LETTER OF TRANSMITTAL

TO: Mr. Dan Carrier, Chevron Environmental Management Company

FROM: Mr. Don Wyll, SAIC

DATE: April 15, 2010

SUBJECT: Site Investigation Report
Former Standard Oil Bulk Plant/Chevron Site #206196
815 E. College Street
Pullman, Washington

RECEIVED
APR 19 2010

DEPARTMENT OF ECOLOGY
EASTERN REGIONAL OFFICE

Dear Mr. Carrier,

SAIC-Benham is pleased to submit the following Site Investigation Report for the Former Standard Oil Bulk Plant No. 206196 in Pullman, Washington. Enclosed, please find one copy of the *Site Investigation Report*.

Please direct any questions or comments regarding this report to Mr. Wyll at (425) 482-3315 or wyld@saic.com.

cc: Mr. John Reed, Washington State University
Mr. Mike Boatsman, WDOE, Eastern Region Toxics Cleanup Program

**SITE INVESTIGATION REPORT
FORMER STANDARD OIL BULK PLANT
NO. 206196**

1. INTRODUCTION

This report documents the activities and findings of a soil investigation and groundwater monitoring performed by the Benham Companies, LLC, an SAIC Company (SAIC-Benham), on behalf of Chevron Environmental Management Company (Chevron). The purpose of this investigation was to delineate the vertical and lateral extent of soil impacts at the former Standard Oil bulk plant No. 206196 property located in Pullman, Washington.

2. SITE BACKGROUND

2.1 SITE DESCRIPTION

The former Standard Oil bulk plant is located at 815 NE College Street in the city of Pullman, Washington, on the campus of Washington State University (WSU). Former site facilities included an office building, a garage, a warehouse, eight aboveground storage tanks (ASTs), an underground septic tank, 500-gallon fuel oil underground storage tank (UST; removed in 1991), pumping equipment, loading rack, and an unloading header (Figure 1). The ASTs contained heating oil, diesel, unleaded gasoline, and supreme gasoline. The existing features on site include the original bulk plant garage, a storage shed, concrete platforms, and foundation from the former facility.

The area surrounding the site consists of an inactive coal power plant, owned by WSU, across College Avenue to the north; East Main Street (Highway 270) overpass embankment to the south; an embankment rising about 20 feet to Tacoma Street to the east; and Burlington Northern Santa Fe Railroad (BNSF) spur line, NE Spring Street, and a city park to the west.

2.2 PREVIOUS INVESTIGATIONS

Standard Oil owned the property and operated the bulk plant from approximately 1921 to 1981. In 1981 the facility was decommissioned, and the property was sold to WSU in October of 1982 for 1 dollar. Petroleum hydrocarbons were first discovered on the site in August 1991 during a geotechnical investigation for the Washington State Department of Transportation (WSDOT). Petroleum-impacted soils and groundwater were encountered in borings drilled for the proposed construction of the Highway 270 Bridge (RZA-AGRA, 1992).

Between 1991 and 1993, several site investigations had been conducted. Site investigation activities included advancing several soil borings and installing monitoring wells MW-1 through MW-10. Gasoline-, diesel-, and heavy oil-range hydrocarbons; and benzene, toluene, ethylbenzene, and total xylenes (BTEX) were detected at concentrations greater than Washington Department of Ecology (WDOE) Model Toxics Control Act (MTCA) Method A cleanup levels in soil and groundwater beneath the former bulk plant property and off-site property to the west and northwest (RZA-AGRA, 1993).

In June 1993, passive product skimmers were placed in MW-8 and MW-10. Hand bailing of light non-aqueous phase liquid (LNAPL) was initiated in MW-9 in December 1996. Approximately 5.8 gallons of LNAPL were removed from the three wells in the period between June 1993 and May 1997.

In 1995, approximately 1,200 cubic yards of contaminated soil were removed from the site during the WSDOT's bridge construction project. An additional 300 cubic yards of contaminated soil was stockpiled on the former bulk plant site and was later removed. The soil was excavated from the southwest corner of the former bulk plant property, just southeast of MW-2. During the excavation, approximately 27,500 gallons of water were removed, tested, and disposed in the sanitary sewer in accordance with the City of Pullman's disposal criteria.

In November 2000, a site investigation was performed that included the installation of four monitoring wells (MW-9A, MW-10A, MW-13, and MW-14) and one soil boring (B-10) to further characterize subsurface soil and groundwater quality in relation to petroleum hydrocarbons. Gasoline- and diesel-range hydrocarbons and benzene were detected in boring B-10 and monitoring well MW-14 at concentrations exceeding MTCA Method A cleanup levels (KHM, 2000).

Between November 2001 and March 2002, four additional wells were installed (MW-15, MW-16 and MW-17, and MW-6A) to further assess and document site conditions at the subject property. Gasoline-range hydrocarbons and benzene and total xylenes in soil were detected in borings B-15/MW-15 and B-17/MW-17 at concentrations exceeding MTCA Method A cleanup levels. Diesel-range hydrocarbons were detected in soil in borings B-6A/MW-6A and B-17/MW-17 at concentrations exceeding MTCA Method A cleanup levels, and heavy oil-range hydrocarbons were detected in B-6A/MW-6A at a concentration exceeding MTCA Method A cleanup levels (Delta, 2002).

Monitoring wells MW-18, MW-19, and MW-20 were installed in September 2008 by SAIC to delineate the down-gradient extent of the dissolved-phase groundwater plume. Gasoline-, diesel-, and heavy oil-range hydrocarbons, as well as BTEX and methyl tertiary butyl ether (MTBE) detections were either below cleanup levels or below laboratory method detection limits in all soil and groundwater samples from the off-site monitoring wells.

Since April 2009, the off-site monitoring wells have been sampled quarterly and LNAPL has been bailed during these sampling events from MW-8, MW-9A, MW-14, and MW-16.

3. SUBSURFACE CONDITIONS

3.1 GEOLOGY

The geology of the site is characterized by fluvial sediments and flood plain deposits from the South Fork Palouse River, which overlies the Miocene age Wanapum Formation Priest Rapids Member basalt. Overlying the fluvial deposits is fill material that consists of silty sand and gravel with metal, polyvinyl chloride (PVC), and concrete debris. The fill material is approximately 3 feet thick beneath the former bulk plant and increases up to 9 feet in thickness toward the west near MW-20. Underlying the fill material, fluvial sediments and flood plain deposits are up to 12 feet in thickness and consist of sandy silt and clay with occasional organic-rich silt layers. The Wanapum Formation Priest Rapids Member underlies the fluvial deposits and its upper surface varies in depth. The basalt unit has been observed up to a depth of 2,210 feet below ground surface (bgs).

3.2 HYDROGEOLOGY

Groundwater levels in the monitoring wells were observed at depths between 3.17 and 9.50 feet bgs during the most recent groundwater monitoring event in August 2009. In general, flow beneath the site appears to be to the northwest at a gradient of 0.013 foot per foot (ft/ft).

Groundwater flow direction is generally to the northwest toward the South Fork of the Palouse River, which is located approximately 600 feet west of the site.

4. INVESTIGATION ACTIVITIES

This site investigation was performed between October 21st and October 30th, 2009, and was designed to delineate the vertical and lateral extent of soil impacts at the former bulk plant property. The field investigation included advancement of soil borings and installation of groundwater monitoring wells MW-21 through MW-23. The lateral extent of the site investigation was limited by train tracks to the west, steep topography to the south and east, and utilities and NE College Street to the north. The vertical extent was limited by bedrock encountered in many of the borings. Bedrock was encountered and refusal was met between 4.5 and 17 feet bgs in the soil borings drilled during the investigation.

All soil borings, except for SB-10, were cleared to a minimum depth of 8 feet bgs using a vacuum truck or hand auger. Bedrock was encountered in boring SB-10 at 4.5 feet bgs. A total of 21 soil borings (SB-1 to SB-18) were completed and sampled to final depth with a Geoprobe® direct-push rig. Three of the 21 borings (MW-21, MW-22 and MW-23) were later completed as 4-inch groundwater monitoring wells with a hollow-stem auger.

4.1 SOIL SAMPLING

Borings were logged in accordance with the Unified Soil Classification System (USCS), Visual Manual Procedures (American Society for Testing and Materials Method D2488), and field screened for the presence of sheen and organic vapors with a photo-ionization detector (PID). Boring logs are presented as Appendix A.

Three soil samples were collected from each boring for laboratory analysis. Samples were collected in borings just above and below the water table, and at the base of each boring. All samples were analyzed by Lancaster Laboratories, Inc. located in Lancaster, Pennsylvania. Soil analytical results are presented in Table 1. Complete laboratory reports are presented as Appendix B.

All samples collected from the soil borings were analyzed for the following parameters:

- Gasoline-range hydrocarbons by WDOE Method NWTPH-Gx;
- Diesel-range hydrocarbons by WDOE Method NWTPH-Dx;
- Heavy-oil range hydrocarbons by WDOE Method NWTPH-Dx; and
- BTEX by United States Environmental Protection Agency (USEPA) Method 8260B.

Select samples where soil impacts were suspected based on field screening were additionally analyzed for the following parameters:

- Lead by USEPA Method 6020;
- MTBE by USEPA Method 8260B;
- Carcinogenic polycyclic aromatic hydrocarbons (cPAHs) by USEPA Method 8270 SIM;
- Naphthalene by USEPA Method 8260B;
- Volatile petroleum hydrocarbons (VPH) by Ecology Method WA-VPH; and
- Extractable petroleum hydrocarbons (EPH) by Ecology Method WA-EPH.

Additional soil samples were analyzed for Total Organic Content by USEPA Method 9060A modified, where field screening indicated no impacts were present.

All reusable sampling equipment was decontaminated by washing in a Liquinox™ solution followed by an initial rinse in tap water and a final rinse in deionized water. Hand augers, sample collection bowls, and split spoon sample barrels were decontaminated immediately after collecting, logging, and screening each sample. Augers were decontaminated by pressure washing between each sampling location. All other sampling equipment, such as gloves, plastic bags, and disposable bailers were placed into a waste container after each use.

Soil, decontamination water, development water, and purge water accumulated during investigation activities were temporarily stored on the property in 55-gallon drums and were taken to CEMEX's facility for thermal treatment and recycling in November 2009.

4.2 MONITORING WELL INSTALLATION AND DEVELOPMENT

Monitoring wells MW-21, MW-22, and MW-23 were constructed in accordance with the Minimum Standards for Construction and Maintenance of Wells (Chapter 173-160 WAC). The wells were constructed of 4-inch diameter, schedule 40 PVC casing and screened with 0.010-inch slotted casing. The annular space around the slotted well screens were filled with Monterey sand (#2/12), extending a minimum of 1 foot above the top of the well screens. One to 2 feet of hydrated bentonite chips were placed above the sand as an annular sealant. The well head covers have watertight and expandable seals to protect the wells against surface water infiltration. The monitoring wells were finished with a concrete seal and a flush-grade steel well monument. Well installation logs are presented as Appendix A.

Following construction, all monitoring wells were developed by surging with a surge block and water was subsequently removed from each of the wells until 10 well-casing volumes were removed using a 4 inch-diameter disposable bailer.

4.3 LIGHT NON-AQUEOUS PHASE LIQUIDS BAILING AND RECOVERY

Light non-aqueous phase liquids (LNAPL) were measured and bailed from monitoring wells MW-8, MW-9A, MW-14, and MW-16 on October 21st, 28th, and 30th, 2009. The LNAPL thicknesses were measured prior to product bailing with a product interface probe and results are presented in Table 2.

5. NATURE AND EXTENT OF PETROLEUM IMPACTS

5.1 SOIL

Based on field screening and soil analytical results, petroleum-impacted soil exists on the subject property exceeding MTCA Method A cleanup levels.

Gasoline and benzene appear to be the most widespread constituents of concern across the site as depicted in Figure 2 and 3, respectively. Gasoline was detected in all of the soil borings installed in October 2009 at concentrations above MTCA Method A cleanup levels. The highest concentrations of gasoline in soil were detected northwest of the former AST tank farm in borings SB-3, SB-12, and MW-21, and on the northern portion of the property in SB-8 west of the former truck trailer loading rack, at an average depth of 4 to 6 feet bgs. A sample collected at 4 feet bgs in boring SB-8 had the highest gasoline-range hydrocarbon detection of 6,600 milligrams per kilogram (mg/kg). Detections of benzene also occur near the former truck trailer loading rack and the former AST farm at concentrations significantly above MTCA Method A cleanup levels.

Diesel-range hydrocarbons with concentrations detected above MTCA Method A cleanup levels appear to be limited to the southern portion of the property northwest of the former AST farm, and are relatively shallow, between 2 and 4 feet bgs (Figure 4). Despite being detected at concentrations above MTCA Method A cleanup levels in boring MW-6A off site during a 2002 site investigation, heavy-oil range hydrocarbons were not detected in any of the borings on site at concentrations exceeding MTCA Method A cleanup levels (Table 1). Figures 5 through 7 present the approximate extent of one or more petroleum constituents exceeding MTCA Method A soil cleanup levels in geologic cross sections.

Petroleum-impacted soil has been fully delineated on site; however, impacts may extend beneath the rail spur line to the west. Soil borings installed in 2008, further west of the rail spur line, were either below MTCA Method A cleanup levels or below laboratory detection limits.

5.2 GROUNDWATER

During the second and third quarter (April 3rd and August 3rd) 2009 groundwater sampling events, no constituents sampled had detections above laboratory method detection limits in the off-site wells (Figure 8) MW-12, MW-18, MW-19, and MW 20 (Table 3).

During the on-site groundwater sampling event that occurred on December 9th, 2009, gasoline- and diesel-range hydrocarbons and benzene were detected in groundwater at concentrations exceeding MTCA Method A cleanup levels in wells MW-21, MW-22, and MW-23.

Additionally, toluene was detected at a concentration above MTCA Method A cleanup levels in monitoring well MW-23. Groundwater monitoring results are presented in Table 3 and a full laboratory report is presented as Appendix B.

5.3 LIGHT NON-AQUEOUS PHASE LIQUIDS

LNAPL was detected in monitoring wells MW-8, MW-9A, MW-14, and MW-16 during the site investigation. In general, LNAPL thicknesses decreased during the subsequent bailing events on October 21st, 28th, and 30th, 2009. Between the April 2009 bailing event and the site investigation that occurred in October 2009, approximately 20 gallons of product were removed. LNAPL did not recover to pre-bailed thicknesses in any of the monitoring wells where it was detected, and during the third round of measurements no product was detected in MW-8.

6. CONCLUSIONS

The horizontal and vertical extent of petroleum-impacted soil has been well defined by this investigation, and is widespread across the property and may extend to the west under the rail spur line. During the September 2008 investigation further to the west, no petroleum impacts were detected in off-site soil borings at concentrations exceeding MTCA Method A cleanup levels.

Gasoline-range hydrocarbons and benzene concentrations are the primary on-site constituents of concern, and typically occur between 4 and 6 feet bgs. Diesel-range hydrocarbons were detected at concentrations above MTCA Method A cleanup levels, but appear to be limited to the southern portion of the site northwest of the former ASTs at a relatively shallow depth of 2 to 5 feet bgs. The vertical extent of petroleum-impacted soil is confined by the bedrock, which ranges in depth between 4 and 17 feet bgs.

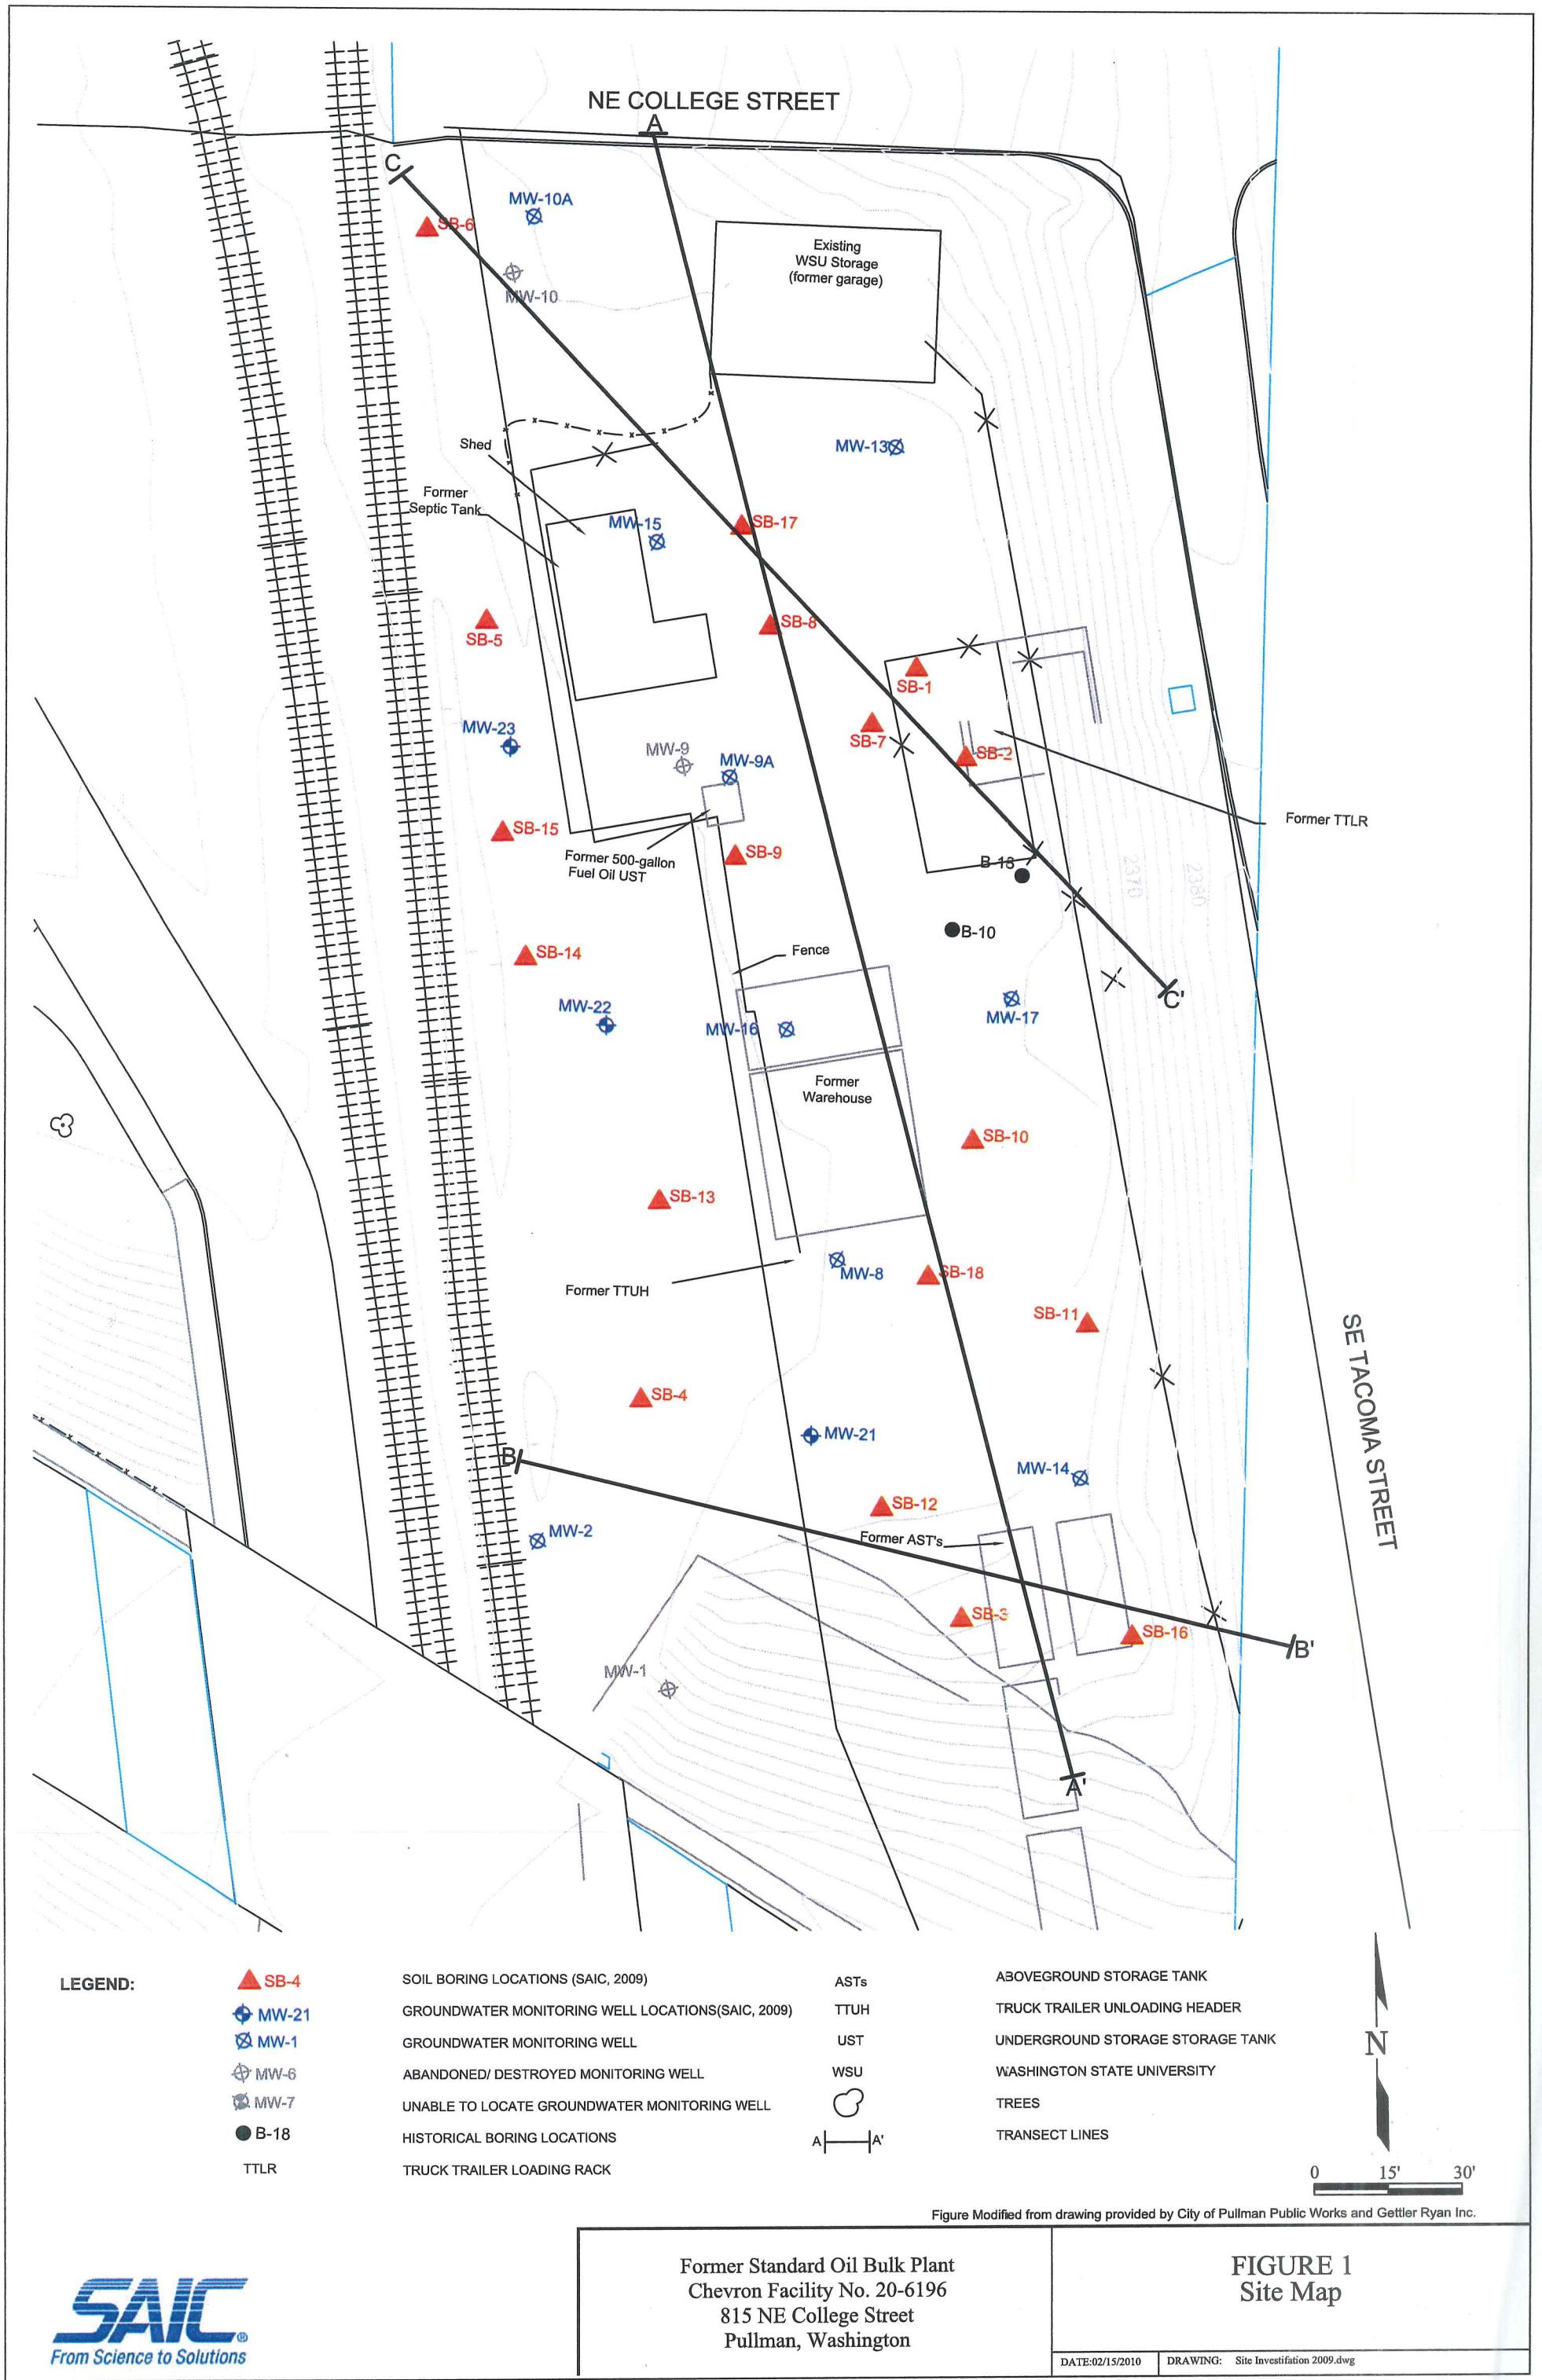

The horizontal extent of petroleum-impacted groundwater has been well defined and does not extend to the South Fork Palouse River. Since 2007, dissolved-phase hydrocarbon constituents

in groundwater have not been detected in off-site monitoring wells at concentrations exceeding their respective method detection limits. Groundwater samples collected from on-site monitoring wells between 2007 and 2008 showed a decrease or stabilization of hydrocarbon concentrations. Monitoring at the property since April 2009 indicates that the seasonal fluctuation of groundwater elevations may have some impact on LNAPL thickness; however, bailing of LNAPL from monitoring wells MW-8, MW-9A, MW-14, and MW-16 has been generally successful at decreasing or stabilizing the thickness of LNAPL. Since April 2009, 20 gallons of LNAPL have been removed from the four wells.

Notes:

Model Toxic Control Act (MTCA) Cleanup Regulations Chapter 173-340 WAC

Gasoline-range hydrocarbons analyzed by WDOE Method NWTPH-Gx (SAIC 2009).

Diesel-range hydrocarbons and heavy-oil range hydrocarbons analyzed by State of Washington Department of Ecology (WDOE) Method NWTPH-Dx extended range w/ silica-gel cleanup (SAIC 2009).

Benzene, toluene, ethylbenzene, total xylenes (BTEX), and MTBE analyzed by USEPA Method 8260 (SAIC 2009).

-- = Not analyzed

Bold detections are those values exceeding the appropriate MTCA cleanup levels

Italicized non-detected values are those detection or reporting limits that exceed the appropriate MTCA cleanup level.

cPAH = toxicity equivalency of benzo(a)pyrene was calculated using toxicity equivalency factors (WDOE, 2007)

MTBE = Methyl tert-butyl ether

SB = Soil Boring

ND = < Detection Limit, Laboratory Results not available

EDB = 1,2-Dibromoethane

EDC = 1,2-Dichloroethane

TPH-D = Total Petroleum Hydrocarbons as Diesel

TPH-O = Total Petroleum Hydrocarbons as Oil

TPH-G = Total Petroleum Hydrocarbons as Gasoline

¹ = boring location was possibly excavated in 1995 during bridge construction.

² = soil sample collected from boring by RZA AGRA Inc.

³ = soil sample collected from boring by Delta Environmental

⁴ = soil sample collected from boring by KHM Environmental

⁵ = soil sample collected from boring by Science Applications International Corporat

no analytical reports for (RZA, 1992)

*MW-1 was excavated in 1992

Table 3
Groundwater Monitoring Data and Analytical Results
Former Standard Oil Bulk Plant No. 206196
815 College Street
Pullman, Washington

EXPLANATIONS:

Groundwater monitoring data and laboratory analytical results prior to March 18, 1999, were compiled from reports prepared by Pacific Environmental Group, Inc.

TOC = Top of Casing

(ft.) = Feet

DTP = Depth to Product

DTW = Depth to Water

GWE = Groundwater Elevation

SPHT = Separate Phase Hydrocarbon Thickness

TPH-D = Total Petroleum Hydrocarbons as Diesel

TPH-O = Total Petroleum Hydrocarbons as Oil

TPH-G = Total Petroleum Hydrocarbons as Gasoline

TPH-418.1 = Total Petroleum Hydrocarbons as 418.1.

B = Benzene

T = Toluene

E = Ethylbenzene

X = Xylenes

MTBE = Methyl tertiary butyl ether

(ppb) = Parts per billion

($\mu\text{g/L}$) = Micrograms per liters

ND = Not Detected

-- = Not Measured/Not Analyzed

QA = Quality Assurance/Trip Blank

MTCA = Model Toxics Control Act Cleanup Regulations

[WAC 173-340-720(2)(a)(I), as amended 02/01]

PAHs = Polynuclear Aromatic Hydrocarbons

NR = Not recorded at time of sampling

* TOC elevations are referenced in feet relative to Mean Sea Level (msl). Data provided by Delta Environmental Inc.

** GWE elevation has been corrected for the presence of SPH; correction factor [(TOC - DTW) + (SPHT x 0.80)].

*** GWE elevation has been corrected for the presence of SPH; correction factor [(TOC - DTP - SPHT) + (SPHT x 0.80)]; Historical data has been altered to correct error in original reporting of depth to product as depth to water.

1 Laboratory report indicates HCID was ND.

2 Detection limit raised. Refer to analytical reports.

3 Laboratory report indicates PAHs was detected at 53 ppb.

4 Laboratory report indicates PAHs was detected at 22 ppb.

5 Laboratory report indicates PAHs were ND.

6 Laboratory report indicates PAHs was detected at 24 ppb.

7 Laboratory report indicates PAHs was detected at 23 ppb.

8 Laboratory report indicates PAHs was detected at 220 ppb.

9 TPH-D and TPH-O with silica gel cleanup.

10 Sock in well.

11 Skimmer present in well.

12 TOC trimmed 2 inches; unable to determine accurate GWE.

13 No skimmer in well.

14 Unable to determine DTW and GWE due to SPH.

15 Wasps living in well.

16 Attempted, but unable to Monitor/Sample due to severe weather conditions.

17 Laboratory report indicates the observed sample pattern is not typical of diesel/#2 fuel oil.

18 Laboratory report indicates the observed sample pattern includes #2 fuel/diesel and an additional pattern which elutes earlier in the DRO range.

19 Laboratory report indicates the observed sample pattern includes #2 fuel/diesel and additional patterns which elute earlier and later in the DRO range.

20 Laboratory report indicates the observed sample pattern is not typical of #2 fuel/diesel. It elutes in the DRO range later than #2 Fuel.

21 Laboratory report indicates the internal standard peak was outside the QC limits in the undiluted analysis. The sample was re-analyzed one day outside of the holding time at a five times dilution and the internal standard met criteria. The values reported are from the initial analysis of the sample. The value for the diluted analysis are noted: Benzene 160 $\mu\text{g/L}$, Toluene 8.5 $\mu\text{g/L}$, Ethylbenzene 15 $\mu\text{g/L}$, Total Xylenes 13 $\mu\text{g/L}$.

22 Laboratory report indicates the internal standard peak was outside the QC limits in the undiluted analysis. The sample was re-analyzed one day outside of the holding time at a five times dilution and the internal standard met criteria. The values reported are from the initial analysis of the sample. The value for the diluted analysis are noted: Benzene 85 $\mu\text{g/L}$, Toluene ND, Ethylbenzene 4.0 $\mu\text{g/L}$, Total Xylenes 9.6 $\mu\text{g/L}$.

Quality Control Summary

Client Name: Chevron

Group Number: 1138940

Reported: 04/16/09 at 04:32 PM

Matrix QC may not be reported if site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

Laboratory Compliance Quality Control

<u>Analysis Name</u>	<u>Blank Result</u>	<u>Blank MDL</u>	<u>Report Units</u>	<u>LCS %REC</u>	<u>LCSD %REC</u>	<u>LCS/LCSD Limits</u>	<u>RPD</u>	<u>RPD Max</u>

General Sample Comments

State of Washington Lab Certification No. C259

The temperature of the temperature blank bottle(s) upon receipt at the lab was >10C using a Hg thermometer. The sample bottles were then measured using an IR thermometer and were recorded at 17.4-18.0 C.

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

Quality Control Summary

Client Name: Chevron

Reported: 08/11/09 at 11:36 AM

Group Number: 1156068

Matrix QC may not be reported if site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

Laboratory Compliance Quality Control

CAT No.	Analysis Name	CAS Number	Dry Result	Dry Method Detection Limit	Dilution Factor
GC/MS Volatiles	SW-846 8260B		mg/kg	mg/kg	
07360 Benzene		71-43-2	N.D.	0.031	47.74
07360 Ethylbenzene		100-41-4	1.3	0.061	47.74
07360 Toluene		108-88-3	N.D.	0.061	47.74
07360 Xylene (Total)		1330-20-7	0.12	0.061	47.74
The GC/MS volatile analysis was performed according to the high level soil method due to the level of non-target compounds. Therefore, the reporting limits were raised.					
GC Volatiles	ECY 97-602 NWTPH-Gx		mg/kg	mg/kg	
02005 TPH by NWTPH-Gx soils		n.a.	1,200	130	2535.42
GC Extractable TPH w/Si Gel	ECY 97-602 NWTPH-Dx modified		mg/kg	mg/kg	
02214 DRO C12-C24 w/Si Gel		n.a.	280	7.7	2
02214 HRO C24-C40 w/Si Gel		n.a.	N.D.	26	2
Wet Chemistry	SM20 2540 G		%	%	
00111 Moisture		n.a.	22.1	0.50	1
"Moisture" represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported above is on an as-received basis.					

General Sample Comments

State of Washington Lab Certification No. C259

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

02858	Naphthalene	91-20-3	6.7	0.10	100

The GC/MS semivolatile surrogate recoveries were outside of QC limits. The matrix spike and matrix spike duplicate samples were analyzed and surrogate recoveries were again outside of QC limits, indicating a matrix effect.

GC Volatiles	ECY 97-602 NWTPH-Gx	mg/kg	mg/kg	
02005	TPH by NWTPH-Gx soils	n.a.	6,600	800

GC Extractable TPH w/Si Gel	ECY 97-602 NWTPH-Dx modified	mg/kg	mg/kg	
02214	DRO C12-C24 w/Si Gel	n.a.	110	4.6
02214	HRO C24-C40 w/Si Gel	n.a.	51	15

Wet Chemistry	SM20 2540 G	%	%	
00111	Moisture	n.a.	34.1	0.50

"Moisture" represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported above is on an as-received basis.

General Sample Comments

State of Washington Lab Certification No. C259

Carcinogenic PAHs have been reported for this sample

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

Quality Control Summary

Client Name: Chevron
 Reported: 11/05/09 at 03:23 PM

Group Number: 1167952

Matrix QC may not be reported if site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

Wet Chemistry	SM20 2540 G		%	%	
00111 Moisture		n.a.	24.0	0.50	1
"Moisture" represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported above is on an as-received basis.					

General Sample Comments

State of Washington Lab Certification No. C259

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

An unknown volume of methanol leaked from the methanol preserved vial prior to its return to the laboratory. As a result, the weight of the sample was biased low. An additional 5 mL of methanol was added to the sample after it was weighed. The dilution factor and all sample results are biased high.

Wet Chemistry	SM20 2540 G		%	%	
00111 Moisture		n.a.	22.7	0.50	1
"Moisture" represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported above is on an as-received basis.					

General Sample Comments

State of Washington Lab Certification No. C259

Carcinogenic PAHs have been reported for this sample.

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

The LCS recovery for the C5-C6 aliphatic range is 67% with QC limits of 70-130%. This range in the LCSD is within specification at 76%. All other ranges are within specification in both the LCS and LCSD. The recovery is high enough to ensure that there is no significant impact to the data.

Wet Chemistry	SM20 2540 G		%	%	
00111 Moisture		n.a.	23.8	0.50	1
"Moisture" represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported above is on an as-received basis.					

General Sample Comments

State of Washington Lab Certification No. C259
 Carcinogenic PAHs have been reported for this sample.

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

The LCS recovery for the C5-C6 aliphatic range is 67% with QC limits of 70-130%. This range in the LCSD is within specification at 76%. All other ranges are within specification in both the LCS and LCSD. The recovery is high enough to ensure that there is no significant impact to the data.

CAT No.	Analysis Name	CAS Number	Dry Result	Dry Method Detection Limit	Dilution Factor
GC Extractable TPH ECY 97-602 WA EPH					
05970	>C16 - C21 Aliphatic	n.a.	8.8	3.9	1
05970	>C16 - C21 Aromatic	n.a.	4.0	2.6	1
05970	>C21 - C34 Aliphatic	n.a.	2.9	1.3	1
05970	>C21 - C34 Aromatic	n.a.	2.9	2.6	1

EPH was detected in the >C21-C34 range for the method blank at a concentration of 1.2 mg/kg. Results from the reextraction are within the limits. The hold time had expired prior to the reextraction therefore, all results are reported from the original extract. Similar results were obtained in both extracts.

GC Extractable TPH w/Si Gel	ECY 97-602 NWTPH-Dx modified	mg/kg	mg/kg
02214 DRO C12-C24 w/Si Gel	n.a.	57	3.9

Wet Chemistry	SM20 2540 G	%	%
00111 Moisture	n.a.	22.9	0.50

"Moisture" represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported above is on an as-received basis.

General Sample Comments

State of Washington Lab Certification No. C259
Carcinogenic PAHs have been reported for this sample.

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

CAT No.	Analysis Name	CAS Number	Dry Result	Dry Method Detection Limit	Dilution Factor
GC/MS Volatiles	SW-846 8260B		mg/kg	mg/kg	
07360 Benzene		71-43-2	0.10	0.031	51.22
07360 Ethylbenzene		100-41-4	0.12	0.062	51.22
07360 Toluene		108-88-3	0.13	0.062	51.22
07360 Xylene (Total)		1330-20-7	0.21	0.062	51.22
The GC/MS volatile analysis was performed according to the high level soil method due to the level of non-target compounds. Therefore, the reporting limits were raised.					
GC Volatiles	ECY 97-602 NWTPH-Gx		mg/kg	mg/kg	
02005 TPH by NWTPH-Gx soils		n.a.	430	31	641.81
GC Extractable TPH w/Si Gel	ECY 97-602 NWTPH-Dx modified		mg/kg	mg/kg	
02214 DRO C12-C24 w/Si Gel		n.a.	740	36	10
02214 HRO C24-C40 w/Si Gel		n.a.	N.D.	120	10
Wet Chemistry	SM20 2540 G		%	%	
00111 Moisture		n.a.	17.3	0.50	1
"Moisture" represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported above is on an as-received basis.					

General Sample Comments

State of Washington Lab Certification No. C259

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

CAT No.	Analysis Name	CAS Number	Dry Result	Dry Method Detection Limit	Dilution Factor
GC/MS Volatiles	SW-846 8260B		mg/kg	mg/kg	
07360 Benzene		71-43-2	0.012	0.0006	1.05
07360 Ethylbenzene		100-41-4	0.34	0.071	58.43
07360 Toluene		108-88-3	0.002	0.001	1.05
07360 Xylene (Total)		1330-20-7	0.033	0.001	1.05
The concentration reported for ethylbenzene is estimated since it exceeded the calibration range of the instrument when determined by the low level method, but was less than the quantitation limit when determined by the high level method. The result reported is from the high level determination.

Quality Control Summary

Client Name: Chevron
 Reported: 11/17/09 at 01:04 PM

Group Number: 1168842

Matrix QC may not be reported if site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

Laboratory Compliance Quality Control

Quality Control Summary

Client Name: Chevron
 Reported: 12/18/09 at 10:17 AM

Group Number: 1174359

Matrix QC may not be reported if site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

Laboratory Compliance Quality Control

<u>Analysis Name</u>	<u>Blank Result</u>	<u>Blank MDL</u>	<u>Report Units</u>	<u>LCS %REC</u>	<u>LCSD %REC</u>	<u>LCS/LCSD Limits</u>	<u>RPD</u>	<u>RPD Max</u>

					1,800	2,200	20 (1)	20

Surrogate Quality Control

Surrogate recoveries which are outside of the QC window are confirmed unless attributed to dilution or otherwise noted on the Analysis Report.

Analysis Name: BTEX
 Batch number: 09349A53A
 Trifluorotoluene-P Trifluorotoluene-F

5858928	71	92
5858929	75	170*
5858930	81	98

*- Outside of specification

- (1) The result for one or both determinations was less than five times the LOQ.
- (2) The unspiked result was more than four times the spike added.
