Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Comments: A-7: this is a recurrent waste because we teach chemistry each quarter, so spent process chemistry is a recurrent waste this stream is inorganic waste that does not always federally designate but would be toxic to fish (Washington State waste). Several unopened containers of chemicals we decided not to use were shipped as well to reduce inventory hazard.

Comments: A-7. When we teach chemistry, we have the students perform experiments in lab. After lab is over, there are spent chemicals. This is recurrent because we teach chemistry every quarter. this waste contains some organic solvents.

Comments: A-7. laboratory waste, benzoyl peroxide

Waste Sequence Number: 3482327
Sequence Number: 1

Comments: A-8. Aviation places absorbent pads under engines to catch fluid leaks. These are managed as hazardous waste because we believe the mixture of fluids would fail the fish toxicity test.

Waste Sequence Number: 3482328
Sequence Number: 1

Comments: a7, when an experiment results in an acid or base waste that is aqueous and doesn't contain any metals or other regulated constituents (is non-toxic except for pH), we neutralize the waste and dispose of it under treatment by generator and permission by King County metro.

Waste Sequence Number: 3482329
Sequence Number: 1

Comments: B-2. The answer is actually "both" However, after we concentrate dilute aqueous wastes by evaporating off most of the water, we lab-pack these wastes for shipment with our other chemistry wastes. All shipped wasted are already reported previously on the report, and I can't find a better way to make turbowaste accept this information on this part of the waste that is the pounds of waste that were treated by evaporation to reduce water content.

Waste Stream Comments:

CORB Waste Sequence Number: 158880
Comments: A-7. We teach biology labs where specimens are dissected. This is a recurrent process that doesn't fit any of the process definitions listed. A-8. This is used specimens from dissection in biology lab. They are in 'Carosafe' preservative that contains some formalin

Waste Sequence Number: 3416767
Sequence Number: 1
Comments: A-7 paint that is not sprayed onto cars or car parts is emptied into a drum from painting guns before the guns are cleaned in a gun washer that purifies and recycles wash solution.

Waste Sequence Number: 3416768
Sequence Number: 1
Comments: A-7. When we teach chemistry, we have the students perform experiments in lab. After lab is over, there are spent chemicals. This is recurrent because we teach chemistry every quarter.

quarter, so spent process chemistry is a recurrent waste this stream is inorganic waste that does not always federally designate but would be toxic to fish (Washington State waste). Several unopened containers of chemicals we decided not to use were shipped as well to reduce inventory hazard.

Waste Sequence Number: 3416772
Sequence Number: 1

Comments: A-7. When we teach chemistry, we have the students perform experiments in lab. After lab is over, there are spent chemicals. This is recurrent because we teach chemistry every quarter. this waste contains some organic solvents.

Waste Sequence Number: 3416773
Sequence Number: 1

Comments: A-7. laboratory waste, magnesium
Waste Sequence Number: 3416774
Sequence Number: 1

Comments: A-8. Aviation places absorbent pads under engines to catch fluid leaks. These are managed as hazardous waste because we believe the mixture of fluids would fail the fish toxicity test.

Waste Sequence Number: 3416775
Sequence Number: 1

Comments: a7, when an experiment results in an acid or base waste that is aqueous and doesn't contain any metals or other regulated constituents (is non-toxic except for pH), we neutralize the waste and dispose of it under treatment by generator and permission by King County metro.

Waste Sequence Number: 3416776
Sequence Number: 1

Comments: B-2. The answer is actually "both" However, after we concentrate dilute aqueous wastes by evaporating off most of the water, we lab-pack these wastes for shipment with our other chemistry wastes. All shipped wastes are already reported previously on the report, and I can't find a better way to make turbowaste except this information on this part of the waste that is the pounds of waste that were treated by evaporation to reduce water content.

Comments:	A-7. We teach biology labs where specimens are dissected. This is a recurrent process that doesn't fit any of the process definitions listed. A-8. This is used specimens from dissection in biology lab. They are in 'Carosafe' preservative that contains some formalin
Waste Sequence Number:	3366197

Comments:	A-7 paint that is not sprayed onto cars or car parts is emptied into a drum from painting guns before the guns are cleaned in a gun washer that purifies and recycles wash solution.
Waste Sequence Number:	3366198
Sequence Number:	1
Comments:	A-7. When we teach chemistry, we have the students perform experiments in lab. After lab is over, there are spent chemicals. This is recurrent because we teach chemistry every quarter.

is inorganic waste that does not always federally designate but would be toxic to fish (Washington State waste). Several unopened containers of chemicals we decided not to use were shipped as well to reduce inventory hazard.

Comments: A-7. When we teach chemistry, we have the students perform experiments in lab. After lab is over, there are spent chemicals. This is recurrent because we teach chemistry every quarter.

Waste Sequence Number: 3366202
Sequence Number: 1

Comments: A-7. When we teach chemistry, we have the students perform experiments in lab. After lab is over, there are spent chemicals. This is recurrent because we teach chemistry every quarter. this waste contains some organic solvents.

Waste Sequence Number: 3366203
Sequence Number: 1

Comments: A-7. laboratory waste, magnesium alloys
Waste Sequence Number: 3366204
Sequence Number: 1

Comments: A-8. Aviation places absorbent pads under engines to catch fluid leaks. These are managed as hazardous waste because we believe the mixture of fluids would fail the fish toxicity test.

Waste Sequence Number: 3366205
Sequence Number: 1

Comments: a7, when an experiment results in an acid or base waste that is aqueous and doesn't contain any metals or other regulated constituents (is non-toxic except for pH), we neutralize the waste and dispose of it under treatment by generator and permission by King County metro.

Waste Sequence Number: 3366206
Sequence Number: 1

Comments: B-2. The answer is actually "both" However, after we concentrate dilute aqueous wastes by evaporating off most of the water, we lab-pack these wastes for shipment with our other chemistry wastes. All shipped wastes are already reported previously on the report, and I can't find a better way to make turbowaste accept this information on this part of the waste that is the pounds of waste that were treated by evaporation to reduce water content.

Waste Stream Comments:

CORB Waste Sequence Number: 146858
Comments: A-7. We teach biology labs where specimens are dissected. This is a recurrent process that doesn't fit any of the process definitions listed. A-8. This is used specimens from dissection in biology lab. They are in 'Carosafe' preservative that contains some formalin

Waste Sequence Number: 3298342
Sequence Number: 1

Comments: A-7 paint that is not sprayed onto cars or car parts is emptied into a drum from painting guns before the guns are cleaned in a gun washer that purifies and recycles wash solution.

Waste Sequence Number: 3298344
Sequence Number: 1

Comments: A-7. When we teach chemistry, we have the students perform experiments in lab. After lab is over, there are spent chemicals. This is recurrent because we teach chemistry every quarter.

Waste Sequence Number: 3298345
Sequence Number: 1

Comments: A-7. When we teach chemistry, we have the students perform experiments in lab. After lab is over, there are spent chemicals. This is recurrent because we teach chemistry every quarter.

Waste Sequence Number: 3298346
Sequence Number: 1

Comments: A-7: this is a recurrent waste because we teach chemistry each quarter, so spent process chemistry is a recurrent waste this stream is inorganic waste that does not federally designate but would be toxic to fish (Washington State waste).

Waste Sequence Number: 3298347

Comments: A-8. Aviation places absorbent pads under engines to catch fluid leaks. These are managed as hazardous waste.

Waste Sequence Number: 3298351
Sequence Number: 1

Comments: a7, when an experiment results in an acid or base waste that is aqueous and doesn't contain any metals or other regulated constituents (is non-toxic except for pH), we neutralize the waste and dispose of it under treatment by generator and permission by King County metro.

Waste Sequence Number: 3298352
Sequence Number: 1

Comments: B-2. The answer is actually "both" However, after we concentrate dilute aqueous wastes by evaporating off most of the water, we lab-pack these wastes for shipment with our other chemistry wastes. All shipped waste are already reported previously on the report, and I can't find a better way to make turbowaste accept this information on this part of the waste that is the pounds of waste that were treated by evaporation to reduce water content.

Waste Stream Comments:
CORB Waste Sequence Number: 142252
Comments: A-7. When we teach chemistry, we have the students perform experiments in lab. After lab is over, there are spent chemicals. This is recurrent because we teach chemistry every quarter.

Waste Sequence Number: 3235281
Sequence Number: 1
Comments: A-7. When we teach chemistry, we have the students perform experiments in lab. After lab is over, there are spent chemicals. This is recurrent because we teach chemistry every quarter. this waste contains some organic solvents.

Waste Sequence Number: 3235282
Sequence Number: 1
Comments: A-7. laboratory waste containing mercuric chloride

Waste Sequence Number: 3235283
Sequence Number: 1
Comments: A-8. Aviation places absorbent pads under engines to catch fluid leaks. These are managed as hazardous waste.

Waste Sequence Number: 3235284
Sequence Number: 1
Comments: a7, when an experiment results in an acid or base waste that is aqueous and doesn't contain any metals or other regulated constituents (is non-toxic except for pH), we neutralize the waste and dispose of it under treatment by generator and permission by King County metro.

Waste Sequence Number: 3235285
Sequence Number: 1
Comments: B-2. The answer is actually "both" However, after we concentrate dilute aqueous wastes by evaporating off most of the water, we lab-pack these wastes for shipment with our other chemistry wastes. All shipped wastes are already reported previously on the report, and I can't find a better way to make turbowaste accept this information on this part of the waste that is the pounds of water evaporated and not yet counted.

Waste Sequence Number: 3235286
Sequence Number: 1
Comments: A-7. gasoline contaminated by water and /or oil / fluids (drip-pans under engine rebuild projects) A-8. waste gasoline - contaminated

Waste Sequence Number: 3235273
Sequence Number: 1
Comments: A-7. We teach biology labs where specimens are dissected. This is a recurrent process that doesn't fit any of the process definitions listed. A-8. This is used specimens from dissection in biology lab. They are in formalin preservative

Waste Sequence Number: 3235274
Sequence Number: 1

Comments:	A-7. When we teach chemistry, we have the students perform experiments in lab. After lab is over, there are spent chemicals. This is recurrent because we teach chemistry every quarter. acidic and basic wastes are shipped in a shipment in separate labpacks, but have the same waste code D002 - so they are on the same line.

Waste Sequence Number:	2648394
Sequence Number:	1
Comments:	A-7: this is a recurrent waste because we teach chemistry each quarter, so spent process chemistry is a recurrent waste (but if I choose - spent chemicals or catalysts, it give me an error message) this dinitrophenol waste was combined with water by the hazardous waste hauler before transport to insure that it was not reactive.

Comments: used oil from aviation is not recycled due to contamination with other engine fluids. These engines are quite old and many leak, all leaks fluids are collected in drip pans and consolidated into a used oil container, however the mixture of engine oil, hydraulic fluids, and cooling fluids from the variety of engines we use in teaching renders this stream non-recyclable)

Comments: used oil from aviation is not recycled due to contamination with other engine fluids. These engines are quite old and many leak, all leaks fluids are collected in drip pans and consolidated into a used oil container, however the mixture of engine oil, hydraulic fluids, and cooling fluids from the variety of engines we use in teaching renders this stream non-recyclable)

Waste Management System Code: H141

Waste Stream Comments:
CORB Waste Sequence Number: 114466
Comments: A-3. only shipment on 9/12/08 contained silver (5 pound waste stream)
Waste Sequence Number: 1844220
Sequence Number: 1

Comments: A-7. collection of broken thermometers and manometers from science.
Waste Sequence Number: 1844230
Sequence Number: 1

Comments: A-7,A-9; our grounds director decided to stop using chemical products to manage our yards. These products both contained sodium metasilicate
Waste Sequence Number: 1844255
Sequence Number: 1

Comments: A-7, A-9, This was a drum of herbicide that our grounds team determined they would no longer use, it's not equipment, but a product that is discontinued...but this code seemed to be the closest fit. Since they are no longer going to use any herbicides, this is a non-recurrent waste.
Waste Sequence Number: 1844223
Sequence Number: 1

Comments: A-8. This is used specimens from dissection in biology lab. They are in formalin preservative.
Waste Sequence Number: 1844219
Sequence Number: 1

Comments: Question A-7. G09: This waste is from servicing solvent parts washer tanks.
Waste Sequence Number: 1844216
Sequence Number: 1

Comments: B-1. We are doing this much less due to a change in staff people, our new chem lab tech does not use TBG to neutralize wastes as frequently as our previous lab tech did. We are working with the new lab tech to make sure she does take advantage of this option when beneficial.
Waste Sequence Number: 1844231
Sequence Number: 1

Comments: used oil from aviation is not recycled due to contamination with other engine fluids. These engines are quite old and many leak, all leaks fluids are collected in drip pans and consolidated into a used oil container, however the mixture of engine oil, hydraulic fluids, and cooling fluids from the variety of engines we use in teaching renders this stream non-recyclable)
Waste Sequence Number: 1844225

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

US EPA Assessment, Cleanup and Redevelopment Exchange System (ACRES) is a federal online database for Brownfields Grantees to electronically submit data directly to EPA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

AIR SYNTHETIC MINOR

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
