---

Hello Jim:

Thank you for providing a workplan for the Sedgwick 1 Stop Site in Port Orchard. I have added it to the Site files. We appreciate your efforts to update Ecology regarding the cleanup efforts at the Site.

Ecology concurs with your interim action groundwater monitoring work plan at Sedgwick 1 Stop in Port Orchard. Please keep us updated on the schedule and let us know if an alternate approach is required due to property access, particularly to better understand the extent of the southern plume. Depending on findings, additional characterization work may be required to sufficiently characterize the Site. We look forward to reviewing the report and next steps for the Site.

Lindsey
