**RE: 2022 Annual Reporting of Soil-Pore Water and Groundwater Sampling
Results at the SWMU-55 Site**

Mr. Schneider:

Whatcom Environmental Services has completed soil-pore water and groundwater monitoring at the Solid Waste Management Unit 55 (SWMU-55) site located at the HollyFrontier Puget Sound Refinery (PSR). HF Sinclair Puget Sound Refining LLC is located at 8505 South Texas Road in Anacortes, Washington. The site location is shown on Figure 1.

The lysimeters and groundwater wells at SWMU-55 have historically been monitored annually per Section V.B of the PSR Permit for Land Treatment of Dangerous Waste (the Permit). Sampling is now being completed as required per Agreed Order (No. DE 16081) relating to construction activities occurring at the site.

Lysimeter L90-13 was removed as a result of construction activities at the site in 2019. The lysimeter was replaced when construction activities were completed in 2020 and renamed L90-13a. Monitoring well and lysimeter locations are shown on Figure 2.

Soil Pore Water Sampling Methods

Soil pore water samples were collected from lysimeters L90-13a and L90-16E in November 2022. Samples were collected utilizing the porous cup lysimeter sample collection methodology in accordance with the procedures in Permit Attachment 11.

Groundwater Sampling Methods

Groundwater samples were collected from wells W-24 and W-46 in November 2022. Due to the depth to water in wells at the site, groundwater samples were collected using disposable bailers. Prior to collecting each sample, 1 to 3 well volumes of water were bailed from the well. Samples were then collected using sample containers provided by the analytical laboratory and placed in a cooler with ice. Dissolved metals samples were filtered in the field using a disposable 0.45 µm in-line filter.

Laboratory Analysis

Samples collected in November 2022 were sent to ALS Laboratory Group in Everett, WA for analysis. ALS Laboratory Group is accredited by the Washington State Department of Ecology. All samples were analyzed for the principal dangerous constituents listed in the Permit as well as contaminants of concern identified in the Agreed Order. Analytes included benzene, toluene, ethylbenzene, and xylenes (BTEX), methyl tert-butyl ether (MTBE), hexane, volatile petroleum hydrocarbons, extractable petroleum hydrocarbons, cPAHs, naphthalenes, chromium, nickel, vanadium, and mercury. Due to lab error, the PAH samples were extracted outside of the hold time. The reporting limits are well below the cleanup level and not considered a concern.

Analytical Results

Well W-24 contained detectable concentrations of dissolved nickel, dissolved chromium, and dissolved vanadium below the MTCA Method B residential groundwater cleanup level. All other analytes were non-detect.

Well W-46 contained detectable concentrations of dissolved nickel and dissolved vanadium below the MTCA Method B residential groundwater cleanup level. All other analytes were non-detect.

Lysimeter L90-13a contained a detectable concentration of dissolved nickel below the MTCA Method B residential groundwater cleanup level. All other analytes were non-detect.

Lysimeter L90-16E contained detectable concentrations of dissolved nickel and dissolved vanadium below MTCA Method B residential groundwater cleanup levels. All other analytes were non-detect.

A summary of the 2022 groundwater sampling results is provided in Table 1. The original laboratory data reports are provided in Appendix A.

Conclusions

Based on the results of this investigation, there is no evidence of groundwater or soil-pore water contamination above MTCA Method B residential groundwater cleanup levels at the SWMU-55 site.

Whatcom Environmental Services appreciates the opportunity to assist the HF Sinclair Puget Sound Refining LLC with the SWMU-55 sampling project. If you have any questions regarding this report, please call me at (360) 752-9571.

Dear Mr. Libolt,

On November 10th, 7 samples were received by our laboratory and assigned our laboratory project number EV22110073. The project was identified as your HF Sinclair Puget Sound Refining LLC (SWMU-55). The sample identification and requested analyses are outlined on the attached chain of custody record.

Due to laboratory error PAH samples were extracted outside of hold time. No other abnormalities or nonconformances were observed during the analyses of the project samples.

Please do not hesitate to call me if you have any questions or if I can be of further assistance.

Sincerely,

ALS Laboratory Group

Glen Perry
Laboratory Director
