.

The method blank was clean at the reporting limits. The LCS percent recoveries were within control limits.

All matrix spike and matrix spike duplicate percent recoveries were outside advisory control limits for sample **GEI-3-16-17** due to interferences. No corrective action is required for matrix QC.

### **PAHs by SW8270-SIM**

The samples and associated laboratory QC were extracted and analyzed within the method recommended holding times.

Initial and continuing calibrations were within method requirements. Internal standard areas were within limits.

The surrogate percent recoveries were within control limits.

The water method blank was clean at the reporting limits. Fluoranthene and Pyrene were present in **MB-040813** at levels that were greater than  $\frac{1}{2}$  the reporting limits. All detected results for these compounds have been flagged with a "B" qualifier. No further corrective action was taken.

The LCS and LCSD percent recoveries were within control limits.

The matrix spike and matrix spike duplicate percent recoveries of Naphthalene were outside advisory control limits for sample **GEI-3-27-28**. No corrective action is required for matrix QC.

### **Arsenic by SW200.8**

The samples and associated laboratory QC were digested and analyzed within recommended holding times.

The method blank was clean at the reporting limit. The LCS percent recovery was within control limits.

The matrix spike percent recovery of arsenic fell outside the control limits low for sample **MS35S-4.5-5**. A post digestion spike was performed and the recovery was within control limits. All relevant data have been flagged with an "N" qualifier on the Form V. No further corrective action was taken.

The duplicate RPD of arsenic was outside the 20% control limit for sample **MW35S-4.5-5**. All relevant data have been flagged with a "\*" qualifier on the Form VI. No further corrective action was taken.

### **Geotechnical Parameters**

A laboratory-specific case narrative follows this page.

**Client:** GeoEngineers

**ARI Job No.:** WJ66

**Client Project:** Gas Works Park

**Client Project No.:** 0186-846-01

### Case Narrative

1. Two samples were submitted for analysis on March 29, 2013, and were in good condition.
2. The samples were submitted for grain size distribution according to ASTM D422. The samples were prepared according to ASTM D421.
3. An assumed specific gravity of 2.65 was used in the hydrometer calculations.
4. A standard milkshake mixer type device was used to disperse the fine fraction sample for one minute.
5. One sample from another job, MW39S-3.5-13.5, was chosen for triplicate analysis. The triplicate data can be found on the QA summary table.
6. The samples displayed an oily sheen and all the samples gave off a very strong fuel like odor. The presence of a fuel-like contaminant may have affected the grain size distribution.
7. One sample contained a tar like material which melted during the oven drying portion of the analysis. Upon cooling in the desiccator, the tar-like material solidified and entrained neighboring particles. Effort was made to separate the particles, but the tar-like material skewed the grain size distribution to appear coarser.
8. The data is provided in summary tables and plots.
9. There were no further anomalies in the samples or test method.

## Geotechnical Data

- A The total of all fines fractions. This flag is used to report total fines when only sieve analysis is requested and balances total grain size with sample weight.
- F Samples were frozen prior to particle size determination
- SM Sample matrix was not appropriate for the requested analysis. This normally refers to samples contaminated with an organic product that interferes with the sieving process and/or moisture content, porosity and saturation calculations
- SS Sample did not contain the proportion of "fines" required to perform the pipette portion of the grain size analysis
- W Weight of sample in some pipette aliquots was below the level required for accurate weighting

Dear Zanna:

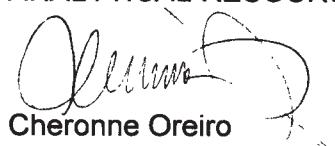

Please find enclosed the Chain of Custody records (COCs), sample receipt documentation, and the final data package for samples from the project referenced above.

Sample receipt and details of these analyses are discussed in the Case Narrative.

An electronic copy of this package will remain on file with ARI. Should you have any questions or problems, please feel free to contact me at your convenience.

Sincerely,

ANALYTICAL RESOURCES, INC.

Cheronne,

Here is the COC markup for the third Gas Works Park sample delivery on Friday 3-29-13.

Can we please schedule a cooler pickup at Gas Works Park for tomorrow, Tuesday at 4:30?

Thank you,

Zanna

ARI Client GeoEngineers COC No(s). WJ79 Assigned ARI Job No WJ79 NA

Preliminary Examination Phase:

Were intact, properly signed and dated custody seals attached to the outside of to cooler? YES  NO

Were custody papers included with the cooler? YES  NO

Were custody papers properly filled out (ink, signed, etc) YES  NO

Temperature of Cooler(s) (°C) (recommended 2-6-0 °C for chemistry) 11.4 13.5 3.4

If cooler temperature is out of compliance fill out form 00070F

Cooler Accepted by AN Date 3/29/13 Time 1740 Temp Gun ID# 90877952

Complete custody forms and attach all shipping documents

Log-In Phase:

Was a temperature blank included in the cooler? YES  NO

What kind of packing material was used? Bubble Wrap  Wet Ice  Gel Packs  Baggies  Foam Block  Paper  Other:

Was sufficient ice used (if appropriate)? YES  NO

Were all bottles sealed in individual plastic bags? YES  NO

Did all bottles arrive in good condition (unbroken)? YES  NO

Were all bottle labels complete and legible? YES  NO

Did the number of containers listed on COC match with the number of containers received? YES  NO

Did all bottle labels and tags agree with custody papers? YES  NO

Were all bottles used correct for the requested analyses? YES  NO

Do any of the analyses (bottles) require preservation? (attach preservation sheet, excluding VOCs) YES  NO

Were all VOC vials free of air bubbles? YES  NO

Was sufficient amount of sample sent in each bottle? YES  NO

Date VOC Trip Blank was made at ARI.. NA Date: 3/20/13

Was Sample Split by ARI NA YES Date/Time: \_\_\_\_\_ Equipment: \_\_\_\_\_ Split by: \_\_\_\_\_

**Limits of Liability:** ARI will perform all requested services in accordance with appropriate methodology following ARI Standard Operating Procedures and the ARI Quality Assurance Program. This program meets standards for the industry. The total liability of ARI, its officers, agents, employees, or successors, arising out of or in connection with the requested services, shall not exceed the Invoiced amount for said services. The acceptance by the client of a proposal for services by ARI release ARI from any liability in excess thereof, notwithstanding any provision to the contrary in any contract, purchase order or co-signed agreement between ARI and the Client.

**Sample Retention Policy:** All samples submitted to ARI will be appropriately discarded no sooner than 90 days after receipt or 60 days after submission of hardcopy data, whichever is longer, unless alternate retention schedules have been established by work-order or contract.

# Cooler Receipt Form

ARI Client: Geo Engineers

COC No(s): \_\_\_\_\_ WJS  NA

Assigned ARI Job No WJS  NA

## Preliminary Examination Phase:

Were intact, properly signed and dated custody seals attached to the outside of to cooler?  YES  NO

Were custody papers included with the cooler?  YES  NO

Were custody papers properly filled out (ink, signed, etc.)  YES  NO

Temperature of Cooler(s) (°C) (recommended 2.0-6.0 °C for chemistry) 11.4 13.5 3.4

If cooler temperature is out of compliance fill out form 00070F

Cooler Accepted by: A Date: 3/29/13 Time: 1740 Temp Gun ID#: 90877952

*Complete custody forms and attach all shipping documents*

## Log-In Phase:

Was a temperature blank included in the cooler?  YES  NO

What kind of packing material was used? Bubble Wrap  Wet Ice  Gel Packs  Baggies  Foam Block  Paper  Other: NA

Was sufficient ice used (if appropriate)?  YES  NO

Were all bottles sealed in individual plastic bags?  YES  NO

Did all bottles arrive in good condition (unbroken)?  YES  NO

Were all bottle labels complete and legible?  YES  NO

Did the number of containers listed on COC match with the number of containers received?  YES  NO

Did all bottle labels and tags agree with custody papers?  YES  NO

Were all bottles used correct for the requested analyses?  YES  NO

Do any of the analyses (bottles) require preservation? (attach preservation sheet, excluding VOCs)  NA  YES  NO

Were all VOC vials free of air bubbles?  YES  NO

Was sufficient amount of sample sent in each bottle?  YES  NO

Date VOC Trip Blank was made at ARI: 3/28/13  NA

Was Sample Split by ARI  NA  YES Date/Time: \_\_\_\_\_ Equipment: \_\_\_\_\_ Split by: \_\_\_\_\_

## Case Narrative

**Client: GeoEngineers, Inc.**

**Project: Gas Works Park, 0186-846-01**

**ARI Job Nos.: WJ79 & WJ80**

### Sample Receipt

Thirteen soil samples and a trip blank were received on March 29, 2013. Select samples were archived upon receipt. The cooler temperatures measured by IR thermometer following ARI SOP were 3.4, 11.4, and 13.5°C. For further details regarding sample receipt, please refer to the Cooler Receipt Form.

Twenty-four soil samples, two water samples, and a trip blank were received on March 29, 2013. Select samples were archived upon receipt. The cooler temperatures measured by IR thermometer following ARI SOP were 3.4, 11.4, and 13.5°C. For further details regarding sample receipt, please refer to the Cooler Receipt Form.

### BETX by SW8260C

The samples and associated laboratory QC were initially analyzed within the method recommended holding times.

Initial and continuing calibrations were within method requirements. Internal standard areas were within limits.

The surrogate percent recovery of d4-1,2-Dichloroethane was outside the control limits high for sample **GEI-12-5.0-7.0**. The sample was re-analyzed and all surrogate percent recoveries were within control limits. No corrective action was taken.

The method blanks were clean at the reporting limits. The LCS and LCSD percent recoveries were within control limits.

The matrix spike and matrix spike duplicate percent recoveries were within advisory control limits.

### PAHs by SW8270-SIM

The samples and associated laboratory QC were extracted and analyzed within the method recommended holding times.

Initial and continuing calibrations were within method requirements. Internal standard areas were within limits.

The surrogate percent recoveries were within control limits.

Naphthalene was present in **MB-041113** and **MB-040913** at levels that were greater than the reporting limit. Detected results associated with these method blanks for Naphthalene have been flagged with a "B" qualifier. No further corrective action was taken.

The LCS percent recovery of Naphthalene was outside the control limits high for **LCS-040813**. All other LCS percent recoveries were within control limits. No corrective action was taken.

The matrix spike and matrix spike duplicate percent recoveries of Naphthalene were outside advisory control limits with a wide RPD for sample **GEI-5-15-16**. No corrective action is required for matrix QC.

Several matrix spike and matrix spike duplicate percent recoveries were outside advisory control limits, with a wide RPD for Naphthalene for sample **GEI-10-6.5-7.5**. No corrective action is required for matrix QC.

### **Arsenic by SW200.8**

The samples and associated laboratory QC were digested and analyzed within recommended holding times.

The method blank was clean at the reporting limit. The LCS percent recovery was within control limits.

The matrix spike percent recovery and duplicate RPD were within control limits.

### **Geotechnical Parameters**

A laboratory-specific case narrative follows this page.

**Analytical Resources, Incorporated**  
Analytical Chemists and Consultants

**Client:** GeoEngineers

**ARI Job No.:** WJ80

**Client Project:** PSE-Gas Works Park

**Client Project No.:** 0186-846-01

**Case Narrative**

1. Three samples were submitted for analysis on April 1, 2013, and were in good condition.
2. The samples were submitted for grain size distribution according to ASTM D422. The samples were prepared according to ASTM D421.
3. An assumed specific gravity of 2.65 was used in the hydrometer calculations.
4. A standard milkshake mixer type device was used to disperse the fine fraction sample for one minute.
5. One sample from another job, MW39S-3.5-13.5, was chosen for triplicate analysis. The triplicate data can be found on the QA summary table.
6. The samples displayed an oily sheen and all the samples gave off a very strong fuel like odor. The presence of a fuel-like contaminant may have affected the grain size distribution.
7. One sample contained a tar like material which melted during the oven drying portion of the analysis. Upon cooling in the desiccator, the tar-like material solidified and entrained neighboring particles. Effort was made to separate the particles, but the tar-like material skewed the grain size distribution to appear coarser.
8. The data is provided in summary tables and plots.
9. There were no further anomalies in the samples or test method.

## Geotechnical Data

- A The total of all fines fractions. This flag is used to report total fines when only sieve analysis is requested and balances total grain size with sample weight.
- F Samples were frozen prior to particle size determination
- SM Sample matrix was not appropriate for the requested analysis. This normally refers to samples contaminated with an organic product that interferes with the sieving process and/or moisture content, porosity and saturation calculations
- SS Sample did not contain the proportion of "fines" required to perform the pipette portion of the grain size analysis
- W Weight of sample in some pipette aliquots was below the level required for accurate weighting

**RE: Client Project: Gas Works Park, 0186-846-01**  
**ARI Job No.: WJ66**

Dear Zanna:

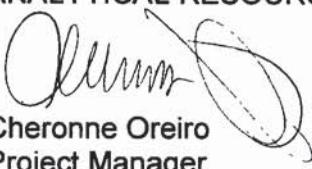

Please find enclosed the Chain of Custody records (COCs), sample receipt documentation, and the final data package for samples from the project referenced above.

Sample receipt and details of these analyses are discussed in the Case Narrative.

An electronic copy of this package will remain on file with ARI. Should you have any questions or problems, please feel free to contact me at your convenience.

Sincerely,

ANALYTICAL RESOURCES, INC.

Cheronne,

Here is the COC markup for the fourth Gas Works Park sample shipment on Tuesday 4-2-13.

We won't have any more samples for you until Wednesday of next week (4-10-13).

Thank you,

Zanna

**Case Narrative, Data Qualifiers, Control Limits**

**ARI Job ID: WK21**

## Case Narrative

**Client: GeoEngineers, Inc.**

**Project: Gas Works Park, 0186-846-01**

**ARI Job No.: WK21**

### Sample Receipt

Twenty-five soil samples, one water sample, and a trip blank were received on April 2, 2013 under ARI job WK21. Select samples were archived upon receipt. The cooler temperatures measured by IR thermometer following ARI SOP were 0.8 and 2.0°C. For further details regarding sample receipt, please refer to the Cooler Receipt Form.

### BETX by SW8260C

The samples and associated laboratory QC were initially analyzed within the method recommended holding times.

Samples **GEI-13-13-16**, **GEI-13-23.5-24.5**, **GEI13-25.0-25.5**, and **GEI-1-16.5-17.0** were analyzed outside the twelve-hour calibration window. These samples were re-analyzed one day outside the method recommend holding time. Both sets of data have been reported. No further corrective action was taken.

Initial and continuing calibrations were within method requirements.

The internal standard areas of d-1,4-Dichlorobenzene fell outside the control limits low for samples **DUP3-040113** and **GEI-13-8-9.5**. This internal standard is not associated with requested compounds. No corrective action was taken.

The surrogate percent recoveries of Bromofluorobenzene and d4-1,2-Dichlorobenzene were outside the control limits for sample **DUP3-040113**. The sample was re-analyzed and all surrogate percent recoveries were within control limits. No further corrective action was taken.

The surrogate percent recovery of d4-1,2-Dichlorobenzene was outside the control limit for sample **GEI-13-8-9.5**. The sample was re-analyzed and all surrogate percent recoveries were within control limits. No corrective action was taken.

The method blanks were clean at the reporting limits. The LCS and LCSD percent recoveries were within control limits.

The matrix spike and matrix spike duplicate percent recoveries were within advisory control limits.

### Alkylated PAHs by SW8270-SIM

The samples were extracted and analyzed within the method recommended holding times.

Initial and continuing calibrations were within method requirements. Internal standard areas were within limits.

The surrogate percent recoveries were within control limits.

The method blank was clean at the reporting limits. The LCS percent recoveries were within control limits.

### PAHs by SW8270-SIM

The samples and associated laboratory QC were extracted and analyzed within the method recommended holding times.

Initial and continuing calibrations were within method requirements. Internal standard areas were within limits.

The surrogate percent recoveries were within control limits.

The method blank was clean at the reporting limits. The LCS percent recoveries were within control limits.

Several matrix spike and matrix spike duplicate percent recoveries were outside advisory control limits for sample **GEI-2-16.0-17.0**. No corrective action is required for matrix QC.

### Aroclor PCBs by SW8082

The samples and associated laboratory QC were extracted and analyzed within the method recommended holding times.

Initial and continuing calibrations were within method requirements. Internal standard areas were within limits.

The surrogate percent recoveries were within control limits.

The method blank was clean at the reporting limit. The LCS percent recoveries were within control limits.

The matrix spike and matrix spike duplicate percent recoveries were within advisory control limits.

### **Arsenic by SW200.8**

The sample and associated laboratory QC were digested and analyzed within recommended holding times.

The method blank was clean at the reporting limit. The LCS percent recovery was within control limits.

The matrix spike percent recovery and duplicate RPD were within control limits.

### **Geotechnical Parameters**

A laboratory-specific case narrative follows this page.

**Client:** GeoEngineers

**ARI Job No.:** WK21

**Client Project:** Gas Works Park

**Client Project No.:** 0186-846-01

#### Case Narrative

1. One sample was submitted for analysis on April 3, 2013, and was in good condition.
2. The sample was submitted for grain size distribution according to ASTM D422. The sample was prepared according to ASTM D421. Upon preparation, not enough sample passed the prep sieve to set up a sample for the hydrometer portion of the analysis. The amount of fines in the hydrometer portion of the analysis would not have been adequate for accurate hydrometer readings. The entire sample had been set up, so no more sample could be added. The sample was run by mechanical analysis only (sieve only). There was not adequate sample for triplicate analysis.
3. The sample displayed an oily sheen and gave off a very strong fuel like odor. The presence of a fuel-like contaminant may have affected the grain size distribution.
4. The data is provided in summary tables and plots.
5. There were no further anomalies in the sample or test method.

## Geotechnical Data

- A The total of all fines fractions. This flag is used to report total fines when only sieve analysis is requested and balances total grain size with sample weight.
- F Samples were frozen prior to particle size determination
- SM Sample matrix was not appropriate for the requested analysis. This normally refers to samples contaminated with an organic product that interferes with the sieving process and/or moisture content, porosity and saturation calculations
- SS Sample did not contain the proportion of "fines" required to perform the pipette portion of the grain size analysis
- W Weight of sample in some pipette aliquots was below the level required for accurate weighting

**Re: GJRW-04403-860, REGL Project, No. 1003-107**

Dear Ms. Fitzpatrick,

Samples from the referenced project were received for testing on July 17, 2001. The results of the analyses are reported on the following pages.

Please call me to discuss any questions, or comments you may have on the data or its presentation. Thank you for selecting REG Lab to perform this analysis for you.

Best Regards,  
Rosa Environmental & Geotechnical Laboratory, LLC.

Harold Benny  
Laboratory Manager

Client: ThermoRetec Corp.	REGL Project No.: 1003-107
Client Project No.: GJRW-04403-860	Sample Batch No.: N/A

Case Narrative

1. Eight samples were received on July 17, 2001.
2. All samples were tested according to ASTM D-422 for grain size distribution.
3. Curve fitting was used on sample, CR-01A to match the sieve portion to the hydrometer plot. This may be due to a difference in specific gravity between the fine fraction and the coarse fraction of the samples.
4. There were no further anomalies in the samples or test method.

**Notes:**

Results are for samples collected by Ecology in March 2002 and analyzed by Ecology (using Manchester and Rosa) and analyzed by RETEC (using ARI and Rosa).

Grain size analyses conducted according to methods specified in Table 2-1.

TOC analyzed according to PSEP (1996) for Ecology analysis and according to Plumb, 1981 for RETEC analysis.

Ref - Reference samples collected from Webster Point.

Subject: Project No.: GJRW1-04403-961; REGL Project No.: 1003-646

Dear Ms. Cunningham

Samples from the referenced project were received for testing on October 16, 2002. The results of the testing are discussed on the attached tables and narrative.

Please call me to discuss any questions, or comments you may have on the data or its presentation.

Best Regards,  
Rosa Environmental & Geotechnical Laboratory, LLC.

  
Harold Benny  
Laboratory Manager

REGL Project No.: 1003-646

Client Project: GJRW1-04403-961

Case Narrative

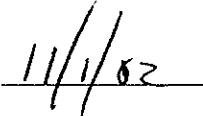

1. Samples were received on September 15 and 16, 2002 in good condition, for grain size analysis.
2. All samples were tested according to PSEP methodology.
3. One sample in the batch was run in triplicate and is reported on the QA summary.
4. There were no perceived anomalies in the samples or test method.

Seattle, WA 98134

**Subject: Lake Union Sediments, REGL Project No. 1003-650**

Dear Ms. Cunningham;

Testing on the samples from the referenced project is complete. The results of the analyses are reported on the following pages. Data tables, plots and a narrative are provided.

Please call me to discuss any questions, or comments you may have on the data or its presentation. Thank you for selecting REG Lab to perform this analysis for you.

Best Regards,  
Rosa Environmental & Geotechnical Laboratory, LLC.

*Harold Benny*

Seattle, WA 98134

206.287.9122 P

206.264.1995 F

Client: The RETEC Group, Inc.

REGL Project No.: 1003-650

Client Project: Lake Union Sediments

**Case Narrative**

1. Samples were received on October 21 and 22, 2002 and were in good condition. The samples were submitted for grain size analysis. Due to the nature of the samples, discussions were held with Ms. Anne Fitzpatrick regarding the best method to use. Because the samples were very organic with suspected low specific gravity, below ASTM guidelines, the PSEP method was chosen.
2. The samples were run in two batches. One batch was prepared from the gravelly and sandy sediments and these were run on the sieves only. The other batch was more normal and was run on the full PSEP method.
3. Sample NLU 14-US-S2 had a QA ratio of 111.7. A QA ratio of 1.00 indicates that the dry sample weight calculated from the moisture content and the after test weight of solids are the same. Rosa uses an internal standard of 0.95 to 1.05 for the acceptable range of this number. When the sample QA ratio exceeds these limits, the grain size distribution data is recalculated and reported using the after dry weight.
4. There were no other apparent anomalies in the samples or method of testing.

**Notes:**

- 1) Depths presented above are recovered depths.
- 2) Unconsolidated Undrained test results.
- 3) Deviator stress at 10% (0.1) strain.
- 4) Void ratio prior to test for consolidation sample.
- 5) Modified compression index.
- 6) Coefficient of Consolidation (average for all loading increments).
- 7) Atterberg limits: LL = liquid limit; PL = plasticity limit; PI = plasticity index
- 8) The specific gravity was determined in the lab according to ASTM D-854 Method.

**Subject: Lake Union Sediments, REGL Project No. 1003-649**

Dear Mr. Chen;

Thank you for pointing out the data entry errors in our original report. The data has been revised and the following pages reflect the correct sample numbers and depths.

Please call me to discuss any questions, or comments you may have on the data or its presentation. Thank you for selecting REG Lab to perform this analysis for you.

Best Regards,  
Rosa Environmental & Geotechnical Laboratory, LLC.

*Harold Benny*

REGL Project No.: 1003-649

Client Project: Lake Union Sediments

**Case Narrative**

1. Samples were received on October 21 and 22, 2002 and were in good condition. Many of the samples had free product in them, which caused some minor variations in testing procedures. Where this was significant, it is noted below. Care should be taken in evaluation of data such as moisture contents, because some of the weight loss during oven drying was due to loss of product, and not entirely water.
2. The samples were submitted for grain size analysis, density and porosity, Atterberg limits, UU triaxial strength, consolidation, and specific gravity.
3. The grain size distribution was measured according to PSEP methodology and was reported previously as job # 1003-650.
4. The Atterberg limits were requested on 12 samples, but this test was only appropriate on eight of them. These were set up according to ASTM D4318. Although every effort was made to complete the test on these eight, only four were actually plastic.
5. The unconsolidated, undrained triaxial strength was measured on five of the samples according to ASTM D2850. A minimal confining pressure of 5 psi was used.
6. The bulk wet density, moisture content, and dry density were measured on all 12 geotech samples. When appropriate, the samples used for triaxial strength testing were used for these measurements. The consolidation samples, taken from elsewhere in the core, have different density and moisture content values.
7. The one-dimensional consolidation was measured on five samples according to ASTM D2435, Method B. Stress-strain plots and void ratio-strain plots are provided. Because some of the samples had oily product in them, some of the saturation values are not typical. The saturation calculation is based on the density of water and not free product. Between tests, the porous stones were washed with acetone and methylene chloride to clean them up and ensure the stones would allow water to flow out for the following test.
8. The specific gravity was measured according to ASTM D854.
9. There were no other apparent anomalies in the samples or method of testing.

## Core Descriptions

## ROSA ENVIRONMENTAL AND GEOTECHNICAL LABORATORY, LLC

The RETEC Group, Inc.  
North Lake Union Phase Two  
Archival Samples Core Extrusions and Descriptions

NLU09-GE-S5 4-5'	Dark gray, clean, medium sand with some coarse gravel
NLU09-GE-S6 5-6'	Dark gray, clean, medium sand with some coarse gravel
NLU09-GE-S7 6-7'	Dark gray, clean, medium sand
NLU09-GE-S8 7-8'	Dark gray, clean sand becoming finer at the bottom
NLU18-GE-S5 5-6'	Top half is gray sand with some oily sheen. Bottom half is coarse gravel with oily sheen and strong odor.
NLU18-GE-S6 6-7'	Coarse gravel with sand, oily sheen present, clay/silt ball in middle of core
NLU18-GE-S7 7-8'	Coarse gravel with silt/clay balls in bottom 1/3 of core, oily sheen decreasing toward the bottom
NLU18-GE-S8 8-9'	Sand and gravel with less oily sheen
NLU18-GE-S9 9-10'	Sand and gravel with a sticky, dry ball of finer material near top, 3" thick. Oily sheen and odor still present.
NLU18-GE-S10 10-11'	Top third is coarse sand and gravel with oily sheen. Lower part is sticky, finer material with gravel, no oily sheen.
NLU18-GE-S11 11-12'	Coarse gravel with heavy sheen.
NLU19-GE-S5 4-5'	Brown uniform muck, very lightweight
NLU19-GE-S6 5-6'	Brown uniform muck, very lightweight
NLU19-GE-S7 6-7'	Brown uniform muck, very lightweight
NLU09-GE-S8 7-8'	Brown uniform muck, very lightweight

## Bulk Wet Density, Moisture Content, Dry Density, and Specific Gravity

## ROSA ENVIRONMENTAL AND GEOTECHNICAL LABORATORY

The Retec Group  
Lake Union Sediments

## Wet and Dry Density, Moisture Content, Porosity and Specific Gravity

Sample Identification	Depth (ft)	Wet Density (lbs/ft <sup>3</sup> )	Moisture Content (%)	Dry Density (lbs/ft <sup>3</sup> )	Total Porosity
NLU09-GE-S1	0-1'	126.5	18.9	106.4	0.37
NLU09-GE-S2	1-2'	129.1	20.9	106.8	0.37
NLU09-GE-S3	2-3'	118.4	16.2	101.9	0.40
NLU09-GE-S4	3-4'	128.8	15.1	111.9	0.34
NLU18-GE-S1	0-2	67.1	393.6	13.6	0.91
NLU18-GE-S2	2-3	77.9	191.2	26.8	0.83
NLU18-GE-S3	3-4	128.2	21.3	105.7	0.36
NLU18-GE-S4	4-5	131.9	15.4	114.3	0.33

## Notes:

1. The moisture content was determined in accordance with ASTM D-2216.
2. The wet density was determined from the average length, diameter and wet weight of the sample.
3. The dry density was determined by dividing the wet density by (1+ moisture content).
4. The specific gravity was determined according to ASTM D-854.
5. The porosity was calculated from the bulk density and specific gravity values.

Sample Identification	Depth (ft)	Wet Density (lbs/ft <sup>3</sup> )	Moisture Content (%)	Dry Density (lbs/ft <sup>3</sup> )	Total Porosity
NLU19-GE-S1	0-1'	65.5	465.1	11.6	0.92
NLU19-GE-S2	1-2'	55.3	256.2	15.5	0.90
NLU19-GE-S3	2-3'	69.4	655.5	9.2	0.93
NLU19-GE-S4	3-4'	60.9	881.2	6.2	0.95

Notes:

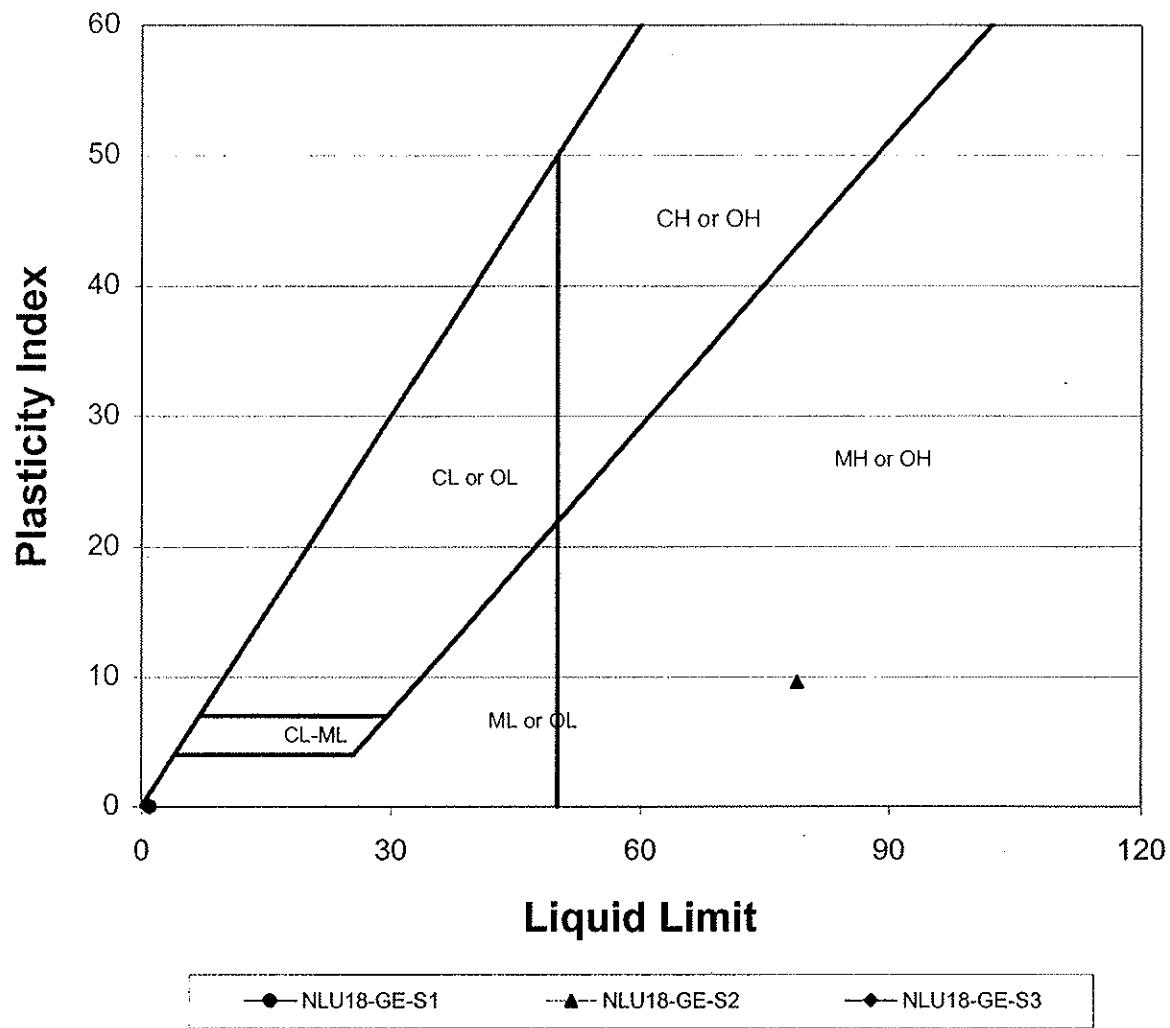

1. The moisture content was determined in accordance with ASTM D-2216.
2. The wet density was determined from the average length, diameter and wet weight of the sample.
3. The dry density was determined by dividing the wet density by (1+ moisture content).
4. The specific gravity was determined according to ASTM D-854.
5. The porosity was calculated from the bulk density and specific gravity values.

Atterberg Limits

ASTM D4318

The Retec Group  
Lake Union Sediments

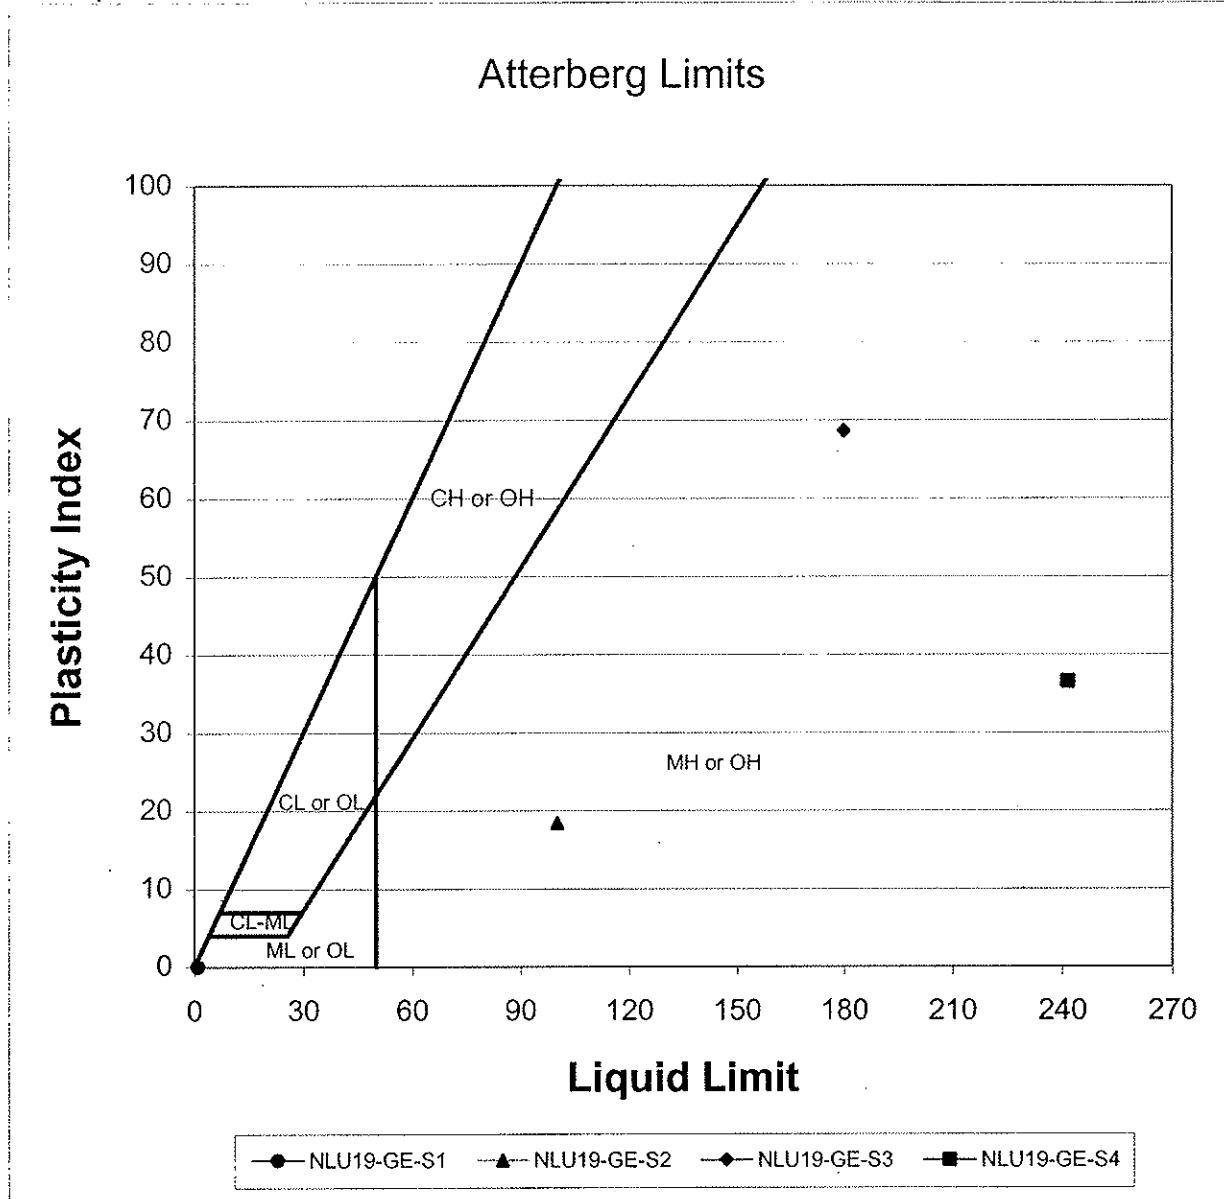

## Atterberg Limits

Sample Number	Depth	Plasticity Index	Liquid Limit	Plastic Limit	Classification
NLU18-GE-S1	0-2'	NA	NA	NA	Not Plastic

2. The sample had a bulging failure.

One Dimensional Consolidation

ASTM D2435

Rosa Environmental and Geotechnical Laboratory, LLC

The Retec Group, Inc.  
GJRW1-04403-961

Project Number:	1003-649	Job Name:	Lake Union
Boring / Sample	NLU18-GE-S1 (0-2')	Job Number	097-001
Sample Initial Height	0.8737	Job Location	Seattle
Initial Dial Indicator	0.6288	DI after Seating load	0.4925

## **Consolidation Test Summary**

## Sample Parameters

Initial Moisture Content, %	368	Final Moisture Content, %	218
Initial Dry Unit Weight, lb/ft <sup>3</sup>	17	Final Dry Unit Weight, lb/ft <sup>3</sup>	24
Initial Void Ratio	7.41	Final Void Ratio	5.06
Initial Saturation	1.17	Final Saturation	1.01

The following equations were used to calculate the values shown in the table above:

$$C_V = T H^2 / t_{90}$$

| Where:

T = the time factor for 90% consolidation

$H =$  average of initial and final heights of the sample at each load, divided by 2

$(S_0 + S_{100})/2$  (for double drainage paths)

$t_{90}$  = the time at which 90% consolidation has occurred, as derived from square root of time plots for each load.

#### **Notes to the Testing:**

1. The sample was extruded from the sample tube and trimmed into a consolidation ring. The sample was inundated at the time of the seating load was applied. The test was run according to ASTM D-2435, Method B.

K = 0.107148

Reference 1995 Annual Book of ASTM Standards  
Section 4 Volume 04.08  
D 2573

1 inch pound-force = 0.0833 foot pound-force

Shear Strength Calculations  
 $s = T/K$   
 $s = \text{shear strength, lbf/ft}^2$   
 $T = \text{torque, lbf.ft}$   
 $K = \text{constant, depending on dimensions of vane, ft}^3$

Vane used in the field is a tapered vane  
 for tapered vane,  $K = 1/1728(\pi D^3 + 0.37(2D^3 - d^3))$   
 where,  $D = \text{vane diameter} = 3.625 \text{ in}$

$d = \text{rod diameter} = 0.5 \text{ in}$

For 0.5 in diameter rod, equation reduces to  $K = 0.00225D^3 - 0.00003$

$K = 0.107148$

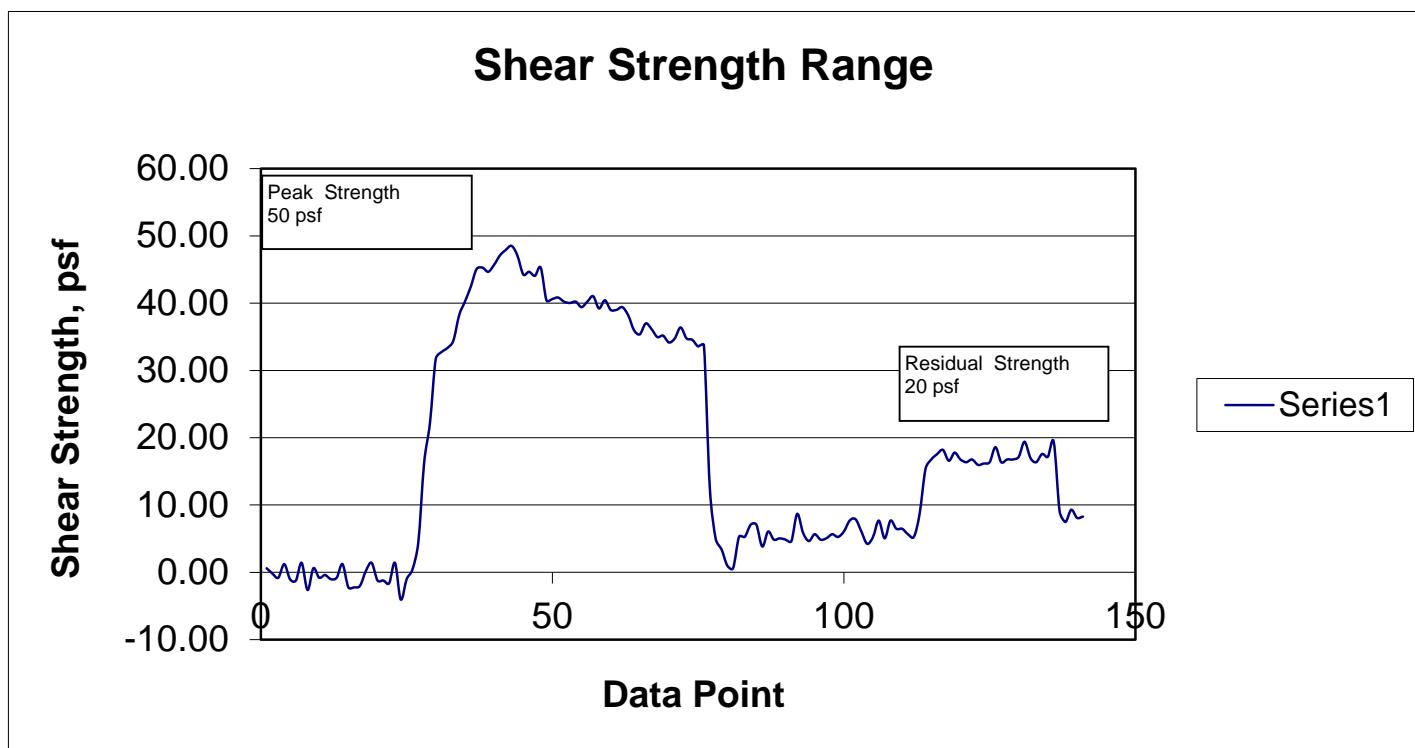

Per Contractor, vanes built per ASTM recommended dimensions of field vanes, ASTM 1995,  
Section 4, Volume 04.08, D 2573 - 94

**Vane Shear Raw Data  
Location 404  
38 feet below Lake Surface  
(Water Depth + Depth Below Mudline)**

Analytical Chemists and Consultants

Client: The Retec Group, Inc.

Project No.: HQ36 & HQ37

Client Project: North Lake Union Geotech

### Case Narrative

1. The samples were submitted for analysis on January 21, 2005. Testing was completed on February 18, 2005.
2. The samples consisted of jars and Shelby tubes. The Shelby tubes were extruded and logged prior to testing.
3. The total organic content was measured according to ASTM D2974. The samples were mostly decomposed peat/organic silts and had very high water contents and high organic contents, as expected.
4. The moisture content was measured according to ASTM D2216.
5. The Atterberg limits were measured according to ASTM D4318.
6. The wet density was calculated from the weight and dimensions of the sample. The dry density was calculated from using the moisture and dry density results.
7. The percent fines were measured according to ASTM D1140.
8. The one dimensional consolidation was measured according to ASTM D2435. Very light loads were used to load the samples, because they were very soft and were very high moisture samples.
9. The data is provided in summary tables and plots.
10. There were no other noted anomalies in the samples or methods on this project.

NLU415-GE-0-2	81.3	159.1	31.4
NLU415-GE-2-4	69.6	809.2	7.7
NLU418-GE-3-5	63.3	883.4	6.4
NLU418-GE-6.5-8.5	66.3	637.7	9.0

Notes:

1. The moisture content was determined in accordance with ASTM D-2216.
2. The wet density was determined from the average length, diameter and wet weight of the sample.
3. The dry density was determined by dividing the wet density by (1+ moisture content).
4. The specific gravity was determined according to ASTM D-854.
5. The porosity was calculated from the bulk density and specific gravity values.

### Sample Parameters

Initial Moisture Content, %	159	Final Moisture Content, %	106
Initial Dry Unit Weight, lb/ft <sup>3</sup>	31	Final Dry Unit Weight, lb/ft <sup>3</sup>	43
Initial Void Ratio	4.01	Final Void Ratio	2.67
Initial Saturation	0.92	Final Saturation	1.00

The following equations were used to calculate the values shown in the table above:

$$Cv = T H^2/t_{90}$$

Where:

T = the time factor for 90% consolidation

H = average of initial and final heights of the sample at each load, divided by 2

(S<sub>0</sub> + S<sub>100</sub>)/2 (for double drainage paths)

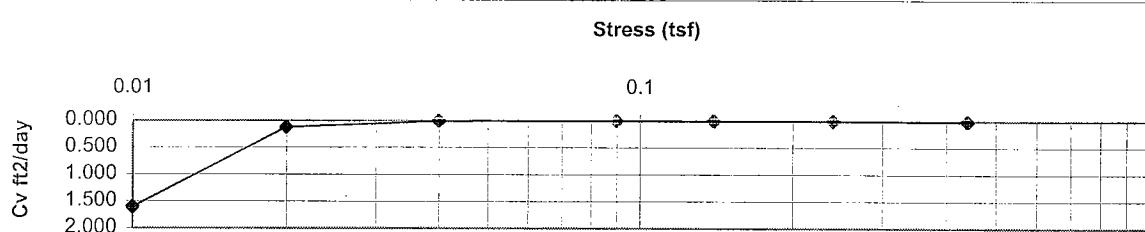

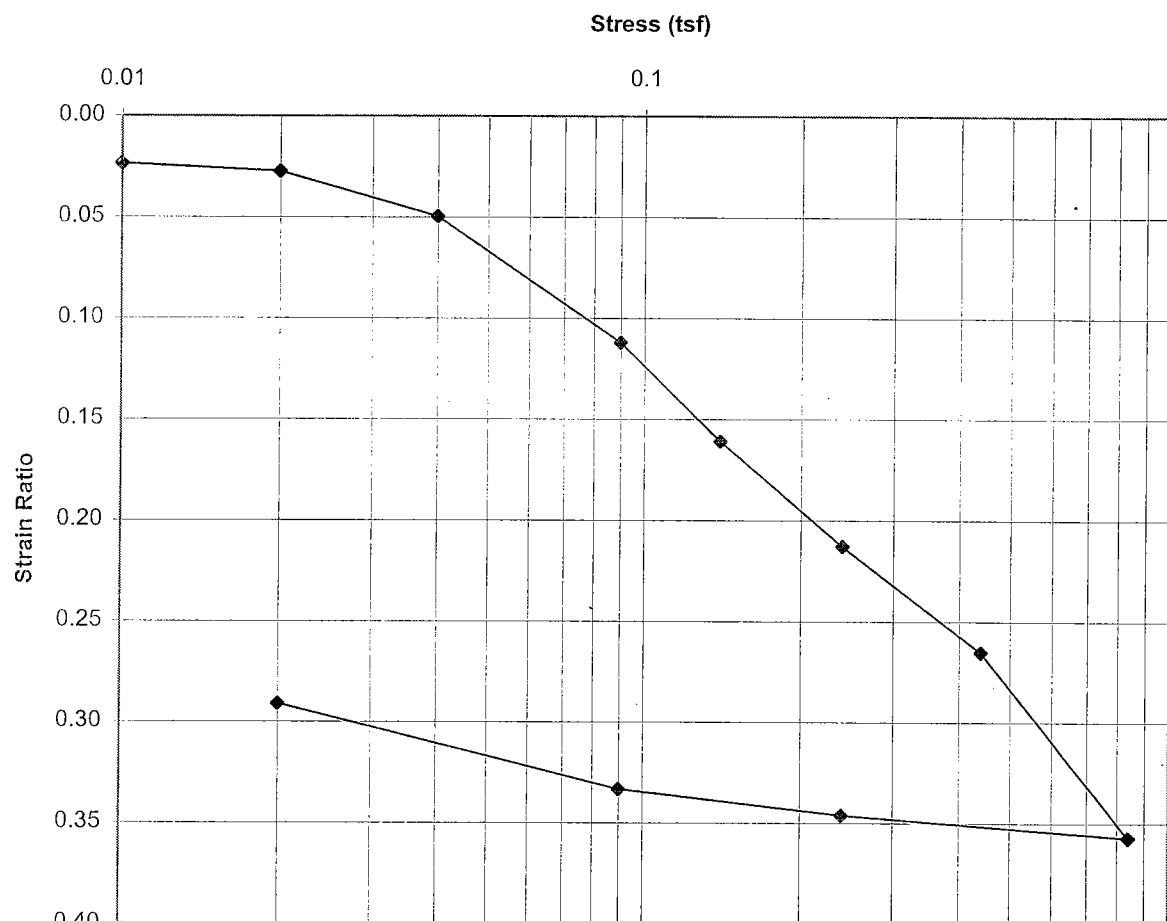

t<sub>90</sub> = the time at which 90% consolidation has occurred, as derived from square root of time plots for each load.

### Notes to the Testing:

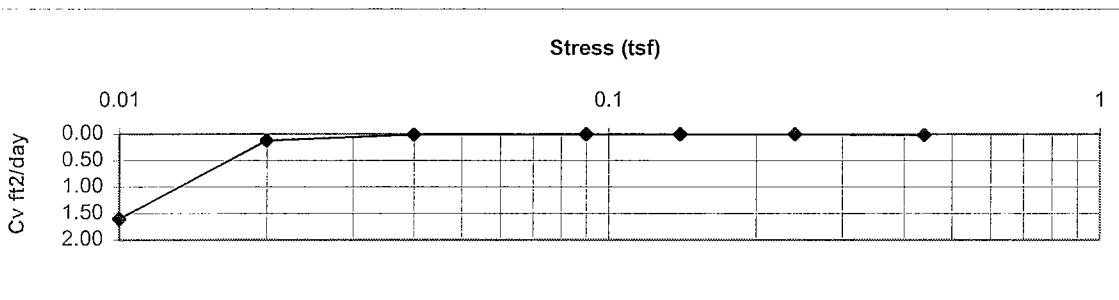

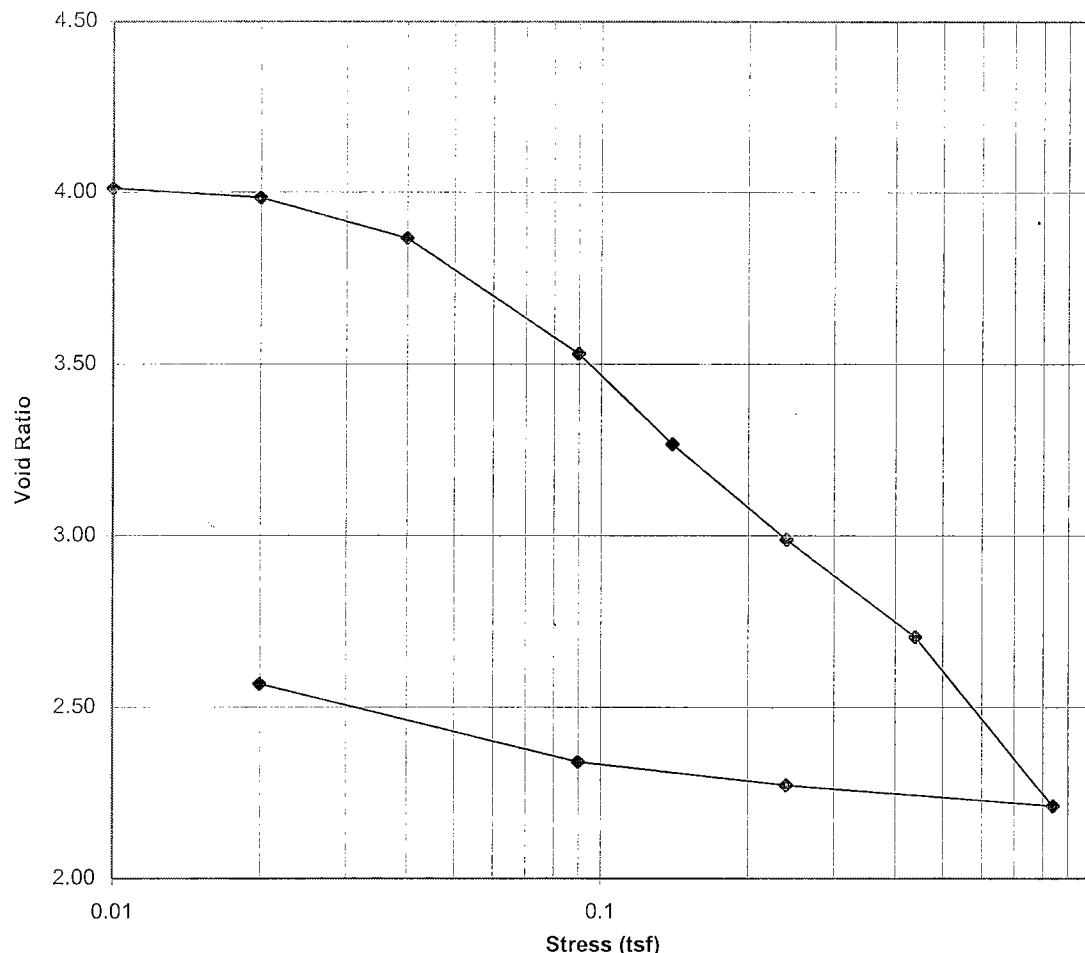

1. The sample was extruded from the sample tube and trimmed into a consolidation ring.
2. The sample was an organic silt.

### Consolidation Test Results

Initial Moisture Content, %	883	Final Moisture Content, %	574
Initial Dry Unit Weight, lb/ft <sup>3</sup>	6	Final Dry Unit Weight, lb/ft <sup>3</sup>	11
Initial Void Ratio	23.44	Final Void Ratio	13.15
Initial Saturation	0.92	Final Saturation	1.10

The following equations were used to calculate the values shown in the table above:

$$C_V = T H^2 / t_{\infty}$$

| Where:

$T$  = the time factor for 90% consolidation

$H$  = average of initial and final heights of the sample at each load, divided by 2

$(S_0 + S_{100})/2$  (for double drainage paths)

$t_{90}$  = the time at which 90% consolidation has occurred, as derived from square root of time plots for each load.

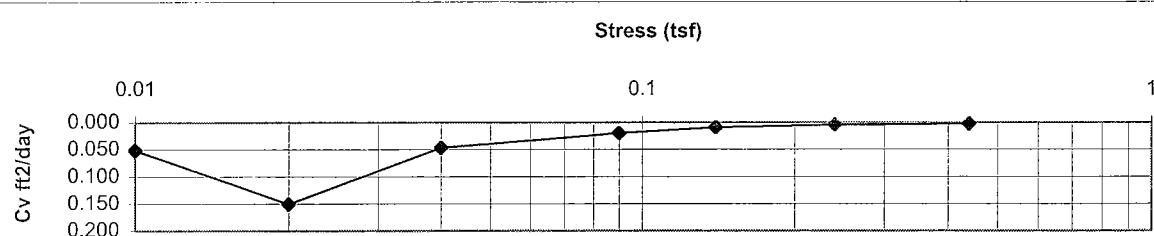

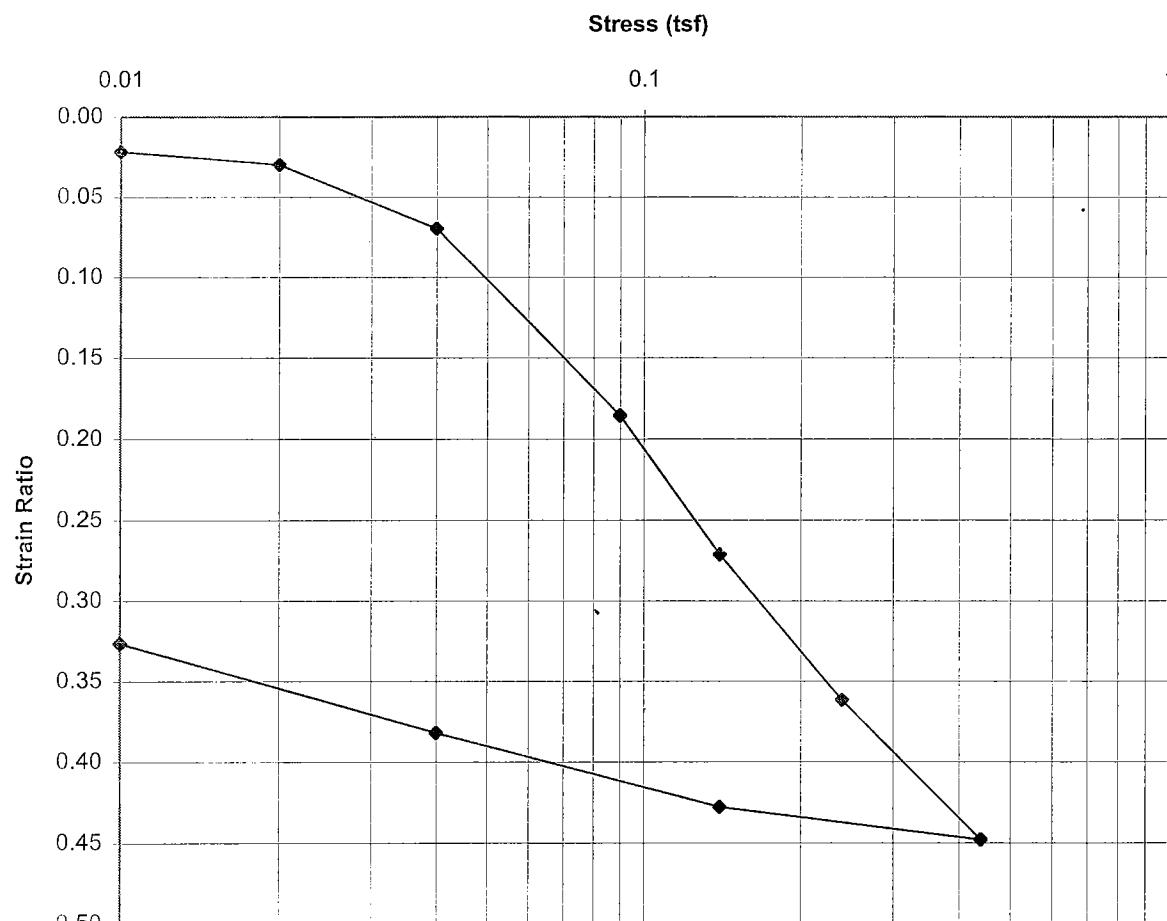

#### **Notes to the Testing:**

- Notes to the Testing:

  1. The sample was extruded from the sample tube and trimmed into a consolidation ring.
  2. The sample was an organic silt.

Project No.: HU50

Client Project: North Lake Union Geotech

### Case Narrative

1. The samples were submitted for grain size analysis and moisture content.
2. The samples were run according to ASTM D422 for the grain size analysis, with both sieve and hydrometer analysis. A specific gravity of 2.65 was assumed for the hydrometer calculations.
3. The moisture content was run according to ASTM D2216. The calculations are based on the dry weight of solids. Because the samples contained more water than solids, they have moisture contents above 100 percent.
4. The data is provided in summary tables and plots.
5. There were no other noted anomalies in the samples or methods on this project.

Analytical Chemists and Consultants

Client: The Retec Group, Inc.

Project No.: HY96

Client Project: PSE10-18064-430

#### Case Narrative

1. The samples were submitted for grain size analysis according to PSEP methodology, both as received and after burning at 440° C.
2. The samples were run in a single batch.
3. The samples were split and washed in the normal way, following PSEP protocols. Following the wash step, the material retained on the #230 sieve was oven dried and sieved. The material was then placed in a crucible and was burned at 440°C. the material was then re-sieved.
4. The data for the as received sample was calculated and plotted in the standard manner. The burned material was calculated by using the burned weight of the coarse material and adding the weight of the fines, to get the "total weight of the sample."
5. The data is provided in summary tables and plots.
6. There were no other noted anomalies in the samples or methods on this project.

**Note:**

All grain size results are considered J-flagged as estimated values because of the apparent influence of organic material on sieving results

Grain size analysis by PSEP method.

Client: Floyd, Snider

ARI Project No.: IG81

Client Project: Gas Works Sed WSA RI/FS

Client Project No.: 340542.002

**Case Narrative**

1. Four samples were retrieved from ARI sample archive on July 12, 2005.
2. The samples were tested for TVS according to ASTM Method D-2974.
3. There were no perceived anomalies to the samples or testing.
