Re: **Marshall Landfill Site**

Dear Mr. Hibbler:

This letter is in response to your April 12, 1993, Notice of Potential Liability. In that notice you requested information that my clients may have regarding other potentially liable parties. I regret the delay in responding, but my clients' records are incomplete. I have been trying to get information from the Spokane County Utilities Department, but with limited success. The information I have indicates that the County Utilities Department and the County Health Department directed the disposal of waste to the Marshall Landfill and they may have records regarding the waste. When I receive this information, I will forward it to you.

In the meantime, I have enclosed a preliminary list of others who may be liable. The list includes, where available, the name and address of the generator, the transporter, the amount and type of waste deposited, and the approximate date of disposal.

In addition to the parties listed on the enclosed list, I believe that Spokane County may also be liable for approving and directing the disposal of the above waste in the Marshall Landfill. I will keep you informed regarding Spokane County's role and other potentially liable parties.

Very truly yours,

BACKMAN, BLUMEL & REED

James Reed
