SIGNATURE AND ENVIRONMENTAL PROFESSIONAL STATEMENT

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312.

I have the specific qualifications based on education, training, and experience to assess a property of the nature, history and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

1. SUMMARY OF CONCLUSIONS

Ramboll US Consulting, Inc. (Ramboll) was retained by Ardagh Glass Inc. (Ardagh) to perform a Phase I Environmental Site Assessment (ESA) of the property located at 5245 East Marginal Way South in Seattle, Washington (herein referred to as the “facility,” or the “site”). Ramboll’s assessment was conducted in connection with a potential lease of the site. The objective of the Phase I ESA, which was conducted in conformance with the scope and limitations of ASTM International’s *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* E1527-13 (the “ASTM Standard”), was to identify Recognized Environmental Conditions (RECs), as defined in the ASTM Standard (see Section 7). The scope of work for the Phase I ESA was expanded to include a qualitative evaluation of certain items that the ASTM standard considers “non-scope considerations” including the potential for the on-site existence of asbestos-containing materials (ACM), lead based paint, and radon based on building age, available information, and in the case of radon, publicly available database information.

1.1 Site Summary

United Western Supplies Company (United Western) leases and operates a warehouse and distribution facility for foundry products, equipment, parts and supplies (e.g., abrasive products such as blasting media; and abrasive equipment, parts and supplies) in Seattle, Washington. The site is currently owned by King County and has been since approximately the late 1930s. The site spans the north approximately half of a 4.67-acre parcel (King County Assessor’s Parcel Number [APN] 192404-9051; herein referred to as the “larger site parcel”) and is improved with an approximately 69,210-square-foot building built in 1919. The building currently consists of office space (approximately 1,500 square feet) and three approximately equally-sized warehouse bays numbered consecutively (e.g., Bay 1 through Bay 3) from east to west. A rail spur extends east to west along the southern side of the site adjacent to the site building. United Western first occupied the site in 1980 when they subleased the site from Utilities Warehouse. United Western continues to occupy the site to present day.

This area of Seattle is located in the Industrial Georgetown District and was originally part of the Duwamish River channel, and following the placement of fill material, the Industrial Georgetown District has historically been used for industrial purposes back to at least the early 1900s. According to historical records, the site was used for manufacturing, warehousing (e.g., food and auto storage) starting as early as 1929. The subsequent occupants of the site consist of mixed industry including various industrial warehousing and distribution operations, and manufacturers including autobody manufacturing (1935), paper container manufacturing including printing (approximately 1940-1960), transportation and trucking (1951-1966), storage/warehousing and distribution rental space (1955-1975), can warehousing (approximately 1966-1975), and warehousing and distribution of foundry and abrasives (approximately 1980-present).

1.2 Recognized Environmental Conditions

Ramboll performed a Phase I ESA of the site in conformance with the scope and limitations of the ASTM Standard. Any exceptions to, or deletions from, this practice are described in Section 6.2 of this report. This assessment has revealed no RECs in connection with the site.

1.3 Other Findings

Although not considered RECs, Ramboll identified the following notable other findings. The term “other finding” is not defined by ASTM; rather, Ramboll uses the term to connote areas of contingent risk that are not clearly defined by the ASTM Standard.

- **Past Site Development and Past Industrial Operations.** The site is located in the Industrial Georgetown District, where industrial activities have occurred since at least the early 1900s, when the adjacent Duwamish River was channelized and straightened (now called Lower Duwamish Waterway [LDW]), which included filling portions of the original Duwamish River. Based on Ramboll’s review of historical topographic maps and aerial photographs it appears that the current location of the site was in the historical channel of the Duwamish River, and the site was likely filled during the early 1900s. The source and quality of the fill material used is unknown. Based on Ramboll’s experience, fill material placed during this time period in the Seattle area often contains petroleum hydrocarbons and/or metals at concentrations that exceed current cleanup criteria established by the Washington Department of Ecology. Since at least the late 1920s, the site (as well as the adjacent southern half of the larger site parcel) has been used for various industrial purposes, including food and auto warehousing (1929); autobody manufacturing (1935); paper container manufacturing including printing operations (approximately 1940-1967); storage/warehousing and distribution rental space (1940-1970); transportation and trucking (1951-1966); and foundry and abrasives (approximately 1980-present). While there are no reported releases or database listings indicating impacts beneath the site, given the extended industrial history at the site and absent further information regarding the specific historical chemical use, chemical handling practices, and associated wastes, Ramboll cannot rule out the possibility that inadvertent spills or releases of chemicals or petroleum products or other hazardous materials may have occurred in the past. Further, without additional information on the source, quality, and quantity of fill material used at the site Ramboll cannot rule out the possibility of residual impacts to the site from fill material. The risk of widespread contamination is mitigated by the fact that facility personnel are not aware of any major spills or releases at the site and there are no floor drains in warehouse areas. There is no current regulatory scrutiny related to contamination matters at the site.
- **Potential Migration of Contamination from Off-site Properties.** The site is located in a heavily industrial area that has been developed since at least the late 1920s, and as a result it is also adjacent to and/or in the presumed downgradient direction from several off-site properties listed with open status on databases indicative of potential or known soil or groundwater contamination (e.g., Resource Conservation and Recovery Act [RCRA] Corrective Action [CORRACTS], leaking underground storage tank [LUST], SPILLS, Confirmed and Suspected Contaminated Sites List [CSCSL], and Hazardous Sites List [HSL]), including petroleum hydrocarbons (diesel and gasoline), base/neutral/acid organics, halogenated organics, and metals. Of note, the LDW Superfund Site is adjacent to the western side of the site (more detail below) and a release from a transformer occurred on the adjacent property to the south. No specific information confirming that off-site impacts have migrated or are suspected to have migrated to the site have been identified, and therefore, Ramboll does not consider this matter to be a REC. If contamination associated with off-site properties is found to have migrated onto the site, it is expected that any remedial activities would be the responsibility of the entities named in the listing or other designated responsible party and not the responsibility of a future lessor.
- **Lower Duwamish Waterway (LDW) Superfund Site Adjacent to the Site.** The LDW Superfund Site is located adjacent to the west side of the site. As a result, current and previous

tenants of the property, including United Western, and tenants of the neighboring properties appear to have been included in some preliminary reconnaissance work related to the LDW Superfund Site. As part of the investigations into the matter, summary reports of existing information/data gaps and Source Control Action Plans (SCAPs) were developed for properties along the LDW. According to the *Lower Duwamish Waterway RM 1.0 to 1.2 East (King County Lease Parcels) Source Control Action Plan* dated January 2011, no chemicals of concern were identified at the site or the larger site parcel, but additional site-specific conditions and operational information was needed in order to assess the potential for sediment impacts in the LDW, which include heavy metals, polychlorinated biphenyls (PCBs), and polycyclic aromatic hydrocarbons (PAHs). In 2012, United Western received and responded to a United States Environmental Protection Agency (USEPA) Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) Section 104(e) Request for Information letter titled *Answers To First Request For Information Pursuant To Section 104(E) Of CERCLA For The Lower Duwamish Waterway Superfund Site, Seattle, Washington*. Based on available information, United Western was not subsequently included among the Potentially Responsible Parties (PRPs) identified for the LDW Superfund Site. King County (the property owner), Port of Seattle, City of Seattle or Boeing Corporation are working with the USEPA and Washington State Department of Ecology (Ecology) to lead investigation and remediation of the LDW. As part of an effort to reduce contaminants in the LDW, total maximum daily load (TMDLs) have been applied to stormwater discharges into the LDW under the Clean Water Act (CWA) National Pollutant Discharge Elimination System (NPDES). United Western has not operated under an industrial stormwater discharge permit (ISGP) at the site; however future lessors of the property (dependent on operations) may be subject to an ISGP and TMDL discharge restrictions.

A discussion of historical RECs and de minimis conditions identified during this review (if any) is presented in Section 6.1.3 of this report.

1.4 Non-Scope Considerations

Ramboll identified the following findings that relate to non-scope considerations:

- **Asbestos Containing Materials.** Given the date of construction of the building at the site, it is possible that ACM are present in building materials. A formal asbestos survey has not been conducted at the facility. Ramboll conducted visual observations of the site and did not note presumed asbestos-containing material (PACM) (e.g., thermal insulation, surface coatings); however suspect ACMs (e.g., roofing materials, window sealants/caulking) were observed. The suspect ACMs that were observed by Ramboll appear to be deteriorated.
- **Lead-Based Paint.** Lead was a major ingredient in paint pigment prior to and through the 1940s. While other pigments were used in the 1950s, the use of lead in paint continued until the early 1970s. In 1978, the Consumer Products Safety Commission banned paint and other surfacing coating materials that are "lead-containing paint." Based on the construction date of the building in 1919, it is possible that lead-based paint was used historically on facility structures. Facility personnel knew of no lead-based paint on structures at the facility. Paint in the office areas appeared to be in good condition. Paint in the warehouse areas appeared to be in poor condition (e.g., cracking and peeling).
- **Radon.** Based on information included in the environmental database review, the site is located in an area categorized as Zone 3, which has average indoor basement radon levels less than 2 picoCuries per liter (pCi/L). USEPA's continuous exposure limit, which is the limit at which further

testing or remedial action is suggested, is 4.0 pCi/L. This USEPA continuous exposure limit applies to residential properties, not commercial.

2. INTRODUCTION

2.1 Scope of Work

Ramboll conducted a Phase I ESA of the site at 5245 East Marginal Way South, Seattle Washington. The Phase I ESA relied upon the references noted below and included the following tasks:

- A visit to the site by Chien-Ju Wu of Ramboll on September 24, 2020 to observe the exterior and interior features of the site and to identify the uses and conditions specified in Sections 9.4.1 through 9.4.4.7 of the ASTM Standard. In addition, Ramboll observed the adjoining properties from the site or adjacent public thoroughfares. Photographs taken during the site visit are presented in Appendix A.
- An interview during the site visit with Chuck McKeever, General Manager (initial hire at the site in 1999). The aforementioned individual is referred to herein as “facility personnel”. The facility personnel interviewed by Ramboll was identified by the site owner as having good knowledge of the uses and physical characteristics of the site.
- A review of information contained in federal and state environmental databases, as obtained from the sources noted below:
 - A radius report prepared by EDR (see Appendix B), which presents the results of searches of federal and state databases for the site, as well as properties near the site. The radius searched for each database, as well as the databases themselves, was selected in accordance with the ASTM Standard.
 - The USEPA Envirofacts database, which provides site information contained in multiple USEPA regulatory databases.
 - The Occupational Safety and Health Administration (OSHA) Establishment Search database, which provides site-specific information on OSHA inspections.
 - The Ecology Toxics Cleanup Web Reporting database, which provides information regarding active and inactive underground storage tanks (USTs), LUSTs, confirmed and suspected contaminated sites (CSCSL), and no further action (NFA) sites.
 - The Ecology Facility/Site Information System (FSIS) databases, which provides information regarding site address, geographic information, and Ecology interactions.
- A review of standard historical sources (included as Appendix C) and local agency inquiries, as defined in the ASTM Standard. The following resources were reviewed:
 - Readily available historical sources (as identified in Section 4.2 of this report and included as Appendix C) to develop a history of the previous uses of the site and surrounding area.
 - Local building permit information, as obtained via EDR’s Lightbox application.
 - Historical and site-specific information obtained from the Puget Sound Archives, which included property assessment information for the site. Ramboll also requested information from the City of Seattle Building Department (Building Department), the King County Assessor’s Office (Assessor), and the City of Seattle Fire Marshal’s Office (Fire Marshal); however, a response had not been received at the time this report was completed.
- A review of documents provided to Ramboll by facility personnel, including correspondence with regulatory agencies. Facility personnel and King County property representatives reported that, to

their knowledge, no Phase I ESAs or Phase II site investigations, environmental compliance audits, or similar investigations have previously been conducted for the site. However, a May 29, 1996 letter from United Western to King County's leasing supervisor indicates that a Phase I was completed at the site in 1992 and included collection of soil samples. In addition, a geotechnical report was reportedly prepared for the site in 2001. Copies of these reports were not readily available for Ramboll's review.

- A review of physical setting sources, as defined in the ASTM Standard, including:
 - The current United States Geological Survey (USGS) 7.5-minute topographic map that shows the area on which the site is located.
 - Geologic, hydrogeologic, or hydrologic sources as provided in the environmental database report.
- A search for environmental liens or other activity and use limitations (AULs) for the site, provided by the third-party database provider (as shown in Appendix D). Ramboll ordered the lien search using the site parcel number believed to be associated with the site, as obtained from the local tax assessor's office and other online resources. As of the date of this report, the lien search results have not identified liens associated with the site.
- A review of any information provided by the user of this assessment, including information consistent with Appendix X3 of the ASTM Standard. Pertinent information, if any, is discussed in the appropriate sections of this report.

This assessment was conducted in accordance with the methodology specified in ASTM Standard E1527-13, as agreed upon by Ramboll and Ardagh in September 2020. The standard ASTM scope was expanded to include a limited review of asbestos-containing materials, lead-based paint and radon presence.

2.2 Significant Assumptions

In conducting this review, no significant assumptions were made, except for the following:

- Site-specific field measurements or other detailed hydrogeological information was not publicly available or reasonably ascertainable. In the absence of such data, Ramboll has assumed that the flow direction of shallow groundwater beneath the site and in the local vicinity generally mimics surface topography. Therefore, in evaluating potential on-site impacts from off-site sources, those off-site facilities not located adjacent to or within one-quarter mile upgradient of the site are not considered to represent a significant concern to the site. This interpretation is based on the assumption that a hazardous material released to the subsurface generally does not migrate laterally within the unsaturated soil for a significant distance, although a hazardous material can migrate in the groundwater in a generally downgradient direction. There are, however, limits to this interpretation.

2.3 Reliance and General Limitations

This report has been prepared for the exclusive use of Ardagh and may not be relied upon by any other person or entity without Ramboll's prior express written permission.

This report is considered current only for a period of 180 days from the site inspection. The conclusions presented in this report represent Ramboll's best professional judgment based upon the information available and conditions existing as of the date of this report. In performing its

assignment, Ramboll must rely upon publicly available information, information provided by the client, and information provided by third parties. Accordingly, the conclusions in this report are valid only to the extent that the information provided to Ramboll was accurate and complete. This review is not intended as legal advice, nor is it an exhaustive review of site conditions or facility compliance.

Ramboll makes no representations or warranties, expressed or implied, about the conditions of the site.

Ramboll's scope of work for this assignment did not include collecting samples of any environmental media. As such, this review cannot rule out the existence of latent conditions including contamination not identified and defined by the data and information available for Ramboll's review; however, this report is intended, consistent with normal standards of practice and care, to assist the client in identifying the risks of such latent conditions.

The scope of work for this assessment did not include an asbestos survey or inspection. According to federal OSHA regulations (29 CFR §1910.1001) and the Model Accreditation Plan (MAP; 40 CFR Part 763, Subpart E, Appendix C), the inspection, testing, evaluation, and/or sampling of suspect asbestos-containing materials must be conducted by an accredited inspector; these activities were not performed as part of this environmental review. Comments in this report regarding the condition of building materials at the site, including presumed or suspect ACM, represent only Ramboll's observations at the time of the site visit and are not intended to be consistent with definitions regarding ACM condition in the Asbestos Hazard Emergency Response Act (AHERA) or in other federal or state asbestos regulations or industry standards.

Other issues considered outside the scope of the ASTM Standard and this review include lead in drinking water, wetlands, PCBs in building materials, cultural and historic resources, ecological resources, endangered species, fire safety, and high voltage power lines.

3. SITE DESCRIPTION

3.1 Site Setting

United Western leases and operates a warehouse and distribution facility for foundry products, equipment, parts and supplies (e.g., abrasive products such as blasting media and abrasive equipment, parts and supplies) at the site. The site is owned by King County and is located east of the LDW and south of downtown Seattle, in the Industrial Georgetown District, which is known for its heavy industrial history dating back the early 1900s (Figure 1). The site is developed with an approximately 69,210-square-foot building, which includes a two-story office area in the southeastern corner, and a single-story physical testing laboratory in the northeastern corner. The remainder of the building is divided into three warehouse and storage spaces (e.g., Bay 1 through Bay 3). A rail spur runs east-west along the southern side of the site adjacent to the site building (Figure 2). The facility also maintains an approximately 200-gallon propane above ground storage tank (AST).

The site occupies the northern approximately 2-acres of an approximately 4.67-acre parcel (“larger site parcel”; King County APN 192404-9051). The southern portion of the larger site parcel is associated with a different address (5409 Ohio Ave South) and is not included in Ramboll’s scope of work. However, information pertaining to the site has been found in documents associated with the larger site parcel. Therefore, information directly pertaining to the site, as well as to the larger site parcel as a whole was reviewed, and pertinent information has been incorporated, as necessary, into relevant sections of this report.

The primary site access is via East Marginal Way South and Ohio Avenue South at the eastern site boundary. One asphalt-paved parking area is present in the eastern portion of the site, and a small asphalt paved area (used for temporary empty drum storage) is located west of the building, separated from the LDW by large cement blocks. An active rail spur is located along the southern side of the site adjacent to the site building. The remaining portion of the site is occupied by the site building, which extends to the northern edge of the site. There are no on-site surface water bodies or stormwater management features. Stormwater percolates into the ground in unpaved areas (e.g., beneath the rail spur) or is directed via sheetflow onto East Marginal Way (eastern entrance). Along the western portion of the site, stormwater travels via sheetflow towards the LDW beneath a concrete block wall (and presumably infiltrates into the adjacent riverbank, which was not visible from the site). No discrete stormwater discharge points to the LDW were observed during the site visit.

Table 3.1 provides an overview of physical setting and utility information for the site.

Table 3.1: Physical Setting and Utility Information		
Conditions	Source	Description
Topography		
Elevation (above mean sea level)	USGS topographic map; Google Earth	Ranges from approximately 3 feet above mean sea level (AMSL) at the LDW shoreline on the western end to 5 feet AMSL near the eastern site boundary.

Table 3.1: Physical Setting and Utility Information		
Conditions	Source	Description
Topographic Gradient	USGS topographic map; visual observations	Relatively flat on site, with a gentle downward slope to the west towards the LDW shoreline. Regional topography slopes gently downward toward the LDW.
Local Land Use	Visual observations	The facility is located in a general industrial land use area. <u>North:</u> Paved alley way/driveway beyond which is Cadman (a sand and gravel distributor and Portland cement concrete manufacturer) and Lehigh Northwest (cement terminal operator). <u>East:</u> Ohio Street South which curves to meet East Marginal Way South beyond which is Lady Bug Espresso (a drive through coffee shop), Argo Blower and Manufacturing Co. (a manufacturer of industrial sheet metal, fans, and dust collector systems). <u>South:</u> JA Jack & Sons (limestone processor and distributor) <u>West:</u> Lower Duwamish Waterway Ramboll did not observe any conditions on adjacent properties that represent a potential contamination concern to the site.
Nearest Residence	Visual observations, EDR map review	Approximately 0.7 miles southeast of the site.
Hydrology		
Storm Water Runoff	Visual observations; Facility personnel	No storm drains were observed. Storm water percolates into the ground surface in unpaved areas (e.g., rail spur, riverbank beneath the concrete block wall along western boundary) or sheet flows onto adjacent paved surfaces (e.g., East Marginal Way South).
Nearest Surface Water Body to the Site	USGS topographic map; Visual observations	The LDW is located adjacent west of the site. The LDW generally flows to the north but is tidally influenced.
Flood Plain	FEMA*; Facility personnel	Facility personnel reported no known occurrences of flooding at the site. The site is not located within a 500-year flood zone.
Wetlands	NWI*; Visual observations	The LDW bank area adjacent west of the site is mapped on the NWI as containing wetlands. The mapped area was observed to contain large cement blocks and some vegetation during Ramboll's site visit.

Table 3.1: Physical Setting and Utility Information		
Conditions	Source	Description
Geology and Hydrogeology		
Presumed Direction of Shallow Groundwater Flow	Ecology 2011 LDW RM 1.0 to 1.2 East (King County Lease Parcels) Source Control Action Plan (SCAP)	Based on the proximity of the site to the LDW, which ultimately flows to the Puget Sound, shallow groundwater flow direction is likely to be west-southwest and tidally influenced (i.e., flow direction may be variable). According to the LDW SCAP, groundwater in the vicinity of the site generally flows to the west-southwest to the LDW, although local variations occur depending on subsurface features and geology and proximity to the tidal influence.
Depth to Groundwater	Ecology 2011 LDW RM 1.0 to 1.2 East (King County Lease Parcels) SCAP	According to the SCAP, groundwater was encountered at 7.5 feet below ground surface (bgs) as part of a 2001 geotechnical study completed at the site.
On-site Wells	Facility personnel; Visual observations	No production or monitoring wells.
Nearest Groundwater Supply Wells	Database report	Three federally registered wells are present between one-eighth of a mile and one mile of the site; one is registered as a public supply well. No private or municipal wells that may be used for water supply are identified within a mile of the site.
Geologic Conditions	NCSS*; Ecology 2011 LDW RM 1.0 to 1.2 East (King County Lease Parcels) SCAP	According to the SCAP, the site is underlain by approximately 6.5 feet of sandy fill which is underlain by loose silt present to a depth of approximately 10 feet bgs. Regional soils are somewhat excessively drained loamy sand with slow infiltration rates.
Site Utility Information		
Heating and Cooling Equipment	Facility personnel	The office area is heated with electric heaters and cooled by several wall-mounted air conditioning units. Facility personnel were not aware of the type of refrigerant used in the air conditioners. The warehouse is neither heated nor air conditioned.
Natural Gas Service	Facility personnel	According to facility personnel, natural gas is not used at the site, but the site building is provided with natural gas service.
Use of Fuel Oil for Building Heat	Facility personnel	No known current or former use of fuel oil for building heat.
Foam-based Fire Suppression System	Facility personnel	According to facility personnel, the site is not equipped with a built-in foam-based fire suppression system.

Table 3.1: Physical Setting and Utility Information		
Conditions	Source	Description
Water Supply	Facility personnel; Seattle Public Utilities Website	City of Seattle (Seattle Public Utilities), which obtains its water from the Cedar River Watershed and South Fork Tolt River Watershed in eastern King County.
Sanitary Sewer	Facility personnel; Seattle Department of Construction & Inspections Side Sewer Cards and Maps	City of Seattle (Seattle Public Utilities). According to a review of Seattle Department of Construction & Inspections Side Sewer Cards and Maps database, the sewer at the site was inspected by the City of Seattle Department of Engineering Maintenance Division in August and September of 1934. Thus, it appears that site has been connected to the sanitary sewer since at least 1934.
Septic Systems	Facility personnel	No identified current or former septic systems.
<p>Notes:</p> <p>FEMA = Federal Emergency Management Agency; NCSS = National Cooperative Soil Survey; NWI = National Wetlands Inventory</p> <p>* - Source was provided in the environmental database report.</p> <p>During the site visit, Ramboll walked or drove by the borders of the properties that are adjacent to the site. Ramboll did not enter the neighboring properties.</p>		

3.2 Current Use of Site

3.2.1 Current Operations

The site is currently used by United Western for storage, repackaging, and distribution of casting foundry equipment, parts, and supplies; abrasive products such as blasting media; foundry coating and binding agents; and abrasive equipment, parts, and supplies. United Western employs approximately nine individuals in the operation of facility. Operations at the site are conducted in one shift, five days per week.

- *Receiving* – Most of the materials used at the site, including foundry equipment, blast media, and binding and coating agents are received in super sacks, 55-gallon drums, 275-gallon totes, or pallets via two loading docks at the southeastern corner of the site building. Slag (a kind of abrasive blast media) is received via rail spur adjacent to the south of the site building.
- *Warehousing* – The majority of the site building consists of a single-story warehouse area, which is divided into three separate bays with a large industrial sliding door between each bay. Bay 1 is predominantly used to store dry and inactive foundry materials including shot blast media, vibratory medium, and various sizes of casting foundry equipment. Bay 2 is used to store flammable and corrosive materials including various binding and coating agents (e.g., NOVASET HK+ BINDER, PEP SET X I 1000 BINDER, isopropyl alcohol). During the site visit, Ramboll observed approximately twelve 275-gallon totes and approximately sixty 55-gallon drums containing flammable/corrosive reagents in the Bay 2 warehouse. According to the facility

personnel, site operations do not include repackaging of hazardous reagents. Bay 3 is used to store slags and an air compressor for warehouse operation.

- *Repackaging* – Abrasive blast media (slags) is received by railcar and is repackaged into super sacks via a conveyance belt, a hopper, and bagging machines in Bay 3.
- *Ancillary Operations* – United Western performs packaging, shipping and administrative operations, none of which involve the use of significant quantities of chemicals. In addition, United Western conducts the following activities in support of the major operations:
 - Management of facility trash in two open-top dumpsters positioned east and west of the building.
 - Operation of a quality control physical laboratory, in which physical tests are conducted.
 - Transfer of raw materials and finished products using four propane-powered forklifts; the units are serviced on-site by outside contractors.
 - Operation of three pump rooms and three small air compressors for the facility fire suppression system.

Maintenance-related chemicals and janitorial supplies, including detergents, and sanitizers, are used in small quantities (containers of one gallon and smaller). Facility personnel knew of no use of chlorinated solvents at the site, and the use of such chemicals would not be expected based on the nature of current site operations; however, the facility personnel has only been with United Western since 1999, and chemical use prior to that time is unknown. According to facility personnel, United Western's operations have remained generally consistent during its period of occupancy at the facility.

4. REVIEW OF PUBLIC RECORDS AND OTHER INFORMATION SOURCES

4.1 Environmental Regulatory Database Review

Ramboll contracted with EDR in September and October 2020 to prepare of summary of listings in federal and state agency databases for the site and facilities within applicable radii of the property, as specified by the ASTM standard.¹ A copy of the environmental database search report is presented in Appendix B.

4.1.1 Database Review for Site

Ramboll reviewed the results of the state and federal environmental database searches performed by the third-party database provider (see Appendix B) and also reviewed information available in the databases listed in Section 2.1. United Western Supply is listed at the site address in the Resource Conservation and Recovery Act (RCRA) database as a non-generator of hazardous waste. The site was formerly listed as a large quantity generator (LQG) of hazardous waste in April 2000, December 2004, and January 2005. Waste included ignitable materials, metals (cadmium, chromium, lead), spent non-halogenated solvents, Washington state extremely hazardous waste and Washington state dangerous waste. United Western Supply was identified as a non-generator 2001-2003. No violations were reported. Facility personnel were not aware of previous hazardous waste disposal events. The site was not listed on other database searches.

4.1.2 Database Review for Adjoining Properties

Based on a review of the environmental database search report, Ramboll identified the adjoining properties listed in Table 4.1 on databases indicative of a potential contamination concern.

¹ EDR uses the term "radii" to refer to the ASTM terminology "approximate minimum search distance" in the environmental database report.

Table 4.1: Contamination-Related Database Listings for Adjoining Properties ¹

Listing Name or Address and Location Relative to the Site	Summary of Information Contained in Database	Ramboll's Comments
<p>Cadman Seattle Inc (also known as Cadman and Lehigh Northwest) 5225 E Marginal Way S (Adjoining to the north)</p>	<p>Cadman is listed in the WA UST database (Facility ID 70313617) for a steel single walled 5,000 to 9,999-gallon tank without spill detection and a permit expiry of 7/31/2020.</p> <p>In addition, Cadman is listed on the WA SPILLS (facility ID 110261) database for a 2-gallon hydraulic oil spill from a utility vehicle in 2020 (1.5 gallons recovered), a 10-gallon hydraulic oil spill to impermeable containment in 2009 (recovered quantity not reported).</p> <p>Cadman is also listed on the RCRA NONGEN/NLR database related to the disposal of hazardous waste. Previously Cadman was listed as a small quantity generator of hazardous waste in 1993, a conditionally exempt small quantity generator of hazardous waste from 1996-2003, and a non-generator of hazardous waste in 1994, 2004 to 2016, 2018 and 2019. A Focused Compliance Inspection was conducted in 2013 and no violations were found.</p>	<p>Based on review of the Lower Duwamish Waterway RM 1.0 to 1.2 East (King County) SCAP (dated January 2011, two USTs that contained solvent and waste oil were removed from the Cadman and Leigh Northwest property in 1989. Soil sample results for volatile organic compounds (VOCs) and total petroleum hydrocarbons (TPH) were below Ecology cleanup levels. According to the SCAP, three additional USTs containing unspecified petroleum products were also removed, but no other information was provided (these historic USTs were not otherwise identified in regulatory database searches). Previous operations included creosote pole treatment and vehicle maintenance. Based on the direction of groundwater flow in the area, impacts to this property could present a contamination concern to the site. This matter is further discussed in Section 6.1 of this report.</p>

Table 4.1: Contamination-Related Database Listings for Adjoining Properties ¹		
Listing Name or Address and Location Relative to the Site	Summary of Information Contained in Database	Ramboll's Comments
LVI Environmental Service Inc 5409 Ohio Ave S (Adjoining to the south; i.e. southern portion of the larger site parcel)	The property is listed on the WA SPILLS database (Facility ID 623084) for a release of 400 gallons of mineral oil on October 25, 2010. According to the listing, the release impacted soil and surface water.	Because the database listing does not indicate the extent of contamination or remedial actions taken, Ramboll submitted a FOIA request to Ecology regarding the listing. Ramboll has obtained information from Ecology that indicates the SPILLS listing corresponds to an incident involving 200 to 400 gallons of transformer oil released to soil and possibly the storm water system. The PCB content of the transformer oil was not identified. The ERTS report also notes that the release was caused by vandals who accessed the yard and damaged the transformer. At the time the spill was documented (October 25, 2010), the spill was in the process of being cleaned up. No further information regarding the listing has been identified. This matter is further discussed in Section 6.1 of this report.

Table 4.1: Contamination-Related Database Listings for Adjoining Properties ¹		
Listing Name or Address and Location Relative to the Site	Summary of Information Contained in Database	Ramboll's Comments
<p>JA Jack & Sons 5427 Ohio Avenue South (Adjoining the site parcel, to the south)</p>	<p>JA Jack & Sons is listed on the Underground Injection Control (UIC) database (site number 31909) with active status for a storm water infiltration trench with perforated pipe. The USEPA well type is "5H1 – Stormwater" (code previously known as 5D2), which can receive storm water from paved areas (e.g., parking lots, streets, residential subdivisions, building roofs, and highways). According to the EDR report, the system was constructed January 1, 2003 for non-municipal storm water.</p> <p>JA Jack & Sons is listed on the UST database as having one current registered diesel fuel UST with capacity between 10,000 and 19,999 gallons. According to the listing, the tank was installed in 1981. The tank is a single walled, steel tank with impressed current and interior lining for corrosion protection. Release detection is monitored through manual inventory control (measured daily) with a spill bucket/spill box for spill prevention and an automatic shutoff in the fill pipe for overflow protection. Piping associated with the UST is corrosion resistant, single walled, fiberglass. The listing indicates that a Safe Suction pumping system is used and there is no leak detection. The UST permit for JA Jack & Sons expires 12/31/2020.</p>	<p>According to documents available through Washington Ecology's online records, the UIC registration is active. The site ID is 31909 and the authorization status is "grandfathered". According to Ecology's online UST database, the UST is active.</p> <p>The UIC and UST listings do not suggest a contamination concern to the site.</p>

Table 4.1: Contamination-Related Database Listings for Adjoining Properties ¹		
Listing Name or Address and Location Relative to the Site	Summary of Information Contained in Database	Ramboll's Comments
<p>Lower Duwamish Waterway (Adjoining to the west)</p>	<p>The LDW is adjacent to the western side of the site and is identified on the National Priorities List (i.e., is a Superfund Site). The database listing was not captured in the EDR database search.</p>	<p>According to the LDW Ecology webpage, USEPA and Ecology are collaborating to cleanup and conduct source control to prevent recontamination of sediments in the LDW. USEPA is leading the sediment investigation and Ecology is leading the source control portion of the work. The first phase of remedial investigation identified seven high priority area for sediment cleanup and initial source control has focused on four areas. The site is not identified as a one of the seven areas.</p> <p>According to information available on the Ecology website and in the Toxics Cleanup Program Web Reporting database, there is confirmed contamination in the LDW above cleanup levels in sediment for thirteen contaminants/constituents: arsenic, base/neutral/acid organics, bioassay benthic failures, inorganic conventional contaminants (unspecified), dioxin/dibenzofuran compounds, halogenated organics, Priority Pollutant metals, pesticides (unspecified), petroleum products (unspecified), phenolic compounds, PCBs, PAHs, and tributyltin. In addition, organic conventional contaminants (not otherwise specified), are suspected in sediment in the LDW.</p> <p>Although United Western was not identified as a PRP for the contamination at the LDW Superfund Site, work on the LDW is ongoing (as recent as 2020).</p> <p>This matter is further discussed in Section 6.1 of this report.</p>

Table 4.1: Contamination-Related Database Listings for Adjoining Properties ¹		
Listing Name or Address and Location Relative to the Site	Summary of Information Contained in Database	Ramboll's Comments
<p>Notes:</p> <p>¹ Ramboll's analysis of adjoining properties was based on observations made during the site reconnaissance (as discussed in Table 2) and location information for off-site listings as presented in the database report. Also, for purposes of this analysis, Ramboll considers as "adjoining" properties that are adjacent, even if separated by a road or other physical barrier. Ramboll has not included a discussion of compliance-related databases in this table, as Ramboll considers it unlikely that off-site properties listed on compliance-related databases without indication of a release or chemical mishandling represent a potential risk for contamination to the site.</p> <p>² The RGA databases are EDR proprietary databases that identify prior versions of the database in which a property was listed.</p>		

4.1.3 Database Review for Other Surrounding Properties

Ramboll has identified a number of non-adjoining properties that represent a potential contamination concern to the site due to past releases on these sites and possible migration onto the site, as detailed in Table 4.2.²

² In its evaluation, Ramboll considered only non-adjoining sites listed on databases indicative of contamination, with open status, located potentially upgradient of the site to represent a potential risk for contamination to the site (as the issuance of regulatory closure suggests that impacts to the site from the noted off-site property are unlikely).

Table 4.2: Summary of Environmental Database Listings for Surrounding Properties that Represent a Potential Contamination Concern		
Listing Name or Address and Location Relative to the Site	Summary of Information Contained in Database	Ramboll's Comments
<p>Loomis Armored Transport and Loomis Fargo & Co 5200 E Marginal Way S (approximately 0.019 mile to the north)</p>	<p>This property is listed on the following databases: HSL, CSCSL, LUST, SPILLS, and Petroleum Technical Assistance Program (PTAP).</p> <p>The Loomis Armored Transport property appears to be managed by the Pollution Liability Insurance Agency (PLIA) and is listed on the PTAP database as in progress.</p> <p>The Loomis Armored Transport property is also listed on the CSCSL and HSL databases (FS ID 67737549) for petroleum (gasoline, diesel, and "other") and benzene contamination suspected in groundwater in association with a LUST (ID 10135). The site was assigned a rank of 5 (lowest assessed risk). Sites are ranked by Ecology from 1 to 5 with 1 being the highest risk and 5 being the lowest risk relative to other properties that are ranked. The CSCSL and LUST listings indicate that cleanup has started.</p> <p>Other names for this property are: LOOMIS ARMORED CAR SERV, LOOMIS ARMORED INC, LOOMIS ARMORED US LLC, Loomis Fargo & Co</p>	<p>Based on a review of documents available on the PTAT website, it appears that as of March 2020, PLIA determined that further remedial action at the Loomis Armored Transport property is needed along with additional investigation to characterize the extent of soil and groundwater impacts. A proposal for additional investigation work at the property was submitted in September 2020.</p> <p>This matter is further discussed in Section 6.1.</p>

<p>Table 4.2: Summary of Environmental Database Listings for Surrounding Properties that Represent a Potential Contamination Concern</p>		
<p>Listing Name or Address and Location Relative to the Site</p>	<p>Summary of Information Contained in Database</p>	<p>Ramboll's Comments</p>
<p>National Transfer 5265 Utah Ave S and 28 S Brandon Street (approximately 0.05 miles to the north)</p>	<p>The National Transfer property is listed on the ICR, HSL, CSCSL, and LUST databases.</p> <p>National Transfer is in the HSL database (listed as risk level 5—lowest assessed risk) (FS ID 73845797) for confirmed petroleum (diesel and gasoline) contamination above Ecology's cleanup levels in soil and suspected contamination of groundwater with benzene and petroleum (gasoline and "other") in association with a gasoline LUST that was listed in the database in 1990. Cleanup has started.</p> <p>Other names for this property are: NATIONAL TRANSFER INC, NATIONAL TRANSFER INC SEATTLE.</p>	<p>According to documents available through Ecology's Toxics cleanup website, this listing is associated with 28 S Brandon Street (the current Seadrumar Recycling facility) where two USTs were removed in 1990. Elevated concentrations of petroleum hydrocarbons (diesel and gasoline) were identified in soil associated with former USTs. Impacted soils were reportedly remediated at the time, but the method was not specified. Additional limited soil and groundwater sampling was conducted in 1995, results of this sampling indicated petroleum, benzene, toluene, ethylbenzene, xylenes, metals, and VOCs were below Ecology cleanup levels or not detected above laboratory reporting limits, however this property has not received regulatory closure. This matter is further discussed in Section 6.1.</p>

Table 4.2: Summary of Environmental Database Listings for Surrounding Properties that Represent a Potential Contamination Concern

Listing Name or Address and Location Relative to the Site	Summary of Information Contained in Database	Ramboll's Comments
<p>Environmental Transport Inc. and Dawson Street Land Co. 54 S Dawson St (approximately 0.13 miles to the northeast)</p>	<p>Dawson Street Land Co. is listed on the CSCSL and HSL database (listed as risk level 5 —lowest assessed risk) (FS ID 36716241) for petroleum (diesel and "other") contamination confirmed above Ecology's cleanup levels in soil. Petroleum (diesel) impacts are suspected in groundwater. Impacts to soil and groundwater appear to be associated with a LUST notification in 1992. Cleanup has started.</p> <p>Other names for this property are: DAWSON STREET LAND COMPANY, Environmental Transport Inc</p>	<p>According to documents available through Ecology's Toxics cleanup website, this property is a truck depot and warehouse, and there were four 10,000-gallon diesel USTs removed from the property in 1992. At that same time, two heating oil USTs (a 500-gallon and a 3,500-gallon) were also removed. Additionally, a 20,000-gallon and two 8,000-gallon used oil tanks were closed in place. Despite some excavation efforts associated with the tank removals and closures, soils impacted with petroleum hydrocarbons at concentrations above cleanup levels remain at the property. Groundwater monitoring wells were reported to have been installed at the property, but according to Ecology's Site Hazard Assessment, groundwater reports were not available for Ecology's review. Ecology noted that groundwater flows east (based on the surface topography). Groundwater elevation data was not included in Ecology's summary. This matter is further discussed in Section 6.1.</p>

<p>Bobs Texaco Service 5304 1st Ave South (approximately 0.19 miles northeast of the site)</p>	<p>Bob's Texaco Service Station (Bob's Texaco) is listed on the HSL, CSCSL, and LUST databases.</p> <p>This property is in the HSL and CSCSL databases (listed as risk level 5—lowest assessed risk) (FS ID 47157762) for confirmed petroleum (gasoline) contamination above Ecology's cleanup levels in soil and groundwater associated with a gasoline LUST that was listed in the database in 1990. Cleanup has started.</p> <p>Other names for this property are: Bob's Texaco Station, BOBS TEXACO SERVICE.</p>	<p>According to documents available through Ecology's Toxics cleanup website, there were 5 USTs previously located on this property in the 1990s: 500-gallon waste oil UST, two 8,000-gallon gasoline USTs, a 3,000-gallon inactive gasoline UST, and a 3,000-gallon inactive diesel UST. These 5 USTs were removed in 1995. Two unidentified USTs were suspected to have been in the southwest corner of the property. Subsequent subsurface investigations indicated that petroleum impacted soils (with concentrations above Ecology cleanup levels) remained post tank removal and diesel range organics (DRO) were present in groundwater above Ecology cleanup levels. In 2017, additional investigations indicated that gasoline range organics (GRO), DRO, and benzene are present in the soils at concentrations that exceed Ecology's cleanup levels (Model Toxic Control Act [MTCA] Method A), and DRO, 1-methylnaphthalene, and 2-methylnaphthalene are present in the groundwater at concentrations that exceed Ecology's cleanup levels (MTCA Method A). An April 2017 groundwater potentiometric map indicates that shallow groundwater flow at Bob's Texaco is to the west-southwest (toward the United Western site). A 2018 Supplemental Investigation Report indicated that the lateral extent of the impacts to soil and groundwater had not been characterized and that based on the concentrations of petroleum hydrocarbons detected in groundwater samples collected in 2017, a source of petroleum hydrocarbons in the saturated soil in the vicinity of the former USTs may be present. This matter is further discussed in Section 6.1.</p>
<p>Multiple listings for properties with known or suspected contamination</p>	<p>There are four properties listed on the CORRACTS, SEMS-Archive CORRACTS, CSCSL, and/or the HSL for known or suspected contamination of soil and or</p>	<p>For these listings, cleanup is still ongoing or the extent of the impacts (if any) is not known (e.g., impacts have not been delineated and/or</p>

Table 4.2: Summary of Environmental Database Listings for Surrounding Properties that Represent a Potential Contamination Concern		
Listing Name or Address and Location Relative to the Site	Summary of Information Contained in Database	Ramboll's Comments
greater and 0.25 miles upgradient of the site	groundwater (GE Aviation, Art Brass Plating Inc., Draper Associates, and Burlington Environmental LLC Georgetown [PSC Environmental Services]). Contaminants of concern include base/neutral/acid organics, halogenated organics, "other" halogenated organics, petroleum (diesel), unspecified petroleum products, Priority Pollutant metals, non-halogenated solvents, phenolic compounds, PCBs, and/or PAHs. In addition, there are approximately 5 properties potentially upgradient of the site that are listed on the Washington State ICR database.	hydraulically contained.) The listings are further discussed in Section 6.1 of this report.
Multiple listings within 0.5 miles upgradient of the site	There are also 12 properties potentially upgradient of the site that are listed on the SWF/LF database. All of these facilities are listed as material recovery facility, recycling facility, or municipal solid waste exporter. No additional information is provided.	The listings on the SWF/LF database (other than those mention above) do not suggest a contamination of concern to the site.

The database report indicates that poor or inadequate address information was available for several properties located in the vicinity of the site; therefore, these properties could not be readily mapped by the third-party provider. Because the location of these properties with respect to the site could not be evaluated, Ramboll is limited in its ability to express an opinion regarding the potential for impact to the site from these properties. It was beyond the scope of this review to accurately locate each of the unmapped properties identified by the third-party provider; however, Ramboll reviewed the list of unmapped properties and verified that none appeared to be adjacent to the site.

4.2 Historical Uses of the Site and Adjacent Properties

4.2.1 Past Uses of the Site

From 1894 to at least 1909, the site was undeveloped and located within the former Duwamish River. The site was filled and developed by at least 1919 with the existing site building, and by 1929, the site was occupied by Seattle Ware House Company for canned salmon and auto storage. Subsequent site uses include manufacturing (autobody and paper carton; at least mid-1930s to at least 1967), transportation and trucking (approximately 1951 to 1966), and warehousing/distribution (at least 1940s to present.) United Western first occupied the site in 1980 when they subleased the site from Utilities Warehouse. United Western continues to occupy the site to present day.

A summary of Ramboll’s key observations from the available historical sources is presented in Table 4.3.

Table 4.3: Summary of Key Observations from Historical Sources for the Site	
Historical Source	Key Observations Regarding Site History
<p>Sanborn Maps (1929, 1949, 1967)</p>	<p>The 1929 map the site building is depicted with Seattle Ware House Company with Canned Salmon Storage) in Bays 2 and 3 (middle and westernmost bays) and Dealers Auto Storage in Bay 1 (easternmost bay). The map specifically indicates “no gasoline” within Bay 1.</p> <p>The 1949 Map depicts Kieckhefer Container Corporation Paper Carton manufacturing as the occupant of the site building. According to the map notes, Bays 2 and 3 (middle and westernmost bays) were used for warehousing and printing was conducted in Bay 1 (easternmost bay).</p> <p>There are no notable changes between the 1949 and 1967 maps.</p> <p>No concerns are noted.</p>
<p>Aerial Photographs 1936, 1943, 1953, 1956, 1965, 1969, 1977, 1980, 1985, 1990, 2006, 2009, 2013, 2017 Satellite Imagery ¹ 1990-2019</p>	<p>The site appears to be developed with the same building/structure and access roads from the first aerial photo in 1936 to present. A rail spur is located adjacent to the south side of the site building. From at least 1936, the shoreline west of the warehouse appeared to be occupied by a pier that was used for storing large containers and accommodating moored vessels until at least 1956. By 1965, the pier west of the site was not present and shoreline pilings were visible, and a narrow boardwalk appears to extend from the northwest corner of the site into the LDW to another narrow boardwalk/walkway extending northwest-southeast in the water. In subsequent aerial photos (1969 through at least 1990), cargo vessels appeared moored to a narrow boardwalk in the LDW. By 2006, the boardwalk is no longer depicted. A small portion of the of the shoreline adjacent to the southwest corner of the building appears to be filled in and under construction by 2006. By 2009. This area appears to be paved asphalt. The site building extends across most of the site, and other site features were not visible or discernable from aerial photos.</p>
<p>Topographic Maps 1894-2014</p>	<p>From 1894 to at least 1909, the site was undeveloped and located within the former Duwamish River. By 1968, the location of the LDW is west of the site and appears channelized. The site is improved with a single structure (consistent with the current warehouse). The 1968 map includes indication of a narrow boardwalk extending from the northwest corner of the site into the LDW to another narrow boardwalk/walkway extending northwest-southeast in the water.</p>
<p>City Directory Abstracts (1930, 1935, 1940, 1944, 1951, 1955, 1960, 1966, 1970, 1975, 1980, 1986, 1990, 1996, 2005, 2009, 2017)</p>	<p>The following individuals or companies occupied the site: several individuals (1930); autobody manufacturing (1935); paper container manufacturing (approximately 1940-1960); storage/warehousing, trucking-motor freight, and distribution rental space (1951-1966); can warehousing (approximately 1966-1970); and foundry and abrasives equipment sales and distribution (approximately 1986-2017).</p>

Table 4.3: Summary of Key Observations from Historical Sources for the Site	
Historical Source	Key Observations Regarding Site History
King County Department of Assessments website (King County iMap)	According to the King County iMap website, the larger site parcel is 4.67 acres in size, and was developed with the existing site building in 1919. The site is zoned IG1 U/85 (General Industrial 1, maximum building height of 85 feet). The building is listed as approximately 69,210 square feet. Building features include sprinklers and no heating. Sales history includes a 1999 transaction from "Utilities Warehouse % W Goodwin" to "ICONCO INC %Jefferey J Slotta Gen Mgr" for \$4,000. Several other listings associated with this parcel (i.e., the larger site parcel) appear to be related to the southern half of the parcel adjacent to the site. Specifically, the website indicates that the larger site parcel received a permit in June 2016 for the demolition of three vacant commercial buildings down to the floor slab and foundation. In addition, the sales history information indicates that buildings at the site were sold to ICONCO by Utilities Warehouse in 1999.
Lien search report (obtained through EDR)	No liens are associated with the site. A Covenant Geologic Hazard Area activity and use limitation (AUL) was identified for the site.
Ecology 2011 LDW RM 1.0 to 1.2 East (King County Lease Parcels) SCAP	Utilities Warehouse subleased the site to United Western Supply in September 1980.
Puget Sound Archives	Based on historical documents obtained through a FOIA request to the Puget Sound Archives, King County has owned the site since at least the 1930s.
City of Seattle Building Department	A response had not been received from the Building Department at the time this report was written.
Notes: ¹ In addition to aerial photographs provided by the third-party provider, Ramboll viewed historical satellite imagery provided via Google Earth and HistoricAerials.com. Printed copies were not obtained, and imagery dates were not independently verified.	

4.2.2 Past Uses of Adjacent Properties

The properties in the vicinity of the site have been used for industrial purposes since at least the late 1920s. Generally, the area around the site continued to be developed from the early 1900s into present day with industrial service providers, equipment manufacturers, building supplies and transportation industry services and products. Notable operations on surrounding properties include a boiler and structural steel shop (Western Engineering Corporation and Seattle Boiler Works, adjacent to the north in the 1929, 1949, 1967 Sanborn maps, with a second boiler shop with an earth floor by 1967), a road machinery and trucking equipment storage yard (to the north in the 1949 and 1967 Sanborn maps), an airplane parts storage (Boeing Airplane Company, adjacent to the south in the 1929 Sanborn maps), a lumber transport yard (south of the site in 1929 and 1949 Sanborn maps), an auto specialty warehouse (General Petroleum Corporation, adjacent to the south of the site in 1949 Sanborn map), and a water pipe fittings shop (Western Utilities, adjacent to the south on the 1967 Sanborn map). Although not depicted on the Sanborn maps, Argo Blower and Manufacturing Company (blowers and exhaust fan manufacturers) is located southeast of the site (across East

Marginal Way South) and has operated since 1935, according to city directory information. In addition, previous operations at the property adjacent to the north of the site included creosote pole treatment and vehicle maintenance, according to the Lower Duwamish Waterway RM 1.0 to 1.2 East (King County) SCAP dated January 2011.

4.3 Review of Local and State Agency Information

Ramboll visited or otherwise contacted local governmental agencies and regulatory bodies for information relating to the site. An overview of the findings of this review is presented in Table 4.4.

Table 4.4: Local Agency Information for the Site	
Agency Contacted / Document Reviewed	Information Obtained
Title Search Report	A title search provided by EDR did not identify title information.
City of Seattle Fire Marshal's Office	Records from the Seattle Fire Department included four notices of violation for the site, three (one each in 2007, 2011, and 2013) were related the sprinkler system in the site building. One notice of violation from July 22, 2009, indicated that the facility needed to contact the Fire Marshall's office (FMO) to update/change their permit amounts to be in compliance with materials storage.
King County Environmental Health Department (EHD)	A response had not been received from the EHD at the time this report was written.
Washington State Department of Ecology	<p>According to documents from Ecology, there is an Incident Detail Report from the Spill Program Integrated Information System for the site dated July 8, 2020 (Environmental Report Tracking System#: 699280.) According to the documentation, an empty hopper derailed at the United Western Supply. The description indicates that no discharge occurred, and that the incident happened as cars were being moved around the yard and the reason for the derailment is not known. There is also a letter dated September 27, 1987 from United Western to Ecology that indicated that United Western may occasionally exceed the Threshold Planning Quantity for phenol for three weeks of the year and that the facility may be subject to Superfund Amendments and Reauthorization Act (SARA) reporting requirements.</p> <p>Files from Ecology also included several Incident Detail Reports related to the adjacent property to the south (5409 Ohio Avenue South). These included the 400-gallon release of transformer oil October 25, 2010 (discussed in Section 4.1.2) and a release of an additional 10 gallons of transformer oil to pavement and the stormwater catch basin on October 25, 2010 due to vandalism (ERTS#: 623084). The notes indicate that the spill was 5 gallons of PCB free oil and a vactor truck would be hired to clean up the release to the catch basin. The information obtained from Ecology is not indicative of impacts to the site.</p>

Table 4.4: Local Agency Information for the Site	
Agency Contacted / Document Reviewed	Information Obtained
Seattle Building Department	Records provided by the Seattle Building Department included permit applications for the site. These applications were for interior changes to the building (1980); heating, ventilation, and cooling system installation (1980); roof repairs (1991); and earthquake damage repair on the north and west walls and the roof (2002). Most of the records received included documentation related to the demolition of three buildings on the property adjacent to the south (5409 Ohio Avenue South) that have been demolished.

4.4 Previous Environmental Assessments and Activities

Based on a review of historical site documents and interviews with facility personnel, no UST closures, environmental sampling, or remediation activities are known to have been conducted at the site. No previous environmental assessments were available for review.

However, in a letter to King County Property Services from United Western dated May 1996, a Phase I Environmental Audit was completed in conjunction with the purchase of United Western by Fairmont Minerals in 1992. The letter indicates that soil samples were collected and analyzed, but also notes that the “information is sketchy.” The letter also suggests that the soil sampling indicated that United Western’s operations had not impacted the site leased from King County. Neither a copy of the 1992 Phase I nor the soil sampling results were readily available for Ramboll’s review.

4.5 User-Provided Information

Ramboll provided Ardagh with a User Questionnaire (consistent with Appendix X3 of the ASTM Standard) that requested information relating to environmental liens, activity use limitations (AULs), specialized knowledge of the property, property value diminution, chain-of-title, or any other commonly known or obvious indications of contamination, that was not otherwise provided to Ramboll. The user has not returned the User Questionnaire or otherwise provided the information requested in the User Questionnaire.

5. SITE RECONNAISSANCE

5.1 Methodology and Limiting Conditions

Ramboll conducted a visit to the site on September 24, 2020. During the site visit, observations of both the interior of the building and exterior portions of the site were made to evaluate if any RECs, as defined in Chapter 7, are present. Ramboll did not observe the roof of the building. In addition, the three pump rooms for the fire suppression system were not accessible during the site visit.

5.2 General Site Setting and Observations

Ramboll made observations concerning the interior and exterior issues specified in Sections 9.4.2 through 9.4.4 of the ASTM E1527-13 Standard. The presence or absence of each issue of environmental interest or concern is noted in Table 5.1. Additional information regarding observed and historical items is provided in the sections following the table.

Table 5.1: Summary of Site Reconnaissance Observations		
ASTM Section	Issue	Observation
Interior and Exterior Issues		
9.4.2.1	Current use(s) of the site	See Section 3.2
9.4.2.2	Past use(s) of the site	See Section 4.2
9.4.2.3	Hazardous substances and petroleum products used, treated, stored, disposed of, or generated on the site in connection with identified present or past uses	Present (see Section 5.2.1)
9.4.2.4	Storage tanks: Underground storage tanks (fill ports, vent pipes, manholes) Aboveground storage tanks	Absent Present (see Section 5.2.2)
9.4.2.5	Odors (strong, pungent or noxious)	Absent
9.4.2.6	Pools of liquid, standing surface water or sumps	Present (see Section 5.2.3)
9.4.2.7	Drums of hazardous substances or petroleum products (five-gallon, 55-gallon or totes)	Present (see Section 5.2.1)
9.4.2.8	Hazardous substance and petroleum product containers (not necessarily in connection with identified uses)	Present (see Section 5.2.1)
9.4.2.9	Unidentified substance containers suspected of containing hazardous substances or petroleum products	Absent

Table 5.1: Summary of Site Reconnaissance Observations		
ASTM Section	Issue	Observation
9.4.2.10	Polychlorinated biphenyls (PCBs) Electrical equipment on-site (e.g., transformers, capacitors) Electrical equipment known or likely to contain PCBs Hydraulic equipment on-site (e.g., elevators, truck dock lifts) Hydraulic equipment known or likely to contain PCBs	(see Section 5.2.4) Possible Absent Absent Absent

Table 5.1: Summary of Site Reconnaissance Observations		
ASTM Section	Issue	Observation
<p>Notes:</p> <p>Observations noted in this table and discussed further below are based on information obtained during the site visit and from a review of the sources summarized in Section 4.</p> <p>See the ASTM Standard for a detailed description of the issues included in each referenced ASTM section.</p> <p>Per the ASTM Standard, fluorescent light ballasts likely to contain PCBs are not considered.</p> <p>N/A – Not applicable.</p>		

5.2.1 Hazardous Substances and Petroleum Products

Hazardous materials (flammable and corrosive) storage at the site is limited to various types of reagents including alcohol and solvent based coatings and binders stored in 55-gallon drums and 275-gallon totes in the Bay 2 warehouse. According to facility personnel, no repackaging of hazardous materials is performed at the site. In addition, one approximately 200-gallon propane tank was located to the southeast of the site building for fueling four forklifts. United Western uses maintenance-related materials, such as hydraulic fluid (one pail), lubricants, and sanitizers and detergents.

Facility personnel knew of no significant spills or releases of materials at drum and container storage areas. While dedicated secondary containment was not provided for all of the drums and containers, Ramboll did not observe evidence of spills or uncontrolled releases from these storage areas, other than one area exhibiting minor staining around an air compressor in Bay 3 warehouse. The staining did not appear to extend to unpaved surfaces or floor drains.

According to facility personnel, hazardous wastes are not routinely generated at the site, other than the generation of limited amounts of universal wastes (e.g., fluorescent light bulbs, batteries).

Nonhazardous waste generated at the site consists of general trash, plastic packaging, cardboard boxes and pallets. General facility trash is collected in two on-site covered dumpsters for removal by Waste Management. One dumpster is positioned near the eastern entrance and the second adjacent to the west side of the site building. During the site reconnaissance, Ramboll observed approximately thirty 55-gallon empty drums stored outdoors (uncovered) adjacent to the southwest corner of the building. According to the facility personnel, the empty drums were returned by their customers and are waiting to be recycled.

5.2.2 Aboveground Storage Tanks

One propane aboveground storage tank (AST; approximately 200-gallons) was located to the southeast of the site building; this tank is not viewed as a potential source of environmental contamination given the physical properties of the materials stored in the AST (compressed gases/liquids that exist as gases under typical atmospheric conditions). Ramboll did not identify evidence of former aboveground storage tanks during the site visit (e.g., concrete pads or tank cradles) or during the review of historical records.

5.2.3 Pools of Liquid, Standing Surface Water, or Sumps

Several areas (up to 20-square feet in size) within the warehouse were observed with pools of rainwater due to water intrusion associated with leaking roofs. According to the facility personnel, aluminum sheeting is used to redirect water leaks through nearby windows, to the extent feasible. A visual evaluation of the water surface did not indicate an oil sheen.

5.2.4 Polychlorinated Biphenyls (PCBs)

Facility personnel knew of no on-site equipment that is known to contain polychlorinated biphenyls (PCBs). Four pole-mounted transformers are present adjacent to the north of the site building and are owned by Seattle City Light. Labels indicating the PCB content were not readily visible during Ramboll's site visit. Ramboll saw no indication of leaks or releases related to the transformers. Because the installation dates of the units are unknown and may predate the 1979 federal ban on the manufacture of PCBs, it is possible that the transformer oils contain PCBs.

Because the buildings were constructed prior to the 1979 federal ban on the manufacture of PCBs, it is possible that hydraulic oils, or other types of electrical equipment, such as capacitors, contain PCBs. Facility personnel were not aware of any hydraulic oils containing PCBs at the site.

Ramboll observed no indication of leaks or releases from electrical equipment during the site visit.

In the event of site or building redevelopment, it may be necessary to test window caulking, sealants, and other suspect materials so that if PCB-containing materials are present, demolition and renovation activities can be conducted in a manner that appropriately manages and disposes of waste materials.

5.2.5 Stains or Corrosion on Interior Floors, Walls, or Ceilings

Ramboll observed floor staining (approximately 20 square feet) around an air compressor located in the Bay 3 warehouse. The staining did not appear to be indicative of widespread releases or fluid losses. Concrete flooring throughout the facility was observed to be in good condition with no evidence of cracking, including in the vicinity of the air compressor. However, one approximately six-inch diameter and six-inch deep hole in the floor slab was observed in the parts storage room.

5.2.6 On-site Filled Areas

Based on Ramboll's review of historical topographic maps and aerial photographs it appears that the current location of the site was previously located in the Duwamish River, and the site was likely filled during the early 1900s. The source and quality of the fill material used is unknown, and Ramboll is not aware of any sampling conducted to evaluate fill material at the site.

5.2.7 Wastewater and Storm Water

Sanitary wastewater from the facility bathroom is discharged to the municipal sanitary sewer system. The facility does not otherwise generate process wastewater. Air compressor condensate is collected and disposed into the sanitary sewer system.

According to facility personnel and based on visual observations during the site visit, no storm drains are located at the site. Storm water percolates into the ground surface in unpaved areas or travels via sheet flow onto adjacent paved properties or into the LDW.

5.2.8 Asbestos Containing Materials

Although an asbestos inspection and sampling of suspect building materials in conformance with established protocols (as outlined in 40 CFR §763), applicable state or local regulations, or industry standards, were beyond our scope of work, Ramboll made limited visual observations³ of representative building materials in those areas accessed during the site tour to identify readily apparent PACM and suspect ACM. OSHA's definition of PACM is limited to thermal system insulation (TSI) and surfacing materials present in buildings constructed before 1981. Vinyl floor tiles are not considered PACM, but OSHA nonetheless requires that asphalt and vinyl floor tiles present in buildings constructed before 1981 be treated similarly to PACM. The term suspect ACM is not defined by OSHA but can include numerous building materials manufactured using asbestos currently or in the past (e.g., ceiling tiles, roofing materials, joint compound), as well as TSI, surfacing materials, and flooring materials installed after 1981.

Because the building at the site was constructed prior to 1981 and a comprehensive asbestos survey has not been conducted, TSI, surfacing materials and vinyl/asphalt flooring must be treated as PACM. During the site visit, PACM was not observed by Ramboll, but other materials that may contain asbestos (based on building age) included roofing materials and window sealants/caulking.

There are no regulatory requirements to remove PACM, suspect ACM and known ACM or to confirm whether building materials contain asbestos, unless the materials are damaged and have the potential to release fibers or the materials have the potential to be disturbed during renovation or demolition activities. Ramboll observed building materials that were damaged or deteriorating, including PACM. OSHA requires building owners and employers to identify locations of PACM and confirmed ACM at the facility and comply with certain employee notification, training, labeling and recordkeeping requirements (29 CFR §1910.1001(j)) and housekeeping programs (1910.1001(k)). United Western has not developed asbestos training programs, labeled ACM or PACM, or maintained appropriate records, as required. In the event of demolition or renovation, affected materials are required to be adequately characterized prior to construction activities, and if found to be ACM, appropriately managed and disposed.

5.2.9 Lead-Based Paint

Lead was a major ingredient in paint pigment prior to and through the 1940s. While other pigments were used in the 1950s, the use of lead in paint continued until the early 1970s. In 1978, the Consumer Products Safety Commission banned paint and other surfacing coating materials that are "lead-containing paint." Based on the construction date of the building in 1919, it is possible that lead-based paint was used historically on facility structures. Facility personnel knew of no lead-based paint on structures at the facility. Paint in the office areas appeared to be in good condition. Paint in the warehouse areas appeared to be in poor condition (e.g., cracking and peeling).

5.2.10 Radon

Based on information included in the environmental database report and USEPA Map of Radon Zones, the site is located in an area categorized as Zone 3, which has average indoor basement radon levels below 2 picoCuries per liter (pCi/L). Based on this general information, radon levels are below the USEPA's continuous exposure limit, which is the limit at which further testing or remedial action is

³ Ramboll did not observe all building materials or formally survey the facility to determine the presence and condition of PACM and suspect ACM.

suggested, of 4.0 pCi/L. This USEPA continuous exposure limit applies to residential, not commercial, properties.

6. FINDINGS, OPINION, AND CONCLUSIONS

Ramboll performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of the property located at 5245 E Marginal Way S in Seattle, Washington in September 2020. The objective of the ESA was to identify RECs, as defined in the ASTM Standard. A list of key definitions presented in the ASTM Standard is provided in Chapter 7 at the end of this report. Any exceptions to, or deletions from, this practice are described in Section 6.2.

6.1 Findings, Opinions, and Conclusions

6.1.1 Recognized Environmental Conditions

This assessment has revealed no evidence of recognized environmental conditions in connection with the property.

6.1.2 Other Findings

In addition to findings associated with significant data gaps discussed above, the following additional findings related to potential contamination concerns were identified:

- **Past Site Development and Past Industrial Operations.** The site is located in the Industrial Georgetown District, where industrial activities have occurred since at least the early 1900s, when the adjacent Duwamish River was channelized and straightened (now called LDW), which included filling portions of the original Duwamish River. Based on Ramboll's review of historical topographic maps and aerial photographs it appears that the current location of the site was in the historical channel of the Duwamish River, and the site was likely filled during the early 1900s. The source and quality of the fill material used is unknown. Based on Ramboll's experience, fill material placed during this time period in the Seattle area often contains petroleum hydrocarbons and/or metals at concentrations that exceed current cleanup criteria established by the Washington Department of Ecology. Since at least the late 1920s, the site (as well as the adjacent southern half of the larger site parcel) has been used for various industrial purposes, including food and auto warehousing (1929); autobody manufacturing (1935); paper container manufacturing including printing operations (approximately 1940-1967); storage/warehousing and distribution rental space (1940-1970); transportation and trucking (1951-1966); and foundry and abrasives (approximately 1980-present). While there are no reported releases or database listings indicating impacts beneath the site, given the extended industrial history at the site and absent further information regarding the specific historical chemical use, chemical handling practices, and associated wastes, Ramboll cannot rule out the possibility that inadvertent spills or releases of chemicals or petroleum products or other hazardous materials may have occurred in the past. Further, without additional information on the source, quality, and quantity of fill material used at the site Ramboll cannot rule out the possibility of residual impacts to the site from fill material. The risk of widespread contamination is mitigated by the fact that facility personnel are not aware of any major spills or releases at the site and there are no floor drains in warehouse areas. There is no current regulatory scrutiny related to contamination matters at the site.
- **Potential Migration of Contamination from Off-site Properties.** The site is located in a heavily industrial area that has been developed since at least the late 1920s, and as a result it is also adjacent to and/or in the presumed downgradient direction from several off-site properties listed with open status on databases indicative of potential or known soil or groundwater contamination (e.g., RCRA CORRACTS, LUST, SPILLS, CSCSL, and HSL), including petroleum hydrocarbons (diesel and gasoline), base/neutral/acid organics, halogenated organics, and metals.

Of note, the LDW Superfund Site is adjacent to the western side of the site (more detail below) and a release from a transformer occurred on the adjacent property to the south. No specific information confirming that off-site impacts have migrated or are suspected to have migrated to the site have been identified, and therefore, Ramboll does not consider this matter to be a REC. If contamination associated with off-site properties is found to have migrated onto the site, it is expected that any remedial activities would be the responsibility of the entities named in the listing or other designated responsible party and not the responsibility of a future lessor.

- **Lower Duwamish Waterway (LDW) Superfund Site Adjacent to the Site.** The LDW Superfund Site is located adjacent to the west side of the site. As a result, current and previous tenants of the property, including United Western, and tenants of the neighboring properties appear to have been included in some preliminary reconnaissance work related to the LDW Superfund Site. As part of the investigations into the matter, summary reports of existing information/data gaps and SCAPs were developed for properties along the LDW. According to the *Lower Duwamish Waterway RM 1.0 to 1.2 East (King County Lease Parcels) Source Control Action Plan* dated January 2011, no chemicals of concern were identified at the site or the larger site parcel, but additional site-specific conditions and operational information was needed in order to assess the potential for sediment impacts in the LDW, which include heavy metals, PCBs, and PAHs. In 2012, United Western received and responded to a USEPA CERCLA Section 104(e) Request for Information letter titled *Answers To First Request For Information Pursuant To Section 104(E) Of CERCLA For The Lower Duwamish Waterway Superfund Site, Seattle, Washington*. Based on available information, United Western was not subsequently included among the PRPs identified for the LDW Superfund Site. King County (the property owner), Port of Seattle, City of Seattle or Boeing Corporation are working with the USEPA and Ecology to lead investigation and remediation of the LDW. As part of an effort to reduce contaminants in the LDW, TMDLs have been applied to stormwater discharges into the LDW under the CWA NPDES. United Western has not operated under an ISGP at the site; however future lessors of the property (dependent on operations) may be subject to an ISGP and TMDL discharge restrictions.

6.1.3 De Minimis Conditions

De minimis conditions are those that do not represent a material risk of harm to public health or the environment and that generally would not be the subject of enforcement action if brought to the attention of appropriate governmental agencies. Ramboll identified the following *de minimis* conditions related to the site:

- **Pavement and Floor Staining.** Ramboll observed floor staining (approximately 20 square foot) around an air compressor located in the Bay 3 warehouse. This staining did not appear to be indicative of widespread releases or losses. Concrete floors in the vicinity of the staining appeared to be in good condition, with no evidence of cracking. As such, Ramboll considers this matter to represent a *de minimis* condition.

6.1.4 Non-Scope Considerations

Ramboll identified the following findings that relate to non-scope considerations (as discussed in Section 2.2), as detailed below:

- **Asbestos Containing Materials.** Given the date of construction of the building at the site, it is possible that ACM are present in building materials. A formal asbestos survey has not been conducted at the facility. Ramboll conducted visual observations of the site and did not note presumed asbestos-containing material (PACM) (e.g., thermal insulation, surface coatings);

however suspect ACMs (e.g., roofing materials, window sealants/caulking) were observed. The suspect ACMs that were observed by Ramboll appear to be deteriorated.

- **Lead Based Paint.** Lead was a major ingredient in paint pigment prior to and through the 1940s. While other pigments were used in the 1950s, the use of lead in paint continued until the early 1970s. In 1978, the Consumer Products Safety Commission banned paint and other surfacing coating materials that are "lead-containing paint." Based on the construction date of the building in 1919, it is possible that lead-based paint was used historically on facility structures. Facility personnel knew of no lead-based paint on structures at the facility. Paint in the office areas appeared to be in good condition. Paint in the warehouse areas appeared to be in poor condition (e.g., cracking and peeling).
- **Radon.** Based on information included in the environmental database review, the site is located in an area categorized as Zone 3, which has average indoor basement radon levels less than 2 pCi/L per liter. USEPA's continuous exposure limit, which is the limit at which further testing or remedial action is suggested, is 4.0 pCi/L. This USEPA continuous exposure limit applies to residential properties, not commercial.

6.2 Analysis of Data Gaps

The ASTM Standard defines a data gap as "a lack of or inability to obtain information required by the practice despite good faith efforts by the environmental professional to gather such information." A data gap is only significant if other information obtained during the ESA, or professional experience, raises reasonable concerns and affects the ability of the environmental professional to identify whether a given issue is a REC. The ASTM Standard requires that the ESA report identify and comment on significant data gaps.

Limiting conditions and deviations to the ASTM Standard for the assessment are discussed below.

- Facility personnel did not have current contact information for representatives of former site owners/occupants. Ramboll made reasonable attempts to obtain such information, but it was not otherwise readily available. Thus, Ramboll was unable to interview former owners/occupants about historical operations and site conditions. However, Ramboll conducted interviews with representatives of United Western with tenure at the site dating back to 1999 and reviewed other historical sources regarding former uses of the property. United Western has occupied the site since the 1980s; representing a historical account of four decades.
- Historical information, such as aerial photographs, were not readily available to characterize the property from the present back to the property's obvious first developed use. The earliest readily available historical source that would indicate the specific site use was the construction of the current warehouse in 1919; suggesting that the original intent for the site was warehousing and storage.
- Ramboll provided the Client with a User Questionnaire consistent with Appendix X3 of the ASTM Standard; however, a response to the questionnaire had not been received as of the time this report was prepared.
- A May 29, 1996 letter from United Western to King County's leasing supervisor indicates that a Phase I was completed at the site in 1992 and included collection of soil samples. In addition, a geotechnical study was reportedly conducted at the site in 2001. Copies of these reports were not readily available for Ramboll's review.

Privileged and Confidential

- During the site visit, facility personnel were unable to provide Ramboll with access to the three pump rooms associated with the fire suppression system. Facility personnel described the contents of the room, but Ramboll was unable to observe the condition of this area of the site.
- The warehouse building roof was not visible or accessible during the site visit due to health and safety reasons.

None of the exceptions, deletions, deviations, or site reconnaissance limitations noted above are considered to represent significant data gaps.

7. ASTM DEFINITIONS

The following definitions are presented in the ASTM Standard:

REC - Recognized Environmental Condition:

The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: 1) due to release to the environment; 2) under conditions indicative of a release to the environment; or 3) under conditions that pose a material threat of a future release to the environment.

CREC - Controlled Recognized Environmental Condition:

A recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

HREC - Historical Recognized Environmental Condition:

A past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls.

***De minimis* Condition:**

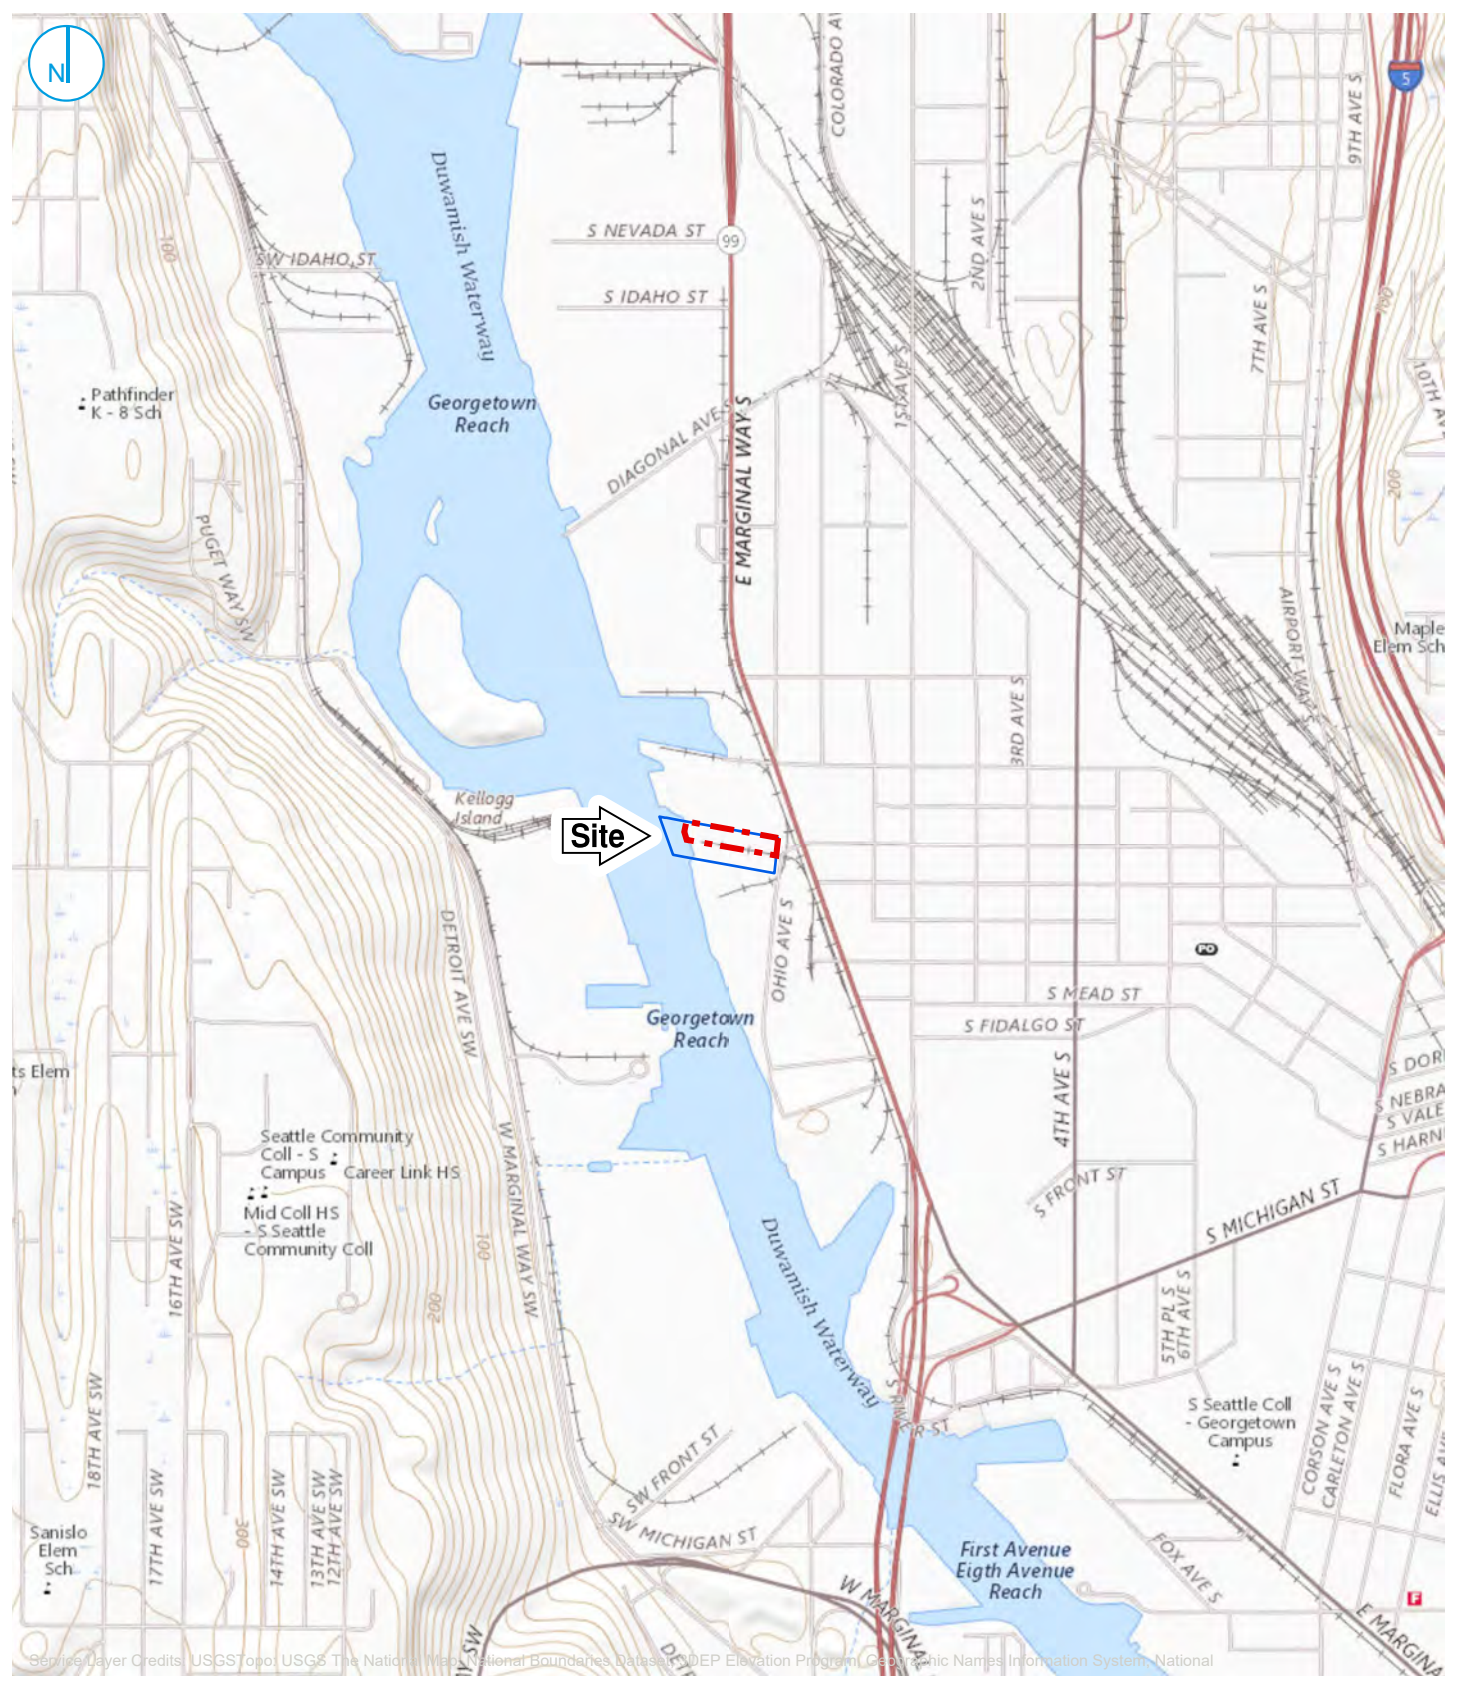

A condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

Data Gap / Significant Data Gap:

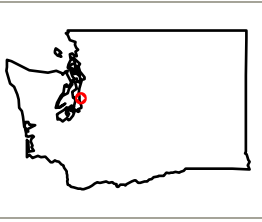

A lack of or inability to obtain information required by the practice despite good faith efforts by the environmental professional to gather such information. A data gap is significant if other information and/or professional experience raises concerns involving the data gap.

Please note that the term "other finding" is not defined by ASTM; rather, Ramboll uses the term to connote areas of contingent risk that are not clearly defined by the ASTM Standard.

APPENDIX B ENVIRONMENTAL DATABASE REPORT

NOTES ON ENVIRONMENTAL DATABASE REPORT

The third-party provider conducted its searches for the standard environmental record sources and the minimum search distances, as specified by the ASTM Standard. The ASTM Standard uses the terminology “approximate minimum search distance” to refer to the radii searched in the environmental database report.

The third-party provider conducted the search of environmental databases in September 2020. Because the environmental databases themselves are sometimes not updated by the specific regulatory agencies for periods of up to one year or more (depending on the database and the state), the database search conducted herein will not necessarily list any facility or site for which an environmental investigation/listing has been initiated subsequent to the last update.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site list

EXECUTIVE SUMMARY

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 07/29/2020 has revealed that there are 4 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 06/15/2020 has revealed that there are 2 CORRACTS sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/15/2020 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

WGM LLC SEATTLE EPA ID:: WAH000056800	5201 1ST AVE S	ENE 1/8 - 1/4 (0.163 mi.)	H46	524

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/15/2020 has revealed that there are 3 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-VSQQ: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQQ list, as provided by EDR, and dated 06/15/2020 has revealed that there are 6 RCRA-VSQQ sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

State- and tribal - equivalent CERCLIS

WA CSCSL: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Ecology's Confirmed & Suspected Contaminated Sites List.

A review of the WA CSCSL list, as provided by EDR, and dated 07/13/2020 has revealed that there are 83 WA CSCSL sites within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

WA SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Department of Ecology's Solid Waste Facilities Handbook.

A review of the WA SWF/LF list, as provided by EDR, has revealed that there are 12 WA SWF/LF sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

WA UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Ecology's Statewide UST Site/Tank Report.

A review of the WA UST list, as provided by EDR, and dated 05/12/2020 has revealed that there are 19

EXECUTIVE SUMMARY

WA UST sites within approximately 0.25 miles of the target property.

WA PTAP: A list of sites accepted into the Petroleum Technical Assistance Program. The Petroleum Technical Assistance Program (PTAP) expands the state's ability to respond to the high customer demand to clean up petroleum contaminated sites. Under the PTAP, the Pollution Liability Insurance Agency (PLIA) may provide informal site-specific technical consultations and issue written opinion letters to persons conducting independent remedial actions at qualifying petroleum cleanup sites. PLIA may provide these services under the authority of RCW 70.149.040(9) and the Model Toxics Control Act (MTCA), Chapter 70.149 RCW and Chapter 173-340 WAC.

A review of the WA PTAP list, as provided by EDR, and dated 05/12/2020 has revealed that there is 1 WA PTAP site within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

WA CSCSL NFA: The data set contains information about sites previously on the Confirmed and Suspected Contaminated Sites list that have received a No Further Action (NFA) determination. Because it is necessary to maintain historical records of sites that have been investigated and cleaned up, sites are not deleted from the database when cleanup activities are completed. Instead a No Further Action code is entered based upon the type of NFA determination the site received.

A review of the WA CSCSL NFA list, as provided by EDR, and dated 07/13/2020 has revealed that there are 15 WA CSCSL NFA sites within approximately 0.5 miles of the target property.

WA AQUEOUS FOAM: Aqueous film-forming foam-laced water running off from fuel spills, firefighting events and routine training sessions has put those chemicals in ground water, surface water, sediments, biota, and other natural resources of the state.

A review of the WA AQUEOUS FOAM list, as provided by EDR, and dated 07/06/2020 has revealed that there is 1 WA AQUEOUS FOAM site within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/15/2020 has revealed that

EXECUTIVE SUMMARY

there are 25 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 14 EDR Hist Auto sites within approximately 0.25 miles of the target property.

This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Name: J. A. JACK & SONS, INC.
 Address: 5427 OHIO AVE S
 City: SEATTLE
 Zip: 98108
 Facility ID: 37836248
 Site Id: 803
 UBI: Not reported
 Phone Number: Not reported
 Decimal Latitude: 47.553358
 Decimal Longitude: -122.339694

Actual:
8 ft.

Tank Name: 1
 Tag Number: A3606
 Tank Status: Operational
 Tank Status Date: 08/06/1996
 Tank Install Date: 06/25/1981
 Tank Closure Date: Not reported
 Capacity Range: 10,000 to 19,999 Gallons
 Tank Permit Expiration Date: 12/31/2020
 Tank Upgrade Date: 12/30/1997
 Tank Spill Prevention: Spill Bucket/Spill Box
 Tank Overfill Prevention: Automatic Shutoff (fill pipe)
 Tank Material: Steel
 Tank Construction: Single Wall Tank
 Tank Tightness Test: Not reported
 Tank Corrosion Protection: Impressed Current and Interior Lining
 Tank Manifold: Not reported
 Tank Release Detection: Manual Inventory Control (daily)
 Tank SFC Type: Not reported
 Pipe Material: Fiberglass
 Pipe Construction: Single Wall Pipe
 Pipe Primary Release Detection: Safe Suction (No Leak Detection)
 Pipe Second Release Detection: Not reported
 Pipe Corrosion Protection: Corrosion Resistant
 Pipe Pumping System: Safe Suction
 Responsible Unit: Northwest

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click Here:

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110012563485

Click Here:

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the

discharge does not adversely affect water quality.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click Here:

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click Here:

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Waste Stream Comments:

CORB Waste Sequence Number: 133561
Comments: Waste generated is collected and stored. Rinse water and water-based solution are reusable in our metal finishing process either as rinse or to mix with more chemical for the dip tank.

Waste Sequence Number: 2651872
Sequence Number: 1

Comments: All waste generated is stored. Water/chemical mix is reusable. Stored indoors in 55 gallon 2-bung drums.

Waste Sequence Number: 2651873
Sequence Number: 1

Comments: We collect it and take it in 5-10 gallon batches to King Co. Local Hazardous Waste in South Seattle bi-monthly. Dates in 2011 were: June 16.

Environmental Interest/Information System:

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

AIR SYNTHETIC MINOR

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
 RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Date Ecology Received Report: 01/01/93
Contaminants Found at Site: Petroleum products
Media Contaminated: Soil
Waste Management: Tank
Region: North Western
Type of Report Ecology Received: Interim cleanup report
Site Register Issue: 98-01
County Code: 17
Contact: Not reported
Report Title: Not reported

Date Ecology Received Report: 04/22/98
Contaminants Found at Site: Metals, Petroleum products
Media Contaminated: Groundwater, Soil

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water

Quality Programs.
 RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Registry ID: 110005318183

Click Here:

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Tank Closure Date: Not reported
Capacity Range: 1,101 to 2,000 Gallons
Tank Permit Expiration Date: 03/31/2017
Tank Upgrade Date: 04/15/1998
Tank Spill Prevention: Spill Bucket/Spill Box
Tank Overfill Prevention: Automatic Shutoff (fill pipe)
Tank Material: Dielectric Coated Steel
Tank Construction: Double Wall Tank
Tank Tightness Test: Not reported
Tank Corrosion Protection: Sacrificial Anode
Tank Manifold: Not reported
Tank Release Detection: Automatic Tank Gauging
Tank SFC Type: Not reported
Pipe Material: Fiberglass
Pipe Construction: Double Wall Pipe
Pipe Primary Release Detection: Safe Suction (No Leak Detection)
Pipe Second Release Detection: Not reported
Pipe Corrosion Protection: Corrosion Resistant
Pipe Pumping System: Safe Suction
Responsible Unit: Northwest
Dispencer/Pump SFC Type: Not reported
