Date: July 26, 2023

Subject: TWAFA Burlington Environmental Stabilization Building Vapor Sampling Memorandum

This memorandum has been prepared to address comments received from the Washington State Department of Ecology (Ecology) on January 26, 2023 (Ecology, 2023) regarding the Data Gaps Data Report and more specifically the request for collection of sub-slab samples and additional pressure differential data in the Burlington Environmental Stabilization Building (referred to herein as Stabilization Building).

In the February 27, 2023, Response to Comments letter (DOF, 2023) from DOF to Ecology regarding Ecology's comments on the Data Gaps Data Report (DOF, 2022), DOF agreed to collect additional differential pressure data and soil vapor samples within the Stabilization Building on the Burlington Environmental property. This memo documents implementation and results of that work.

Differential Pressure Data Collection

Differential pressure measurements across the building slab were collected from location TWA-SV-30 (Figure 1), as specified in the Response to Comments letter (DOF, 2023). Collection of differential pressures was performed in accordance with the December 3, 2021, *Revised TWAFA Data Gap Investigation Progress Summary and Soil Vapor Intrusion and Recommendation Memo* (DOF, 2021) to emulate past collection procedures. Differential pressure measurements were collected between May 22, 2023, and May 26, 2023, on one-minute intervals during the collection period using a TSI 9565-P Meter instrument. DOF attempted to obtain the same instrument used for differential pressure measurements in the 2022 Transportation Building sampling, as specified in Ecology's comments (Ecology, 2023), but that specific instrument was no longer available.

A graph showing the differential pressure versus time is provided in Attachment A, along with tabulated data. As noted on the graph in Attachment A, differential pressure was not logged on May 23, 2023, between 9:33 AM and 2:37 PM due to battery failure of the instrument. Following the battery failure, the instrument was connected to line power to prevent the issue from reoccurring.

Sample Locations and Collection

Sub-slab vapor samples were collected from the sub-slab monitoring points TWA-SV-28 and TWA-SV-30 as shown in Figure 1, per the Response to Comments letter (DOF, 2023).

Prior to sample collection, a shroud was placed over the sampling point, a single-use laboratory provided soil gas manifold was connected to the vapor sampling location, Summa® canister, and the purge line; helium gas was then applied to the shroud as a leak detection indicator. A rotary vane pump was connected to the purge line and operated for 5 minutes at a flow rate of 2 liters per minute to remove any stagnant soil vapor and confirm the sample tubing was leak free. An MGD 2002 Helium Leak Detector instrument was used to monitor effluent of the purge line for helium.

Following purging and confirmation of sealed connection and tubing, sample collection occurred using a 1L Summa® canister equipped with a laboratory certified 200 mL per minute regulator prepared by the analytical laboratory. Sampling was deemed complete when the pressure reached -5 inches of mercury, at which time, the valve was closed tightly, the manifold was disconnected from canister and the threaded cap was replaced. The manifold was removed from the sample location and the sample location was secured at the completion of sampling.

Sample Analysis

A chain of custody (COC) form was completed that recorded the sample name, date, time, canister serial number, regulator serial number, starting pressure, and final pressure. Summa® canisters were repackaged in shipping containers they were received in, with the COC accompanying them, and delivered to the laboratory for analysis under COC as specified in the Quality Assurance Project Plan (QAPP) provided in Appendix L of the Data Gaps Work Plan (DOF, 2020).

Samples were analyzed under a standard TAT of 10-15 days for the volatile organic compounds (VOCs) and Air-Phase Hydrocarbons (APH) listed in Table 1 of Appendix M of the Data Gaps Work Plan (DOF, 2020) via EPA Method TO-15 and the Massachusetts DEP APH Test Method WSC-CAM-IX, respectively. Methane, oxygen, and carbon dioxide were analyzed in the field during sampling by a Landtec GEM 2000 Landfill Gas Monitor (Table 1). Differential pressure was measured at the sample locations, though methane concentrations did not exceed the 5% threshold requiring the measurement.

Data Analysis and Interpretation

Analytical data for soil vapor sampling investigations at TWAFA on the Burlington Property collected in 2021, 2022, and 2023 is tabulated in Table 1. Concentrations are compared against Model Toxics Control Act (MTCA) Method B and C screening levels. Concentrations reported during this current investigation at the Stabilization Building were reported below screening levels.

APH was detected in both samples collected from the Stabilization Building, but both results were below the applicable screening level of 1,500 µg/m³. The highest aggregate APH concentration was 980 µg/m³ in TWA-SV-28, where EC5-8 aliphatics was 540 µg/m³, EC9-12 aliphatics was 440 µg/m³, but EC9-10 aromatics was not detected.

Two VOCs were detected in TWA-SV-30. Benzene was detected at 2.5 µg/m³, below the MTCA Method B screening level of 11 µg/m³ and total xylenes at 9.9 µg/m³, below the MTCA Method B level of 1,500 µg/m³. Of the total xylenes, m,p-xylene was detected at 7.3 µg/m³ and o-xylene

was detected at $2.6 \mu\text{g}/\text{m}^3$, for an aggregate concentration of $9.9 \mu\text{g}/\text{m}^3$. VOCs were not detected at location TWA-SV-28.

Quality Assurance/Quality Control Discussion

A data quality review was performed on the analytical results. Copies of the analytical reports and the associated data quality review memorandum are included in Attachment B.

Data quality review was based on method performance and quality control criteria, as specified in the QAPP. Hold times, initial and continuing calibrations, method blanks, surrogate recoveries, laboratory duplicate results, field duplicate results, matrix spike/matrix spike duplicate results, and reporting limits were reviewed to assess compliance with applicable methods and project requirements. If data qualification was required, data were qualified in general accordance with the definitions and use of qualifying flags outlined in EPA guidance documents (EPA, 2020a and b).

For the two samples analyzed in the Stabilization Building, none of the results required qualification, restatement, or rejection.

Sampling Location Abandonment

Prior to and during sample collection at the Stabilization Building, the field team observed that one of the VaporPins[®] previously installed in 2022 was damaged by the daily operations (includes excavator traffic) within the Stabilization Building. On May 8, 2023, the vapor pin in location TWA-SV-31 was abandoned due to damage. Abandonment was completed by sealing the 5/8-inch diameter borehole through the slab with Sikaflex[®]-1A and then grouting the 1 ½ -inch in-set borehole with MasterFlow 928 mineral aggregate grout. This abandonment method is standard for repairs to containment areas at the CleanEarth facility. Locations TWA-SV-28, TWA-SV-29, and TWA-SV-30 were abandoned on June 15, 2023, using the same methods and materials as location TWA-SV-31.

Conclusions

Soil vapor sample analytical results collected at two locations within the Stabilization Building did not exceed the most stringent sub-slab soil gas screening levels under MTCA and confirm that soil vapor concentrations are acceptable for the Stabilization Building.

Soil vapor assessment is ongoing in other areas of the TWAAFA Site. Following completion of the soil vapor assessment, DOF will begin preparation of the TWAAFA Site Indoor Air Assessment Protocol to be used at the TWAAFA Site as future development is planned and completed. This protocol is expected to be completed in cooperation with Ecology.

Subject: Taylor Way and Alexander Ave Fill Area (TWAFA) Site - Stabilization Building Vapor Samples Data Validation Summary
Client Project No., Task Order No.: TWA-QAQC-8
QA/QC Solutions, LLC Project No.: 080522.1

Dear Tasya:

This letter documents the results of the data validation completed for the analyses of two aliphatic hydrocarbons, 1 aromatic hydrocarbon and 11 target compounds volatile organic compounds (VOCs) (including co-eluting VOCs) on vapor samples associated with Taylor Way and Alexander Ave Fill Area (TWAFA) Site located in Tacoma, Washington sampling events.

The available data were validated to verify applicable laboratory quality assurance and quality control (QA/QC) measurements were reported, documented, and of sufficient quality to support its intended purpose(s). A summary of the overall assessment of data quality, the data set, a summary of the analytical methods used to complete the chemical analyses, a summary of the data validation procedures used, and a summary of the reasons why data were qualified (including other items noted during data validation) is presented below.

Overall Assessment of Data Quality

Overall, the data reported are of good quality and the results for the applicable QA/QC measurements that were used by the laboratory during the analysis of the samples were acceptable. No sample results required qualification during data validation.

Data Set

The data set consisted of two vapor samples collected on May 26, 2023. The samples were as follows:

- TWA-SV-28-052623 (lab ID 305467-01)
- TWA-SV-30-052623 (lab ID 305467-02)

Analyses were completed by Friedman & Bruya, Inc. Environmental Chemists located in Seattle, Washington. The laboratory submitted one (1) data summary package and electronic data deliverable (EDD) under work order F&BI 305467.

Analytical Methods

The analytical methods used to complete the chemical analyses are as follows:

- Air phase hydrocarbon (APH) ranges for APH EC5-8 and EC9-12 Aliphatics and APH EC9-10 Aromatics by the Method for the Determination of Air Phase Hydrocarbons (MA APH) prepared by the Massachusetts Department of Environmental Protection using gas chromatography/mass spectrometry (GC/MS) (MA APH 2009)
- Volatile organic compounds (VOCs) for 11 target compounds (including co-eluting VOCs) by GC/MS using EPA Method TO-15 (U.S. EPA 1999).

Data Validation Procedures

Data validation procedures included evaluating a summary of the sample results and applicable quality control results reported by the laboratory; this level of validation is also referred to as an abbreviated data review (equivalent to “Stage 2A/2B” review per U.S. EPA 2009). The analytical data were validated generally following the applicable guidance and requirements:

- Method-specific and laboratory-established quality control requirements, as applicable.
- Guidance on Environmental Data Verification and Validation (U.S. EPA 2002)
- Guidance for Labeling Externally Validated Laboratory Analytical Data for Superfund Use. OSWER No. 9200.1-85. EPA 540-R-08-005. (U.S. EPA 2009).
- *National Functional Guidelines for Organic Superfund Methods Data Review*. Final. OLEM 9240.0-51. EPA 542-R-20-007. November 2020. Office of Superfund Remediation and Technology Innovation (OSRTI), U.S. Environmental Protection Agency. (U.S. EPA 2020).

The laboratory data deliverables that were validated and available for review included the following:

- Case narratives discussing analytical problems (if any) and procedures.
- Chain-of-custody documentation to verify completeness of the data set.
- Sample preparation logs or laboratory summary result forms to verify analytical holding times were met.
- Results for applicable method blanks to determine whether an analyte that may have been reported as detected in a sample was the result of possible contamination introduced at the laboratory, during sampling, and/or during transport of samples, respectively.
- Results for applicable surrogate compound, laboratory control sample (LCS) (i.e., blank spike), duplicate LCS, matrix spike (MS), and matrix spike duplicate (MSD) recoveries to assess analytical accuracy.
- Results for applicable laboratory duplicate sample, duplicate LCS, and MSD analyses to assess analytical precision as are applicable.
- Laboratory summaries of analytical results reported for the analyses completed.

Verification and validation of 100-percent of all applicable laboratory calculations, transcriptions, review of instrument printouts, and review of bench sheets were not completed during the data validation review. There may be analytical problems that could only be identified by reviewing every instrument printout and associated analytical quality control results. Verification of all possible factors that could result in the degradation of data quality was not completed nor should be inferred at this time. The laboratory case narratives did not indicate any significant problems with data that were not reviewed during data validation. The adequacy of the sampling procedures was not completed during the data validation.

Performance based control limits established by the laboratory, applicable control limits specified in the analytical methods, and best professional judgement were used to evaluate data quality and to determine if specific data required qualification.

Reasons for Data Qualification

No results required qualification.

General Comments:

- Data users should refer to the laboratory data packages for complete information pertinent to the analyses completed.
- Results were reported as not detected were at the applicable method reporting limit (MRL).

This concludes the data validation review. Should you have any questions regarding the information presented herein, please contact me by telephone at 503.763.6948 or by e-mail at jjmcateer@msn.com.

Cordially,

James J. Mc Ateer, Jr., BS, MRSC

Dear Ms Gray:

Included are the results from the testing of material submitted on May 30, 2023 from the TWAAFA CE Tacoma-Soil Vapor TWAAFA-001, F&BI 305467 project. There are 10 pages included in this report.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

CASE NARRATIVE

This case narrative encompasses samples received on May 30, 2023 by Friedman & Bruya, Inc. from the Dalton Olmsted Fuglevand TWAAFA CE Tacoma-Soil Vapor TWAAFA-001, F&BI 305467 project. Samples were logged in under the laboratory ID's listed below.

<u>Laboratory ID</u>	<u>Dalton Olmsted Fuglevand</u>
305467 -01	TWA-SV-28-052623
305467 -02	TWA-SV-30-052623

Non-petroleum compounds identified in the air phase hydrocarbon (APH) ranges were subtracted per the MA-APH method.

All quality control requirements were acceptable.

ENVIRONMENTAL CHEMISTS

Data Qualifiers & Definitions

- a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.
- b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.
- ca - The calibration results for the analyte were outside of acceptance criteria, biased low; or, the calibration results for the analyte were outside of acceptance criteria, biased high, with a detection for the analyte in the sample. The value reported is an estimate.
- c - The presence of the analyte may be due to carryover from previous sample injections.
- cf - The sample was centrifuged prior to analysis.
- d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.
- dv - Insufficient sample volume was available to achieve normal reporting limits.
- f - The sample was laboratory filtered prior to analysis.
- fb - The analyte was detected in the method blank.
- fc - The analyte is a common laboratory and field contaminant.
- hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.
- hs - Headspace was present in the container used for analysis.
- ht - The analysis was performed outside the method or client-specified holding time requirement.
- ip - Recovery fell outside of control limits due to sample matrix effects.
- j - The analyte concentration is reported below the standard reporting limit. The value reported is an estimate.
- J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.
- jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.
- js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.
- k - The calibration results for the analyte were outside of acceptance criteria, biased high, and the analyte was not detected in the sample.
- lc - The presence of the analyte is likely due to laboratory contamination.
- L - The reported concentration was generated from a library search.
- nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.
- pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.
- ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.
- vo - The value reported fell outside the control limits established for this analyte.
- x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.
