## 1.0 INTRODUCTION

Golder Associates Inc. (Golder) is pleased to present this Media Management Plan (MMP) to Puget Sound Energy (PSE) for use during the construction of PSE's new natural 16-inch gas pipeline in Tacoma and Fife, Washington. The 4-mile long proposed gas line will be installed from an existing 20-inch high pressure (HP) gas line located at the intersection of 20<sup>th</sup> Street East and 62<sup>nd</sup> Avenue East to the intersection of East 11<sup>th</sup> Avenue and Taylor Way (the Site). A majority of the pipeline alignment is located on Taylor Way between the Hylebos and Blair Waterways as shown in Figure 1. The pipeline construction will utilize open trench direct bury and horizontal direction drilling (HDD) methodologies; both of which generate waste including soils, drilling spoils, and water that may potentially be contaminated with hazardous chemicals or constituents from adjacent properties.

There are numerous known contaminated properties located along the pipeline alignment registered with the Washington State Department of Ecology (Ecology) as shown in Figure 2. A limited due diligence assessment of the properties along the pipeline alignment was previously conducted by others and provided by PSE. A map of known contaminated properties located along the pipeline alignment and a table listing property specific potential contaminants of concern (PCOCs) are included in Appendix A.

A subsequent Phase II environmental investigation (Phase II investigation) was conducted by Golder to evaluate the potential for encountering contaminated media during pipeline construction and to pre-characterize impacted media for management planning purposes. The Phase II Investigation Summary Report (Phase II report) is provided as Appendix B.

Additional information on both environmental assessments is presented in Section 3.0.

### 1.1 Purpose and Use of the MMP

This MMP was prepared to provide guidance on the proper management of potentially contaminated investigative derived waste (IDW) and construction derived waste (CDW) including soils, drill spoils and water based on the results of the due diligence assessment and Phase II investigation, health and safety requirements, storage, transportation, and disposal practices. The MMP incorporates basic background information about the Site and a description of the identified PCOCs and contaminants of concern (COCs).

This MMP is intended for use by contractors and consultants involved in subsurface activities at the Site. All persons involved in subsurface work at the Site must be advised of the potential contamination, health and safety issues, and soil management procedures described herein.

## 1.2 Acknowledgements and Limitations

This MMP was prepared based on the available Site environmental data and relevant state and federal regulations published as of September 2015. No warranties are express or implied concerning potential contaminants or environmental media not addressed through the existing sampling and analysis conducted at the Site. Golder is not responsible for conditions or consequences arising from information not available at the time of the MMP preparation. This MMP was prepared in accordance with the generally accepted professional practice at this time for the exclusive use of PSE and their agents or authorized third parties. No other warranty, either expressed or implied, is made.

## 2.0 PROJECT ORGANIZATION AND COMMUNICATIONS

PSE is responsible for the overall management of the excavations and construction, including work to be completed under this MMP. Individual contractors and/or subcontractors involved in subsurface work are responsible for reviewing, understanding, and following this MMP.

### 2.1 Description of General Project Roles and Responsibilities

Roles and responsibilities of the primary team personnel are as follows:

- The Contractor's **Project Manager** is ultimately responsible for directing the earthwork and construction activities at the Site. The Project Manager is also responsible for ensuring implementation of this MMP throughout all subsurface Site activities. The Project Manager or designee(s) will be responsible for keeping daily records of site safety briefings and field notes of pertinent Site observations. The Project Manager or designee(s) will be responsible for managing bills of lading for materials transported off-site. The Project Manager or designee is responsible for ensuring soil selected as backfill meets relevant screening levels.
- The **Environmental Consultant** will be responsible for soil or water sampling and for managing, analyzing and reporting sample data. At the request of PSE, the Environmental Consultant will conduct field screening of soils as described in the MMP and keep field notes of pertinent observations. The Environmental Consultant will provide support to the Project Manager as needed including assistance training crew members on basic visual and olfactory screening methods to be employed during excavation.
- The **On-Site Supervisor and Crew (On-Site Observer)** will observe soils and spoils from excavation and HDD activities when CDW is being generated and have the sole responsibility for determining if suspect soils are encountered. The Environmental Consultant will conduct site visits, field screening, and environmental sampling only when notified by PSE, Project Manager or On-Site Supervisor. The On-Site Supervisor will notify the Environmental Consultant immediately if they encounter soil or generate spoils with an unusual odor or appearance. Visual and olfactory observations will be ongoing throughout excavation activities either by the On-Site Observer or by the Environmental Consultant (when requested).
- The **Geotechnical Engineer** will be responsible for ensuring appropriate fill thickness and compaction, and placement of clean backfill as requested by the Project Manager. They will provide support to the Project Manager as needed.
- The **Site Workers**, including all individuals involved in subsurface activities at the Site, are responsible for following this MMP including safety precautions, appropriate use of personal protective equipment (PPE), proper soil management, visual and olfactory screening of soils during excavation, and proper stormwater management.

### 2.2 Permit Requirements

Construction activities will be permitted under the appropriate governing authorities. PSE is responsible for identifying and acquiring all permits necessary for the planned construction and excavation activities.

### 3.0 SITE DESCRIPTION

As noted above, PSE is installing approximately 4 miles of 16-inch gas line from the existing 20-inch HP gas line at the intersection of 20<sup>th</sup> Avenue East and 62<sup>nd</sup> Avenue East in the City of Fife to the intersection of East 11<sup>th</sup> Street and Taylor Way in the City of Tacoma, as shown in Figure 1. The pipeline will be installed using both HDD and open trench direct bury construction methodologies. The locations of the seven planned HDD crossings are shown in Figure 2.

#### 3.1 Summary of Environmental Investigations

Environmental investigations include the due diligence assessment and Phase II Investigation Summary Report.

##### 3.1.1 Due Diligence Assessment

PSE conducted a due diligence assessment, which identified 30 known contaminated properties adjacent to the pipeline alignment with a risk for the presence of migratory contaminants that could potentially impact the project Site. A risk rating of low, moderate, and high were given to each of these 30 properties as shown on the map in Appendix A. PCOCs associated with one or more of the 30 properties are composed of one or more individual constituents from the following analytical groups; petroleum hydrocarbons, volatile organic compounds (VOCs), semi-VOCs, polycyclic aromatic hydrocarbons (PAHs), polychlorinated biphenyls (PCBs) cyanide, and metals. Contaminants associated with the individual properties are presented in Appendix A.

##### 3.1.2 Phase II Investigation Summary Report

Golder conducted a Phase II investigation along the pipeline alignment based on the findings of the due diligence assessment. The Phase II investigation was primarily designed based on proximity of direct bury portions of the pipeline, HDD entry pits, and HDD exit pits to adjacent high risk properties to determine the potential for encountering environmental media impacted with hazardous constituents. The Phase II investigation was completed concurrently with the HDD geotechnical investigation and the results of that study are summarized under separate cover.

Field work for the Phase II investigation was conducted from September 14 through 18 and September 21, 2015. Samples were collected from vadose soil, saturated soil, and groundwater in 18 boreholes, EH-A through EH-R with the following exceptions. The vadose sample from EH-J was not collected due to poor recovery and high gravel content. No groundwater samples were collected from EH-G or EH-R due to poor water production. Saturated soil samples were also collected from seven geotechnical boreholes, BH-12 through BH-16, BH-18, and BH-19. A total of 42 soil and 16 groundwater samples were collected and analyzed for one or more PCOCs. Analyses were based on PCOCs identified in the Appendix A table for the adjacent moderate or high risk property(s). Work was conducted in general accordance with

Golder's Sampling and Analysis Plan (SAP). Deviations from the SAP are noted in the Phase II report provided as Appendix B, as well as within the SAP. The Phase II report provides:

- A description of the field activities and investigation methods
- List and explanation of deviations from the SAP
- Geologic borehole logs for all of the boreholes that environmental samples were collected from
- Summary of geology generally developed in the companion geotechnical report
- Tables of environmental sampling results and data summary

### 3.2 Contaminants of Concern

Identification of COCs is based on the comparison of the Phase II investigation analytical results for PCOCs (identified in the initial due diligence assessment) being detected over the project characterization criteria, which consisted of:

- Washington State's Department of Ecology's Model Toxics Control Act (MTCA) Chapter 173-340 Washington Administrative Code (WAC) cleanup levels for MTCA Method B for unrestricted use.
- Dangerous Waste Regulations Chapter 173-303-WAC Toxicity Characteristics List: Maximum Concentration of Contaminants for the Toxicity Characteristic.
- Potential applicability of 40 Code of Federal Regulations (CFR) Part 268 Land Disposal Restrictions, Treatment Standards for Hazardous Wastes values for wastewaters and non-wastewaters.

The analytical data produced by the Phase II investigation was compared to the project characterization criteria provided as Appendix B. **There were no PCOCs detected exceeding project characterization criteria and therefore no COCs were identified for the project media.** For the purpose of this MMP, Golder will continue to reference and use the standards noted above to characterize and manage soils, drilling spoils, and water associated with IDW and CDW.

## 4.0 MEDIA MANAGEMENT

### 4.1 Soil Management Overview

The purpose of this MMP is to provide guidelines for environmental monitoring of activities that generate CDW (and IDW) and management and disposal the two types of waste streams, as well as support safe working conditions for construction workers during excavation of soils and HDD while producing spoils. Media management protocol includes:

- Health and Safety
- Soil Excavation Management
- Soil stockpiling
- Reuse and disposal of excavated soils
- Groundwater management
- Stormwater management
- Fugitive Dust Management
- Documentation of media management

### 4.2 Health and Safety Requirements On-Site

Since there were no concentrations of PCOCs detected exceeding the soil or water characterization criteria (identified in Section 3.2) for Phase II investigation samples, there were no COCs identified for either media. The Phase II investigation results indicate exposure of project personnel to Site soil or groundwater under direct-contact or inhalation exposure scenarios would not likely pose an unacceptable health risk to Site personnel. However, the distance between the sampling locations in the Phase II investigation exceeds 500 feet in many cases. It is possible that isolated pockets of COCs could be discovered during construction. Therefore site workers must follow the appropriate Site Specific Health and Safety Plans, use appropriate PPE, and practice good hygiene to avoid accidental ingestion or excessive dermal contact with soils. Dust control measures should be put into place to reduce the potential for inhalation exposures.

### 4.3 Soil Excavation and Field Screening

CDW soil will be generated by trench excavation in the direct bury portions of the alignment, entrance and exit pits for HDD, and HDD drilling (via drilling spoils). Soil excavation is discussed in this section. Drilling spoils are discussed in Section 4.4. The Environmental Consultant will have a field engineer on-site during excavation activities to field screen soils and groundwater for the presence of potentially hazardous materials (Section 4.7) as requested by PSE, the On-Site Supervisor or Project Manager. Field screening will consist of a combination of standard industry recognized field methods used for identifying soil and groundwater potentially impacted with hazardous materials including: making visual and olfactory observations, surveying soils with a photoionization detector (PID) and sheen testing. Any

media identified as suspect (i.e. potentially being impacted with hazardous materials) will be segregated and sampled.

PSE estimates that on average one-half cubic yard ( $\text{yd}^3$ ) of CDW will be generated per linear foot of direct bury pipeline. Un-impacted soil characterized during field screening and/or subsequent sampling and testing can be re-used as backfill for the trench or HDD pits from an environmental perspective. Suitability for re-use from a geotechnical perspective should be evaluated separately. No judgment of geotechnical suitability is made by this MMP. If non-suspect /non-regulated soil is not used for backfill it will be direct loaded and transported off-site for disposal at a Washington State certified subtitle D landfill in accordance with PSE standard procedures. Shipment of non-regulated CDW soil may use trans-model facilities to support more efficient shipping at the Project Manager's discretion.

If suspect soils are identified during construction they will be segregated and sampled. When impacted soils are identified, the Heavily Impacted Soil Notification Form included in Appendix C shall be filled out immediately. Preferably suspect soils will be placed in roll-offs containers and retained on-site until sample results are available for waste characterization and, if required, generating a profile for disposal. If roll-off containers are not feasible based on field conditions or logistical reasons, soil will be stockpiled and covered with plastic. Roll-offs and stockpiles will be temporarily placed within the pipeline construction boundaries or at an alternate location(s) identified by PSE.

#### **4.4 HDD Drilling Spoils**

Drilling spoils will consist of a mixture of drilling mud and soil. Spoils will be field screened as they are generated. Drilling spoils should be handled in much the same way as excavated soil. Any drilling spoils suspected of potentially containing hazardous materials will be segregated and sampled.

Washington State Department of Transportation (WSDOT) regulations prohibit the release of liquid during transport of materials. Therefore, even spoils treated as non-regulated may have to be temporarily stockpiled to allow free liquid to drain and the soils stiffen before it can be loaded and transported off-site for disposal.

#### **4.5 Soil Stockpiling**

Soils determined to be non-regulated will generally be direct-loaded and transported off-site for use as fill or cover at a designated Subtitle D landfill or re-used on site. Soils intended for reuse on-site may be required to be stockpiled on-site.

Soil identified as being potentially contaminated will be segregated and stockpiled separately from soils planned for on-site reuse or off-site disposal and will be placed on plastic sheeting and covered or placed in roll-off containers. The potentially contaminated soils will be further characterized by sampling and

analysis. Laboratory turnaround times for sample results may vary, depending on requested turnaround times, analytical procedure, or laboratory workload. Therefore, potentially contaminated soils should be placed in an area designated by PSE that will not disturb or impede construction activities during the waiting period for analytical results and disposal coordination. PSE's Project Manager or contractor will have pre-arranged for roll-offs to be available and at the ready to use prior to the start of construction.

#### **4.6 Disposal of Excavated Soil**

Excavated unregulated soil not used on-site for backfill will be removed from Site and disposed of at a Subtitle D landfill. Receipt of non-regulated project soil and drilling spoils will be coordinated with and accepted by the selected landfill(s) prior to transport. Phase II investigation soil and groundwater data will be provided to the receiving landfill to coordinate receipt of non-regulated soil. Additional sample data will be provided to the landfill for suspected contaminated soils as generated, if appropriate. Disposal options and transportation details are discussed in Sections 6.3 and 6.4, respectively. Some soil may be retained for reuse on-site as discussed in Section 6.2.

#### **4.7 Groundwater Management**

Based on interpreted groundwater levels of approximately 6 feet below ground surface (bgs), negligible to minor groundwater inflows are expected for standard trench excavation. In areas of deeper installation dewatering activities may be required and may generate larger volumes of water. It is anticipated that PSE will apply for a Construction Wastewater Discharge Authorization (DA) to discharge accumulated groundwater inflow to the cities of Tacoma and/or Fife's sewer districts sanitary sewer. Therefore, if groundwater is encountered, it will be sampled, managed and discharged in accordance with an approved DA employing standard Best Management Practices (BMPs) to remove turbidity and meet discharge limit requirements.

If the water generated does not meet criteria for discharge it shall be directed to a holding tank and treated in place to meet discharge criteria or transported off site to an appropriate treatment facility based on its profile. The Project Manager will have pre-arranged for holding tanks to be available and ready to use prior to the start of excavation.

To mitigate the potential for transport or migration of impacted groundwater in the pipeline bedding, bentonites dams can be installed in the pipeline trench to limit the migration of suspected or known areas of impacted groundwater.

#### **4.8 Stormwater Management**

Stormwater contaminated by contact with the Site is not expected to pose a threat to human health or the environment. During excavation activities, Site stormwater shall be managed in accordance with the

---

applicable construction stormwater permit. PSE is responsible for acquiring and complying with the appropriate stormwater management permit for excavation and construction activities.

#### **4.9 Fugitive Dust Management**

Fugitive dust control measures should be evaluated and implemented whenever earthwork activities are performed. These activities may include sprinkling water onto stockpiles and bare soil for dust suppression, using sheeting to cover exposed soils and stockpiles, and street sweeping to keep roads and staging areas free of accumulated soils. The Project Manager is responsible for evaluating and implementing appropriate dust control measures as they are applicable to the proposed excavation and construction activities.

#### **4.10 Documentation of Media Management**

The Environmental Consultant will maintain field notes and take photographs during site visits to record observations of field screening and media management activities. The Project Manager will provide the Environmental Consultant copies of all disposal records for all IDW and CDW including bills of laden, manifest, and weight tickets, as appropriate. The Environmental Consultant will be present on the Site to conduct field screening, environmental sampling, support waste management tasks, and document relevant field activities related to media management at the request of PSE, the On-Site Supervisor or Project Manager.

## 5.0 MEDIA SAMPLING AND ANALYSIS PLAN

This section describes the methods that will be used to field screen CDW and if required, to collect and analyze additional samples in order to fully profile CDW for disposal.

### 5.1 Field Screening

Initial field screening will be performed solely by PSE, their contractor, and their subcontractors. PSE's contractor and their subcontractors will have the sole responsibility for determining if suspect soils are encountered. The Environmental Consultant will conduct site visits, field screening, and environmental sampling only when notified by PSE or the On-Site Supervisor.

The On-Site Supervisor and Crew (On-Site Observer) will observe soils as they are being excavated. The On-Site Supervisor or Project Manager will notify the Environmental Consultant immediately if they encounter soil with an unusual odor or appearance. Visual and olfactory observations will be ongoing throughout excavation activities either by the On-Site Observer or by the Environmental Consultant (when requested by PSE, the On-Site Supervisor or Project Manager). PID readings will be taken at the discretion of the Environmental Consultant and in accordance with the Site Specific Health and Safety Plan.

Sheen tests will also be conducted at the discretion of the Environmental Consultant. Soils with an unusual appearance (e.g., abnormal or off-color), a visible sheen, a strong petroleum or chemical odor, or which generate a PID reading of over 200 parts per million (ppm) may be considered suspect. The Environmental Consultant will collect samples from the suspect soils and submit them for analysis of the presence of COCs.

The sheen test consists of placing a small amount of suspect soil into a plastic sealable bag or other suitable container. Distilled water is added to the bag or container with soil. The soil-water mixture is then agitated to thoroughly mix the soil and water. If sheen appears on the water the test indicates petroleum contamination is likely present in the soil and subsequent sampling should be conducted.

Based on field screening observations, the Environmental Consultant may designate the soil as suspect and direct the soil to be segregated and placed in a roll-off or stockpiled and sampled accordingly. Samples will be delivered to a prearranged analytical laboratory for testing. Site work does not need to stop in the area where the soils are collected, unless other visual or olfactory observations indicate a potential presence of contaminants above acceptable levels (i.e. free product is present, PID readings over 1,000 ppm as indicated in the following paragraph, indications of disposal is present) or Environmental Consultant's professional judgment. The analysis of suspect soils will assist in characterization for disposal. The Environmental Consultant will record all observations including locations from which samples are collected.

Excavation work will stop in any area where soils elicit a PID reading of over 1,000 ppm. The On-Site Supervisor or Environmental Consultant may also stop work if they have reason to believe personnel or the environment is at risk. Soils that elicit a stop-work order will be sampled but left in place, pending analytical results. Analytical results will be used to characterize the soil for disposal and appropriate safety precautions. Upon removal of this soil, if requested by PSE confirmation samples will be collected from at least two sidewalls and the excavation floor. All soils will be managed in accordance with Section 4.0 of this MMP.

## 5.2 Sample Collection

Soil samples to be collected for sheen tests in the field or to be delivered to the laboratory for analysis will be collected as discrete grab samples following the procedures described in this section. The field personnel, or sampler, will don a new pair of nitrile gloves for each sample collected. The sampler will use a decontaminated stainless steel spoon or trowel to collect soil from the stockpile or excavation floor. The sampling instrument will be decontaminated before collecting each sample using the procedures described in the SAP. Disposable sampling spoons may also be used, and will be discarded following each individual sample location.

Soil samples for VOC analysis will be collected in accordance with United States Environmental Protection Agency (EPA) Method 5035 procedures.

### 5.2.1 Segregated Stockpile or Roll-off Samples

Non-hazardous stockpiles segregated for reuse will not require sampling. Discrete grab samples will be collected from suspect soil stockpiles or roll-offs from 6 to 12 inches below the soil surface. The samples shall be collected where field screening indicates contamination is most likely present. The number of samples collected from individual stockpiles, roll-offs or groups of roll-offs filled from the same source will be determined in consultation with the receiving landfill. Samples will be analyzed for all constituents listed in Section 5.5. The Environmental Consultant will record all observations including locations from which samples are collected.

## 5.3 Sample Containers and Documentation

For analytical samples, only laboratory-provided jars with Teflon-lined lids will be used to retain soil samples. Sample containers will be labeled with the Site name, project number, unique sample identification (ID) number, and date and time of sample collection.

A field book will be maintained including records of PID readings, observations, and information about each sample collected and sheen test conducted. The field book will include the sample ID, date and time of sample collection, sample preservation method (if applicable), and requested analytical or results of the sheen test, as applicable.

## 5.4 Sample Storage, Chain of Custody, and Shipment

Samples collected for laboratory analysis will be placed in a cooler chilled with either blue ice or water ice. If water ice is used, the ice will be double-bagged in plastic sealable bags to prevent melt water from accumulating inside the cooler. A laboratory-provided chain of custody will be completed and samples will be transported under chain of custody procedures to the laboratory.

## 5.5 Sample Analysis

Samples collected for characterization of stockpiled soils will be analyzed as follows:

- Diesel- and lube oil-range organics (DRO and ORO) using Method Northwest Total Petroleum Hydrocarbon (NWTPH)-Dx
- VOCs using EPA Method 8260
- Resource Conservation Recovery Act (RCRA) Metals (totals) using EPA Method 6020

The receiving disposal facility may require additional analytical testing based on their internal or regulatory requirements. A list of required analytes and test methods shall be coordinated with the disposal facility and analytical laboratory. In addition, any soil samples with high PID readings (over 200 ppm) but no visible sheen may be analyzed for all standard 8260-listed VOCs.

## 6.0 CLASSIFICATION, REUSE, AND DISPOSAL

### 6.1 Field Screening

During excavation activities, initial field screening will be performed by the On-Site Observer who will have the responsibility for determining if suspect soils are being encountered. PSE's contractor personnel will be making visual and olfactory observations during soil excavation. The contractor personnel will notify the Environmental Consultant of any suspect soils encountered. Soils which are not considered suspect according to this field screening method will not be sampled.

During field screening a PID reading of over 200 ppm may be considered suspect. Suspect soils will be segregated and analyzed minimally for the constituents listed in Section 5.5 in addition to any PCOCs associated with adjacent contaminated properties as applicable. Suspect soils generating a PID reading over 1,000 ppm will be sampled, but left in place, and excavation work in that area will cease pending analytical results. Analytical turnaround time can be reduced to minimize scheduling delays at an increased cost. Results of the laboratory analysis will indicate the appropriate field actions as described below.

### 6.2 On-Site Reuse

An unspecified volume of excavated trench soils may be reused on-site if geotechnically acceptable. Site soil for reuse and import soils both should have COC concentrations less than MTCA Method B clean up levels (CULs).

### 6.3 Off-Site Disposal

It is anticipated that some of the excavated soils may not be suitable for reuse from a geotechnical perspective and will have to be disposed at off-site facilities. Soils will be removed as they are excavated (direct-loaded) unless the receiving facility scheduling requires temporary stockpiling or the soils are deemed suspect according to the field screening measures in Section 5.2. Suspect soils will be stockpiled or placed in roll-offs as described in Section 4.5. Suspect soils will be sampled to appropriately characterize the soil for disposal. The sample(s) will be analyzed for the constituents listed in Section 5.5 and adjacent property PCOCs, in addition to any additional analytes required by the receiving facility. Analytical results will be compared to the criteria noted in Section 3.2 to determine disposal options. After the soil has been characterized and accepted by the appropriate facility, the soils will be transported off-site for disposal.

### 6.4 Transportation of Media

Regardless of the destination, all soils removed from the Site will be transported in accordance with applicable federal, state, and local laws. Soils determined as contaminated will be loaded into plastic-lined trucks or roll-offs in a manner that prevents spilling or tracking of contaminated material off-site.

---

Trucks will cover their loads securely before leaving the work zone. A waste manifest or bill of lading will be included for each load of contaminated media transported off-site, as necessary.

PSE and its contractor are responsible for ensuring that all drivers are adequately licensed and informed of the nature of the material they are transporting, required routes to and from the Site and disposal location, and applicable city and state regulations and requirements.

## 7.0 CLOSING

This MMP has been prepared for PSE by Golder to provide guidance for characterization and management of CDW and IDW generated in association with the construction of a 16-inch natural gas pipeline located in Tacoma and Fife, Washington. The MMP was developed based on and as a continuation of the preceding environmental assessment work presented in Appendix A and B.

Golder appreciates the opportunity to provide our services to PSE. If you have questions or require any additional information, please contact one of the undersigned at (425) 883-0777.

**PSE Tacoma LNG Project**

Map ID	Pierce County Parcel Number	Current Business (Listed Business) Current Address (Former Address)	Site Information	Potential to Encounter Contamination During Pipeline Construction
1	5000350011	Totem Ocean Trailer Express Terminal (Alaska Barge Lines, Inc.)  500 Alexander Avenue (600 Alexander Avenue)	<p><b>Database Listing:</b> RCRA-LQG, PADS, FINDS, WA CSCSL, WA ALLSITES, WA LUST, WA MANIFEST, WA SPILLS, WA NPDES, RCRA Non-Generator</p> <p>The Totem Ocean Trailer Express (TOTE) site is an industrial property consisting of one two-story building constructed in 1919 and one one-story building constructed in 1995.</p> <p>Ecology received notification of a LUST at the site in December 1998. <b>Unspecified petroleum products</b> are confirmed in soil and groundwater at the site. According to Ecology's website, site status is "cleanup started".</p> <p>Ecology website: <a href="https://fortress.wa.gov/ecy/gsp/Sitepage.aspx?csid=7619">https://fortress.wa.gov/ecy/gsp/Sitepage.aspx?csid=7619</a></p>	<p>Detailed information regarding the location of contaminated soil and groundwater at the site was not included on the Ecology website. The Port may be able to provide this information. Pending receipt of such information, this site is considered a <b>high risk</b> for contaminant migration into the pipeline corridor (TOTE portion) based on proximity, contaminant types, and the reported presence of groundwater contamination.</p>
2	2275200520	Mariana Properties, LLC (Washington Marine Services, United Independent Oil Company, Glenn Springs Holdings, Inc., PRI Northwest, Inc., Tacoma Marine Terminal)  709 Alexander Avenue	<p><b>Database Listings:</b> RCRA Non-Generator, FINDS, WA ALLSITES, CERCLIS, FINDS, WA CSCSL, WA ALLSITES, WA HSL, WA MANIFEST, WA INST CONTROL, WA UST</p> <p>Washington Marine Services site is a commercial/industrial vacant property.</p> <p>According to Ecology's website, the site was identified as a hazardous site in September 1993. An RI/FS performed by Ecology under Agreed Order was completed in November 1994.</p> <p><b>Corrosive wastes, halogenated organics, metals, petroleum products and PAHs</b> are confirmed above cleanup levels in soil and/or groundwater at the site. A cleanup action plan was developed but rejected by Ecology in June 1995. According to Ecology's website, site status is "cleanup started".</p> <p>Ecology website: <a href="https://fortress.wa.gov/ecy/gsp/Sitepage.aspx?csid=4330">https://fortress.wa.gov/ecy/gsp/Sitepage.aspx?csid=4330</a></p>	<p>Based on document reviews completed by GeoEngineers during preparation of the sampling and analysis plan for the environmental assessment of the proposed LNG facility site, chlorinated solvents and petroleum-related compounds are present in groundwater beneath this site. Additional recent information regarding the extent of dissolved benzene beneath this site was provided by the Port on November 4, 2014. This site is considered a <b>moderate risk</b> for contaminant migration into the pipeline corridor (TOTE portion) based on distance, contaminant types, and recent (2010-2014) groundwater sampling results.</p>
3a	5000350021	Port of Tacoma (Alexander Avenue Petroleum Tank Facilities, American Fast Freight, 721 Alexander Ave, Fletcher Oil Company, Calbag Metals)  901 Alexander Avenue (845 Alexander Avenue, 721 Alexander Avenue)	<p><b>Database Listings:</b> CSCSL, WA HSL, RCRA NonGen/NLR, WA ALLSITES, WA MANIFEST, WA SPILLS, FINDS</p> <p>The Alexander Avenue Petroleum Tank Facilities site encompasses multiple properties (709, 901, and 1001 Alexander Avenue), including the former 721 Alexander Avenue property.</p> <p>According to Ecology's website, the site has been used for petroleum processing and storage since the 1930s. The Port of Tacoma purchased the site in 1966 and removed storage tanks and a crude oil plant in 1983.</p> <p>Ecology received a Site Discovery report in February 1995. A PA/SI was performed by the Pierce County Health Department from March 1995 to December 1996.</p> <p><b>Benzene, diesel, and gasoline</b> are confirmed above applicable cleanup levels in soil and groundwater at the site, some in close proximity to the adjacent rights-of-way. Additional contaminants were identified in site soils at unspecified concentrations on Ecology's website, including: <b>lead, arsenic, copper, tetrachloroethylene (PCE), trichloroethylene (TCE), and vinyl chloride.</b></p> <p>In October 2013, Ecology entered an Agreed Order requiring development and implementation of an RI/FS and cleanup action plan. The RI was completed in June 2014. According to Ecology's website, site status is "cleanup started".</p> <p>Ecology website: <a href="https://fortress.wa.gov/ecy/gsp/Sitepage.aspx?csid=743">https://fortress.wa.gov/ecy/gsp/Sitepage.aspx?csid=743</a></p>	<p>Based on document reviews completed by GeoEngineers during preparation of the sampling and analysis plan for the environmental assessment of the proposed LNG facility site, chlorinated solvents and petroleum-related compounds are present in groundwater beneath this site. Additional recent information regarding the extent of dissolved benzene beneath this site was provided by the Port on November 4, 2014. This site is considered a <b>moderate risk</b> for contaminant migration into the pipeline corridor (TOTE portion) based on proximity, contaminant types, and recent (2010-2014) groundwater sampling results.</p>

Map ID	Pierce County Parcel Number	Current Business (Listed Business) Current Address (Former Address)	Site Information	Potential to Encounter Contamination During Pipeline Construction
3b	2275200502	Port of Tacoma (Naval Reserve Center) 1001 Alexander Avenue	<p><b>Database Listings: WA CSCSL, WA ALLSITES, WA HSL, WA LUST</b></p> <p>The site is an industrial property formerly used for military activities and consisting of two buildings; one two-story building constructed in 1975 and one one-story building constructed in 1970.</p> <p>According to Ecology's website, Ecology received notification of LUST in December 1993. The site was entered in the VCP in May 1999, and remediated <b>unspecified petroleum products</b> in soil at the site to concentrations below applicable cleanup levels.</p> <p>A Site Hazard Assessment was performed at the site in 2011. According to the database review, <b>unspecified petroleum products</b> were suspected in groundwater at the site. However, petroleum products were not detected in groundwater samples collected at this site in 2014 during PSE's environmental assessment of the proposed LNG facility site.</p> <p>Site status is listed as "awaiting cleanup".</p> <p>Ecology website: <a href="https://fortress.wa.gov/ecy/gsp/Sitepage.aspx?csid=3017">https://fortress.wa.gov/ecy/gsp/Sitepage.aspx?csid=3017</a></p>	<p>Detailed information regarding the location of contaminated soil and groundwater at the site was not included on the Ecology website. This site is considered a <b>low risk</b> for contaminant migration into the pipeline corridor based on previous cleanup actions and recent (2014) groundwater sampling results.</p>
4	0321263046	Tacoma DPU Steam Plant 2 1171 Taylor Way	<p><b>Database Listing: RCRA-LQG, PADS, FINDS, WA CSCSL, WA ALLSITES, WA LUST, WA MANIFEST, WA SPILLS</b></p> <p>This site was historically a Port of Tacoma steam plant. Minimal information is available on Ecology's website. <b>Arsenic, lead, mercury, and petroleum products</b> were reported in site soil and groundwater at concentrations above applicable cleanup levels. Site status is listed as "awaiting cleanup".</p> <p>Ecology website: <a href="https://fortress.wa.gov/ecy/gsp/Sitepage.aspx?csid=11532">https://fortress.wa.gov/ecy/gsp/Sitepage.aspx?csid=11532</a></p>	<p>Detailed information regarding the location of contaminated soil and groundwater at the site was not included on the Ecology website. This site may pose a <b>high risk</b> for contaminant migration into the pipeline corridor depending on contaminant location and groundwater flow direction.</p>
5	0321263016	PQ Corporation 1202 Taylor Way	<p><b>Database Listing: RCRA-NonGen, FINDS, WA CSCSL, WA ALLSITES, WA LUST, WA MANIFEST, WA VCP</b></p> <p>One industrial heavy manufacturing building, built in 1950, is located at this site. Minimal information regarding site condition is available on Ecology's website. The site was entered in the VCP in 2012 and <b>metals, PAHs, and petroleum products</b> are confirmed in site soil and groundwater at concentrations above applicable cleanup levels. Site status is listed as "cleanup started."</p> <p>Ecology website: <a href="https://fortress.wa.gov/ecy/gsp/Sitepage.aspx?csid=11532">https://fortress.wa.gov/ecy/gsp/Sitepage.aspx?csid=11532</a></p>	<p>Detailed information regarding the location of contaminated soil and groundwater at the site was not included on the Ecology website. This site may pose a <b>high risk</b> for contaminant migration into the pipeline corridor depending on contaminant location and groundwater flow direction.</p>
6	0321263024 approximate	Taylor Way & Alexander Ave Fill Area 1500 Block of Taylor Way	<p><b>Database Listing: WA CSCSL, WA ALLSITES, WA HSL</b></p> <p>Minimal information regarding site condition is available on Ecology's website. An area of contaminated fill was identified in 1988; the affected fill area is not well defined in the available resources and therefore may extend beyond the parcel boundaries. The site was listed on the Hazardous Sites List in 2007. <b>Metals, halogenated organics, and petroleum products</b> are confirmed in site soil and groundwater at concentrations above applicable cleanup levels. Site status is listed as "awaiting cleanup."</p> <p>Ecology website: <a href="https://fortress.wa.gov/ecy/gsp/Sitepage.aspx?csid=4692">https://fortress.wa.gov/ecy/gsp/Sitepage.aspx?csid=4692</a></p>	<p>Detailed information regarding the location of contaminated soil and groundwater at the site was not included on the Ecology website. This site may pose a <b>high risk</b> for contaminant migration into the pipeline corridor depending on contaminant location and groundwater flow direction.</p>

Map ID	Pierce County Parcel Number	Current Business (Listed Business) Current Address (Former Address)	Site Information	Potential to Encounter Contamination During Pipeline Construction
7	0321352066 0321352054	Clean Care 1510 Taylor Way	<p><b>Database Listing:</b> RCRA-LQG, FTTS, CERCLIS, ICIS, FINDS, RAATS, WA CSCSL, WA ALLSITES, WA HSL, WA SPILLS, 2020 COR ACTION</p> <p>Four 1980s-era buildings are located on this former chemical manufacturing property, now in foreclosure. According to Ecology's website, the site is part of the Taylor Way &amp; Alexander Ave Fill Site along with neighboring properties. CleanCare operated a treatment, storage, disposal, and recycling facility with known spills and releases of <b>petroleum</b> and hazardous materials. CleanCare ceased operations in 1999. Shallow and deep groundwater at the site is reportedly contaminated with <b>metals, petroleum products, PAHs, and other contaminants.</b></p> <p>Ecology website: <a href="https://fortress.wa.gov/ecy/gsp/Sitepage.aspx?csid=604">https://fortress.wa.gov/ecy/gsp/Sitepage.aspx?csid=604</a></p>	<p>Detailed information regarding the location of contaminated soil and groundwater at the site was not included on the Ecology website. This site may pose a <b>moderate risk</b> for contaminant migration into the pipeline corridor based on the distance between the property and the corridor. Risk also depends on groundwater flow direction.</p>
8	0321267006	American Construction Company (Taylor Way Properties) 1501 Taylor Way	<p><b>Database Listing:</b> RCRA-NonGen, FINDS, WA CSCSL NFA, WA ALLSITES, WA NPDES, WA SPILLS</p> <p>Minimal information regarding site history and condition is presented on Ecology's website. Cleanup actions were completed at this property in the 1990s. <b>Metals and PCBs</b> are below cleanup levels in site soil and groundwater. The site received NFA status from Ecology in 2001.</p> <p>Ecology website: <a href="https://fortress.wa.gov/ecy/gsp/Sitepage.aspx?csid=3761">https://fortress.wa.gov/ecy/gsp/Sitepage.aspx?csid=3761</a></p>	<p>This site is considered a <b>low risk</b> for contaminant migration into the pipeline corridor based on the previous cleanup action and associated NFA status.</p>
9	0321263030	Simon & Sons (Targa Sound Terminal) 1601 Taylor Way	<p><b>Database Listing:</b> RCRA-NonGen, FINDS, WA CSCSL NFA, WA ALLSITES, RCRA-CESQG, WA SPILLS</p> <p>Since the 1940s, the Simon and Sons site was used for petroleum storage, shipbuilding, log sorting, dismantling locomotives and other industrial activities. These activities reportedly contaminated the site with <b>PCBs, petroleum hydrocarbons, and metals.</b> Remedial actions were conducted at the site in 1990s and early 2000s including extensive excavation of contaminated soil as well as groundwater monitoring. The site was removed from the Hazardous Sites List in 2003 because cleanup was complete.</p> <p>Ecology website: <a href="https://fortress.wa.gov/ecy/gsp/Sitepage.aspx?csid=145">https://fortress.wa.gov/ecy/gsp/Sitepage.aspx?csid=145</a></p>	<p>This site is considered a <b>low risk</b> for contaminant migration into the pipeline corridor based on the previous cleanup action.</p>
10	0321264008	Cenex AG Inc. (Tacoma Industrial Properties) 1801 Taylor Way	<p><b>Database Listing:</b> WA LUST, FINDS, WA CSCSL, WA ALLSITES, WA ICR, WA MANIFEST, WA NPDES, WA SPILLS</p> <p>Minimal information regarding site history and condition is presented on Ecology's website. Ecology was notified of leaking USTs at the site in 1992 and cleanup actions were conducted in the mid-1990s. While <b>benzene, lead, and non-halogenated organics</b> in soil and <b>petroleum products</b> in groundwater have been remediated to below cleanup levels, <b>petroleum</b> in soil and <b>lead</b> in groundwater reportedly remain at concentrations above cleanup levels. Site status is listed as "cleanup started".</p> <p>Ecology website: <a href="https://fortress.wa.gov/ecy/gsp/Sitepage.aspx?csid=9215">https://fortress.wa.gov/ecy/gsp/Sitepage.aspx?csid=9215</a></p>	<p>This site may pose a <b>high risk</b> for contaminant migration into the pipeline corridor depending on contaminant location and groundwater flow direction.</p>

Map ID	Pierce County Parcel Number	Current Business (Listed Business) Current Address (Former Address)	Site Information	Potential to Encounter Contamination During Pipeline Construction
11	0321264075	Trident Metals 1851 Taylor Way	<p><b>Database Listing:</b> WA HSL, WA CSCSL NFA, WA ALLSITES, WA VCP, WA NPDES, WA SPILLS</p> <p>The Trident Metals site was a door factory from the 1910s to 2003. From 2003 to 2011, the property was used for metals recycling by Trident Metals. <b>Petroleum-contaminated soils</b> were identified at the site in 2011 and were subsequently excavated and removed from the site. Ecology granted NFA status to the site in 2014.</p> <p>Ecology website: <a href="https://fortress.wa.gov/ecy/gsp/Sitepage.aspx?csid=194">https://fortress.wa.gov/ecy/gsp/Sitepage.aspx?csid=194</a></p>	<p>This site is considered a <b>low risk</b> for contaminant migration into the pipeline corridor based on the previous cleanup action and associated NFA status.</p>
12	0321264074	Buffelen Woodworking 1901 Taylor Way	<p><b>Database Listing:</b> UST, RCRA-CESQG, ICIS, FINDS, WA CSCSL NFA, WA MANIFEST, WA NPDES</p> <p>Minimal information regarding site history and condition is presented on Ecology's website. Cleanup actions were completed at this property in the 1990s. <b>Phenolic compounds</b> have been remediated to below cleanup levels in site soil. Groundwater is not identified as impacted. The site received NFA status from Ecology in 1995.</p> <p>Ecology website: <a href="https://fortress.wa.gov/ecy/gsp/Sitepage.aspx?csid=4594">https://fortress.wa.gov/ecy/gsp/Sitepage.aspx?csid=4594</a></p>	<p>This site is considered a <b>low risk</b> for contaminant migration into the pipeline corridor based on the previous cleanup action and associated NFA status.</p>
13	0321351052	Prologis Development (AOL Express) 2000 Taylor Way	<p><b>Database Listing:</b> RCRA NonGen, WA UST, FINDS, WA CSCSL NFA, WA ALLSITES, WA ICR, WA MANIFEST, WA NPDES, WA SPILLS</p> <p>According to Ecology's website, a landfill was formerly operated on adjacent property (the Taylor Way &amp; Alexander Ave Fill Site; see Map ID 6). Landfill materials, including lime solvent sludge wastes, auto fluff, and slag may be present on the ProLogis site.</p> <p><b>Metals, non-halogenated solvents, petroleum products, phenolic compounds, and PAHs</b> have been identified in soil and groundwater at the site.</p> <p>In 2005, Ecology entered an Agreed Order requiring development and implementation of an RI/FS and cleanup action plan. A completed RI/FS is not identified on Ecology's website. According to Ecology's website, site status is "cleanup started".</p> <p>Ecology website: <a href="https://fortress.wa.gov/ecy/gsp/Sitepage.aspx?csid=2240">https://fortress.wa.gov/ecy/gsp/Sitepage.aspx?csid=2240</a></p>	<p>Detailed information regarding the location of contaminated soil and groundwater at the site was not included on the Ecology website. This site may pose a <b>high risk</b> for contaminant migration into the pipeline corridor depending on contaminant location and groundwater flow direction.</p>

Map ID	Pierce County Parcel Number	Current Business (Listed Business) Current Address (Former Address)	Site Information	Potential to Encounter Contamination During Pipeline Construction
14	0321351029	Superlon Plastics 2116 Taylor Way	<p><b>Database Listing:</b> RCRA LQG, WA UST, FINDS, WA CSCSL, WA ALLSITES, WA ICR, WA MANIFEST, WA NPDES</p> <p>According to Ecology's website, the Superlon Plastics site was a lead-arsenate pesticide plant from 1925 until 1972, and the site has been used for plastic pipe manufacturing since the early 1970s.</p> <p>Soil and groundwater contamination were identified in 1990. Since then, a variety of contaminants have been identified in site soil and groundwater at concentrations above applicable cleanup levels, including: <b>metals, petroleum hydrocarbons, pentachlorophenol, and VOCs</b>. Several partial cleanup actions were conducted between 1996 and 2009. In 2009, Ecology entered an Agreed Order requiring additional remedial investigation and cleanup action. According to Ecology's website, site status is "cleanup started".</p> <p>Ecology website: <a href="https://fortress.wa.gov/ecy/gsp/Sitepage.aspx?csid=2096">https://fortress.wa.gov/ecy/gsp/Sitepage.aspx?csid=2096</a></p>	<p>Detailed information regarding the location of contaminated soil and groundwater at the site was not included on the Ecology website. This site may pose a <b>high risk</b> for contaminant migration into the pipeline corridor depending on contaminant location and groundwater flow direction.</p>
15	0321351032	Fields Corp 2240 Taylor Way	<p><b>Database Listing:</b> FTTS, SSTS, VCP, WA CSCSL NFA, WA SPILLS</p> <p>Minimal information regarding site history and condition is presented on Ecology's website. Cleanup actions were completed at this property in the 1990s. <b>Non-halogenated compounds</b> have been remediated to below cleanup levels in site soil and groundwater. The site received NFA status from Ecology in 1999.</p> <p>Ecology website: <a href="https://fortress.wa.gov/ecy/gsp/Sitepage.aspx?csid=659">https://fortress.wa.gov/ecy/gsp/Sitepage.aspx?csid=659</a></p>	<p>This site is considered a <b>low risk</b> for contaminant migration into the pipeline corridor based on the previous cleanup action and associated NFA status.</p>
16	0321351006	US Gypsum (USG) (Thermafiber LLC) 2301 Taylor Way	<p><b>Database Listing:</b> RCRA LQG, WA UST, WA LUST, FINDS, WA CSCSL, WA ALLSITES, WA HSL, WA SPILLS, WA INST CONTROL, WA NPDES</p> <p>According to Ecology's website, a mineral fiber production plant operated at this site from 1959 to 2002, when Port of Tacoma purchased the property. Rock wool (an insulation and fireproofing material) production reportedly contaminated site soil and groundwater with <b>petroleum products, arsenic and other heavy metals</b>. Several partial cleanup actions were conducted between 1993 and 2000. In 2006, Ecology entered an Agreed Order requiring additional remedial investigation and cleanup action. According to Ecology's website, site status is "cleanup started".</p> <p>Ecology website: <a href="https://fortress.wa.gov/ecy/gsp/Sitepage.aspx?csid=5003">https://fortress.wa.gov/ecy/gsp/Sitepage.aspx?csid=5003</a></p>	<p>Detailed information regarding the location of contaminated soil and groundwater at the site was not included on the Ecology website. This site may pose a <b>high risk</b> for contaminant migration into the pipeline corridor depending on contaminant location and groundwater flow direction.</p>
17	0321355005	Reichhold Chemical 2340 Taylor Way	<p><b>Database Listing:</b> WA LUST, FINDS, WA CSCSL, WA ALLSITES, WA ICR, WA MANIFEST, WA NPDES, WA SPILLS</p> <p>Minimal information regarding site history and condition is presented on Ecology's website. Ecology was notified of a release at the site in 1988 and at least one cleanup action was conducted in 1990. <b>Halogenated and non-halogenated solvents and phenolic compounds</b> were reported in site groundwater at concentrations above cleanup levels, and <b>petroleum, metals, and dioxins/furans</b> were reported in site soil. Although site status is listed as "awaiting cleanup", GeoEngineers is aware of extensive soil and groundwater cleanup actions at the site.</p> <p>Ecology website: <a href="https://fortress.wa.gov/ecy/gsp/Sitepage.aspx?csid=154">https://fortress.wa.gov/ecy/gsp/Sitepage.aspx?csid=154</a></p>	<p>Detailed information regarding the location of contaminated soil and groundwater at the site was not included on the Ecology website. This site may pose a <b>high risk</b> for contaminant migration into the pipeline corridor depending on contaminant location and groundwater flow direction.</p>

Map ID	Pierce County Parcel Number	Current Business (Listed Business) Current Address (Former Address)	Site Information	Potential to Encounter Contamination During Pipeline Construction
18	5000350090	Tribal Land (Puyallup Land Settlement)	<p><b>Database Listing:</b> WA CSCSL, WA ALLSITES, WA HSL</p> <p>Minimal information regarding site condition is available on Ecology's website. Ecology was notified of releases in the late 1980s and early 1990s. <b>Metals, halogenated organics, and/or PAHs and PCBs</b> are confirmed in site soil and groundwater at concentrations above applicable cleanup levels. Site status is listed as "cleanup started."</p> <p>Ecology websites: <a href="https://fortress.wa.gov/ecy/gsp/Sitepage.aspx?csid=113">https://fortress.wa.gov/ecy/gsp/Sitepage.aspx?csid=113</a>  <a href="https://fortress.wa.gov/ecy/gsp/Sitepage.aspx?csid=653">https://fortress.wa.gov/ecy/gsp/Sitepage.aspx?csid=653</a></p>	<p>Detailed information regarding the location of contaminated soil and groundwater at the site was not included on the Ecology website. This site may pose a <b>high risk</b> for contaminant migration into the pipeline corridor depending on contaminant location and groundwater flow direction.</p>
19	0321362056	Arkema 2901 Taylor Way	<p><b>Database Listing:</b> RCRA LQG, WA UST, WA LUST, FINDS, WA CSCSL, WA ALLSITES, WA HSL, WA SPILLS, WA INST CONTROL, WA NPDES</p> <p>According to Ecology's website, the Arkema site was formerly a chemical plant that made chlorine, hydrochloric acid, and arsenic-containing herbicides until 1997, when the plant was closed. Most buildings have since been removed. The site consists of two sections; a larger portion north (true north) of Taylor Way and a triangular property south of Taylor Way known as "Wypenn". Wastes from pesticide production were historically dumped into pits, which leached <b>arsenic</b> to soil and groundwater. Other areas of the site are reportedly affected by <b>VOCs and hexavalent chromium</b>. Partial cleanup actions were previously conducted. In 2011, Ecology entered an Agreed Order requiring additional remedial investigation and cleanup action. Ecology identifies the site status is "cleanup started".</p> <p>Based on our review of RI reports available on Ecology's website, contamination is widely scattered across the site, and areas of arsenic-contaminated shallow soil are present at the northwest portion of the site, near the boundary with the USG site (Map ID 16) and in close proximity to Taylor Way.</p> <p>Ecology website: <a href="https://fortress.wa.gov/ecy/gsp/Sitepage.aspx?csid=3405">https://fortress.wa.gov/ecy/gsp/Sitepage.aspx?csid=3405</a></p>	<p>This site may pose a <b>high risk</b> for contaminant migration into the pipeline corridor depending on contaminant location and groundwater flow direction.</p>
20	0321351053	Atofina 3009 Taylor Way	<p><b>Database Listing:</b> FINDS, WA CSCSL, WA ALLSITES, WA HSL, WA INST CONTROL, WA NPDES</p> <p>According to Ecology's website, the Atofina site was originally a log sorting yard and was contaminated with <b>wood waste and heavy metals</b>, as well as <b>slag</b> from a North Tacoma smelter that was used to build the road bed for the sorting yard. Additionally, a landfill for contaminated soils, wood waste, and slag was created at the site in the 1990s under a consent decree with Ecology. Although the landfill was lined and capped, the Port of Tacoma plans to remove the landfill to facilitate redevelopment. Documents outlining the plan and progress of this work were not included on Ecology's website; however, a restrictive covenant for the site identifies residual contaminated areas as confined within site boundaries. Site soil and groundwater are suspected to be contaminated by <b>metals</b>. According to Ecology's website, site status is "cleanup started".</p> <p>Ecology website: <a href="https://fortress.wa.gov/ecy/gsp/Sitepage.aspx?csid=3635">https://fortress.wa.gov/ecy/gsp/Sitepage.aspx?csid=3635</a></p>	<p>Detailed site condition information was not included on the Ecology website. This site may pose a <b>high risk</b> for contaminant migration into the pipeline corridor depending on contaminant location and groundwater flow direction.</p>

Map ID	Pierce County Parcel Number	Current Business (Listed Business) Current Address (Former Address)	Site Information	Potential to Encounter Contamination During Pipeline Construction
21	0321363021 0321363028	Petroleum Reclaiming Service  3003 Taylor Way	<p><b>Database Listing:</b> RCRA LQG, WA UST, WA LUST, FINDS, PADS, RAATS, WA CSCSL, WA ALLSITES, WA HSL, WA SPILLS, WA MANIFEST, WA SWRCY</p> <p>According to Ecology's website, Petroleum Reclaiming Service (PRS) receives and treats wastes from off-site facilities. In the 1980s, inspections identified releases of hazardous materials at the site. In 1990 and 1997, PRS and Ecology entered an Agreed Order requiring additional remedial investigation and cleanup action. Another Agreed Order will be finalized prior to redevelopment of the property. <b>Petroleum products and metals</b> are confirmed in site soils at concentrations above cleanup levels, and <b>halogenated organics and metals</b> are suspected in site groundwater. According to Ecology's website, site status is "cleanup started".</p> <p>Ecology website: <a href="https://fortress.wa.gov/ecy/gsp/Sitepage.aspx?csid=3255">https://fortress.wa.gov/ecy/gsp/Sitepage.aspx?csid=3255</a></p>	<p>Detailed information regarding the location of contaminated soil and groundwater at the site was not included on the Ecology website. This site may pose a <b>high risk</b> for contaminant migration into the pipeline corridor depending on contaminant location and groundwater flow direction.</p>
22	0321362046	Weyerhaeuser Export Facility (Weyerhaeuser Cascade)  3401 Taylor Way	<p><b>Database Listing:</b> RCRA NonGen, WA UST, WA LUST, FINDS, WA CSCSL, WA ALLSITES, WA ICR, WA SPILLS, WA NPDES</p> <p>According to documents provided on Ecology's website, Weyerhaeuser operated the site for log sorting and debarking since the early 1970s. Several USTs were removed in the 1990s. Leaks from the USTs were partially remediated at that time; remaining <b>petroleum contamination</b> appears confined to the vicinity of the former USTs. Groundwater flow at the site is reportedly to the north (true north). Ecology identifies the site status is "cleanup started".</p> <p>Based on our review of reports available on Ecology's website, contamination is scattered across the site and does not appear to be located in close proximity to Taylor Way.</p> <p>Ecology website: <a href="https://fortress.wa.gov/ecy/gsp/Sitepage.aspx?csid=10980">https://fortress.wa.gov/ecy/gsp/Sitepage.aspx?csid=10980</a></p>	<p>This site is considered a <b>low risk</b> for contaminant migration into the pipeline corridor based on the reported contaminant location and groundwater flow direction.</p>
23	0321363034 0321363033 0321363013	Port of Tacoma Kaiser  3400 Taylor Way	<p><b>Database Listing:</b> RCRA LQG, WA UST, WA LUST, FINDS, WA CSCSL, WA ALLSITES, WA HSL, WA SPILLS, WA INST CONTROL, WA NPDES</p> <p>According to Ecology's website, Kaiser Aluminum operated an aluminum smelter and manufacturing facility at this site since the 1960s. Spent pot liner waste was historically disposed of on bare ground at the site, reportedly leaching <b>cyanide and PAHs</b> into site soils and groundwater. Contaminated soils excavated in the 2000s were reportedly placed in a temporary landfill on site.</p> <p>Recent investigation documents for the site provided on Ecology's website identify a variety of affected areas at the site. Groundwater flow at the site is generally to the east or northeast, toward Taylor Way. Most of the remaining contamination at the site is confined within site boundaries; however, <b>arsenic-contaminated groundwater</b> has been identified in close proximity to Taylor Way near the northeast corner of the site. Ecology identifies the site status is "cleanup started".</p> <p>Ecology website: <a href="https://fortress.wa.gov/ecy/gsp/Sitepage.aspx?csid=2215">https://fortress.wa.gov/ecy/gsp/Sitepage.aspx?csid=2215</a></p>	<p>This site may pose a <b>high risk</b> for contaminant migration into the pipeline corridor based on contaminant proximity and the reported groundwater flow direction.</p>

24	0321364024	Louisiana Pacific Corp (Pony Lumber) 3701 Taylor Way	<p><b>Database Listing:</b> RCRA NonGen, WA LUST, FINDS, WA CSCSL NFA, WA ALLSITES, WA HSL, WA SPILLS, WA INST CONTROL, WA NPDES</p> <p>According to Ecology's website, this site was developed as a log yard in the late 1960s. During construction, <b>slag</b> from the Asarco smelter was used as fill material. In the 1980s, as part of a larger survey of log yards in the area as potential sources of contamination to nearby tidelands, <b>heavy metals including arsenic, lead, and copper</b> were detected in groundwater at concentrations above cleanup standards. In 1993, a cap was constructed over the site to prevent stormwater from infiltrating the slag and mobilizing contaminants to the Hylebos Waterway. Routine groundwater monitoring has been conducted at the site since the 1990s as a condition of an environmental covenant and Ecology's NFA determination for the site.</p> <p>Based on our review of a 2011 Periodic Review report, contaminated soils remain in-place at the site but the cap appears to be effective. Concentrations of contaminants in groundwater did not exceed cleanup standards in 2010, the most recent year for which information was available on Ecology's website.</p> <p>Ecology website: <a href="https://fortress.wa.gov/ecy/gsp/Sitepage.aspx?csid=2317">https://fortress.wa.gov/ecy/gsp/Sitepage.aspx?csid=2317</a></p>	<p>This site is considered a <b>low risk</b> for contaminant migration into the pipeline corridor based on previous cleanup actions and the associated NFA status.</p>

## 1.0 INTRODUCTION

Golder Associates Inc. (Golder) is pleased to present this report to Puget Sound Energy (PSE) for the proposed installation of a 16-inch high pressure (HP) gas line in Tacoma and Fife, Washington. The proposed project includes the installation of approximately 4 miles of 16-inch gas line from the existing 20-inch HP gas line at the intersection of 20<sup>th</sup> Street East and 62<sup>nd</sup> Avenue East to the intersection of 11<sup>th</sup> Avenue East and Taylor Way shown in Figure 1.

Golder received a request for proposal (RFP) from PSE to complete environmental characterization services to provide support for the handling and/or disposal of construction derived waste (drilling spoils, excavated soil, and water from project dewatering activities) generated during construction of the proposed natural gas pipeline. Our proposal was provided to PSE on August 3, 2015 and PSE verbally authorized our contract on August 14, 2015. A change order was fully executed on September 21, 2015. This summary report (hereon referred to as Phase II investigation summary or simply Phase II) details the findings of the sampling activities, including tables and figures summarizing soil and groundwater analytical results. Within the RFP, we were provided environmental due diligence information about adjacent properties. This information was used to help develop the sampling and analysis strategy for this Phase II investigation.

Also included in the RFP and Golder's proposal was a scope of work for a geotechnical investigation and a horizontal directional drilling (HDD) feasibility evaluation. The results of this work are summarized in a separate report (Golder 2015a).

### 1.1 Background

The proposed installation of the 16-inch HP gas line is located in northern Pierce County within the cities of Tacoma and Fife, Washington. The proposed 4-mile long pipeline alignment is within the City of Fife right-of-way (ROW) and the City of Tacoma ROW. The project begins in the City of Fife at the intersection of 20<sup>th</sup> Street East and follows 62<sup>nd</sup> Avenue East to the north for about one-half mile, crossing under Interstate 5 (I-5). The pipeline will then head west along 12<sup>th</sup> Street East for about one-half mile until heading north on 54<sup>th</sup> Avenue East which turns into Taylor Way as the road bends to the west near the city boundary between Tacoma and Fife. The pipeline will run along Taylor Way for about 3 miles ending at the planned LNG facility in the Port of Tacoma. Taylor Way sits on a portion of land between the Hylebos Waterway and the Blair Waterway shown in Figure 1.

PSE plans to excavate an open trench and direct bury the 16-inch pipeline line for the majority of the alignment presented in Figure 1. However, there are seven proposed HDD installations at roadway, railroad, and culvert crossings along the alignment shown in Figures 2 and 3. The purpose of the HDDs is to avoid open cut installations at the crossings.

Essentially there are two types of activities that will generate wastes on this project: drilling and excavation. The Phase II investigation focused on characterizing soil and groundwater in the HDD and direct bury segments where "Moderate" to "High" risk properties are present, as indicated on the sites of potential concern shown in Figures 2 and 3.

## 2.0 SCOPE OF INVESTIGATION

Golder performed the Phase II investigation along the planned alignment in general accordance with Golder's Sampling and Analysis Plan (SAP) dated September 14, 2015 (Golder 2015b, Appendix C). The field investigation for the subsurface investigation occurred on September 14 through 18 and September 21, 2015. Golder's subsurface investigation included the following:

- Advanced 7 hollow stem auger (HSA) boreholes, BH-12 through BH-19, excluding BH-17, at the following HDD crossing locations:
  - BH-12 and BH-13 at Railroad RR852-628V & Kaiser Ditch Crossing, Station 90+00 to 93+80, Crossing: located at the intersection of Taylor Way and about 3,000 feet north of the intersection with SR 509; adjacent to Risk Areas 20 and 23.
  - BH-14 through BH-16 at BH Railroad RR867-859X & RR852-630W Crossing, Station 37+83 to 48+20, Crossing: located at the intersection of Taylor Way and Lincoln Avenue; adjacent to Risk Areas 14 and 13, respectively.
  - BH-18 and BH-19 at Railroad (RR)852-621X & RR932-791N Crossing, Station 9+30 to 12+45, Crossing: located at the intersection of Taylor Way and East 11th Street; adjacent to Risk Areas 5 and 3, respectively.
- Advanced 6 HSA boreholes, EH-A through EH-F:
  - EH-A through EH-F at the northern end of Taylor Way spaced approximately every 500 to 800 feet between the HDD investigation locations; adjacent to Risk Areas 4, 5, 6, and 14.
- Advanced 12 direct push boreholes, EH-A through EH-R:
  - EH-G through EH-P along Taylor Way spaced approximately every 500 to 800 feet between the HDD investigation locations; adjacent to Risk Areas 16, 17, 18, 19, 20, 21, and 23.
  - EH-Q along 54<sup>th</sup> Avenue East about 550 feet north of the intersection with 12<sup>th</sup> Street East; adjacent to Risk Area 27.
  - EH-R along 62<sup>nd</sup> Avenue East about 80 feet north of the intersection with Pacific Highway (Route 99); adjacent to Risk Area 30.
- The HSA boreholes were advanced to a depth of 36.5 to 56.5 feet below ground surface (bgs).
  - Analytical soil samples were collected from the HSA boreholes using Standard Penetration Tests (SPT) in accordance with ASTM D1586 at the estimated depth of the HDD crossing as indicated in Table 2-1. The samples identifications were designated by the borehole name followed by E-1. For example the analytical sample collected from BH-19 is designated BH-19 E-1.
- The direct push boreholes were advanced to a depth of 10 to 12 feet bgs.
  - Analytical soil samples consisted of composite samples collected from representative vadose and saturated soil from the respective intervals identified in Table 2-1. The samples were designated by the borehole name and then a V for vadose and S for saturated. For example, the vadose zone sample collected from borehole EH-A is designated EH-A-V.

- Analytical groundwater samples were collected from direct push boreholes, if encountered, using temporary PVC well screens installed within the water table. Water samples were designated with a W after the borehole name. For example, the groundwater sample collected from EH-A is designated EH-A-W.
- Samples were visually examined for indications of contamination (e.g., off-color, odor, etc.) and screened using a photoionization detector (PID) to measure organic vapors that could indicate potential impacts from gasoline or solvents.
- Soil and groundwater samples were analyzed by one or more of the following analytical methods as prescribed in Table 2-2:
  - Gasoline-range organics (GRO) and benzene, toluene, ethylbenzene and total xylenes (BTEX) using Method Northwest Total Petroleum Hydrocarbon (NWTPH)-Gx/BTEX if volatile organic compounds (VOCs) were not tested.
  - GRO using Method Northwest Total Petroleum Hydrocarbon (NWTPH)-Gx if VOCs were tested.
  - Diesel/oil-range organics (DRO) using Method NWTPH-Dx.
  - Resource Conservation Recovery Act (RCRA) Metals (totals) using Environmental Protection Agency (EPA) Method 6010C/7471B.
  - Soluble hexavalent chromium using EPA Method 7196A.
  - Polycyclic aromatic hydrocarbons (PAHs) using EPA Method 8270D.
  - VOCs using EPA Method 8260B.
  - Polychlorinated biphenyls (PCBs) using EPA Method 8082A.
  - Cyanide (CN) using EPA Method 9012, for soil.
  - Cyanide (CN) using EPA Method 335.4, for water.
  - Pentachlorophenol (Phenols) using EPA Method 8270D.
  - Dioxins and Furans using EPA Method 8270D.

Holocene Drilling Inc. of Puyallup, Washington under subcontract to Golder provided all drilling and sampling services. OnSite Environmental Inc. (OnSite) of Redmond, Washington provided laboratory analytical services.

## 2.1 Field Methods

Golder followed established procedures appropriate for media characterization during the field investigation that included the following:

- Sample containers and preservatives appropriate for the analysis were provided by OnSite, as described in the SAP.
- Soil samples for GRO/BTEX and VOC analyses were collected in accordance with EPA Method 5035 procedures.
- HSA boreholes were advanced in general accordance with locally accepted geotechnical engineering practice.
- Direct push boreholes were advanced in general accordance with locally accepted environmental practice.

- The soils collected during drilling were screened with a PID and the levels recorded and presented on the borehole logs in Appendix A.
- Two soil samples were collected from each direct push borehole. One was a composite sample collected in the vadose zone from about 3 to 6 feet bgs. The other sample a composite sample collected in the saturated zone from about 7 to 10 feet bgs.
- The soil sample collected from the hollow stem auger borehole in the split spoon was composited from the length of the split spoon, about 18 inches.
- The soil conditions were examined and logged by Golder field personnel. The soil samples were classified in accordance with Golder Technical Procedure TP-1.2-6, Field Identification of Soil. Pertinent information was recorded, including sample depths, stratigraphy, groundwater occurrence, and engineering characteristics.
- Groundwater samples were collected from the direct push boreholes boreholes with a peristaltic pump using low-flow sampling methods in general accordance with standard EPA procedures.
- Quality Control samples were collected including:
  - Field duplicate samples (DUP) were collected from the HSA borehole samples,
  - One trip blank was included from the laboratory in each ice chest containing VOCs or Gas<sub>(BTEX)</sub> samples,
  - One groundwater matrix spike/matrix spike duplicate (MS/MSD) sample, and
  - Two equipment blank (EB) samples.
- Direct push borehole sampling equipment was pressure-washed with clean water and a new, clean PVC plastic liner was used for each sample interval.
- Split spoons used for the SPT samples by the hollow stem auger boreholes were cleaned with a cleaning detergent (Alconox) and the lead auger were pressure-washed with clean water.
- Samples were maintained inside a cooler in a chilled state using water-ice until relinquished to OnSite.
- Chain-of-custody procedures were followed from the time of collection until the samples were relinquished to OnSite.
- Investigation derived waste (IDW) was accumulated in a total of 28, 55-gallon DOT drums and 8, 20-gallon DOT drums with closed lids, labeled, and left at the planned facility location at 901 East Alexander Avenue in Tacoma. The IDW consists of 30 drums of soil drill cuttings and 6 drums of water (purge and decontamination water).

## 2.2 Deviations

A limited number of deviations from the SAP occurred during the performance of the Phase II investigation, which are noted below:

- Due to the large content of gravels, a vadose sample was unable to be collected from direct push borehole EH-J. Therefore, there is no sample EH-J-V.
- Groundwater was unable to be pumped from direct push boreholes EH-G and EH-R. Therefore, no water was analyzed from these boreholes.
- Duplicate samples were not collected for the direct push boreholes. Therefore, OnSite used selected samples that had good recovery to run duplicate analyses.

- Six of the boreholes that were originally planned to be advanced using direct push methods were advanced using hollow stem auger methods.
- After the final borehole locations were chosen based on field conditions (accessibility of the drill rig, existing utilities, requirements for the road closures, etc), the estimated depths of the HDD path was recalculated and the planned sample depths were revised as noted in Table 2-1.

**Table 2-1: Depths of Boreholes Samples**

Borehole Number	Sample Name	Revised Sample Depth (ft bgs)	Originally Planned Sample Depths (ft bgs)

## 3.0 FINDINGS

### 3.1 Subsurface Conditions

#### 3.1.1 Soil

The lithology encountered in the geotechnical and Phase II investigation boreholes is consistent with a filled and modified river delta with tide flats and marshlands. In 1886 the area of the current Port of Tacoma area was essentially an un-modified delta of the Puyallup River. The area between what is now East 11<sup>th</sup> Street and Lincoln Avenue was a tidal marsh and beyond East 11<sup>th</sup> Street was a tidal flat. The tidal flat was only exposed at the lowest tides and extended out to about the present position of the developed port. A tributary system of streams and tidal channels laced the delta area. The Puyallup River delta has variable beds of silts deposited with slower moving water and sands with slightly faster moving water. Fill material up to 25 feet thick was placed over the tidal flat deposits, due northwest of existing East 11<sup>th</sup> Street. Fill material was also placed on parcels with the Port area. Character and strength of the fill materials vary greatly. The thickness of fill at the ground surface noted along Taylor Way from the intersection with East 11<sup>th</sup> Street and Taylor Way ranges from about 5 to 10 feet bgs. (Hart Crowser).

The vicinity of borehole EH-Q is mapped as Holocene age alluvium (Qal) (Booth 2004). The vicinity of borehole EH-R is also mapped as Holocene and Pleistocene age alluvium (Qal) (Troost 2006). The Port of Tacoma along the alignment of Taylor Way in the vicinity of the reaming boreholes is mapped as modified land (ML) (Smith 1976). Modified land, also known as fill materials, is described as a layer up to 25 feet thick consisting of gravel, sand, silt, concrete, and other materials placed as a direct result of human activity. Alluvium is described as a layer up to 300 feet thick consisting of sand, silt, gravel, and cobbles, clean to silty, with peat and organic silt lenses common.

All of the boreholes advanced for this project encountered fill materials at the ground surface extending 4.5 to 18 feet bgs. Native alluvium was encountered in all boreholes underlying the fill materials. The materials encountered were in agreement with the descriptions in the geologic maps and reports of the area. The thickness of the fill increased along the alignment to the west/northwest. For detailed descriptions review the borehole logs included in Appendix A.

#### 3.1.2 Groundwater

Groundwater was measured in all but two direct push boreholes: EH-E and EH-R. Depths to groundwater and approximate groundwater elevations are presented in the borehole records in Appendix A and in Table 3-1. Groundwater elevations are estimated from surface elevations on a survey drawing provided by PSE on March 18, 2015 (AutoCAD format), depth to water measurements taken at the time of drilling and interpretation of soil borehole data.

**Table 3-1: Depths and Approximate Elevations of Encounter Groundwater**

NE – Groundwater not encountered

## 3.2 Analytical Results

The soil samples were submitted to OnSite in Redmond, Washington. Detection limits were all less than the referenced MTCA Method B cleanup levels for soil and groundwater. Analytical results were compared to the lower of non-carcinogen and carcinogenic MTCA Method B industrial unrestricted cleanup levels (Method B CULs). Appendix B includes the laboratory analytical reports. The analytical results for the soil and groundwater samples along with the cleanup levels are presented in Table 2-2.

### 3.2.1 Soil Results

Analytical results for all soil samples tested for GRO, DRO, RCRA Metals, hexavalent chromium, PAHs, VOCs, PCBs, CN, and Phenols, were below the MTCA Method B CULs as presented in Table 2-2.

### 3.2.2 Groundwater Results

Analytical results for all groundwater samples tested for GRO, DRO, RCRA Metals, hexavalent chromium, PAHs, VOCs, PCBs, CN, and Phenols, were below the MTCA Method B CULs as presented in Table 2-2.

## 4.0 CONCLUSIONS

Based on field screening and the results of the analytical testing, this investigation indicates there is lower than expected risk of encountering contaminated soil and groundwater within the proposed pipeline alignment. However, it remains possible that isolated pockets of contaminated media could be discovered during construction. We recommend that contractors performing the construction activities review the project Media Management Plan in order to be better prepared in case contaminated media are encountered.

## 5.0 CLOSING REMARKS

Golder appreciates the opportunity to provide our services to PSE. If you have questions or require any additional information, please contact one of the undersigned at (425) 883-0777.

**APPENDIX A  
RECORD OF BOREHOLE LOGS**

## METHOD OF SOIL CLASSIFICATION

The Golder Associates Ltd. Soil Classification System is based on the Unified Soil Classification System (USCS)

Organic or Inorganic	Soil Group	Type of Soil	Gradation or Plasticity	$Cu = \frac{D_{60}}{D_{10}}$	$Cc = \frac{(D_{30})^2}{D_{10} \times D_{60}}$	Organic Content	USCS Group Symbol	Group Name	
INORGANIC (Organic Content <30% by mass)	COARSE-GRAINED SOILS (>50% by mass is larger than 0.075 mm)	GRAVELS (>50% by mass of coarse fraction is larger than 4.75 mm)	Poorly Graded	<4	≤1 or ≥3	<30%	GP	GRAVEL	
			Well Graded	≥4	1 to 3		GW	GRAVEL	
			Below A Line		n/a		GM	SILTY GRAVEL	
			Above A Line		n/a		GC	CLAYEY GRAVEL	
		SANDS (>50% by mass of coarse fraction is smaller than 4.75 mm)	Poorly Graded	≤6	≤1 or ≥3		SP	SAND	
			Well Graded	≥6	1 to 3		SW	SAND	
			Below A Line		n/a		SM	SILTY SAND	
			Above A Line		n/a		SC	CLAYEY SAND	
Organic or Inorganic	Soil Group	Type of Soil	Laboratory Tests	Field Indicators (See Section 5.2.2)				Primary Name	
INORGANIC (Organic Content <30% by mass)	FINE-GRAINED SOILS (>50% by mass is smaller than 0.075 mm)	SILTS (Non-Plastic or PI and LL plot below A-Line on Plasticity Chart below)	Liquid Limit <50	Rapid	None	None	>6 mm	N/A (can't roll 3 mm thread)	<5% ML SILT
				Slow	None to Low	Dull	3mm to 6 mm	None to low	<5% ML CLAYEY SILT
				Slow to very slow	Low to medium	Dull to slight	3mm to 6 mm	Low	5% to 30% OL ORGANIC SILT
				Slow to very slow	Low to medium	Slight	3mm to 6 mm	Low to medium	<5% MH CLAYEY SILT
		CLAYS (PI and LL plot above A-Line on Plasticity Chart below)	Liquid Limit >50	None	Medium to high	Dull to slight	1 mm to 3 mm	Medium to high	5% to 30% OH ORGANIC SILT
				Liquid Limit <35	None	Low to medium	~ 3 mm	Low to medium	0% to 30% CL SILTY CLAY
				Liquid Limit 35 to 50	None	Medium to high	Slight to shiny	1 mm to 3 mm	CI SILTY CLAY
				Liquid Limit >50	None	High	Shiny	<1 mm	CH CLAY
HIGHLY ORGANIC SOILS (Organic Content >30% by mass)	Peat and mineral soil mixtures Predominantly peat, may contain some mineral soil, fibrous or amorphous peat							30% to 75% PT SILTY PEAT, SANDY PEAT	
								75% to 100% PEAT	
						<p>Dual Symbol — A dual symbol is two symbols separated by a hyphen, for example, GP-GM, SW-SC, CL-ML. For non-cohesive soils, the dual symbols must be used when the soil has between 5% and 12% fines. (i.e. to identify transitional material between "clean" and a "dirty" sand or a gravel.) For cohesive soils, the dual symbol must be used when the liquid limit and plasticity index values plot in the CL-ML area of the Plasticity Chart see plasticity chart at left).</p> <p>Borderline Symbol — A borderline symbol is two symbols separated by a slash, for example, CL/CI, GM/SM, CL/ML. A borderline symbol may be used to indicate that the soil has been identified as having properties that are on the transition between similar materials. In addition, a borderline symbol may be used to indicate a range of similar soil types within a stratum.</p>			
<p>Note 1 – Fine grained materials which are Non-plastic (i.e., a PL cannot be measured) are named SILT.</p>									

## SYMBOLS AND TERMS USED ON RECORDS OF BOREHOLES AND TEST PITS

### PARTICLE SIZES OF CONSTITUENTS

Soil Constituent	Particle Size Description	Millimetres	Inches (US Std. Sieve Size)
BOULDERS	Not Applicable	>300	>12
COBBLES	Not Applicable	75 to 300	3 to 12
GRAVEL	Coarse Fine	19 to 75 4.75 to 19	0.75 to 3 (4) to 0.75
SAND	Coarse Medium Fine	2.00 to 4.75 0.425 to 2.00 0.075 to 0.425	(10) to (4) (40) to (10) (200) to (40)
SILT/CLAY	Classified by plasticity	<0.07	<(200)

### MODIFIERS FOR SECONDARY AND MINOR CONSTITUENTS

Percentage by Mass	Modifier
≤ 5	trace
> 5 to 12	some
> 12 to 35	Primary soil name prefixed with "gravelly, sandy, SILTY, CLAYEY" as applicable
>35	Use 'and' to combine major constituents (i.e., SAND and GRAVEL, SAND and CLAY)

### PENETRATION RESISTANCE

#### Standard Penetration Resistance (SPT), N:

The number of blows by a 63.5 kg (140 lb) hammer dropped 760 mm (30 in.) required to drive a 50 mm (2 in.) split-spoon sampler for a distance of 300 mm (12 in.).

#### Cone Penetration Test (CPT)

An electronic cone penetrometer with a 60° conical tip and a project end area of 10 cm<sup>2</sup> pushed through ground at a penetration rate of 2 cm/s. Measurements of tip resistance (q<sub>t</sub>), porewater pressure (u) and sleeve frictions are recorded electronically at 25 mm penetration intervals.

#### Dynamic Cone Penetration Resistance (DCPT); N<sub>d</sub>:

The number of blows by a 63.5 kg (140 lb) hammer dropped 760 mm (30 in.) to drive uncased a 50 mm (2 in.) diameter, 60° cone attached to "A" size drill rods for a distance of 300 mm (12 in.).

PH: Sampler advanced by hydraulic pressure

PM: Sampler advanced by manual pressure

WH: Sampler advanced by static weight of hammer

WR: Sampler advanced by weight of sampler and rod

### NON-COHESIVE (COHESIONLESS) SOILS

Compactness <sup>2</sup>	
Term	SPT 'N' (blows/0.3m) <sup>1</sup>
Very Loose	0 - 4
Loose	4 to 10
Compact	10 to 30
Dense	30 to 50
Very Dense	>50

1. SPT 'N' in accordance with ASTM D1586, uncorrected for overburden pressure effects.

2. Definition of compactness descriptions based on SPT 'N' ranges from Terzaghi and Peck (1967) and correspond to typical average N<sub>60</sub> values.

#### Field Moisture Condition

Term	Description
Dry	Soil flows freely through fingers.
Moist	Soils are darker than in the dry condition and may feel cool.
Wet	As moist, but with free water forming on hands when handled.

### SAMPLES

AS	Auger sample
BS	Block sample
CS	Chunk sample
DO or DP	Seamless open ended, driven or pushed tube sampler – note size
DS	Denison type sample
FS	Foil sample
RC	Rock core
SC	Soil core
SS	Split spoon sampler – note size
ST	Slotted tube
TO	Thin-walled, open – note size
TP	Thin-walled, piston – note size
WS	Wash sample

### SOIL TESTS

w	water content
PL , w <sub>p</sub>	plastic limit
LL , w <sub>L</sub>	liquid limit
C	consolidation (oedometer) test
CHEM	chemical analysis (refer to text)
CID	consolidated isotropically drained triaxial test <sup>1</sup>
CIU	consolidated isotropically undrained triaxial test with porewater pressure measurement <sup>1</sup>
D <sub>R</sub>	relative density (specific gravity, G <sub>s</sub> )
DS	direct shear test
GS	specific gravity
M	sieve analysis for particle size
MH	combined sieve and hydrometer (H) analysis
MPC	Modified Proctor compaction test
SPC	Standard Proctor compaction test
OC	organic content test
SO <sub>4</sub>	concentration of water-soluble sulphates
UC	unconfined compression test
UU	unconsolidated undrained triaxial test
V (FV)	field vane (LV-laboratory vane test)
γ	unit weight

Note: <sup>1</sup> Tests which are anisotropically consolidated prior to shear are shown as CAD, CAU.

### COHESIVE SOILS

Consistency		
Term	Undrained Shear Strength (kPa)	SPT 'N' <sup>1</sup> (blows/0.3m)
Very Soft	<12	0 to 2
Soft	12 to 25	2 to 4
Firm	25 to 50	4 to 8
Stiff	50 to 100	8 to 15
Very Stiff	100 to 200	15 to 30
Hard	>200	>30

1. SPT 'N' in accordance with ASTM D1586, uncorrected for overburden pressure effects; approximate only.

#### Water Content

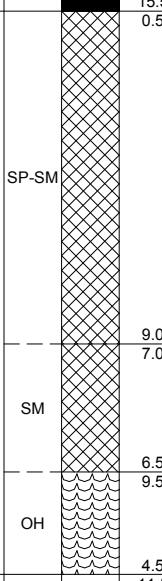

Term	Description
w < PL	Material is estimated to be drier than the Plastic Limit.
w ~ PL	Material is estimated to be close to the Plastic Limit.
w > PL	Material is estimated to be wetter than the Plastic Limit.

Re: Analytical Data for Project 1537265.002  
Laboratory Reference No. 1509-121

Dear Ali:

Enclosed are the analytical results and associated quality control data for samples submitted on September 15, 2015.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

A handwritten signature in black ink, appearing to read "DB" followed by a cursive surname.

David Baumeister  
Project Manager

Enclosures

Date of Report: September 21, 2015  
Samples Submitted: September 15, 2015  
Laboratory Reference: 1509-121  
Project: 1537265.002

### Case Narrative

Samples were collected on September 14, 2015 and received by the laboratory on September 15, 2015. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

### NWTPH Gx/BTEX and Volatiles EPA 8260C Analysis

Per EPA Method 5035A, samples were received by the laboratory in pre-weighed 40 mL VOA vials within 48 hours of sample collection. They were stored in a freezer at between -7°C and -20°C until extraction or analysis.

Any other QA/QC issues associated with this extraction and analysis will be indicated with a footnote reference and discussed in detail on the Data Qualifier page.

#### Data Qualifiers and Abbreviations

- A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.
- B - The analyte indicated was also found in the blank sample.
- C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.
- E - The value reported exceeds the quantitation range and is an estimate.
- F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.
- H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.
- I - Compound recovery is outside of the control limits.
- J - The value reported was below the practical quantitation limit. The value is an estimate.
- K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.
- L - The RPD is outside of the control limits.
- M - Hydrocarbons in the gasoline range are impacting the diesel range result.
- M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.
- N - Hydrocarbons in the lube oil range are impacting the diesel range result.
- N1 - Hydrocarbons in diesel range are impacting lube oil range results.
- O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.
- P - The RPD of the detected concentrations between the two columns is greater than 40.
- Q - Surrogate recovery is outside of the control limits.
- S - Surrogate recovery data is not available due to the necessary dilution of the sample.
- T - The sample chromatogram is not similar to a typical \_\_\_\_\_.
- U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
- U1 - The practical quantitation limit is elevated due to interferences present in the sample.
- V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.
- W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.
- X - Sample extract treated with a mercury cleanup procedure.
- X1 - Sample extract treated with a Sulfuric acid/Silica gel cleanup procedure.
- Y - The calibration verification for this analyte exceeded the 20% drift specified in method 8260C, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.
- Z -

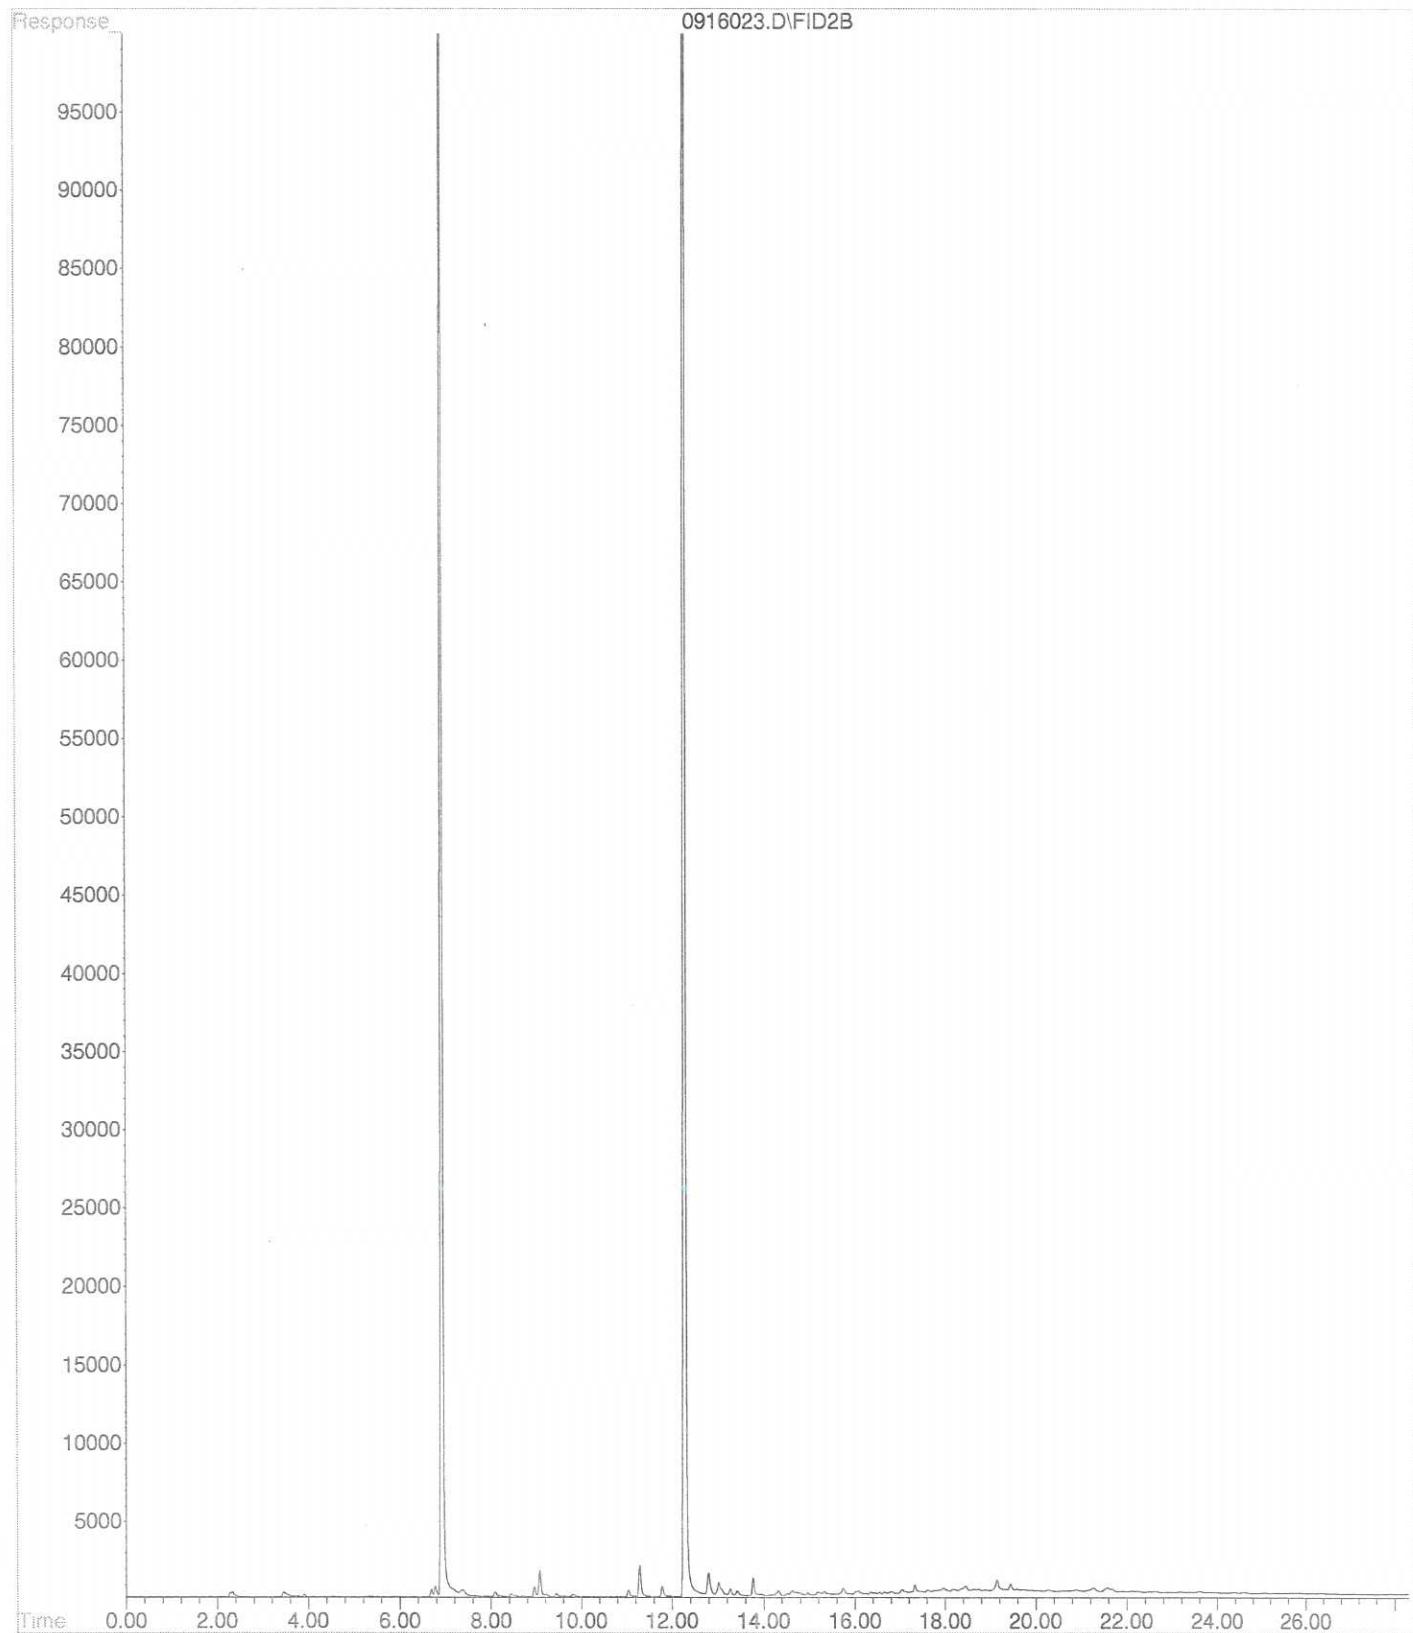

ND - Not Detected at PQL

PQL - Practical Quantitation Limit

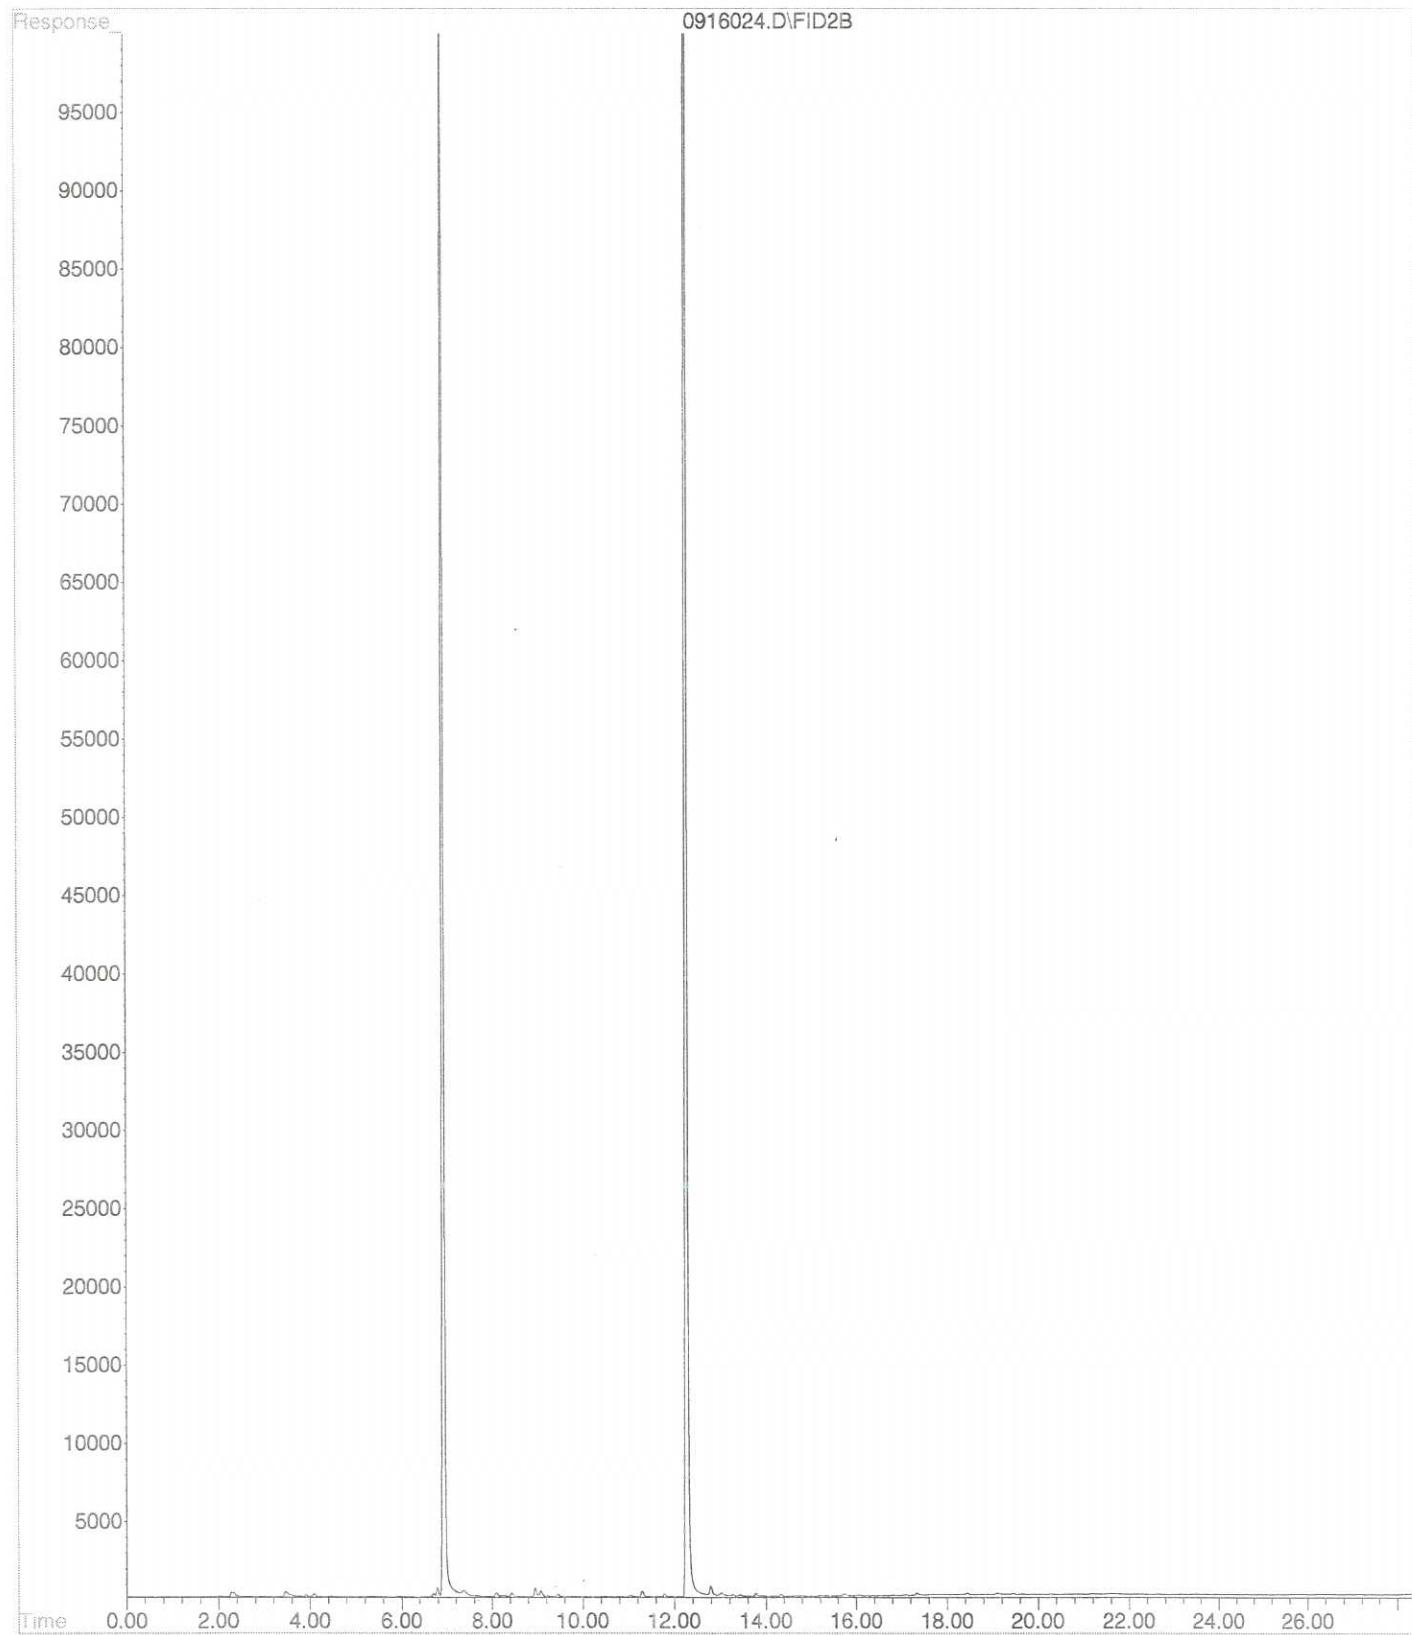

RPD - Relative Percent Difference

Re: Analytical Data for Project 1537265.002  
Laboratory Reference No. 1509-140

Dear Ali:

Enclosed are the analytical results and associated quality control data for samples submitted on September 16, 2015.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

A handwritten signature in black ink, appearing to read "DB" followed by a cursive surname.

David Baumeister  
Project Manager

Enclosures

Date of Report: September 29, 2015  
Samples Submitted: September 16, 2015  
Laboratory Reference: 1509-140  
Project: 1537265.002

### Case Narrative

Samples were collected on September 15, 2015 and received by the laboratory on September 16, 2015. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

#### NWTPH Gx/BTEX (soil) Analysis

Per EPA Method 5035A, samples were received by the laboratory in pre-weighed 40 mL VOA vials within 48 hours of sample collection. They were stored in a freezer at between -7°C and -20°C until extraction or analysis.

#### PAHs EPA 8270D/SIM (water) Analysis

Sample MS/MSD pair had several recoveries fall outside of control limits. The SB/SBD pair extracted with this batch had all parameters in control, no further action was deemed necessary.

**Please note that any other QA/QC issues associated with these extractions and analyses will be indicated with a footnote reference and discussed in detail on the Data Qualifier page.**

EH-N-V	09-140-13	4
EH-N-S	09-140-14	20

#### Data Qualifiers and Abbreviations

- A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.
- B - The analyte indicated was also found in the blank sample.
- C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.
- E - The value reported exceeds the quantitation range and is an estimate.
- F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.
- H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.
- I - Compound recovery is outside of the control limits.
- J - The value reported was below the practical quantitation limit. The value is an estimate.
- K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.
- L - The RPD is outside of the control limits.
- M - Hydrocarbons in the gasoline range are impacting the diesel range result.
- M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.
- N - Hydrocarbons in the lube oil range are impacting the diesel range result.
- N1 - Hydrocarbons in diesel range are impacting lube oil range results.
- O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.
- P - The RPD of the detected concentrations between the two columns is greater than 40.
- Q - Surrogate recovery is outside of the control limits.
- S - Surrogate recovery data is not available due to the necessary dilution of the sample.
- T - The sample chromatogram is not similar to a typical \_\_\_\_\_.
- U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
- U1 - The practical quantitation limit is elevated due to interferences present in the sample.
- V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.
- W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.
- X - Sample extract treated with a mercury cleanup procedure.
- X1 - Sample extract treated with a Sulfuric acid/Silica gel cleanup procedure.
- Y - The calibration verification for this analyte exceeded the 20% drift specified in method 8260C, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.
- Z -

ND - Not Detected at PQL

PQL - Practical Quantitation Limit

RPD - Relative Percent Difference

Your samples were received on Wednesday, September 16, 2015. At the time of receipt, the samples were logged in and properly maintained prior to the subsequent analysis.

The analytical procedures used at AmTest are well documented and are typically derived from the protocols of the EPA, USDA, FDA or the Army Corps of Engineers.

Following the analytical data you will find the Quality Control (QC) results.

Please note that the detection limits that are listed in the body of the report refer to the Practical Quantitation Limits (PQL's), as opposed to the Method Detection Limits (MDL's).

If you should have any questions pertaining to the data package, please feel free to contact me.

Sincerely,

Aaron W. Young  
Laboratory Manager

Re: Analytical Data for Project 1537265.001  
Laboratory Reference No. 1509-157

Dear Ali:

Enclosed are the analytical results and associated quality control data for samples submitted on September 17, 2015.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

A handwritten signature in black ink, appearing to read "DB" followed by a cursive surname.

David Baumeister  
Project Manager

Enclosures

Date of Report: September 23, 2015  
Samples Submitted: September 17, 2015  
Laboratory Reference: 1509-157  
Project: 1537265.001

### Case Narrative

Samples were collected on September 16, 2015 and received by the laboratory on September 16, 2015. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

### NWTPH Gx and Volatiles EPA 8260C Analysis

Per EPA Method 5035A, samples were received by the laboratory in pre-weighed 40 mL VOA vials within 48 hours of sample collection. They were stored in a freezer at between -7°C and -20°C until extraction or analysis.

Any other QA/QC issues associated with this extraction and analysis will be indicated with a footnote reference and discussed in detail on the Data Qualifier page.

#### Data Qualifiers and Abbreviations

- A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.
- B - The analyte indicated was also found in the blank sample.
- C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.
- E - The value reported exceeds the quantitation range and is an estimate.
- F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.
- H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.
- I - Compound recovery is outside of the control limits.
- J - The value reported was below the practical quantitation limit. The value is an estimate.
- K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.
- L - The RPD is outside of the control limits.
- M - Hydrocarbons in the gasoline range are impacting the diesel range result.
- M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.
- N - Hydrocarbons in the lube oil range are impacting the diesel range result.
- N1 - Hydrocarbons in diesel range are impacting lube oil range results.
- O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.
- P - The RPD of the detected concentrations between the two columns is greater than 40.
- Q - Surrogate recovery is outside of the control limits.
- S - Surrogate recovery data is not available due to the necessary dilution of the sample.
- T - The sample chromatogram is not similar to a typical \_\_\_\_\_.
- U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
- U1 - The practical quantitation limit is elevated due to interferences present in the sample.
- V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.
- W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.
- X - Sample extract treated with a mercury cleanup procedure.
- X1 - Sample extract treated with a Sulfuric acid/Silica gel cleanup procedure.
- Y - The calibration verification for this analyte exceeded the 20% drift specified in method 8260C, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.
- Z -

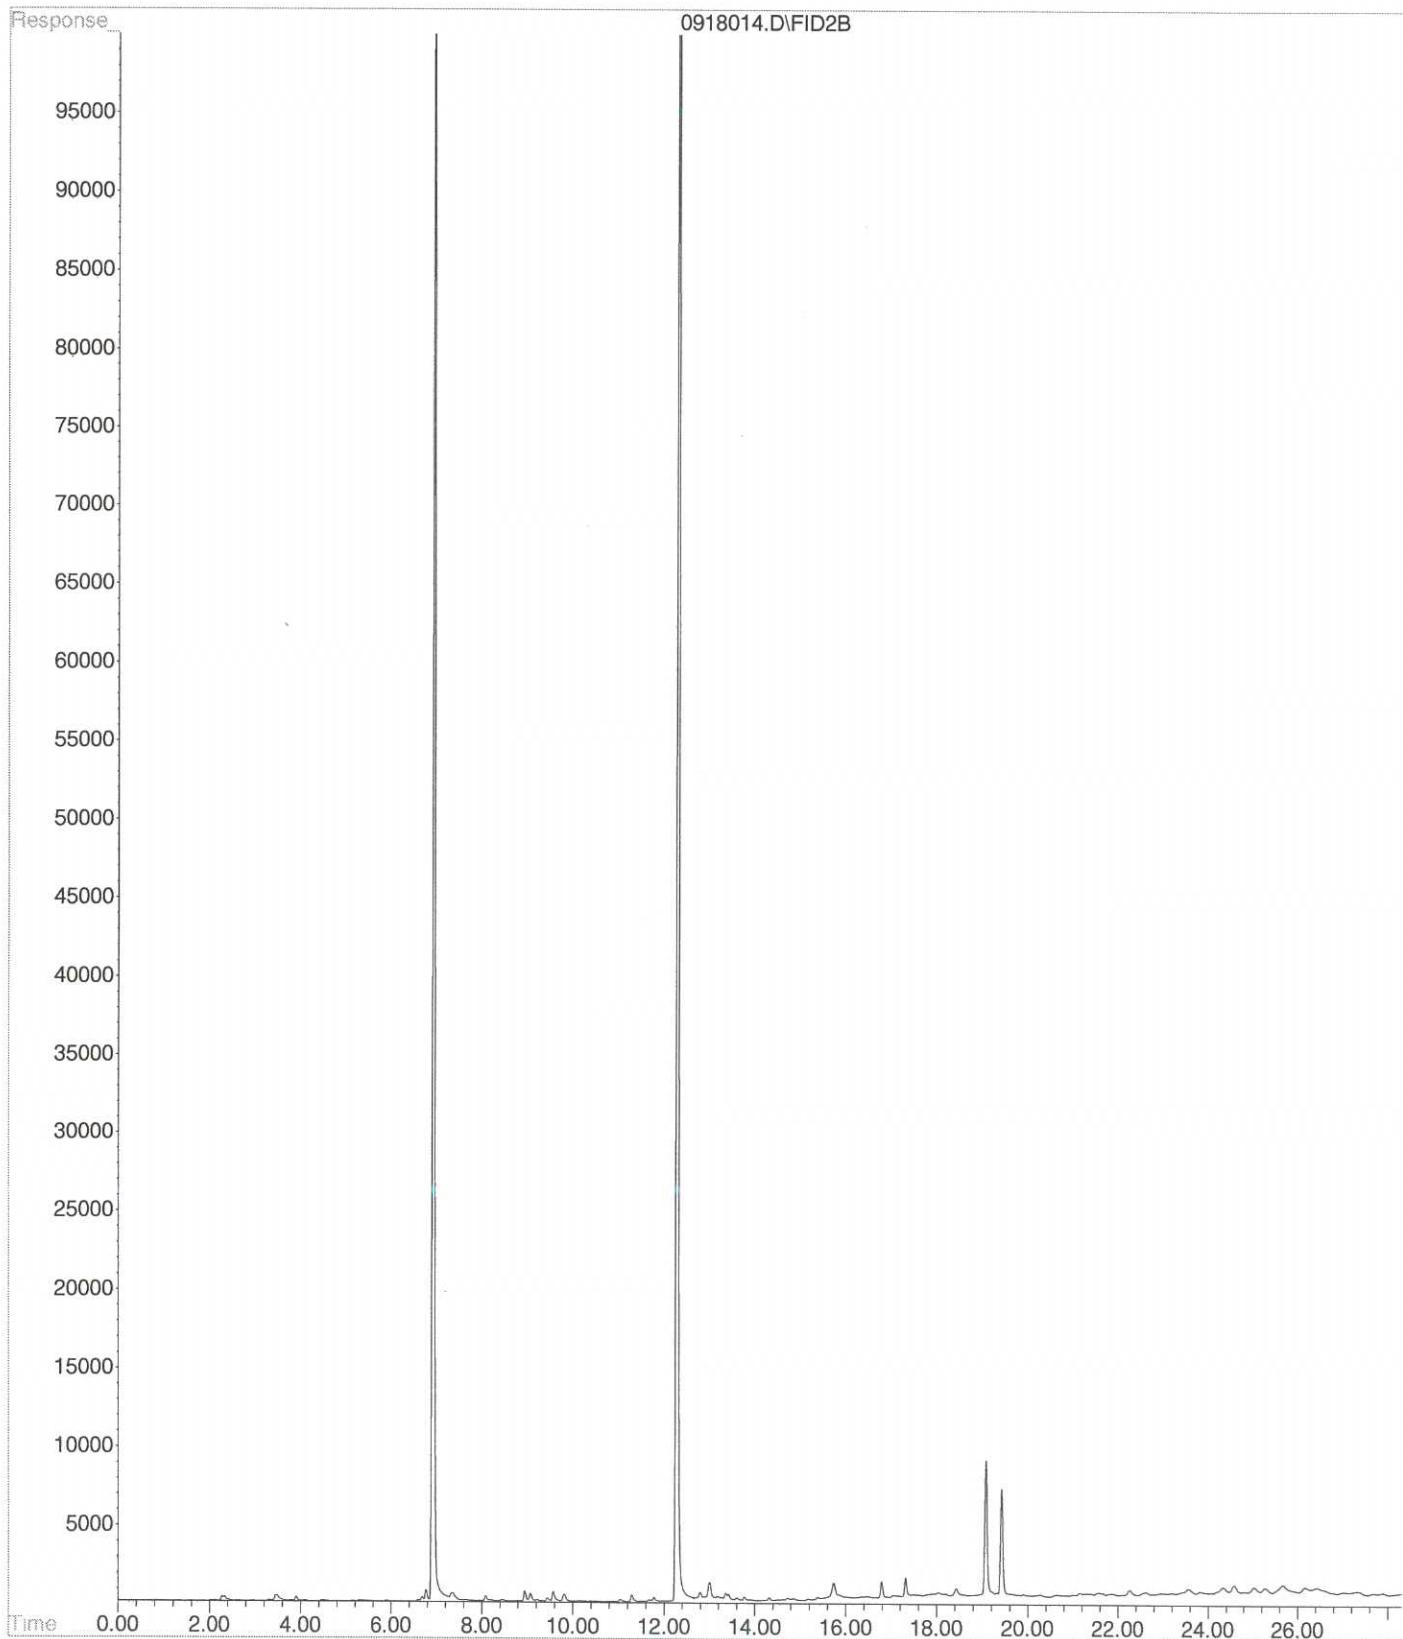

ND - Not Detected at PQL

PQL - Practical Quantitation Limit

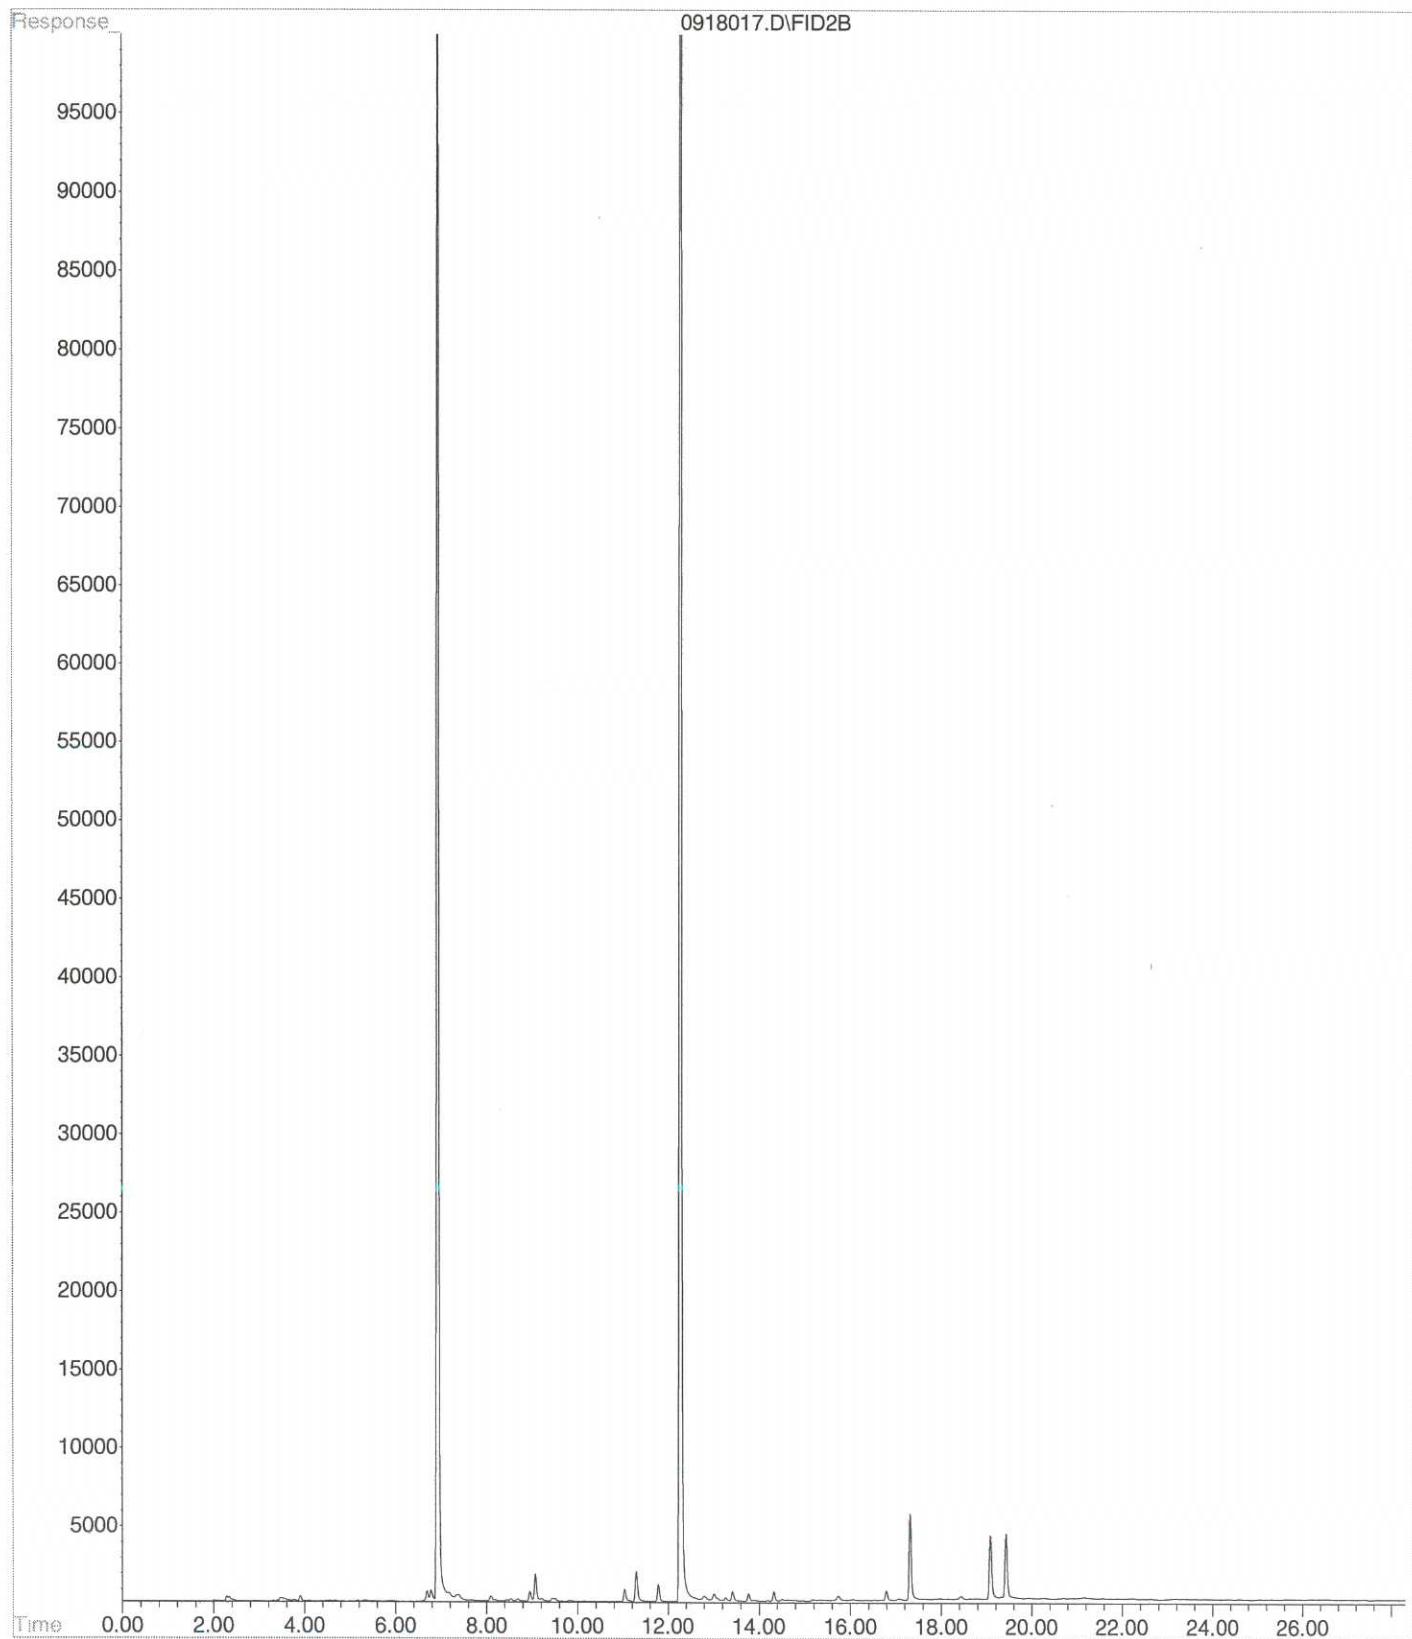

RPD - Relative Percent Difference

Re: Analytical Data for Project 1537265.002  
Laboratory Reference No. 1509-158

Dear Ali:

Enclosed are the analytical results and associated quality control data for samples submitted on September 16, 2015.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

A handwritten signature in black ink, appearing to read "DB" followed by a cursive surname.

David Baumeister  
Project Manager

Enclosures

Date of Report: September 29, 2015  
Samples Submitted: September 16, 2015  
Laboratory Reference: 1509-158  
Project: 1537265.002

### Case Narrative

Samples were collected on September 16, 2015 and received by the laboratory on September 16, 2015. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

#### NWTPH Gx and Volatiles EPA 8260C (soil) Analysis

Per EPA Method 5035A, samples were received by the laboratory in pre-weighed 40 mL VOA vials within 48 hours of sample collection. They were stored in a freezer at between -7°C and -20°C until extraction or analysis.

#### PAHs EPA 8270D/SIM (water) Analysis

Sample EH-K-W had one surrogate recovery out of control limits. This is within allowance of our standard operating procedure as long as the recovery is above 10%.

#### PCBs EPA 8082A (water) Analysis

Due to matrix effects, the surrogate recovery of DCB (46%) for the sample EH-K-W was below the quality control limits of 53-128%. All other QC was within their corresponding quality control limits. No further action was performed.

**Please note that any other QA/QC issues associated with these extractions and analyses will be indicated with a footnote reference and discussed in detail on the Data Qualifier page.**

#### Data Qualifiers and Abbreviations

- A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.
- B - The analyte indicated was also found in the blank sample.
- C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.
- E - The value reported exceeds the quantitation range and is an estimate.
- F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.
- H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.
- I - Compound recovery is outside of the control limits.
- J - The value reported was below the practical quantitation limit. The value is an estimate.
- K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.
- L - The RPD is outside of the control limits.
- M - Hydrocarbons in the gasoline range are impacting the diesel range result.
- M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.
- N - Hydrocarbons in the lube oil range are impacting the diesel range result.
- N1 - Hydrocarbons in diesel range are impacting lube oil range results.
- O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.
- P - The RPD of the detected concentrations between the two columns is greater than 40.
- Q - Surrogate recovery is outside of the control limits.
- S - Surrogate recovery data is not available due to the necessary dilution of the sample.
- T - The sample chromatogram is not similar to a typical \_\_\_\_\_.
- U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
- U1 - The practical quantitation limit is elevated due to interferences present in the sample.
- V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.
- W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.
- X - Sample extract treated with a mercury cleanup procedure.
- X1 - Sample extract treated with a Sulfuric acid/Silica gel cleanup procedure.
- Y - The calibration verification for this analyte exceeded the 20% drift specified in method 8260C, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.
- Z -

ND - Not Detected at PQL

PQL - Practical Quantitation Limit

RPD - Relative Percent Difference

Attention: David Baumeister

Dear David Baumeister:

Enclosed please find the analytical data for your project.

The following is a cross correlation of client and laboratory identifications for your convenience.

CLIENT ID	MATRIX	AMTEST ID	TEST
EH-M-V	Soil	15-A015159	CN
EH-M-S	Soil	15-A015160	CN
EH-M-W	Water	15-A015161	CONV

Your samples were received on Thursday, September 17, 2015. At the time of receipt, the samples were logged in and properly maintained prior to the subsequent analysis.

The analytical procedures used at AmTest are well documented and are typically derived from the protocols of the EPA, USDA, FDA or the Army Corps of Engineers.

Following the analytical data you will find the Quality Control (QC) results.

Please note that the detection limits that are listed in the body of the report refer to the Practical Quantitation Limits (PQL's), as opposed to the Method Detection Limits (MDL's).

If you should have any questions pertaining to the data package, please feel free to contact me.

Sincerely,

Aaron W. Young  
Laboratory Manager

Re: Analytical Data for Project 1537265.002  
Laboratory Reference No. 1509-158B

Dear Ali:

Enclosed are the analytical results and associated quality control data for samples submitted on September 16, 2015.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

A handwritten signature in black ink, appearing to read "DB" followed by a cursive surname.

David Baumeister  
Project Manager

Enclosures

Date of Report: October 8, 2015  
Samples Submitted: September 16, 2015  
Laboratory Reference: 1509-158B  
Project: 1537265.002

### Case Narrative

Samples were collected on September 16, 2015 and received by the laboratory on September 16, 2015. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

### PCBs EPA 8082A (water) Analysis

Due to matrix effects, the surrogate recovery of DCB (49%) for the sample EH-K-W was below the quality control limits of 53-128%. All other QC was within their corresponding quality control limits. No further action was performed.

Any other QA/QC issues associated with this extraction and analysis will be indicated with a footnote reference and discussed in detail on the Data Qualifier page.

### Data Qualifiers and Abbreviations

- A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.
- B - The analyte indicated was also found in the blank sample.
- C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.
- E - The value reported exceeds the quantitation range and is an estimate.
- F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.
- H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.
- I - Compound recovery is outside of the control limits.
- J - The value reported was below the practical quantitation limit. The value is an estimate.
- K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.
- L - The RPD is outside of the control limits.
- M - Hydrocarbons in the gasoline range are impacting the diesel range result.
- M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.
- N - Hydrocarbons in the lube oil range are impacting the diesel range result.
- N1 - Hydrocarbons in diesel range are impacting lube oil range results.
- O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.
- P - The RPD of the detected concentrations between the two columns is greater than 40.
- Q - Surrogate recovery is outside of the control limits.
- S - Surrogate recovery data is not available due to the necessary dilution of the sample.
- T - The sample chromatogram is not similar to a typical \_\_\_\_\_.
- U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
- U1 - The practical quantitation limit is elevated due to interferences present in the sample.
- V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.
- W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.
- X - Sample extract treated with a mercury cleanup procedure.
- X1 - Sample extract treated with a Sulfuric acid/Silica gel cleanup procedure.
- Y - The calibration verification for this analyte exceeded the 20% drift specified in method 8260C, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.
- Z -

ND - Not Detected at PQL

PQL - Practical Quantitation Limit

RPD - Relative Percent Difference

Re: Analytical Data for Project 1537265.002  
Laboratory Reference No. 1509-163

Dear Ali:

Enclosed are the analytical results and associated quality control data for samples submitted on September 17, 2015.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

A handwritten signature in black ink, appearing to read "DB" followed by a cursive surname.

David Baumeister  
Project Manager

Project: 1537265.002

### Case Narrative

Samples were collected on September 16, 2015 and received by the laboratory on September 17, 2015. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

### Volatiles EPA 8260C (soil) Analysis

Per EPA Method 5035A, samples were received by the laboratory in pre-weighed 40 mL VOA vials within 48 hours of sample collection. They were stored in a freezer at between -7°C and -20°C until extraction or analysis.

Any other QA/QC issues associated with this extraction and analysis will be indicated with a footnote reference and discussed in detail on the Data Qualifier page.

### Data Qualifiers and Abbreviations

- A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.
- B - The analyte indicated was also found in the blank sample.
- C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.
- E - The value reported exceeds the quantitation range and is an estimate.
- F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.
- H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.
- I - Compound recovery is outside of the control limits.
- J - The value reported was below the practical quantitation limit. The value is an estimate.
- K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.
- L - The RPD is outside of the control limits.
- M - Hydrocarbons in the gasoline range are impacting the diesel range result.
- M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.
- N - Hydrocarbons in the lube oil range are impacting the diesel range result.
- N1 - Hydrocarbons in diesel range are impacting lube oil range results.
- O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.
- P - The RPD of the detected concentrations between the two columns is greater than 40.
- Q - Surrogate recovery is outside of the control limits.
- S - Surrogate recovery data is not available due to the necessary dilution of the sample.
- T - The sample chromatogram is not similar to a typical \_\_\_\_\_.
- U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
- U1 - The practical quantitation limit is elevated due to interferences present in the sample.
- V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.
- W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.
- X - Sample extract treated with a mercury cleanup procedure.
- X1 - Sample extract treated with a Sulfuric acid/Silica gel cleanup procedure.
- Y - The calibration verification for this analyte exceeded the 20% drift specified in method 8260C, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.
- Z -

ND - Not Detected at PQL

PQL - Practical Quantitation Limit

RPD - Relative Percent Difference

Re: Analytical Data for Project 1537265.001  
Laboratory Reference No. 1509-179

Dear Ali:

Enclosed are the analytical results and associated quality control data for samples submitted on September 17, 2015.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

A handwritten signature in black ink, appearing to read "DB" followed by a cursive surname.

David Baumeister  
Project Manager

Enclosures

Date of Report: October 5, 2015  
Samples Submitted: September 17, 2015  
Laboratory Reference: 1509-179  
Project: 1537265.001

#### **Case Narrative**

Samples were collected on September 17, 2015 and received by the laboratory on September 18, 2015. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

#### Data Qualifiers and Abbreviations

- A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.
- B - The analyte indicated was also found in the blank sample.
- C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.
- E - The value reported exceeds the quantitation range and is an estimate.
- F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.
- H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.
- I - Compound recovery is outside of the control limits.
- J - The value reported was below the practical quantitation limit. The value is an estimate.
- K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.
- L - The RPD is outside of the control limits.
- M - Hydrocarbons in the gasoline range are impacting the diesel range result.
- M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.
- N - Hydrocarbons in the lube oil range are impacting the diesel range result.
- N1 - Hydrocarbons in diesel range are impacting lube oil range results.
- O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.
- P - The RPD of the detected concentrations between the two columns is greater than 40.
- Q - Surrogate recovery is outside of the control limits.
- S - Surrogate recovery data is not available due to the necessary dilution of the sample.
- T - The sample chromatogram is not similar to a typical \_\_\_\_\_.
- U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
- U1 - The practical quantitation limit is elevated due to interferences present in the sample.
- V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.
- W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.
- X - Sample extract treated with a mercury cleanup procedure.
- X1 - Sample extract treated with a Sulfuric acid/Silica gel cleanup procedure.
- Y - The calibration verification for this analyte exceeded the 20% drift specified in method 8260C, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.
- Z -

ND - Not Detected at PQL

PQL - Practical Quantitation Limit

RPD - Relative Percent Difference

Attention: David Baumeister

Dear David Baumeister:

Enclosed please find the analytical data for your project.

The following is a cross correlation of client and laboratory identifications for your convenience.

CLIENT ID	MATRIX	AMTEST ID	TEST
BH-12-E-1	Soil	15-A015248	CN

Your sample was received on Friday, September 18, 2015. At the time of receipt, the sample was logged in and properly maintained prior to the subsequent analysis.

The analytical procedures used at AmTest are well documented and are typically derived from the protocols of the EPA, USDA, FDA or the Army Corps of Engineers.

Following the analytical data you will find the Quality Control (QC) results.

Please note that the detection limits that are listed in the body of the report refer to the Practical Quantitation Limits (PQL's), as opposed to the Method Detection Limits (MDL's).

If you should have any questions pertaining to the data package, please feel free to contact me.

Sincerely,

Aaron W. Young  
Laboratory Manager

Re: Analytical Data for Project 1537265.002  
Laboratory Reference No. 1509-180

Dear Ali:

Enclosed are the analytical results and associated quality control data for samples submitted on September 17, 2015.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

A handwritten signature in black ink, appearing to read "DB" followed by a cursive surname.

David Baumeister  
Project Manager

Enclosures

Date of Report: September 29, 2015  
Samples Submitted: September 17, 2015  
Laboratory Reference: 1509-180  
Project: 1537265.002

### Case Narrative

Samples were collected on September 17, 2015 and received by the laboratory on September 17, 2015. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

#### Volatiles EPA 8260C (soil) Analysis

Per EPA Method 5035A, samples were received by the laboratory in pre-weighed 40 mL VOA vials within 48 hours of sample collection. They were stored in a freezer at between -7°C and -20°C until extraction or analysis.

#### PCBs EPA 8082A (water) Analysis

Due to matrix effects, the surrogate recovery of DCB (26%) for the sample EH-I-W was below the quality control limits of 53-128%. All other QC was within their corresponding quality control limits. No further action was performed.

**Please note that any other QA/QC issues associated with these extractions and analyses will be indicated with a footnote reference and discussed in detail on the Data Qualifier page.**

### Data Qualifiers and Abbreviations

- A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.
- B - The analyte indicated was also found in the blank sample.
- C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.
- E - The value reported exceeds the quantitation range and is an estimate.
- F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.
- H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.
- I - Compound recovery is outside of the control limits.
- J - The value reported was below the practical quantitation limit. The value is an estimate.
- K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.
- L - The RPD is outside of the control limits.
- M - Hydrocarbons in the gasoline range are impacting the diesel range result.
- M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.
- N - Hydrocarbons in the lube oil range are impacting the diesel range result.
- N1 - Hydrocarbons in diesel range are impacting lube oil range results.
- O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.
- P - The RPD of the detected concentrations between the two columns is greater than 40.
- Q - Surrogate recovery is outside of the control limits.
- S - Surrogate recovery data is not available due to the necessary dilution of the sample.
- T - The sample chromatogram is not similar to a typical \_\_\_\_\_.
- U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
- U1 - The practical quantitation limit is elevated due to interferences present in the sample.
- V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.
- W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.
- X - Sample extract treated with a mercury cleanup procedure.
- X1 - Sample extract treated with a Sulfuric acid/Silica gel cleanup procedure.
- Y - The calibration verification for this analyte exceeded the 20% drift specified in method 8260C, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.
- Z -

ND - Not Detected at PQL

PQL - Practical Quantitation Limit

RPD - Relative Percent Difference

Re: Analytical Data for Project 1537265.002  
Laboratory Reference No. 1509-182

Dear Ali:

Enclosed are the analytical results and associated quality control data for samples submitted on September 18, 2015.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

A handwritten signature in black ink, appearing to read "DB" followed by a cursive surname.

David Baumeister  
Project Manager

Enclosures

Date of Report: October 16, 2015  
Samples Submitted: September 18, 2015  
Laboratory Reference: 1509-182  
Project: 1537265.002

### Case Narrative

Samples were collected on September 17, 2015 and received by the laboratory on September 18, 2015. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

### NWTPH Gx and Volatiles EPA 8260C (soil) Analysis

Per EPA Method 5035A, samples were received by the laboratory in pre-weighed 40 mL VOA vials within 48 hours of sample collection. They were stored in a freezer at between -7°C and -20°C until extraction or analysis.

Any other QA/QC issues associated with this extraction and analysis will be indicated with a footnote reference and discussed in detail on the Data Qualifier page.

#### Data Qualifiers and Abbreviations

- A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.
- B - The analyte indicated was also found in the blank sample.
- C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.
- E - The value reported exceeds the quantitation range and is an estimate.
- F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.
- H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.
- I - Compound recovery is outside of the control limits.
- J - The value reported was below the practical quantitation limit. The value is an estimate.
- K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.
- L - The RPD is outside of the control limits.
- M - Hydrocarbons in the gasoline range are impacting the diesel range result.
- M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.
- N - Hydrocarbons in the lube oil range are impacting the diesel range result.
- N1 - Hydrocarbons in diesel range are impacting lube oil range results.
- O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.
- P - The RPD of the detected concentrations between the two columns is greater than 40.
- Q - Surrogate recovery is outside of the control limits.
- S - Surrogate recovery data is not available due to the necessary dilution of the sample.
- T - The sample chromatogram is not similar to a typical \_\_\_\_\_.
- U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
- U1 - The practical quantitation limit is elevated due to interferences present in the sample.
- V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.
- W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.
- X - Sample extract treated with a mercury cleanup procedure.
- X1 - Sample extract treated with a Sulfuric acid/Silica gel cleanup procedure.
- Y - The calibration verification for this analyte exceeded the 20% drift specified in method 8260C, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.
- Z -

ND - Not Detected at PQL

PQL - Practical Quantitation Limit

RPD - Relative Percent Difference

**Vista Work Order No. 1500912**

Mr. David Baumeister  
OnSite Environmental Inc.  
14648 NE 95th Street  
Redmond, WA 98052

Dear Mr. Baumeister,

Enclosed are the results for the sample set received at Vista Analytical Laboratory on September 22, 2015. This sample set was analyzed on a standard turn-around time, under your Project Name 'Port of Tacoma'.

Vista Analytical Laboratory is committed to serving you effectively. If you require additional information, please contact me at 916-673-1520 or by email at [mmaier@vista-analytical.com](mailto:mmaier@vista-analytical.com).

Thank you for choosing Vista as part of your analytical support team.

Sincerely,

Martha Maier  
Laboratory Director

*Vista Analytical Laboratory certifies that the report herein meets all the requirements set forth by NELAC for those applicable test methods. Results relate only to the samples as received by the laboratory. This report should not be reproduced except in full without the written approval of Vista.*

**Vista Work Order No. 1500912****Case Narrative****Sample Condition on Receipt:**

Two solid samples were received in good condition and within the method temperature requirements. The samples were received and stored securely in accordance with Vista standard operating procedures and EPA methodology.

**Analytical Notes:****EPA Method 8290**

These samples were extracted and analyzed for tetra-through-octa chlorinated dioxins and furans by EPA Method 8290 using a ZB-5MS GC column.

**Holding Times**

The method holding time criteria were met for these samples.

**Quality Control**

The Initial Calibration and Continuing Calibration Verifications met the method acceptance criteria.

A Method Blank and Ongoing Precision and Recovery (OPR) sample were extracted and analyzed with the preparation batch. No analytes were detected above the sample quantitation limits in the Method Blank. The OPR recoveries were within the method acceptance criteria.

Labeled standard recoveries for all QC and field samples were within method acceptance criteria.

DL - Sample specific estimated detection limit

EMPC - Estimated maximum possible concentration

LCL-UCL- Lower control limit - upper control limit

The results are reported in dry weight. The sample size is reported in wet weight.

Min-The TEQ is calculated using zero for the concentration of congeners that are not detected.

Re: Analytical Data for Project 1537265.002  
Laboratory Reference No. 1509-200

Dear Ali:

Enclosed are the analytical results and associated quality control data for samples submitted on September 18, 2015.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

A handwritten signature in black ink, appearing to read "DB" followed by a cursive surname.

David Baumeister  
Project Manager

Enclosures

Date of Report: October 20, 2015  
Samples Submitted: September 18, 2015  
Laboratory Reference: 1509-200  
Project: 1537265.002

### Case Narrative

Samples were collected on September 18, 2015 and received by the laboratory on September 18, 2015. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

#### NWTPH Gx and Volatiles EPA 8260C (soil) Analysis

Per EPA Method 5035A, samples were received by the laboratory in pre-weighed 40 mL VOA vials within 48 hours of sample collection. They were stored in a freezer at between -7°C and -20°C until extraction or analysis.

#### PAHs EPA 8270D/SIM (soil) Analysis

Sample EH-F-S had one surrogate recovery out of control limits. This is within allowance of our standard operating procedure as long as the recovery is above 10%.

**Please note that any other QA/QC issues associated with these extractions and analyses will be indicated with a footnote reference and discussed in detail on the Data Qualifier page.**

#### Data Qualifiers and Abbreviations

- A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.
- B - The analyte indicated was also found in the blank sample.
- C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.
- E - The value reported exceeds the quantitation range and is an estimate.
- F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.
- H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.
- I - Compound recovery is outside of the control limits.
- J - The value reported was below the practical quantitation limit. The value is an estimate.
- K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.
- L - The RPD is outside of the control limits.
- M - Hydrocarbons in the gasoline range are impacting the diesel range result.
- M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.
- N - Hydrocarbons in the lube oil range are impacting the diesel range result.
- N1 - Hydrocarbons in diesel range are impacting lube oil range results.
- O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.
- P - The RPD of the detected concentrations between the two columns is greater than 40.
- Q - Surrogate recovery is outside of the control limits.
- S - Surrogate recovery data is not available due to the necessary dilution of the sample.
- T - The sample chromatogram is not similar to a typical \_\_\_\_\_.
- U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
- U1 - The practical quantitation limit is elevated due to interferences present in the sample.
- V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.
- W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.
- X - Sample extract treated with a mercury cleanup procedure.
- X1 - Sample extract treated with a Sulfuric acid/Silica gel cleanup procedure.
- Y - The calibration verification for this analyte exceeded the 20% drift specified in method 8260C, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.
- Z -

ND - Not Detected at PQL

PQL - Practical Quantitation Limit

RPD - Relative Percent Difference

**Vista Work Order No. 1500913**

Mr. David Baumeister  
OnSite Environmental Inc.  
14648 NE 95th Street  
Redmond, WA 98052

Dear Mr. Baumeister,

Enclosed are the results for the sample set received at Vista Analytical Laboratory on September 22, 2015. This sample set was analyzed on a standard turn-around time, under your Project Name 'Port of Tacoma'.

Vista Analytical Laboratory is committed to serving you effectively. If you require additional information, please contact me at 916-673-1520 or by email at [mmaier@vista-analytical.com](mailto:mmaier@vista-analytical.com).

Thank you for choosing Vista as part of your analytical support team.

Sincerely,

Martha Maier  
Laboratory Director

*Vista Analytical Laboratory certifies that the report herein meets all the requirements set forth by NELAC for those applicable test methods. Results relate only to the samples as received by the laboratory. This report should not be reproduced except in full without the written approval of Vista.*

**Vista Work Order No. 1500913****Case Narrative****Sample Condition on Receipt:**

One water sample and two solid samples were received in good condition and within the method temperature requirements. The samples were received and stored securely in accordance with Vista standard operating procedures and EPA methodology.

**Analytical Notes:****EPA Method 8290**

These samples were extracted and analyzed for tetra-through-octa chlorinated dioxins and furans by EPA Method 8290 using a ZB-5MS GC column.

**Holding Times**

The method holding time criteria were met for these samples.

**Quality Control**

The Initial Calibration and Continuing Calibration Verifications met the method acceptance criteria.

A Method Blank and Ongoing Precision and Recovery (OPR) sample were extracted and analyzed with each preparation batch. No analytes were detected above the sample quantitation limit in the Method Blanks. The OPR recoveries were within the method acceptance criteria.

Labeled standard recoveries for all QC and field samples were within method acceptance criteria.

Re: Analytical Data for Project 1537265.002  
Laboratory Reference No. 1509-204

Dear Ali:

Enclosed are the analytical results and associated quality control data for samples submitted on September 18, 2015.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

A handwritten signature in black ink, appearing to read "DB" followed by a cursive surname.

David Baumeister  
Project Manager

Enclosures

Date of Report: September 29, 2015  
Samples Submitted: September 18, 2015  
Laboratory Reference: 1509-204  
Project: 1537265.002

### Case Narrative

Samples were collected on September 18, 2015 and received by the laboratory on September 18, 2015. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

### NWTPH Gx/BTEX (soil) Analysis

Per EPA Method 5035A, samples were received by the laboratory in pre-weighed 40 mL VOA vials within 48 hours of sample collection. They were stored in a freezer at between -7°C and -20°C until extraction or analysis.

Any other QA/QC issues associated with this extraction and analysis will be indicated with a footnote reference and discussed in detail on the Data Qualifier page.

#### Data Qualifiers and Abbreviations

- A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.
- B - The analyte indicated was also found in the blank sample.
- C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.
- E - The value reported exceeds the quantitation range and is an estimate.
- F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.
- H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.
- I - Compound recovery is outside of the control limits.
- J - The value reported was below the practical quantitation limit. The value is an estimate.
- K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.
- L - The RPD is outside of the control limits.
- M - Hydrocarbons in the gasoline range are impacting the diesel range result.
- M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.
- N - Hydrocarbons in the lube oil range are impacting the diesel range result.
- N1 - Hydrocarbons in diesel range are impacting lube oil range results.
- O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.
- P - The RPD of the detected concentrations between the two columns is greater than 40.
- Q - Surrogate recovery is outside of the control limits.
- S - Surrogate recovery data is not available due to the necessary dilution of the sample.
- T - The sample chromatogram is not similar to a typical \_\_\_\_\_.
- U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
- U1 - The practical quantitation limit is elevated due to interferences present in the sample.
- V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.
- W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.
- X - Sample extract treated with a mercury cleanup procedure.
- X1 - Sample extract treated with a Sulfuric acid/Silica gel cleanup procedure.
- Y - The calibration verification for this analyte exceeded the 20% drift specified in method 8260C, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.
- Z -

ND - Not Detected at PQL

PQL - Practical Quantitation Limit

RPD - Relative Percent Difference

Re: Analytical Data for Project 1537265.001  
Laboratory Reference No. 1509-205

Dear Ali:

Enclosed are the analytical results and associated quality control data for samples submitted on September 18, 2015.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

A handwritten signature in black ink, appearing to read "DB" followed by a cursive surname.

David Baumeister  
Project Manager

Enclosures

Date of Report: October 5, 2015  
Samples Submitted: September 18, 2015  
Laboratory Reference: 1509-205  
Project: 1537265.001

### Case Narrative

Samples were collected on September 17, 2015 and received by the laboratory on September 18, 2015. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

### Data Qualifiers and Abbreviations

- A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.
- B - The analyte indicated was also found in the blank sample.
- C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.
- E - The value reported exceeds the quantitation range and is an estimate.
- F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.
- H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.
- I - Compound recovery is outside of the control limits.
- J - The value reported was below the practical quantitation limit. The value is an estimate.
- K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.
- L - The RPD is outside of the control limits.
- M - Hydrocarbons in the gasoline range are impacting the diesel range result.
- M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.
- N - Hydrocarbons in the lube oil range are impacting the diesel range result.
- N1 - Hydrocarbons in diesel range are impacting lube oil range results.
- O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.
- P - The RPD of the detected concentrations between the two columns is greater than 40.
- Q - Surrogate recovery is outside of the control limits.
- S - Surrogate recovery data is not available due to the necessary dilution of the sample.
- T - The sample chromatogram is not similar to a typical \_\_\_\_\_.
- U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
- U1 - The practical quantitation limit is elevated due to interferences present in the sample.
- V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.
- W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.
- X - Sample extract treated with a mercury cleanup procedure.
- X1 - Sample extract treated with a Sulfuric acid/Silica gel cleanup procedure.
- Y - The calibration verification for this analyte exceeded the 20% drift specified in method 8260C, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.
- Z -

ND - Not Detected at PQL

PQL - Practical Quantitation Limit

RPD - Relative Percent Difference

Dear David Baumeister:

Enclosed please find the analytical data for your 09-205 project.

The following is a cross correlation of client and laboratory identifications for your convenience.

CLIENT ID	MATRIX	AMTEST ID	TEST
BH-13 E-1	Soil	15-A015297	CN

Your sample was received on Monday, September 21, 2015. At the time of receipt, the sample was logged in and properly maintained prior to the subsequent analysis.

The analytical procedures used at AmTest are well documented and are typically derived from the protocols of the EPA, USDA, FDA or the Army Corps of Engineers.

Following the analytical data you will find the Quality Control (QC) results.

Please note that the detection limits that are listed in the body of the report refer to the Practical Quantitation Limits (PQL's), as opposed to the Method Detection Limits (MDL's).

If you should have any questions pertaining to the data package, please feel free to contact me.

Sincerely,

Aaron W. Young  
Laboratory Manager

Re: Analytical Data for Project 1537265.001  
Laboratory Reference No. 1509-217

Dear Ali:

Enclosed are the analytical results and associated quality control data for samples submitted on September 21, 2015.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

A handwritten signature in black ink, appearing to read "DB" followed by a cursive surname.

David Baumeister  
Project Manager

Enclosures

Date of Report: September 29, 2015  
Samples Submitted: September 21, 2015  
Laboratory Reference: 1509-217  
Project: 1537265.001

### Case Narrative

Samples were collected on September 21, 2015 and received by the laboratory on September 21, 2015. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

### NWTPH Gx and Volatiles EPA 8260C (soil) Analysis

Per EPA Method 5035A, samples were received by the laboratory in pre-weighed 40 mL VOA vials within 48 hours of sample collection. They were stored in a freezer at between -7°C and -20°C until extraction or analysis.

Any other QA/QC issues associated with this extraction and analysis will be indicated with a footnote reference and discussed in detail on the Data Qualifier page.

#### Data Qualifiers and Abbreviations

- A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.
- B - The analyte indicated was also found in the blank sample.
- C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.
- E - The value reported exceeds the quantitation range and is an estimate.
- F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.
- H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.
- I - Compound recovery is outside of the control limits.
- J - The value reported was below the practical quantitation limit. The value is an estimate.
- K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.
- L - The RPD is outside of the control limits.
- M - Hydrocarbons in the gasoline range are impacting the diesel range result.
- M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.
- N - Hydrocarbons in the lube oil range are impacting the diesel range result.
- N1 - Hydrocarbons in diesel range are impacting lube oil range results.
- O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.
- P - The RPD of the detected concentrations between the two columns is greater than 40.
- Q - Surrogate recovery is outside of the control limits.
- S - Surrogate recovery data is not available due to the necessary dilution of the sample.
- T - The sample chromatogram is not similar to a typical \_\_\_\_\_.
- U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
- U1 - The practical quantitation limit is elevated due to interferences present in the sample.
- V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.
- W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.
- X - Sample extract treated with a mercury cleanup procedure.
- X1 - Sample extract treated with a Sulfuric acid/Silica gel cleanup procedure.
- Y - The calibration verification for this analyte exceeded the 20% drift specified in method 8260C, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.
- Z -

ND - Not Detected at PQL

PQL - Practical Quantitation Limit

RPD - Relative Percent Difference

Re: Analytical Data for Project 1537265.002  
Laboratory Reference No. 1509-218

Dear Ali:

Enclosed are the analytical results and associated quality control data for samples submitted on September 21, 2015.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

A handwritten signature in black ink, appearing to read "DB" followed by a cursive surname.

David Baumeister

Enclosures

Date of Report: September 30, 2015  
Samples Submitted: September 21, 2015  
Laboratory Reference: 1509-218  
Project: 1537265.002

### Case Narrative

Samples were collected on September 21, 2015 and received by the laboratory on September 21, 2015. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

#### NWTPH Gx/BTEX and Volatiles EPA 8260C (soil) Analysis

Per EPA Method 5035A, samples were received by the laboratory in pre-weighed 40 mL VOA vials within 48 hours of sample collection. They were stored in a freezer at between -7°C and -20°C until extraction or analysis.

Any other QA/QC issues associated with this extraction and analysis will be indicated with a footnote reference and discussed in detail on the Data Qualifier page.

### Data Qualifiers and Abbreviations

- A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.
- B - The analyte indicated was also found in the blank sample.
- C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.
- E - The value reported exceeds the quantitation range and is an estimate.
- F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.
- H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.
- I - Compound recovery is outside of the control limits.
- J - The value reported was below the practical quantitation limit. The value is an estimate.
- K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.
- L - The RPD is outside of the control limits.
- M - Hydrocarbons in the gasoline range are impacting the diesel range result.
- M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.
- N - Hydrocarbons in the lube oil range are impacting the diesel range result.
- N1 - Hydrocarbons in diesel range are impacting lube oil range results.
- O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.
- P - The RPD of the detected concentrations between the two columns is greater than 40.
- Q - Surrogate recovery is outside of the control limits.
- S - Surrogate recovery data is not available due to the necessary dilution of the sample.
- T - The sample chromatogram is not similar to a typical \_\_\_\_\_.
- U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
- U1 - The practical quantitation limit is elevated due to interferences present in the sample.
- V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.
- W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.
- X - Sample extract treated with a mercury cleanup procedure.
- X1 - Sample extract treated with a Sulfuric acid/Silica gel cleanup procedure.
- Y - The calibration verification for this analyte exceeded the 20% drift specified in method 8260C, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.
- Z -

ND - Not Detected at PQL

PQL - Practical Quantitation Limit

RPD - Relative Percent Difference

Re: Analytical Data for Project 1537265.002  
Laboratory Reference No. 1509-218B

Dear Ali:

Enclosed are the analytical results and associated quality control data for samples submitted on September 21, 2015.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

A handwritten signature in black ink, appearing to read "DB" followed by a cursive surname.

David Baumeister  
Project Manager

Enclosures

Date of Report: October 9, 2015  
Samples Submitted: September 21, 2015  
Laboratory Reference: 1509-218B  
Project: 1537265.002

### Case Narrative

Samples were collected on September 21, 2015 and received by the laboratory on September 21, 2015. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

### NWTPH Gx (soil) Analysis

Per EPA Method 5035A, samples were received by the laboratory in pre-weighed 40 mL VOA vials within 48 hours of sample collection. They were stored in a freezer at between -7°C and -20°C until extraction or analysis.

Any other QA/QC issues associated with this extraction and analysis will be indicated with a footnote reference and discussed in detail on the Data Qualifier page.

#### Data Qualifiers and Abbreviations

- A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.
- B - The analyte indicated was also found in the blank sample.
- C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.
- E - The value reported exceeds the quantitation range and is an estimate.
- F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.
- H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.
- I - Compound recovery is outside of the control limits.
- J - The value reported was below the practical quantitation limit. The value is an estimate.
- K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.
- L - The RPD is outside of the control limits.
- M - Hydrocarbons in the gasoline range are impacting the diesel range result.
- M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.
- N - Hydrocarbons in the lube oil range are impacting the diesel range result.
- N1 - Hydrocarbons in diesel range are impacting lube oil range results.
- O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.
- P - The RPD of the detected concentrations between the two columns is greater than 40.
- Q - Surrogate recovery is outside of the control limits.
- S - Surrogate recovery data is not available due to the necessary dilution of the sample.
- T - The sample chromatogram is not similar to a typical \_\_\_\_\_.
- U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
- U1 - The practical quantitation limit is elevated due to interferences present in the sample.
- V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.
- W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.
- X - Sample extract treated with a mercury cleanup procedure.
- X1 - Sample extract treated with a Sulfuric acid/Silica gel cleanup procedure.
- Y - The calibration verification for this analyte exceeded the 20% drift specified in method 8260C, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.
- Z -

ND - Not Detected at PQL

PQL - Practical Quantitation Limit

RPD - Relative Percent Difference

## TECHNICAL MEMORANDUM

**Date:** September 14, 2015

**Project No.:** 1537265-002.1

**To:** Greg Andrina, Puget Sound Energy (PSE)

**Company:** Puget Sound Energy

**From:** Ted Norton

**cc:** Larry Anderson, PSE

Julie Kelly, PSE

Chris King (Golder Associates Inc.)

Alison Dennison (Golder Associates Inc.)

**RE: PSE LNG PIPELINE TACOMA / FIFE ENVIRONMENTAL SAMPLING AND ANALYSIS PLAN**

### 1.0 INTRODUCTION AND PURPOSE

Puget Sound Energy (PSE) is proposing to install a new 16-inch gas line in the Port of Tacoma industrial area that will run through portions of Tacoma and Fife, Washington. The 16-inch gas line will be installed from an existing 20-inch high pressure (HP) gas line located at the intersection of 20<sup>th</sup> Street East and 62<sup>nd</sup> Avenue East to the intersection of East 11<sup>th</sup> Avenue and Taylor Way. A majority of the pipeline alignment is located on Taylor Way between the Hylebos and Blair Waterways (Figure 1). There are numerous known contaminated properties registered with the Washington State Department of Ecology (Ecology) along the alignment (Figure 2). The pipeline construction will utilize direct bury and horizontal direction drilling (HDD) methodologies; both of which generate waste including soils, drilling spoils, and water that are potentially contaminated with hazardous chemicals or constituents from adjacent properties. This technical memorandum presents a sampling and analysis plan (SAP) that provides an outline for conducting an environmental drilling and sampling investigation. The results of this investigation will provide chemical data that can be used to support health and safety planning and development of a media waste (soil, drilling spoils, and groundwater) management plan for the pipeline construction project.

### 2.0 OBJECTIVES

The objectives of this SAP are to identify the borehole locations, drilling methods, and sample depths and to prescribe the analytical testing methods for specific soil and groundwater samples that will:

- Provide PSE subcontractors analytical data to evaluate the risk of exposure to hazardous chemicals (if present) to their site workers and develop site-specific health and safety plans reflective of those risks.
- Provide vadose and saturated soil analytical data to evaluate the potential for generating soil that could be characterized as hazardous waste, and develop preliminary waste profiles for excavated soils to support preparing a media waste management plan.

- Provide groundwater analytical data to determine the potential for generating hazardous waste associated with dewatering activities, and develop preliminary waste profiles for groundwater to support preparing a media waste management plan.
- Provide saturated soil analytical data to determine the potential for generating hazardous waste associated with HDD spoils and limit the chemicals/constituents analyzed in future spoils characterization sampling (if required).

The environmental investigation is being conducted in association with development of a media waste management plan and is not for the purpose of a remedial investigation or site cleanup administered by a regulatory authority.

### **3.0 ENVIRONMENTAL INVESTIGATION**

The environmental investigation will be conducted in conjunction with the project's geotechnical investigation for the HDD portions of the pipeline alignment presented in Figure 2. Geologic information gathered during the environmental investigation will supplement the geotechnical investigation and evaluations.

#### **3.1 Boreholes and Locations**

Both direct push and hollow stem auger (HSA) drilling and sampling methods will be used to collect soil samples for chemical analysis associated with the environmental investigation. The direct push boreholes will be designated as "EH" followed by a letter (EH-A through EH-R). The HSA boreholes will be designated as "BH" followed by a number (BH-12 through BH-19). Groundwater samples will only be collected from direct push locations.

Borehole and sampling locations were selected based on adjacent properties identified with a high to moderate risk of impacting the project as identified in PSE's request for proposal (Figure 2; PSE 2015<sup>1</sup>). Standard penetration test (SPT) sampling equipment will be used at locations where HSA boreholes are being used for the HDD segments and coordinated with the geotechnical investigation. Direct push drilling and sampling methods will be used for soil and groundwater sampling in the direct bury (non-HDD) segments of the pipeline.

General direct push and HSA project borehole locations are presented in Figures 3 and 4. The environmental sample depths associated with the direct push boreholes (EH-A through EH-R) and the selected geotechnical HSA boreholes (BH-12 through BH-19 excluding BH-17) are presented in the attached Table 1. Specific locations for sighting boreholes and checking utility conflicts in the field are provided in Figures 5 through 13. Borehole locations are subject to field adjustment based on utility conflicts, accessibility by the drill rig, existing driveways, and health and safety considerations.

<sup>1</sup> Puget Sound Energy (PSE). 2015. Request for Proposal, "Tacoma Liquid Natural Gas (LNG) – 16" HP Tacoma, Pierce County, Washington Requirements for Geo Technical Analyses". July 28.

### 3.2 Drilling and Sampling

Both HSA and direct push drilling and soil and groundwater sampling will be conducted in general accordance with the following Golder Associates Inc. (Golder) technical procedures:

- TP 1.2-5 Drilling, Sampling and Logging of Soils
- TG 1.2-6 GIA Soil Description
- TG 1.2-20 Collection of Groundwater Quality Samples

Direct push soil samples will consist of composite samples collected from representative vadose and saturated soil from the approximate respective intervals identified in Table 1. The intent is to sample vadose or saturated soils and not strictly adhere to specific intervals. Composite samples will better represent the pending waste stream than specifically targeted grab samples. Potential groundwater impacts on saturated zone soils can be more accurately evaluated by separating vadose and saturated soils. Similarly groundwater samples will be collected from the top of the aquifer, not specifically the 6- to 10-foot below ground surface (bgs) interval. Groundwater will not be sampled if its depth is greater than 10 foot bgs.

Unlike direct push locations, the soil samples at HSA locations are not focused on soil conditions (vadose versus saturated) but are targeted at specific intervals. The depth intervals identified in Table 1 for the HSA borehole locations were coordinated to intercept the pipeline alignment. Soil samples collected from these intervals will provide data to evaluate the HDD spoils potentially contaminated with hazardous constituents and identify constituents (if any) for subsequent testing.

### 3.3 Analytical Methods and Sample Container Requirements

In addition to identifying the borehole type and locations, Table 1 presents sample media, sample intervals, and chemical analyses required at each of the direct push and HSA locations. Table 2 identifies the analytical methods for prescribed chemical analyses, the appropriate sample containers, and preservative for each of the analytical methods by media.

### 3.4 Quality Control

Quality control (QC) samples will be collected to evaluate laboratory performance, potential matrix interferences, and potential laboratory contamination issues. Field duplicates, trip blanks, one soil, and one groundwater matrix spike/matrix spike duplicate (MS/MSD) samples, and two equipment blank samples will be collected as part of the field QC program.

Field duplicates will be collected from approximately 5 percent of the samples for each analytical method. Field duplicate sample requirements for each analytical method and media are presented in Table 2.

One trip blank will be included in each ice chest transported to the laboratory containing volatile organic compounds (VOCs) or Gas<sub>(BTEX)</sub> samples.

The soil and groundwater MS/MSD samples will be collected from direct push samples. The soil samples will be collected after compositing and may not include all analysis due to volume limitations.

The equipment blank will be collected by pouring distilled water over a decontaminated split spoon and capturing it in the appropriate sample containers for chemical analysis. One equipment blank will be collected for the direct push and for HSA sampling equipment.

### **3.5 Sample Handling and Shipping**

All samples will be stored in ice chests packed with enough bagged ice or frozen "blue ice" to maintain an internal temperature of approximately 4 degrees Celsius (°C) to 6°C until relinquished to OnSite Environmental Inc. (OnSite) analytical laboratory under chain of custody at the following address.

OnSite Environmental Inc.  
14648 NE 95th Street  
Redmond, WA 98052  
Ph. 425.883.3881

Contact: Mr. David Baumeister

Chain of custody will be maintained and documented in accordance with Golder technical procedure TG 1.2-23 Chain of Custody.

### **3.6 Decontamination Procedures**

Purging and sampling equipment that comes into direct contact with sample media, sample containers, or the inside of a probe will ideally be single-use disposable equipment that is replaced between each sampling location and interval. If the sampling equipment is not single-use disposable equipment, it will be decontaminated prior to drilling at each location or interval where environmental samples are collected. Therefore, split-spoon samplers, temporary well screens, and other sampling devices will be decontaminated between sampling locations and sample intervals per TP1.2-5 Drilling, Sampling and Logging of Soils.

### **3.7 Investigation Derived Waste**

Investigation derived waste (IDW) including drill cuttings, sample waste, purge water, and decontamination waste will be contained in Department of Transportation (DOT) approved 55-gallon drums and stored in an area designated by PSE. Drums will be labeled as non-hazardous pending analysis. The label will identify the contents; location of origin [borehole(s) identifier]; the first and last dates material was placed in the drum; and Golder contact information. The analytical data will be used to characterize and manage disposal of the IDW.

### 3.8 Health and Safety

All field activities will be conducted in accordance with the requirements of the project site specific health, safety, and environment plan (HASEP). All Golder personnel will read and sign the HASEP prior to commencing field work. A copy of the HASP will be in the possession of Golder project personnel and maintained on site at all times. The drilling Subcontractor will also be required to have a job specific HASEP. Two integral aspects of health and safety for this project are drilling in the vicinity of underground and overhead utilities and traffic. All borehole locations will have public and private utility locates conducted and utility drawings reviewed prior to drilling. Additionally, all Golder personnel and those personnel under Golder's direction will comply with traffic control plans and personnel.
